<td>This is a particular issue for the North Witney SDA, as the revenue from all the new residential dwellings proposed will be used, in part, to fund the significant package of infrastructure improvements required by the Council, including the West End Link (WEL) and the Northern Distributor Road. We therefore suggest that the Strategic Development Areas should be excluded from Policy H5 (Custom and Self-Build Housing). Whether or not the percentage requirement of custom/self-build housing is amended, should the Council be minded to retain a requirement for all housing developments of 100 or more dwellings, we consider that the words &quot;subject to viability&quot; should be inserted at the end of the first sentence of Policy H5 to provide sufficient flexibility in the policy wording.</td>

<td>-</td>
<td>-</td>
<td>1943</td>
<td>&gt; SECTION 5 - PROVIDING NEW HOMES &gt; MAIN 42</td>
<td>Travelling Communities. 5.116 and 5.120. &quot;...the Council commissioned new evidence to establish future accommodation requirements in the period up to 2031&quot; and the conclusions are cited in 5.120. There is no mention or reference as to how this evidence was gathered, on the basis on which it was arrived at and thus no means to assess its soundness. There is no reference to the evidence on the WODC website and no indication of any public consultation on this evidence. 5.120 indicates a need to 19 pitches but 5.121b indicates that this should be reduced by 90% but only to 2 pitches needed after 5 years (why only after 5 years?) As above it is impossible to assess the evidence that produces these inconsistent figures and is not consistent with the need to 'use a robust evidence base to establish accommodation needs....' (Planning Policy for Traveller Sites, Aug. 2015 para 7c). 5.117. Kingham is mentioned as a gypsy site - this is misleading. There is one ex-traveler who was granted permission to settle on this site because of his personal circumstances. Permission is personal to him and his family so is ultimately temporary. Expansion would therefore be inappropriate. H7. This indicated that existing traveler sites will be safeguarded and expanded. Criteria for new sites are then listed. These criteria should also apply to expanding any existing sites.</td>
</tr>
</tbody>
</table>
Highways Concerns

The intensification of development on site will increase traffic movement of large vehicles within the vicinity on roads such as the A40, Eynsham Road and the B4044 which are already heavily trafficked. Contrary to Paragraph 5.12d, the SHELAA states that whilst access can be achieved from the existing access road off Cuckoo Lane the County Council have raised some concerns stating that speeds are very high and the visibility splay to the north probably will not be deliverable for these speeds. This then questions whether criterion b), of Policy H8, which sets out that any proposal for six plots at Cuckoowood Farm will need to provide a satisfactory vehicular access, can be achieved.

The County Council also raise a particular concern that a larger than normal proportion of vehicles using the access will be of a large and slow nature, further increasing risk to road users. Whilst the access is currently utilised by Travelling Showpeople, the allocation of six plots will double the frequency of use.

Surrounding Character and Setting

Whilst criterion a) of Policy H8 proposes further structural and boundary landscaping as part of any future proposal on the site, the proposed allocation falls within Eynsham Vale Landscape Area, as identified in the 'West Oxfordshire Landscape Assessment'. Overall, Eynsham Vale has an attractive and largely unspoilt rural character and this should be retained. The proposed allocation is not consistent with this objective and instead would seriously impact on the conservation of the area by virtue of its siting in the countryside. Large stationary vehicles on the site are particularly exposed to north, east and west. The allocation does not enhance or maintain the agricultural values of the site as additional plots would sterilise more land which is unsympathetic and is not appropriate or acceptable within the rural area. In addition, along the western boundary is a designated bridal way. The plots and vehicles associated with the proposed use will be in a prominent position to users. Accordingly the Estate considers the proposed allocation to be contrary to other emerging policies in the Local Plan, such as Policy EH1 in terms of minimising its impact on the countryside.

Local Amenity

The proposed allocation will lead to the intensification of noise and, as specified above, the movement of vehicles within the vicinity and on the site. This would be detrimental to the residential amenity and living environment of both existing housing located to the south and the approved Travelling Showpeople's site located to the east. The Estate considers the proposed allocation to be contrary to other emerging policies in the Local Plan, such as Policy OS4 as a satisfactory environment for existing residents would not be retained.

Size of the Site

The Showman's Guild recommends that plot sizes of 100 x 150 foot (15,000 sq ft) are required to accommodate the needs of Travelling Showpeople (to include storage) (source: Paragraph 6.3.1 of the Tribal Report). The application for the adjacent Travelling Showpeople site reference: 08/1885/P/FP (Change of use from agricultural to site for travelling show people) proposed relative uniform plot sizes for the site which appear to be in the region of 45 x 75 metres. This equated to 147 x 246 foot or 36,162 sqft. This represents a plot size of double the area suggested by The Showman's Guild. The total site area for this application was 3.6 hectares. Whilst Paragraph 5.121g and criterion e) of Policy H8 set out the need for an area of open and child's play at the proposed allocation, the site area (5.3 ha) is considerably larger than necessary for both the
provision of six plots and open space. Minimising the size of the site, whilst obviously meeting the requirements of its users, would assist in reducing the impact of development on the open countryside. The open space requirement should also be safeguarded against future expansion of Travelling Showpeople plots.

Conclusion

In summary, for the reasons outlined above, the Estate objects to the proposed allocation at Cuckoo Wood Farm for Travelling Showpeople. Accordingly, reference to the site should be removed from both Main Modifications 42 and 44. The Estate is particularly concerned that in a number of places the Main Modifications contradict the evidence and comments set out in the SHELAA.

Comments have been provided above in respect of the proposed main modifications to the WODC Local Plan 2031, and it is requested that due weight be given to these representations in the ongoing preparation of the emerging Local Plan.

If you have any questions in relation to these matters, please do not hesitate to contact Naomi Hubbard at the above address.

| MM51          | Lomond Holdings - Mr M Chattoe | Mr Chattoe      |                   |                   | 115        | > SECTION 5 - PROVIDING NEW HOMES > MAIN 43 | On behalf of the land owner and promoter of the expansion of the site at Cuckoo Wood Farm the allocation of the site is supported. However, the basis of the scale of need for the provision of plots for Travelling Showpeople is questioned as well as the phasing of the provision as proposed. It is considered that the need for plots has been seriously underestimated. The latest Travelling Communities Needs Assessment has been based on the advice given in Policy A of the NPPF of the need for community engagement with both the settled and traveller communities including discussing the needs with travellers themselves, their representative bodies and local support groups. From an examination of the report the following relevant issues emerge. Although all pitches and plots were visited (3.11) there were 5 unknown showpersons households and estimates were made when interviews were not possible.(3.21) The Showman's Guild is quoted as pointing out that some showmen who operate in the area are found to live outside it. (5.26) In (3.34) it states that a component of future needs includes in-migration yet it is clear from Appendix in the report that no allowance has been made for this. However, it does say in (3.23) that should further information be made available to the Council these households could be added to the figure.

It is a pity that the owner of Cuckoo Wood Farm, who is a member of the Showman's Guild was not directly consulted by the authors of the report as he does have an up to date assessment of members of the Showman's Guild who are seeking accommodation in West Oxfordshire. This details 20 families with there background details who have a need for accommodation in the district. This can be submitted separately in the form of an Appendix. The lack of an allowance for in-migration is a serious flaw in the process, especially in the light of the advice under Policy H of the NPPF, where in determining applications LPAs “should determine applications for sites from any travellers and not just those with local connections.”

In terms of phasing, there are practical and economic reasons why the further provision of the plots at Cuckoo Wood Farm should not be subject to phasing as proposed. First of all it is not so relevant in the light of the scale of need now suggested. The latest TCAN assessment makes the point that because of land and development costs new yards are a challenge.(5.27) Although land costs are not involved in this case, the development has to be self financing. If only half the plots could go ahead it would not be practical for the limited development to finance the full extent of the substantial landscaping and basic infrastructure costs which would be more cost effective if provided in one go for the whole allocation. Nor would it make sense to phase the landscaping in the interests of the wider landscape issues, or provide satisfactorily for the... |

| MM784 | North Witney Land Consortium | North Witney Land Consortium | | | 2157 | > SECTION 5 - PROVIDING NEW HOMES > MAIN 43 | Whilst we have no comments on the majority of the proposed revised text, we do have some concerns regarding the statement that the Council will "consider the scope to include specific provision as part of the larger strategic development areas including in particular the West Oxfordshire Garden Village."

The proposed SDAs form a crucial means for the Council to seek to meet its housing requirement. The detailed requirements which the SDAs are to deliver are set out in the relevant policies for the sites themselves. Should any additional elements be required to be delivered as part of the SDAs these must be made clear within the policies relevant to the SDAs themselves.

The proposed modification is considered to be unsound in seeking to raise the potential for the SDAs to deliver an element of gypsy and traveller pitches. No assessment has been made of the potential implications this would have on the overall development capacity and the viability of the SDAs. As such, and given the crucial role that the SDAs are to play in meeting the Council’s housing requirement it is considered that reference to the potential for these making provision for gypsy and traveller should be removed from the current proposed modification text. |

| MM51          | Lomond Holdings - Mr M Chattoe | Mr Chattoe     | -                | 118               | 118        | > SECTION 5 - PROVIDING NEW HOMES > MAIN 44 | As the owner and promoter of the proposed expansion to the Cuckoowood Farm site there have been initial discussions with the LPA which have led to the principle of development being broadly agreed. Since these discussions the details of how such provision can be made has been through a refining process resulting in what is considered to be the optimum form of providing the necessary infrastructure in the most beneficial way meeting the principles of the allocation. The scheme has now been submitted in the form of a planning application and covers the issues under a), b), c), d), and e), in the following way.  

a) On consideration, it has been concluded that in the wider landscape interests and mitigating the impact of the development, it would be more beneficial if this woodland provision was to be made in the form of a substantial woodland belt that would extend along the western and northern boundaries of the allocated site. This has taken into account the fact that the landowner to the north has recently planted woodland in the adjoining field. This additional woodland will link the allocated site with Vincent's Wood to the north, which together with the landscape belt now proposed, would result in a continuous woodland landscape feature between Freeland and through to the southern extent of Cuckoo Wood Farm where it meets the Eynsham Road. The application provides for nearly 1 hectare of woodland planting within the allocated site.

b) The site is served by an existing private roadway from the Eynsham Road.

c) A surface water drainage scheme will serve the site in the same way as the established site. It is questioned whether the policy should be so prescriptive in setting out such requirements when the matter will be subject to the submission of details at an appropriate stage.

d) It is questioned that there is main sewer within any reasonable distance to the allocated site. It is suggested that the each plot provides its own package treatment as is the case on the existing site.

e) An area just short of 1 hectare of recreational open is provided by the submitted scheme in the northern section of the allocated land. This generous provision can be shared by the existing and future residents at Cuckoowood Farm. The area to the north has been chosen as it lies on the highest part of the land and gently slopes down to the plots and the access point. This location makes it attractive to future users and provide the best amenity setting and also serves to distance the nearby bridleway from the developed area of the allocation thereby enhancing its landscape setting whilst the new tree belt matures. |

| MM758         | Eynsham Park Estate       | -              | -                | 1944              | 1944       | > SECTION 5 - PROVIDING NEW HOMES > MAIN 44 | Policy H8: Land at Cuckoowood Farm, Freeland  
Main Modifications 42 and 44  
Unsustainable Location  
The National Planning Policy Framework (NPPF) seeks the delivery of sustainable forms of development. Accordingly Local Planning Authorities are to seek improved access to all facilities by ensuring that new development is located where everyone can access services by foot, bicycle and public transport rather than having to utilise a private car. The Cuckoowood Farm site is situated over a kilometre away from the A40, beyond which lies the settlement of Eynsham. This distance is likely to lead to dependency upon private motor vehicles in order to access everyday needs such as shopping facilities.  
In addition, contrary to paragraph 5.12d of the Main Modifications the recently published Strategic Housing Land and Economic Land Availability Assessment (SHELAA) identifies that there is a limited bus service along |
Cuckoo Lane and that there is limited access to services in close proximity to the site such as those in Eynsham and Freeland. Accordingly the Estate do not consider that this site represents a sustainable location for development as it is too isolated. As such it is considered contrary to the NPPF and other policies in the emerging Local Plan.

Highways Concerns

The intensification of development on site will increase traffic movement of large vehicles within the vicinity on roads such as the A40, Eynsham Road and the B4044 which are already heavily trafficked. Contrary to Paragraph 5.12d, the SHELAA states that whilst access can be achieved from the existing access road off Cuckoo Lane the County Council have raised some concerns stating that speeds are very high and the visibility splay to the north probably will not be deliverable for these speeds. This then questions whether criterion b), of Policy H8, which sets out that any proposal for six plots at Cuckoowood Farm will need to provide a satisfactory vehicular access, can be achieved.

The County Council also raise a particular concern that a larger than normal proportion of vehicles using the access will be of a large and slow nature, further increasing risk to road users. Whilst the access is currently utilised by Travelling Showpeople, the allocation of six plots will double the frequency of use.

Surrounding Character and Setting

Whilst criterion a) of Policy H8 proposes further structural and boundary landscaping as part of any future proposal on the site, the proposed allocation falls within Eynsham Vale Landscape Area, as identified in the ‘West Oxfordshire Landscape Assessment’. Overall, Eynsham Vale has an attractive and largely unspoilt rural character and this should be retained. The proposed allocation is not consistent with this objective and instead would seriously impact on the conservation of the area by virtue of its siting in the countryside. Large stationary vehicles on the site are particularly exposed to north, east and west. The allocation does not enhance or maintain the agricultural values of the site as additional plots would sterilise more land which is unsympathetic and is not appropriate or acceptable within the rural area. In addition, along the western boundary is a designated bridal way. The plots and vehicles associated with the proposed use will be in a prominent position to users. Accordingly the Estate considers the proposed allocation to be contrary to other emerging policies in the Local Plan, such as Policy EH1 in terms of minimising its impact on the countryside.

Local Amenity

The proposed allocation will lead to the intensification of noise and, as specified above, the movement of vehicles within the vicinity and on the site. This would be detrimental to the residential amenity and living environment of both existing housing located to the south and the approved Travelling Showpeople’s site located to the east. The Estate considers the proposed allocation to be contrary to other emerging policies in the Local Plan, such as Policy OS4 as a satisfactory environment for existing residents would not be retained.

Size of the Site

The Showman’s Guild recommends that plot sizes of 100 x 150 foot (15,000 sq ft) are required to accommodate the needs of Travelling Showpeople (to include storage) (source: Paragraph 6.3.1 of the Tribal Report). The application for the adjacent Travelling Showpeople site reference: 08/1885/P/FP (Change of use from agricultural to site for travelling show people) proposed relative uniform plot sizes for the site which
appear to be in the region of 45 x 75 metres. This equated to 147 x 246 foot or 36,162 sqft. This represents a plot size of double the area suggested by The Showman’s Guild. The total site area for this application was 3.6 hectares. Whilst Paragraph 5.121g and criterion e) of Policy H8 set out the need for an area of open and child’s play at the proposed allocation, the site area (5.3 ha) is considerably larger than necessary for both the provision of six plots and open space. Minimising the size of the site, whilst obviously meeting the requirements of its users, would assist in reducing the impact of development on the open countryside. The open space requirement should also be safeguarded against future expansion of Travelling Showpeople plots.

Conclusion

In summary, for the reasons outlined above, the Estate objects to the proposed allocation at Cuckoowood Farm for Travelling Showpeople. Accordingly, reference to the site should be removed from both Main Modifications 42 and 44. The Estate is particularly concerned that in a number of places the Main Modifications contradict the evidence and comments set out in the SHELAA.

Comments have been provided above in respect of the proposed main modifications to the WODC Local Plan 2031, and it is requested that due weight be given to these representations in the ongoing preparation of the emerging Local Plan.

If you have any questions in relation to these matters, please do not hesitate to contact Naomi Hubbard at the above address.

Ecology and Natural Environment

In all cases reference should be made to the District Council’s ecologist for specific details on each site. It is assumed that before firm proposals are brought forward for each site an appropriate ecological, landscape and visual impact assessment will be undertaken including surveys for protected and threatened species.

The permanent loss of land of existing and potential future habitat value should be recognised with a corresponding investment in biodiversity and other green infrastructure resources that provide a range of benefits including biodiversity, water management and contribute to physical and mental well-being. Additional off-site enhancement should be provided where insufficient environmental gains cannot be secured within the development boundary.

Freeland – Cuckoo Wood Farm

The location of this site is not clear. It is believed that it may be in close proximity to Vincent’s Wood ancient woodland and other known priority habitat.

Flood risk is acknowledged at the Cuckoowood Farm extension for travellers (which is higher than the eastern section of the Garden Village site), but seriously downplayed along the northern fringe and eastern section of the Garden Village. When the travellers extension is connected to the mains sewerage network, will the dwellings in and around City Farm, currently served by septic tanks, also be connected?

<td>Mrs</td>
<td>Smith</td>
<td>862</td>
<td>&gt; SECTION 5 - PROVIDING NEW HOMES &gt; MAIN 44</td>
<td>Freeland Parish Council has great concerns about the proposed expansion to the existing site at Cuckoo Wood Farm. In the section about Cuckoo Wood Farm, the updated Local Plan states at paragraph 5.121d that “as the peripheral hedgerow planting has become established, so the site has softened into the landscape.” Councillors (plus many local residents) would not agree with this statement. The site is an eyesore from the public footpath and the landscaping and hedge planting that was stipulated in the original application has not been adhered to. The site has not had limitations put upon it in terms of how many (non-static) caravans are permitted, even though the site currently only has 6 plots. This has led to a mass of caravans being permitted on the site, making the whole area an eyesore with attention being drawn to it at night as the whole area is lit up. It certainly does not blend or soften into the landscape, and further expansion would just be even more detrimental to the area. If expansion were to go ahead, destroying yet more open farmland, then the Parish Council would insist on assurances that there would be restrictions attached to the new site limiting the number of caravans permitted at any one time.</td>

</tr>
</tbody>
</table>

Policy T1 - Sustainable Transport Priority will be given to locating new development in areas with convenient access to a good range of services and facilities and where the need to travel by private car can be minimised, due to opportunities for walking, cycling and the use of public transport, particularly where this would help to reduce traffic congestion on the routes around Oxford and the Air Quality Management Areas at Witney and Chipping Norton.

Witney’s main traffic bottleneck is at Bridge Street. With an average of 29,000 vehicles a day, it is the only vehicular crossing of the River Windrush for local journeys and through traffic from the north and east. The constraint of the river combined with the level of demand for vehicular travel results in severe congestion, delays to buses and air pollution (it is already an Air Quality Management Area). The environment deters cyclists and pedestrians from using the route.

The new A40/Down’s Road junction and A40/Shores Green improvements (Main 102) will significantly reduce traffic (and air pollution) in Bridge Street whereas the North Witney proposal combined with the recent successful applications on New Yatt Road (270 and 40 houses) will substantially increase traffic (and air pollution) in Bridge Street. Replacing North Witney with South Witney would potentially release £40m of S106 funding:

- Northern Distributor Road (£10m)
- West End Link road (£23.2m)
- Foul water drainage (£3m)
- Flood alleviation (£3m)

We will also work with Oxfordshire County Council to identify funding for their long term strategy for the A40 which will involve dualling between Witney and Eynsham and a westbound bus lane.

However, the £55m funding to facilitate the above long term strategy has yet to be identified. Selection of South Witney as an alternative to North Witney could be used to facilitate Oxfordshire County Council’s transport strategy outlined above to improve the A40 between Witney and Oxford. This proposed change of strategy would benefit substantially more residents than the existing strategy.

Other advantages to replacing North Witney with South Witney are:

* Traffic from South Witney would avoid the Bridge Street bottleneck (Air quality management area) on journeys into Witney.
* A South Witney development would be able to take advantage of the existing four way A40 junction at Ducklington and the proposed four way A40 junction with Downs Road, providing direct access to the main employment areas of Oxford, Witney and Carterton.
* Conversely the development of 1,400 houses at North Witney would significantly increase traffic in Bridge Street, even with the delivery of WEL2.

Remove North Witney from the Local Plan 2031 and replace with South Witney.

Support the clarification of the role of employment land at Chipping Norton.

<td>Support the changes to reflect the proposed approach towards additional business land provision as part of the land east of Chipping Norton strategic development area and the West Oxon Garden Village strategic development area. 4.1 Policy E1 seeks to allocate 4ha of land at Carterton (corner of Monahan Way/Carterton Road) for employment uses, subject to the satisfactory relocation of the existing sports pitches that occupy the site. There is no explanation within the policy itself, or in the supporting text that sets out how this will be achieved. In absence of any strategic scale development within the Main Service Centre it is unclear how the Council expects that this objective will be achieved. 4.2 Until such an explanation is provided the aspiration within the policy is considered to be unrealistic and therefore ineffective; as such it fails the test of soundness.</td>

<td>&gt; SECTION 6 - SUSTAINABLE ECONOMIC GROWTH &gt; MAIN 49</td>
<td>It is also of note that under policy E1 and clause 6.28, WODC seeks to allocate around 100Ha of employment land. This will accommodate around 7,500 jobs (based on 30 jobs per acre). Typically 50% of new jobs are on employment land and the rest are accommodated at existing premises. Therefore, about 15,000 jobs are catered for. As the total number of additional jobs expected is 7,900 under the SHMA, this seems excessive and inconsistent. In particular, it doesn't make much sense to provide significant employment land with the houses at the Garden Village in Eynsham if that site is intended to meet Oxford's unmet need. Although for sure if additional employment land were provided alone in the District (assuming there is a market), no houses at all would be needed here, as the District has too many homes for the number of jobs and population growth is in-migration driven and generated by house building itself.</td>

| MM786 | Oxfordshire County Council | Amada Jacobs (OCC) | Mrs Jacobs | 2192 | GROWTH > MAIN 51 | Changes to the Distribution of Housing to allocate land at West Eynsham and a new Garden Village north of A40 at Eynsham to help meet Oxford’s unmet needs: MM 63 et al

We support MM51 which proposes provision of 40ha business land for a science park as part of the Eynsham Garden Village proposal.

Soundness Reason: Justified

The proposal would provide a source of high quality, knowledge-based jobs, offering existing and new local residents the opportunity to work close to where they live, allowing them to cycle or walk to work rather than by private car.

Businesses would be well-placed to capitalise on the site’s proximity to Oxford and there would be synergies with business and research activities elsewhere on the knowledge spine.

Trips to and from the business park could make use of the proposed rapid transit services and new park & ride facility planned on the A40 at Eynsham or by bus and rail from Long Hanborough station. |
| MM787 | Rachel Livingstone | Mrs Livingstone | 2230 | > SECTION 6 - SUSTAINABLE ECONOMIC GROWTH > MAIN 51 | Paragraph 6.31

Tourism and leisure activities such as walking, cycling and horseriding’. Please show me on your plan where you are putting measures in place for horseriding. Nothing in the plan/maps. High population of horse riders in a 2 mile radius all use this field. 12+ equestrian yards/70+ horses. Any large development should include ‘multi-user tracks’ to include horse riders. Quiet rural roads are getting busier as people use them as rat runs. Only going to get worse - through New Yatt and North Leigh. Countryside being swallowed up with housing causing country pursuits to be forced onto busy roads. |
| MM61 | NP | Mr Pearce | 553 | > SECTION 6 - SUSTAINABLE ECONOMIC GROWTH > MAIN 51 | MAIN 51, Para 6.31

Not sound

Is there really a need for a 40 hectare Science Park as part of the Garden Village, acknowledged as ‘well in excess of what would typically be sought at a rural service centre’? How does it compare in size to the other Science Parks around Oxford? Given that areas in the north and east of the Garden Village are prone to flooding, why not reduce the size of the Science Park and put more housing in the south-west? (Or move it to Carterton – see comment on MAIN 7, SWOC Table.) |

<td>&gt; SECTION 6 - SUSTAINABLE ECONOMIC GROWTH &gt; MIN 40</td>
<td>We write to set out that we consider the Local Plan to be unsound in regard to a proposed minor modification Min 40 - Paragraph 6.86. The minor modification updates paragraph 6.86 to state that the District-wide Parking Strategy (herein referred to as the &quot;Parking Strategy&quot;) has been prepared to investigate whether parking provision is meeting current needs and whether it will meet future parking requirements. The previous iteration of the Local Plan stated that work had commenced on the Parking Strategy. There is, however, no additional text as part of the minor modification setting out the findings of the Parking Strategy within this paragraph (6.86) or any other paragraphs within the Local Plan. The Parking Strategy has been published and is publicly available following a consultation in November 2016. It has identified a need for a substantial amount of new car parking across the Borough. For example, in Witney alone it has been identified that there is a need for 600 further car parking spaces until this figure does not take into account any future retail growth that may come forward within the plan period. This is an important emission as Paragraph 6.73 of the Local Plan states that the Council's retail evidence identifies capacity to support additional shopping floorspace in Witney in the medium to longer term and recommends that this strategy starts to plan for a phased extension to the town centre to accommodate new investment. The requirement could therefore be higher than the amount identified within the Parking Strategy. Furthermore, Local Plan Policy T4 - Parking Provision has not been updated to reflect the car parking needs identified within the Parking Strategy. While the Policy as previously drafted does state that the Council will work with partners to provide, maintain and manage an appropriate amount of off-street public car parking, particularly to support town and village centres and to address issues of congestion and air quality there is no reference to the scale of provision which is required and the implications. We consider that as this information is now available, the Local Plan should reflect this evidence which sets out that a significant amount of additional car parking is required. Furthermore, the Parking Strategy itself recommends a series of Policy Options to be taken forward e.g. review of parking standards and a review of potential sites for new and expanded car parks. The Local Plan is currently silent on the findings and the recommendations of the Parking Strategy. The Policy and text at Paragraph 6.86 as it stands is currently not justified as it does not reference that a substantial quantum of additional car parking provision will be required across the Borough. The wording of the Local Plan is therefore not effective at addressing this need. The requirement for additional car parking has been identified within the Parking Strategy and needs to be reflected in the Local Plan, given it is aligned...</td>
<td></td>
</tr>
</tbody>
</table>
with the most recent revisions to housing numbers. The evidence base has been provided and the findings should be reported given the implications.

In order to be found sound, the Local Plan should be updated to include the findings of the Parking Strategy and it should commit the Council to undertaking further work in this area. The Parking Strategy should identify that there is a requirement for additional car parking and how the Local Plan will seek to ensure that this is delivered. The Local Plan should specifically address the extent of the requirement which was previously not known. This will build on the positive work the Council has undertaken so far in commissioning the Parking Strategy and ensure that the shortfalls identified are addressed.

<td>-</td>
<td>Cantay Estates</td>
<td>1936</td>
<td>&gt; SECTION 7 - TRANSPORT AND MOVEMENT &gt; MAIN 58</td>
<td>Proposed modification- Expansion of Eynsham: The proposed modifications introduce a significant strategic development to the north of Eynsham to meet Oxford City’s unmet housing need. This change pertains to numerous modifications, we therefore set out our response below which we wish to be considered in response to the following modifications: MAIN3, MAIN7, MAIN9, MAIN13, MAIN14, MAIN15, MAIN23, MAIN24, MAIN27, MAIN58, MAIN60, MAIN149 Detailed comments particular to each modification are set out in detail against the relevant reference in following sections. The proposed ‘Garden Village’ is a strategic site suggested to be a new standalone settlement. Such a development is a clear departure from the submitted spatial strategy which emerged from the earlier consultation stages and was informed by the evidence base. The proposed new development is a clear departure from the proposed development plan, not a mere modification. The proposed changes to the plan are so significant that they amount to a fundamentally different strategy to that submitted for examination. Should the Council wish to make such a fundamental change it should be done so through a new plan informed by a suitable evidence base and following a formal consultation process. To do otherwise would undermine the credibility of the plan and public confidence in the planning process. A consequence of the limited considerations which have informed the introduction of the development area is considerable uncertainty as to the achievability of the proposed scheme. The site was previously discounted as unsuitable for development within the submitted SHLAA, no updated document has been published to revise this status. Noise impacts, segregation across the A40 and landscape impacts are all...</td>
</tr>
</tbody>
</table>
identified as being prohibitive to development. No information has been produced to demonstrate how these issues may be overcome, nor whether they are less pronounced at any other development site. Similarly the proposal was dismissed as not being realistic in the submitted SA, little is offered to justify such a fundamental change in stance.

Development strategy for the proposed site is deferred to a later Area Action Plan, we consider however development parameters must be set out and explored in order to ensure the proposed scheme is achievable. The Plan also refers to an expression of interest submitted to Government seeking to obtain Garden Village status for the development, unlocking funding streams to deliver infrastructure to unlock the site.

Although an expression has been submitted, no decision has yet been issued. In excess of 50 similar expressions have been made nationally, therefore Garden Village status is far from guaranteed. Proper exploration must be made as to the sustainability, suitability and deliverability of this site and essential infrastructure in the event it does not secure Garden Village status.

MAIN9: The propose modification identifies the proposed expansion north of Eynsham to be an ‘exemplar’ development with regard to design and environmental performance. The aspirations for the development are laudable, however only very high level initial assessments have been undertaken to establish whether this is deliverable, particularly in the context of the landscape previously considered vulnerable to development.

MAIN23: The proposed alteration to the wording from the ‘majority’ of development being delivered in the district’s towns, to a significant proportion, confirms the proposed expansion to the north of Eynsham to be a deviation from the strategy set out under policy OS2 in the Submission Plan. We consider the fundamental change of the strategy renders this a new plan, it should therefore be developed as such, rather than processed through modifications.

MAIN25: We welcome the proposed increase in housing provision within the plan to reflect the objectively assessed need set out in the Oxfordshire SHMA (660 dwellings per annum). Although the headline figure for housing provision is increased the means of meeting that need is somewhat unclear in the document. The proposed site allocations fall someway short of the accepted housing requirement. Allocated sites and suggested windfalls total 11,545 homes, some 1,655 homes below the housing target for West Oxfordshire (13,200). Although not clearly stated it seems the Plan is reliant on a significant number of sites which have on the deliverability of these sites.

The published housing supply position paper sets out the Council’s assumptions on the deliverability of permitted homes. This is set against a backdrop of previous under-delivery in relation to the objectively assessed need, including in the initial five years of the plan period. The anticipated delivery of homes from larger sites (more than ten units) is particularly optimistic given the recent under-delivery of homes and the longstanding nature of several of the outline planning permissions.

The anticipated delivery figures (Appendix 3) do not appear to assume all planning permissions granted for larger sites will be implemented. The assessment of smaller sites makes a concession (9.1%) in acknowledgement that not all permissions will be implemented; an allowance for non-delivery of larger sites is also required.

While uncertainty exists as to the deliverability of a significant proportion of the required housing supply
questions remain as to the soundness of the plan. Robust evidence should be produced to show the permitted sites can be relied upon to deliver homes, additional allocations should also be made to mitigate against any shortfall.

MAIN27: The allocation of non-strategic sites is welcomed and we believe imperative if the housing need of the district is to be satisfied. We are concerned that those sites allocated have not been selected through thorough testing, including consideration of all reasonable alternatives as set out by the regulations. As a consequence the soundness of the allocations and broader plan is in doubt.

We have raised our concerns with regard to the unpublished SHELAA earlier in these representations; those comments also apply to this modification. The fact that the plan preceded the assessment significantly undermines the credibility of the plan as an evidence based document as do shortcomings in the assessment.

We consider Long Hanborough to be a suitable location for development as it benefits from an excellent range of services and facilities, including a railway station. We believe additional development sites should be permitted in the village alongside those proposed in the modifications. The proposed development site at Tuckwells Pit, Church Road (SHELAA ref 225) is a suitable location for new development. It can sensitively accommodate new homes in a location which benefits from access to key services and facilities. A Landscape and Visual Impact Assessment has confirmed development of the site can have a beneficial effect on the landscape while the off-road cycleway on Main Road provides viable access to the railway station.

MAIN29: The proposed modifications seek to rely upon windfall development to fulfill the housing requirement at a rate of 125 homes per year. Although this policy is informed by previous delivery rates the published SHELAA suggests insufficient developable sites exist to fulfill that rate of development throughout the plan period. As the Council’s own SHELAA suggests insufficient sites are available to fulfill the suggested windfall rate either the evidence, or the proposed strategy must be unsound.

Historic windfall delivery rates have been achieved in the district’s larger settlements including those designated as service centres. The proposed downgrading of Long Hanborough reduces the likelihood of homes being delivered in the village further reducing the chances of windfall housing rates being maintained. Although an alternative service centre is proposed to be provided this is for delivery within the plan period and therefore will not give rise to any windfalls.

MAIN59: The proposed emphasis on the desirability of locating development in locations with access to public transport is at odds with the modification suggesting downgrading Long Hanborough’s settlement status. The village is one of only two in the district which benefit from a significant railway station.

MAIN60: The plan identifies significant challenges upon the A40, particularly with regard to access to Oxford. Although several alleviation options are suggested none is carried forward in plan proposals which acknowledges necessary funding is not available.

The proposed strategic development area at Eynsham is suggested on the basis that alleviation of A40 issues could be provided, however their achievability is unknown. The uncertainty of delivery of necessary highway improvements calls into question the suitability of the proposed strategic development area. The Plan which relies upon this area to meet its portion of Oxford’s unmet housing need cannot be sound until the site is known to be deliverable.

MAIN66: The proposed modification underlines a success in the current plan period in encouraging use of
railway connections in the district, particularly from Long Hanborough. The modification acknowledges the capability of the rail corridor to remove vehicles from the A40 as residents travel toward Oxford and London, and the desirability of increasing capacity of Hanborough station and the railway link.

The modification supports improvements to the rail connection and acknowledges the need to provide the proposed development north of Eynsham with connections to Hanborough station. It is perverse therefore that the plan seeks to restrict development in Long Hanborough as developments in the village could provide easy access to the railway station and contribute to providing enhanced services and facilities. We consider the village should retain its rural service centre status and consideration given to additional non-strategic allocations to make the most of this opportunity for sustainable development.

MAIN145: The proposed modification suggests Long Hanborough is not in a position to support significant levels of additional development, however no evidence is provided as to any particular harm which would arise from residential development over and above that in the plan.

The document identifies the opportunity in the village in enhancing sustainable transport options through improvements to the station, this presents scope for new homes to be developed with a tangible benefit for the district. No unique sensitivities are identified, we therefore believe additional housing development should be allocated (beyond that proposed) and windfalls encouraged in Long Hanborough.

MAIN149, 180: We welcome the acknowledgement in the modification of the potential for enhancement of Hanborough Station as a transport interchange, however the proposed downgrading of the settlement is clearly at odds with this and undermines the aspiration for improvements. Such an approach is also at odds with the NPPFs encouragement of environmentally sustainable development.

The modification suggests increased car parking at the station, whilst this could encourage rail commuters from rural areas it is clearly preferable to remove the need for car use all together. Additional cycle parking should be provided and homes provided in locations which already benefit from access to the station by sustainable means.

New homes created in Long Hanborough would benefit from existing foot and cycle access to the station, therefore they could be delivered early in the plan period and support enhanced rail services without need for additional car journeys. To seek to restrict this undermines the aspiration of the plan.

The Council suggest the proposed northern extension of Eynsham could benefit from sustainable access options through creation of new foot/cycle routes from the south. These would be more distant than any point within Long Hanborough, furthermore their delivery cannot at this point be guaranteed. If the Council wishes to make the most of opportunities presented by rail routes from Hanborough permitting of additional development in the village is clearly the correct path.

<td>-</td>
<td>Cantay Estates</td>
<td>1914</td>
<td>&gt; SECTION 7 - TRANSPORT AND MOVEMENT &gt; MAIN 59</td>
<td>Proposed modification- Downgrading of Long Hanborough: The proposed modifications involve the downgrading of Long Hanborough from a service centre, to a lower order village. This change pertains to numerous modifications, we therefore set out our response below which we wish to be considered in response to the following modifications: MAIN3, MAIN13, MAIN14, MAIN15, MAIN59, MAIN66, MAIN145, MAIN149. Detailed comments particular to each modification are set out in detail against the relevant reference in following sections. We object to proposed modifications which suggests the downgrading of Long Hanborough from a rural service centre to a village. The submission plan confirmed the rural service centres were classified as such because they benefitted from a range of services and facilities which supported the village and surrounding area. They are able to support additional homes in the short-term, while proposed growth can enhance the role of the settlement in supporting the surrounding rural area (paragraph 4.18). This approach was directly in line with the plan’s objective 1 ‘strong market towns and villages’ and objective 4 ‘sustainable communities with access to services and facilities’, both of which remain un-modified. Long Hanborough retains the same services and facilities which existed at the time the plan was submitted, furthermore planning permission has been granted which allows significant expansion of the primary school (15/03341/FUL). While additional housing has been permitted no evidence has been produced to suggest additional homes would result in any harm to the character or sustainability of the settlement. The village therefore remains well placed to fulfill the role of a rural service centre.</td>
</tr>
</tbody>
</table>

The downgrading of Long Hanborough proposed through modifications is largely unexplained and not supported by any evidence. The Council cite the creation of a ‘new’ service centre through the northern expansion of Eynsham as justifying the downgrading of Long Hanborough as the new development will need to “develop a critical mass of services and facilities” (paragraph 2.5a).

We are concerned the Council’s explanation suggests an intention to restrict the development of Long Hanborough and reduce services in the village in order to encourage their replacement in the new development. A restrictive approach to development stifling an existing sustainable settlement and vibrant community is clearly at odds with the Plan’s vision, policies of the NPPF and good planning practice.

The provision of an additional service centre would be entirely in line with the Plan objectives. If the development proposed north of Eynsham is to proceed it is clearly preferable that Long Hanborough maintains its status as a service centre complementing any new facilities created. The need to retain the service centre is particularly pronounced due to the unclear deliverability of the proposed site north of Eynsham, even if the site is delivered this will not be until the latter part of the plan period, therefore there is a need for services and facilities in the interim.

The submitted plan set out clear objectives which the following policies sought to deliver sustainable communities. The Council seeks to deviate from this approach without explanation, evidence or proper assessment, we therefore believe this modification should be deleted.

---

**MM756 Cantay Estates Cantay Estates - Cantay Estates 1952**

`> SECTION 7 - TRANSPORT AND MOVEMENT > MAIN 59`

MAIN59: The proposed emphasis on the desirability of locating development in locations with access to public transport is at odds with the modification suggesting downgrading Long Hanborough’s settlement status. The village is one of only two in the district which benefit from a significant railway station.

---

**MM786 Oxfordshire County Council Amada Jacobs (OCC) Mrs Jacobs 2224**

`> SECTION 7 - TRANSPORT AND MOVEMENT > MAIN 59`

The emphasis of this policy is only indirectly about sustainable transport. A suggested alternative title is: “Minimising the need to travel through sustainable development.”

---

**MM97 Mr Grumpy Mr Sesicall 250**

`> SECTION 7 - TRANSPORT AND MOVEMENT > MAIN 59`

The impact of the additional housing and the resulting population explosion does not seem to be properly catered for in transportation planning. The desire is for reduced reliance on private car, but this will only be achieved if it becomes untenable, which admittedly is likely since the public transport plans do not appear to address the real problems of today in terms of traffic numbers, never mind the extra burdens of all the extra housing.

---

**MM116 Paul Mr Hughes 288**

`> SECTION 7 - TRANSPORT AND MOVEMENT > MAIN 59`

**TRANSPORT:**

With the 10-11,000 new homes being built in Eynsham, Witney and Carterton I believe the road infrastructure in each of these towns/villages and along the A40 will be significantly worse in 2031 than it is now. When you also factor in the 40ha science park at Eynsham, as well as Oxford City Council’s plans at the ‘Northern Gateway’ near Wolvercote, the traffic volumes on the A40 don’t bear thinking about.

Sadly, there is little provision for public transport, except for the ‘park and ride’ at Eynsham, which will hardly help traffic in and around Eynsham! Anyone who uses the A40 daily knows...
that it is Eynsham and Cassington that cause many of the major issues and these two bottlenecks need looking at. I just don’t see how an east bound bus lane and dual carriageway between Eynsham and Witney will really help.

There will still be no rail link for Witney, Carterton or the new enlarged Eynsham to Oxford and beyond. Cars will continue to be used for the overwhelming majority of journeys and with many thousand of new houses that means many thousands of more journeys. This will also be the case for Chipping Norton and Woodstock. What are the plans for the effect of these journeys on air quality and climate change, as well as the upkeep of the roads themselves?

Rural bus services have recently been decimated by Oxfordshire County Council, so how will WODC help reduce car use in the many villages affected?

Where is the strategic vision to provide a comprehensive cycle network in West Oxfordshire?

Policy T1 - ‘Priority will be given to locating new developments in areas . . . where the need to travel by car can be minimized due to opportunities for walking, cycling and the use of public transport.’

Assuming 1400 ‘units’ are built in the North Witney development area and, at a conservative estimate, each one attracts two cars; that amounts to 2800 extra cars travelling on the already overcrowded roads.

Available employment in Witney cannot support that many residents so, travelling to and from Oxford or Abingdon will take even longer than it does already, and a bus lane will in no way address that particularly as there are few appropriate long stay parks to address commuting.

Main 59 Policy T1
There are no cycle ways in and out of Witney from Hailey Parish – you are about to destroy the delightful and much used footpaths that go through the proposed development making them unpleasant to use, and you have cut what little public transport there is.

Main 104 – Alternative Options for Strategic Growth at Witney

9.2.50

Land to the south of Witney which straddles the boundaries of Ducklington and Curbridge Parishes, whilst physically proximate to the town centre and main employment areas in the south is segregated from the town by the A40. There are concerns regarding noise, odour and landscape impact and unlike the alternative options, the scheme would not deliver any strategic highway improvements for Witney.

Policy T1 – Sustainable Transport Priority will be given to locating new development in areas with convenient access to a good range of services and facilities and where the need to travel by private car can be minimised, due to opportunities for walking, cycling and the use of public transport, particularly where this would help to reduce traffic congestion on the routes around Oxford and the Air Quality Management Areas at Witney and Chipping Norton.

Witney’s main traffic bottleneck is at Bridge Street. With an average of 29,000 vehicles a day, it is the only vehicular crossing of the River Windrush for local journeys and through traffic from the north and east. The constraint of the river combined with the level of demand for vehicular travel results in severe congestion, delays to buses and air pollution (it is already an Air Quality Management Area). The environment deters
The new A40/Down’s Road junction and A40/Shores Green improvements (Main 102) will significantly reduce traffic (and air pollution) in Bridge Street whereas the North Witney proposal combined with the recent successful applications on New Yatt Road (270 and 40 houses) will substantially increase traffic (and air pollution) in Bridge Street. Replacing North Witney with South Witney would potentially release £40m of S106 funding:

- Northern Distributor Road (£10m)
- West End Link road (£23.2m)
- Foul water drainage (£3m)
- Flood alleviation (£3m)

Main 47, 6.13

We will also work with Oxfordshire County Council to identify funding for their long term strategy for the A40 which will involve dualling between Witney and Eynsham and a westbound bus lane.

However, the £55m funding to facilitate the above long term strategy has yet to be identified. Selection of South Witney as an alternative to North Witney could be used to facilitate Oxfordshire County Council’s transport strategy outlined above to improve the A40 between Witney and Oxford. This proposed change of strategy would benefit substantially more residents than the existing strategy.

Other advantages to replacing North Witney with South Witney are:

- Traffic from South Witney would avoid the Bridge Street bottleneck (Air quality management area) on journeys into Witney.
- A South Witney development would be able to take advantage of the existing four way A40 junction at Ducklington and the proposed four way A40 junction with Downs Road, providing direct access to the main employment areas of Oxford, Witney and Carterton.
- Conversely the development of 1,400 houses at North Witney would significantly increase traffic in Bridge Street, even with the delivery of WEL2.

Remove North Witney from the Local Plan 2031 and replace with South Witney.

How telling that the aim to provide congestion-free roads has been deleted. Dualling the A40 all the way is surely the best way of eradicating congestion. True, the pinch point of Sunderland Avenue would need to be addressed, but if man can get to the moon, surely we have the nous to solve that problem. OCC’s own traffic survey showed that of eastbound car journeys leaving West Oxon., only 40% were going to Oxford, whereas 60% were going to elsewhere in Oxfordshire or to places in the south east. Therefore bus lanes to Oxford & Park & Rides are unlikely to help these drivers, whose main aim is to get past Oxford.

It is recognised that this medium term unfunded scheme for dualling the A40 between Eynsham and Witney may be insufficient in the longer term, necessitating the development of a separate public transport route. To that end the line of the old Witney - Yarnton Junction railway will be safeguarded from development along with any short deviations to by-pass the small number of developments made since the railway was closed.

<td>&gt; SECTION 7 - TRANSPORT AND MOVEMENT &gt; MAIN 60</td>
<td>Main 60: An additional 600 houses in CN will generate significant traffic with a large proportion (to be determined and not estimated in the report). If one assumes 75% of the home owners attempt to drive into Oxford, the Oxford portal, and Woodstock might expect 450 more cars driving through them, on top of the already agreed increase in traffic. These significant further increases on the original plan are just that - significant - and one would expect a plan of this kind to be detailed and specific on this aspect of infrastructure. It is clear that the Oxford Northern Portal recent improvements have done little to significantly improve the journey into Oxford and that the 2400 homes (gross figure including the increase) will generate yet more traffic with associated environmental impacts including pollution and noise</td>
<td></td>
</tr>
</tbody>
</table>

Amendments to Paras 7.27-7.27b provide a summary of the improvements proposed along the A40 and notes that improvement in capacity may be achieved and that the current junction at Eynsham is a contributory factor. We would suggest that the new junction to the proposed Park & Ride facility to the north of Eynsham should also be utilised to provide access to the allocation to the west of Eynsham to avoid creating more than one new access to the A40 principal route, to maximise accessibility to the Park & Ride site and to manage the way that new development traffic accesses the main road network to ensure that this does not contribute to any further issues to the capacity of the network. We appreciate the views of the community expressed in the Autumn 2015 consultation ‘Investing in the A40’ and we recognise the need to future proof A40 access design proposals to accommodate a future possible westbound bus lane and possible future dual carriageway along this section of the A40. We understand that there will be ‘funding gap’ issues associated with the delivery of new strategic infrastructure and we will work with the Highway and Planning Authorities to identify necessary measures to mitigate the impact of development traffic and where appropriate contributions to strategic transport improvements that would be of wider benefit to the local community. We assert the land to the west of Eynsham could provide necessary funding contributions to deliver an appropriate standard of link road and to provide and enhanced junction to the A40, including the Park & Ride facility and note that the council have been considering funding options for this these. MAIN 65 Para 7.54 also notes the proposed Park & Ride facility at Eynsham will be delivered in conjunction with improvements to the A40. MAIN 156 Paras 9.5.40x-9.5.40y explains the benefit to the community of providing the West Eynsham SDA link road to give additional journey choice and to remove unnecessary through traffic. These paragraphs also note that appropriate consideration will need to be given to the connection to the A40 and to the Garden Village to the north. We assert the land to the west of Eynsham could provide necessary funding contributions to deliver an appropriate standard of link road and to provide and enhanced junction to the A40, which would support the delivery of the infrastructure required for the Park & Ride facility, particularly for non-car modes of travel from the wider Eynsham village. Development of the Site in the short term can respond to the identified housing need and also enable the early delivery of essential infrastructure for the West Eynsham SDA, co-ordinated and closely designed with the evolving work on the 2017 planning application by Oxfordshire County Council for the Park & Ride site. The pre-submission version of the Neighbourhood Plan for Eynsham is currently out for consultation until the
31st of January 2017. The emerging Neighbourhood plan seeks to accommodate the proposed growth set out in the Local Plan, including the proposed modifications. Of importance Proposed Policy ENP17 covers the western expansion area, point A) of the policy states: "Development west of Eynsham shall have vehicular access from the A40 at only one point". The supportive explains that the single access point will be achieved through the consolidation of junctions. The Site Options Assessment which supports the pre-submission version of the Neighbourhood Plan sets out preferred details of how this access can be achieved, Maps W1, W2 and N1 all show one consolidated access point to the north of the Site. An extract of Map W1 is below (see original representation).

Gavin Barwell’s written ministerial statement on 12th December 2016 gives further support and weight to the Neighbourhood Planning process. We consider it is vital that the access aspirations for the western expansion area, as set out in the emerging Neighbourhood Plan accord with the emerging Local Plan. We request that the Local Plan be amended to reflect this and further exploration of the issue be considered in the hearings to ensure that the Plan is robust and effective in this delivery on this point.

Proposed modification- Expansion of Eynsham: The proposed modifications introduce a significant strategic development to the north of Eynsham to meet Oxford City’s unmet housing need. This change pertains to numerous modifications, we therefore set out our response below which we wish to be considered in response to the following modifications: MAIN3, MAIN7, MAIN9, MAIN13, MAIN14, MAIN15, MAIN23, MAIN24, MAIN27, MAIN58, MAIN60, MAIN149 Detailed comments particular to each modification are set out in detail against the relevant reference in following sections.

The same modification seeks to introduce the new strategic development north of Eynsham. The proposed development is of a strategic scale in a location which previously only saw limited development. The strategic area has been newly introduced at the examination stage, rather than through the extensive consultation process which should inform fundamental decisions in plan making.

The proposed ‘Garden Village’ is a strategic site suggested to be a new standalone settlement. Such a development is a clear departure from the submitted spatial strategy which emerged from the earlier consultation stages and was informed by the evidence base. The proposed new development is a clear departure from the proposed development plan, not a mere modification.

The proposed changes to the plan are so significant that they amount to a fundamentally different strategy to that submitted for examination. Should the Council wish to make such a fundamental change it should be done so through a new plan informed by a suitable evidence base and following a formal consultation process. To do otherwise would undermine the credibility of the plan and public confidence in the planning process.

A consequence of the limited considerations which have informed the introduction of the development area is considerable uncertainty as to the achievability of the proposed scheme. The site was previously discounted as unsuitable for development within the submitted SHLAA, no updated document has been published to revise this status. Noise impacts, segregation across the A40 and landscape impacts are all identified as being prohibitive to development. No information has been produced to demonstrate how these issues may be overcome, nor whether they are less pronounced at any other development site. Similarly the proposal was dismissed as not being realistic in the submitted SA, little is offered to justify such a fundamental change in stance.

Development strategy for the proposed site is deferred to a later Area Action Plan, we consider however development parameters must be set out and explored in order to ensure the proposed scheme is

We have raised our concerns with regard to the unpublished SHELAA earlier in these representations; those comments also apply to this modification. The fact that the plan preceded the assessment significantly undermines the credibility of the plan as an evidence based document as do shortcomings in the assessment.

We consider Long Hanborough to be a suitable location for development as it benefits from an excellent range of services and facilities, including a railway station. We believe additional development sites should be permitted in the village alongside those proposed in the modifications. The proposed development site at Tuckwells Pit, Church Road (SHELAA ref 225) is a suitable location for new development. It can sensitively accommodate new homes in a location which benefits from access to key services and facilities. A Landscape and Visual Impact Assessment has confirmed development of the site can have a beneficial effect on the landscape while the off-road cycleway on Main Road provides viable access to the railway station.

MAIN29: The proposed modifications seek to rely upon windfall development to fulfill the housing requirement at a rate of 125 homes per year. Although this policy is informed by previous delivery rates the published SHELAA suggests insufficient developable sites exist to fulfill that rate of development throughout the plan period. As the Council's own SHELAA suggests insufficient sites are available to fulfill the suggested windfall rate either the evidence, or the proposed strategy must be unsound.

Historic windfall delivery rates have been achieved in the district’s larger settlements including those designated as service centres. The proposed downgrading of Long Hanborough reduces the likelihood of homes being delivered in the village further reducing the chances of windfall housing rates being maintained. Although an alternative service centre is proposed to be provided this is for delivery within the plan period and therefore will not give rise to any windfalls.

MAIN59: The proposed emphasis on the desirability of locating development in locations with access to public transport is at odds with the modification suggesting downgrading Long Hanborough’s settlement status. The village is one of only two in the district which benefit from a significant railway station.

MAIN60: The plan identifies significant challenges upon the A40, particularly with regard to access to Oxford. Although several alleviation options are suggested none is carried forward in plan proposals which acknowledges necessary funding is not available.

The proposed strategic development area at Eynsham is suggested on the basis that alleviation of A40 issues could be provided, however their achievability is unknown. The uncertainty of delivery of necessary highway improvements calls into question the suitability of the proposed strategic development area. The Plan which relies upon this area to meet its portion of Oxford’s unmet housing need cannot be sound until the site is known to be deliverable.

MAIN66: The proposed modification underlines a success in the current plan period in encouraging use of railway connections in the district, particularly from Long Hanborough. The modification acknowledges the capability of the rail corridor to remove vehicles from the A40 as residents travel toward Oxford and London, and the desirability of increasing capacity of Hanborough station and the railway link.

The modification supports improvements to the rail connection and acknowledges the need to provide the proposed development north of Eynsham with connections to Hanborough station. It is perverse therefore that the plan seeks to restrict development in Long Hanborough as developments in the village could provide
Main Modification 60, Paragraphs 7.23-7.28

The University & Colleges note that the County currently propose to dual 3.5km of the A40 between Eynsham and Witney at a cost of £54m, which will be subject to ongoing discussion and analysis. Ensuring the delivery of sufficient transport capacity in this key transport corridor to accommodate future levels of commuting and other journeys to Oxford is essential if the Local Plan strategy is to be effective in contributing to meeting the housing needs of the City. The importance of the route is specifically identified in paragraph 7.23: 'The A40 is the main east-west transport route with congestion on the section between Witney and Oxford being amongst the most severe transport problems in Oxfordshire and acting as a potential constraint to economic and housing growth.'

At present the County Council is undertaking consultation on the ‘A40 Eynsham Park and Ride and Bus Lane Scheme’. Paragraph 7.27a, b and c need to be updated to reflect this latest consultation and the overall status of the proposed improvements.

Furthermore, as stated in reference to MM 15 & 16 above, the current high levels of congestion on the A40...
need to be addressed if the proposed Garden Village at Eynsham is going to be able to operate as an extension of the Oxford housing market and therefore contribute towards meeting the needs of the City. However, dualling alone is unlikely to solve the problem of accessing Oxford on the A40 corridor and would be likely to generate induced demand and simply attract more vehicle trips to the network, such that the new highways capacity rapidly fills and congestion returns. The University & Colleges consider a more balanced solution is required including a range of sustainable modes as well as improvements to highway capacity.

The University & Colleges therefore request that there is a clearer commitment to the delivery of improved sustainable transport infrastructure for the A40 corridor. It is noted that the latest reports for the meeting of the OGB dated 30th November 2016 state that the A40 Eynsham Park & Ride and Bus Lane Scheme will be delivered in the period 2018-2020. It is proposed that this wording is carried forward into the Local Plan.

It is noted that proposed and anticipated improvements to existing highways capacity to the A40 connecting Witney and Oxford are subject to ongoing discussion and analysis. The Consortium welcomes further progress updates regarding the proposed schedule of improvements to the A40 in due course. It is further requested that the potential implications of any proposed network improvements to development north of the A40 near Eynsham are made suitably clear.

At paragraph 7.43e, it is noted that the garden village proposal is at a very early stage and that potential strategic or infrastructure improvements have not yet been determined. It is requested that engagement between the Consortium, the Local Planning Authority, and other relevant stakeholders inform any such highways improvements or enhancements.

Improvements to Wolvercote and Cutteslowe roundabouts were completed in Autumn 2016.

Paragraph 7.27a.

Trains/tram is the way to go and additional road lanes will still meet pinch points at Cassington, Eynsham. There will be more traffic but the same pinch points. How can the Council afford to widen roads when they can’t fix the ones we already use?

Paragraph 7.24.

‘Displacement of traffic on A4095’. How would this stop anyone from the North Witney development going through New Yatt and North Leigh? This is already used as a ‘rat-run’ another 1,400 houses will make it worse. This road is used by cyclists, horseriders and runners, it’s dangerous now even more so with this development.

How the transportation needs are addressed needs to be part and parcel of a comprehensive development plan. At best the current proposed solutions look to be attempting to address existing issues with sticking plaster and not really strategic and sustainable based on the probable number of extra commuters. I have not seen any models that may have been used to see the journeys currently taken and how the proposed solutions will tackle these and the anticipated increases. It looks like a solution based on what is thought to be feasible/affordable to do, ignoring the perceived too difficult like re-instating railway lines or other mass

<td>Robert Niblett</td>
<td>Mr Niblett</td>
<td>710</td>
<td>&gt; SECTION 7 - TRANSPORT AND MOVEMENT &gt; MAIN 60</td>
<td>The following concerns regarding transport/highway matters are raised for your consideration and arise mainly, but not exclusively, from the overall strategy set out in the Proposed Modifications. Access to and from West Oxfordshire to Gloucestershire is along two local authority routes: A40 – Oxford to Cheltenham – now identified as part of the Major Road Network between Oxford and A417. The road is classified as having limited access around Witney and Eynsham a centre of the proposed growth. It is classified as a primary link within Gloucestershire which is critical to the local economy. It typically has been 10,000 to 15,000 daily vehicle movements. Scale of growth potentially impacting route: * 12,000 dwellings * Witney sub-area 4,400 homes * Carterton sub-area 2,600 homes * Eynsham – Woodstock sub-area 4,000 homes * Burford – Charlbury sub-area 1,000 homes * 60ha of employment * An additional 20ha west of Witney * 40ha campus science park as part of the Garden Village north of the A40 at Eynsham We have concerns over the scale of growth being proposed along this strategic route if the impacts of the additional vehicle demand are not fully mitigated. At the moment the A40 is generally free flowing between Oxford and Cheltenham and it is assumed very little residential traffic will travel west to access employment. However, without suitable mitigation measures to restrict car use accessing Oxford vehicle delays will be more prevalent impacting the Central Severn Vale’s connectivity with Oxford through greater journey time unreliability. The A40 is also likely to provide the extension of the proposed Oxford / Cambridge Expressway to access the</td>
</tr>
</tbody>
</table>
The A40 forms part of GCC's Advisory freight map. We would expect to be consulted on proposed construction management plans where the construction of these sites impacts the operation of the A40. This is essential to reduce the impact of inappropriate routes. It is also important to coordinate freight information through our Freight gateway system.

Direct rail access is not currently provided between the Central Severn Vale and Oxford – a new direct rail connection linking the Central Severn Vale to Oxford via Honeybourne might be something to consider in the long-term to maintain connectivity between these centres. Substantial investment will be required at existing stations along the North Cotswold line to encourage and facilitate greater use of rail services arising from the new development as well as meeting the ongoing demand that continues to increase. Providing quality bus services connecting stations to new and existing development will be critical in reducing car usage in the area.

A44 – Oxford to Evesham – is no longer identified as part of GCC advisory HGV route. The route is identified as a District Link which is critical for local access. It typically has been 6,000 to 10,000 daily vehicle movements.

Scale of growth impacting route:

* Chipping Norton sub-area 2,400 homes
* 9ha east of Chipping Norton as part of the Strategic Development Area

We have limited concerns over the scale of growth being proposed along this strategic route. However, if the impacts of the proposed growth along the A40 corridor are not mitigated freight may switch to using this route when accessing Evesham. This will cause additional vehicle problems at Moreton-in-Marsh one of the Cotswold’s leading attractions.

<p>| MM376 | Stagecoach in Oxfordshire/Stagecoach West | Nick Small, Stagecoach Bus | Dr Small | 776 | MAIN 60 paragraphs 7.23-7.28 A40 Improvements | Stagecoach notes and supports the amendments that accurately reflect the current situation. Stagecoach note and supports the principle that developer funding might be secured to help bring forward the Phase 2 improvements to the A40 between Witney, Eynsham and Oxford along the A40, while recognising that the cumulative burdens on development viability will unavoidably limit how far such improvements could be developer-funded. |
| MM357 | Tony Bovey | Mr Bovey | 810 | &gt; SECTION 7 - TRANSPORT AND MOVEMENT &gt; MAIN 60 | 7.23, Highway improvements of A40 corridor: it is doubtful if the improvements would be sufficient to enable sustainable and equitable travel for the proposed Eynsham growth, especially when the Northern Gateway will generate even more traffic through the A40 roundabouts. 7.27 : the A 40 cycleway should be protected and enhanced and the Eynsham -Botley cycleway should be built. Bus priority should be secured beyond Duke's Cut into Oxford, including access to employment sites in Headington and east Oxford. |
| MM45 | Nigel Rose | Mr Rose | 90 | &gt; SECTION 7 - TRANSPORT | Although mention is made of suggested, currently unfunded, improvements to the A40 between Witney and Eynsham, it has to be recognised that the route will still be subject to the congestion problems nearer to |</p>

<td>&gt; SECTION 7 - TRANSPORT AND MOVEMENT &gt; MAIN 60</td>
<td>AND MOVEMENT &gt; MAIN 60 Oxford. Also because of the problems created by any perturbations, the only reliable long term solution will be to re-open the old railway line between Yarnton Junction and Witney to a Park &amp; Ride south of Witney town centre, in a similar manner to the re-opening of the Borders Railway in Scotland between Edinburgh, Galashiels and Tweedbank P&amp;R, which has proved very successful and to be carrying many more passengers than predicted. A re-opening of the Witney line will provide direct rail access to the economic growth areas in Oxfordshire and beyond and to Heathrow Airport. To this end the line of the old railway should be safeguarded from development along with any necessary deviations around developments that have occurred since the railway was closed.</td>

<td>&gt; SECTION 7 - TRANSPORT AND MOVEMENT &gt; MAIN 61</td>
<td>WODC continues to position WEL as the second river crossing for Witney, when OCC’s LTP4 determines that the Shores Green junction upgrade becomes the second river crossing (OCC LTP4 WIT1), with WEL not even specified in LTP4 WIT1. Furthermore, Shores Green upgrade is not currently fully funded (9.2.34a), and OCC would look to WODC to assist in providing funding. Additionally, the Inspector (Frances Mahoney) at the Gladman/Burford Rd planning appeal (14/1215/P/OP) in her final report, para 318 wrote, &quot;The Council is clearly committed to the SGSR scheme and sees it as a primary solution to the problem of air quality and highways congestion within Witney.&quot; The Secretary of State granted planning permission and agreed a £1.16m contribution towards the SGSR scheme. (Para 16) Alarmingly, Main 113, 9.2.58 removes the onus from the developers of North Witney SDA from their responsibility of delivering WEL to a mere facilitation role. In doing so WODC has left itself vulnerable to the full funding of the (currently) £23.2m West End Link Road which is &quot;needed to enable the proposed development of land to the north of Witney&quot; (Local Plan CD1, 7.36) Atkins Technical Note, Evaluation of Traffic Impacts, 4.2, Table 13 says - &quot;West End Link 2 (WEL2) - standard junctions - West End to Mill Street link road/bridge&quot; This reference to the use of ‘standard junctions’ (and thereby excluding Higher Capacity Junctions) does not appear to be mentioned anywhere else in any of the latest submitted evidence, including ‘Main Modifications’. Given that WODC TRA1 contains up to 50% of text and data comparing ‘Higher Capacity Junctions’ (HCJs) with ‘standard junctions’, NWAG is confused as to whether WODC has now permanently abandoned the idea of using HCJs at each end of WEL, or whether they have been temporarily excluded from the Evaluation of Traffic Impacts report for some other ungiven reason(s). This is of critical importance because, as pointed out by WODC in TRA1, using HCJs has a significant impact on traffic around the WEL area, and therefore would be expected to have a direct bearing on the outcome of tables 8 and 9 in the Evaluation of Traffic Impacts report. A Freedom of Information Request was submitted by NWAG to OCC on November 17th 2016. It requested a copy of the raw data used to produce the traffic flow in the Evaluation Report in order to establish the</td>
</tr>
</tbody>
</table>
situation within Witney around the WEL area.

The response (11030 EIR - Traffic Flow Figures) received from OCC dated December 14th 2016 was-

"The report/work so far has not included outputting the raw data from the traffic model, which would incur a significant fee to extract."

This is an extremely unhelpful response in a situation where NWAG are attempting to analyse data presented in a macrocosmic format, where multiple options have been added, dropped and altered and where close analysis of the raw data has previously revealed a quite different outcome than the technical reports would indicate.

Furthermore, it is beginning to become apparent that the important decisions being made on critical issues (eg infrastructure, sequencing and timing) are being relaxed by WODC, in order to accommodate the flawed North Witney SDA.

The second bullet point of paragraph 7.32 addresses the Shores Green Slip Roads, and states that:

'...facilitated by the proposed East Witney Strategic Development Area."

Similarly, the second bullet point of paragraph 9.2.58 states that the Shores Green Slip Roads will be "...facilitated by new development including primarily the proposed East Witney Strategic Development Area."

We would suggest that the wording in paragraph 9.2.58 is more appropriate, as it recognises that other developments will contribute towards the delivery of this new infrastructure. A significant financial contribution (in excess of £1m) has already been secured towards this new transport infrastructure from a scheme off the Burford Road, Witney. Indeed, we would suggest that the Local Plan should commit to seeking further financial contributions towards the Shores Green Slip Roads from any proposed allocations or future windfall sites that would impact on traffic movements in the vicinity, including on Bridge Street.

This proposed main modification is supported in so far as it clarifies that the North Witney SDA will facilitate the delivery of the West End Link.

The proposed main modification to paragraph 7.33 however states that:

"LTP4 envisages that [the four identified strategic highways schemes in Witney] will come forward sequentially with the Ducklington Lane improvements happening first (now completed) followed by the A40/Downs Road junction followed by the Shores Green Slip Road scheme and associated improvements at Bridge Street. Whilst not specified in LTP4, the inference is that the West End Link and Northern Distributor Road would follow on from these other strategic highway improvements..."

We object to the sentence underlined above as it could be misconstrued as suggesting that neither the West End Link nor the Northern Distributor Road should come forward until both the Downs Road junction and Shores Green Slip Roads have been delivered. There is no reason in transport terms however why either the West End Link and/or the Northern Distributor Road could be brought forward alongside other necessary supporting infrastructure. Indeed, as it forms the main spine road throughout the North Witney SDA, the Northern Distributor Road will be delivered in phases as part of the SDA itself.

To avoid any potential cause for confusion, we therefore request that the sentence underlined above be...

| MM365 | Shilton Road Burford Group | Richard Shute | Mr | Shute | > SECTION 7 - TRANSPORT AND MOVEMENT > MAIN 61 | **Access to Carterton – Improvements to the B4477 and west facing slips on the A40 at Minster Lovell.**  
We should like to see greater importance given to the provision of west facing slips on the A40 with the B4477 at Minster Lovell and to the upgrading of the B4477 to ‘A road’ standard. Carterton is an important town and its status is set to grow still further as a result of the local plan. It therefore warrants proper ‘A road’ connectivity for traffic from both a westerly and easterly direction. This would markedly increase the capacity and safety of the road and improve the environment for neighbouring towns and villages, relieving them of commuter and service traffic which today use a variety of alternative minor roads.  
As an example, Shilton Road (B4020), Burford, has seen passenger car and commercial vehicle numbers increase as a result of new housing in Carterton. The number of supermarkets has grown and the strategic heavy lift facility at neighbouring RAF Brize Norton generates more HGV traffic.  
Shilton Road (B4020) is the main route into Carterton and Brize Norton from the west. Traffic leaves the A40 near Burford roundabout and follows a twisty route which includes the hazardous dip at the entrance to Shilton village. West facing slips on the A40 would improve the environment for residents of Burford, particularly those on Shilton Road, as much of the traffic going to Carterton / Brize Norton from the west would use the improved Minster Lovell junction.  
Both the westerly slips and ‘A road’ improvements feature in the OCC document "Connecting Oxfordshire" but neither formed part of the Local Growth Fund Scheme. We should like to see this changed and for the draft local plan to promote these investments in anticipation of the extra traffic the planned housing will bring to the locality. |
| MM376 | Stagecoach in Oxfordshire/Stagecoach West | Nick Small, Stagecoach Bus | Dr | Small | > SECTION 7 - TRANSPORT AND MOVEMENT > MAIN 61 | **Stagecoach notes and supports the revisions necessary to ensure that the full suite of policy in the Plan is consistent with and supports the revised Plan strategy** |
| MM399 | Hailey Parish Council | Graham Knaggs | Mr | Knaggs | > SECTION 7 - TRANSPORT AND MOVEMENT > MAIN 61 | **Main 61 Sustainable Transport**  
7.32 West End Link – the provision of a new road link between Woodford Way and West End creating a second river crossing for Witney. Delivery will be facilitated by the proposed North Witney Strategic Development Area (SDA)  
Main 102 9.2.48  
... Delivery of the bulk of development in the medium to long-term would however offer the following advantages: - ensure the transport impact of the scheme is minimised by allowing for the new A40/Down's Road junction and A40/Shores Green improvements to come forward first;  
* allow time for the east and west Witney schemes to come forward in advance (and hereby avoid market saturation in the Witney area);  
* allow for the West End Link element of the scheme to be phased in appropriately as an integral part of the development. |

<td>2234</td>
<td>&gt; SECTION 7 - TRANSPORT AND MOVEMENT &gt; MIN 46</td>
<td>We believe that the above changes of wording weakens the probability of delivery and would like to see a return to the original commitment to deliver the West End Link ahead of the majority of development coming forward. Previous failed promises to deliver an additional river crossing have sensitised us to this issue. If 1,400 houses are built, it is critical that the West End Link or any other river crossing is delivered (along with the Northern Distributor Road). Conversely, if North Witney is not built there is no need to build the West End Link / Northern Distributor Road. Remove the above modifications in Main 61 and Main 102 and revert to the original wording to retain some strength in the commitment to deliver the West End Link road.</td>

<td>&gt; SECTION 7 - TRANSPORT AND MOVEMENT &gt; MAIN 62</td>
<td>When the Local Plan was originally developed, it made sense to concentrate housing developments in the three market towns. However, it is not appropriate to merely extrapolate the original allocations to take the additional numbers required by the Inspector and the SHMA. In particular, it is not sustainable to allocate an additional 800 homes to the Chipping Norton SDA. The percentage of residents employed locally has been falling steadily over the last decade and is now below 30%. Employment growth in the County is centred on the ‘knowledge spine’ running from Bicester through Oxford to the South. Chipping Norton is too inaccessible to attract significant potential employers, who will want to locate near the clusters along the spine. The main employment locally is for ‘minimum wage’ jobs in retail and caring sectors. New residents looking for professional or technical jobs will be forced to commute by car using the sub-standard A44 towards Oxford or the more dangerous A361 towards Banbury. The bus service to Oxford only runs hourly and has to cope with the severe congestion in the Wolvercote roundabout area. Access to the North Cotswold railway line at Kingham is also difficult - the connecting bus service is now sparse and unreliable following the County Council cuts, not as implied in para. 7.58. The additional 800 homes must be allocated nearer to Oxford with easy access to a railway line, thereby linking easily to the main employment areas in the County. The modified Plan already picks up on this logic, by proposing the Eynsham garden village with good links to Hanborough station (and with the potential to be eventually linked to a re-opened railway line to Witney) and with employment areas nearer to the ‘knowledge spine’ clusters. The Chipping Norton “800” should therefore be reallocated to the Eynsham area or sites even nearer to Oxford, with a start date earlier than the 2021 proposed for the garden village. The Chipping Norton Eastern Link Road proposed as part of the Tank Farm SDA will not achieve the reduction in HGVs through the town centre - the vast majority of HGVs are on the A44 towards Evesham, not on the A361. The link road will be a “road from nowhere to nowhere”. The money on the link would be wasted and reduce the likelihood of achieving a proper Chipping Norton by-pass on the A44. The commercial viability of the Stagecoach S3 bus to Oxford and the availability of a cadre of local drivers is dependent upon an overnight bus park in Chipping Norton. As part of the masterplan for the Tank Farm development a site of at least 0.3 Ha should be set aside for this vital bus parking.</td>

| MM16          |                        | Josmond         | Mr Osmond       | 17         | > MAIN 62          | figures extrapolated from the WYG Traffic Planning Report - see below for more explanation) * Purports to relieve the A361 "through traffic" which any Chippy resident will tell you is NOT our fundamental problem. * Fails to identify the growing concern and action being taken by the Burford Action Group in their attempt to ban HGV's from their historic town centre and by implication the A361 to and from Chippy, therefore bringing into question the Councils contention that an A361 relief road would reduce HGV traffic by an average of 40% during peak periods (Ref para 7.43b Draft Local Plan). * Fails to address the fundamental traffic/pollution issues of through traffic on the A44, particularly HGV's, which are responsible for 66% of noxious gas pollution (ref - West Oxfordshire D.C. Air Quality Action Plan). * Makes no mention of the County Council’s Local Transport Plan 2015 - 2031 which states, "In the case of Chipping Norton, a scheme to change the status of the A44 would be required before a new environmental weight limit could be considered. In line with policies 4 and 29 of the Local Transport Plan, taking note of Table 2 of the LTP, we will seek to remove the primary route status on the A44 between Oxford and Moreton-in-Marsh. This would open opportunities to reduce HGV movements through Chipping Norton and address the air quality problems. However, as with weight limits, this would need to be funded through development and/or the local community, businesses and the town council."

The above paragraphs (7.43A & B), of the West Oxfordshire Council's redrafted Lol Plan are based on a report commissioned by Oxfordshire County Council and undertaken by WYG Transport Planning which is, to say the least, a simple exercise made unnecessarily lengthy and intricate in the way it is presented and fails to consider the most obvious solution to an A44 by pass.

The Report considers an upgrading of the Roll right Lane from the Greedy Goose crossroads to the A3400, together with further upgrades to the A3400 to where it meets the A361 roundabout, north of Chipping Norton (a distance of 6.5 Km). It concludes the cost at £18.15M is both too costly and unacceptably lengthy for vehicles, especially HGV’s, even suggesting that HGV’s would flout any weight restrictions imposed through Chipping Norton as the likelihood of being monitored and fined would be far less than any increase in fuel costs. What hope have residents got if the Authorities already accept failure of the legal processes.

The Council contends that HGV volumes through Chippy can be reduced, once the Relief Road is built by introducing “appropriate HGV restrictions” (Ref para 7.43b Draft Local Plan), yet the report produced by WYG Transport Planning clearly believes that HGV’s would flout any restrictions, considering them to have little effect, with only derisory fines if they were ever caught. Thus questioning the Council’s contention that HGV volumes could ever be reduced by apparent ineffective restrictions.

<p>| MM738 | Cala Homes Chiltern | Cala Homes (Chiltern) | - | 1729 | &gt; SECTION 7 - TRANSPORT AND MOVEMENT &gt; MAIN 62 | Main 62: The amendment to the plan suggests that a proposed Eastern Relief Road skirting the SDA together with &quot;appropriate&quot; but undefined HGV restrictions &quot;might&quot; reduce HGV traffic in the HighStreet. Traffic surveys suggest that as little as 30% HGV traffic will use the Eastern Relief Road - it is not the main issue in CN - and the report does not state what the measures would be or how they would be implemented or enforced. The issue of traffic and air quality in the Town is significant and one would expect a plan of this kind to be more specific on this issue in particular. The Eastern Relief Road does appear to be a solution to the wrong and smaller problem. |
|        |                        | Cala Homes (Chiltern) | - | 1729 | &gt; SECTION 7 - TRANSPORT AND MOVEMENT &gt; MAIN 62 | Paragraphs 7.43a and 7.43b CALA supports the increase in the size of the housing allocation at the Chipping Norton SDA. It also supports the provision of an eastern link road, recognizing the benefits that this could bring to improve air quality in Chipping Norton Town Centre. |</p>

</table>
 quantum east of the town to be sustainably delivered. We would be clear that the Link Road represents an essential component in any access and movement strategy that would allow existing or future bus services to effectively penetrate the proposed residential allocation. Stagecoach therefore strongly supports the identification of the Eastern Link Road in the Plan as being an essential element of infrastructure in support of the Plan strategy.

However, the effectiveness of the Link Road as a future bus route is greatly compromised by the failure to consider how buses using the link are going to terminate in the town. Currently, most journeys on services 488 (form Banbury) and S3 (from Oxford) approach the town from the north/north east, and run through the town to terminate in the south of the town.

The probable diversion of the S3 in particular, to serve development proposed east of the town, also requires provision to be made in the Plan for buses to turn around in the Town Centre, and lay over, as an integral part of the access and movement strategy supporting the Plans proposals for the town. This is because buses from Oxford in particular, in all probability, need to approach the town centre from the south, having already served the main residential areas via the new Link Road and Burford Road.

In addition, bus stops and passenger waiting facilities in the town centre are poorly located, and entirely inadequate in scale to properly meet even current demand, much less that growth arising from the Plan’s modified development strategy. Suitable purpose designed facilities at the heart of the central area could make a very positive contribution to townscape and the public realm, which today is overly dominated by car parking.

NPPF paragraph 35 requires that the opportunities for sustainable transport such as this, should be indentified and protected.

<td></td>
<td></td>
<td></td>
<td></td>
<td>&gt; SECTION 7 - TRANSPORT AND MOVEMENT &gt; MAIN 62</td>
<td>General comments. Chipping Norton is one of the highest towns in West Oxon and is built mainly on hills with narrow streets except for the main roads of M4 and A36f in places the underground infrastructure (overflowing sewers/rainwater drainage - shared system) is already creaking with too much use and the road problems we have are well documented and accepted as being unfit for purpose by OCCA/VODC with a serious air quality problem in the centre of town. It might also be worth mentioning here that when an OCC employee was recently asked ‘how many of West Oxon’s main A roads are fit for the very large HGV’s we see nowadays?’ The answer was ‘none of them!’ CHIPPING NORTON NEIGHBOURHOOD PLAN – on 3rd March 2016 a referendum was held in the town accepting the CNNP which was then adopted. In this plan it was mentioned in several places that any future development has to be sustainable and it is felt that whilst 600 homes on Tank Farm were possibly sustainable 1400 homes are not - please see notes 213141516 below. It is felt that WODC in their draft Local Plan entirely ignoring the spirit of the CNNP. In February 2014 the Town accepted that it would have to take some new houses and reluctantly agreed that 600 on the area known as Tank Farm (the south half of the SDA) could be acceptable subject to suitable planning and mix of houses and infrastructure. Little contact has been made since then except for a plan that was attached to a planning application in the nearby area in the middle of 2015. Nothing officially has been given since the</td>
</tr>
</tbody>
</table>
meeting on 14th February 2014 until 23rd August 2016 when in a meeting between CNTC and OCC a plan using 800 homes plus 80 extra care beds was tabled and alterations suggested including no access at the southerly perimeter.

The next contact was the recent suggestion of 1400 houses. Considering that the allotment land to the south of the SDA is owned by the Town it seems strange that discussion about the possible of purchase of any land requirement has not yet happened - for sake of absolute clarity the William Fowler Allotment land is not for sale.

We also get the impression that some pressure might have been brought to bear on local land owners to go along with OCC plans - and please bear in mind that the majority of the land we are discussing is owned by OCC - thank goodness there are some ‘ransom sites’ to protect the town from being totally overrun and spoilt.

We also feel that discussions with other stakeholders have not taken place - we back this statement up with the recent planning application at the Pillars which is adjacent to the northern edge of the SDA with no vehicular access which apparently shows no coherent masterplan.

Chipping Norton Town Council totally reject the new local plan for the SDA for the following reasons in brief:

1) 1400 new homes on Tank Farm are not sustainable

2) The local employment of residents has fallen over the last 10 years and is now below 30%

3) The majority of local employment tends to be ‘low paid’ jobs in retail catering and caring sectors

4) ‘High paid’ jobs i.e. professional or technical jobs tend to be in what is now called the ‘knowledge spine’ which is difficult to access from Chipping Norton unless you drive as we have a poor train and bus service

5) Narrow and congested roads (including the main A441A361 at Horsefair where the worst pollution in Oxfordshire has been ignored for many years by OCC and WODC. The best long term solution to Horsefair are the road improvements needed around the Rollright Stones, which have been discarded due to cost - now budgeted at €18 million by OCC’s consultants

6) The cost of the Eastern Relief road has not yet been tabled but has to be close to the figures in (5)

7) The traffic figures being used from the survey carried out by WYG are erroneous - two points immediately stand out - a) it is stated that there have been no traffic related accidents in Horsefair in the last 5 years - we know that there have been 3 DEATHS in the period and b) it is stated that the busiest time of the day on Burford Road (A361) at Chipping Norton School (a large comprehensive 1200 pupils) is between 0700 and 0800, but in reality this is really 0815 to 0845.

8) We dispute the figures given to us by OCC and others which show that only 30% of the HGV’s that transit through Horsefair use the 4361 towards Burford and a massive TOO/o use the A44 east and west towards Oxford/Moreton-in-Marsh / Evesham and the 4361 north to Banbury.

We have been advised by independent traffic consultants that the figures are probably nearer to 15%

<td>Oxford University and Colleges</td>
<td>-</td>
<td>Oxford University and Colleges</td>
<td>1999</td>
<td>&gt; SECTION 7 - TRANSPORT AND MOVEMENT &gt; MAIN 63</td>
<td>Main Modification 63, Paragraphs 7.43c, d, e, f, g The University &amp; Colleges note that the County currently propose to dual 3.5km of the A40 between Eynsham and Witney at a cost of £54m, which will be subject to ongoing discussion and analysis. Ensuring the delivery of sufficient transport capacity in this key transport corridor to accommodate future levels of commuting and other journeys to Oxford is essential if the Local Plan strategy is to be effective in contributing to meeting the housing needs of the City. The importance of the route is specifically identified in paragraph 7.23: ‘The A40 is the main east-west transport route with congestion on the section between Witney and Oxford being amongst the most severe transport problems in Oxfordshire and acting as a potential constraint to economic and housing growth.’ At present the County Council is undertaking consultation on the ‘A40 Eynsham Park and Ride and Bus Lane Scheme’. Paragraph 7.27a, b and c need to be updated to reflect this latest consultation and the overall status of the proposed improvements. Furthermore, as stated in reference to MM 15 &amp; 16 above, the current high levels of congestion on the A40 need to be addressed if the proposed Garden Village at Eynsham is going to be able to operate as an extension of the Oxford housing market and therefore contribute towards meeting the needs of the City. However, dualling alone is unlikely to solve the problem of accessing Oxford on the A40 corridor and would be likely to generate induced demand and simply attract more vehicle trips to the network, such that the new highways capacity rapidly fills and congestion returns. The University &amp; Colleges consider a more balanced solution is required including a range of sustainable modes as well as improvements to highway capacity. The University &amp; Colleges therefore request that there is a clearer commitment to the delivery of improved sustainable transport infrastructure for the A40 corridor. It is noted that the latest reports for the meeting of the OGB dated 30th November 2016 state that the A40 Eynsham Park &amp; Ride and Bus Lane Scheme will be delivered in the period 2018-2020. It is proposed that this wording is carried forward into the Local Plan.</td>

<td>&gt; SECTION 7 - TRANSPORT AND MOVEMENT &gt; MAIN 63</td>
<td>Changes to the Distribution of Housing to allocate land at West Eynsham and a new Garden Village north of A40 at Eynsham to help meet Oxford's unmet needs: MM 63 et al. We support the various MMs which propose to identify Eynsham as a location for significant development to meet the district’s share of Oxford’s unmet need within a 1,000 home urban extension to the west of Eynsham and a new Garden Village north of the A40 for 2,200 homes. Soundness reason: Positively prepared, effective and justified Spatial options based on Land to the west of Eynsham and land north of the A40 were both subject to high level testing through the post SHMA process to establish their ‘sustainability’ in meeting the housing needs of Oxford. Both options were RAG rated green and formed the basis for the district’s apportionment for unmet need. Both sites are outside the Green belt and can take advantage of planned investment in strategic infrastructure improvements on the A40 corridor, including the committed and funded project to provide a new park and ride facility in Eynsham as well as an eastbound bus lane between Eynsham park and ride and the Duke’s Cut canal bridge near Wolvercote and the future development of this corridor as a Rapid Transit public transport route. There are references to the Garden Village being ‘self-contained’. When planning strategic infrastructure such as secondary school provision to support growth in the Eynsham area it will be important to take a comprehensive approach to assessing the impacts of growth and planning necessary capacity improvements. The West of Eynsham SDA will need to be served by a spine road to distribute trips arising from the development onto the surrounding road network. The West of Eynsham SDA will need to be served by a spine road (not a bypass) to distribute trips arising from the development onto the surrounding road network. The garden village will need to be served by a spine road to distribute trips arising from the development onto the surrounding road network.</td>

7.43c Comment: lacks soundness – no consideration of alternatives, not objectively assessed

7.43c prejudges the building of a Link Road between A40 and B4449 as being of unqualified benefit. It should be considered only as a possibility, as the Eynsham Neighbourhood Plan (ENP) has identified significant harms that would result. The ENP also questions if the benefits of slightly shortening the existing route along the eastern and southern bypasses of Eynsham will ever justify either the expense of or traffic nuisance caused by the road to residents on the new development.

We do approve of the idea being considered as part of the AAP, which we consider should apply to a single Eynsham Strategic Development Area to make issues such as road traffic which affect both WOGV and West Eynsham. We note that this section on transport does appear to see the AAP as applying to both areas.

7.43f Comment: lacks soundness – no consideration of alternatives; a main road through a community or extra cost of a Link Road is likely to delay the project.

7.43f appears to justify the addition of a 'Northern Link Road' associated with the development of WOGV although the wording of the paragraph is somewhat confused.

There does need to be a 'through route' that will allow buses to serve WOGV and Hanborough Station from the Park and Ride and as a bus route would be best going through the housing and/or village centre to serve the maximum number of potential passengers. This would simply be local village roads leading from one side of the settlement to another.

A Northern Link Road implies it is for for general traffic. Running this through the new community will be as unwelcome as through any other community. But there is no possible reason for through traffic to go between Cuckoo Lane and Lower Road so the idea of a separate Link Road in completely unnecessary and will only detract from focussing on building much more necessary infrastructure or even delay the project.

One opportunity to improve the road network is presented by the inclusion of site 150 both sides of Lower Road - the dog-leg here is always considered hazardous by locals and could easily be straightened as part of better access to the east side of WOGV.

We strongly recommend the 'iconic bridge' idea be dropped as impractical and unnecessary. It would not be possible to build as shown, as it would cross the front of houses in Spareacre Lane; the draft Eynsham Neighbourhood Plan (ENP) (Section 16.20ff) addresses the issue of safe crossing for the A40 and explains why a bridge in this location will be of very limited value. In any case OCC plans for the A40 call for a number of pedestrian/horse crossings nearby so it is no longer needed.

The opportunity to mention real possible improvements to the A40 is missed although there are generalised laments about the state of the road elsewhere The ENP strongly recommends that a route be protected between the existing A40 and the southern edge of the WOGV for the A40 to be upgraded, removing the multiple junctions and crossing points that are noted elsewhere as contributing to the slowing of through traffic. |
Policy T2 'proposes to deliver' a Western Link Road, Eynsham and 'Northern Link Road, WOGV', neither of which is yet justified.

A map outlining Eynsham Parish Council's suggestion for a protected route for A40 improvement is attached.

Building a new western link road to connect the A40 to the B4449 south of Eynsham, presumably close to the Chil Brook, will add to the flood risk in that area. Furthermore, it is odd to suggest that it will reduce the amount of 'through-traffic’ in Eynsham, when the bypass to the east already does this job well. The new western link will also fully and finally enclose Eynsham in main roads – not conducive to countryside access for the residents. Para 7.43e

Not sound

A new connection from the Garden Village to the A40, connecting with a new western bypass, will add another busy junction to the A40 and slow down traffic even further. Para 7.43f

In addition to creating a new blockage on the A40, this ‘new main road’ appears to run right through the middle of the Garden Village, past a primary school and neighbourhood centre, becoming the High Street for a while, with five junctions – 1 from the Science Park, 1 from the Park & Ride (both also residential) and three residential – and bus stops, before joining the dangerous Lower Road, which will have to be substantially improved in order to cope with the extra traffic. It will then serve as a back way (rat run) to the A44, A34 and M40: what will the Bladon residents think of that? Furthermore, no mention is made of this new main road displacing David Einig Contracting, a thriving aggregate recycling business in the middle of the Garden Village site.

In the distant past, villages were built around roads for a good reason, but traffic was minimal and alternative communication unavailable. Who today would willingly set out to create a new village around a busy main link road? The new residents will be crying out for a bypass as soon as they move in. Also, who pays for all these new roads? As for the ‘iconic feature bridge’, using it to allow 'easy connection' between Eynsham and the Garden Village flies in the face of Garden Village principles, which insist that such developments should not be an extension of an existing town or village'. And as for access between the two areas and into open countryside beyond, WODC's Expression of Interest (and Para 9.5.32) makes it clear that further expansion of the Garden Village is envisaged. As this is mostly likely to happen to the north, there will be no countryside left to access between the A40 and Long Hanborough. Just a sprawling suburb. Para 7.43g

Not sound

<td>Swinford Toll Bridge is indeed a congestion challenge. But electronic rather than human toll collection will have a minimal effect, if any. The real problem is large vehicles which force traffic to stop and let them pass. Presumably you cannot widen the bridge, so maybe the only improvement is one of weight and size restriction (buses excepted). MAIN 65, Para 7.54 Not sound While new bus services will be welcome (whether they turn out to be fast is debatable), new residents might not be too pleased to have a Park &amp; Ride as ‘an integral part’ of their village, attracting large numbers of strangers to the neighbourhood. Para 7.55 I am not sure how new bus services at the Park &amp; Ride will help those people in smaller rural areas whose bus services have been lost. How are they going to get to the Park &amp; Ride, if indeed they want to get there? (A bus route that went from the Park &amp; Ride to Long Hanborough station via Freeland might help: ask the residents there.)</td>

<tr>
<td>MM357</td>
<td></td>
<td>Tony Bovey</td>
<td>Mr Bovey</td>
<td>611</td>
<td>&gt; SECTION 7 - TRANSPORT AND MOVEMENT</td>
<td>Item 7.43d. The Park and Ride is entirely separate to the Garden Village and cannot be linked. Eynsham is the wrong place for the Park and Ride. It should be nearer Witney/Carterton. The OCC decision to locate it at Eynsham was a fiddle, the alternative sites were specifically chosen because they were inferior. No site to the west of Eynsham was included, so the benefits or problems were not reviewed. Courses in Problem-Solving teach you that you never, ever, ever dismiss an idea before thinking it through to figure out whether it’s possible. WODC should be opposing the Park and Ride at Eynsham. The shortfall in Oxford houses is not all about new houses for the current community and new jobs. A lot of the houses will be required for people moving into the district and working in London so we will get lots of large houses when what is required is lots of starter/cheaper houses. Development must not worsen the living conditions for the existing population. Infrastructure and amenities for new developments must be completed before people live in the new developments. The development of the western side of Eynsham must be developed as a whole, not just a collection of unrelated developments. They must be a positive part of the village unlike the Garden Centre development which is out on a limb, separate to the village. I also agree with the comments made by the Eynsham Neighbourhood Plan team.</td>

<td>1476</td>
<td>&gt; SECTION 7 - TRANSPORT AND MOVEMENT &gt; MAIN 64</td>
<td>the problem for the present usage and certainly not for the projected increase that would arise from this Local Plan. The A415 has problems of its own that are centred on Newbridge, a historic bridge inadequately protected by an 18 tonne limit, that could have further restrictions should traffic levels rise. The toll bridge at Eynsham is an historical artefact that has no place in the Plan for tomorrow.</td>
</tr>
<tr>
<td>MM741</td>
<td>CPRE Oxfordshire</td>
<td>Helen CPRE Oxon</td>
<td>Mrs Marshall</td>
<td>1512</td>
<td>&gt; SECTION 7 - TRANSPORT AND MOVEMENT &gt; MAIN 64</td>
<td>CPRE feels that the focus in Carterton should be to strengthen the core of the town. Therefore, CPRE is supportive of the release of REEMA Central for housing and of the intention to increase the density at REEMA North, yielding an additional allocation of a total of 300 more homes across the 2 sites. Therefore, CPRE supports clauses 9.3.3-9.3.6, 9.3.36 &amp; 9.3.50. However, the REEMA areas cover 146 acres in total. The last information from the MOD indicated that 742 SFA homes are needed, which at the usual JSP density of 12 per acre, will require 62 acres, leaving 84 acres spare. North and Central areas cover approximately 70 acres (22 at REEMA North and 48 at REEMA Central), so the allocation of 300 houses in addition to the existing 200 is modest, even accounting for some retail or leisure land. CPRE also feels that there is likely to be potential in other REEMA areas in the town and it now appears that past claims of increasing housing need generated by RAF Brize Norton were unfounded. The existing houses are at an approximate density of 6 homes per acre, as they are not well-planned. Therefore, no further expansion of the town should occur until these sites achieve their potential and any future development in Carterton should be focused at REEMA. It is clearly preferable to development on open countryside and CPRE agrees with WODC that it will improve the style and image of the town. It is development that would lead to clear betterment and would be likely to be well supported in the community. In line with the need, mostly apartments and small homes should be built, with a few larger gateway properties for kerb appeal. Some housing for the elderly would be beneficial. That means that the density could be relatively high, in line with most town centre developments. It would not be unreasonable to expect a density of 20-30 per acre or 50-75 per ha to be achieved in line with other mixed developments in the area, giving a total potential of at least 1,680 homes in REEMA North and Central areas alone, based on 50 units per ha.</td>
</tr>
</tbody>
</table>
In fact, Carterton has the least infrastructure and facilities of the three main towns and lags behind in terms of employment opportunities, as noted in the Draft Local Plan clauses 2.26, 9.3.10, 9.3.39 & 9.3.42. There is a pre-existing imbalance between numbers of jobs and homes/workers, meaning that out-commuting is high. It’s the furthest from Oxford and has no A road access. There is mention in 9.3.15 and 9.3.67 of upgrading the B4477 in Brize Norton to an A road at a cost of £3.9M, but clauses 7.48 & policy T2 are vague about funding. It appears that there is no firm commitment or allocated funding. It is not clear either where the £7.2M for westbound slips onto the A40 will come from at Minster Lovell.

Carterton should not therefore be seen as the obvious place to put any houses that other areas do not want, as has been suggested by some.

If a significant number of houses were moved from Witney to Carterton, Carterton would counter significantly more growth per capita than Witney. Carterton could not sustain such growth without further major incursion into open countryside in neighbouring parishes (over and above that already caused by Shilton Park, Carterton North and Carterton East in Brize Norton and Shilton Parishes), which CPRE considers unacceptable.

<td>&gt; SECTION 7 - TRANSPORT AND MOVEMENT &gt; MAIN 64</td>
<td>Section 7, Transport Policy T2 should require a proper cost-benefit analysis of building Link Roads and/or improving existing roads. Given limited funds apart from developer contribution, all funds should be focused on the most beneficial results as part of AAP development. Link Roads need to be defined – 40+mph HGV routes or 20mph local roads within built-up area. The alternative of ‘safeguarding’ an improved route for the A40 between Eynsham and Tilgarsley should be included as this could deliver more benefit than local link roads and show due cooperation with OCC to benefit the wider district.</td>

<td>&gt; SECTION 7 - TRANSPORT AND MOVEMENT &gt; MAIN 64</td>
<td>CALA recognises the need for a road around the east of the Town and the benefits that this could bring. However, further highway modelling is required to identify if this road is required as currently set out in the Main Modifications, the type of road and its precise alignment. As such CALA requests, as per paragraph 9.4.4a of the Local Plan that the route for the link road remains indicative at this stage to provide flexibility in the detailed design stage. Commentary should be amended to include that the route of the link road should be subject to the masterplanning of the whole site to ascertain the best location and that the viability of the road needs to be assessed. CALA also seeks changes to ensure that other developments in the Chipping Norton sub-area contribute financially to the road if they would benefit from it. The Plan needs to acknowledge that the Council would, as a last resort, consider use of compulsory purchase powers to enable delivery of the road.</td>

We are extremely concerned that an inspector, if considering a planning application appeal, might refer to the WODC Local Plan 2031 and think that Ascott-under-Wychwood has amenities equal to Shipton and Milton and we would ask that the Draft Local Plan be amended to reflect the true picture.

Stagecoach supports the modification which is essential to the soundness of the Plan's proposed revised development strategy.

The short term delivery of this facility represents an integral part of A40 Science Transit Phase 1, and proposed subsequent improvements on the corridor's capacity west of Eynsham. The bus lanes provided as part of the scheme will unlock the ability for Stagecoach to provide effective sustainable transport links from the District to Oxford City, including important destinations within the Eastern Arc, to which it is not possible today to offer direct regular and reliable bus services, owing to chronic prevailing traffic congestion.

The delivery of these measures provides scope to raise the mode share for bus between Carterton, Witney and Eynsham to the Eastern Arc from less than 3% to a much higher figure; perhaps as high as 30%, in the reasonably short term, after the project is delivered.

The effectiveness of this scheme will be further reinforced by additional measures including additional bus priority at Oxford Northern Gateway on the A40; rapid transit within the City on the Banbury Road and Woodstock Road corridors; and the County's Access to Headington project, which is already underway.

This suite of projects sits within a clear overarching strategy within the County's LTP4 "Connecting Oxfordshire".

I am not sure how new bus services at the Park & Ride will help those people in smaller rural areas whose bus services have been lost. How are they going to get to the Park & Ride, if indeed they want to get there? (A bus route that went from the Park & Ride to Long Hanborough station via Freeland might help: ask the residents there.)
development along with any necessary deviations around developments that have occurred since the railway was closed.

Therefore add at the end of 7.58 the following:

However, there is potential to re-open the old line to Witney from Yarnton Junction and the track of the railway will be safeguarded from development along with any short deviations to by-pass the small number of developments made since the railway was closed.

---

When the Local Plan was originally developed, it made sense to concentrate housing developments in the three market towns. However, it is not appropriate to merely extrapolate the original allocations to take the additional numbers required by the Inspector and the SHMA. In particular, it is not sustainable to allocate an additional 800 homes to the Chipping Norton SDA. The percentage of residents employed locally has been falling steadily over the last decade and is now below 30%. Employment growth in the County is centred on the ‘knowledge spine’ running from Bicester through Oxford to the South. Chipping Norton is too inaccessible to attract significant potential employers, who will want to locate near the clusters along the spine. The main employment locally is for ‘minimum wage’ jobs in retail and caring sectors. New residents looking for professional or technical jobs will be forced to commute by car using the sub-standard A44 towards Oxford or the more dangerous A361 towards Banbury. The bus service to Oxford only runs hourly and has to cope with the severe congestion in the Wolvercote roundabout area. Access to the North Cotswold railway line at Kingham is also difficult - the connecting bus service is now sparse and unreliable following the County Council cuts, not as implied in para. 7.58.

The additional 800 homes must be allocated nearer to Oxford with easy access to a railway line, thereby linking easily to the main employment areas in the County. The modified Plan already picks up on this logic, by proposing the Eynsham garden village with good links to Hanborough station (and with the potential to be eventually linked to a re-opened railway line to Witney) and with employment areas nearer to the ‘knowledge spine’ clusters. The Chipping Norton “800” should therefore be reallocated to the Eynsham area or sites even nearer to Oxford, with a start date earlier than the 2021 proposed for the garden village.

The Chipping Norton Eastern Link Road proposed as part of the Tank Farm SDA will not achieve the reduction in HGVs through the town centre - the vast majority of HGVs are on the A44 towards Evesham, not on the A361. The link road will be a “road from nowhere to nowhere”. The money on the link would be wasted and reduce the likelihood of achieving a proper Chipping Norton by-pass on the A44.

The commercial viability of the Stagecoach S3 bus to Oxford and the availability of a cadre of local drivers is dependent upon an overnight bus park in Chipping Norton. As part of the masterplan for the Tank Farm development a site of at least 0.3 Ha should be set aside for this vital bus parking.

---

We support the reference at paragraph 7.57 to car parking provision at the identified stations being an important consideration. As the Council is aware, at Hanborough Station a lack of sufficient levels of car parking provision has caused many issues in recent years, both in terms of suppressing existing rail demand and resulting in unauthorised and unacceptable car parking on highways verges etc…..This is a matter that requires major improvements to address existing issues, and is not dependent upon the levels of additional housing now proposed in the Local Plan.

Paragraph 7.57a

We support the reference at paragraph 7.57a to the ‘exceptional growth’ in passenger numbers at Hanborough Station in particular (a 239% increase). Whilst growth is also noted at Charlbury (30%) it...

<td>1464</td>
<td></td>
<td>&gt; SECTION 7 - TRANSPORT AND MOVEMENT &gt; MAIN 66</td>
<td>is evident that the growth at Hanborough Station is of a wholly different and fundamentally more substantial order. This growth of course reflects the proximity of Hanborough Station to Oxford, and the increases in car parking provision provided at the station in recent years (which have released some clearly suppressed demand and allowed some people to shift from the private car to the train). The noted extent of suppressed demand, together with the introduction of an hourly service in 2018 and new trains with increased capacity and faster journey times, serves only to highlight that further improvements are required at Hanborough Station (including materially increased levels of car parking) and that this further demand / required improvements are necessary to address an existing situation and are not simply a consequence of the additional development proposed in this Local Plan. Paragraph 7.57b Having regard to our support for paragraphs 7.57 and 7.57a, we also support the specific provisions of paragraph 7.57b which identifies the Council's aspiration to develop Hanborough Station as a transport hub to help reduce congestion on the A40. We also support the specific identification that to fulfil its potential, Hanborough Station will require a larger car park, footbridge and new platform so that any trains extended from Oxford can terminate and turnaround. As the Council is aware a planning application for residential development adjacent to Hanborough station (Ref: 15/03797/OUT) has just been the subject of a Public Inquiry and would, linked to the proposed development, make land available at nil cost which GWR has confirmed is of an appropriate size, and an appropriate location, to deliver the short and longer term station improvements identified by GWR – improvements needed to address existing issues and not only a response to the additional growth proposed in the Local Plan.</td>

<tr>
<td>MM756</td>
<td>Cantay Estates</td>
<td>Cantay Estates</td>
<td>1915</td>
<td></td>
<td>&gt; SECTION 7 - TRANSPORT AND MOVEMENT &gt; MAIN 66</td>
<td>The presumption has to be in favour of sustainable development and this means having the necessary infrastructure in place to cope with an increased population. The modifications to the local plan clearly show where development is intended to take place but they also need to show how this can be facilitated. Proposed modification- Downgrading of Long Hanborough: The proposed modifications involve the downgrading of Long Hanborough from a service centre, to a lower order village. This change pertains to numerous modifications, we therefore set out our response below which we wish to be considered in response to the following modifications: MAIN3, MAIN13, MAIN14, MAIN15, MAIN59, MAIN66, MAIN145, MAIN149. Detailed comments particular to each modification are set out in detail against the relevant reference in following sections. We object to proposed modifications which suggests the downgrading of Long Hanborough from a rural service centre to a village. The submission plan confirmed the rural service centres were classified as such because they benefitted from a range of services and facilities which supported the village and surrounding area. They are able to support additional homes in the short-term, while proposed growth can enhance the role of the settlement in supporting the surrounding rural area (paragraph 4.18). This approach was directly in line with the plan’s objective 1 'strong market towns and villages’ and objective 4 ‘sustainable communities with access to services and facilities’, both of which remain un-modified.</td>
<td></td>
</tr>
</tbody>
</table>
Long Hanborough retains the same services and facilities which existed at the time the plan was submitted, furthermore planning permission has been granted which allows significant expansion of the primary school (15/03341/FUL). While additional housing has been permitted no evidence has been produced to suggest additional homes would result in any harm to the character or sustainability of the settlement. The village therefore remains well placed to fulfil the role of a rural service centre.

The downgrading of Long Hanborough proposed through modifications is largely unexplained and not supported by any evidence. The Council cite the creation of a ‘new’ service centre through the northern expansion of Eynsham as justifying the downgrading of Long Hanborough as the new development will need to “develop a critical mass of services and facilities” (paragraph 2.5a).

We are concerned the Council’s explanation suggests an intention to restrict the development of Long Hanborough and reduce services in the village in order to encourage their replacement in the new development. A restrictive approach to development stifling an existing sustainable settlement and vibrant community is clearly at odds with the Plan’s vision, policies of the NPPF and good planning practice.

The provision of an additional service centre would be entirely in line with the Plan objectives. If the development proposed north of Eynsham is to proceed it is clearly preferable that Long Hanborough maintains its status as a service centre complementing any new facilities created. The need to retain the service centre is particularly pronounced due to the unclear deliverability of the proposed site north of Eynsham, even if the site is delivered this will not be until the latter part of the plan period, therefore there is a need for services and facilities in the interim.

The submitted plan set out clear objectives which the following policies sought to deliver sustainable communities. The Council seeks to deviate from this approach without explanation, evidence or proper assessment, we therefore believe this modification should be deleted.

Passenger growth on the Cotswold line has been significant with exceptional growth at Hanborough (up 239%) and at the busiest station on the line at Charlbury (up 30%).

Para 7.57c
There is no commercial case for a connecting bus service from Eynsham Garden Village to Hanborough. Good public transport routes will link the Garden Village with Oxford rail station.

<td>Ascott Parish Council</td>
<td>-</td>
<td>Carter</td>
<td>691</td>
<td>&gt; MAIN 66</td>
<td>&gt; SECTION 7 - TRANSPORT AND MOVEMENT</td>
<td>Ascott-under-Wychwood Parish Council notes that our village has actually been named for the first time in the Draft Local Plan 2031 and has been moved to the 'Villages' category. We are very concerned that this has been done apparently arbitrarily and without any consultation at all with the Parish Council. The consequence is that certain statements which were acceptable last year (when only 2 Wychwood villages were named) are no longer accurate with Ascott-u-W included. Ascott is a village one half and one third of the size of the other two Wychwood villages and with far fewer amenities. It is not accurate to include Ascott in the general Wychwood statements written last year. This places us in the difficult position of strongly objecting to statements which are not among the amendments but our objections do flow from the original critical amendment – that of naming Ascott-under-Wychwood in the Villages category. In particular, we feel that the impression is given over and over again that Ascott-u-W is reasonably well served by public transport. This is blatantly not the case and the situation has got worse in the past 6 months with the cuts in bus subsidies (as indicated in our response to the WODC Planning Services Parish Survey 2016). Ascott-u-W also appears to have a Post Office (Friday afternoon in Tiddy Hall does not constitute a Post Office) – and a smart railway station with a reasonable service (when in fact it has 1 train each way on weekdays only, too late in the morning for London commuters and even Oxford schools). We are extremely concerned that an inspector, if considering a planning application appeal, might refer to the WODC Local Plan 2031 and think that Ascott-under-Wychwood has amenities equal to Shipton and Milton and we would ask that the Draft Local Plan be amended to reflect the true picture.</td>

<tr>
<td>MM375</td>
<td>Charlbury Town Council</td>
<td>Charlbury Town Council Mr S R Clarke</td>
<td>Mr Clarke</td>
<td>732</td>
<td>&gt; SECTION 7 - TRANSPORT AND MOVEMENT</td>
<td>Paragraph 7.57 to 7.59 – Public Transport We welcome the inclusion of this proposed modification. However, we regret that it is phrased such that the need for improved bus and cycle links is restricted to the Garden Village to Hanborough station (7.57c), rather than all the catchment areas for the district’s stations – especially in the light of recent cuts to bus subsidies and the increasing traffic on the area’s roads, with consequent effects on local residents. (Note in particular the withdrawal of the C1 bus to Charlbury station, and the local campaigns for improved cycle links to stations.) We object to the limitation of redoubling to “Wolvercot Junction and Hanborough and from west of Evesham towards Pershore”. Full redoubling between Charlbury and Wolvercot Junction is a long-standing aspiration of rail travellers and user groups, and will provide greater resilience and flexibility in the peak hours. Though we recognise that redoubling to Hanborough is the short-term priority, we believe the Local Plan should restate the ambition for full redoubling rather than asserting that partial redoubling will “fully realise the potential of the railway”.</td>

The Forestry Commission has prepared joint standing advice [https://www.gov.uk/guidance/ancient-woodland-and-veteran-trees-protection-surveys-licences] with Natural England on ancient woodland and veteran trees which we refer you to in the first instance. This advice is a material consideration for planning decisions across England. It explains the definition of ancient woodland, its importance, ways to identify it and the policies that relevant to it. It also provides advice on how to protect ancient woodland when dealing with planning applications that may affect ancient woodland. It also considers ancient wood-pasture and veteran trees.

The Standing Advice website will provide you with links to Natural England's Ancient Woodland Inventory [http://www.gis.naturalengland.org.uk/pubs/gis/tech_aw.htm] , assessment guides and other tools to assist you in assessing potential impacts. The assessment guides sets out a series of questions to help planners assess the impact of the proposed development on the ancient woodland. Case Decisions demonstrates how certain previous planning decisions have taken planning policy into account when considering the impact of proposed developments on ancient woodland. These documents can be found on our website [http://www.forestry.gov.uk/forestry/infd-9hbjk4] .

Page 24 "Areas of woodland are material considerations in the planning process and may be protected in local authority Area Plans. These plans pay particular attention to woods listed on the Ancient Woodland Inventory and areas identified as Sites of Local Nature Conservation Importance SLNCIs)."

Page 10 "The existing area of ancient woodland should be maintained and there should be a net increase in the area of native woodland".

Paragraph 2.53 - This has a “renewed commitment to conserving and restoring ancient woodlands”.

Paragraph 2.56 – "The Government is committed to providing appropriate protection to ancient woodlands and to more restoration of plantations on ancient woodland sites".

Paragraph 2.16 - Further commitments to protect ancient woodland and to continue restoration of Plantations on Ancient Woodland Sites (PAWS).

Renewable & low carbon energy

The resilience of existing and new woodland is a key theme of the Forestry Commission’s work to Protect, Improve and Expand woodland in England we will continue to work with Forestry / Woodland owners, agents, contractors
and other Stakeholders to highlight and identify, pests and diseases and to work in partnership to enable Woodlands and Forests are resilient to the impacts of Climate Change.

Woodfuel and timber supplies continues to be an opportunity for local market growth whilst also enabling woodlands to be brought back into active management.

Flood risk

The planting of new riparian and floodplain woodland, can help to reduce diffuse pollution, protect river morphology, moderate stream temperature and aid flood risk management, as well as meet Biodiversity Action Plan targets for the restoration and expansion of wet woodland.

The Forestry Commission is keen to work in partnership with Woodland / Forest Stakeholders to develop opportunities for woodland creation to deliver these objectives highlighted above.

In the wider planning context the Forestry Commission encourages local authorities to consider the role of trees in delivering planning objectives [http://www.forestry.gov.uk/forestry/infd-9asbjw] as part of a wider integrated landscape approach. For instance through:

* the inclusion of green infrastructure [http://planningguidance.communities.gov.uk/blog/guidance/natural-environment/biodiversity-ecosystems-and-green-infrastructure/] (including trees and woodland [http://www.forestry.gov.uk/forestry/BEEH-A6LMEZ]) in and around new development; and
* the use of locally sourced wood in construction and as a sustainable, carbon lean fuel [http://www.forestry.gov.uk/communitybiomass].

The addition of a reference to “priority species” is apt in the case of the Garden Village proposal. The well-respected Plantlife organisation (plangtlife.org.uk) has this to say about City Farm, much of which lies within the proposed Garden Village site, with the rest immediately adjacent to it:

"The fields at City Farm have been regularly surveyed between 2014 and 2016 by experienced botanists including the Oxfordshire Flora Group and BSBI [Botanical Society of Britain and Ireland] vice-county recorder providing specialist identification of difficult species, such as nettle-leaved goosefoot and blue pimpernel. City Farm has an IAPA score of 90 making it of European importance for arable plants." (IAPA = Important Arable Plant Area.)

Over a dozen plant species present on the farm are on the Red List for England. Many others are endangered, rare or vulnerable. The site is almost unique in Oxfordshire in that it has probably never been farmed using modern intensive methods, and now has both grassland and arable fields that are highly diverse on the same site.

Arable plants are the fastest declining group of plants in the UK. City Farm has become such an important site for their conservation partly because of its recent sensitive management, but perhaps more importantly because it has never been subjected to high and consistent herbicide use. This has enabled seeds of arable plants that were more common five decades or more ago to survive in the soil and return to flourish quite quickly once appropriate management was reinstated. For example, nettle-leaved goosefoot, a nationally vulnerable species, had not been recorded anywhere in Oxfordshire since 1985 until it was identified at City Farm in 2016. City Farm is close to unique in having experienced gentle farming management that has allowed plants such as this and many others to persist and now return to thriving abundance. As such it is a rare and precious resource, whose importance is only now being fully revealed and appreciated.

A separate ornithological report concludes that: "The combination of different habitats found within a relatively
small area at City Farm, including arable land, grassland, scrub, large hedges, small streams and a range of ponds and damp areas, means that a wide variety of resident and migratory birds have been recorded making use of City Farm. Currently, the list of birds recorded since 2010 stands at 90 species, a remarkably high total for a single farm. Fifteen of these species are on the "NERC Act Section 41" list cited in paragraph 8.12.

It should be noted that WODC, as part of its evidence base, has cited the “West Oxfordshire Landscape Assessment” (WOLA). However, this report is dated 1998, and much has happened to the landscape since then. Most notably, City Farm, which has probably never been farmed intensively, has for the past 6 years been farmed organically with wildlife as a high priority under a Higher Level Stewardship agreement. This has had a hugely beneficial impact on the habitats and wildlife in the area. The WOLA does, however, make it clear how important the landscape due to fall under the Garden Village is (see, for example, the "Conserve" and "Strengthen" sections of pages 15 and 16 of the WOLA).

<td></td>
<td>A separate ornithological report concludes that: 'The combination of different habitats found within a relatively small area at City Farm, including arable land, grassland, scrub, large hedges, small streams and a range of ponds and damp areas, means that a wide variety of resident and migratory birds have been recorded making use of City Farm. Currently, the list of birds recorded since 2010 stands at 90 species, a remarkably high total for a single farm.’ Fifteen of these species are on the NERC Act Section 41 list cited in paragraph 8.12.</td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td>It should be noted that WODC, as part of its evidence base, has cited the 'West Oxfordshire Landscape Assessment' (WOLA). However, this report is dated 1998, and much has happened to the landscape since then. Most notably, City Farm, which has probably never been farmed intensively, has for the past 6 years been farmed organically with</td>
</tr>
</tbody>
</table>
wildlife as a high priority under a Higher Level Stewardship agreement. This has had a hugely beneficial impact on the habitats and wildlife in the area. The WOLA does, however, make it clear how important the landscape due to fall under the Garden Village is (see, for example, the ‘Conserve’ and ‘Strengthen’ sections of pages 15 and 16 of the WOLA).

Para 8.13
Not sound

WODC ‘expects’ British Standards BS 42020: 2013 [on biodiversity ‘conservation and enhancement’] to be applied as good practice, but ‘expecting’ is not the same as ‘ensuring’. Who will ensure that the developers fully observe BS 42020? What checks and procedures will be put in place? In relation to the comment on Para 8.12 above, it seems to me that, among other precautions, the kind of air quality monitoring and measures recommended by the Habitat Regulations Assessment for the Oxford Meadows SAC (Special Area of Conservation) should be applied to the area proposed for the Garden Village.

As just one example of the adverse effects of ‘urbanisation’ (which is what the Garden Village will create), a survey on ‘cat predation’ in 1997 indicated that ‘nine million British cats brought home 92 million prey items over a five-month period. A large proportion of domestic cats are found in urban situations, and increasing urbanisation is likely to lead to increased cat predation.’ (URS Habitats Regulations Assessment for WODC, 2015 – effects of urbanisation, including roads, fly-tipping et al.) Not good news for the high-value wildlife population in and around City Farm. The proximity of many more domestic cats, and dogs, would threaten the breeding populations of ground-nesting birds such as Lapwing and Skylark in particular.
Local Plans and ancient woodland – Forestry Commission approach

The Forestry Commission is not in a position to input into the consultation process for Local Plans. However, the information below is provided to assist you in assessing the appropriateness of sites for future development, and to highlight opportunities for achieving your renewable energy obligations.

A summary of Government policy on ancient woodland

Section 40 – “Every public authority must, in exercising its functions, have regard, so far as is consistent with the proper exercise of those functions, to the purpose of conserving biodiversity”.

Paragraph 118 – “planning permission should be refused for development resulting in the loss or deterioration of irreplaceable habitats, including ancient woodland and the loss of aged or veteran trees found outside ancient woodland, unless the need for, and benefits of, the development in that location clearly outweigh the loss”.

This Guidance supports the implementation and interpretation of the National Planning Policy Framework. This section outlines the Forestry Commission’s role as a non-statutory consultee [http://www.forestry.gov.uk/forestry/INFO-9BUH7N] on “development proposals that contain or are likely to affect Ancient Semi-Natural woodlands or Plantations on Ancient Woodlands Sites (PAWS) [as defined and recorded in Natural England’s Ancient Woodland inventory [http://www.gis.naturalengland.org.uk/pubs/gis/tech_aw.htm], including proposals where any part of the development site is within 500 metres of an ancient semi-natural woodland or ancient replanted woodland, and where the development would involve erecting new buildings, or extending the footprint of existing buildings”.

It notes that ancient woodland is an irreplaceable habitat, and that, in planning decisions, Plantations on Ancient Woodland Sites (PAWS) should be treated equally in terms of the protection afforded to ancient woodland in the National Planning Policy Framework. It highlights the Ancient Woodland Inventory as a way to find out if a woodland is ancient.

The Forestry Commission has prepared joint standing advice [https://www.gov.uk/guidance/ancient-woodland-and-veteran-trees-protection-surveys-licences] with Natural England on ancient woodland and veteran trees which we refer you to in the first instance. This advice is a material consideration for planning decisions across England. It
explains the definition of ancient woodland, its importance, ways to identify it and the policies that relevant to it. It also provides advice on how to protect ancient woodland when dealing with planning applications that may affect ancient woodland. It also considers ancient wood-pasture and veteran trees.

The Standing Advice website will provide you with links to Natural England’s Ancient Woodland Inventory [http://www.gis.naturalengland.org.uk/pubs/gis/tech_aw.htm], assessment guides and other tools to assist you in assessing potential impacts. The assessment guides sets out a series of questions to help planners assess the impact of the proposed development on the ancient woodland. Case Decisions demonstrates how certain previous planning decisions have taken planning policy into account when considering the impact of proposed developments on ancient woodland. These documents can be found on our website [http://www.forestry.gov.uk/forestry/infid-9hbkj4].

Page 24 “Areas of woodland are material considerations in the planning process and may be protected in local authority Area Plans. These plans pay particular attention to woods listed on the Ancient Woodland Inventory and areas identified as Sites of Local Nature Conservation Importance SLNCIs).

Page 10 “The existing area of ancient woodland should be maintained and there should be a net increase in the area of native woodland”.

Paragraph 2.53 - This has a “renewed commitment to conserving and restoring ancient woodlands”.

Paragraph 2.56 – “The Government is committed to providing appropriate protection to ancient woodlands and to more restoration of plantations on ancient woodland sites”.

Paragraph 2.16 - Further commitments to protect ancient woodland and to continue restoration of Plantations on Ancient Woodland Sites (PAWS).

Renewable & low carbon energy

The resilience of existing and new woodland is a key theme of the Forestry Commission’s work to Protect, Improve and Expand woodland in England we will continue to work with Forestry / Woodland owners, agents, contractors and other Stakeholders to highlight and identify, pests and diseases and to work in partnership to enable Woodlands and Forests are resilient to the impacts of Climate Change.

Woodfuel and timber supplies continues to be an opportunity for local market growth whilst also enabling woodlands to be brought back into active management.
Flood risk
The planting of new riparian and floodplain woodland, can help to reduce diffuse pollution, protect river morphology, moderate stream temperature and aid flood risk management, as well as meet Biodiversity Action Plan targets for the restoration and expansion of wet woodland.

The Forestry Commission is keen to work in partnership with Woodland / Forest Stakeholders to develop opportunities for woodland creation to deliver these objectives highlighted above.

In the wider planning context the Forestry Commission encourages local authorities to consider the role of trees in delivering planning objectives [http://www.forestry.gov.uk/forestry/infd-9asbjw] as part of a wider integrated landscape approach. For instance through:

- the inclusion of green infrastructure [http://planningguidance.communities.gov.uk/blog/guidance/natural-environment/biodiversity-ecosystems-and-green-infrastructure/] (including trees and woodland [http://www.forestry.gov.uk/forestry/BEEH-A6LMEZ]) in and around new development; and
- the use of locally sourced wood in construction and as a sustainable, carbon lean fuel [http://www.forestry.gov.uk/communitybiomass].

Regarding the importance of habitat connectivity, it is evident that the Garden Village will substantially disrupt both habitat connectivity and biodiversity during the ten years of construction, and, despite claims to the contrary, will clearly affect it adversely afterwards, not least because of the addition of so many new roads. As noted in your paragraph 8.13, there should “not be any localised adverse effects resultant from construction or increased road trips within 200 metres of the European sites”. City Farm is now recognised as a site of European importance for arable plants, and part of it, immediately to the north of the Garden Village, is also a Local Wildlife Site. Furthermore, Millennium Wood (Eynsham Wood, owned by The Woodland Trust) looks as though it will be entirely cut off from connectivity.

The Habitats Regulations Assessment 2016 notes, regarding “the delivery of 15,590 new dwellings within and around the Main Service Centres, Rural Service Centres and Villages”, that the “quantum and distribution of new dwellings has clear implications for potential impacts on European sites”.

(Figure 8.4 is incomplete, because it does not show the City Farm Site of European Importance for Arable Plants, which could also be added in future to the Conservation Target Areas shown in Figure 8.3.)

The plans for improvements to Conservation Target Areas are pretty vague and seem no more than an aspiration rather than a guaranteed commitment.
For example, after many re-writes of this plan I am still no clearer as to what exactly you intend to do in the Shill Brook CTA to make ecological improvements, where the funding would come from, which land owners you would work with and which if any ngos ,such as the Wildlife Trusts you may work with on these plans.

Considering how much agricultural land is being used for housing and employment at Carterton, Witney, Chipping Norton, Eynsham and elsewhere, I believe you need a detailed strategic action plan on mitigating the loss of habitat for farmland specialist species. Farmland birds have suffered enormous declines and many species are already red-listed, this further loss...
and fragmentation of habitat within WODC boundaries needs to be looked at if you are to meet your biodiversity obligations.

Where are the plans for new woodlands or nature reserves or country parks to meet the needs of the 15,000 plus new households? The plans for green infrastructure need some larger strategic sites added, you can’t just rely on existing green sites and then add little parks etc into each development, you require a much bolder vision.

Not sound
This figure is incomplete, because it does not show the City Farm Site of European Importance for Arable Plants, which could also be added in future to the Conservation Target Areas shown in Figure 8.3.

MIN, Para 8.48
Not sound
Shouldn’t the Garden Village site, and the site to the west of Eynsham, both have Level 2 or Level 3 SFRAs (Strategic Flood Risk Assessments)? Level 1 is surely inadequate, even if it has been ‘revisited’.

MIN, para 8.50
Not sound
The Local Plan mentions ‘climate change’ about 25 times. But one wonders whether this is rather a formulaic use of the term. With regard to flood risk in particular, the principle should presumably be pre-caution rather than re-action. I am not convinced the Local Plan carries that commitment.

The West Oxfordshire Level 1 SFRA 2016 makes it clear, from its maps, that the northern fringe and the whole eastern section of the Garden Village are at substantial risk of flooding from watercourses, groundwater or surface...
water. The document says that Eynsham is one of the settlements affected by the Evenlode and Windrush flood plains; that the potential for groundwater flooding is greater in Carterton, Witney, Eynsham and Woodstock; that there is an Environment Agency Flood Warning Area from Eynsham Mill to Cassington Mill (Table 9.2 – Evenlode), making the Garden Village the only proposed development site directly adjacent to such a Warning Area; that there is a smaller localised area of Functional Flood Plain along Chil Brook; and that the southern part of the Eynsham-Woodstock Sub-Area is dominated by high susceptibility (75%+) to flooding from groundwater, where the land is a natural low-lying valley bottom. Given that paragraph 8.2 of the SFRA states that ‘residential elements should be restricted to areas at lower probability of flooding’, it begins to look as though the two proposed sites next to Eynsham are not suited to large-scale development. After all, in any development of this kind, 30%–40% is considered reasonable for the impermeable area of the site (North Witney Level 2 SFRA). Where is the water that would be absorbed by that area going to?

Likewise, the West Oxfordshire Water Cycle Study of November 2016 points out that: ‘The urbanisation of large areas of land alters the way in which rainfall can drain away and has the potential to increase the rate and amount of water that enters watercourses causing an increase in flood risk.’

Now add climate change to this mix of flood risk ingredients.

8.12 Biodiversity

8.16 ‘the landscape context of the site and the habitat connectivity beyond its boundaries should be taken into account.’ This should apply to the highly biodiverse 650 acre organic farm of Robert Crocker on the garden village site, and his valuable work on extensive wildlife rich hedgerows to make wildlife connections. The value of this site and the impact of development should be rigorously tested and full mitigation proposed. It does not appear on Figure 8.3 or 8.4. Is information up to date?

Local Plans and ancient woodland – Forestry Commission approach

The Forestry Commission is not in a position to input into the consultation process for Local Plans. However, the information below is provided to assist you in assessing the appropriateness of sites for future development, and to highlight opportunities for achieving your renewable energy obligations.

A summary of Government policy on ancient woodland

Section 40 – “Every public authority must, in exercising its functions, have regard, so far as is consistent with the proper exercise of those functions, to the purpose of conserving biodiversity”.

National Planning Policy Framework
Paragraph 118 – “planning permission should be refused for development resulting in the loss or deterioration of irreplaceable habitats, including ancient woodland and the loss of aged or veteran trees found outside ancient woodland, unless the need for, and benefits of, the development in that location clearly outweigh the loss”.

This Guidance supports the implementation and interpretation of the National Planning Policy Framework. This section outlines the Forestry Commission’s role as a non-statutory consultee [http://www.forestry.gov.uk/forestry/INFD-9B0UH7N] on “development proposals that contain or are likely to affect Ancient Semi-Natural woodlands or Plantations on Ancient Woodlands Sites (PAWS) [as defined and recorded in Natural England’s Ancient Woodland inventory [http://www.gis.naturalengland.org.uk/pubs/gis/tech_aw.htm] ), including proposals where any part of the development site is within 500 metres of an ancient semi-natural woodland or ancient replanted woodland, and where the development would involve erecting new buildings, or extending the footprint of existing buildings”

It notes that ancient woodland is an irreplaceable habitat, and that, in planning decisions, Plantations on Ancient Woodland Sites (PAWS) should be treated equally in terms of the protection afforded to ancient woodland in the National Planning Policy Framework. | MM380         | Berks, Bucks and Oxon Wildife Trust | BBOWT - Haidrun Breith | Mrs       | Breith            | 775        | > SECTION 8 - ENVIRONMENTAL AND HERITAGE ASSETS > MAIN 69 | We propose minor changes to the wording in para. 8.21 (Main 69):  
"Development proposals directly or indirectly affecting or related to these and other ecologically important areas will need to be appropriately assessed and follow the mitigation hierarchy of avoidance, mitigation and compensation. As such developments will be expected to ensure that any potential harm is avoided. However in exceptional cases when harm cannot be avoided, then the impact on biodiversity will need to be fully mitigated and only as a last resort compensated. Some potential areas of improvement are identified in the Infrastructure Delivery Plan (IDP). In order to ensure there is no net loss of a net gain in biodiversity, the enhancement of biodiversity within developments will be a requirement, for example, habitat creation and provision of features for species."  
We welcome the detail provided in para. 8.22 and recommend the following text to be added to the end of this paragraph:  
Para 8.22 [...]  
Development proposals must clearly demonstrate that an overall net gain in biodiversity is being achieved. The established method for measuring this is through the use of the metric (or Biodiversity Impact Assessment calculator) produced as part of the DEFRA Biodiversity Offsetting guidance or a locally derived guidance as it is currently being developed for Oxfordshire.  
We welcome the inclusion of biodiversity enhancing measures in para 8.23. Para 118 of the NPPF requires local planning authorities to encourage the incorporation of biodiversity in and around developments. However more detail than this will be needed in order to comply with the NPPF policy.  
Either the main document of the Local Plan, or a separate Design Guide, should provide detail on ways in which the above can be achieved, and what the Council expects. The text should emphasise that biodiversity in built development is not only about helping wildlife. It is also about creating a much better environment for people, and also about wider "ecosystem service" benefits to people. There is clear evidence that wildlife habitat in urban areas can also have a highly significant beneficial effect for humans by:  
* reducing the urban heat-island effect in a warming world where summer heatwaves will make any urban areas dominated by tarmac, concrete and bricks (as opposed to street trees, wetlands and other green space) increasingly unbearable and dangerous to health;  
* reducing air pollution, particularly by removing gaseous pollutants from vehicle exhausts, such as nitrogen oxides and particulates from vehicle exhausts that are increasingly shown to be harmful to human health;  
* reducing flood risk, by increasing infiltration and therefore slowing run-off into watercourses.  
BBOWT can provide further detail for a Biodiversity in Built Development section if required. |
Local Plans and ancient woodland – Forestry Commission approach

The Forestry Commission is not in a position to input into the consultation process for Local Plans. However, the information below is provided to assist you in assessing the appropriateness of sites for future development, and to highlight opportunities for achieving your renewable energy obligations.

A summary of Government policy on ancient woodland

Section 40 – “Every public authority must, in exercising its functions, have regard, so far as is consistent with the proper exercise of those functions, to the purpose of conserving biodiversity”.

Paragraph 118 – “planning permission should be refused for development resulting in the loss or deterioration of irreplaceable habitats, including ancient woodland and the loss of aged or veteran trees found outside ancient woodland, unless the need for, and benefits of, the development in that location clearly outweigh the loss”.

This Guidance supports the implementation and interpretation of the National Planning Policy Framework. This section outlines the Forestry Commission’s role as a non-statutory consultee [http://www.forestry.gov.uk/forestry/INFD-98UH7N] on “development proposals that contain or are likely to affect Ancient Semi-Natural woodlands or Plantations on Ancient Woodlands Sites (PAWS) [as defined and recorded in Natural England’s Ancient Woodland inventory [http://www.gis.naturalengland.org.uk/pubs/gis/tech_aw.htm] ), including proposals where any part of the development site is within 500 metres of an ancient semi-natural woodland or ancient replanted woodland, and where the development would involve erecting new buildings, or extending the footprint of existing buildings”.

It notes that ancient woodland is an irreplaceable habitat, and that, in planning decisions, Plantations on Ancient Woodland Sites (PAWS) should be treated equally in terms of the protection afforded to ancient woodland in the National Planning Policy Framework. It highlights the Ancient Woodland Inventory as a way to find out if a woodland is ancient.

| MM380        | Berks, Bucks and Oxon Wildlife Trust | BBOWT - Haidrun Breith | Mrs Breith | 780 | > SECTION 8 - ENVIRONMENTAL AND HERITAGE ASSETS > MAIN 70 | We propose the following changes to the wording of policy EH2 - Biodiversity (Main 70):

Policy EH2 - Biodiversity

The biodiversity of West Oxfordshire shall be protected and enhanced to achieve an overall net gain in biodiversity and minimise impacts on geodiversity, including by:

- giving sites and species of international nature conservation importance and nationally important sites of special scientific interest the highest level of protection from any development that will have an adverse impact;

- requiring a Habitats Regulations Assessment to be undertaken of any development proposal that is likely to have a significant adverse effect, either alone or in combination, on the Oxford Meadows SAC, particularly in relation to air quality and nitrogen oxide emissions and deposition;

- protecting and mitigating for impacts on priority habitats, and protected species and priority species, both their importance individually and as part of a wider network;

- avoiding loss, deterioration or harm to locally important wildlife and geological sites and sites supporting irreplaceable habitats (including ancient woodland and aged or veteran trees), UK priority habitats and priority species, except in exceptional circumstances where the importance of the development significantly and demonstrably outweighs the harm and the harm can be mitigated through appropriate measures and a net gain in biodiversity is secured;

- ensuring development does not prevent the achievement works towards achieving the aims and objectives of the Conservation Target Areas (CTAs) and Nature Improvement Areas (NIAs);

- promoting the preservation conservation, restoration and re-creation of priority habitats, ecological networks and the protection and recovery of priority species populations, particularly within the CTAs and NIAs;

- taking all opportunities to enhance the biodiversity of the site or the locality, especially where this will help deliver networks of biodiversity and green infrastructure and UK priority habitats and species targets and meet the aims of Conservation Target Areas CTAs;

- ensuring that all applications that might adversely affect biodiversity are accompanied by adequate ecological survey information in accordance with BS 42020:2013

- all major and minor applications demonstrating a net gain in biodiversity in a quantifiable way through the use of a Biodiversity Impact Assessment calculator based on that described in the DEFRA Biodiversity Offsetting guidance or a suitably amended version.

- All development retaining features of biodiversity value on site and incorporating biodiversity enhances features.

All developments will be expected to provide towards the provision of necessary enhancements in areas of biodiversity importance. |
| MM64         | Transition              | Rosalind Kent    | Mrs Kent        | 1187       | > SECTION 8 - ENVIRONMENTAL | Green TEA recommends the planting of more native, forest-scale trees in Eynsham, and, in addition, apple and nut trees, rather than small new ornamentals. This would provide a source of food locally if importation becomes As well as Policy EH2 should for clarity be changed to 'Biodiversity and Geodiversity'. |
Local Plans and ancient woodland – Forestry Commission approach

The Forestry Commission is not in a position to input into the consultation process for Local Plans. However, the information below is provided to assist you in assessing the appropriateness of sites for future development, and to highlight opportunities for achieving your renewable energy obligations.

A summary of Government policy on ancient woodland

Section 40 – “Every public authority must, in exercising its functions, have regard, so far as is consistent with the proper exercise of those functions, to the purpose of conserving biodiversity”.

Paragraph 118 – “planning permission should be refused for development resulting in the loss or deterioration of irreplaceable habitats, including ancient woodland and the loss of aged or veteran trees found outside ancient woodland, unless the need for, and benefits of, the development in that location clearly outweigh the loss”.

This Guidance supports the implementation and interpretation of the National Planning Policy Framework. This section outlines the Forestry Commission’s role as a non-statutory consultee [http://www.forestry.gov.uk/forestry/INFD-98UH7N] on “development proposals that contain or are likely to affect Ancient Semi-Natural woodlands or Plantations on Ancient Woodlands Sites (PAWS) [as defined and recorded in Natural England's Ancient Woodland inventory [http://www.gis.naturalengland.org.uk/pubs/gis/tech_aw.htm]], including proposals where any part of the development site is within 500 metres of an ancient semi-natural woodland or ancient replanted woodland, and where the development would involve erecting new buildings, or extending the footprint of existing buildings”.

It notes that ancient woodland is an irreplaceable habitat, and that, in planning decisions, Plantations on Ancient Woodland Sites (PAWS) should be treated equally in terms of the protection afforded to ancient woodland in the National Planning Policy Framework. It highlights the Ancient Woodland Inventory as a way to find out if a woodland is ancient.

The Forestry Commission has prepared joint standing advice [https://www.gov.uk/guidance/ancient-woodland-and-veteran-trees-protection-surveys-licences] with Natural England on ancient woodland and veteran trees which...
we refer you to in the first instance. This advice is a material consideration for planning decisions across England. It explains the definition of ancient woodland, its importance, ways to identify it and the policies that relevant to it. It also provides advice on how to protect ancient woodland when dealing with planning applications that may affect ancient woodland. It also considers ancient wood-pasture and veteran trees.

The Standing Advice website will provide you with links to Natural England's Ancient Woodland Inventory [http://www.gis.naturalengland.org.uk/pubs/gis/tech_aw.htm], assessment guides and other tools to assist you in assessing potential impacts. The assessment guides sets out a series of questions to help planners assess the impact of the proposed development on the ancient woodland. Case Decisions demonstrates how certain previous planning decisions have taken planning policy into account when considering the impact of proposed developments on ancient woodland. These documents can be found on our website [http://www.forestry.gov.uk/forestry/infd-9hbjk4].

Page 24 "Areas of woodland are material considerations in the planning process and may be protected in local authority Area Plans. These plans pay particular attention to woods listed on the Ancient Woodland Inventory and areas identified as Sites of Local Nature Conservation Importance SLNCS).

Page 10 "The existing area of ancient woodland should be maintained and there should be a net increase in the area of native woodland".

Paragraph 2.53 - This has a “renewed commitment to conserving and restoring ancient woodlands”.

Paragraph 2.56 – “The Government is committed to providing appropriate protection to ancient woodlands and to more restoration of plantations on ancient woodland sites”.

Paragraph 2.16 - Further commitments to protect ancient woodland and to continue restoration of Plantations on Ancient Woodland Sites (PAWS).

Renewable & low carbon energy

The resilience of existing and new woodland is a key theme of the Forestry Commission’s work to Protect, Improve and Expand woodland in England we will continue to work with Forestry / Woodland owners, agents, contractors and other Stakeholders to highlight and identify, pests and diseases and to work in partnership to enable Woodlands and Forests are resilient to the impacts of Climate Change.

Woodfuel and timber supplies continues to be an opportunity for local market growth whilst also enabling...
woodlands to be brought back into active management.

Flood risk

The planting of new riparian and floodplain woodland, can help to reduce diffuse pollution, protect river morphology, moderate stream temperature and aid flood risk management, as well as meet Biodiversity Action Plan targets for the restoration and expansion of wet woodland.

The Forestry Commission is keen to work in partnership with Woodland / Forest Stakeholders to develop opportunities for woodland creation to deliver these objectives highlighted above.

In the wider planning context the Forestry Commission encourages local authorities to consider the role of trees in delivering planning objectives [http://www.forestry.gov.uk/forestry/infd-9asbjw] as part of a wider integrated landscape approach. For instance through:

* the inclusion of green infrastructure [http://planningguidance.communities.gov.uk/blog/guidance/natural-environment/biodiversity-ecosystems-and-green-infrastructure/] (including trees and woodland [http://www.forestry.gov.uk/forestry/BEEH-A6LMEZ] ) in and around new development; and

* the use of locally sourced wood in construction and as a sustainable, carbon lean fuel [http://www.forestry.gov.uk/communitybiomass].

I. A diverse network of accessible, multi-functional green infrastructure across the district will be protected and enhanced for its biodiversity, recreational, accessibility, health and landscape value and for the contribution it makes towards combating climate change.

II. Development proposals should:

(a) Avoid the loss, fragmentation or functionality of the green infrastructure network, including within the built environment, such as access to urban waterways;

(b) Maximise opportunities for improvement to the green infrastructure network in accordance with the Council's Green Infrastructure Plan, its Open Spaces Strategy, Playing Pitch strategy, Living Landscape Schemes, locally identified Nature Improvement Areas and any future relevant plans and programmes as appropriate;

(c) Maximise opportunities for urban greening such as through appropriate landscaping schemes and the planting of street trees; |

<td>&gt; SECTION 8 - ENVIRONMENTAL AND HERITAGE ASSETS &gt; MAIN 75</td>
<td>West Oxfordshire falls within an area of demonstrable ‘water stress’ and planned growth and other pressures are forecast to lead to a supply demand deficit in the next ten years. The West Oxfordshire Water Cycle Study: Phase 1 Scoping (2016), in assessing the impact of the Local Plan upon the water environment and water infrastructure provision, concludes there is strong justification for West Oxfordshire to have a water efficiency policy in line with the Building Regulations optional requirement of 110l/h/d. This will support Thames Water’s resource management planning and help to achieve more sustainable water usage.’ Acknowledging that this is an area of ‘water stress’ and that the landscape is threatened by poor management of drainage maintenance, also either cultivation of flood plain pastures or excessive development on the flood plain, I fail to see how building properties designed to ‘manage water use’ will in any way address the main problems. I also note there is no mention of the existing sewage problems which must be exacerbated by adding more properties to the system. Designing sewage treatment on new developments does not solve old problems. The system in Hailey Parish that was built over 75 years ago to manage a population half its current size and that included its own treatment works which has since been closed. Every time flooding occurs the sewage system is breached allowing ‘foul water’ into the rain water system and thence into the rivers. Do the council intend to replace all the sewer pipes and increase the capacity of the treatment works so that it no longer smells or are they expecting the developers to undertake or pay for this task as that is what I consider needs doing. I have spoken to a local water engineer, who installed his own water treatment center in his garden as he said that fish had become infertile due to oestrogen in the water and many had died as a result of the water pollution from the treatment works. The standards had been considerably reduced as a result of adopting standards set by the EU as opposed to those previously used. Finally I must add that allowing the residents a response time of just 6 weeks, prior to Christmas when it must be</td>

| MM491 Crest Strategic Projects Crest Strategic Projects | Crest Strategic Projects Crest Strategic Projects | - Crest Strategic Projects | 1432 | > SECTION 8 - ENVIRONMENTAL AND HERITAGE ASSETS > MAIN 80 | Main 80: Paragraph 8.85  
5.1 The guidance within this paragraph follows that set out in the NPPF (para.132), although it is notable that the wording has changed to reduce the threshold for allowing development where harm to designated heritage assets arises. Formerly the Plan provided that development that caused harm to designated assets should be allowed only in exceptional circumstances and where a clear and convincing justification on the grounds of public benefits exists. The test is now relaxed (in the context of this Plan), although the clear and convincing justification for harm on the grounds of public benefit is retained, in line with the NPPF.  
5.2 This approach is considered to be sound, although as is set out elsewhere in these representations, the Council has not followed its own advice in selecting draft allocations for inclusion in the Local Plan. As a consequence this paragraph is not consistent with the overall strategy that the Council has adopted. |
| MM451         | English Heritage        | Historic England| Mr               | Small             | 1068       | > SECTION 8 - ENVIRONMENTAL AND HERITAGE ASSETS > MAIN 81 | Historic England welcomes and supports Proposed Main Modification MAIN81 for the replacement of “preserve” with “conserve”, which is more consistent with the National Planning Policy Framework and the addition of new paragraph 8.90a on heritage at risk as part of the positive strategy for conserving and enjoying, and clear strategy for enhancing, the historic environment as required by the Framework. |
| MM626 Charlbury Conservation Area Advisory Committee Juliet West Mrs West | Charlbury Conservation Area Advisory Committee Juliet West Mrs West | 1424 | > SECTION 8 - ENVIRONMENTAL AND HERITAGE ASSETS > MAIN 81 | Para 8.88  
The meaning of the wording in relation to Conservation Areas is unclear. Is this paragraph intended to mean that new development in Conservation Areas should conserve or enhance the area itself or only its setting? Surely it should do both? ‘Conserve’ is the term used in the NPPF but the Planning(Listed Buildings and Conservation Areas) Act 1990 Part II says ‘preserve’ throughout. |
| MM491 Crest Strategic Projects Crest Strategic Projects | Crest Strategic Projects Crest Strategic Projects | - Crest Strategic | 1441 | > SECTION 8 - ENVIRONMENTAL | Main 81: Paragraphs 8.88-8.90a |
5.3 With regard to the Council's approach to treatment and assessment of the historic environment as part of the plan-making process GL Hearn draws attention to the submission from Orion Heritage that supports these representations23 (Appendix 5). It is also necessary to note that Historic England raised objections to the pre-submission Local Plan, which are captured within the Statement of Common Ground between the Council and Historic England, dated 22 October 2015. This is the most up to date publicly stated position on heritage matters arising from the emerging Local Plan policies, benefiting from the input of Historic England.

5.4 In response to the pre-submission consultation exercise Historic England (HE) recorded that the Plan did not include a positive strategy for the conservation/enhancement of the historic environment and as such was unsound. The SoCG advises that HE maintains its objections to 8.88-8.92, and while the modifications appear to have addressed certain of the points raised, HE stated in their representations:

The Plan should make explicit the historic environment evidence base on which it is based or, if that evidence base does not exist, then it should be developed.

5.5 The Council's response within the SoCG is that such information is set out at paragraph 8.89, which 'gives a flavour of the information sources available'. There are no modifications to this paragraph that address the HE objection. This confirms the position that the Council has carried out no proper evaluation of the historic environment as part of the evidence gathering that has informed the Local Plan, contrary to the advice contained within the NPPF (paragraph 169).

5.6 Given the stated importance of the historic environment in West Oxfordshire it is surprising that the Council has not undertaken a comprehensive review of the heritage assets as part of its evidence gathering to inform policy making and published this as part of the evidence base.

management plans, the completion of a comprehensive list of locally important non-designated assets (and a commitment to its regular updating), the use of Article 4 Directions where appropriate within conservation areas etc. We note (and welcome and support) the positive measures identified in paragraph 8.92, but consider that these should be identified in the actual policy itself (as, for example, in Policy EH2 of the Plan on biodiversity).

It is our understanding from the Council’s Local Development Scheme that the Council does not intend to prepare a DPD with more detailed development management policies to supplement Policy EH7. We note from Appendix 1 of the Plan that Policy CP23 will replace Policies BE5, BE8, BE11 and BE12 in the adopted Local Plan, covering Conservation Areas, the setting of listed buildings, Historic Parks and Gardens and Archaeology. If this is the case, and it is not intended to have any more detailed development management policies for the historic environment or heritage assets, then we do not consider Policy EH7 to be adequate as either a strategic and detailed policy.

| MM455 | Commercial Estates Group | Commercial Estates Group | - | Commercial Estates Group | 1155 | > SECTION 8 - ENVIRONMENTAL AND HERITAGE ASSETS > MAIN 83 | Main 83  
Policy EH7 – Historic Environment  
We object to policy EH7 as it does not currently distinguish between setting and significance. The difference of which is set out below:  
Distinction between ‘significance’ and ‘setting’  
Annex 2 (Glossary) of the 2012 NPPF sets out the following definition of significance: Significance (for heritage policy): The value of a heritage asset to this and future generations because of its heritage interest. That interest may be archaeological, architectural, artistic or historic. Significance derives not only from a heritage asset’s physical presence, but also from its setting.  
Setting is defined as: 'The surroundings in which a heritage asset is experienced. Its extent is not fixed and may change as the asset and its surroundings evolve. Elements of a setting may make a positive or negative contribution to the significance of an asset, affect the ability to appreciate that significance or may be neutral.' The NPPF is clear that setting is important to the extent that it enables an appreciation of significance. It may contribute positively to an asset’s significance, may detract from that significance or may have a neutral role in significance. Setting is not an asset in itself, that is, of intrinsic value (unless it is designated in its own right).  
The NPPG provides further guidance in relation to setting at paragraph 014 (Reference ID 18a-014-20140306):  
The “setting of a heritage asset” is defined in the Glossary of the National Planning Policy Framework. A thorough assessment of the impact on setting needs to take into account, and be proportionate to, the significance of the heritage asset under consideration and the degree to which proposed changes enhance or detract from that significance and the ability to appreciate it.  
Setting is the surroundings in which an asset is experienced, and may therefore be more extensive than its curtilage. All heritage assets have a setting, irrespective of the form in which they survive and whether they are designated |
The extent and importance of setting is often expressed by reference to visual considerations. Although views of or from an asset will play an important part, the way in which we experience an asset in its setting is also influenced by other environmental factors such as noise, dust and vibration from other land uses in the vicinity, and by our understanding of the historic relationship between places. For example, buildings that are in close proximity but are not visible from each other may have a historic or aesthetic connection that amplifies the experience of the significance of each.

The contribution that setting makes to the significance of the heritage asset does not depend on there being public rights or an ability to access or experience that setting. This will vary over time and according to circumstance. When assessing any application for development which may affect the setting of a heritage asset, local planning authorities may need to consider the implications of cumulative change. They may also need to consider the fact that developments which materially detract from the asset’s significance may also damage its economic viability now, or in the future, thereby threatening its ongoing conservation.

Historic England has published a guidance note: The Setting of Heritage Assets (GPA3) (Historic England, July 2015). GPA3 comprises Historic England’s advice on how one assesses the effects of development in the setting of an asset on its significance or cultural value. The guidance note confirms that setting is not of itself a heritage asset, nor a heritage designation (paragraph 9, page 4). A setting’s importance lies in its contribution to significance.

Setting may or may not contribute to an appreciation of significance. Its value lies in contributing to our ability to appreciation cultural significance. If setting does not make any such contribution, then a change to it will not cause harm.

Accordingly, even a major change to an element of setting does not in principle cause harm, nor is it unacceptable. What matters are the nature of the contribution and the impact on the particular value of an asset.

| Policy EH? (para? onwards) uses the term ‘considerable weight’ as well as ‘great weight’ which introduces a hierarchy in the degree of weight to be given to conserving the significance of different heritage assets. ‘Great weight’ is reserved for monuments (scheduled or not) and all Registered Parks and Gardens, while World Heritage Sites, listed buildings and Conservation Areas merit only ‘considerable weight’. This does not reflect para 132 of the NPPF which
1) uses the term ‘great weight’ for all heritage assets
2) states that World Heritage Sites, grade I and II* listed buildings and grade I and II* Registered Parks and Gardens are assets of the highest significance.

Para 7 of Policy EH7 says that ‘considerable weight’ will be given to conserving the universal values for which Blenheim Palace and Park is inscribed as a World Heritage Site. This is inconsistent with Policy EW1 Blenheim

| MM745        | Area Advisory Committee | Richard House  | Mr               | House             | 1797      | AND HERITAGE ASSETS > MAIN 83 | World Heritage Site which says that ‘great weight’ will be given to the conservation and enhancement of the Outstanding Universal Value etc. when assessing the impact of a proposed development on the OUV.  
‘Great weight’ is the wording used in para 132 of the NPPF which says that ‘the more important the asset, the greater the weight should be.’ Para 132 includes World Heritage Sites among the designated assets ‘of the highest significance’ when assessing harm or loss.  
9.1 Policy EH7 regarding the Historic Environment is proposed to be modified to improve clarity and consistency with national policy. Gladman considers that the proposed wording fails to achieve that objective. Firstly, the policy is inconsistent with the NPPF because as currently worded, the policy states that proposals that would lead to any harm to designated assets should be refused unless the public benefit would outweigh that harm, whereas the NPPF provides a very clear process where there is less than substantial and substantial harm and the other aspects within Section 12 of the NPPF, that should be utilised instead.  
9.2 Secondly, the policy fails to differentiate between designated and non-designated assets. As set out in paragraph 135 of the NPPF, the Policy should make clear that where non-designated heritage assets are concerned, a balanced judgement should be made “having regard to the scale of any harm or loss and the significance of the heritage asset.” |
| MM61         | Gladman Developments Limited | Mr | Pearce | 189 | > SECTION 8 - ENVIRONMENTAL AND HERITAGE ASSETS > MAIN 83 | "Considerable weight and importance will be given to conserving the significance of listed buildings, both with regard to their fabric and their settings.” Let’s hope so. So far, the listed buildings in City Farm have gone unacknowledged. For them, the most important word is "settings", which new development should apparently "conserve or enhance" (paragraph 8.88).  
City Farm’s listed buildings have a rural setting, and one which can be appreciated from the footpaths to the west and north in particular, but also from the east and south. Historic England’s Good Practice Advice in Planning (GPA3) has this to say about "The Setting of Heritage Assets":  
“Negative change could include severing the last link between an asset and its original setting” (the Garden Village will sever all links with City Farm’s original setting).  
“Significance is not dependent on numbers of people visiting it; this would downplay . . . the importance of setting to a local community who may be few in number” (we may be few in number but please don’t ignore us).  
“In particular, it would be helpful for local planning authorities to consider at an early stage whether development affecting the setting of a heritage asset can be broadly categorised as having the potential to enhance or harm the significance of the asset through . . . the scale, proximity or placement of development” (the Garden Village, as proposed, is large, very close and placed entirely around the listed buildings of City Farm).  
The Historic England checklist for assessment of effect of development includes: “degree to which location will physically or visually isolate asset”; “position in relation to key views”; “introduction of movement or activity”; “noise, odour, vibration, dust, etc”; “light effects and light spill”; “change to general character” (eg, suburbanising or industrialising); and “changes to land use, land cover, tree cover”. Clearly much of this checklist is directly relevant to City Farm and the Garden Village. Can we be assured that these criteria will be sufficiently accommodated? I don’t see how that is possible. |
| MM784        | North Witney Land Consortium | North Witney Land | - | 2159 | > SECTION 8 - ENVIRONMENTAL AND HERITAGE ASSETS > MAIN 83 | Policies of the Plan should not seek to replicate those contained within the NPPF and as such it is considered that the current proposed Policy wording is unnecessary. Should the Council wish to retain the Policy, it is important that the requirements are consistent with those set out in the NPPF in order to be sound. Paragraph 133 of the |

<td>MIN, Para 8.70 Not sound The likely destruction of the David Einig Contracting (DEC) aggregate recycling site by the construction of the Garden Village is illogical and the opposite of sustainable. In particular, it makes a mockery of the statement that use should be made of ‘alternatives to primary land-won aggregates’. It is odd that the existence of DEC has been consistently ignored. MAIN 83, Policy EH7 Not sound ‘Considerable weight and importance will be given to conserving the significance of listed buildings, both with regard to their fabric and their settings’. Let’s hope so. So far, the listed buildings in City Farm have gone unacknowledged. For them, the most important word is ‘settings’, which new development should apparently ‘conserve or enhance’ (Para 8.88). City Farm’s listed buildings have a rural setting, and one which can be appreciated from the footpaths to the west and north in particular, but also from the east and south. Historic England’s Good Practice Advice in Planning (GPA3) has this to say about ‘The Setting of Heritage Assets’: ‘Negative change could include severing the last link between an asset and its original setting’ (the Garden Village will sever all links with City Farm’s original setting). ‘Significance is not dependent on numbers of people visiting it; this would downplay . . . the importance of setting to a local community who may be few in number’ (we may be few in number but please don’t ignore us). ‘In particular, it would be helpful for local planning authorities to consider at an early stage whether development affecting the setting of a heritage asset can be broadly categorised as having the potential to enhance or harm the significance of the asset through . . . the scale, proximity or placement of development’ (the Garden Village, as proposed, is large, very close and placed entirely around the listed buildings of City Farm). The Historic England checklist for assessment of effect of development includes: ‘degree to which location will physically or visually isolate asset’; ‘position in relation to key views’; ‘introduction of movement or activity’: ‘noise, odour, vibration, dust, etc’; ‘light effects and light spill’; ‘change to general character’ (eg, suburbanising or industrialising); and ‘changes to land use, land cover, tree cover’. Clearly much of this checklist is directly relevant to City Farm and the Garden Village. Can we be assured that these criteria will be sufficiently accommodated? I don’t see how that is possible.</td>
</tr>
</tbody>
</table>
Policy EH7 states "Considerable weight and importance will be given to conserving the significance of listed buildings, both with regard to their fabric and their setting". It is self evident that the proposal to surround the listed farm buildings at City Farm with urban development will remove their agricultural surroundings and destroy their "setting" in contravention of this policy.
### This document is a response to West Oxfordshire’s consultation on its proposed modifications to its Local Plan. It has been prepared by Dominic Lawson Bespoke Planning Ltd on behalf of Socially Conscious Capital. Socially Conscious Capital ("the applicant") are promoting the Land at Curbridge ("the site") for allocation in the Local Plan. The applicant will also be preparing an outline planning application for c110 homes, to be worked up in consultation with local stakeholders, for submission in 2017.

The site 'Land at Curbridge' provides the Council with a superb opportunity to increase its planned housing numbers by 110 dwellings at a site which is suitable, sustainable and deliverable. The site is the land in the central triangle of Curbridge. The land is designated as open countryside in the West Oxfordshire Local Plan 2011 and is in flood zone 1 (very low risk of flooding). There are no other statutory designations affecting the site. The village of Curbridge is located approximately 1.5 miles to the south west of the town centre of Witney.

The site that has been identified and can improve connectivity and support the cohesiveness of the village through a sensitively planned extension within the core of the village, whilst also preserving a broad, green corridor along the Elm Bank Ditch. Although separated by the A40, the land at Curbridge would be a self-sufficient development opportunity in a sought after location. The land at Curbridge is a short cycle ride from the centre of Witney. There is a continuous paved footpath from Curbridge to Witney over the A40 bypass, along the western edge of the A4095.

A careful framework for development that follows and enhances natural desire lines across the village would represent the natural and organic growth of the settlement. Its growth will support the social sustainability and existing facilities of the village whilst providing new homes and amenities within a sought after location. The site 'Land at Curbridge' represents an excellent opportunity for the Council to plan proactively for housing delivery as the site is not constrained by any technical or policy impediments preventing its allocation.

The Village of Curbridge is located approximately 1.5 miles to the south west of the town centre of Witney. The majority of buildings in the village date from the C20th though its origins as a settlement are much earlier. Since the mid C19th, Curbridge has been a civil parish and until 2001 it included the industrial and residential estates to the west of Witney, bounded to the north by Burford Road. The civil parish is now half the size that it was at the beginning of the 20th, its area has reduced as the boundaries of Witney have grown but it still includes the small village of Lew 1.5 miles to the south.

The form of the village of Curbridge is defined by three routes that make up a triangle (each side approximately 500m in length), with a secondary nucleus to the south where the village pub is located. The name of the village on Ordnance Survey maps from the C19th to the present is typically inscribed within this triangle. The grouping along the east-west road from Ducklington to Brize Norton (Main Road) was followed by development along Well Lane in the C20th, establishing a continuous connection between the west end of the village and the nucleus to the south.

In terms of amenities the village is served by a church, a village hall and a pub. There is a play park at the northern end of Well Lane and a recreation field to the south adjacent to the pub. Formerly in the C19th and into the C20th there was additionally a school, a post office, a butcher, a smithy, a Methodist chapel and another pub.

The site is not categorised under any statutory (or local) landscape, nature or heritage designations. There is
an area of deciduous woodland to the north of Main Road that is included in the Deciduous Woodland Inventory. The nearest SSSIs are to the west of Minster Lovell (1.5 miles) and to the east of Ducklington (2 miles). There are 3 Grade II listed buildings to the south of Main Road, each of which is well screened from the proposed development site.

The Bampton Road (A4095) which runs along the eastern boundary of the village is a historic route which was formerly marked by toll houses to the north and south of the village. A detailed history of the village is contained in A History of the County of Oxford (Volume 14, Bampton Hundred, Part Two). It suggests that the original nucleus of the village may have been at the east end of the main street. It states: “it seems likely that the Witney—Bampton road once entered rather than bypassed Curbridge village, its line perhaps preserved in the lane running from Manor Farm to the village street, and continuing southwards as a footpath (now blocked by a house) to rejoin the Bampton road.”

There has been very little development in recent decades despite the expansion of Witney. The last principal phase of the growth of the village was in the 1970s along Well Lane, with occasional infill and building renewal subsequently among pre-existing houses.

Curbridge is an 8-minute cycle ride from the centre of Witney. There is a continuous paved footpath from Curbridge to Witney over the A40 bypass, along the western edge of the A4095. There are buses from the village (Main Road) to Oxford via Witney every 20 minutes at peak times and every half hour at other times. The village is well located in terms of employment, including the nearby local employment centres of Witney and Brize Norton. The majority of the village is contained within a 5-minute walkable catchment of 800m diameter, a recognised, traditional measure of urban form, which assumes reasonable internal connectivity to function as a cohesive whole.

The proposed site is contained within a gentle dip in the landscape so that it is visually contained; both Well Lane and Main Road are at a slightly higher elevation. The site is also screened by trees and hedges to the south and is broken up by vegetation along the Elm Bank Ditch watercourse.

A footpath crosses the site which may follow the original line of the Bampton Road. This is constrained and narrow where it meets Main Road between two houses and there is an opportunity to provide a clearer, wider pedestrian connection 40m to the west, closer to the village hall. This north – south pedestrian link is a natural desire line, providing a connection to the pub and recreation field to the south, and the church, village hall and bus stops along Main Road to the north. The alternative pedestrian route along the side of the A4095 is longer and more isolated. Originally, as shown on maps prior to 1945, there was a second footpath from north to south, emerging on Well Lane beside the existing play park.

The land at Curbridge provides the Council with the opportunity to allocate a site for housing that will increase its planned housing numbers by 110 dwellings. The site that has been identified can improve connectivity and support the cohesiveness of the village through a sensitively planned extension within the core of the village, whilst also preserving a broad, green corridor along the Elm Bank Ditch.

In addition to an expanded village green around the existing play park, there may be an opportunity to provide a village shop, additional homes for the elderly and recreational facilities such as tennis courts, with proposals welcomed from the community. The proposed development would partially screen views to and from the A4095 from post-WWII development within the village. The Grade II listed Thatched Cottage and pre-C20th cottages at the eastern end of the village would retain their open aspect and rural setting.
The urban form of the proposed development would be relatively compact, in keeping with the older parts of the village and making best use of the land, whilst providing for a mix and variety of house types that distinctively belong with the traditional patterns of the area. These homes would in general have parking provided to the rear to ensure that the new streets and lanes are welcoming, actively fronted and not dominated by resident car parking. The principal vehicular access would be from the Bampton Road with the potential for a secondary access from Well Lane. Streets will be designed so as to prioritise the pedestrian over the car user.

Careful landscape design will also ensure that the proposed development beds comfortably and naturally within the existing landscape, providing new opportunities for wildlife and informal recreation alongside improved drainage and wetland habitat. Street lighting also would be sensitively designed so as minimise any light pollution.

A careful framework for development that follows and enhances natural desire lines across the village would represent the natural and organic growth of the settlement. Its growth will support the social sustainability and existing facilities of the village whilst providing new homes and amenities within a sought after location.

The site 'Land at Curbridge' represents a good opportunity for the Council to plan proactively for housing delivery as the site is not constrained by any technical or policy impediments preventing its allocation.

The site is the land in the central triangle of Curbridge. The land is designated as open countryside in the West Oxfordshire Local Plan 2011 and is in flood zone 1 (very low risk of flooding). There are no other statutory designations affecting the site. In the current draft Local Plan, the site is in the Witney sub-area. The settlement of Curbridge is currently designated as a village in the Schedule of Proposed Main Modifications (October 2016) of the Local Plan. Paragraph 9.26 of the Local Plan (Proposed Modifications) states that: "Whilst there are some further opportunities for housing within the built up area of the town of Witney, these are relatively limited and to accommodate future housing needs there is a need to develop on the fringes of the town on Greenfield land. This needs to be carefully balanced with the need to protect the town's setting and the separate identity of nearby villages. There are some further development opportunities within the rest of the sub-area although these are relatively modest in scale."

Paragraph 9.2.24 of the Local Plan (Proposed Modifications) states that: “Opportunities for major development within the built up area of the town [Witney] are relatively limited. This means that development on the fringes of the town will be required to meet future needs. Land to the west of the town (north Curbridge) is already committed by way of a resolution to grant planning permission subject to Section 106. The outline application anticipates 1,000 homes and 10 hectares of new business land but it is quite possible that a modest increase in the number of homes (e.g. to around 1,100) could be achieved as detailed planning applications are dealt with. The remaining strategic options considered through the Local Plan process are to the south, east, north-east north and further west of Witney. There are some further development opportunities within the rest of the sub area although these are relatively modest in scale.

The above statements support the proposal for development in Curbridge in order to help to meet the future housing needs of the District. The land at Curbridge provides the Council with the opportunity to allocate 110 homes at a self-sufficient development that will support the social sustainability and existing facilities of the village whilst providing new homes and amenities within a sought after location.

Paragraph 9.2.32 of the Local Plan (Proposed Modifications) confirms that the land to the west of Witney is a Strategic Development Area and that there is: “limited capacity for further housing development within the
area of Witney and as a result it is necessary for development to take place on undeveloped land on the edge of the town. Land to the west of Witney (north Curbridge) was identified as a reserve site in the previous Local Plan and is now a firm commitment, expected to deliver at least 1,000 homes within the plan period and possibly more as detailed planning applications are dealt with."

This indicates that the focus for development is to the west of Witney. The proposed development at Curbridge is policy compliant and will add 110 dwellings to the Council’s housing figures. The development will play a role in being part of modest growth outside of Witney and in turn strengthen the village of Curbridge whilst maintaining its separate identity.

Paragraph 9.2.33 Local Plan (Proposed Modifications) has been amended to state that further options to the land west, south, east, northeast and north of the town have been considered for development. Land to the east of Witney has now been allocated for 450 homes (up from 400) and land to the north of Witney has now been allocated for 1,400 homes (up from 1,000).

The land at Curbridge provides the Council with the opportunity to allocate 110 homes to the south west of Witney. The location of Curbridge benefits from excellent nearby employment locations such as the centre of Witney which is just a 6-minute drive or 8-minute cycle from the village. The A40 which runs between Witney and Curbridge acts as a natural barrier meaning that although benefiting from facilities and employment opportunities in Witney, Curbridge will remain a separate albeit stronger village.

Paragraph 9.2.50 of Local Plan (Proposed Modifications) states that: “Land to the south of Witney which straddles the boundaries of Ducklington and Curbridge Parishes, whilst physically proximate to the town centre and main employment areas in the south is segregated from the town by the A40. There are concerns regarding noise, odour and landscape impact and unlike the alternative options, the scheme would not deliver any strategic highway improvements for Witney.”

Although separated by the A40, the land at Curbridge would be a self-sufficient development opportunity in a sought after location. The land at Curbridge is an 8-minute cycle ride from the centre of Witney. There is a continuous paved footpath from Curbridge to Witney over the A40 bypass, along the western edge of the A4095.

The village is well located in terms of employment, including the nearby local employment centres of Witney and Brize Norton. This is confirmed in paragraph 9.2.53 in the Schedule of Proposed Main Modifications (October 2016) which states that “Witney will be the focus for additional business and employment opportunities over the period of the Local Plan.”

Its growth will support the social sustainability and existing facilities of the village whilst providing new homes and amenities within a sought after location. In the existing Strategic Housing Land Availability Assessment June 2014 SHLAA), the site is identified as “land at Curbridge” site 142. Site 142 is designated as available and achievable, but not suitable because: “The site is a significant open space that contributes to the character and the setting of the village, particularly in views from the Bampton Road. Development in depth would be out of keeping with the historic linear form of the village which has been subsequently extended with a second linear form along Well Lane.”

In response to the above, whilst the main street lies on an east to west road, the village is not a classic linear settlement, there is a nucleus of the village to the south and historically there is evidence of more north to south routes across the village. Its urban form is not of outstanding significance and limited expansion would
represent organic growth and an evolutionary consolidation of the village.

Based on this argument, the Council’s position does not represent a satisfactory reason not to allocate this site, especially given that the Council has identified that they are unable to meet their housing requirements.

Where the Council cannot demonstrate a five-year housing land supply, paragraph 49 of the National Planning Policy Framework ("the Framework") is clear that "relevant policies for the supply of housing should not be considered up-to-date". Within the context of the presumption in favour of sustainable development, paragraph 14 of the Framework states planning permission should be granted unless:

- any adverse impacts of doing so would significantly and demonstrably outweigh the benefits, when assessed against the policies in this Framework taken as a whole;
- or specific policies in this Framework indicate development should be restricted.

The considerable benefits of a carefully planned development providing 110 new homes, community facilities and, in a strategic context, revitalising the village of Curbridge on land that is already contained within the village envelope outweigh any potential adverse impacts of the development.

### Housing Numbers

Following the planning inspector’s interim report in December 2015, the Council was required to do further work on its housing requirement, to make up for historic shortfalls and to take pressure off Oxford City Council as required by the duty to cooperate. Paragraph 5.15 Local Plan (Proposed Modifications) indicates that the Council has accepted that it needs to plan for more housing and proposes to adopt a total of 15,950 new homes in the plan period, 13,200 for its own needs and 2,750 homes to accommodate the needs of Oxford City.

The Land at Curbridge provides the opportunity for the Council to add 110 houses to its housing figures in order to meet its housing requirement and make up for historic shortfalls. The Land at Curbridge is a suitable and sustainable location for housing development and will help the Council with its housing figures whilst strengthening the village of Curbridge through development of 110 homes.

The land at Curbridge provides the Council with the opportunity to move further towards meeting this additional demand whilst strengthening the village of Curbridge and strengthening local services. Allocating the Land at Curbridge site for housing development would allow the Council to engage positively with the landowner and enable the site to be delivered constructively through a plan led development.

<p>| MM75 | AJ04 | Mr Bickley | 217 | &gt; SECTION 9 - STRATEGY AT THE LOCAL LEVEL &gt; Witney Sub Area &gt; MIN 65 | This section seems to be only dealing with transport problems as they exist at the moment, and ignores the Garden Village and other proposals for new houses that are detailed later. |

The site known as Land at Batts Row Curbridge provides the Council with the opportunity to increase its planned housing numbers by 75 - 85 dwellings on a site which is suitable, sustainable and deliverable. The land is bordered by the A40 dual carriageway to the North and lies within a flood zone 1 area (very low risk of flooding). There are no other statutory designations affecting the site. The proposed site is concealed by existing housing and the adjacent A40 as well as screening provided by existing hedges. Access to the site is excellent.

The village of Curbridge is lies 1.5 miles to the south west of the town centre of Witney. Although separated by the A40, the land at Curbridge is a short cycle ride from the centre of Witney. There is a continuous paved footpath from Curbridge to Witney over the A40 along the western edge of the A4095. In terms of amenities, the village is served by a church, a village hall and a pub. There is a play park at the northern end of Well Lane and a recreation field to the south adjacent to the pub. Previously the village provided a school, a post office, a butcher, a smithy, a Methodist chapel and a second pub. The site is not categorised by any statutory (or local) landscape, nature or heritage designations. The nearest SSSIs are to the west of Minster Lovell (1.5 miles) and to the east of Ducklington (2 miles). There are 3 Grade 11 listed buildings to the south of Main Road, each of which is well screened from the proposed development site.

There are buses from the village (Main Road) to Oxford via Witney every 20 minutes at peak times and every half hour at other times. The village is well located in terms of employment, including the nearby local employment centres of Witney and Brize Norton.

The land at Curbridge provides the Council with the opportunity to allocate a site for housing that will increase its planned housing numbers by 75 - 85 dwellings on a site with excellent access on foot, by cycle and by public transport to Witney.

The site would be brought forwards with a scheme that provides a variety of house types that will be drawn from traditional designs from the district with an emphasis on off road parking to avoid clutter whilst still retaining a wildlife corridor alongside the A40 to avoid unnecessary fragmentation of habitats and providing improved dedicated areas for wildlife within the site boundary. Street lighting would be sensitively designed so as minimise any light pollution.

In terms of compliance with planning policy the land lies just to the north of the core of Curbridge. Which lies in the Witney sub-area. Curbridge is currently designated as a village in the Schedule of Proposed Main Modifications (October 2016) of the Local Plan. Paragraph 9.26 of the Local Plan (Proposed Modifications) states that:

"Whilst there are some further opportunities for housing within the built up area of the town of Witney, these are relatively limited and to accommodate future housing needs there is a need to develop on the fringes of the town on Greenfield land. This needs to be carefully balanced with the need to protect the town's setting and the separate identity of nearby villages. There are some further development opportunities within the rest of the sub-area although these are relatively modest in scale."

Paragraph 9.2.24 of the Local Plan (Proposed Modifications) states that:
Opportunities for major development within the built up area of the town are relatively limited. This means that development on the fringes of the town will be required to meet future needs. Land to the west of the town (north Curbridge) is already committed by way of a resolution to grant planning permission subject to Section 106. The outline application anticipates 1,000 homes and 10 hectares of new business land but it is quite possible that a modest increase in the number of homes (e.g. to around 1,100) could be achieved as detailed planning applications are dealt with. The remaining strategic options considered through the Local Plan process are to the south, east, north-east and further west of Witney. There are some further development opportunities within the rest of the sub-area although these are relatively modest in scale.

We consider the above statements support the proposal for development in Curbridge in order to meet the housing needs of the District. The land at Curbridge would enable the Council the opportunity to allocate 75 - 85 homes within a sought after location lying within easy reach of a substantial area of employment land as well as education and other facilities.

Paragraph 9.2.33 Local Plan (Proposed Modifications) has been amended to state that further options to the land west, south, east, northeast and north of the town have been considered for development. Land to the east of Witney has now been allocated for 450 homes (increased from 400) and land to the north of Witney has now been allocated for 1,400 homes (increased from 1,000).

The site offers a self-sufficient development site in a sought after location. The land at Curbridge is an 8 minute cycle ride from the centre of Witney. There is a continuous paved footpath from Curbridge to Witney over the A40 bypass, along the western edge of the A4095. The village is well located in terms of employment, including the nearby local employment centres of Witney and Brize Norton. This is confirmed in paragraph 9.2.53 in the Schedule of Proposed Main Modifications (October 2016) which states that

"Witney will be the focus for additional business and employment opportunities over the period of the Local Plan."

Following on from the planning inspector’s interim report in December 2015, the Council was required to do further work on its housing requirement, to make up for historic shortfalls and to take pressure off Oxford City Council as required by the duty to cooperate. Paragraph 5.15 Local Plan (Proposed Modifications) indicates that the Council has accepted that it needs to plan for more housing and proposes to adopt a total of 15,950 new homes in the plan period, 13,200 for its own needs and 2,750 homes to accommodate the needs of Oxford City.

As such the land at Curbridge provides the Council with the opportunity to move further towards meeting this additional demand whilst revitalising the village of Curbridge and strengthening local services. Allocating the Land at Curbridge site from housing development would allow the Council to engage positively with the landowner and enable the site to be delivered constructively through a plan led development.

<td>&gt; SECTION 9 - STRATEGY AT THE LOCAL LEVEL &gt; Witney Sub Area &gt; MAIN 90</td>
<td>We have made presentations to you on behalf of our clients, the Dowley, Conlon, Brooks, Williams and Huntly families over a number of years during the ongoing review of the Local Plan, seeking to have their land at Brize Norton Road/Bushey Ground, Minster Lovell allocated for housing, including your most recent SHLAA call for sites consultation in February this year and put forward their land as being available and suitable for such a use. Previous ref 262. We note that in the latest version of the Draft Plan a site for 85 dwellings has been proposed on a back land site adjoining the north west edge of the village and that following a planning application this site has been granted consent in the last month. We believe the Council may find the need to allocate more dwellings in sustainable settlements like Minster Lovell and our clients site is both suitable and available. There is an existing access via Bushey Ground which already serves a number of existing dwellings and businesses. We realise this site is not large enough to be seen as a strategic one, but given the draft plan modifications have now included/identified a number of non-strategic sites ranging from 25 to 300 dwellings, we believe this site should have been included as well – so Modification Main 26 (para5.30b) should be amended to include this site and likewise Main 90 Witney sub Area table 1 and again Main 115. We anticipate the Council may find there will prove to be a need to provide more deliverable sites like this because the larger sites are either not deliverable quickly or worse not at all within the Plan period. In Main 104 paras 9.2.51 a,b and c - our clients support the principle of extending development westwards from Downs Road and linking Downs Road to B4047. There is a four way link interchange proposed to the A40 at Downs road and possibly another may be provided at the B4477 at Minster Lovell.</td>

</tbody>
</table>

Given the concerns that the Council themselves have raised in relation to delivery with a higher housing rate, it is considered prudent to allocate sites where possible. In this respect, we consider that in relation to the Witney sub-area – a further allocation could be made at Hailey. Hailey is the same category village as Minster Lovell (which benefits from an allocation and outline consent for 85 dwellings) and yet does not benefit from any allocation within the plan. No distinction is drawn by the Council in selecting one site / area over another despite the sustainable location of Hailey and its lack of physical / policy constraints.

We propose a new policy as follows (following the policy approach taken in respect of Minster Lovell):

Land South West of Charlbury Road, Hailey (B4022) (85 homes) (Appendix 1)

This is a greenfield site currently given over to arable crops however the site is confirmed on DEFRA maps as Grade 3b land and thus does not represent Best and Most Versatile Land (BMVL). The site is just under 5.3ha in size in total however not all of the site will be given over to development. The anticipated number of dwellings is around 85. Hailey is a sustainable settlement close to Witney and offering its own range of services and facilities. It benefits from a regular bus service giving good connections to both Finstock railway station and Witney including a direct link to Sainsburys and the town centre.

Importantly the site is next to an existing area of relatively dense, more modern development that is not characteristic of the historic core of Hailey which has a very linear form. The scale of the proposed development is such that it would integrate with rather than dominate the existing village. The development also offers the opportunity to enhance the Conservation Area and the northern edge of the settlement approach to Hailey.

The site has been submitted for consideration by a promoter demonstrating a clear developer interest in bringing the site forward in the short-term. Key considerations for the site include the mitigation of landscape and visual impact, albeit the site is not within or adjacent to the Cotswolds AONB (and has limited intervisibility between the site and AONB which is over 700m from the site with a ridgeline in between), and the need to ensure effective integration with the existing village and the need to reflect existing patterns of development.

New Policy WIT2c – Land South West of Charlbury Road, Hailey

Key issues to be addressed as part of any development proposal will include:

a) provision of a mix of house types and tenures including affordable housing in accordance with Policy H3 - Affordable Housing;

b) the provision of primary vehicular access from the B4022;

<td>MM786</td>
<td>Oxfordshire County Council</td>
<td>Amada Jacobs (OCC)</td>
<td>Mrs Jacobs</td>
<td>2184</td>
<td>&gt; SECTION 9 - STRATEGY AT THE LOCAL LEVEL &gt; Witney Sub Area &gt; MAIN 90</td>
<td>Table 9.1 sets out the anticipated housing delivery in the Witney Sub-Area. The Sub-Area has been set an indicative housing requirement of 4,400 new dwellings to assist in meeting the District wide requirement of 13,200 new dwellings. As is clear from Table 9.1, the Plan as currently drafted would only deliver 4,386 new dwellings in the Sub-Area. Clearly therefore not only is the overall Plan failing to make adequate provision for its housing requirement, this is also specifically the case within the Witney Sub-Area. As discussed above in relation to the overall housing land supply, it is important that the Plan not only makes sufficient provision to meet the objectively assessed need for the District but also, as required by the NPPF, allows sufficient flexibility to allow for changing circumstances. Whilst additional housing could be provided for through Neighbourhood Plans there is no guarantee of this, and no mechanism in place in the policy should they not deliver. As currently drafted there is therefore concern as to whether the Plan will meet the housing requirement for the Sub-Area and the District as a whole. This proposed main modification in so far as it relates to the North Witney SDA is however supported in principle for the reasons set out above, to reflect the proposed increase in the housing requirement for the Witney sub-area and the revised approach in relation to housing delivery.</td>
</tr>
</tbody>
</table>
A great deal of work has already been undertaken in a short time to model the impacts of the increased housing growth. However, more detailed modelling associated with the Witney Area Transport Strategy refresh is ongoing and there will be a need to further assess the impact of the additional growth in Witney. Any identified schemes will need to be fully assessed and developed as the allocated sites evolve.

6.2 To help address the uplift in the housing requirement for West Oxfordshire, the main modifications increase the allocation of dwellings to the Witney sub-area from 3,700 to 4,400 over the plan period. A large proportion of the uplift is met through the expansion of the Strategic Development Areas at North and East Witney. The remaining additional housing is planned to be delivered at two smaller non-strategic allocations and partly through additional planning commitments (with the most significant additional commitment for 260 dwellings at Burford Road, Witney). Paragraph 9.2.28 indicates further sites will be identified through a subsequent review of the Local Plan.

6.3 The soundness of this approach is challenged on the following grounds:

1) The deliverability of the planned level of housing at the selected strategic development sites over the plan period and the implications upon the effectiveness of the Local Plan;

The majority of the growth planned for this sub-area is anticipated to come forward at three strategic sites:

* West Witney (1,000 units) (Commitment);
* North Witney (1,400 units) (SDA); and
* East Witney (450 units) (SDA).

6.4 There is no issue in principle with allocating strategic scale housing development at either North or East Witney; the benefits of well-planned, carefully considered large strategic sites are clear, they offer long term co-ordinated growth, where social and transport infrastructure meeting the needs of new residents can be delivered in a comprehensive manner. However, these particular strategic sites have specific issues which will likely result in significantly increased timescales for their development and consequent delays in housing delivery, calling into question whether they will deliver in full during the plan period.

6.5 West Witney: The site is identified within the draft Local Plan as an existing large planning commitment for 1,000 dwellings. An outline planning application for a development comprising up to 1,000 dwellings, employment space, education provision and local retail and community uses with associated infrastructure (reference 12/0084/P/OP) was submitted in January 2012. WODC Planning Committee resolved to approve the application in March 2013, pending completion of Section 106 and 278 agreements. The necessary agreements have yet to be completed well over three years since the Committee resolution and some four years since submission of the application. It must be questionable whether it is safe (from a judicial perspective) to continue to treat the site as a commitment, or whether the Council should reconsider the application (and the continuing validity of the associated EIA) before issuing the decision.

6.6 The Statement of Common Ground27 between WODC and the developers submitted during the Examination (dated October 2015) states:

---

“During the intervening period the Consortium, District and County Councils have worked closely to agree the wording of the necessary legal agreements, which are now in a final form and awaiting approval by the landowners. The Consortium, expects the agreements to be completed during October 2015, with the decision notice issued accordingly”.

6.7 A full year after the date of this Statement of Common Ground, these agreements have yet to be completed and the Decision Notice has yet to be issued.

6.8 It is noted from the original Planning Statement for the application that the promotion of this site began in 1996, demonstrating the length of time taken to reach the stage of submitting an outline planning application (before any detailed reserved matters submission and discharge of pre-commencement conditions, let alone any homes being completed). Furthermore, Condition 5 attached to the Officers’ Report to Planning Committee extends the standard time limit for development to up to 12 years (or two years from the last Reserved matters approval). This indicates that the Council anticipated long lead-in time to development and, by association, completion. This calls into question projected delivery rates outlined within Main Modification 2012, which anticipates the development commencing in 2018, with completion by 2025/26.

6.9 The pending Section 106 agreement associated with the application will secure the provision of a new ‘all movements’ junction onto the A40 at Down’s Road to the west of Witney (A40/Down’s Road junction). Draft condition 16 requires the infrastructure to be completed and operational prior to occupation of the 200th dwelling, which suggests that implementation challenges remain once the decision notice is finally issued.

6.10 Viability concerns have long been associated with the West Witney proposals, which were raised initially during assessment of the planning application. The Committee Report advised that the developers had provided a viability appraisal, which relied upon a developer’s profit margin lower than is generally accepted by the development industry. An independent appraisal commissioned by the Council at the time concluded that a viability gap exists, which would necessitate viability considerations being revisited at key stages of the development.

6.11 The Infrastructure Delivery Plan (IDP) Update 2016 identifies the Down’s Road/A40 junction improvements as ‘Critical’ and to be delivered within the timescale 2016 – 2018 as a prerequisite for development at West Witney. The estimated cost of the infrastructure (2012) is identified as £6.1 million, with only £1.25 million currently subject to existing Section 106 agreements. The Infrastructure Funding Gap Analysis (2015) sets out the extent of the funding gap for projects across the District and notes that strategic highway schemes such as the Down’s Road/A40 junction improvements will be funded in full via Section 106 agreements.

6.12 On this basis the Council anticipates that the funding to deliver this infrastructure (at 2012 costings c. £4.85mn) will be covered by the West Witney development. Given delays that have occurred already and the questionable viability of the scheme, it is unlikely that the highway infrastructure will be delivered in accordance with the required timescale of 2016 – 2018 to align with the Council’s current housing trajectory.

6.13 It is further noted that a planning application was submitted in September 2016 (reference 16/03262/FUL) for common infrastructure, roads, landscaping and drainage in isolation to, and ahead of, the outline consent being issued. This application is also pending. However, the proposal is subject to an objection from Oxford County Council’s Major Planning and Transport teams on the grounds the application...
has come forward in advance of the outline planning permission for the strategic development which it would serve, and on the basis that the design is unsuitable for the required bus service provision. This implies likely further delays with delivering this site and must call into question whether the site can be “viably developed at the point envisaged” within the published housing trajectory.

6.14 East Witney - This site is identified within the draft Local Plan as a Strategic Development Area for residential development. The proposed modifications increase the allocation by 50, to 450 homes. The site comprises two parcels: a small area of land to the west of Stanton Harcourt Road, which will provide c. 30 dwellings, together with a larger area east of Stanton Harcourt Road, for a further 420 dwellings.

6.15 The Local Plan requires the East Witney SDA to facilitate provision of west facing slip roads at the Shore’s Green junction with the A40 east of Witney (A40/Shore’s Green Western Slip Roads). It is common ground between the promoters of the site, East Witney Land Consortium (EWLC), WODC and OCC that the East Witney SDA cannot be developed fully in absence of the Shore’s Green Slip Road improvements. However, the Joint Statement of Common Ground (SoCG) confirms that EWLC controls land sufficient only to deliver the Shore’s Green junction west-facing ‘off-slip’. It has no control over the full extent of land required to provide the west facing ‘on-slip (in accordance with Manual for Streets). While EWDC controls enough land to support an alternative (non-Manual for Streets) slip road design, this is not acceptable to OCC.

6.16 It is understood that negotiations are ongoing with the third parties that control the additional land, but at the time of writing there has been no conclusion of this matter. The potential to use compulsory purchase powers has also been mooted as an alternative approach. However, as noted in the Inspector’s Preliminary Findings:

“One of the owners of the additional land necessary for the slip road design required by the HA is promoting an additional/alternative housing site nearby and so may, understandably have little interest in facilitating the East Witney scheme by resolving the land ownership issue quickly. The Council has indicated a willingness to use a CPO to acquire needed 3rd party land, but a CPO should always be a last resort and is unlikely to be speedy process”.

6.17 It is pertinent to note that a previous Cogges Link Road scheme was abandoned in 2012 following an unsuccessful attempt to compulsory purchase land needed to construct the road.

6.18 The IDP (2016) identified the SGSR infrastructure as ‘Critical’ and to be delivered within a timescale 2016 – 2021 as a prerequisite of a development at East Witney. The cost of the infrastructure (2012) is estimated at £5.6 million with only £1.16 million currently held by existing S106 agreements. In similar fashion to the position at West Witney, the Council considers the highways infrastructure will be funded via Section 106 agreements. On this basis, once again, there is likely to be a significant burden placed on the site itself, extending in this case to in excess of £4.44 million (based on 2012 figures). Within the SoCG the EWLC states that the WODC and OCC requirement for the East Witney SDA to fund in full the cost of the SGSR infrastructure is not fairly and reasonably related in scale and kind to the development.

6.19 There are land ownership constraints affecting the delivery of the SGSR infrastructure; it is also not unreasonable to conclude, based on the content of the SoCG that there will be difficulties in determining where and to whom the costs of delivering the infrastructure are apportioned. As such, delivery of the infrastructure within the prescribed timescale of 2016 – 2021 is considered unrealistic. Furthermore, as yet, there are no named housebuilders involved with the site and no applications. The housing trajectory anticipates that the site will start to deliver housing in 2021.
6.20 Given the timeframes involved in preparing and determining planning applications, the absence of a named housebuilder; uncertainties applying to the required highway infrastructure, relating to funding and land ownership, it is considered unlikely that completions will be achieved by 2021.

6.21 North Witney – The proposed modification increases the allocation by 400 units, to 1,400 homes and increases the size of the site by incorporating land to the west of Hailey Road. The Local Plan requires the North Witney SDA to provide a new road link between Hailey Road and Woodstock Road via New Yatt Road (the Northern Distributor Road – NDR). The Local Plan also sets out that the North Witney SDA will facilitate the provision of a new road link between Woodford Way and West End, creating a second river crossing for Witney (the West End Link Road – WEL). It is common ground (SoCG) between the land promoter (NWLC), WODC and OCC that the North Witney SDA would be unacceptable without the WEL and the NDR (SoCG Traffic and Road Proposals, November 2015).38

6.22 The SoCG (Viability) identifies areas of disagreement in respect of the overall viability of the North Witney SDA and raises questions regarding funding of the required highway infrastructure: “WODC does not consider it reasonable for the landowner to expect the same return as other, less complex, greenfield sites elsewhere. However, WODC does accept that the substantial infrastructure costs associated with this SDA do have an impact on viability and will work with the NWLC to negotiate a satisfactory delivery mechanism which is financially sustainable”39.

6.23 Peter Brett Associates (PBA) has reviewed the highway infrastructure requirements relating to the North Witney SDA on behalf of Crest Nicholson. Their findings call into question the viability of delivering all of the infrastructure requirements. Furthermore, highway infrastructure is not the only significant infrastructure requirement associated with this SDA. The SoCG and Flood Risk Assessment (FRA) submitted by the developers describe large surface water attenuation basins that are needed to mitigate potential flood risks associated with the allocation. These will impose a further significant cost burden.

6.24 It is also important to note that sites of this scale and potential complexity take considerable time to deliver completions. A relevant piece of planning research by Nathaniel Lichfield and Partners40 (Appendix 6) highlights that for sites of between 3000 and 1,499 dwellings the average (based on the performance of 70 large sites nationally) is for a period of c. 5.5 years to elapse between allocation and first completions and for sites of this size to deliver on average around 100 completions per annum. On this basis, and allowing for some acceleration across these metrics, it is unlikely that first completions will be delivered before 2022; thereafter the site is likely to struggle to deliver the 1,000 dwellings originally planned. Adding in the doubts surrounding the funding and delivery of the major infrastructure works required to facilitate the development, there must be significant doubts concerning deliverability of the North Witney SDA within the plan period to 2031. The Council’s current housing trajectory anticipates first completions on site in 2021 with completion of the overall development in 203141. This is considered unrealistic.

6.25 An application relating to the part of the site seeking consent for 200 dwellings (reference 14/01671) was submitted in November 2014 and remains undetermined. The application is subject to technical objections from statutory consultees, including an objection from the highways authority regarding the impact of the development upon the existing highways network ahead of the delivery of the identified infrastructure requirements.

6.26 The potential for market saturation in the Witney area if all of the proposed allocations are delivered simultaneously is acknowledged at paragraph 9.2.48 of the Local Plan. The Council also anticipates delivery of
the bulk of the development at the North Witney SDA in the medium to long term to allow time for the East and West Witney schemes to come forward in advance of this. In considering the cumulative impact of the combined strategic developments around Witney, the landscape evidence states:

"Phasing of development at Witney is therefore particularly important to avoid the creation of further encirclement by extensive new estates with immature landscape settings".

6.27 Given the potential for substantial delays in delivering housing at West Witney; the issues impacting on delivery identified at East Witney, together with the significant infrastructure requirements required at both these sites, which have the potential to adversely affect delivery there must be doubts about the robustness of the Council’s strategy for comprehensively planned and phased development at Witney.

6.28 Therefore, to seek to accommodate the additional uplift in the overall housing requirement by, in part, allocating further significant housing growth to the North Witney and East Witney SDAs will not ensure that the strategy meets the objectively assessed development and infrastructure requirements within the plan period. Main Modification 91 therefore fails the tests of soundness insofar as the proposed modification is not positively prepared, nor is it effective and deliverable over the plan period.

6.29 The ‘Landscape and Visual Review of Submission for Carterton and Witney Strategic Development Options’ (October 2012) prepared by Kirkham Landscape Planning Ltd is the most up-to-date assessment of the landscape impact of developing land at the East Witney and North Witney SDAs.

6.30 With respect to East Witney, the Review makes recommendations on the limits of the extent of land which could be developed acceptably from a landscape perspective (one of the key determinants in the SA process applied to selecting allocations) and provided an estimated housing capacity of 250 – 300 units. The Review specifically considered a higher housing capacity on the basis of the site promoter’s submission, but concluded:

"It is recommended from a landscape perspective that the East Witney option could be pursued further, subject to major revisions to the extent of the development and to the layout, governed by protection of the key landscape assets of this area and a comprehensive Green Infrastructure masterplan prepared for the sites. The number of potential dwellings will however need to be reduced in order to protect important landscape, visual and townscape features of this area".

6.31 Notwithstanding this, the Council is now seeking to increase capacity of the East Witney SDA through increased density and expansion of the developable area to achieve delivery of 450 units. Policy WIT1, therefore, fails to secure a landscape led approach to masterplanning of the site, as set out in the evidence base.

6.32 With respect to North Witney, the developable area has been increased to incorporate a parcel of land west of Hailey Road. This area was not included within the site as part of the 2012 Landscape Review; accordingly there is no assessment on which to base its inclusion in the SDA. At the time of the Review, NWLC were promoting a development of 1,500 dwellings on a larger site extending further north compared to that now proposed by the Council within the Local Plan modifications. The Kirkham Review considered this site, commenting both on the extent of land that could be developed and providing guidance on housing capacity, which it set at 750 – 850 dwellings. In considering development of up to 1,500 dwellings it stated:

"It is recommended from a landscape perspective that if the North Witney option is pursued further, major
6.32 The number of potential dwellings will however need to be reduced significantly in order to protect important landscape, visual and townscape features of the area. 46 6.33 Within the SoCG relating to site capacity, it is clear that NWLC is promoting a larger allocation (c. 50 hectares), which includes a net residential area of c. 32 hectares. NWLC consider this could accommodate up to 1,400 dwellings at an average density of around 43 dwellings per hectare (dph). This area extends further north than the developable area currently proposed within the Local Plan.

6.34 Within this SoCG WODC state:

"whilst this quantum of development is achievable within the extent of development land identified by the NWLC, it (considers that it) would represent a very high density of development". 48

6.35 The proposed modifications increase the number of dwellings within the allocation from 1,000 to 1,400, and while the allocation area has increased, by incorporating the parcel of land west of Hailey Road, overall the proposed developable area is smaller than that promoted by NWLC. Accordingly the average density across the site would be greater than the 43 dph countenanced by the NWLC proposals and considered to be very high by the Council. In conflict with the Council’s own evidence base Policy WIT2 fails to secure a landscape-led approach to masterplanning the site.

6.36 The Council has failed to provide any landscape evidence to justify the uplift in planned development either at the East Witney or the North Witney SDAs and therefore the increased quantum of development at each of these sites is in unsound on the basis it does not accord with the evidence base.

3) Heritage impact

6.37 Paragraph 9.2.25 of the Local Plan highlights key issues and challenges facing Witney, which include conservation and enhancement of the historic environment. The Witney sub-area contains many heritage assets including Conservation Areas, Scheduled Monuments and a wide range of Listed Buildings. As set out elsewhere in these representations paragraph 132 of the NPPF requires local planning authorities to take account of the impact of development on the significance of designated heritage assets, affording great weight to the conservation of such assets. Paragraph 141 also requires LPAs to make information about the significance of the historic environment gathered as part of the plan-making process publicly accessible.

6.38 As part of his requirement for Statements of Common Ground (SoCG) in August 2015, the Inspector requested details of assessments made on the effect of development upon the significance of heritage assets adjoining the North Witney SDA. The Heritage Assets SoCG50 advised that NWLC had commissioned a heritage assessment of the North Witney SDA, and the Council commented on the findings of the assessment within it, cross-referring to the Council landscape evidence base51. However, the Council provide no details of their own heritage assessment of the North Witney SDA because there is no such publicly available document within the Local Plan evidence base.

6.39 Notwithstanding national policy and the provisions of the Town and Country Planning (Listed Buildings and Conservation Areas) Act 1990, the Local Plan modifications have been prepared in absence of any proper assessment of the historic environment, or of the potential impact of development allocations on identified heritage assets. In absence of such evidence, the Council is unable to conclude with any confidence that the increased housing allocations at the East Witney and North Witney SDAs would avoid causing harm to
designated heritage assets. In absence of such an assessment it is not possible to conclude that the proposed allocations are sound. The evidence base is deficient in this regard and therefore the allocations cannot be relied upon.

6.40 Accordingly, the Local Plan should be modified to remove the uplift in housing allocated to the East and North Witney SDAs, which are affected by deliverability and viability challenges and for which there is a lack of sound evidence relating to the impact on the historic environment.

---

### Table 9.1 (Main 91) sets out the anticipated housing delivery in the Witney sub-area over the plan period. The WOLP does not allocate all of the planned growth within the sub-areas and relies on windfall developments to deliver the objectively assessed housing need over the plan period. In the Witney sub-area, anticipated windfall developments of up to 304 dwellings will be required over the plan period based on historic rates of windfall delivery within the sub-area.

The WOLP as a whole, and to some extent the Witney sub-area, rely heavily on windfall development to deliver the objectively assessed housing need. Incremental development will not bring forward the required contributions to fund key items of infrastructure such as SGSR to the A40, schools and other infrastructure.

This modification is supported as it clarifies that the options considered land north and east of Witney are considered to be the most suitable and it reflects the increase in housing numbers at each to 1,400 and 450 homes respectively. The Consortium has previously submitted representations and a Development Framework Document detailing how their site can yield up to 1,400 dwellings in an appropriate manner.

WODC continues to position WEL as the second river crossing for Witney, when OCC’s LTP4 determines that the Shores Green junction upgrade becomes the second river crossing (OCC LTP4 WIT1), with WEL not even...

6.41 Paragraph 9.2.34, which relates to the East Witney allocation (450 homes) states:

"The site has no significant environmental or heritage constraints and provided the extent, scale and design of development is sensitively controlled, will not have a significant landscape impact".

6.42 This statement is considered to be unjustified on the basis there is no evidence against which to judge the veracity of the claim. As set out elsewhere within these representations in absence of a heritage assessment dealing with the heritage assets within and in close proximity to the site it is not possible to conclude that there are no significant constraints that are capable of being overcome satisfactorily for this quantum of development. Reference is made within the draft policy (WIT1) to the requirement to secure the conservation and enhancement (where possible) of the setting of the Cogges Scheduled Ancient Monument and the Witney and Cogges Conservation Area and to ensure that investigation, recording and safeguarding of the known potential archaeological significance of the area is carried out. In absence of any assessment of these assets it is not possible to conclude that the policy criteria can be met for the allocation that is proposed.

6.43 Similarly, the Kirkham Landscape Review (2012)52 does not support the statement that an allocation of 450 units will not have a significant landscape impact.

6.44 The wording of 9.2.34 has been changed from requiring the development to deliver west facing slip roads at the Shores Green junction onto the A40 to:

"the west facing slip roads at the Shores Green junction onto the A40 will need to be delivered alongside the development in order to help manage the impact of the development". (GL Hearn emphasis).

6.45 Paragraph 9.2.34a further states:

"The development itself is able to deliver the 'off-slip' through a planning obligation and an appropriate financial contribution will be sought towards the 'on-slip' potentially as part of a wider strategic transport infrastructure fund/package for Witney".

6.46 It is a policy requirement under criterion b) of Policy WIT1 for the development of the SDA to be phased in accordance with the timing of provision of infrastructure including the Shore Green junction with the A40.
6.47 It is common ground between the promoters of the site, East Witney Land Consortium (EWLC), WODC and OCC that the East Witney SDA cannot be developed fully in absence of the Shore’s Green Slip Road improvements. The SoCG confirms that EWLC controls land that is sufficient only to provide the Shore’s Green junction west-facing ‘off-slip’. It does not control the land required to provide the west facing ‘on-slip’, for a scheme designed in accordance with Manual for Streets. It is understood that negotiations are ongoing with the landowners who control the required land and the potential use of compulsory purchase powers has been suggested as another solution. However, as noted in the Inspector’s Preliminary Findings the owners of the additional land are promoting an alternative site nearby and so may have little interest in resolving the matter quickly.

6.48 If third party land outside the control of either the developer or the Council is required to deliver infrastructure necessary for implementation of the strategic allocation, and delivery of this land cannot be guaranteed then there is a significant risk that the policy cannot be implemented. Under such circumstances, the policy cannot be construed to be effective and as such must be considered unsound as drafted.

<td>&gt; SECTION 9 - STRATEGY AT THE LOCAL LEVEL &gt; Witney Sub Area &gt; MAIN 93</td>
<td>Much of the revised explanatory text to Policy WIT 1 is supported by the EWLC. We would agree that there are no significant environmental or heritage constraints, and that the land is well located in relation to the Town Centre. We support the proposed approach to delivery of the Shores Green Slip Roads, with the East Witney development delivering the off-slip alongside planned housing development, and an appropriate financial contribution being made to enable the Highway Authority to deliver the on-slip. As set out below in more detail, we do not believe that landscape considerations should constrain the scale of housing development at East Witney to about 450 dwellings, when the full range of social, environmental and economic considerations are taken into account, including the significant locational advantages of the land at East Witney, and the comparable landscape and visual impacts of other proposed allocations in the District.</td>

<td>Witney Sub-area 4.24 Transport is a key issue for the Witney sub-area which contains a number of important and well-used routes including the A40 the A4095 and A415. Although Witney has the best road connections and bus</td>
</tr>
</tbody>
</table>
services in the district context, traffic congestion is a significant problem due to high car use particularly for journeys outside of Witney.16

4.25 Currently access to the A40 at Witney is relatively limited and the route is also heavily congested at peak times between Eynsham and the edge of Oxford.

4.26 An award of £35m through the Local Growth Fund will be used to deliver improvements comprising a new park and ride at Eynsham and an eastbound bus lane from the park and ride toward Oxford. Longer-term improvements to the A40 have also been identified although funding is yet to be secured, and is largely dependent on the delivery of the Garden Village SDA.

4.27 Such issues could clearly slow down delivery on the SDAs in Witney.

East Witney SDA (MM93)

4.28 Capacity: The Submission Draft Plan identified 400 homes at East Witney SDA, split across two separate sites:

* Land off Stanton Court Road (30 homes) and
* Cogges Triangle (c 370).

4.29 The Proposed Modifications increases the allocation of to 450 homes:

* Land off Stanton Court Road is maintained at 30 homes; and
* Cogges Triangle is increased to c 420 homes.

4.30 We do not take issue with these capacity figures. The boundary of Cogges Triangle has not been altered to accommodate the additional 50 homes within the East Witney SDA but the developable area has increased. This is in response to EWLC assertion that an extended development area could accommodate up to 475 homes.18

4.31 Ownership: The East Witney Land Consortium (EWLC) is a family consortium who own all the land within the SDA. EWLC have actively promoted an increase in the residential capacity of the East Witney SDA. The EWLC will manage the delivery of the site, but as yet there is no named developer on board.

4.32 Infrastructure Requirements: The delivery of Cogges Triangle is dependent on the delivery of Shores Green slip roads.

4.33 Delivery: We have assumed that 30 homes can be brought forward on the Stanton Court Road site with relative ease. This parcel is not dependent on the delivery of the Shores Green slip roads and we note the inclusion of the Stanton Court Road site within the allocation is to assist in providing early revenue for the developer to help fund the infrastructure needed to bring forward the larger Cogges Triangle site.19 In terms of funding mechanism, we don't take issue with this.

4.34 Indeed, the development of Cogges Triangle is able to deliver the Shores Green ‘off-slip’ through a planning obligation since the land required is within the ownership of EWLC. However, it is noted by the site promoters and the Council that the delivery of the Shores Green ‘on slip’ may require the use of CPO powers if necessary.20 Furthermore, the ‘on slip’ works would need to be secured through an appropriate financial contribution that will be sought potentially as part of the wider strategic transport infrastructure...
4.35 The above factors will no doubt effect the lead-in time to the first completions at the East Witney SDA. Indeed, it is noteworthy that the Council's Housing Land Supply Position Statement (October 2016) excludes the whole of the East Witney SDA (including the 30 homes of the Stanton Court site) from the Council's 5-year supply assumptions.

4.36 Conclusion: Notwithstanding some of the above complexities with the site's delivery, we have assumed the 450 dwellings proposed would be delivered within the plan period based on an average of 60 dwellings per annum and commencement around 2021 for the 30 unit scheme and 2024 for the larger site.

6.49 Figure 9.3 details an increased area for proposed housing development to accommodate the increased number of units allocated to the East Witney SDA. This does not accord with the evidence set out within the Kirkham Review55, which provides the most up-to-date assessment of the landscape impact of developing land at the East Witney SDA. 6.50 With respect to East Witney, the Review makes recommendations on the extent of land that could be developed without adversely impacting on the landscape and provides an estimated capacity of 250 – 300 dwellings. The Review considered and rejected a larger quantum of housing: "It is recommended from a landscape perspective that the East Witney option could be pursued further, subject to major revisions to the extent of the development and to the layout, governed by protection of the key landscape assets of this area and a comprehensive Green Infrastructure masterplan (being) prepared for the sites. The number of potential dwellings will however need to be reduced in order to protect important landscape, visual and townscape features of this area".56

6.51 Notwithstanding the above, the Council is proposing via the modifications to increase capacity at the East Witney SDA by raising the density of development and by expanding the developable area. The proposed allocation is now set at 450 dwellings; up from 400. Taking into consideration the factors set out above Policy WIT1 is considered to be unsound on the basis the Council has failed to provide any landscape evidence to justify the increase in development at the East Witney SDA, which should consider a landscape-led approach to masterplanning of the site, based on the evidence.

Historic England welcomes and supports Proposed Main Modification MAIN95 for the recognition of heritage impact as an issue on which the precise quantum of development will depend, as part of the positive strategy for conserving and enjoying, and clear strategy for enhancing, the historic environment as required by the Framework.

Stagecoach supports the modification in support of an increased quantum as part of the East of Witney SDA. Stagecoach has made previous representations in support of such an increased allocation in line with the fact this is among the best locations in the District as far as sustainable transport choices is concerned.
Historic England welcomes and supports Proposed Main Modification MAIN96 for the addition of criteria relating to the Cogges Scheduled Monument and the Witney and Cogges Conservation Area; to the investigation, recording and safeguarding of the archaeological significance of the area; and to the results of that investigation informing the final layout of the development, as part of the positive strategy for conserving and enjoying, and clear strategy for enhancing, the historic environment as required by the Framework.

As set out in our representations to the first draft of the Local Plan, the Council should undertake a playing pitch strategy to assess the need for outdoor sports provision to meet the needs of the new housing development proposed in the District. This policy proposes a significant amount of new housing and an up-to-date evidence base for indoor and outdoor sports provision is required to support this. Please contact Sport England for assistance.

Main 96

6.52 It is common ground between the promoters of the site, East Witney Land Consortium (EWLC), WODC and OCC that the East Witney SDA cannot be developed fully in absence of the Shore’s Green Slip Road improvements57. The SoCG confirms that EWLC controls land that is sufficient only to provide the Shore’s Green junction west-facing ‘off-slip’. It does not control the land required to provide the west facing ‘on-slip’, for a scheme designed in accordance with Manual for Streets. It is understood that negotiations are ongoing with the landowners who control the required land and the potential use of compulsory purchase powers has been suggested as another solution. However, as noted in the Inspector’s Preliminary Findings58 the owners of the additional land are promoting an alternative site nearby and so may have little interest in resolving the matter quickly.

6.53 If third party land outside the control of either the developer or the Council is required to deliver infrastructure necessary for implementation of the strategic allocation, and delivery of this land cannot be guaranteed then there is a significant risk that the policy cannot be implemented. Under such circumstances the policy cannot be construed to be effective and as such must be considered unsound as drafted.

Main 97

6.54 Paragraph 9.2.38, which relates to the North Witney allocation (1,400 homes) states that the site: “has no major ecological or heritage constraints and, based on the proposed quantum of growth, will not have a significant landscape impact”.

6.55 This statement is considered to be unjustified on the basis there is no evidence against which to judge the veracity of the claim. As set out elsewhere within these representations in absence of a heritage assessment dealing with the heritage assets within and in close proximity to the site it is not possible to conclude that there are no significant constraints that are capable of being overcome satisfactorily for this quantum of development. Reference is made within the draft policy (WIT2) to the requirement to secure the conservation and enhancement (where possible) of the setting of the Grade II listed Middlefield Farmhouse and dovecote and the Witney and Cogges and Hailey Conservation Areas and to ensure that investigation, recording and safeguarding of the known potential archaeological significance of the area is carried out. In
absence of any assessment of these assets it is not possible to conclude that the policy criteria can be met for the allocation that is proposed.

6.56 Similarly, the Kirkham Landscape Review (2012)59 does not support the statement that an allocation of 1,400 units will not have a significant landscape impact.

The EWLC supports Main Modification 96, which proposes an increase to the allocation at East Witney from about 400 to about 450 homes. However, we believe that there is scope to further increase the scale of new development planned at East Witney. It is considered particularly important that any proposed development is brought forward in the context of comprehensive master plan - that recognises both the existing need for additional development land to ensure Local Plan flexibility and deliverability, as well as the fact that the need for more housing will not come to an end in 2031.

The EWLC has been working with the Environment Agency to explore the potential for further dwellings at Land off Stanton Harcourt Road. We believe that, if the development area is ‘rounded off’, at least 50 units could be delivered in Flood Zone 1, the area at lowest risk of flooding. There is also potential for further dwellings to be developed on this land, if ground raising takes place on part of the site, and other areas are used to attenuate flood water. This approach is being explored with the Environment Agency, but could increase the capacity of the site still further, to up to 100 units.

As above, the EWLC supports the addition to Policy WIT 1, which requires that comprehensive development is led by an agreed master plan. The EWLC will work with a leading development Master planner to prepare a comprehensive master plan for the site, which will focus on delivering an exemplar scheme, of exceptional design and appropriate to its setting. Alongside new housing development, the scheme will deliver open space, green infrastructure, and cycling and footpaths connecting the development to the Cogges Estate and Witney town centre.

The EWLC welcomes the removal of the requirement that the Shores Green Slip Roads must be delivered prior to completion of any housing on the Cogges Triangle part of the site. Work undertaken on behalf of the EWLC demonstrates that with the Shores Green off-slip in place (which can be delivered in on EWLC and
Parking Authority land) development at East Witney could be delivered in full, without a prior requirement for delivery of the on-slip. This is not to say that the EWLC is not prepared to make an appropriate financial contribution towards the on-slip, but its delivery is not needed in advance of significant development at East Witney.

EWLC accepts the proposed modification to Policy WIT 1 which requires further consideration of the local heritage assets. An archaeological assessment of the site will be undertaken, to confirm the presence or absence of heritage assets on the site. This will inform the final layout of the development, and relevant finds will be deposited in a public archive.

The Proposed Main Modifications (Main 24 - Policy H1) to the WOLP includes an increase in the apportionment of dwellings to the Witney sub-area from 3,700 to 4,400 dwellings. My client is supportive of the spatial strategy to increase the number of dwellings to be delivered at Witney as it’s the most sustainable settlement in the District. However, the increase in apportionment is delivered through an increase in the strategic allocations at Witney (Main 26 and 27) at the following SDA’s:

- Land to the east of Witney - increase from 400 to 450 homes
- Land to the north of Witney - increase from 1,000 to 1,400 homes

The Inspector’s Preliminary Findings Part 2, paragraphs 2.3 to 2.6, discussed deliverability concerns regarding the strategic allocation at Land East of Witney, primarily due to concerns with the deliverability of the Shore Green Slip Roads (SGSR) and the acceptance that the strategic site allocation cannot be built without it (paragraph 2.4). The landowner in relation to the strategic allocation at Land East of Witney does not own all the land needed to deliver the SGSR to the design required by Oxfordshire County Council (Highways Authority).

Oxfordshire County Council Local Transport Plan 2015-2031 (LTP), Witney Area Strategy, advises at page 77, the A40 is the main strategic route through West Oxfordshire, however there is limited access to the A40 at Witney. Furthermore, ‘to the east of Witney the B4022 Shores Green A40 junction provides east facing slip roads only for trips to and from Oxford. This restricted movement junction, coupled with Bridge Street providing the only river crossing which links central and east Witney, results in considerable congestion and journey time delay. Housing and employment growth at Witney will place increasing demand on the existing junctions with the A40.’

The LTP goes onto to provide strategic transport network upgrades to deliver the strategic growth planned for Witney.

‘West-facing slip roads at A40 Shores Green junction and improvements to the B4022 Oxford Hill junction with Jubilee Way and Cogges Hill Road to be delivered by housing development at East Witney. This will provide an all-movement junction east of Witney, and a second river crossing for local journeys. Complementary measures in the surrounding rural area may also be sought to support this scheme.’
It is clear the Highways Authority see the deliverability of west facing slip roads at Shore Green junction are needed to provide a second river crossing for local journeys, this is fundamental to the deliverability of the East Witney SDA, other existing and proposed allocations and to the wider spatial strategy for the Witney sub-area.

Policy T2 (Highway Infrastructure Schemes) of the WOLP supports the important strategic highways improvements to SGSR and indicates it will be safeguarded and delivered as part of the committed and allocated urban extensions and new Garden Village identified in this Local Plan. The supporting text to Policy T2 indicates the highways upgrades for SGSR will be delivered through Policy WIT1 (Main 61, para 7.32).

The supporting text to Policy WIT1 (East Witney Strategic Development Area) (Main 93, para 9.2.34 and 9.2.34a) indicates west facing slip roads will be delivered alongside the development to help manage the impact of the development. Furthermore, it states financial contributions have been secured from another housing development and the East Witney SDA ‘will be able to deliver the ‘off-slip’ through a planning obligation and a financial contribution will be sought towards the ‘on-slip’ potentially as part of a wider strategic transport infrastructure fund/package for Witney.’

Part b) to Policy WIT1 (Main 96) has been amended to the following:

‘Development to be phased in accordance with the timing of provision of supporting infrastructure and facilities including the necessary improvements to Shores Green junction onto the A40 and related highways measures.’

The main modifications have weakened the policy wording, the fundamental change being the deletion of wording for SGSR to be delivered via East Witney SDA, now it merely is to be delivered in accordance with timing of the provision of the infrastructure. However, there is no mechanism for the delivery of SGSR besides a financial contribution towards its delivery. The delivery of west facing slip roads is fundamental to the deliverability of the East Witney SDA, and the wider spatial strategy for Witney given the strategic importance of the A40 and the benefit a second river crossing will provide.

Policy WIT1 fails to provide any certainty that the SGSR will and can be delivered. This is fundamentally the same concerns raised at paragraphs 2.3 to 2.6 of the Inspector’s Preliminary Findings Part 2.

During Hearing sessions (held between Monday 23 November and Thursday 26 November 2015), the Council indicated their willingness to use a Compulsory Purchase Order (CPO) to acquire 3rd party land. However, we are aware there is no such willingness from the Highways Authority to use CPO powers to deliver SGSR. The use of a CPO is a lengthy legal process and should only be considered as a last resort where it is in the public interest. Furthermore, the use of a CPO should be considered against other reasonable alternatives for the delivery of SGSR. As noted at paragraph 7.30 of the WOLP, a previous scheme known as the Cogges Link Road which would have provided a second river crossing was abandoned following a failed CPO attempt. Fundamentally, a CPO of 3rd party land is no guarantee of the delivery of SGSR, therefore when assessed against other reasonable alternatives, the strategy to utilise a CPO cannot realistically be considered the most appropriate strategy when assessed against the reasonable alternatives.

Policy WIT1 is not positively prepared, justified or effective in delivering SGSR infrastructure which is fundamentally required to support the East Witney SDA and the wider Witney spatial strategy. The soundness of Policy WIT1 and the Witney spatial strategy is crucial to the soundness of the WOLP as a whole given the Council’s increased reliance on the North and East Witney SDA’s to deliver the objectively assessed housing
need and for the Local Authority to deliver a 5 year supply of land for housing.

Ecology and Natural Environment
In all cases reference should be made to the District Council’s ecologist for specific details on each site. It is assumed that before firm proposals are brought forward for each site an appropriate ecological, landscape and visual impact assessment will be undertaken including surveys for protected and threatened species.

The permanent loss of land of existing and potential future habitat value should be recognised with a corresponding investment in biodiversity and other green infrastructure resources that provide a range of benefits including biodiversity, water management and contribute to physical and mental well-being.

Additional off-site enhancement should be provided where insufficient environmental gains cannot be secured within the development boundary.

East Witney
There is potential for increased recreational pressures on Witney Lake to the south which is known to have particularly high water quality and biodiversity value. This and the wider Windrush in Witney area - Langel Common, Grimes Mead, Cogges - would benefit from further investment in green infrastructure if development is to proceed.

The site lies adjacent to the Lower Windrush Valley Project area and consideration should be given to how best to support the long-term strategic aims of the LWVP.

The Lower Windrush Conservation Target area appears to be missing from the map.

Green infrastructure developments alongside the A40 and other main roads would provide additional benefits e.g. in reducing noise and air pollution impacts.

(i) comprehensive development to be led by an agreed masterplan.

(c) the provision of other supporting transport infrastructure, including proposals to mitigate the impact of traffic associated with the development, and incorporating a comprehensive network for pedestrians, cyclists and public transport with links to adjoining areas, including a particular emphasis on improving the linkages across the Windrush Valley into the town centre consistent with the aims and objectives of the Windrush in Witney Project.

East of Witney SDA (450 dwellings); Cogges Triangle (420 dwellings)
Stagecoach has already expressed its support for development East of Witney, a site that directly benefits from being directly served by the main bus corridor between Carterton, Witney and Oxford. We have previously made representations in support of the allocation of further development here, given this unique locational advantage.

This SDA and the two main areas of development comprising it, will assume much of the funding burden for the Shores Green Slip Roads, which we recognise is also essential to allow the development to here and on

| MM457         | North Witney Action Group NWAG | North Witney Action Group (NWAG) | Mr | Neyroud | 1335 | > SECTION 9 - STRATEGY AT THE LOCAL LEVEL > Witney Sub Area > MAIN 97 | Atkins Technical Note, Evaluation of Traffic Impacts, 4.2, Table 13 says - "West End Link 2 (WEL2) - standard junctions - West End to Mill Street link road/bridge"
This reference to the use of ‘standard junctions’ (and thereby excluding Higher Capacity Junctions) does not appear to be mentioned anywhere else in any of the latest submitted evidence, including ‘Main Modifications’. Given that WODC TRA1 contains up to 50% of text and data comparing ‘Higher Capacity Junctions’ (HCJs) with ‘standard junctions’, NWAG is confused as to whether WODC has now permanently abandoned the idea of using HCJs at each end of WEL, or whether they have been temporarily excluded from the Evaluation of Traffic Impacts report for some other ungiven reason(s). This is of critical importance because, as pointed out by WODC in TRA1, using HCJs has a significant impact on traffic around the WEL area, and therefore would be expected to have a direct bearing on the outcome of tables 8 and 9 in the Evaluation of Traffic Impacts report. A Freedom of Information Request was submitted by NWAG to OCC on November 17th 2016. It requested a copy of the raw data used to produce the traffic flow in the Evaluation Report in order to establish the situation within Witney around the WEL area. The response (11030 EIR - Traffic Flow Figures) received from OCC dated December 14th 2016 was - “The report/work so far has not included outputting the raw data from the traffic model, which would incur a significant fee to extract.” This is an extremely unhelpful response in a situation where NWAG are attempting to analyse data presented in a macrocosmic format, where multiple options have been added, dropped and altered and where close analysis of the raw data has previously revealed a quite different outcome than the technical reports would indicate. Furthermore, it is beginning to become apparent that the important decisions being made on critical issues (eg infrastructure, sequencing and timing) are being relaxed by WODC, in order to accommodate the flawed North Witney SDA. |
| MM784         | North Witney Land Consortium | North Witney Land Consortium | North Witney Land | - | 2165 | > SECTION 9 - STRATEGY AT THE LOCAL LEVEL | Quantum of development and expansion of allocation site
This proposed main modification is supported to reflect the proposed increase in housing numbers at the North Witney SDA from 1,000 to 1,400 homes and to provide clarification in relation to the delivery of the other sites allocated in the town, to proceed without causing unacceptable highways impacts. |
Our previous submissions have indicated that the North Witney SDA could deliver 1,400 homes without the additional land to the west of Hailey Road.

The draft wording of Policy WIT2 states however that the allocation is for "about 1,400 homes", which infers that the Council will take a flexible approach if the site could satisfactorily accommodate a higher number of units. This would help to address the concerns raised above regarding the ability of the Plan as currently drafted to meet the housing requirement for the Sub-Area and the District as a whole.

On that basis no objection is raised to these proposed main modifications in terms of the principle of including the additional land to the west of Hailey Road within the boundary of the North Witney SDA. Indeed, the potential opportunity to expand the Witney Community Primary School rather than provide a separate new school within the main site area is supported by our clients.

Revised paragraph 9.2.45 of the Local Plan explains the Council's justification for increasing the quantum of development on the site and the landscape work that has been undertaken to inform this. We support the acknowledgement that the site is capable of accommodating a greater number of houses than that previously suggested within the 'Kirkham Associates Landscape and Visual Review of Submissions for Carterton and Witney Strategic Development Options' (2012).

An independent landscape review of the site and the Kirkham report previously prepared for the North Witney Consortium (and previously submitted to the council) concluded that the Kirkham report had concentrated on the wider open countryside to the north of Witney. Although we would not disagree with the high sensitivity landscape of the wider setting, it is considered that the openly visible existing settlement edge exerts an urbanising influence into a greater portion of the site than the Kirkham report suggests. The openness of the site contrasts strongly with the high level of enclosure to the north beyond the site, in the vicinity of Poffley End and Hailey, ensuring the setting to these settlements would not be compromised by development of the site.

Through sensitive masterplan design it is therefore considered that a development of around 1,400 units can be readily assimilated into the landscape without eroding the setting to Poffley End or Hailey. To that end, and as indicated at paragraph 9.2.45 of the draft Local Plan, a detailed Landscape and Visual Impact Assessment (LVIA) would be submitted in support of any future planning application, to ensure that the scale of the development proposed and its arrangement is capable of being accommodated on the site without undue adverse impact.

Given the points raised above in respect of the Council's position on the findings of the Kirkham report referred to at footnote 56 of the Plan, and given the Council's acceptance of the findings of the Environmental Dimension Partnership Report (EP247_10b) prepared on behalf of the Consortium, it is considered that this document should also be referred to in the footnotes. This modification will provide clarity in respect of the Council's altered approach to the site.

In light of the Council's comments in respect of landscape and the recognition that the SDA is capable of accommodating an increased quantum of development, it is considered that the revised Figure 9.8 at Main 98 should be updated. As with the other allocations in the Plan it is recommended that the Figure is simplified to

<tr>
<td>Main Modification 102 in respect of phasing is broadly supported in so far as it provides additional flexibility in relation to the phasing of development at North Witney.</td>
<td></td>
</tr>
<tr>
<td>Paragraph 9.2.48 states that:</td>
<td></td>
</tr>
<tr>
<td>&quot;As a large site, development of the North Witney SDA is likely to fall into a number of phases. There is already a current planning application on part of the site for 200 dwellings which is likely to form 'Phase 1' (subject to a comprehensive masterplan/delivery framework for the whole site)...&quot;</td>
<td></td>
</tr>
<tr>
<td>The potential for the land between New Yatt Road and Woodstock Road (to which the extract above refers) coming forward in the short term as a first phase of development of the North Witney SDA is recognised and supported. The site, which is controlled by Taylor Wimpey, lends itself to early release without prejudice to the remainder of the site.</td>
<td></td>
</tr>
<tr>
<td>As well as land at Woodstock Road, Taylor Wimpey also control a substantial area of the main SDA site. Taylor Wimpey fully agree that any development on land between New Yatt Road and Woodstock Road should make proportionate contributions towards delivering the infrastructure requirements of the whole SDA, in addition to providing the first phase of the Northern Distributor Road. Taylor Wimpey is completely committed to ensuring that this early phase of development forms part of the wider SDA and does not prejudice its delivery, which can be secured through the use of planning conditions and s106 obligations as necessary.</td>
<td></td>
</tr>
<tr>
<td>Given the potential for the New Yatt Road/ Woodstock Road to come forward at an earlier stage and that the proposed new additional land to the West of Hailey Road is not within the control of the Consortium, the requirement for a “comprehensive masterplan” for the whole site is questioned. We therefore suggest that the reference to a “comprehensive masterplan” is removed from paragraph 9.2.48 and just the reference to a “delivery framework” retained in the interests of clarity.</td>

these will inform, and assess, the detailed proposals as they continue to evolve.

**Criterion L - West End Link**

As with our above comments in respect of criterion Di, it is considered that this requirement should be reworded to reflect the requirements of the NPPF in respect of heritage. Furthermore, to ensure consistency with MAIN 61 discussed above, the Policy text should reflect that the North Witney SDA is to “facilitate the delivery of the West End Link.”

**Other Matters**

We support the recognition of the potential of land to the north of the site in terms of the potential use of off-site measures in relation to sustainable drainage for the North Witney SDA.

As highlighted in the Development Framework Document (DFD) previously submitted, as well as mitigating the impact of the proposed development, the use of additional off-site attenuation features offers the opportunity to alleviate the downstream sewer systems which are currently over capacity.

The proposed main modifications to criteria (a), (b) and (i) to Policy WIT2 relating to the North Witney SDA are supported in principle to reflect the additional capacity of the site and possibility of off-site drainage solutions, as well as providing additional flexibility in relation to the proposed phasing of development.

For the reasons detailed above in respect of MAIN 40 (not repeated here), we also maintain a strong objection to criterion (n), which requires the developer to set aside 5% of the developable plots as custom/self-build, and request that this be deleted.

**Sustainability Appraisal**

Enfusion, on behalf of WODC, have prepared a Sustainability Appraisal Addendum Report in respect of the proposed modifications to the Local Plan. In respect of the increased scale and quantum of development proposed at the North Witney SDA, the Addendum advises that “the findings of the SA as reported in the Submission SA Report remain valid.”

We support the conclusions of the Sustainability Appraisal Addendum Report. Given the scale of increase of the proposed SDA since the previous Sustainability Appraisal was undertaken, to ensure the Plan is underpinned by a robust evidence base we would recommend that the detailed appraisal of the allocation be updated in full to support the summary provided in the Addendum Report. This will help to further demonstrate that the proposed strategy is justified, subject to our comments above.

**Viability Assessment and Infrastructure Delivery Plan**

To underpin the proposed modifications to the Local Plan, Aspinall Verdi have prepared a Strategic Development Area Viability Update (2016) on behalf of the Council. The Viability Update should be further updated to reflect our comments above in respect of custom/selfbuild housing etc.

As per the previous submissions on behalf of the Consortium, further consideration is required in respect of the necessary infrastructure required to be delivered by the site and whether this is to be funded by the SDA in isolation or whether contributions through Section 106 Agreements or CIL are to be sought from other...

<td>807</td>
<td>&gt; SECTION 9 - STRATEGY AT THE LOCAL LEVEL &gt; Witney Sub Area &gt; MAIN 97</td>
<td>MAIN 97 Paragraphs 9.2.37 – 9.2.38 North of Witney Strategic Development Area However Stagecoach notes and objects to the identification of 400 additional dwellings North of Witney. Stagecoach does not believe that the evidence sufficiently demonstrates that this site as a whole is sustainable, suitable, achievable or deliverable, as required by NPPF. Stagecoach has already pointed out to the Examination that land north of Witney becomes progressively harder to integrate into a relevant and attractive pattern of bus service provision, the further west from New Yatt Road development extends. Thus land extending to Hailey Road, and now beyond it will be that much more likely to be car-dependent, even if that is only to drive out of town to the new Park and Ride site at Eynsham, Hanborough Station, or a new P+R proposed in the Oxford Transport Strategy in the Begbroke/A44 area. This proposals therefore runs entirely contrary to the requirement in NPPF para 17 that patterns of development should be actively managed to make the fullest possible use of the opportunities for sustainable transport. On the contrary, this site would struggle to be served by any kind of bus service that would be relevant to meeting residents daily travel needs to a meaningful degree. Worse, modelling already before the Examination shows that even with the £18m West End Link Road provided, the 1000 dwellings previously proposed could be accommodated with small detriment to already unacceptable traffic conditions at Bridge Street. It follows therefore, that any additional quantum provided here would seriously affect this area, adding greatly to congestion-induced delay and unreliability on all our bus services serving the District. NPPF paragraph 32 makes clear that when cumulative unmitigated impacts are severe, development should not be consented. There is no evidence of any kind presented, that an additional 400 dwellings in this location could be accommodated, without already severe and chronic congestion being the result, even if the WELR is provided, something which is itself in some doubt. This aspect of the Plan is contrary to NPPF paras 17 and 29-35, and is evidently not the most appropriate solution when all reasonable alternatives have been considered contrary to paragraph 182. Accordingly, this aspect of the Plan is unsound. Irrespective of the planning merits of the enlarged site, it is also unclear that the enlarged site North of Witney is even deliverable. We are apprised that the land is unregistered and has no promoter, much less a housebuilder, on board. Given the fact that WODC repeatedly stressed the challenge of meeting the currently-proposed housing trajectory, this is both illogical and unhelpful. The Plan in this respect is ineffective, and is thus also unsound on that basis. Stagecoach therefore strongly urges WODC to re-examine the potential to accommodate development north of the town, to focus on a smaller quantum oriented towards the Woodstock Road, where much improved developments in the area. We will continue to liaise with the Council in this regard in advance of the EIP.</td>
<td></td>
</tr>
</tbody>
</table>
bus services could be provided; and that any residual quantum be redirected to other sustainable settlements.

This could include Carterton, where at least two housebuilders with a strong track record are actively promoting strategic options that are omitted from the Plan.

**Main 97 North Witney Strategic Development Area (SDA) 1,400 homes (Hailey Parish)**

9.2.38 Land to the north of Witney is allocated for the delivery of 1,400 homes. The site is considered to be well-related to the main services and facilities of Witney, has no major ecological or heritage constraints and based on the proposed quantum of growth, will not have a significant landscape impact.

**Main 101 9.2.45**

In terms of landscape impact, evidence22 prepared in support of the Local Plan suggested that the originally proposed quantum of development (1,000 homes) was able to be accommodated on the site without undue adverse impact. Taking account of the additional development capacity provided by the inclusion of land west of Hailey Road, a modest increase in the extent of the developable area to the north (see Figure 9.4) and slightly higher density assumptions, it is considered that around 1,400 homes can be delivered on the site whilst ensuring an acceptable degree of impact in landscape terms. A detailed landscape and visual impact assessment would however be required in support of any future application to determine the most appropriate form and layout of development which would ultimately influence final housing numbers.

Reference 22 is the Landscape and Visual Review of submissions for Carterton and Witney Strategic Development options KirkhamLandscapePlanning – October 2012

We contend that some of the statements contained in Main 97 and Main 101 above are at variance with reality, are not supported by any evidence and breach many of WODC’s own strategic objectives and policies as detailed below.

There have been three Landscape and Visual Review reports on North Witney over the last few years:

The first was the West Oxfordshire Landscape Assessment produced by Atlantic Consultants

PART THREE – Key Settlements – Witney (marked as Page 100; Page 179 of electronic document)

Key sensitivities and considerations

* high quality landscape edge - vulnerable to change
* important rural approach to Witney from the north - vulnerable to change
* special attention should be given to maintaining strong landscape edges
* resist urbanisation between Hailey and Witney

The second was produced by AHLC (Page 11)

6.16 The updated key Sensitivities and Considerations are:

* Moderate quality landscape edge with some suburbanising influences, vulnerable to change;
* Important rural approach to Witney from the north, particularly vulnerable to change given the scattered
development along the B4022 between Witney and the modern edge of Hailey village:

* Resist urbanisation between Hailey and Witney, particularly sensitive given the existing scattered development along the B4022.

6.17 In summary, Area C2 is a gently undulating plateau landscape with high intervisibility to the south and north west and a strong physical continuity with the Wychwood Uplands to the north. The area is of moderate to high importance and sensitivity.

The third report referenced in Main 101 is Landscape and Visual Review of submissions for Carterton and Witney Strategic Development options by Kirkham Landscape Planning

Against a background where the developer had proposed building 1,500 houses, Kirkham identified the following key constraints, recommendations and estimated housing capacity:

**Key Constraints to development:**

* High landscape sensitivity
* Need to protect the landscape setting of the villages and scattered farmsteads
* Need to protect the open valley landscape and its continuity with the valley northwards
* Protection of the separate identity of Hailey / Puffley End

**Recommendations**

Reduce area to avoid development within the landscape buffer which contains important surviving elements of the settled ancient pastures around the settlements.

**Recommended actions**

Consider smaller area on the southern part of the site whilst including proposed landscape transition zone to the edge of the town

**Estimated housing capacity**

750 – 850

What does WODC believe a fourth detailed landscape and visual impact assessment will deliver that has not already been identified in the previous three reports? Is this a case of asking a consultant to provide supporting evidence to justify a weak argument?

The capacity of the smaller site between the Woodstock and New Yatt roads is 200 houses resulting in 550 – 650 houses on the main site. However, WODC decided to include 1,000 houses in the Local Plan 2031. This has now been modified further to 1,400 houses (Main 97).

WODC’s statements in Main 97 that The site is considered to be well-related to the main services and facilities of Witney, has no major ecological or heritage constraints and based on the proposed quantum of growth, will not have a significant landscape impact.
and in Main 101 that

‘In terms of landscape impact, evidence prepared in support of the Local Plan suggested that the originally proposed quantum of development (1,000 homes) was able to be accommodated on the site without undue adverse impact’

are at variance with all of the landscape reports.

Urbanisation between Witney and Hailey is increased by the inclusion of the land to the west of Hailey Road – now closing the gap between Witney and Downhill Lane on both sides of the road (a massive issue to the residents of Hailey). All of the reports identify high landscape sensitivity and the need to protect the landscape setting of the scattered villages and hamlets.

The Kirkham Landscape Review which recommended 750 – 850 houses contains no supporting evidence for a development of the magnitude proposed – indeed Kirkham significantly reduced the original proposal from 1,500 to 750-850 houses.

Allowing for 200 or 300 houses on the two smaller sites, this would mean 1,100 or 1,200 houses on the main site between Hailey Road and New Yatt Road – almost doubling the Kirkham recommendation of 550 – 650 houses. This cannot be described as having no significant landscape impact.

The amended North Witney proposal breaches many of the Strategies, Core Objectives and policies contained in the Local Plan 2031 – highlighted by underlining below:

Main 9 Para 3.2 Our vision

... The larger towns and villages will accommodate growth of an appropriate scale and type to help ensure their future prosperity and that of the rural areas around them without compromising their intrinsic character, appearance and setting.

The scattered villages and hamlets of Hailey, Delly End, Poffley End, Whiteoak Green, New Yatt, Pitts Lane and Foxburrow comprise fewer than 500 houses (2011 census). Adding 1,400 houses to a parish of 500 houses can only be described as disproportionate and completely at variance with the above vision.

The proposal will merge Witney with Foxburrow, and severely compromise the intrinsic scattered rural character of Hailey parish, particularly along the B4022.

CO1 Enable new development, services and facilities of an appropriate scale and type in locations which will help improve the quality of life of local communities and where the need to travel, particularly by car, can be minimised. CO2 Ensure that new developments are suitably located and well designed to protect and enhance the individual form, character and identity of our towns and villages as well as contributing to the quality of life in West Oxfordshire.

There is a complete absence of protection here. The character, appearance and setting of the villages within Hailey parish will change forever.

CO14 Conserve and enhance the high environmental quality of West Oxfordshire with protection and

| MM457 | North Witney Action Group (NWAG) | North Witney Action Group (NWAG) | Mr Neyroud | 1136 | > SECTION 9 - STRATEGY AT THE LOCAL LEVEL > Witney Sub Area > MAIN 98 | There appears to be no new evidence to support WODC's assertion that the number of dwellings in (Kirkham) area C3 of North Witney SDA can be potentially doubled* over the 2012 Kirkham figure without having a significant effect on the intrinsic character, appearance and setting of the area. Indeed, the proposal now seems to move housing further into the green buffer zone. (Main 98, 9.4)

* Kirkham report, combined areas C2+C3 shown as 750-850 houses. C2 allocated 200; therefore C3 would be net 550-650 houses.

Proposed new housing number for area C3 now 1200 houses, or 1100 should 100 units be built on land west of Hailey Rd, as this may be used for a new school. |
| MM491 | Crest Strategic Projects | Crest Strategic Projects | - | 1462 | > SECTION 9 - STRATEGY AT THE LOCAL LEVEL > Witney Sub Area > MAIN 98 | Main 98

6.57 Figure 9.4 details an increased area for proposed housing development to accommodate the increased number of units/education provision allocated to the North Witney SDA. The developable area has been increased in size to incorporate a parcel of land to the west of the Hailey Road. This land was not considered for development within the Landscape and Visual Review of Submission for Carterton and Witney Strategic Development Options (October 2012) prepared by Kirkham Landscape Planning Ltd which represents the most up-to-date assessment of the landscape impact of developing land at the North Witney SDA.60 As such, there is no landscape evidence base to support its inclusion within the SDA allocation. |
| MM784 | North Witney Land Consortium | North Witney Land Consortium | - | 2167 | > SECTION 9 - STRATEGY AT THE LOCAL LEVEL > Witney Sub Area > MAIN 98 | Quantum of development and expansion of allocation site

This proposed main modification is supported to reflect the proposed increase in housing numbers at the North Witney SDA from 1,000 to 1,400 homes and to provide clarification in relation to the delivery of the West End Link and northern distributor road. For further clarification however, we would suggest that the wording of paragraph 9.2.38 be amended to "...the development will require enable the delivery of the West End Link (WEL)...

Our previous submissions have indicated that the North Witney SDA could deliver 1,400 homes without the additional land to the west of Hailey Road.

The draft wording of Policy WIT2 states however that the allocation is for "about 1,400 homes", which infers that the Council will take a flexible approach if the site could satisfactorily accommodate a higher number of units. This would help to address the concerns raised above regarding the ability of the Plan as currently drafted to meet the housing requirement for the Sub-Area and the District as a whole.

On that basis no objection is raised to these proposed main modifications in terms of the principle of including the additional land to the west of Hailey Road within the boundary of the North Witney SDA. Indeed, the potential opportunity to expand the Witney Community Primary School rather than provide a separate new school within the main site area is supported by our clients. |
Revised paragraph 9.2.45 of the Local Plan explains the Council’s justification for increasing the quantum of development on the site and the landscape work that has been undertaken to inform this. We support the acknowledgement that the site is capable of accommodating a greater number of houses than that previously suggested within the ‘Kirkham Associates Landscape and Visual Review of Submissions for Carterton and Witney Strategic Development Options’ (2012).

An independent landscape review of the site and the Kirkham report previously prepared for the North Witney Consortium (and previously submitted to the council) concluded that the Kirkham report had concentrated on the wider open countryside to the north of Witney. Although we would not disagree with the high sensitivity landscape of the wider setting, it is considered that the openly visible existing settlement edge exerts an urbanising influence into a greater portion of the site than the Kirkham report suggests. The openness of the site contrasts strongly with the high level of enclosure to the north beyond the site, in the vicinity of Poffley End and Hailey, ensuring the setting to these settlements would not be compromised by development of the site.

Through sensitive masterplan design it is therefore considered that a development of around 1,400 units can be readily assimilated into the landscape without eroding the setting to Poffley End or Hailey. To that end, and as indicated at paragraph 9.2.45 of the draft Local Plan, a detailed Landscape and Visual Impact Assessment (LVIA) would be submitted in support of any future planning application, to ensure that the scale of the development proposed and its arrangement is capable of being accommodated on the site without undue adverse impact.

Given the points raised above in respect of the Council’s position on the findings of the Kirkham report referred to at footnote 56 of the Plan, and given the Council’s acceptance of the findings of the Environmental Dimension Partnership Report (EP247_10b) prepared on behalf of the Consortium, it is considered that this document should also be referred to in the footnotes. This modification will provide clarity in respect of the Council’s altered approach to the site.

In light of the Council’s comments in respect of landscape and the recognition that the SDA is capable of accommodating an increased quantum of development, it is considered that the revised Figure 9.8 at Main 98 should be updated. As with the other allocations in the Plan it is recommended that the Figure is simplified to indicate the site boundary only with all other matters of detail to be agreed through the planning application process in due course (for example, removing the areas identified in the Legend).

Phasing and Masterplanning

Main Modification 102 in respect of phasing is broadly supported in so far as it provides additional flexibility in relation to the phasing of development at North Witney.

Paragraph 9.2.48 states that:

“As a large site, development of the North Witney SDA is likely to fall into a number of phases. There is already a current planning application on part of the site for 200 dwellings which is likely to form ‘Phase 1’ (subject to a comprehensive masterplan/delivery framework for the whole site)...”

The potential for the land between New Yatt Road and Woodstock Road (to which the extract above refers) coming forward in the short term as a first phase of development of the North Witney SDA is recognised and supported. The site, which is controlled by Taylor Wimpey, lends itself to early release without prejudice to
the remainder of the site.

As well as land at Woodstock Road, Taylor Wimpey also control a substantial area of the main SDA site. Taylor Wimpey fully agree that any development on land between New Yatt Road and Woodstock Road should make proportionate contributions towards delivering the infrastructure requirements of the whole SDA. In addition to providing the first phase of the Northern Distributor Road, Taylor Wimpey is completely committed to ensuring that this early phase of development forms part of the wider SDA and does not prejudice its delivery, which can be secured through the use of planning conditions and s106 obligations as necessary.

Given the potential for the New Yatt Road/ Woodstock Road to come forward at an earlier stage and that the proposed new additional land to the West of Hailey Road is not within the control of the Consortium, the requirement for a “comprehensive masterplan” for the whole site is questioned. We therefore suggest that the reference to a “comprehensive masterplan” is removed from paragraph 9.2.48 and just the reference to a “delivery framework” retained in the interests of clarity.

The Council has proposed an additional criterion (ai) “comprehensive development to be led by an agreed masterplan” to reflect the comments in the supporting text discussed above. Whilst a masterplan for the main part of the site is supported, given the comments above it is suggested that this criterion should be amended to: “comprehensive development of the main part of the site between New Yatt Road and Hailey Road to be led by an agreed masterplan” (additional text underlined).

Criterion Di – Heritage

The Council have proposed a new criterion which requires “the conservation and where possible enhancement of the setting of the grade II listed Middlefield Farmhouse and dovecote and the Witney and Cogges and Hailey Conservation Areas.” Given our comments above in respect of Policy EH7 it is considered that further amendment is required to this proposed requirement to ensure it is consistent with national policy.

Detailed heritage assessments have been undertaken on behalf of the Consortium in respect of heritage and these will inform, and assess, the detailed proposals as they continue to evolve.

Criterion L – West End Link

As with our above comments in respect of criterion Di, it is considered that this requirement should be reworded to reflect the requirements of the NPPF in respect of heritage. Furthermore, to ensure consistency with MAIN 61 discussed above, the Policy text should reflect that the North Witney SDA is to “facilitate the delivery of the West End Link.”

Other Matters

We support the recognition of the potential of land to the north of the site in terms of the potential use of off-site measures in relation to sustainable drainage for the North Witney SDA.

As highlighted in the Development Framework Document (DFD) previously submitted, as well as mitigating the impact of the proposed development, the use of additional off-site attenuation features offers the opportunity to alleviate the downstream sewer systems which are currently over capacity.
The proposed main modifications to criteria (a), (b) and (i) to Policy WIT2 relating to the North Witney SDA are supported in principle to reflect the additional capacity of the site and possibility of off-site drainage solutions, as well as providing additional flexibility in relation to the proposed phasing of development.

For the reasons detailed above in respect of MAIN 40 (not repeated here), we also maintain a strong objection to criterion (n), which requires the developer to set aside 5% of the developable plots as custom/self-build, and request that this be deleted.

**Sustainability Appraisal**

Enfusion, on behalf of WODC, have prepared a Sustainability Appraisal Addendum Report in respect of the proposed modifications to the Local Plan. In respect of the increased scale and quantum of development proposed at the North Witney SDA, the Addendum advises that "the findings of the SA as reported in the Submission SA Report remain valid."

We support the conclusions of the Sustainability Appraisal Addendum Report. Given the scale of increase of the proposed SDA since the previous Sustainability Appraisal was undertaken, to ensure the Plan is underpinned by a robust evidence base we would recommend that the detailed appraisal of the allocation be updated in full to support the summary provided in the Addendum Report. This will help to further demonstrate that the proposed strategy is justified, subject to our comments above.

**Viability Assessment and Infrastructure Delivery Plan**

To underpin the proposed modifications to the Local Plan, Aspinall Verdi have prepared a Strategic Development Area Viability Update (2016) on behalf of the Council. The Viability Update should be further updated to reflect our comments above in respect of custom/selfbuild housing etc.

As per the previous submissions on behalf of the Consortium, further consideration is required in respect of the necessary infrastructure required to be delivered by the site and whether this is to be funded by the SDA in isolation or whether contributions through Section 106 Agreements or CIL are to be sought from other developments in the area. We will continue to liaise with the Council in this regard in advance of the EIP.
My driveway is a quiet, privately owned (by me) drive serving three houses. There is a historic grade 2 listed ‘Dovecote’ on the drive from 1640. I object to this being opened up to cycle traffic which does not need to come past our house.

What happens if a cyclist has an accident on my land due to a ‘pot hole’ or something similar. Will I be subject to an insurance claim?

The access pathway is very narrow (see attached photograph) as is not suitable. There are other better access entrance 50m away.

The area of land required to deliver 1,400 houses is unclear. Main 98 talks of an amended plan in Figure 9.4 but this plan fails to capture area 250 shown on the SHELA map released on 12th December 2016.

Main 99 - 9.2.40b In addition to the proposed site allocation shown on Figure 9.4, there may also be some potential for further development on the land further north between New Yatt Road and Woodstock Road. The site has not been promoted for development through the Council’s housing land availability assessment and has therefore not been included within the allocation but in principle may be suitable subject to there being a demonstrable benefit e.g. in terms of improved highway access arrangements and Green Infrastructure provision.

We presume this is site 457 on the SHELA map and / or what has been previously referred to as the ‘panhandle’ alongside it. If it has not been promoted for development, why does it merit inclusion? Inclusion highlights how poor the preparation and supporting evidence is for this magnitude of development.

Main 100 - 9.2.42 In terms of flood risk, evidence suggests that there is scope to reduce surface water run-off from the site itself through the use of sustainable drainage and potential off-site enhancements. The site promoter has identified land to the north of the SDA boundary which could be used for the purpose of off-site storage.

Strategic Flood risk assessment (SFRA) Level 2 – North Witney

5.2 SuDS Requirements ... Currently around 9.5ha of open space is proposed in the north of the site, which is at the upslope limit.

The Richard Jackson Engineering Consultants’ report on flood risk was published in January 2015. However, during the following two years, no clear proposals on solutions to the flood risks and land requirements have been finalised. This SuDS flood attenuation area of 9.5ha is not identified on any of the maps.

So, in addition to the declared SDA area, we should probably add area 250, we may have to add area 457 and / or possibly the ‘panhandle’ and a further area of 9.5ha will be required for flood mitigation.

Expansion of the SDA footprint at this late stage is a major concern and the failure to clearly identify and declare the area of land required to deliver the whole of the North Witney development is an abuse of the consultation process.

Summary

All three landscape reports have identified

<td>WYG are instructed by Barwood Land to prepare and submit representations to the current consultation on the Proposed Modifications to the Submission Draft West Oxfordshire Local Plan 2031. Barwood has land interests in the area which are now included in the Proposed Modifications as part of the North Witney allocation. The purpose of these representations is to support the inclusion of land at North Witney as part of the North Witney Strategic Development Area (SDA), to which draft Policy WIT2 relates, and demonstrate that it could come forward, to meet much needed housing numbers, in advance of the remainder of the North Witney allocation. A map identifying the Barwood land interests within the North Witney SDA is attached to these representations. In preparing and submitting these representations regard has been had to the proposed allocation of the land and the practicalities of bringing forward the site alongside the wider development of the North Witney SDA whilst not impeding the delivery of infrastructure which will be needed to support such development. A meeting held with West Oxfordshire District Council Officer Mr Hargraves on 25th November 2016 has also been referenced in the preparation and submission of these representations. Background The Inspector’s Preliminary Findings Part 1 (IN 015) confirmed at para 1.2 that the “housing requirement in the submitted local plan of 10,500 dwellings [525 per annum] is not justified and has not been derived from a process which complies with the requirements of the NPPF.” Section 10 of the Preliminary Findings report stated that the demographic starting point is too low, that no explicit consideration had been given to the need for affordable housing and that the preference for a baseline economic growth rate was unjustified and out of step with the Government’s aims for economic growth.</td>

Whilst the Inspector did not identify a specific housing requirement he indicated that it should be between the submitted figure of 525 dwellings per annum and the Strategic Housing Market Assessment (SHMA) figure of 660 dwellings per annum.

**Proposed Modifications**

Following a suspension of the Local Plan Examination, the Council’s Proposed Modifications to the emerging Local Plan identify at Para 5.12 and Policy H1 that the total level of housing provision to be provided in West Oxfordshire across the Plan period of 2011-2031 is 19,950 homes. This comprises 13,200 homes to meet West Oxfordshire’s own needs and a further 2,750 homes during the period 2021-2031 to assist with the unmet needs of Oxford City.

Policy H1 goes on to state that a significant proportion of new homes will be provided at, inter alia, Witney, and the Witney sub-area is proposed to provide 4,400 new dwellings across the Plan period.

The Proposed Modifications also now set out that the Strategic Development Area on land ‘north of Witney’ is proposed to provide a 400 dwelling increase to that originally proposed as well as an increase in the land that will comprise the SDA.

Figure 9.4 in the Proposed Modifications document highlights the now proposed SDA land parcels, including my client’s land interests at Hailey Road as identified on the Plan attached to this letter (Attached). The proposed development of this land for around 100 new dwellings (para 9.2.40a) is fully supported as part of the SDA allocation.

Notwithstanding the support for this additional land, specific comments are made in respect of criteria d) in the proposed Policy WIT2. A meeting held between my client and Mr Hargraves at West Oxfordshire District Council on 25th November 2016 identified that the reference to the land west of Hailey Road as a possible extension for the existing Witney Community Primary School identified that this is not to be taken forwards as a proposal. Oxfordshire County Education have confirmed that their ambition is to achieve the provision of a new school to serve the wider North Witney allocation and not to simply expand the existing one.

**Barwood Land Interests and Site Deliverability**

The inclusion of my Client’s land interests at Hailey Road in the North Witney SDA as identified in the Proposed Modifications to the emerging West Oxfordshire Local Plan is fully supported. As set out in para 4.3 of the Inspector’s Preliminary Findings - Part 1 (In 015), the LPA has consistently delivered housing numbers lower than the current requirement of 525 and the inclusion of this parcel of land within the SDA is such that it could come forward independently of the remainder of the allocation, to be delivered within five years to contribute toward the identified housing need in West Oxfordshire.

In turn the development of the land would provide the appropriate, and proportionate contributions towards funds for the necessary infrastructure required to support the entire North Witney SDA, as identified in the proposed emerging Local Plan Policy WIT2. The provision of a monetary contribution through Section 106 funding as part of any planning permission granted for the site should be acceptable with regard to relevant Secretary of State decisions (e.g. APP/D3125/W/15/3005737, land at Burford Road, Witney), where the principle of a financial contribution toward the delivery of infrastructure improvements has been found acceptable.
It is therefore suggested that an early application for the development of my client’s land interests at Hailey Road would be appropriate, to both assist in the Council being able to maintain a 5 year land supply position whilst the infrastructure constraints associated with the delivery of the wider allocation are addressed.

Indeed, as set out at para 16 of the Secretary of State decision referenced above, the provision of monetary contributions toward the provision of strategic infrastructure may also aid the delivery of the wider Strategic Development Area (which in this case was the East Witney SDA).

To summarise, the inclusion of my client’s land interests within the North Witney SDA in the Proposed Modifications to the emerging West Oxfordshire Local Plan 2031 are fully supported. The Council is, however, requested to:

1) Remove any reference to the provision of an extension to the North Witney Community Primary School from the draft Policy WIT2, criteria d); and
2) To encourage the submission of an early planning application, which would assist in enabling West Oxfordshire District Council to maintain a demonstrable five year land supply, and secure financial contributions toward the provision of essential infrastructure which will, in turn, enable the delivery of the wider SDA Allocation at North Witney.

The text indicates that a primary school may be removed and replaced as part of this proposal. Sport England recommends that the Council ensure that any playing fields associated with the primary school are also replaced.

As a local resident with a close interest in the past development of Witney over the last 40 years and its future form I would strongly suggest that with regard to the comments made under 9.2.40b, serious consideration should be given to the incorporation the area to the north between New Yatt Road and Woodstock Road within the Strategic Development Area. In my experience it would be a mistake to disregard the significance of this area in enabling proper decisions to be made in respect of the most advantageous route of the new distributor road and best place for its link with the Woodstock Road and Jubilee Way. Furthermore, it would be better for future development in this area to be properly integrated within the SDA on a comprehensive basis rather than be considered as an add on at a later date. The addition of this area will also make the the infrastructure costs, especially the West End link, more feasible.

Quantum of development and expansion of allocation site

This proposed main modification is supported to reflect the proposed increase in housing numbers at the North Witney SDA from 1,000 to 1,400 homes and to provide clarification in relation to the delivery of the West End Link and northern distributor road. For further clarification however, we would suggest that the wording of paragraph 9.2.38 be amended to “...the development will require enable the delivery of the West End Link (WEL)...”

Our previous submissions have indicated that the North Witney SDA could deliver 1,400 homes without the additional land to the west of Hailey Road.

The draft wording of Policy WIT2 states however that the allocation is for “about 1,400 homes”, which infers...
that the Council will take a flexible approach if the site could satisfactorily accommodate a higher number of units. This would help to address the concerns raised above regarding the ability of the Plan as currently drafted to meet the housing requirement for the Sub-Area and the District as a whole.

On that basis no objection is raised to these proposed main modifications in terms of the principle of including the additional land to the west of Hailey Road within the boundary of the North Witney SDA. Indeed, the potential opportunity to expand the Witney Community Primary School rather than provide a separate new school within the main site area is supported by our clients.

Revised paragraph 9.2.45 of the Local Plan explains the Council’s justification for increasing the quantum of development on the site and the landscape work that has been undertaken to inform this. We support the acknowledgement that the site is capable of accommodating a greater number of houses than that previously suggested within the ‘Kirkham Associates Landscape and Visual Review of Submissions for Carterton and Witney Strategic Development Options’ (2012).

An independent landscape review of the site and the Kirkham report previously prepared for the North Witney Consortium (and previously submitted to the council) concluded that the Kirkham report had concentrated on the wider open countryside to the north of Witney. Although we would not disagree with the high sensitivity landscape of the wider setting, it is considered that the openly visible existing settlement edge exerts an urbanising influence into a greater portion of the site than the Kirkham report suggests. The openness of the site contrasts strongly with the high level of enclosure to the north beyond the site, in the vicinity of Poffley End and Hailey, ensuring the setting to these settlements would not be compromised by development of the site.

Through sensitive masterplan design it is therefore considered that a development of around 1,400 units can be readily assimilated into the landscape without eroding the setting to Poffley End or Hailey. To that end, and as indicated at paragraph 9.2.45 of the draft Local Plan, a detailed Landscape and Visual Impact Assessment (LVIA) would be submitted in support of any future planning application, to ensure that the scale of the development proposed and its arrangement is capable of being accommodated on the site without undue adverse impact.

Given the points raised above in respect of the Council’s position on the findings of the Kirkham report referred to at footnote 56 of the Plan, and given the Council’s acceptance of the findings of the Environmental Dimension Partnership Report (EP247_10b) prepared on behalf of the Consortium, it is considered that this document should also be referred to in the footnotes. This modification will provide clarity in respect of the Council’s altered approach to the site.

In light of the Council’s comments in respect of landscape and the recognition that the SDA is capable of accommodating an increased quantum of development, it is considered that the revised Figure 9.8 at Main 98 should be updated. As with the other allocations in the Plan it is recommended that the Figure is simplified to indicate the site boundary only with all other matters of detail to be agreed through the planning application process in due course (for example, removing the areas identified in the Legend).

Phasing and Masterplanning

Main Modification 102 in respect of phasing is broadly supported in so far as it provides additional flexibility in relation to the phasing of development at North Witney.
Paragraph 9.2.48 states that:

"As a large site, development of the North Witney SDA is likely to fall into a number of phases. There is already a current planning application on part of the site for 200 dwellings which is likely to form ‘Phase 1’ (subject to a comprehensive masterplan/delivery framework for the whole site)…"

The potential for the land between New Yatt Road and Woodstock Road (to which the extract above refers) coming forward in the short term as a first phase of development of the North Witney SDA is recognised and supported. The site, which is controlled by Taylor Wimpey, lends itself to early release without prejudice to the remainder of the site.

As well as land at Woodstock Road, Taylor Wimpey also control a substantial area of the main SDA site. Taylor Wimpey fully agree that any development on land between New Yatt Road and Woodstock Road should make proportionate contributions towards delivering the infrastructure requirements of the whole SDA, in addition to providing the first phase of the Northern Distributor Road. Taylor Wimpey is completely committed to ensuring that this early phase of development forms part of the wider SDA and does not prejudice its delivery, which can be secured through the use of planning conditions and s106 obligations as necessary.

Given the potential for the New Yatt Road/ Woodstock Road to come forward at an earlier stage and that the proposed new additional land to the West of Hailey Road is not within the control of the Consortium, the requirement for a “comprehensive masterplan” for the whole site is questioned. We therefore suggest that the reference to a “comprehensive masterplan” is removed from paragraph 9.2.48 and just the reference to a “delivery framework” retained in the interests of clarity.

Criterion Di – Heritage

The Council have proposed a new criterion which requires “the conservation and where possible enhancement of the setting of the grade II listed Middlefield Farmhouse and dovecote and the Witney and Cogges and Hailey Conservation Areas.” Given our comments above in respect of Policy EH7 it is considered that further amendment is required to this proposed requirement to ensure it is consistent with national policy.

Detailed heritage assessments have been undertaken on behalf of the Consortium in respect of heritage and these will inform, and assess, the detailed proposals as they continue to evolve.

Criterion L – West End Link

As with our above comments in respect of criterion Di, it is considered that this requirement should be reworded to reflect the requirements of the NPPF in respect of heritage. Furthermore, to ensure consistency with MAIN 61 discussed above, the Policy text should reflect that the North Witney SDA is to “facilitate the delivery of the West End Link.”
We support the recognition of the potential of land to the north of the site in terms of the potential use of off-site measures in relation to sustainable drainage for the North Witney SDA.

As highlighted in the Development Framework Document (DFD) previously submitted, as well as mitigating the impact of the proposed development, the use of additional off-site attenuation features offers the opportunity to alleviate the downstream sewer systems which are currently over capacity.

The proposed main modifications to criteria (a), (b) and (i) to Policy WIT2 relating to the North Witney SDA are supported in principle to reflect the additional capacity of the site and possibility of off-site drainage solutions, as well as providing additional flexibility in relation to the proposed phasing of development.

For the reasons detailed above in respect of MAIN 40 (not repeated here), we also maintain a strong objection to criterion (n), which requires the developer to set aside 5% of the developable plots as custom/self-build, and request that this be deleted.

Sustainability Appraisal

Enfusion, on behalf of WODC, have prepared a Sustainability Appraisal Addendum Report in respect of the proposed modifications to the Local Plan. In respect of the increased scale and quantum of development proposed at the North Witney SDA, the Addendum advises that “the findings of the SA as reported in the Submission SA Report remain valid.”

We support the conclusions of the Sustainability Appraisal Addendum Report. Given the scale of increase of the proposed SDA since the previous Sustainability Appraisal was undertaken, to ensure the Plan is underpinned by a robust evidence base we would recommend that the detailed appraisal of the allocation be updated in full to support the summary provided in the Addendum Report. This will help to further demonstrate that the proposed strategy is justified, subject to our comments above.

Viability Assessment and Infrastructure Delivery Plan

To underpin the proposed modifications to the Local Plan, Aspinall Verdi have prepared a Strategic Development Area Viability Update (2016) on behalf of the Council. The Viability Update should be further updated to reflect our comments above in respect of custom/selfbuild housing etc.

As per the previous submissions on behalf of the Consortium, further consideration is required in respect of the necessary infrastructure required to be delivered by the site and whether this is to be funded by the SDA in isolation or whether contributions through Section 106 Agreements or CIL are to be sought from other developments in the area. We will continue to liaise with the Council in this regard in advance of the EIP.

Stagecoach welcomes the recognition in para. 9.2.40b that further land to the east of the proposed allocation, between New Yatt Road and Woodstock Road would represent a possible suitable sustainable direction of growth. We have previously suggested that such a direction of growth would be greatly easier to serve with high quality bus services, based on the improvement of the existing service to Hanborough Station and beyond along the A4095, which itself aligns with the County’s adopted Transport Plan suite; and this
While no promoter has yet been in a position to secure control of the site, the evidence suggests that should the site become available, it is likely to be both suitable and achievable, to a degree that other options being proposed for allocation may not be, to the same extent. Stagecoach considers that this is a "reasonable alternative" of sufficient merit that the site might be allocated as a "reserve site", or be subject to an "opportunity-based" policy.

The area of land required to deliver 1,400 houses is unclear. Main 98 talks of an amended plan in Figure 9.4 but this plan fails to capture area 250 shown on the SHELA map released on 12th December 2016.

In addition to the proposed site allocation shown on Figure 9.4, there may also be some potential for further development on the land further north between New Yatt Road and Woodstock Road. The site has not been promoted for development through the Council's housing land availability assessment and has therefore not been included within the allocation but in principle may be suitable subject to there being a demonstrable benefit e.g. in terms of improved highway access arrangements and Green Infrastructure provision.

We presume this is site 457 on the SHELA map and / or what has been previously referred to as the 'panhandle' alongside it. If it has not been promoted for development, why does it merit inclusion? Inclusion highlights how poor the preparation and supporting evidence is for this magnitude of development.

In terms of flood risk, evidence suggests that there is scope to reduce surface water run-off from the site itself through the use of sustainable drainage and potential off-site enhancements. The site promoter has identified land to the north of the SDA boundary which could be used for the purpose of off-site storage.

Currently around 9.5ha of open space is proposed in the north of the site, which is at the upslope limit. The Richard Jackson Engineering Consultants' report on flood risk was published in January 2015. However, during the following two years, no clear proposals on solutions to the flood risks and land requirements have been finalised. This SuDS flood attenuation area of 9.5ha is not identified on any of the maps.

So, in addition to the declared SDA area, we should probably add area 250, we may have to add area 457 and / or possibly the 'panhandle' and a further area of 9.5ha will be required for flood mitigation.

Expansion of the SDA footprint at this late stage is a major concern and the failure to clearly identify and declare the area of land required to deliver the whole of the North Witney development is an abuse of the consultation process.

Summary

All three landscape reports have identified

* High landscape sensitivity
* Need to protect the landscape setting of the villages and scattered farmsteads
* Need to protect the open valley landscape and its continuity with the valley northwards
* Need to resist urban development between Hailey and Witney
* Protection of the separate identity of Hailey / Poffley End

All three reports have been ignored.

The closure of one of the two gaps between Witney and Hailey (development proposed on both sides of the B4022 South of Downhill Lane) by inclusion of land west of Hailey Road is one of the largest breaches, effectively joining Witney and the Foxburrow area of Hailey.

The declaration in Main 97 that the building of 1,400 houses ‘will not have a significant landscape impact’ is not sustained by additional evidence. Proposing a fourth landscape and visual impact assessment underlines the weakness of WODC’s case and exposes the fragility of their statements.

The area of land required to deliver this development has not been clearly identified and may require an extension of the SDA. It is, at best, unprofessional to put out a consultation on this proposal without a clear declaration of the land area required for successful delivery.

The proposals breach many of WODCs own strategic objectives and policies as outlined above.

These two statements appear to be vague references to the six attenuation ponds (60,000 cubic metre capacity) situated outside and to the north of the main SDA area on the 100 metre contour, and first published on WODC’s website in November 2015 in WOLP36 (43163/C/013 - Drainage Strategy Plan). This document (WOLP36), commissioned by Meridian Land, was ultimately revealed following the Inspector’s Q&A document IN004 and WODC’s subsequent response WOLP24.

It is unacceptable that WODC is still unable to give more detail about a critical piece of flood attenuation infrastructure when this, the developer’s own Technical Report, was dated prior to the original submission of the Local Plan to the Inspector for examination. (WOLP36 - Richard Jackson Engineering Consultants, report dated 16/01/2015).

Flood Attenuation

It is unacceptable that WODC is still unable to be more specific about a critical piece of Witney’s flood attenuation infrastructure in North Witney SDA than shown in Main 103 & 100, “This may include consideration of ‘off-site’ solutions.” and “…could be used for the purpose of off-site storage.” Considering that the developer’s flood consultants (Richard Jackson Engineering) in WOLP36 are recommending a very significantly sized 60,000 cubic metre reservoir to be built outside the SDA in Hailey, we would expect more detail at this stage, not a vague, non-committal comment.

Quantum of development and expansion of allocation site
Consortium

This proposed main modification is supported to reflect the proposed increase in housing numbers at the North Witney SDA from 1,000 to 1,400 homes and to provide clarification in relation to the delivery of the West End Link and northern distributor road. For further clarification however, we would suggest that the wording of paragraph 9.2.38 be amended to “…the development will require enable the delivery of the West End Link (WELL).”

Our previous submissions have indicated that the North Witney SDA could deliver 1,400 homes without the additional land to the west of Hailey Road.

The draft wording of Policy WIT2 states however that the allocation is for “about 1,400 homes”, which infers that the Council will take a flexible approach if the site could satisfactorily accommodate a higher number of units. This would help to address the concerns raised above regarding the ability of the Plan as currently drafted to meet the housing requirement for the Sub-Area and the District as a whole.

On that basis no objection is raised to these proposed main modifications in terms of the principle of including the additional land to the west of Hailey Road within the boundary of the North Witney SDA. Indeed, the potential opportunity to expand the Witney Community Primary School rather than provide a separate new school within the main site area is supported by our clients.

Revised paragraph 9.2.45 of the Local Plan explains the Council’s justification for increasing the quantum of development on the site and the landscape work that has been undertaken to inform this. We support the acknowledgement that the site is capable of accommodating a greater number of houses than that previously suggested within the ‘Kirkham Associates Landscape and Visual Review of Submissions for Carterton and Witney Strategic Development Options’ (2012).

An independent landscape review of the site and the Kirkham report previously prepared for the North Witney Consortium (and previously submitted to the Council) concluded that the Kirkham report had concentrated on the wider open countryside to the north of Witney. Although we would not disagree with the high sensitivity landscape of the wider setting, it is considered that the openly visible existing settlement edge exerts an urbanising influence into a greater portion of the site than the Kirkham report suggests. The openness of the site contrasts strongly with the high level of enclosure to the north beyond the site, in the vicinity of Poffley End and Hailey, ensuring the setting to these settlements would not be compromised by development of the site.

Through sensitive masterplan design it is therefore considered that a development of around 1,400 units can be readily assimilated into the landscape without eroding the setting to Poffley End or Hailey. To that end, and as indicated at paragraph 9.2.45 of the draft Local Plan, a detailed Landscape and Visual Impact Assessment (LVIA) would be submitted in support of any future planning application, to ensure that the scale of the development proposed and its arrangement is capable of being accommodated on the site without undue adverse impact.

Given the points raised above in respect of the Council’s position on the findings of the Kirkham report referred to at footnote 56 of the Plan, and given the Council’s acceptance of the findings of the Environmental Dimension Partnership Report (EP247_10b) prepared on behalf of the Consortium, it is considered that this document should also be referred to in the footnotes. This modification will provide clarity in respect of the Council’s altered approach to the site.

In light of the Council’s comments in respect of landscape and the recognition that the SDA is capable of...

</tr>
</thead>
</table>

accommodating an increased quantum of development, it is considered that the revised Figure 9.8 at Main 98 should be updated. As with the other allocations in the Plan it is recommended that the Figure is simplified to indicate the site boundary only with all other matters of detail to be agreed through the planning application process in due course (for example, removing the areas identified in the Legend).

Phasing and Masterplanning

Main Modification 102 in respect of phasing is broadly supported in so far as it provides additional flexibility in relation to the phasing of development at North Witney.

Paragraph 9.2.48 states that:

"As a large site, development of the North Witney SDA is likely to fall into a number of phases. There is already a current planning application on part of the site for 200 dwellings which is likely to form ‘Phase 1’ (subject to a comprehensive masterplan/delivery framework for the whole site)..."

The potential for the land between New Yatt Road and Woodstock Road (to which the extract above refers) coming forward in the short term as a first phase of development of the North Witney SDA is recognised and supported. The site, which is controlled by Taylor Wimpey, lends itself to early release without prejudice to the remainder of the site.

As well as land at Woodstock Road, Taylor Wimpey also control a substantial area of the main SDA site. Taylor Wimpey fully agree that any development on land between New Yatt Road and Woodstock Road should make proportionate contributions towards delivering the infrastructure requirements of the whole SDA, in addition to providing the first phase of the Northern Distributor Road. Taylor Wimpey is completely committed to ensuring that this early phase of development forms part of the wider SDA and does not prejudice its delivery, which can be secured through the use of planning conditions and s106 obligations as necessary.

Given the potential for the New Yatt Road/ Woodstock Road to come forward at an earlier stage and that the proposed new additional land to the West of Hailey Road is not within the control of the Consortium, the requirement for a “comprehensive masterplan” for the whole site is questioned. We therefore suggest that the reference to a "comprehensive masterplan" is removed from paragraph 9.2.48 and just the reference to a “delivery framework” retained in the interests of clarity.

The Council has proposed an additional criterion (ai) "comprehensive development to be led by an agreed masterplan" to reflect the comments in the supporting text discussed above. Whilst a masterplan for the main part of the site is supported, given the comments above it is suggested that this criterion should be amended to: “comprehensive development of the main part of the site between New Yatt Road and Hailey Road to be led by an agreed masterplan” (additional text underlined).

Criterion Di - Heritage

The Council have proposed a new criterion which requires "the conservation and where possible enhancement of the setting of the grade II listed Middlefield Farmhouse and dovecote and the Witney and Cogges and Hailey Conservation Areas." Given our comments above in respect of Policy EH7 it is considered that further amendment is required to this proposed requirement to ensure it is consistent with national policy.

Detailed heritage assessments have been undertaken on behalf of the Consortium in respect of heritage and these will inform, and assess, the detailed proposals as they continue to evolve.

**Criterion L - West End Link**

As with our above comments in respect of criterion Di, it is considered that this requirement should be reworded to reflect the requirements of the NPPF in respect of heritage. Furthermore, to ensure consistency with MAIN 65 discussed above, the Policy text should reflect that the North Witney SDA is to “facilitate the delivery of the West End Link.”

**Other Matters**

We support the recognition of the potential of land to the north of the site in terms of the potential use of off-site measures in relation to sustainable drainage for the North Witney SDA.

As highlighted in the Development Framework Document (DFD) previously submitted, as well as mitigating the impact of the proposed development, the use of additional off-site attenuation features offers the opportunity to alleviate the downstream sewer systems which are currently over capacity.

The proposed main modifications to criteria (a), (b) and (i) to Policy WIT2 relating to the North Witney SDA are supported in principle to reflect the additional capacity of the site and possibility of off-site drainage solutions, as well as providing additional flexibility in relation to the proposed phasing of development.

For the reasons detailed above in respect of MAIN 40 (not repeated here), we also maintain a strong objection to criterion (n), which requires the developer to set aside 5% of the developable plots as custom/self-build, and request that this be deleted.

**Sustainability Appraisal**

Enfusion, on behalf of WODC, have prepared a Sustainability Appraisal Addendum Report in respect of the proposed modifications to the Local Plan. In respect of the increased scale and quantum of development proposed at the North Witney SDA, the Addendum advises that “the findings of the SA as reported in the Submission SA Report remain valid.”

We support the conclusions of the Sustainability Appraisal Addendum Report. Given the scale of increase of the proposed SDA since the previous Sustainability Appraisal was undertaken, to ensure the Plan is underpinned by a robust evidence base we would recommend that the detailed appraisal of the allocation be updated in full to support the summary provided in the Addendum Report. This will help to further demonstrate that the proposed strategy is justified, subject to our comments above.

**Viability Assessment and Infrastructure Delivery Plan**

To underpin the proposed modifications to the Local Plan, Aspinall Verdi have prepared a Strategic Development Area Viability Update (2016) on behalf of the Council. The Viability Update should be further updated to reflect our comments above in respect of custom/selfbuild housing etc.

As per the previous submissions on behalf of the Consortium, further consideration is required in respect of...

| MM399 | Hailey Parish Council | Graham Knaggs | Mr Knaggs       | 875       | > SECTION 9 - STRATEGY AT THE LOCAL LEVEL > Witney Sub Area > MAIN 100 | I live in Poffley End. I support the cogent views set out in the submission from the Hailey Parish Council dated 21/12/2016. However, neither the local plan, nor the Hailey Parish Council submission emphasise the impact of the proposed plan on flooding in the North Witney area. At present, there is already limited run-off for flood water along the road between Witney and Hailey. In addition, there remains a high risk of flooding on the surrounding lower lying areas, such as Poffley End. Development of 1400 homes in an area where there are currently 500 homes, would:  
* Close the gap between Witney and Hailey;  
* Destroy the landscape setting of the scattered villages and hamlets; And  
* Will cause extensive flooding on existing properties. |

The area of land required to deliver 1,400 houses in unclear. Main 98 talks of an amended plan in Figure 9.4 but this plan fails to capture area 250 shown on the SHELA map released on 12th December 2016.  
Main 99 - 9.2.40b In addition to the proposed site allocation shown on Figure 9.4, there may also be some potential for further development on the land further north between New Yatt Road and Woodstock Road. The site has not been promoted for development through the Council’s housing land availability assessment and has therefore not been included within the allocation but in principle may be suitable subject to there being a demonstrable benefit e.g. in terms of improved highway access arrangements and Green Infrastructure provision.  
We presume this is site 457 on the SHELA map and/or what has been previously referred to as the ‘panhandle’ alongside it. If it has not been promoted for development, why does it merit inclusion? Inclusion highlights how poor the preparation and supporting evidence is for this magnitude of development.  
Main 100 - 9.2.42 In terms of flood risk, evidence suggests that there is scope to reduce surface water run-off from the site itself through the use of sustainable drainage and potential off-site enhancements. The site promoter has identified land to the north of the SDA boundary which could be used for the purpose of off-site storage.  
Strategic Flood risk assessment (SFRA) Level 2 – North Witney  
5.2 SuDS Requirements .... Currently around 9.5ha of open space is proposed in the north of the site, which is at the up slope limit. The Richard Jackson Engineering Consultants’ report on flood risk was published in January 2015. However, during the following two years, no clear proposals on solutions to the flood risks and land requirements have been finalised. This SuDS flood attenuation area of 9.5ha is not identified on any of the maps.  
So, in addition to the declared SDA area, we should probably add area 250, we may have to add area 457 and/or possibly the ‘panhandle’ and a further area of 9.5ha will be required for flood mitigation.  
Expansion of the SDA footprint at this late stage is a major concern and the failure to clearly identify and declare the area of land required to deliver the whole of the North Witney development is an abuse of the... |

Indeed, the proposal now seems to move housing further into the green buffer zone. (Main 98, 9.4)</td>
</tr>
</tbody>
</table>

Summary

All three landscape reports have identified

* High landscape sensitivity
* Need to protect the landscape setting of the villages and scattered farmsteads
* Need to protect the open valley landscape and its continuity with the valley northwards
* Need to resist urban development between Hailey and Witney
* Protection of the separate identity of Hailey / Poffley End

All three reports have been ignored.

The closure of one of the two gaps between Witney and Hailey (development proposed on both sides of the B4022 South of Downhill Lane) by inclusion of land west of Hailey Road is one of the largest breaches, effectively joining Witney and the Foxburrow area of Hailey.

The declaration in Main 97 that the building of 1,400 houses 'will not have a significant landscape impact' is not sustained by additional evidence. Proposing a fourth landscape and visual impact assessment underlines the weakness of WODC's case and exposes the fragility of their statements.

The area of land required to deliver this development has not been clearly identified and may require an extension of the SDA. It is, at best, unprofessional to put out a consultation on this proposal without a clear declaration of the land area required for successful delivery.

The proposals breach many of WODCs own strategic objectives and policies as outlined above.
WODC has completely ignored the findings of their own commissioned (Kirkham 2012) Report, and which they earlier relied upon. (Main 101, 9.2.45, note 22)

* Kirkham report, combined areas C2+C3 shown as 750-850 houses.
C2 allocated 200; therefore C3 would be net 550-650 houses.

Proposed new housing number for area C3 now 1200 houses, or 1100 should 100 units be built on land west of Hailey Rd, as this may be used for a new school.

---

The North Witney SDA housing number has been increased from 1,000 to 1,400. This is a 40% increase, and WODC’s use of the phrases in Main 101 “modest increase, ...slightly higher density, and ...an acceptable degree of impact in landscape term.” cannot reflect the full impact this increase would undeniably have.

There is no new evidence to support WODC’s assertion that the number of dwellings in the largest area of North Witney SDA can be virtually doubled over the 2012 Kirkham Report’s recommended net C3 figure of 550-650 (new figure for area C3 is 1,100 to 1,200), without having a significant effect on the intrinsic character, appearance and setting of the area, particularly as it is now proposing to move housing further into the C3 green buffer zone.
Our previous submissions have indicated that the North Witney SDA could deliver 1,400 homes without the additional land to the west of Hailey Road.

The draft wording of Policy WIT2 states however that the allocation is for "about 1,400 homes", which infers that the Council will take a flexible approach if the site could satisfactorily accommodate a higher number of units. This would help to address the concerns raised above regarding the ability of the Plan as currently drafted to meet the housing requirement for the Sub-Area and the District as a whole.

On that basis no objection is raised to these proposed main modifications in terms of the principle of including the additional land to the west of Hailey Road within the boundary of the North Witney SDA. Indeed, the potential opportunity to expand the Witney Community Primary School rather than provide a separate new school within the main site area is supported by our clients.

Revised paragraph 9.2.45 of the Local Plan explains the Council's justification for increasing the quantum of development on the site and the landscape work that has been undertaken to inform this. We support the acknowledgement that the site is capable of accommodating a greater number of houses than that previously suggested within the 'Kirkham Associates Landscape and Visual Review of Submissions for Carterton and Witney Strategic Development Options' (2012).

An independent landscape review of the site and the Kirkham report previously prepared for the North Witney Consortium (and previously submitted to the council) concluded that the Kirkham report had concentrated on the wider open countryside to the north of Witney. Although we would not disagree with the high sensitivity landscape of the wider setting, it is considered that the openly visible existing settlement edge exerts an urbanising influence into a greater portion of the site than the Kirkham report suggests. The openness of the site contrasts strongly with the high level of enclosure to the north beyond the site, in the vicinity of Poffley End and Hailey, ensuring the setting to these settlements would not be compromised by development of the site.

Through sensitive masterplan design it is therefore considered that a development of around 1,400 units can be readily assimilated into the landscape without eroding the setting to Poffley End or Hailey. To that end, and as indicated at paragraph 9.2.45 of the draft Local Plan, a detailed Landscape and Visual Impact Assessment (LVIA) would be submitted in support of any future planning application, to ensure that the scale of the development proposed and its arrangement is capable of being accommodated on the site without undue adverse impact.

Given the points raised above in respect of the Council's position on the findings of the Kirkham report referred to at footnote 56 of the Plan, and given the Council's acceptance of the findings of the Environmental Dimension Partnership Report (EP247_10b) prepared on behalf of the Consortium, it is considered that this document should also be referred to in the footnotes. This modification will provide clarity in respect of the Council's altered approach to the site.

In light of the Council's comments in respect of landscape and the recognition that the SDA is capable of accommodating an increased quantum of development, it is considered that the revised Figure 9.8 at Main 98 should be updated. As with the other allocations in the Plan it is recommended that the Figure is simplified to indicate the site boundary only with all other matters of detail to be agreed through the planning application.

Phasing and Masterplanning

Main Modification 102 in respect of phasing is broadly supported in so far as it provides additional flexibility in relation to the phasing of development at North Witney.

Paragraph 9.2.48 states that:

"As a large site, development of the North Witney SDA is likely to fall into a number of phases. There is already a current planning application on part of the site for 200 dwellings which is likely to form ‘Phase 1’ (subject to a comprehensive masterplan/delivery framework for the whole site)..."

The potential for the land between New Yatt Road and Woodstock Road (to which the extract above refers) coming forward in the short term as a first phase of development of the North Witney SDA is recognised and supported. The site, which is controlled by Taylor Wimpey, lends itself to early release without prejudice to the remainder of the site.

As well as land at Woodstock Road, Taylor Wimpey also control a substantial area of the main SDA site. Taylor Wimpey fully agree that any development on land between New Yatt Road and Woodstock Road should make proportionate contributions towards delivering the infrastructure requirements of the whole SDA, in addition to providing the first phase of the Northern Distributor Road. Taylor Wimpey is completely committed to ensuring that this early phase of development forms part of the wider SDA and does not prejudice its delivery, which can be secured through the use of planning conditions and S106 obligations as necessary.

Given the potential for the New Yatt Road/ Woodstock Road to come forward at an earlier stage and that the proposed new additional land to the West of Hailey Road is not within the control of the Consortium, the requirement for a “comprehensive masterplan” for the whole site is questioned. We therefore suggest that the reference to a “comprehensive masterplan” is removed from paragraph 9.2.48 and just the reference to a “delivery framework” retained in the interests of clarity.

The Council has proposed an additional criterion (ai) “comprehensive development to be led by an agreed masterplan” to reflect the comments in the supporting text discussed above. Whilst a masterplan for the main part of the site is supported, given the comments above it is suggested that this criterion should be amended to: “comprehensive development of the main part of the site between New Yatt Road and Hailey Road to be led by an agreed masterplan” (additional text underlined).

Criterion Di – Heritage

The Council have proposed a new criterion which requires “the conservation and where possible enhancement of the setting of the grade II listed Middlefield Farmhouse and dovecote and the Witney and Cogges and Hailey Conservation Areas.” Given our comments above in respect of Policy EH7 it is considered that further amendment is required to this proposed requirement to ensure it is consistent with national policy.

Detailed heritage assessments have been undertaken on behalf of the Consortium in respect of heritage and these will inform, and assess, the detailed proposals as they continue to evolve.

**Criterion L – West End Link**

As with our above comments in respect of criterion Di, it is considered that this requirement should be reworded to reflect the requirements of the NPPF in respect of heritage. Furthermore, to ensure consistency with MAIN 61 discussed above, the Policy text should reflect that the North Witney SDA is to "facilitate the delivery of the West End Link."

**Other Matters**

We support the recognition of the potential of land to the north of the site in terms of the potential use of off-site measures in relation to sustainable drainage for the North Witney SDA.

As highlighted in the Development Framework Document (DFD) previously submitted, as well as mitigating the impact of the proposed development, the use of additional off-site attenuation features offers the opportunity to alleviate the downstream sewer systems which are currently over capacity.

The proposed main modifications to criteria (a), (b) and (i) to Policy WIT2 relating to the North Witney SDA are supported in principle to reflect the additional capacity of the site and possibility of off-site drainage solutions, as well as providing additional flexibility in relation to the proposed phasing of development.

For the reasons detailed above in respect of MAIN 40 (not repeated here), we also maintain a strong objection to criterion (n), which requires the developer to set aside 5% of the developable plots as custom/self-build, and request that this be deleted.

**Sustainability Appraisal**

Enfusion, on behalf of WODC, have prepared a Sustainability Appraisal Addendum Report in respect of the proposed modifications to the Local Plan. In respect of the increased scale and quantum of development proposed at the North Witney SDA, the Addendum advises that "the findings of the SA as reported in the Submission SA Report remain valid."

We support the conclusions of the Sustainability Appraisal Addendum Report. Given the scale of increase of the proposed SDA since the previous Sustainability Appraisal was undertaken, to ensure the Plan is underpinned by a robust evidence base we would recommend that the detailed appraisal of the allocation be updated in full to support the summary provided in the Addendum Report. This will help to further demonstrate that the proposed strategy is justified, subject to our comments above.

**Viability Assessment and Infrastructure Delivery Plan**

To underpin the proposed modifications to the Local Plan, Aspinall Verdi have prepared a Strategic Development Area Viability Update (2016) on behalf of the Council. The Viability Update should be further updated to reflect our comments above in respect of custom/selfbuild housing etc.

As per the previous submissions on behalf of the Consortium, further consideration is required in respect of the necessary infrastructure required to be delivered by the site and whether this is to be funded by the SDA in isolation or whether contributions through Section 106 Agreements or CIL are to be sought from other developments in the area. We will continue to liaise with the Council in this regard in advance of the EIP.

| MM399        | Hailey Parish Council   | Graham Knaggs    | Mr Knaggs        | 870       | > SECTION 9 - STRATEGY AT THE LOCAL LEVEL > Witney Sub Area > MAIN 101 | Main 97 North Witney Strategic Development Area (SDA) 1,400 homes (Hailey Parish)  
9.2.38 Land to the north of Witney is allocated for the delivery of 1,400 homes. The site is considered to be well-related to the main services and facilities of Witney, has no major ecological or heritage constraints and based on the proposed quantum of growth, will not have a significant landscape impact.  
Main 101 9.2.45  
In terms of landscape impact, evidence prepared in support of the Local Plan suggested that the originally proposed quantum of development (1,000 homes) was able to be accommodated on the site without undue adverse impact. Taking account of the additional development capacity provided by the inclusion of land west of Hailey Road, a modest increase in the extent of the developable area to the north (see Figure 9.4) and slightly higher density assumptions, it is considered that around 1,400 homes can be delivered on the site whilst ensuring an acceptable degree of impact in landscape terms. A detailed landscape and visual impact assessment would however be required in support of any future application to determine the most appropriate form and layout of development which would ultimately influence final housing numbers.  
Reference 22 is the Landscape and Visual Review of submissions for Carterton and Witney Strategic Development options KirkhamLandscapePlanning – October 2012  
We contend that the some of the statements contained in Main 97 and Main 101 above are at variance with reality, are not supported by any evidence and breach many of WODC’s own strategic objectives and policies as detailed below.  
There have been three Landscape and Visual Review reports on North Witney over the last few years:  
The first was the West Oxfordshire Landscape Assessment produced by Atlantic Consultants  
PART THREE – Key Settlements – Witney (marked as Page 100; Page 179 of electronic document)  
Key sensitivities and considerations  
* high quality landscape edge – vulnerable to change  
* important rural approach to Witney from the north – vulnerable to change  
* special attention should be given to maintaining strong landscape edges  
* resist urbanisation between Hailey and Witney  
The second was produced by AHLC (Page 11)  
6.16 The updated key Sensitivities and Considerations are:  
* Moderate quality landscape edge with some suburbanising influences, vulnerable to change;  
* Important rural approach to Witney from the north, particularly vulnerable to change given the scattered development along the B4022 between Witney and the modern edge of Hailey village;  
* Resist urbanisation between Hailey and Witney, particularly sensitive given the existing scattered development along the B4022.  
6.17 In summary, Area C2 is a gently undulating plateau landscape with high intervisibility to the south and |
The third report referenced in Main 101 is Landscape and Visual Review of submissions for Carterton and Witney Strategic Development options by Kirkham Landscape Planning.

Against a background where the developer had proposed building 1,500 houses, Kirkham identified the following key constraints, recommendations, and estimated housing capacity:

**Key Constraints to development:**

- High landscape sensitivity
- Need to protect the landscape setting of the villages and scattered farmsteads
- Need to protect the open valley landscape and its continuity with the valley northwards
- Protection of the separate identity of Hailey / Poffley End

**Recommendations**

Reduce area to avoid development within the landscape buffer which contains important surviving elements of the settled ancient pastures around the settlements.

**Recommended actions**

Consider smaller area on the southern part of the site whilst including proposed landscape transition zone to the edge of the town.

**Estimated housing capacity**

750 – 850

What does WODC believe a fourth detailed landscape and visual impact assessment will deliver that has not already been identified in the previous three reports? Is this a case of asking a consultant to provide supporting evidence to justify a weak argument?

The capacity of the smaller site between the Woodstock and New Yatt roads is 200 houses resulting in 550 – 650 houses on the main site. However, WODC decided to include 1,000 houses in the Local Plan 2031. This has now been modified further to 1,400 houses (Main 97).

WODC's statements in Main 97 that the site is considered to be well-related to the main services and facilities of Witney, has no major ecological or heritage constraints and based on the proposed quantum of growth, will not have a significant landscape impact.

and in Main 101 that

"In terms of landscape impact, evidence prepared in support of the Local Plan suggested that the originally proposed quantum of development (1,000 homes) was able to be accommodated on the site without undue..."

</tbody>
</table>
Small Villages, Hamlets and Open Countryside Development in the small villages, hamlets and open countryside will be limited to that which requires and is appropriate for a rural location and which respects the intrinsic character of the area.

**General Principles.** All development should:
- Be of a proportionate and appropriate scale to its context having regard to the potential cumulative impact of development in the locality;
- Form a logical complement to the existing scale and pattern of development and/or the character of the area;
- Avoid the coalescence and loss of identity of separate settlements;
- Be compatible with adjoining uses and not have a harmful impact on the amenity of existing occupants;
- As far as is reasonably possible protect or enhance the local landscape and the setting of the settlement/s;
- Not involve the loss of an area of open space or any other feature that makes an important contribution to the character or appearance of the area;
- Conserve and enhance the natural, historic and built environment;

This proposal will breach virtually all of these principles.

Policy OS4 – High Quality Design

High design quality is central to the strategy for West Oxfordshire. New development should respect the historic, architectural and landscape character of the locality, and contribute to local distinctiveness and, where possible, enhance the character and quality of the surroundings and should:

Policy EH1 - Landscape Character

The quality, character and distinctiveness of West Oxfordshire’s natural environment, including its landscape, cultural and historic value, tranquillity, geology, countryside, soil and biodiversity, will be conserved and enhanced. New development should respect and, where possible, enhance the intrinsic character, quality and distinctive natural and man-made features of the local landscape, including individual or groups of features and their settings, such as stone walls, trees, hedges, woodlands, rivers, streams and ponds. Conditions may be imposed on development proposals to ensure every opportunity is made to retain such features and ensure their long-term survival through appropriate management and restoration. Proposals which would result in the loss of features, important for their visual, amenity, or historic value will not be permitted unless the loss can be justified by appropriate mitigation and/or compensatory measures which can be secured to the satisfaction of the Council.

Special attention and protection will be given to the landscape and biodiversity of the Lower Windrush Valley Project, the Windrush in Witney Project Area and the Wychwood Project Area.

Although the site is part of the Wychwood Project Area there has been no special attention and a complete absence of landscape protection in the modifications to the Local Plan.

There is no supporting evidence in any of the North Witney Landscape and Visual reports to justify the modification from 1,000 to 1,400 houses and the proposal breaches many of WODC’s own policies. The development should be withdrawn and replaced by South Witney.

<td></td>
<td></td>
</tr>
</tbody>
</table>
Previously a start had to be made on infrastructure “ahead of the majority of development coming forward.” (Main 102, 9.2.48), but, for whatever reason, this commitment has now been fully deleted.

Clearly there is now a probability that vital infrastructure will be significantly delayed. Worse still, there is a real possibility that it (or parts of it) will not be built at all post the starting of the development. NWAG says this situation cannot be allowed to prevail.

Quantum of development and expansion of allocation site

This proposed main modification is supported to reflect the proposed increase in housing numbers at the North Witney SDA from 1,000 to 1,400 homes and to provide clarification in relation to the delivery of the West End Link and northern distributor road. For further clarification however, we would suggest that the wording of paragraph 9.2.38 be amended to “…the development will require enable the delivery of the West End Link (WELL)...”

Our previous submissions have indicated that the North Witney SDA could deliver 1,400 homes without the additional land to the west of Hailey Road.

The draft wording of Policy WIT2 states however that the allocation is for “about 1,400 homes”, which infers that the Council will take a flexible approach if the site could satisfactorily accommodate a higher number of units. This would help to address the concerns raised above regarding the ability of the Plan as currently drafted to meet the housing requirement for the Sub-Area and the District as a whole.

On that basis no objection is raised to these proposed main modifications in terms of the principle of including the additional land to the west of Hailey Road.

An independent landscape review of the site and the Kirkham report previously prepared for the North Witney Consortium (and previously submitted to the council) concluded that the Kirkham report had concentrated on the wider open countryside to the north of Witney. Although we would not disagree with the high sensitivity landscape of the wider setting, it is considered that the openly visible existing settlement edge exerts an urbanising influence into a greater portion of the site than the Kirkham report suggests. The openness of the site contrasts strongly with the high level of enclosure to the north beyond the site, in the vicinity of Poffley End and Hailey, ensuring the setting to these settlements would not be compromised by development of the site.

Through sensitive masterplan design it is therefore considered that a development of around 1,400 units can be readily assimilated into the landscape without eroding the setting to Poffley End or Hailey. To that end, and as indicated at paragraph 9.2.45 of the draft Local Plan, a detailed Landscape and Visual Impact Assessment (LVA) would be submitted in support of any future planning application, to ensure that the scale of the development proposed and its arrangement is capable of being accommodated on the site without undue adverse impact.

Given the points raised above in respect of the Council’s position on the findings of the Kirkham report referred to at footnote 56 of the Plan, and given the Council’s acceptance of the findings of the Environmental Dimension Partnership Report (EP247_10b) prepared on behalf of the Consortium, it is considered that this document should also be referred to in the footnotes. This modification will provide clarity in respect of the Council’s altered approach to the site.

In light of the Council’s comments in respect of landscape and the recognition that the SDA is capable of accommodating an increased quantum of development, it is considered that the revised Figure 9.8 at Main 98 should be updated. As with the other allocations in the Plan it is recommended that the Figure is simplified to indicate the site boundary only with all other matters of detail to be agreed through the planning application process in due course (for example, removing the areas identified in the Legend).

Phasing and Masterplanning

Main Modification 102 in respect of phasing is broadly supported in so far as it provides additional flexibility in relation to the phasing of development at North Witney.

Paragraph 9.2.48 states that:

"As a large site, development of the North Witney SDA is likely to fall into a number of phases. There is already a current planning application on part of the site for 200 dwellings which is likely to form 'Phase 1' (subject to a comprehensive masterplan/delivery framework for the whole site)..."

The potential for the land between New Yatt Road and Woodstock Road (to which the extract above refers) coming forward in the short term as a first phase of development of the North Witney SDA is recognised and supported. The site, which is controlled by Taylor Wimpey, lends itself to early release without prejudice to the remainder of the site.

As well as land at Woodstock Road, Taylor Wimpey also control a substantial area of the main SDA site. Taylor Wimpey fully agree that any development on land between New Yatt Road and Woodstock Road should make proportionate contributions towards delivering the infrastructure requirements of the whole SDA, in addition to providing the first phase of the Northern Distributor Road. Taylor Wimpey is completely committed to ensuring that this early phase of development forms part of the wider SDA and does not prejudice its delivery, which can be secured through the use of planning conditions and s106 obligations as necessary.

Given the potential for the New Yatt Road/ Woodstock Road to come forward at an earlier stage and that the proposed new additional land to the West of Hailey Road is not within the control of the Consortium, the requirement for a “comprehensive masterplan” for the whole site is questioned. We therefore suggest that the reference to a “comprehensive masterplan” is removed from paragraph 9.2.48 and just the reference to a “delivery framework” retained in the interests of clarity.

The Council has proposed an additional criterion (ai) “comprehensive development to be led by an agreed masterplan” to reflect the comments in the supporting text discussed above. Whilst a masterplan for the main part of the site is supported, given the comments above it is suggested that this criterion should be amended to: “comprehensive development of the main part of the site between New Yatt Road and Hailey Road to be led by an agreed masterplan” (additional text underlined).
Criterion Di – Heritage

The Council have proposed a new criterion which requires "the conservation and where possible enhancement of the setting of the grade II listed Middlefield Farmhouse and dovecote and the Witney and Cogges and Hailey Conservation Areas." Given our comments above in respect of Policy EH7 it is considered that further amendment is required to this proposed requirement to ensure it is consistent with national policy.

Detailed heritage assessments have been undertaken on behalf of the Consortium in respect of heritage and these will inform, and assess, the detailed proposals as they continue to evolve.

Criterion L – West End Link

As with our above comments in respect of criterion Di, it is considered that this requirement should be reworded to reflect the requirements of the NPPF in respect of heritage. Furthermore, to ensure consistency with MAIN 61 discussed above, the Policy text should reflect that the North Witney SDA is to "facilitate the delivery of the West End Link."

Other Matters

We support the recognition of the potential of land to the north of the site in terms of the potential use of off-site measures in relation to sustainable drainage for the North Witney SDA.

As highlighted in the Development Framework Document (DFD) previously submitted, as well as mitigating the impact of the proposed development, the use of additional off-site attenuation features offers the opportunity to alleviate the downstream sewer systems which are currently over capacity.

The proposed main modifications to criteria (a), (b) and (i) to Policy WIT2 relating to the North Witney SDA are supported in principle to reflect the additional capacity of the site and possibility of off-site drainage solutions, as well as providing additional flexibility in relation to the proposed phasing of development.

For the reasons detailed above in respect of MAIN 40 (not repeated here), we also maintain a strong objection to criterion (n), which requires the developer to set aside 5% of the developable plots as custom/self-build. and request that this be deleted.

Sustainability Appraisal

Enfusion, on behalf of WODC, have prepared a Sustainability Appraisal Addendum Report in respect of the proposed modifications to the Local Plan. In respect of the increased scale and quantum of development proposed at the North Witney SDA, the Addendum advises that "the findings of the SA as reported in the Submission SA Report remain valid."

We support the conclusions of the Sustainability Appraisal Addendum Report. Given the scale of increase of the proposed SDA since the previous Sustainability Appraisal was undertaken, to ensure the Plan is underpinned by a robust evidence base we would recommend that the detailed appraisal of the allocation be updated in full to support the summary provided in the Addendum Report. This will help to further demonstrate that the proposed strategy is justified, subject to our comments above.
Viability Assessment and Infrastructure Delivery Plan

To underpin the proposed modifications to the Local Plan, Aspinall Verdi have prepared a Strategic Development Area Viability Update (2016) on behalf of the Council. The Viability Update should be further updated to reflect our comments above in respect of custom/selfbuild housing etc.

As per the previous submissions on behalf of the Consortium, further consideration is required in respect of the necessary infrastructure required to be delivered by the site and whether this is to be funded by the SDA in isolation or whether contributions through Section 106 Agreements or CIL are to be sought from other developments in the area. We will continue to liaise with the Council in this regard in advance of the EIP.

As a large site, development of the North Witney SDA is likely to fall into a number of phases. There is already a current planning application on part of the site for 200 dwellings which is likely to form ‘Phase 1’ (subject to a comprehensive masterplan/delivery framework for the whole site). Because of the lead-in times associated with larger strategic sites, it is likely that the With regard to phasing, it is proposed that the larger part majority of the site will be phased to come forward later in the plan period after 2021 unless delivery can be accelerated. This phased approach will Delivery of the bulk of development in the medium to long-term would however offer the following advantages:

### MAIN 102 Para 9.2.48 Phasing of North of Witney Strategic Development Area

Stagecoach notes that the evidence base suggests that delivery of Shores Green slip roads will be needed in advance of significant development in excess of 200 units between New Yatt Road and Woodstock Road. Stagecoach is of the view that it is likely that strategic bus service enhancements on Woodstock Road, linking Witney to Hanborough Station and beyond with a half-hourly service, would be likely to materially damp peak journeys in the area currently made by car, sufficient to make it possible to justify the early release of this part of the proposed allocation as a first phase.

Stagecoach has previously objected to the allocation of the bulk of the SDA, on the grounds that it has not been clear that the traffic impacts on Bridge Street can be satisfactorily mitigated by the proposals. If this critical dependency can be addressed, then much of the allocation might be made sustainable.

We note, and agree strongly that phasing of the larger portion of the site needs to follow post 2021, and this needs to follow the delivery of both the Shores Green Slip Roads, and the West End Link Road, if the requirements of NPPF paragraph 32 are to be satisfied.

While it is conceded that more evidence might yet be adduced as to what the critical thresholds might be that allow a portion of the allocation to be brought forward, it is far from clear what this is. Stagecoach disputes that anything other than a suitable micro-simulation of the local network is an appropriate tool to fully appraise what the impacts on the local network and junctions should be. Larger scale tools such as SATURN would not represent appropriate tools, as they cannot accurately model the impacts in sufficient detail.

Should either or both of these not prove to be fundable and deliverable at a suitably early stage, it is clear that the known residual cumulative unmitigated impacts would permit the remaining allocation to be brought forward, as in line with NPPF paragraph 32 and DfT Ministerial Circular 02/2013, the exacerbation of already serious traffic congestion at Bridge Street is in Stagecoach’s view likely to judged to be “severe”.

We propose that Policy should reflect this critical dependency in a much more explicit way, requiring that...

<td>Witney's main traffic bottleneck is at Bridge Street. With an average of 29,000 vehicles a day, it is the only vehicular crossing of the River Windrush for local journeys and through traffic from the north and east. The</td>
</tr>
</tbody>
</table>
constraint of the river combined with the level of demand for vehicular travel results in severe congestion, delays to buses and air pollution (it is already an Air Quality Management Area). The environment deters cyclists and pedestrians from using the route.

The new A40/Down's Road junction and A40/Shores Green improvements (Main 102) will significantly reduce traffic (and air pollution) in Bridge Street whereas the North Witney proposal combined with the recent successful applications on New Yatt Road (270 and 40 houses) will substantially increase traffic (and air pollution) in Bridge Street. Replacing North Witney with South Witney would potentially release £40m of S106 funding:

Northern Distributor Road (£10m) West End Link road (£23.2m)
Foul water drainage (£3m) Flood alleviation (£3m)

We will also work with Oxfordshire County Council to identify funding for their long term strategy for the A40 which will involve dualling between Witney and Eynsham and a westbound bus lane.

However, the £55m funding to facilitate the above long term strategy has yet to be identified. Selection of South Witney as an alternative to North Witney could be used to facilitate Oxfordshire County Council's transport strategy outlined above to improve the A40 between Witney and Oxford. This proposed change of strategy would benefit substantially more residents than the existing strategy.

Other advantages to replacing North Witney with South Witney are:

* Traffic from South Witney would avoid the Bridge Street bottleneck (Air quality management area) on journeys into Witney.
* A South Witney development would be able to take advantage of the existing four way A40 junction at Ducklington and the proposed four way A40 junction with Downs Road, providing direct access to the main employment areas of Oxford, Witney and Carterton.
* Conversely the development of 1,400 houses at North Witney would significantly increase traffic in Bridge Street, even with the delivery of WEL2.

Remove North Witney from the Local Plan 2031 and replace with South Witney.

---

K Bennett  
Mr Bennett  
ID 1001  

My comments are:

1) When will the bottleneck at the bottom of the road from Bicester & Bridge Street be resolved? I first complained about this in 1953 (!!) and of course it is now even worse!
2) When will the Hailey Road-Burford Road link be activated rather than council waffle being made (WEL)?
3) When will there be any definite proposals for road construction & amenities before the proposals for housing are raised, i.e. schools, play areas, shops etc. rather than piece-meal aspirations (supposedly good developments)?

Please let's have some sensible action.

<td>&gt; SECTION 9 - STRATEGY AT THE LOCAL LEVEL &gt; Witney Sub Area &gt; MAIN 103 I would like to express my objection to the proposed development of 1400 houses on the land to the north of Witney (Hailey Parish), the proposed West End link road and the Shores Green slip road, and would comment as follows:- I cannot believe that yet again, despite all the tales of woe, and television coverage over recent years, that I am witnessing a proposal-to build on a floodplain! If approved, then this will be a disaster waiting to happen. The local area has a history of flooding and in particular Eastfield Road, which now repeatedly floods year after year, with regular traffic diversions along Farmers Close, New Yatt Road and Woodgreen Road which causes major disruption and inconvenience for local residents. This proposed development will only exacerbate the situation and increase the flow of water into the river Windrush, making the flooding of High street even more problematical. The suggestion of holding ponds is not welcome and will cause a problem to the wildlife which is already at threat. The impact of 1400 new homes on the transport system will cause massive disruption to local residents and the impact will be even greater when the inevitable flooding occurs, due to the increased number of people trying to navigate around the problem. Please note that the local roads are already at bursting point at commuting times. From experience the commute into Oxford can take up to between one hour and one and a half hours to travel just 22 miles. This development will create the scenario of trying to get a quart into a pint pot. I believe that there will be a severe risk to Highway safety for all road users, cyclists and pedestrians due to inadequate roads for the increased volume of traffic. I am fed up with driving along poorly maintained roads which repeatedly flood and have no wish to sanction something that will only add to the problem. This development will change the Parish boundary between Witney and Hailey. This will in effect change the character of both districts in a detrimental way. We currently have visits from an interesting array of rare wildlife ranging from Bats, Barn Owls, both sorts of Woodpecker, Pied Wagtails, Kestrel's plus other more common birds. The habitat of these at risk creatures will be removed and the fear is that we will not see them return. This is a greenfield site and should remain as agricultural land. West End Link Road I fail to see what use this will be to the residents of Witney and I consider it to be a total waste of time, effort...</td>

| MM56          | roger bryant            | mr             | bryant           | 121               | > SECTION 9 - STRATEGY AT THE LOCAL LEVEL > Witney Sub Area > MAIN 103 | Witney Proposal.  
1. The additional 400 houses added to North Witney between Hailey Road and Woodstock Road to achieve "viability" are no longer required to hit the overall housing target because of planning approval already given for Burford Road and Downs Road of 540 houses. This extra 400 houses will put an additional strain on the local economy in terms of traffic, parking, schooling and health. The additional 400 houses will probably generate another 200 cars.  
2. Whilst accepting that additional school places will be required for a development in North Witney which may require additional temporary space at Witney Community School, the answer is not to extend the existing school into the adjoining field, but to build a new school in the development. The extension of Witney Community School and the building of a further 100 house will add significantly to the flood risk on Hailey Road and increase the traffic congestion. It is already quite dangerous around the school at peak times.  
3. Three reports have recommended retaining the gap between Witney and Hailey, and Kirkham Associates in their report have concluded that only 750-850 houses should be built in the area of North Witney. The present draft plan envisages nearly doubling this to 1500 houses in the North Witney Area. This is unacceptable.  
4. Any development in North Witney will increase the traffic in Foxburrow Lane. This single track lane is used now as a "rat run". Any development in the area needs to include traffic calming measures in that lane and through Crawley. This is missing from the plan.  
5. We already know that developers are chasing significant land purchase beyond the present North Witney Development proposals. |
| MM496         | G Brown and P Hartwell  | -              | Brown and Hartwell | 1234             | > SECTION 9 - STRATEGY AT THE LOCAL LEVEL > Witney Sub Area > MAIN 103 | Further to our letter to you on the 17th September 2014 outlining our concerns over the North Witney Housing Development, we are aware that there are now proposed plans for modifications to the West Oxfordshire Local Plan (2011-2031).  
We understand that the plans keep getting rejected due to the North Witney Site being flawed with multiple issues; we therefore are appealing to WODC Councillors to take action and seriously consider removing the North Witney Site from the local plan due to it being unsound.  
The main issues as we see it are summarised below:  
• North Witney Site officers want to increase number of houses from 1000 to 1400, on ancient undulating farmland, that is entirely in the parish of Hailey and part of the Wychwood Project.  
• The West End Link Road has to be built before North Witney is developed. It will not pass an essential test (the bridge would be in a zone 3B flood plain and the development is not essential). The cost in 2012 was £18m, the developers own flood report says the water levels would rise 1.5 inches, not an insignificant level.  
• Both the OCC and the recent Burford Road Appeal inspector agree that Shore’s Green is the second river crossing.  
• Through four Freedom of Information requests OCC traffic counts show traffic flows increase in West Endby 52.5%, in the Witney Conservation Area by 47.1% and Hailey Road becomes the third busiest road in Witney with traffic tripling in volume.  
• All the water flowing down from 100m contours has to move through the 0.75m Hailey Drain. To restrain this, they plan to build six reservoirs each the size of Wembley Stadium on land above the development, how will the water be redirected up the hill, this fails to... |

<td>Jennison</td>
<td>1236</td>
<td>&gt; SECTION 9 - STRATEGY AT THE LOCAL LEVEL &gt; Witney Sub Area &gt; MAIN 103</td>
<td>I was disappointed in the changes made so far to the draft Local Plan 2031. I address only the North Witney Strategic Development Area, since I know it well and can therefore comment upon how the Plan affects it. Despite the acknowledgement that this is an area of high water stress (4.27a) and serious traffic congestion, I see that the original designation of 1,000 new houses for land to the north of Witney has been expanded to 1,400 houses (5.29). I object to this even more strongly than I did to the earlier figure, for a number of reasons. First, 9.2.38 reads &quot;The site is considered to be well-related to the main services and facilities of Witney, has no major ecological or heritage constraints and based on the proposed quantum of growth, will not have a significant landscape impact.&quot; None of these statements is true. First, 1,400 houses mean at least 1,400 vehicles attempting to access &quot;the main services and facilities of Witney&quot; via Woodstock Road, Hailey Road and New Yatt Road. New Yatt Road is a narrow residential road with unavoidable residential on-street parking, which already leads to passing difficulties, readily observable to anyone standing outside WODC's Wood Green offices. Woodstock Road and West End leading from Hailey Road are already unacceptably congested at many times of day (including school start and finish times): the proposed new river crossing would simply move those traffic-jams and add them to the existing one in Burford Road as it approaches Bridge Street. The second statement, that this site &quot;has no major ecological or heritage constraints&quot; is also highly dubious. As the Plan states in 8.12, &quot;In the same way as West Oxfordshire has a rich and diverse landscape, so too does it contain a rich variety of habitats, which support a wide range of legally protected species, priority species and other wildlife (including those listed in the NERC Act Section 41 list).&quot; Further paragraphs in this section of the plan refer to minimising the impact on biodiversity, the value of natural habitats, and so on. These are splendid aspirations, which are completely contradicted by the housing proposals. The land north of Witney is a richly bio-diverse environment, home to at least two species of owl and much other wildlife. Much of this area is valuable agricultural land which the south of England loses at its peril, at a time of spiralling food-mile costs. Local councils should be at the forefront in resisting this damaging destruction. The third statement refers to landscape impact. This area has notorious flooding problems. I note that the draft states (9.2.42) &quot;In terms of flood risk, evidence suggests that there is scope to reduce surface water run-off from the site itself through the use of sustainable drainage and potential offsite enhancements. The site promoter has identified land to the north of the SDA boundary which could be used for the purpose of off-site storage.&quot; I very much regret that the public exhibitions... in</td>

</tbody>
</table>
expense of land already within the site boundary which was previously identified for 'Environmental Enhancement' including landscape mitigation. This goes against the recommendations, as quoted above, within the council’s evidence base West Oxfordshire Draft Local Plan 2012 - Landscape and Visual Review of Submissions for Carterton and Witney Strategic Development Options (October 2012) and the West Oxfordshire Pre-Submission Draft Local Plan - Assessment of Strategic Site Options (February 2015). Whist the increase in developable land beyond the boundary deemed acceptable in the council’s evidence base would undoubtedly have a significant and harmful impact in terms of landscape characteristics, it is not considered that the increase is substantial enough to offer a significant increase in the number of dwellings deliverable on the site. In particular, in terms of increase the developable land to the north of the site, whilst the impacts of increasing the quantum of developable land will have a significant negative impact on the landscape, it is not considered that the quantum of additional land would be sufficient to provide a large number of additional units - especially not in the region of 300.

MAIN101 requires that any future application would be required to be supported by a detailed landscape and visual assessment to determine the appropriate form and layout of development which would ultimately influence final housing numbers. Given that previous landscape advice has stated that the quantum of development would need to be reduced to 1,000 houses in order to be acceptable in landscape terms, it seems unlikely that 1,400 houses on this site can be accommodated without resulting in adverse harm. The Sustainability Appraisal Addendum Report, Paragraph 4.636, states that there is ‘uncertainty until lower level detailed studies have been completed to inform final numbers, site layout and form’. This statement recognises that there are questions remaining about the capacity of the site. The Council should not be relying on figures which they themselves recognise are ‘uncertain’ to meet their OAN. Instead, additional sites should be allocated within the plan to ensure that there is enough flexibility to deliver the housing required to meet needs.

In addition to the above which questions the ability of the site to accommodate 1,400 houses without resulting in adverse harm to the landscape character of the area. The infrastructure needs associated with the development must also be considered. The site is severed from the majority of services in Witney by the River Windrush, as a result of this location, a significant burden is placed upon the Bridge Street river crossing. In order to mitigate the additional burden that any residential development would add, extensive highway mitigation works are required to be provided in the form of West End Link Road. Within the West Oxfordshire District Council Local Plan Pre-Submission Draft Sustainability Appraisal Report (2015) there is recognition that with regards to highways there is the “potential for residual minor long-term negative effects with an element of uncertainty” (p62). It goes onto say that whilst development at North Witney has the potential to deliver transport infrastructure, which could result in a minor long-term positive effect, there is still an element of uncertainty with regards to deliverability (p63). There is nothing within the West Oxfordshire District Council Local Plan: Proposed Main Modifications Sustainability Appraisal Addendum Report (2016) to suggest that the uncertainty raised within the previous Sustainability Appraisal (2015) have been overcome.

Within the Local Plan, the highway improvements which would be required for any development at North Witney are presented as a wider benefit of the development. Indeed, the lack of need for highway improvements is a criticism levelled at the potential development of the South Witney site.

This is a misinterpretation of what can be expected in terms of delivery via a section 106 agreement. Any infrastructure secured by S106 would need to be proportionate to the scale of the development,
directly related to the development and necessary to make the development acceptable in planning terms. Therefore, when considering any potential highways improvements, these will only be delivered if they are necessary to mitigate impacts and should not in this case be considered as a wider positive consideration.

The expected construction phase of the North Witney SDA is set out within the Appendix 2 of the Local Plan. This delivery timetable shows no houses expected to be delivered on the site until 2021/22.

During 2021-2031, the site is programmed to deliver its entire proposed allocation of 1,400 homes.

To achieve this deliver requires 200 units per annum for 4 consecutive years with the following year to deliver 175 units.

In November 2016, Nathaniel Lichfield & Partners (NLP) published Start to Finish - How Quickly do Large-Scale Housing Sites Deliver? This research provides a comprehensive review of 70 strategic sites which have / will deliver in excess of 500 dwellings. NLP’s research focused on a variety of locations with a focus on sites outside of London. With respect to the timeline of the build-out period, the research notes that whilst “many planners’ housing trajectories show large sites gradually increasing their output and then remaining steady before trailing off in the end, in fact, delivery rates are not steady” (p16). NLP’s research concludes that when looking at the first 8 years of the buildout of a large scheme, completions tend to be higher in the early phases before tailing off towards the end and for sites with a build out period of longer than 8 years, the peaks and troughs of delivery can be repeated. This research casts doubt over the programme for delivery of houses on the North Witney site which does not reflect the true nature of housing delivery on a large site.

The NLP research also considers the average build out rate for sites of differing sizes and types (page 19). For Greenfield sites with between 1,000-1,499 dwellings, the average annual build-out rate over the duration of the development is 122 dwellings per annum (table 3). If the North Witney site achieves this build out rate then by the end of the plan period, the site will have under delivered against the OAN by 180 dwellings. Given the timetable for delivery on this site which is in the final 10 years of the plan period, there is no provision included to allow any flexibility if the optimistic build out rates are not delivered.

The NLP research clearly raises significant doubt as to the current deliverability of the full North Witney allocation within the plan period, let alone the proposed revision through the Main Modifications. We therefore suggest that further sites should be allocated which will deliver in the short to medium term to ensure that the requirement will be met.

East Witney

We object to the proposed increase in the capacity of the East Witney SDA to 450 homes (MAIN93).

The Proposed Main Modifications Sustainability Appraisal Addendum Report (October, 2016) states that ‘a proposed increase in housing from 400 to 450 dwellings represents a comparatively modest increase and is still less than the scale of acceptable development of around 500 homes determined with regard to landscape and visual effects’ (4.61). The Sustainability Appraisal Addendum references the West Oxfordshire District Council (2012) Landscape and Visual Review of Submissions for Carterton for 500 units. This is not the case. The Landscape and Visual Review (2012) document concluded that taking mitigation into account, there is the potential for the landscape to accommodate from 250 - 300 dwelling (p86).

The conclusion of the Landscape and Visual Review (2012) (that the site is able to accommodate 250- 300
dwellings) were reiterated in the Pre-Submission Draft Sustainability Appraisal Report (February, 2015) which allocated the site for 400 dwellings. In relation to the landscape and visual impact of this level of housing, the 2015 Sustainability Appraisal recognised that given the findings of the Landscape and Visual Review (2012), the development of 400 dwellings could have ‘major long-term negative effects on an area considered to have high landscape/visual importance and sensitivity’ (Appendix V p27). Notwithstanding this, the council ignored this part of their evidence base and allocated the site to deliver 400 houses within the Pre-Submission Draft Local Plan.

The increase proposed within the Main Modification 93 to accommodate a further 50 units will have further negative effects on the landscape character of the area. This increase has not been given due consideration in the Proposed Main Modifications Sustainability Appraisal Addendum Report (2016) which wrongly presents information that in landscape terms, 500 dwellings would be acceptable. The West Oxfordshire District Council (2012) Landscape and Visual Review of Submissions for Carterton and Witney Strategic Development Options remains within the council evidence base and clearly states that the site is suitable for 250-300 dwellings and, an increase on this figure would result in adverse harm to the area which is considered to have landscape / visual importance. An allocation of 450 dwellings is clearly directly opposed to the evidence base and, would constitute a quantum of development unable to be sustainably accommodated within the site.

Woodford Way Car Park

The Woodford Way Car Park is allocated to deliver 50 houses within the medium to long term. This is a non-strategic housing allocation and we understand the land to be in the ownership of West Oxfordshire District Council. The basis for this allocation seems to be a previous grant of planning permission in February 2007 for the site for the: ‘Redevelopment to provide multiplex cinema, retail uses, residential, new urban square, town park, landscaping, multi storey car park, public toilets, access and servicing’. This grant of planning permission for a mixed-use scheme lapsed without implementation.

The supporting text to the allocation within the emerging Local Plan (MAIN 106, para 9.2.5f) states that ‘whilst not available in the short term, it is reasonable to expect that a residential scheme could come forward on this site within the plan period’ [emphasis added]. Having regard to national policy, a site where there is not a reasonable prospect that the site is available and could be viably developed at the point envisaged should not be allocated for development to help meet needs.

South Witney

Previously submitted representations made by Barton Willmore have confirmed that the South Witney site is available for development. Furthermore, those representations were supported by a range of environmental surveys and assessments which demonstrate that the site is a suitable location for new strategic housing development. A Development Framework Document has been submitted previous which illustrates how the site could be deliver a residential-led proposal with capacity for up to 1,200 homes.

MAIN104 states that several alternative options for growth in Witney have been considered. However, that having regard to the overall housing requirement and evidence prepared in light of the local plan, these sites have not been allocated but will be reconsidered as part of any subsequent local plan review. This suggests that the council have not found the alternative sites to be unsustainable or fundamentally inappropriate for development, but they consider that they are not required at this stage to meet needs. It also suggests that, when the local plan evidence base is considered, the sites which have been chosen are adequate and the most appropriate to accommodate the objectively assessed needs. In relation to the site at North Witney, this
Comment is clearly not the case as the evidence base firmly indicates that the site can only accommodate 1,000 dwellings and any more than this would cause adverse harm to the landscape character. Nor is it the case for the allocation of the site at East Witney which the evidence base states can accommodate a maximum of 250-300 dwellings without causing substantial harm to the landscape character of the area (West Oxfordshire District Council (2012) Landscape and Visual Review of Submissions for Carterton and Witney Strategic Development Options; p86). As such, there is the need for additional housing sites in Witney to come forward as part of this plan to ensure that, on the basis of the evidence base, housing needs can be accommodated sustainably. Therefore, the time to reconsider the other sites in Witney which were not allocated is now-- This will allow for needs to be accommodated on sites sustainably without the need to adversely impact on the landscape character or to deliver a cramped form of development at densities which are not appropriate to their setting.

In relation to the Land to the South of Witney, paragraph 9.2.50 refers to the site and states that there are 'concerns regarding noise, odour, landscape and unlike the alternative options, the scheme would not deliver any strategic highways improvements'. In relation to the areas of concern which are raised, comprehensive technical evidence has been provided as previous stages of consultation that confirms beyond doubt that through mitigation, all concerns can be overcome and would not compromise the deliverability of the site. For your ease of reference, we attach the South Witney Development Framework Document (September 2014) which demonstrates how a sustainable development to provide up to 1,200 dwellings and a primary school can be delivered on the site.

The following represents a brief summary of how the development of the land to the South of Witney is able to mitigate against the issues raised by the Council in paragraph 9.2.50 of the Local Plan.

A40 "Separation"

The previously submitted Transport and Highways Technical Note produced in May 2015 states that South Witney’s position in relation to Witney Town Centre presents opportunities to provide attractive public transport services such as extending the Route S1 buses.

The site is also well positioned to access existing movement corridors for pedestrian and cycle access

in addition to providing new routes such as a foot bridge over the A40. The site is well positioned for accessing facilities in the town. The A40 does not create a barrier to movement with the town centre, major employment areas, education facilities, and the new facilities coming forward with the adjacent West Witney development area, all being accessible in close proximity to the site. Most notably, all are on the same side of town and to the west of the River Windrush. Development locations to the east of the river, East Witney and North Witney, are heavily reliant upon the congested bridge street.

It should also be noted that the proposed new 'Garden Village' to the north of Eynsham will be separated from Eynsham itself and from the proposed West Eynsham SDA by the A40. Within the 'Vision' of the Draft Plan (Main Modification 9; paragraph 3.2) the Council have stated that the Garden Village will be "self-contained". Given the size of the proposed housing allocation (2,200 houses), it is unrealistic to suppose that there will not be shared use of services and facilities with between the Garden Village, Eynsham itself and the West Eynsham SDA. This is particularly true of education provision as, whilst there is a policy requirement (Policy EW1a) for the delivery of up to two onsite primary schools, there is no requirement for an onsite secondary school. Instead, a financial contribution towards secondary capacity is sought. In addition, whilst employment floorspace will be delivered on the site, it would not be feasible to consider that everyone who
lives within the Garden Village would also work there. There will be further reliance on the services and facilities in Eynsham in respect of health care and retail. Therefore, given the scale and scope of the Garden Village, whilst there will be a degree of self-containment, it will evidently not be fully self-contained. As a consequence, it will (and should) have a degree of connectivity with Eynsham. This demonstrates an inconsistency of approach with the Council not considering the A40 to present a significant barrier in terms connectivity between the Garden Village and Eynsham but dismissing South Witney on this very same basis.

Noise

The noise assessment undertaken at the site identified the A40 as a significant source of noise in regards to development of South Witney. In response, the Illustrative Framework Plan proposes an acoustic barrier along the northern edge of the site as mitigation against any noise impact from the A40. In addition, buffer zones have also been illustrated around the abattoir and waste water treatment works to reduce the impact of low frequency noise from these sources. These mitigation measures demonstrate that noise considerations would not preclude the development of the site for housing.

Odour

The Odour Risk Assessment Report concludes that a suggested odour separation of 200m from the centre of the abattoir and 350m from the centre of the Sewage Treatment Works (SWT) would be appropriate for mitigating the effects of odours on any development at South Witney. The buffer zones are achievable on the site and have been incorporated within the Illustrative Framework Plan for the site.

Landscape and Visual Impact

A Landscape and Visual Appraisal (LVA) was produced by Barton Willmore in May 2015. The LVA acknowledges that any development within the site would result in a technical reduction in openness due to the introduction of new built form, however, due to the containment of the site by reason of its low-lying position, vegetation structure and the proposed mitigation, the development as proposed within the Masterplan would not lead to significant adverse effects in relation to the wider area. Furthermore, due to the siting of the development and retention of fields, the rural pattern between Curbridge and Ducklington would be maintained.

As noted above, and as discussed in detail within the LVIA, the Council’s own evidence base has previously identified the South Witney site as having capacity for approximately 500 dwellings.

Conclusions

Despite having provided the Council with a range of environmental surveys and assessments which fully address the issues raised in respect of South Witney, the Council continue to raise concerns as set out in paragraph 9.2.50. As set out above, the site is a sustainable location for housing and can deliver in the short to medium term.

Accordingly, we invite the Inspector to consider the allocation of the South Witney site through this Local Plan.

Other alternative options for strategic growth at Witney Finally, we object to MAIN104 (paragraphs 9.2.51a-9.2.51b) which appear to promote the potential merits of a new longer-term option to the west of Downs...

<td>&gt; SECTION 9 - STRATEGY AT THE LOCAL LEVEL &gt; Witney Sub Area &gt; MAIN 103</td>
<td>We would suggest that the Local Plan should commit to seeking further financial contributions towards the Shores Green Slip Roads from any relevant proposed allocations or future windfall sites. The increased scale of development proposed at North Witney should enable provision of a financial contributions to the Shores Green Slip Roads, given that the slip roads are required to enable development at North Witney. Similarly, the proposed development at Woodford Way Car Park should contribute towards delivery of the Shores Green Slip Roads. The EWLC requests that Policies WIT 2 and WIT 2a are amended to require financial contributions from these developments towards the Shores Green Slip Roads. In addition, Main Modification 91, which refers to anticipated windfall sites, should also be amended to ensure that any windfall sites coming forward in Witney will be required to make a proportional contribution to the Shores Green Slip Roads.</td>

<td>&gt; SECTION 9 - STRATEGY AT THE LOCAL LEVEL &gt; Witney Sub Area &gt; MAIN 103</td>
<td>North Witney SDA Proposed Main Modifications (Main 103) to Policy WIT2 (North Witney Strategic Development Area) increase the North Witney SDA from 1,000 to 1,400 dwellings. Furthermore, Policy WIT2 goes on to state ‘the development to be phased in accordance with the timing of supporting infrastructure and facilities including the delivery of the West End Link and Northern Distributor Road.’ Paragraph 173 of the NPPF advises that ‘pursuing sustainable development requires careful attention to viability and costs in planmaking and decision taking. Plans should be deliverable...To ensure viability, the costs of any requirements likely to be applied to development, such as requirements for affordable housing, standards, infrastructure contributions or other requirements, when taking account of the normal costs of development and mitigation, provide competitive returns to a willing land owner and willing developer’ My client questions the viability and deliverability of the North Witney SDA given the infrastructure burden required to deliver the quantum of development proposed within Policy WIT2, particularly given the expectation to deliver a new river crossing known as the West End Link 2 (WEL2). The deliverability of Policy WIT2, and in particular the supporting infrastructure requirements such as the WEL2, is imperative to the deliverability and soundness of the Witney sub-area strategy and the WOLP as a whole.</td>

<td>North Witney Land Consortium</td>
<td>North Witney Land Consortium</td>
<td>-</td>
<td>2172</td>
<td>&gt; SECTION 9 - STRATEGY AT THE LOCAL LEVEL &gt; Witney Sub Area &gt; MAIN 103</td>
<td>Quantum of development and expansion of allocation site This proposed main modification is supported to reflect the proposed increase in housing numbers at the North Witney SDA from 1,000 to 1,400 homes and to provide clarification in relation to the delivery of the West End Link and northern distributor road. For further clarification however, we would suggest that the wording of paragraph 9.2.38 be amended to “…the development will require enable the delivery of the West End Link (WEL)...” Our previous submissions have indicated that the North Witney SDA could deliver 1,400 homes without the additional land to the west of Hailey Road.</td>
</tr>
</tbody>
</table>
The draft wording of Policy WIT2 states however that the allocation is for “about 1,400 homes”, which infers that the Council will take a flexible approach if the site could satisfactorily accommodate a higher number of units. This would help to address the concerns raised above regarding the ability of the Plan as currently drafted to meet the housing requirement for the Sub-Area and the District as a whole.

On that basis no objection is raised to these proposed main modifications in terms of the principle of including the additional land to the west of Hailey Road within the boundary of the North Witney SDA. Indeed, the potential opportunity to expand the Witney Community Primary School rather than provide a separate new school within the main site area is supported by our clients.

Revised paragraph 9.2.45 of the Local Plan explains the Council’s justification for increasing the quantum of development on the site and the landscape work that has been undertaken to inform this. We support the acknowledgement that the site is capable of accommodating a greater number of houses than that previously suggested within the ‘Kirkham Associates Landscape and Visual Review of Submissions for Carterton and Witney Strategic Development Options’ (2012).

An independent landscape review of the site and the Kirkham report previously prepared for the North Witney Consortium (and previously submitted to the council) concluded that the Kirkham report had concentrated on the wider open countryside to the north of Witney. Although we would not disagree with the high sensitivity landscape of the wider setting, it is considered that the openly visible existing settlement edge exerts an urbanising influence into a greater portion of the site than the Kirkham report suggests. The openness of the site contrasts strongly with the high level of enclosure to the north beyond the site, in the vicinity of Poffley End and Hailey, ensuring the setting to these settlements would not be compromised by development of the site.

Through sensitive masterplan design it is therefore considered that a development of around 1,400 units can be readily assimilated into the landscape without eroding the setting to Poffley End or Hailey. To that end, and as indicated at paragraph 9.2.45 of the draft Local Plan, a detailed Landscape and Visual Impact Assessment (LVIA) would be submitted in support of any future planning application, to ensure that the scale of the development proposed and its arrangement is capable of being accommodated on the site without undue adverse impact.

Given the points raised above in respect of the Council’s position on the findings of the Kirkham report referred to at footnote 56 of the Plan, and given the Council’s acceptance of the findings of the Environmental Dimension Partnership Report (EP247_10b) prepared on behalf of the Consortium, it is considered that this document should also be referred to in the footnotes. This modification will provide clarity in respect of the Council’s altered approach to the site.

In light of the Council’s comments in respect of landscape and the recognition that the SDA is capable of accommodating an increased quantum of development, it is considered that the revised Figure 9.8 at Main 98 should be updated. As with the other allocations in the Plan it is recommended that the Figure is simplified to indicate the site boundary only with all other matters of detail to be agreed through the planning application process in due course (for example, removing the areas identified in the Legend).

**Phasing and Masterplanning**

Main Modification 102 in respect of phasing is broadly supported in so far as it provides additional flexibility in relation to the phasing of development at North Witney.
Paragraph 9.2.48 states that:

"As a large site, development of the North Witney SDA is likely to fall into a number of phases. There is already a current planning application on part of the site for 200 dwellings which is likely to form 'Phase 1' (subject to a comprehensive masterplan/delivery framework for the whole site)..."

The potential for the land between New Yatt Road and Woodstock Road (to which the extract above refers) coming forward in the short term as a first phase of development of the North Witney SDA is recognised and supported. The site, which is controlled by Taylor Wimpey, lends itself to early release without prejudice to the remainder of the site.

As well as land at Woodstock Road, Taylor Wimpey also control a substantial area of the main SDA site. Taylor Wimpey fully agree that any development on land between New Yatt Road and Woodstock Road should make proportionate contributions towards delivering the infrastructure requirements of the whole SDA, in addition to providing the first phase of the Northern Distributor Road. Taylor Wimpey is completely committed to ensuring that this early phase of development forms part of the wider SDA and does not prejudice its delivery, which can be secured through the use of planning conditions and s106 obligations as necessary.

Given the potential for the New Yatt Road/ Woodstock Road to come forward at an earlier stage and that the proposed new additional land to the West of Hailey Road is not within the control of the Consortium, the requirement for a “comprehensive masterplan” for the whole site is questioned. We therefore suggest that the reference to a “comprehensive masterplan” is removed from paragraph 9.2.48 and just the reference to a “delivery framework” retained in the interests of clarity.

The Council has proposed an additional criterion (ai) "comprehensive development to be led by an agreed masterplan" to reflect the comments in the supporting text discussed above. Whilst a masterplan for the main part of the site is supported, given the comments above it is suggested that this criterion should be amended to: "comprehensive development of the main part of the site between New Yatt Road and Hailey Road to be led by an agreed masterplan" (additional text underlined).

Criterion Di – Heritage

The Council have proposed a new criterion which requires “the conservation and where possible enhancement of the setting of the grade II listed Middlefield Farmhouse and dovecote and the Witney and Cogges and Hailey Conservation Areas.” Given our comments above in respect of Policy EH7 it is considered that further amendment is required to this proposed requirement to ensure it is consistent with national policy.

Detailed heritage assessments have been undertaken on behalf of the Consortium in respect of heritage and these will inform, and assess, the detailed proposals as they continue to evolve.

Criterion L – West End Link

As with our above comments in respect of criterion Di, it is considered that this requirement should be reworded to reflect the requirements of the NPPF in respect of heritage. Furthermore, to ensure consistency with MAIN 61 discussed above, the Policy text should reflect that the North Witney SDA is to “facilitate the
Other Matters

We support the recognition of the potential of land to the north of the site in terms of the potential use of off-site measures in relation to sustainable drainage for the North Witney SDA.

As highlighted in the Development Framework Document (DFD) previously submitted, as well as mitigating the impact of the proposed development, the use of additional off-site attenuation features offers the opportunity to alleviate the downstream sewer systems which are currently over capacity.

The proposed main modifications to criteria (a), (b) and (i) to Policy WIT2 relating to the North Witney SDA are supported in principle to reflect the additional capacity of the site and possibility of off-site drainage solutions, as well as providing additional flexibility in relation to the proposed phasing of development.

For the reasons detailed above in respect of MAIN 40 (not repeated here), we also maintain a strong objection to criterion (n), which requires the developer to set aside 5% of the developable plots as custom/self-build, and request that this be deleted.

Sustainability Appraisal

Enfusion, on behalf of WODC, have prepared a Sustainability Appraisal Addendum Report in respect of the proposed modifications to the Local Plan. In respect of the increased scale and quantum of development proposed at the North Witney SDA, the Addendum advises that "the findings of the SA as reported in the Submission SA Report remain valid."

We support the conclusions of the Sustainability Appraisal Addendum Report. Given the scale of increase of the proposed SDA since the previous Sustainability Appraisal was undertaken, to ensure the Plan is underpinned by a robust evidence base we would recommend that the detailed appraisal of the allocation be updated in full to support the summary provided in the Addendum Report. This will help to further demonstrate that the proposed strategy is justified, subject to our comments above.

Viability Assessment and Infrastructure Delivery Plan

To underpin the proposed modifications to the Local Plan, Aspinall Verdi have prepared a Strategic Development Area Viability Update (2016) on behalf of the Council. The Viability Update should be further updated to reflect our comments above in respect of custom/self-build housing etc.

As per the previous submissions on behalf of the Consortium, further consideration is required in respect of the necessary infrastructure required to be delivered by the site and whether this is to be funded by the SDA in isolation or whether contributions through Section 106 Agreements or CIL are to be sought from other developments in the area. We will continue to liaise with the Council in this regard in advance of the EIP.

Ecology and Natural Environment

In all cases reference should be made to the District Council's ecologist for specific details on each site. It is assumed that before firm proposals are brought forward for each site an appropriate ecological, landscape and visual impact assessment will be undertaken including surveys for protected and threatened species.
The permanent loss of land of existing and potential future habitat value should be recognised with a corresponding investment in biodiversity and other green infrastructure resources that provide a range of benefits including biodiversity, water management and contribute to physical and mental well-being. Additional off-site enhancement should be provided where insufficient environmental gains cannot be secured within the development boundary.

**North Witney**

This area was a core part of the historic royal hunting forest of Wychwood and the landscape retains traces of this earlier historic character. A number of the hedgerows to the north and west of Merryfield Farm are species rich and there is good habitat connectivity. This historic landscape character should be recognised and protected. If development proceeds and a net biodiversity gain cannot be provided and maintained on site, then off-site enhancements should be sought.

The proposed development will increase significantly the recreational pressure on local community woodlands – Foxburrow Wood (off Foxburrow Lane) and Breach Wood east of Hailey. If development takes place it should contribute funding to increase the future resilience of these sites. There may be opportunities to enhance local footpath connections.

The local water catchment feeds in to the Windrush. The management of water and flooding should be considered carefully and linked to opportunities for natural flood management, green infrastructure and habitat enhancement.

The site lies within the Wychwood Project area.

---

### Education Comments

**Appendix 2 – Education Comments**

**N Witney Strategic Development Area- 1,400 homes**

Policy WIT2 includes a 2.2ha site for a new primary school. This should be 2.22ha. This is appropriate as 1400 new homes would be broadly in line with a new 2 form entry primary school being provided within the site.

The county council will continue to work with surrounding schools to plan school provision strategically, and seek added value from the eventual school solution, in particular by exploring the roles of Witney Community Primary School, the nearest current primary school, and Hailey Primary School, within whose current catchment the N Witney development lies, in meeting the needs of the new community. This will also take into account the education needs generated by other, smaller, housing developments, including the E Witney strategic site.

other key documents on traffic had also be uploaded after the consultation start date.

This raises a rather disturbing question about how the North Witney site, and indeed the plan, can possibly have been sanctioned through cabinet and its members without critical information having been completed or available for review by WODC officers or members.

Landscape and Ecology

Main 9, 16, 98, 101, 103 All conflict described below.

The North Witney site has been promoted for development for some time. There have thus been a number of landscape assessments regarding the site. All the reports (WODC commissioned landscape reports in 1998, 2007 and 2012) are consistent in maintaining that the gap between Witney and Hailey needs to be protected, the important farmsteads of Merryfield Farm and Downhill Farm should be protected, and the sensitive higher ground above 100m is of high landscape value and should be protected. The original plan paid little respect to these principles. However, in a desperate attempt to achieve financial viability, the modified plan seeks to disregard all of the previous landscape recommendations in repeated reports. The maximum housing recommendation of 800 houses has been abandoned; the proximity of Downhill and Merryfield Farms is not respected and new houses are planned on the higher ground identified as high landscape value that should be protected. Indeed, there is absolutely no screening of the higher land offered.

It is ironic that the lower ground, where screening offers little value, has been identified as an area to be screened, indicating a complete absence of local input. It is also noteworthy, that the only proposed screening is directly adjoining land of owned by party who has a beneficial interest in the development.

Landscape proposals in the modified plan therefore show a clear contempt for all the previous reports, a total lack of application of local knowledge and an inadequate understanding of what is really on the ground.

On ecology we are well placed to understand what is at risk. There is a remarkable and rich diversity of wildlife that is given no consideration or comment in the original ecology reports. Three types of owl, as well as lapwings and a wide range of protected amphibians (due to the wet nature of the ground) live on the adjoining land and these feed and breed in the proposed development areas. The modified plan does more than simply erode the buffer zone to protect these species - it almost completely removes it.

WEL

Main 20, 102, 217

Firstly, it should be stressed that the overwhelming majority of local residents cannot understand what advantages WEL can possibly deliver. Taking traffic from one highly congested area of the A40 and diverting it to another highly congested area of central Witney solves nothing.

On process we feel strongly that all the reports showing that traffic would increase by over 200% on Hailey Road seem to have been suppressed as they were only released as a result of an FOI. Indeed, this key fact was never mentioned in any of the narrative and appears to have been concealed in the consultation process. Having been made aware of the sensitivity of this issue, it is therefore extremely disappointing that yet again traffic documents were up-loaded well after the consultation process had started.

<td>Mr Midwinter</td>
<td>272</td>
<td>&gt; SECTION 9 - STRATEGY AT THE LOCAL LEVEL &gt; Witney Sub Area &gt; MAIN 103</td>
<td>The modified plan provides no information whatsoever as to the route of Northern Perimeter Road. Both aforementioned farms keep livestock and the route of NPR has significant implications for the farms and their animal husbandry. I have questioned your team directly as to the route of NPR but to date no one can give me a definite answer. In light of this, I fail to see how it can possibly have been costed if the route is unknown. It is therefore impossible to comment on the impact of WEL and the NRP, rendering the consultation on WEL meaningless and undemocratic and therefore a breach of process. It is also noted that the original plan indicates the importance of completing WEL before the development commences. The proposal of an additional 400 houses logically heightens the importance of completing this infrastructure prior to the construction of houses. It is therefore illogical that the commitment to construct WEL upfront has been abandoned. That this will be constructed at an &quot;appropriate time&quot; puts no responsibility on the developer and suggests it may never be built (as has happened before in WODC). Sewerage Little or no reference in documents - why is this? The modified plan makes no mention of the plans for additional sewage. Although it is understood that the waterworks itself has adequate capacity, questions appear not to have been asked about the network to deliver the effluence across Witney. Every year following heavy rainfall, sewage escapes onto Hailey Road. The ageing and constricted pipework that takes it to the sewage works to South Witney treatment works simply does not have the capacity to take the volume of sewage. As director of an environmental engineering company that specialises in designing sewage infrastructure, I am confident in estimating that coping with the increased volume of sewage from the additional 1400 houses is a significant infrastructure challenge. It is probable that many of the ducts under Witney would have to be upgraded, costing many millions of pounds. (When Woking was upgraded in a similar manner it took over two years to compete and caused extreme traffic congestion for the entire period.) It is therefore staggering that this key issue attracts almost no professional comment, as I would assume that a sewage network upgrade is essential in order to deliver the project.</td>
</tr>
</tbody>
</table>

I write jointly with my neighbour Jon Midwinter regarding the WODC Local Plan to affirm our strong objections to it and its recent modifications. Jon and I farm land that forms a significant proportion of the eastern and northern boundaries of the proposed North Witney site adjoining Merryfield Farm and Downhill Farm respectively. Both of us (and our extended families and neighbours) hold strong objections to the original plan, and the latest modifications to the plan only compound and exaggerate our original concerns. We are not filling out the official response form, which is rather user-unfriendly; however we will try and respond by detailing where we feel the modified plan fails on process or viability. Assumptions in FRA flawed Main 100 and 103 are not answers to the issues below. By farming the land immediately adjoining the site we are better placed than most to know that only a thin layer of Cotswold brash covers a thick layer of Oxford blue clay, which underlies the entire area. The geological maps that relate to the area are not an accurate definition of our own land and should not be taken as representative for the proposed development area. Oxford blue clay is almost totally impermeable and as such it is mined to line landfill sites because of its impermeable characteristics. It is for this reason that the proposed area floods so swiftly and extensively in winter, causing misery in Eastfield Road and beyond. |

<td></td>
<td>We believe it is highly unlikely that the blue clay miraculously stops on our boundaries and therefore the key assumption that 40% of the total area is permeable, once roof and road areas have also been accounted for, is highly improbable. Unfortunately, it is clear that no detailed work on SUDs has been conducted. Every SUD method available has been listed as a solution and this suggests there is no clear strategy as to how this very pressing issue is actually going to be resolved. What is true is that the majority of SUD options depend on good permeability, and therefore are not options for this development, despite the FRA’s suggestion that they are.</td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td>It is also worth noting that despite the increase in housing density in the modified plan, the permeability assumption of 40% remains the same, which we assume is mathematically impossible. (This remains speculation because no detail is available about the key 40% permeability assumption.)</td>

<td>The North Winney site has been promoted for development for some time. There have thus been a number of landscape assessments regarding the site. All the reports (WODC commissioned landscape reports in 1998, 2007 and 2012) are consistent in maintaining that the gap between Witney and Hailey needs to be protected, the important farmsteads of Merryfield Farm and Downhill Farm should be protected, and the sensitive higher ground above 100m is of high landscape value and should be protected. The original plan paid little respect to these principles. However, in a desperate attempt to achieve financial viability, the modified plan seeks to disregard all of the previous landscape recommendations in repeated reports. The maximum housing recommendation of 800 houses has been abandoned; the proximity of Downhill and Merryfield Farms is not respected and new houses are planned on the higher ground identified as high landscape value that should be protected. Indeed, there is absolutely no screening of the higher land offered.</td>
</tr>
<tr>

<td>&gt; SECTION 9 - STRATEGY AT THE LOCAL LEVEL &gt; Witney Sub</td>
<td>The one specific proposed site I object to is Witney North. This area of land has inbuilt drainage problems that the proposed technical drainage plan designed to alleviate these problems are unlikely to work. In the event they don’t, the natural drainage of the area will cause any flood waters to cascade into properties on the Hailey Road. This has happened in the past and the loss of natural surface absorption of rain water because of the proposed 1,400 houses will worsen the problem. Further, unless both relief roads are built then traffic congestion will be even more severe.</td>

</tbody>
</table>

A. This will only be a feeder road to Marriott's walk car park.

B. There are too many sets of traffic lights and pedestrian crossings to allow it to be a through road.

C. West End will become a bigger 'rat race' than it is today, and it could start to have higher toxic air readings than Bridge Street. (See section five).

D. The building of this site will also cause extra flooding elsewhere (upstream from the bridge), there is no fool proof way shown to collect extra surface water.

The existing drainage system as it stands now cannot cope, plus the fact that our flood plains are slowly being built upon. Witney bridge is the bottle neck in the system.

will not be able to take the extra volume of flood water. More properties will flood because of this scenario.

3. As council officers you need to obtain enough money from the government’s new road building funds, to build the Shores Green slip roads first.

A. There is no need to be jealous about the profit the land owners will make. We need this area of ground. Both for housing and infrastructure.

B. I think it’s also safe to say that people living on this new housing complex would chose Oxford or beyond, rather than Witney for employment.

C. Lets face it, it will be near a railway station. It will be on a main bus route. It could keep the extra traffic generated away from Witney streets.

4. Further details and investigations need to be looked into regarding the extra influx of houses added to the original plans. These are the houses that are due to be situated on the left hand side of Hailey Road, as you go towards Hailey from Witney. The added extra to the original north Witney plan.

A. These green fields need natural drainage, not a top coating of concrete. The reason being, these fields contain natural aquifers which in turn slowly feed the springs that are situated in the grounds of Willow Farm, Crawley Road, Witney.

B. If a 'SUDS' surface water draining system is introduced on this housing complex site, rain water could find its way more quickly into the aquifers and cause flash flooding on the land behind Bridge Street.

C. This amount of extra water could have devastating effects, when added to the extra water that will quickly find its way into the Hailey Road drain, when the proposed 1000 (proposed) extra houses are built.

D. We need to protect our older house’s and buildings, mainly in Bridge Street from possibly unforeseen
flooding which could be greater than levels obtained during the 2007 floods. These old houses, with some of them possibly dating back to the 1600’s are part of the heritage of Witney.

5. Lastly, this objection should be the major stumbling block which should put all idea’s and thoughts about building 1400 houses to rest.

A. Since the 1930’s Witney has expanded beyond control but, I will only mention one small stretch of road = Bridge Street. This small stretch of road was once part of the A40, which as you well know stretched from London to Wales. In the 1930’s the Staple Hall section was widened and in the 1960’s the Bridge was also widened. This was done with two thoughts in mind, the extra traffic travelling through witney and the size of the motor vehicles.

Nothing at all has been done to the centre section, which still stands the same as in Victorian days. This might have been OK in the 1960’s, but times have changed.

B. Traffic counts done over the last 15 years tell us the volume of traffic that passes through Bridge Street daily, and Oxfordshire County Council have estimated that traffic will increase along this small stretch of road between 4% and 7% once the West End slip road is built. We could be talking in terms of 30,000 vehicles per day. This situation could or possibly would bring the town to a stand still.

C. Now we need to bring into focus ‘AIR QUALITY CONTROL’. As I am lead to believe WODC has no plans or guide lines as to overcome this situation. Monitored air readings tell us that each and every day Government guide lines in Bridge Street are broken, and in some instances they have been over double the limit.

D. You, the council officers need to get your ‘act’ together now to try and put an Air Quality Plan together. By doing so you might be able to meet the new plans that DEFRA will be presenting to the government, in the early months of 2017.

The proposal for the original 1,000 homes, let alone the revised figure of 1,400 takes no account of the impact of traffic between Witney and North Leigh along the New Yatt Road, or into Witney.

Heading towards North Leigh, this narrow country lane is often used by horse riders, cyclists and runners. There is no footpath. I do not believe that adequate thought has been given to the increased volume of traffic resulting from the provision of new housing.

Any commuters having to pass through Witney will add to the already, at peak times, clogged up traffic system at the double roundabout.

<td>Sir Brendam Gormley</td>
<td>Sir Gormley</td>
<td>642</td>
<td>&gt; SECTION 9 - STRATEGY AT THE LOCAL LEVEL &gt; Witney Sub Area &gt; MAIN 103</td>
<td>The volume of houses proposed is simply too great and if any are to be built, should be restricted to the 200 proposed between New Yatt Road and Woodstock Road. I am a local resident of Hailey. I attended the Council Meeting which approved the Modified Plan now subject to consultation. I was shocked that the council refused to consider and voted down alternative sites in Carterton where there is a real desire for new homes. However all the councillors who spoke accepted that the North Witney scheme was already the weakest and most problematic element in their plan, and this was even before the increase now proposed. The main reason seemed to be that this would mean a further delay in what has already been a costly and drawn out exercise. But whose fault is that? What is striking in the modified plan is that some of the objections raised before this expansion have not even now been addressed. * Transport congestion: WEL SECTION 217 There is no proper study of increased traffic, and you will be aware that the bridge in Crawley that takes some of the relief traffic is unsafe and will need to be closed or rebuilt. Shockingly the commitment to construction of the WEL is now downgraded from &quot;in advance&quot; to &quot;timely&quot;. This means nothing and does not indicate who is responsible for the decision. Council members actually discussed their poor record in infrastructural development. * Drainage: 100 -103: The permeability calculation of 40% remains the same despite the increase in housing and there is no compelling evidence for this calculation. Worse the plan still has statements in 103 (e) &quot;may include off site solutions&quot; - demonstrating that the whole issue of flooding has yet to be properly resolved. It is not acceptable just to publish a long list of possible solutions. * Sewerage: This issue was raised in the first consultation in Hailey Village hall in 2015 and its still not adequately addressed. How will the extra volume reach the sewerage works? * Cost: It is not clear to me as a resident and council tax payer what is the true cost of the North Witney Scheme, when all the necessary infrastructure is included, and who will pay. Will this be made clear before the scheme is agreed. My conclusion is that the Council continues to extend the North Witney option because they must realise that the expense of any necessary infrastructural development will be so costly they need to allow the developers more housing. I think that a more modest scheme that could infill from Witney upto the proposed relief road running from the Canon Pool garage on the Hailey Road to the Kings school on the New Yatt Road is the best solution coupled with additional housing elsewhere, especially in Carterton where the Mayor and Council members would welcome it. The lack of access to timely and complete documentation, which is supported by relevant evidence, firstly for the Council and Cabinet and now for the public to make their recommendations could make this whole plan process liable to judicial review.</td>

<td>&gt; SECTION 9 - STRATEGY AT THE LOCAL LEVEL &gt; Witney Sub Area &gt; MAIN 103</td>
<td>you say with any certainty that each property will even have space to park two cars off the road. A wall of trees surrounding such overdevelopment does not make it any more rural. In the guidelines you produced it states ‘development of small fields and over development of individual plots, leading to continuous ribbon development, should be avoided.’ Yet that is exactly what you are proposing. In previous council statements there was a specific understanding that open space between urban developments like Witney and hamlets like Hailey should be maintained to protect their individual rural nature. The assertion in the submission that 1400 homes can be delivered on site whilst ensuring an acceptable degree of impact in the landscape is utterly disingenuous. There can be no way that 1400 ‘units’ can be delivered without building either multi-storied properties or one-up one-down ‘cottages’ totally at odds with the landscape report which deplored the expansion of settlements into open countryside creating ‘suburbanisation’ of rural settlements. As far as I am aware most of the tree planting in this area has been done by locals under the auspices of the Wychwood Project. I am interested to know what the WODC’s plans are for tree planting on these developments.</td>
</tr>
</tbody>
</table>

On many occasions over the past 30 years I have submitted my comments on successive proposals to develop the land between Hailey and New Yatt Roads, most recently in 2014. Never yet have I received a response explaining how the issues I have raised might be addressed; this time, I hope I shall be luckier. Nothing I said in my 2014 submission has changed; the Revised Plan simply makes things a whole lot worse. I make no excuse, therefore, for resubmitting my previous letter, with some further points that have since occurred to me. This is what I said in 2014:

When I bought this house in 1986, my decision was clinched by the view: an idyllic vista of fields and copses rising gently to a tree-lined horizon. However low I am feeling, when I open my curtains each morning this view lifts my spirits. So beautiful was it this spring that, although I am not an artist, I was moved to paint it. I cannot believe that, yet again, I am having to defend it against the developers.

I make no excuse, therefore, for resubmitting my previous letter, with some further points that have since occurred to me. This is what I said in 2014:

When I bought this house in 1986, my decision was clinched by the view: an idyllic vista of fields and copses rising gently to a tree-lined horizon. However low I am feeling, when I open my curtains each morning this view lifts my spirits. So beautiful was it this spring that, although I am not an artist, I was moved to paint it. I cannot believe that, yet again, I am having to defend it against the developers.

I'm sure my previous correspondence is filed somewhere, and I can say little more than I have said on previous occasions. Yes, I know people need houses to live in; yes, I know that since this little patch of beauty is in my backyard, I must inevitably be motivated by selfish considerations. But someone must defend the English landscape against the creeping destruction that has already blighted so much of Witney's green fringe.

This beautiful landscape isn't just a view. It's a place where people walk, relax, breathe fresh air. In the middle of it, you are surrounded by nothing but fields, trees and sky, with not a building in sight. It is home to an enormous range of wildlife; I assume that surveys have been conducted by the appropriate organisations to determine just how many creatures' habitats would be destroyed by the proposed development. As well as the more familiar birds and animals you would expect to find here, it is also home to buzzards, red kites, owls, cuckoos, long-tailed tits, goldfinches, willow warblers and, in the winter, flocks of redwing and fieldfare. I
guessthere are frogs, toads, newts and grass-snakesin the shadier, damper areas, and my garden has been visited by hedgehogs, bats, deer and, on one memorable occasion, a hare. In addition, the range of insects is diverse and beautiful, from butterflies and moths to bees, beetles, lacewings and shield-bugs. Yes, people need somewhere to live, but so do all these creatures; more so, one could argue, in the modern world.

The fact that the current threat of development here is vaguely deferred to some future time “after 2021” paradoxically makes it more urgent to act now, though I assume, perhaps naively, that there will be many further consultations during the next six or seven years. This piece of land has aesthetic value, amenity value, landscape value, habitat value; why, then, must its economic value to developers be allowed to outweigh all these?

There are still sites in and around Witney that are less environmentally sensitive than this. If it were a building, it would have a preservation order on it. Once it’s gone, it will never return; then it will be the turn of the adjacent patch of land to be swallowed up, and so on and so on till Hailey and Finstock are mere suburbs of Witney, with a grim urban corridor leading to Charlbury.

Is this what you want your legacy to future generations to be?

In addition to the above, I should like to add two points. Firstly, this area is subject to flooding, which will inevitably get much worse as a result of the proposed urban sprawl, whatever attempted mitigation measures are put in place. Secondly, since I wrote in 2014 the traffic situation on New Yatt and Vanner Roads has become well-nigh intolerable. In particular, on-street parking has increased exponentially, causing enormous problems at peak times, with extremely dangerous situations at every junction. This is exacerbated by the increasing number of delivery vans on the roads. No amount of new link roads or relief roads can possibly solve these problems, with such a potentially huge increase in two- and three-car-owning households on the vast estates that are proposed.

As far as I know, this country is still a democracy, so I LOOK FORWARD TO BEING INVITED TO A PUBLIC MEETING IN THE NEAR FUTURE TO DISCUSS ALL THESE ISSUES. In the meantime, I invite you to visit me at the above address to see for yourselves why, if and when the diggers move in after 2021, I shall feel, quite frankly, suicidal.

Stagecoach continues to maintain its objection to the proposed Strategic Development Area North of Witney, with the exception of land east of New Yatt Road. The allocation is unsound as it is not sufficiently evidenced that the site is deliverable without giving rise to unacceptably severe impacts on the local highway network, and in and around Bridge Street in particular. This seriously threatens the efficient and reliable operation of every local commercial bus service serving both Witney and Carterton, and thus directly prejudices the ongoing provision of realistically attractive, reliable travel choices to existing and future residents. The allocation is thus contrary to specific Policies within NPPF, in particular 17, 29, and 32, which require that development giving rise to such severe residual unmitigated impacts should be restricted by Policy or refused if proposed.

The proposed allocation cannot deliver improvements at Shores Green and through the West End Link Road without third party land and funding, that are required merely to prevent the traffic impacts materially aggravating existing severe congestion within the town.

| MM390       | Hailey CE Primary School       | Sue Haywood     | Ms Haywood       | 846        | > SECTION 9 - STRATEGY AT THE LOCAL LEVEL > Witney Sub Area > MAIN 103 | Most of the proposed allocation, east and west of Hailey Road, also remains a significant distance from current commercially sustainable bus routes. It would be difficult to extend bus services to the site, which would be sufficiently frequent or serve such destinations (mainly within Oxford City) that would make them relevant and attractive to enough paying customers to allow them to be sustainable on a commercial basis in the long term. The addition of another 400 dwellings does little to alter this equation, given the extent of the proposed allocation and the nature of the urban structure and highways network that both have an important bearing on how such services could be designed.

The dependency of the allocation on mitigations outside the ability of the promoters to deliver can be resolved through the modification of Policy WIT2 to make allow for the delivery of development above clearly evidenced traffic generation thresholds to be conditional upon the delivery of the Shores Green Slip Roads, and the West End Link Road, through the imposition of appropriately worded “Grampian” conditions.

Stagecoach, in the light of the issues we raise above, proposes the following modification to the Plan to make it sound:

“b) development on the larger part of the site between New Yatt Road and Woodstock Road will be brought forward subject to and following the delivery to be phased to come forward in the period post-2021 in accordance with the timing of supporting infrastructure and facilities required to ensure the traffic impacts of the development at no point materially exacerbates existing highways conditions at and in the vicinity of Bridge Street and its approaches. This infrastructure will include delivery of the West End Link and Northern Distributor Road, and all-movements junctions on the A40 at Shores Green and at Downs Road; and such other interventions as may be separately required and identified in any Transport Assessment/s submitted in support of any application/s for the site or any portion of it. Phased delivery, governed if necessary by “Grampian-style” conditions, may be used to achieve this.” |

| MM390                | Hailey CE Primary School     | Sue Haywood      | Ms Haywood       | 846        | > SECTION 9 - STRATEGY AT THE LOCAL LEVEL > Witney Sub Area > MAIN 103 | The suggested provision of a 2FE school on the North Witney Strategic Development (or expansion of WCP school) not only has longer term effects arising from competition for pupil places, but also directly constrains the availability of CIL funding available for education and related investment in the shorter term for Hailey. We understand that the education CIL funding would be likely to be “contained” within this specific development for the 2FE school and therefore not available to Hailey Neighbourhood Plan for investment in Hailey School’s provision. This, along with the changes in Section 106 funding criteria seriously affects the funding streams available to support our school’s place in the local community.

More importantly, the Local Plan does not fully explore the positive contribution and solutions that existing local rural schools could offer the WODC Local Plan and strategy.

For example, Hailey CE Primary School:

* has strong performance and inspection results (Ofsted and SIAMS), and pupil, parent and staff satisfaction surveys, making it a school of choice. This supports the WODC Plan aspirations to support local employment, improving rates of education, and protecting and enhancing local established facilities and infrastructure.

* is currently only 0.5FE but has extensive grounds and, unlike many of the schools in the area, has opportunities to expand physically. The need to protect the character and ethos of the school, and initial consultation with OCC Schools Planning, would suggest a 1FE would be an appropriate growth model. This would have the benefit of providing WODC Plan with a realistic, timely and achievable solution to meet some of the pupil place needs emerging from the first phases of the various and many Witney-wide developments in the more immediate future (and ongoing). For ourselves, it would enhance the income, and therefore
protect the viability of the school and its role in the local community, for the longer term; particularly important given the need to offset the potential impact of the proposed development of the 2FE school so locally to us.

* has extensive grounds and its location, being close to various proposed developments in the WODC Local Plan and with footpaths that link to Witney town adjoining the school site, both of which offer innovative transport solutions, including low and zero carbon footprint options. Integration of these solutions into the plan, conjoined with expansion of Hailey School to 1FE, would enable provision of a Witney-wide education infrastructure solution without the usual attendant scale of transport and traffic considerations. Upgrade of the footpaths to safe cycle routes, installation of cycle racks, school support and facilities for community and pupil provision of cycle proficiency education, provision of a "drop off circle" to significantly reduce parking at peak times in the village, would all be examples of the innovative infrastructure that could be offered, meeting many of the principles and objectives outlined throughout the WODC Local Plan.

* has an integral role as a village school in the wider community, which we are keen to further enhance. By including Hailey School in the infrastructure planning for the WODC and Neighbourhood Plans, many of the cohesive solutions would also benefit the community, and thus support the principles and objectives in the WODC Local Plan, most specifically the need to improve the quality of life of local communities, the protection of existing facilities and infrastructure. For example, investment in extending the school to 1FE will help protect the viability of the school for the village, protecting house value and local pupil places (enabling walking/cycling to school for families); furthermore, new building facilities and school sports facilities can be designed with out-of-hours community use in mind. Investment in cohesive transport solutions for the school could enable improved cycle pathways for the wider Hailey Parish community, reduced traffic congestion (with a drop-off loop), and out-of-school hours opportunities such as cycle proficiency education/training facilities and safe access and parking spaces for sports etc.

To reiterate - for all these reasons, we submit that this specific modification, along with other developments in the Witney-wide area, has not given due regard to a number of principles underlying the WODC Local Plan, such as protecting and improving the quality of life in, and facilities in local communities (in this instance - Hailey Parish), nor has it maximised the opportunities to achieve some of its stated aims, such as the timely provision of appropriate supporting infrastructure, including the education pupil place needs arising from imminent Witney-wide developments and the first phase of this development in question.

Witney Sub-area

4.24 Transport is a key issue for the Witney sub-area which contains a number of important and well-used routes including the A40 the A4095 and A415. Although Witney has the best road connections and bus services in the district context, traffic congestion is a significant problem due to high car use particularly for journeys outside of Witney16.

4.25 Currently access to the A40 at Witney is relatively limited and the route is also heavily congested at peak times between Eynsham and the edge of Oxford.

4.26 An award of £35m through the Local Growth Fund will be used to deliver improvements comprising a new park and ride at Eynsham and an eastbound bus lane from the park and ride toward Oxford. Longer-term improvements to the A40 have also been identified although funding is yet to be secured17, and is largely dependent on the delivery of the Garden Village SDA.

4.27 Such issues could clearly slow down delivery on the SDAs in Witney, ease. This parcel is not dependent on the delivery of the Shores Green slip roads and we note the inclusion of the Stanton Court Road site within the allocation is to assist in providing early revenue for the developer to

help fund the infrastructure needed to bring forward the larger Cogges Triangle site19. In terms of funding mechanism, we don’t take issue with this.

North Witney SDA (MM103)

4.37 Capacity: The Submission Draft Local Plan identified 1,000 homes at North Witney SDA. It was previously acknowledged by WODC that whilst 1,400 homes were achievable on this site it would present a ‘very high density’ of development22. However, following the requirement to increase their housing requirement WODC have increased the North Witney SDA to 1,400 homes in the Proposed Modifications. The boundary of the SDA has been extended to incorporate a 4ha parcel of land west of Hailey Road. The increased capacity also takes into account a modest increase in the extent of the developable area to the north and slightly higher density assumptions23.

4.38 Representations to the Submission Draft Local Plan by Boyer on behalf of the NWLC identified that the 1400 capacity of the SDA can be achieved through the delivery of 200 homes at the Woodstock Road site (14/01671/OUT); 1,000 to 1,200 homes on the main bulk of the site; and 100 homes on the 4ha site to the west of Hailey Road.

4.39 Unlike our approach with the SDA in Chipping Norton, we have not had sufficient scope to scrutinise the capacity of this site in detail and therefore we are not in a position to take issue with these figures and therefore we take them at face value.

4.40 Ownership: (Map attached) The bulk of the North Witney SDA is controlled by the North Witney Land Consortium (NWLC) which comprises: The ‘Middlefield Consortium’ (comprising of Taylor Wimpey, Jack Moody Limited and Cranbrook Construction) (blue – Figure 3); All Souls College (access across the school land is secured by a deed of easement entered into at the point of transfer to the school) (orange); Meridian Strategic Land (pink); and Gleeson Developments (green). The additional land parcel off Hailey Road is within the ownership of Persimmon Homes Limited.

4.41 Infrastructure: The North Witney SDA is dependent on the delivery of the West End Link (WEL) (a second river crossing). It will also provide a new Northern Distributor Road through the site connecting Hailey Road to New Yatt Road and onto Woodstock Road.

4.42 The Proposed Modifications identifies that delivery of the bulk of development in the medium to long-term would:

* Help to ensure that housing delivery is provided evenly across the whole of the Local Plan period;
* Ensure the transport impact of the scheme is minimised by allowing for the new A40/Down’s Road junction and A40/Shores Green improvement to come forward first;
* Allow time for the east and west Witney scheme to come forward in advance (and thereby avoid market saturation in the Witney area); and,
* Allow for the West End Link element of the scheme to be phased in appropriately as an integral part of the development25.

4.43 Delivery: The Proposed Modifications indicate that the development of the North Witney SDA is likely to fall into a number of phases and that because of the lead-in times associated with larger strategic sites, it is likely that “the majority” of the site will come forward later in the plan period after 2021 unless delivery can be accelerated. We agree that the delivery is likely to take place in phases and later on in the plan period.
4.44 We believe that the first phase will be 200 homes on the Woodstock Road site with first completions in 2021-22. This site is separate from the main bulk of the site and not dependent on the WEL and Northern Distributor Road coming forward first.

4.45 We are also of the view that the Hailey Road site (100 homes) could come forward without the highways infrastructure, but given that there is no planning application for this site and the parcel of land has only just been included within the allocation as part of the Proposed Modifications, we have identified first completions the following year in 2022-23. Irrespective of when it starts, we accept that it will be complete within the plan period.

4.46 With regards to the remainder of the North Witney SDA (1,100 homes), and noting that the Proposed Modifications anticipate the Shores Green improvements and East Witney SDA coming forward before the majority of the North Witney SDA, we have assumed first completions around 2024-25.

4.47 This part of the site is within three ownerships (The 'Middlefield Consortium' (comprising of Taylor Wimpey, Jack Moody Limited and Cranbrook Construction), Meridian Strategic Land and Gleeson Development. Given that the Meridian Strategic Land parcel is currently land-locked, it would not be unreasonable to assume that just two developers would be delivering on this part of the site at the same time. Overall, we have assumed 100 units per annum of this part of the site would be reasonable output given their might be scope for three developers and noting NLP suggest a build out rate of 105 units per annum for a site of this scale (i.e. over 1,000 units).

4.48 Conclusion: For the SDA as a whole, which the Council expect to deliver 1,400 units over the plan period, we expect that this will reduce a maximum of 1,000 units given the multiple ownerships, infrastructure requirements and phasing of the site.

North Leigh Parish Council (NLPC) objected to the draft Local Plan submitted in 2014/5 in particular in respect of the proposed allocation of 1000 dwellings at North Witney.

The proposed modifications now include a proposal to increase that allocation by 40% to 1400 dwellings, without supporting landscape highway and drainage impact assessments being undertaken.

NLPC supports the Main Modification Main 9 and the overall Vision that expresses the need to protect Witney’s landscape setting and Main 12 (Policy CO15) seeking to reduce the adverse impacts of climate change and in particular flood risk.

In the opinion of NLPC the allocation of 40% more dwellings at North Witney without any supporting evidence to show how such an enlarged development will impact on the local landscape, local roads and impact on local surface water and foul drainage issues where known problems already exist without 1000 extra dwellings let alone 1400 dwellings being built as proposed exposes existing residents here and in North witney exposed to a variety of risks - additional traffic in North Leigh and flood risk in North Witney. This lack of suitable assessment, in our opinion, makes this proposal unsound and not legally compliant.

Further consideration should be given to extending Witney westwards off Downs Road where significant proposals are already planned and where better road links to the A40 are planned both at Downs Road interchange and possibly Minster Lovell; we understand that Carterton is seeking more housing and although it is one of the three main towns and the second largest town in WODC, Carterton has no new SDA allocated which seems an oversight having regard to the key main three towns policy at the heart of the overall Local Plan.
We support the general principles of development restated in Main 16, but the North Witney proposal - whether 1000 or worse 1400 dwellings, fails on various counts to satisfy some of those key principles - it is not a logical complement to the existing scale and pattern of development and the character of the area. It has a potentially harmful effect on existing occupants and damages rather than enhances and protects the local landscape; it significantly increases the risk of flooding both from surface water and foul water drainage as the existing systems are known to be inadequate; it will generate significant additional traffic likely to rat run through North Leigh via the New Yatt Road which will link to the northern distributor road and if the West End Link Road is built yet more traffic from West Witney and beyond will be able to take the same short cuts and increase traffic flows in our village to an unacceptable level. In these respects the modifications are unsound and these elements legally non compliant.

Main 68 seeks to protect Landscape impact by ensuring appropriate landscape assessments but whilst one has been done for the original proposal of 1000 dwellings one has not been done for 1400 as now proposed.

Main 75 (policy EH5) seeks to reduce or avoid flood risk - the North Witney proposal appears to increase these risks - as such it must be non compliant with Main 75.

If the Inspector were minded to approve the North Witney allocation then we would request as part of the wording in one or all of the policy modifications relevant to North Witney namely Main 97,101,102,103 and 113, there should be a requirement to provide suitable traffic calming measures in various locations along the New Yatt Road to discourage rat running from North Witney through New Yatt and North Leigh. At present no provision is made in the respective policies nor any Modification, and as such the impact of the proposal, as yet not suitably assessed, makes it unsound.

In addition as part of a wider strategy of enhancing cycling provision between Witney and the railway station at Long Hanborough, all developments in settlements along the A4095 starting with North Witney, North Leigh, Freeland and Long Hanborough should contribute towards improving the local road network and in particular upgrading the cycle path between Witney and Long Hanborough especially the section of cycleway missing between the Common Road and Park Road junctions at North Leigh - the relevant modifications are Main 59 (sustainable transport T1) 150, 170,172,173,175 and 183 (Policy EW2). This element of the Plan needs to be sounder and more compliant by making suitable provision for this important cycle link to encourage more cycling and fewer car journeys between Witney and Long Hanborough railway station.

NLPC is keen to see the Local Plan adopted as soon as possible to enable WODC to regain control of the planning system to avoid losing appeals or being forced to grant consent on unsuitable sites as has been the case on two sites in North Leigh amounting to over 110 dwellings - both of which will access directly onto the New Yatt Road with similar traffic issues that North Witney will cause. However selecting the best sites with least impact remains paramount.

The approach given to the identification of individual allocations (as set out under the relevant sub-areas within chapter 9) and their associated policies is strongly supported.

Where relevant, individual policies require the provision of schools as part of the wider allocated development, including the number and size of schools required (for example Main Modifications 103, 140 and 155). Where the proposed housing numbers do not trigger the need for a new school, the policy requires appropriate provision of or a contribution to the necessary supporting infrastructure (for example Main Modifications 128 and 131). This approach is supported by the EFA.
You will have no doubt taken account of the key strategic policies to reiterate this position, including securing developer contributions through s106 and CIL, but it would be helpful if they were explicitly referenced within the document. In particular, as below:

The National Planning Policy Framework (NPPF) advises that local planning authorities (LPAs) should take a proactive, positive and collaborative approach to ensuring that a sufficient choice of school places is available to meet the needs of communities and that LPAs should give great weight to the need to create, expand or alter schools to widen choice in education (para 72).

The EFA support the principle of safeguarding land for the provision of new schools to meet government planning policy objectives as set out in paragraph 72 of the NPPF. Support is also given for the siting of schools within the allocated sites in locations which promote sustainable travel modes for pupils, staff and visitors. There is also a need to ensure that the education contributions made by developers through the Community Infrastructure Levy are sufficient to cover the increase in demand for school places that is likely to be generated by a development. When new schools are developed, local authorities should also seek to safeguard land for any future expansion of new schools where demand indicates this might be necessary.

West Oxfordshire District Council should also have regard to the Joint Policy Statement from the Secretary of State for Communities and Local Government and the Secretary of State for Education on ‘Planning for Schools Development’ (2011) which sets out the Government’s commitment to support the development of state-funded schools and their delivery through the planning system.

Overall, the EFA commends the main modifications proposed. They seek to ensure that adequate future education provision across the district is provided.

> MAIN 103  

North Witney SDA  

Our previous comments made in relation to this SDA still apply, we note that the allocation has increased from 1000 to 1400 houses, and the area of the allocation has increased. We note that ‘an acceptable degree of impact in landscape terms’ is anticipated: we advise that this allocation would have to follow the recommendations of a full Landscape and Visual Impact Assessment (LVIA) in order to create a development which is both sustainable and acceptable in terms of its impact on the wider landscape given it falls within the setting of the Cotswolds Area of Outstanding Natural Beauty (AONB).

It should be ensured that an increased housing density still allows for provision of sufficient Green infrastructure, since the land currently provides a recreational resource. The potential for hydrological impacts on Duckington Meads SSSI will need to be assessed.

**MM456 Sport England**

Raymond Cole  
Mr Cole  
1120  
> SECTION 9 - STRATEGY AT THE LOCAL LEVEL  
> Witney Sub Area  
> MAIN 104  

Please see also Sport England’s representations on MAIN 50. The policy WIT4 and supporting text suggests that the land should be allocated for development, ‘subject to relocation of existing sports pitches’. Sport England considers that this wording on its own may not be sufficient to secure satisfactory reprovision of these community sport facilities. Further amendments are required to the policy and these are suggested below. If the pitches and ancillary facilities are to be relocated then the Council should allocate a replacement site for these through the local plan and a site should be identified in the modifications to the plan. If areas of the golf course are to be lost then these should also be replaced and the Council should identify a site within the Local Plan.

<td>1898</td>
<td>&gt; SECTION 9 - STRATEGY AT THE LOCAL LEVEL &gt; Witney Sub Area &gt; MAIN 104</td>
<td>We have made presentations to you on behalf of our clients, the Dowley, Conlon, Brooks, Williams and Huntoon families over a number of years during the ongoing review of the Local Plan, seeking to have their land at Brize Norton Road/Bushey Ground, Minster Lovell allocated for housing, including your most recent SHLAA call for sites consultation in February this year and put forward their land as being available and suitable for such a use. Previous ref 262. We note that in the latest version of the Draft Plan a site for 85 dwellings has been proposed on a back land site adjoining the north west edge of the village and that following a planning application this site has been granted consent in the last month. We believe the Council may find the need to allocate more dwellings in sustainable settlements like Minster Lovell and our clients site is both suitable and available. There is an existing access via Bushey Ground which already serves a number of existing dwellings and businesses. We realise this site is not large enough to be seen as a strategic one, but given the draft plan modifications have now included/identified a number of non-strategic sites ranging from 25 to 300 dwellings, we believe this site should have been included as well – so Modification Main 26 (para5.30b) should be amended to include this site and likewise Main 90 Witney sub Area table 1 and again Main 115. We anticipate the Council may find there will prove to be a need to provide more deliverable sites like this because the larger sites are either not deliverable quickly or worse not at all within the Plan period. In Main 104 paras 9.2.51 a,b and c - our clients support the principle of extending development westwards from Downs Road and linking Downs Road to B4047. There is a four way link interchange proposed to the A40 at Downs road and possibly another may be provided at the B4477 at Minster Lovell. Please take this letter as a repeat of our earlier representations – our client’s land is still available for housing</td>

<td>848</td>
<td>&gt; SECTION 9 - STRATEGY AT THE LOCAL LEVEL &gt; Witney Sub Area &gt; MAIN 104</td>
<td>MAIN 104 Para 9.2.49-51 Alternative Locations around Witney Stagecoach recognises that there are few suitable clearly available alternative opportunities to accommodate development around Witney, without seriously conflicting with other constraints and policy objectives, including those within NPPF. Not least of these constraints is the difficulty providing real choices to travel by sustainable modes. Stagecoach agrees that any such opportunities, apart from a small amount of land north of Woodstock Road, are likely to lie in the west of the town beyond committed development at Downs Road. The difficulties integrating successive rounds of plan-led expansion at a large number of towns suggests that policy ought to consider requiring that the opportunities for longer-term development adjacent to allocated sites and larger scale “departure” permissions, should identify and secure for future access to, and integration with, long-term development opportunities, beyond the Plan period, especially West of Witney.</td>

There are concerns regarding noise, odour and landscape impact and unlike the alternative options, the scheme would not deliver any strategic highway improvements for Witney. Policy T1 – Sustainable Transport Priority will be given to locating new development in areas with convenient access to a good range of services and facilities and where the need to travel by private car can be minimised, due to opportunities for walking, cycling and the use of public transport, particularly where this would help to</td>
</tr>
</tbody>
</table>
reduce traffic congestion on the routes around Oxford and the Air Quality Management Areas at Witney and Chipping Norton.

Witney’s main traffic bottleneck is at Bridge Street. With an average of 29,000 vehicles a day, it is the only vehicular crossing of the River Windrush for local journeys and through traffic from the north and east. The constraint of the river combined with the level of demand for vehicular travel results in severe congestion, delays to buses and air pollution (it is already an Air Quality Management Area). The environment deters cyclists and pedestrians from using the route.

The new A40/Down's Road junction and A40/Shores Green improvements (Main 102) will significantly reduce traffic (and air pollution) in Bridge Street whereas the North Witney proposal combined with the recent successful applications on New Yatt Road (270 and 40 houses) will substantially increase traffic (and air pollution) in Bridge Street. Replacing North Witney with South Witney would potentially release £40m of S106 funding:

- Northern Distributor Road (£10m)
- West End Link road (£23.2m)
- Foul water drainage (£3m)
- Flood alleviation (£3m)

We will also work with Oxfordshire County Council to identify funding for their long term strategy for the A40 which will involve dualling between Witney and Eynsham and a westbound bus lane.

However, the £55m funding to facilitate the above long term strategy has yet to be identified. Selection of South Witney as an alternative to North Witney could be used to facilitate Oxfordshire County Council’s transport strategy outlined above to improve the A40 between Witney and Oxford. This proposed change of strategy would benefit substantially more residents than the existing strategy.

Other advantages to replacing North Witney with South Witney are:

- Traffic from South Witney would avoid the Bridge Street bottleneck (Air quality management area) on journeys into Witney.
- A South Witney development would be able to take advantage of the existing four way A40 junction at Ductlington and the proposed four way A40 junction with Downs Road, providing direct access to the main employment areas of Oxford, Witney and Carterton.
- Conversely the development of 1,400 houses at North Witney would significantly increase traffic in Bridge Street, even with the delivery of WEL2.

Remove North Witney from the Local Plan 2031 and replace with South Witney.

| MM786         | Oxfordshire County Council | Amada Jacobs (OCC) | Mrs Jacobs     | Jacobs            | 2215       | > SECTION 9 - STRATEGY AT THE LOCAL LEVEL > Witney Sub Area > MAIN 108 | Ecology and Natural Environment  
In all cases reference should be made to the District Council’s ecologist for specific details on each site. It is assumed that before firm proposals are brought forward for each site an appropriate ecological, landscape and visual impact assessment will be undertaken including surveys for protected and threatened species.  
The permanent loss of land of existing and potential future habitat value should be recognised with a corresponding investment in biodiversity and other green infrastructure resources that provide a range of benefits including biodiversity, water management and contribute to physical and mental well-being.  
Additional off-site enhancement should be provided where insufficient environmental gains cannot be secured within the development boundary.  
Witney – Woodford Way Car Park  
There is an opportunity to introduce new green infrastructure to benefit the surrounding area and to counterbalance local noise and air pollution impacts on residents. |
| MM786         | Oxfordshire County Council | Amada Jacobs (OCC) | Mrs Jacobs     | Jacobs            | 2245       | > SECTION 9 - STRATEGY AT THE LOCAL LEVEL > Witney Sub Area > MAIN 108 | Omission of transport infrastructure from the policy. We suggest the following addition to ensure this policy is in line with LTP4.  
Provision of satisfactory vehicular access, provision of supporting transport infrastructure, including mitigating the impact of traffic associated with the development; the provision of appropriate financial contributions towards LTP4 transport schemes; provision of appropriate public transport (services and infrastructure) serving the site; and provision of a comprehensive network for pedestrians, and cyclists with links to key. Provision of individual Travel Plan (and associated Travel Information Packs) for the residential and employment areas. |
| MM111         | Print Design Focus       | Sue Carter       | Mrs Carter     | Carter            | 279        | > SECTION 9 - STRATEGY AT THE LOCAL LEVEL > Witney Sub Area > MAIN 108 | I wish to express our concern as a local business and myself as a local resident to the proposed building of 50 homes on the Woodford Way Car park in Witney.  
The loss of 255 car parking spaces would be devastating for workers in Witney for which this is the only long term i.e. all day parking. It is very understandable to look to reduce the numbers of cars on the roads but with the loss of public transport and many people travelling longer distances than it is feasible to walk or cycle this would make recruitment of staff even more difficult than it is at present.  
The car park is at present always very well utilized, it’s not as if no-one is using it. |
| MM117         |                         | Rachel Smith     | -               | -                 | 290        | > SECTION 9 - STRATEGY AT THE LOCAL LEVEL > Witney Sub Area > MAIN 108 | I am writing this email out of concern that you are planning on building 50 houses on the car park on Woodford way in Witney. I currently use this car park on a daily basis as we have huge problems parking where we live on Gloucester Place. I do shift work and quite often miss out on the spaces by my house so use the car park where I know I can leave my car for 12 hours or so and it’s not a problem. We moved to Gloucester place knowing the parking would be tight, however we knew we had the car park as a backup.  
Where will everyone park? When I finish a shift at 0200hr, there are plenty of cars using this car park, where will they all go? Where will the extra cars from the 50 houses go?  
Witney is a popular place to shop due to the free car parking. I do believe people will be put off shopping here if they are unable to find somewhere to park. With the new shops currently being built in Oxford surely they... |

<td>Finally I would like to question the idea of building 50 houses in Witney on the Woodford way car park site. I am concerned that this car park seems to be much needed as it is always full and therefore I would question where the planners think these people will park. I have not seen a plan to produce extra car parking elsewhere. I also believe that this car park is often used by people who require to park for longer periods, and I question where else this facility is offered. I believe that the limited long term space available in the nearby multi story car park is also often full. Thank you for the opportunity to put these points. I would also like to thank the team within West Oxford Council for all their work to try to come up with the best possible solution, as I am very aware of how important it is to get this right.</td>

-HOSPITAL NEXT DOOR (carpark is now pay and display)  
CONSULTATION RUNS FROM 11TH NOV-23RD DEC 2016!  
Contact West Oxon District Council with your views.  
Register at planning.policy@westoxon.gov.uk or phone 01993 861000 ask for Planning Policy  
Your views will be passed on to the planning inspectorate. WODC will notify you about future meetings and decisions.  
Witney has the best reputation for FREE parking with great shops and is a happy friendly town.  
We could lose all of this if this is voted to proceed by WODC, who by the way have their OWN CARPARK (That's nice!!!)  
This town is working-Don't change it! Listen to the people! |
| MM456        | Sport England           | Raymond Cole   | Mr Cole          | 1121       | > SECTION 9 - STRATEGY AT THE LOCAL LEVEL > Witney Sub Area > MAIN 108 | The West Eynsham strategic development area contains areas of Flood Zone 2 and 3 associated with the Chil Brook.  
The allocated site at Woodford Way Car Park, Witney contains an area of Flood Zone 2 originating from the River Windrush.  
Paragraph 100 and 101 of the National Planning Policy Framework (NPPF) requires that a Strategic Sequential Test is undertaken to ensure both the strategic allocation, and the Plan are sound. The Strategic Flood Risk Assessment will provide the basis for applying the test and a sequential approach. Once the Sequential Test is undertaken the Exception Test would be required in accordance with Paragraph 102 of the NPPF.  
The text indicates that the existing playing field at Ripley Lane may be affected by this proposal. The Council should advise whether or not this will occur. The Council should also undertake a playing pitch strategy to determine what level of new provision is required to support the new housing. |

<td>Mr and Mrs Martin Kinch</td>
<td>Mr</td>
<td>Kinch</td>
<td>2000</td>
<td>&gt; SECTION 9 - STRATEGY AT THE LOCAL LEVEL &gt; Witney Sub Area &gt; MAIN111</td>
<td>Strutt &amp; Parker act on behalf of Mr and Mrs Martin Kinch, owners of the land west of Minster Lovell, which the West Oxfordshire Local Plan 2031 allocates for around 85 homes. My clients welcome the identification of this land as a non-strategic housing allocation and wish to reiterate to the Council that, in line with the advice included within the National Planning Policy Framework relating to the deliverability of sites allocated for residential development, the site is ‘available’ now for residential development, offers a ‘suitable’ location for new housing and is ‘achievable’ with a realistic prospect that housing can be delivered within five years. This is supported by the submission of an outline planning application for 85 homes on the site which received a resolution to grant planning permission at the November 2016 meeting of the Council’s Lowlands Area Planning Sub-Committee. Key elements of the scheme reflect the provisions of draft Policy WIT2b: § The provision of around 85 new market and affordable homes in close proximity to local services and amenities. The illustrative Masterplan submitted featured an attractive and high quality development of 8x1 bedroom, 31x2 bedroom, 33x3 bedroom, 9x4 bedroom and 4x5 bedroom homes with the larger units principally located in the southern areas of the Site. The mix will allow for a choice of housing tenures and...</td>
</tr>
</tbody>
</table>
sizes. Affordable housing will be provided in accordance with the requirements of draft Policy H3 (40% affordable tenure, delivered on site) and will comprise a mix of rented and shared ownership;

§ Provision of new on and off-site community facilities and services, including public open space to south of site which will provide a transition from the proposed development to the adjacent agricultural fields. This well-defined and overlooked space provides a large area of semi-natural open space and creates an attractive recreational amenity which complements the existing public open space at the adjacent Ripley Avenue Amenity Area;

§ The scheme uses design cues taken from the original layout of the Chartist settlement to create a development that is sensitive to the historic development pattern present in Minster Lovell whilst ensuring neighbouring properties are respected. The long rear gardens positioned along eastern boundary help to establish a buffer to adjacent existing properties.

§ Provision of one vehicular and two pedestrian links onto Burford Road along with a new pedestrian crossing;

§ A reduction in the speed limit is proposed along the site frontage with the Burford Road with associated infrastructure including Vehicle Activated Signs (VAS) to deter speeding;

§ Retention, management and enhancement of existing hedgerows and trees to promote biodiversity, integrate the development with the existing landscape character and minimise its visual impact;

§ New boundary planting around the south west corner reducing longer views;

§ Enhanced planting along existing hedgerow boundary on the western edge;

§ Provision of additional planting to mitigate any visual impact from surrounding areas and the Cotswold AONB;

§ Retention of existing trees along Burford Rd and addition of dry stone wall entrances – screening the development while retaining landscape features, enhancements to the ecology and creation of rural residential character, therefore reducing traffic speeds; and

§ Integration of Sustainable Urban Drainage Systems (SUDS) including an attenuation basin.

The Illustrative Masterplan submitted as part of the application features a scheme with a net density of 19 dwellings per hectare. This is a particularly low density and given land is a finite resource and the encouragement within the Framework to make the most efficient use of land, it is submitted that the site is capable of accommodating more than 85 dwellings whilst still complying with the provisions of draft Policy WIT2b. Based on the size and location of the site and the density of neighbouring development, this proposed allocation could accommodate a further 40-50 dwellings. Therefore in line with the Government’s requirement in paragraph 47 of the Framework to “boost significantly the supply of housing” and to optimise the potential of the site, it is proposed that this allocation is increased to ‘around 125 new homes’.

I would wish to participate at the oral examination in support of the allocation.

<td>North Witney Action Group (NWAG)</td>
<td>Mr Neyroud</td>
<td>1328</td>
<td>&gt; SECTION 9 - STRATEGY AT THE LOCAL LEVEL &gt; Witney Sub Area &gt; MAIN113</td>
<td>WODC continues to position WEL as the second river crossing for Witney, when OCC’s LTP4 determines that the Shores Green junction upgrade becomes the second river crossing (OCC LTP4 WIT1), with WEL not even specified in LTP4 WIT1. Furthermore, Shores Green upgrade is not currently fully funded (9.2.34a), and OCC would look to WODC to assist in providing funding. Additionally, the Inspector (Frances Mahoney) at the Gladman/Burford Rd planning appeal (14/1215/P/OP) in her final report, para 318 wrote, “The Council is clearly committed to the SGSR scheme and sees it as a primary solution to the problem of air quality and highways congestion within Witney.” The Secretary of State granted planning permission and agreed a £1.16m contribution towards the SGSR scheme. (Para 16) Alarmingly, Main 113, 9.2.58 removes the onus from the developers of North Witney SDA from their responsibility of delivering WEL to a mere facilitation role. In doing so WODC has left itself vulnerable to the full funding of the (currently) £23.2m West End Link Road which is “needed to enable the proposed development of land to the north of Witney” (Local Plan CD1. 7.36)</td>

<td>The second bullet point of paragraph 7.32 addresses the Shores Green Slip Roads, and states that: ‘Delivery will be facilitated by the proposed East Witney Strategic Development Area.’ Similarly, the second bullet point of paragraph 9.2.58 states that the Shores Green Slip Roads will be “…facilitated by new development including primarily the proposed East Witney Strategic Development Area.’ We would suggest that the wording in paragraph 9.2.58 is more appropriate, as it recognises that other developments will contribute towards the delivery of this new infrastructure. A significant financial contribution (in excess of £1m) has already been secured towards this new transport infrastructure from a scheme off the Burford Road, Witney. Indeed, we would suggest that the Local Plan should commit to seeking further financial contributions towards the Shores Green Slips Roads from any proposed allocations or future windfall sites that would impact on traffic movements in the vicinity, including on Bridge Street.</td>

<td>906</td>
<td>&gt; SECTION 9 - STRATEGY AT THE LOCAL LEVEL &gt; Witney Sub Area &gt; MAIN 113</td>
<td>MAIN 113 Paras 9.2.58-9.2.59 Strategic Highways Schemes and funding for Witney It is clear that the main highways schemes necessary to create the capacity to satisfactorily accommodate traffic arising from the development strategy in Witney, suffer from both their costs, and the need for land outside the control either of promoters of draft allocations, or the Highways Authority. Stagecoach welcomes the recognition in the proposed modifications that development North of Witney will “contribute to” the delivery of the West End Link Road (WELR), and that it is now accepted that even the enlarged proposed allocation cannot credibly be expected to deliver the scheme. However WELR is clearly required if existing conditions at Bridge Street, through which all the main bus services serving the town must pass, are not to become significantly worse as a direct result of the traffic arising from North of Witney SDA. The question is therefore begged, that the proposed allocation of the North of Witney SDA cannot be sound, unless some mechanism is found in the Plan to demonstrate that the WELR is in fact credibly deliverable over the Plan period, in which case, it would be possible to consent the scheme as a whole subject to the discharge of a “Grampian Condition”, which would not permit the occupation of more than an agreed number of dwellings before WELR is completed and open to traffic. Stagecoach therefore proposes that to make the Plan sound, permission for the North of Witney SDA will be conditional on the identification of a threshold beyond which traffic generation would exceed the ability of other mitigations to achieve “nil detriment” to the Bridge Street junctions, and that no dwellings will be occupied until the West End Link Road is completed and opened to traffic.</td>

<td>1226</td>
<td>&gt; SECTION 9 - STRATEGY AT THE LOCAL LEVEL &gt; Witney Sub Area &gt; MAIN 115</td>
<td>West Witney - ‘Area of long term future development potential’ Further to the above, whilst we encourage the increase in overall numbers, we would suggest that they are treated as a whole OANfigure of 15,950, as opposed to the splitting of the Oxford City numbers out of the total OANfor WODC. With this aside, and with reference to MOD 24 Policy HI, it is encouraging that the distribution of housing numbers has increased the distribution to the Witney sub-area from 3,700 - 4,400. Whilst the Witney sub-area is the smallest by area, it is the most densely populated, with 33,000 people, circa 28,000 of which live in Witney, the District’s largest town. Witney is the main service centre for West Oxford, and with almost a third of the employment opportunities being located in the sub-area, it is the most logical and sustainable location to site the highest proportion of the District’s future housing and employment growth. There are currently three Strategic Development Areas (SDAs) identified within Witney: East Witney SDA - 450 homes North Witney SDA - 1,400 homes West Witney SDA - 1,000 homes Each of these are targeted to deliver within the Plan Period, however looking forward, there is then limited scope for future growth. We note that a number of options have been considered, and that the land to the west of the West Witney SDA (West of Downs Road) is now considered to have ‘future development potential.’ We echo paragraphs 9.2.51 a / b of MAIN 104 and agree that once the West Winey SDA is built out, the area to the west of the town becomes more urbanised and the context of the land will change, and thus forming a logical extension to the town. The site is well placed to provide additional employment and dwellings to form a logical residually led, mixed use, urban extension to Witney. Additional employment would complement the existing provision off Downs Road, and with the provision of improved access onto the A40, via a new junction, would be a sustainable location to site future growth. As indicated in MAIN 104, in order to achieve the optimum benefit, and plan for the full capacity of the area, the relocation of the Witney Golf Club will need to be considered in detail. Given the proximity of Minster Lovell, and the relatively low landscape significance of the area, the</td>

<td>c/o Carter Jonas</td>
<td>c/o Carter Jonas</td>
<td>1784</td>
<td>&gt; SECTION 9 - STRATEGY AT THE LOCAL LEVEL &gt; Witney Sub Area &gt; MAIN 115</td>
<td>Main Modification 115 identifies further employment land in Witney, in addition to the land already allocated, but this land is also to the west of the town. Land to the west of Downs Road is identified in Policy WIT 4 as an ‘area of future, long term development potential’. The Plan makes no provision for strategic employment to the east of the town, although the two Strategic Development Areas, which together will provide approximately 1,850 new homes, are located to the East and the North of the town. The current spatial strategy for employment provision in Witney, proposed in the Main Modifications to the Submission Plan, will lead to an increased number of journeys across the town between significant residential development in the east, and employment opportunities in the west, potentially increasing car use and exacerbating congestion around the Bridge Street junction in the centre of town. Allocation of the Land off Jubilee Way for a mixed use, residential and employment development would help address the current imbalance between employment and residential uses in the town, which is being exacerbated by the Proposed Modifications. This proposal would also assist in bolstering the Council’s housing land supply position, with an additional development outlet that could contribute to the Council’s overall housing target.</td>

<td>&gt; SECTION 9 - STRATEGY AT THE LOCAL LEVEL &gt; Witney Sub Area &gt; MAIN 115</td>
<td>The Consortium supports Main 115 which states: “Land to the west of Down’s Road identified as an ‘area of future long-term development potential’ to include consideration of opportunities for new housing and employment to meet identified development needs beyond 2031.” However, the reference to ‘long-term development potential beyond 2031 is not supported. This site is available and deliverable and able to come forward within the next five years to meet West Oxfordshire’s under-supply between 2011 and 2016. Any backlog should be dealt via the Sedgefield approach and therefore should not be met residually over the rest of the plan period. Furthermore it is noted that Oxford City’s unmet housing need (2,750 homes) will only form part of any five year supply calculation that includes housing delivery assumptions from 2021 onwards. The majority of the unmet need is to be delivered</td>

<td>by the Eynsham Garden Village for 2,200 dwellings. It is unlikely that this site will come forward within the timescales proposed due to the complexity of the site in terms of land assembly and associated infrastructure requirements. Land to the west of Down's Road, Witney provides a logical urban extension to Witney and should be identified as an allocation within the Local Plan. As stated above the Council intends to deal with the backlog of 1,836 homes through the Liverpool approach which is unsound. The approach to calculating five year housing land supply should follow Government policy and therefore the Sedgefield approach should be used and the shortfall should be addressed as quickly as possible, i.e. within the next five years. We are concerned that 5 years has already elapsed and the Council only has 15 years left to deliver the overall requirement. We consider that delivery could be greatly assisted by confirming the allocation at Land to the West of Down’s Road, Witney for residential development. Land at Down’s Road, Witney is available and deliverable now and can assist in the short term to provide certainty on delivering Oxford City’s unmet need. As mentioned above, we have concerns over the supply of housing at West Oxfordshire Garden Village and the way in which it is intended to be ring fenced and excluded from the overall land supply calculation of the District. We consider this approach to be unsound and inconsistent with national policy. In our opinion it is unlikely that the Garden City proposal for 2,750 new homes will come forward within the timescales proposed due to the complexity of the site in terms of land assembly and associated infrastructure requirements. It is also recognised that an Area Action Plan is to be drawn up for the site which will undoubtedly be time consuming. Land to the West of Down’s Road is controlled by three developers, achieving three outlets to assist with build-out rates to deliver the backlog of housing and to maintain a five year housing land supply.</td>

<td></td>
<td></td>
<td></td>
<td></td>
<td>We have made presentations to you on behalf of our clients, the Dowley, Conlon, Brooks, Williams and Huntly families over a number of years during the ongoing review of the Local Plan, seeking to have their land at Brize Norton Road/Bushey Ground, Minster Lovell allocated for housing, including your most recent SHLAA call for sites consultation in February this year and put forward their land as being available and suitable for such a use. Previous ref 262. We note that in the latest version of the Draft Plan a site for 85 dwellings has been proposed on a back land site adjoining the north west edge of the village and that following a planning application this site has been granted consent in the last month. We believe the Council may find the need to allocate more dwellings in sustainable settlements like Minster Lovell and our clients site is both suitable and available. There is an existing access via Bushey Ground which already serves a number of existing dwellings and businesses. We realise this site is not large enough to be seen as a strategic one, but given the draft plan modifications have now included/identified a number of non-strategic sites ranging from 25 to 300 dwellings, we believe this site should have been included as well – so Modification Main 26 (para5.30b) should be amended to include this site and likewise Main 90 Witney sub Area table 1 and again Main 115. We anticipate the Council may find there will prove to be a need to provide more deliverable sites like this because the larger sites are either not deliverable quickly or worse not at all within the Plan period. In Main 104 paras 9.2,51 a,b and c - our clients support the principle of extending development westwards from Downs Road and linking Downs Road to B4047. There is a four way link interchange proposed to the A40 at Downs road and possibly another may be provided at the B4477 at Minster Lovell. Please take this letter as a repeat of our earlier representations – our client’s land is still available for housing and possibly some element of employment and hope that you will now reconsider it for inclusion in your new plan.</td>

<td>&gt; SECTION 9 - STRATEGY AT THE LOCAL LEVEL &gt; Witney Sub Area &gt; MAIN 115 Appendix 2 – Education Comments West Oxfordshire Garden Village Strategic Development Area - 2,200 homes - and West Eynsham Strategic Development Area - 1,000 homes Policy EW1a includes the provision of up to two primary schools on site (2FE including nursery) on 2.22ha sites and Policy EW1b includes the provision of a new primary school on-site (1.5FE including nursery) on a 2.22ha site. This is appropriate at this stage, but the exact distribution of primary school provision will need to be reviewed in the light of actual delivery timelines. 2200 homes would be broadly in line with 3 forms of entry, and 1000 homes would be broadly in line with 1.5 forms of entry. It may be that a 2 form entry primary school in West Eynsham – to also meet the need of other, smaller sites in the village - and a three form entry primary school on the Garden Village site is a more efficient model. One of these development sites would also need to provide land for the provision of additional secondary education capacity, as the current secondary school, Bartholomew School, does not have sufficient site area to expand in line with this level of growth. This is noted in the IDP but not in the Local Plan. An appropriate solution would be the provision of a second site for Bartholomew School, rather than creating another secondary school, which would struggle to be a financially viable size. However, this would need to be the subject of further work, and would require approval from the Regional Schools Commissioner.</td>

<td>Lagan Homes</td>
<td>Lagan Homes</td>
<td>-</td>
<td>278</td>
<td>&gt; SECTION 9 - STRATEGY AT THE LOCAL LEVEL &gt; Witney Sub Area &gt; MAIN 115 INTRODUCTION AND SUMMARY i. These representations are submitted in response to the West Oxfordshire Local Plan 2031 – Proposed Modifications Consultation, December 2016 (WOLP 2031 Modifications). They are made by Edgars Limited on behalf of Lagan Homes who have land under their control off School Hill, Minster Lovell. The land extends to 2.5ha and is identified on the plan attached as Appendix 1 to these representations. ii. Lagan Homes object to Table 4.1 (Main Modification, MM, 14) Policies H1 (MM24), H2 (MM29 and MM30) and WIT4 (MM4115) on the basis that insufficient sites for housing have been identified to provide for a five year supply of housing in accordance with national policy. iii. Edgars Limited have prepared representations on behalf of a number of clients which demonstrates that a five year land supply cannot be demonstrated when appropriate assumptions are used in accordance with national planning policy and guidance. These representations conclude that only a 2.7 year supply can be demonstrated. Edgars consider that additional non-strategic sites are required to be allocated to ensure...</td>
</tr>
</tbody>
</table>
sufficient housing land supply.

iv. Land at School Lane is under the control of Lagan Homes, is available now and capable of delivering around 25 homes in a sustainable location to help boost housing supply, ensure a 5 year supply of housing between 2016-2021 and provide robustness to ensure that the housing requirement of the modified WOLP 2031 is delivered.

v. Lagan Homes object to Table 4.1 and the reference to Minster Lovell 'south of the Burford Road' (MM14). There is no reason why Land at School Lane and north of the Burford Road is in anyway less sustainable in locational terms than other land on the edge of the village.

vi. The following representations provide further information on the Land at School Lane and should be read in conjunction with Edgars Limited's representations regarding housing supply which are not repeated in detail in these representations.

1.0 LAND AT SCHOOL LANE, MINSTER LOVELL

1.1 Lagan Homes object to Table 4.1 (Main Modification, MM, 14) Policies H1 (MM24), H2 (MM29 and MM30) and WIT4 (MM115) on the basis that the modified plan has not identified sufficient housing land to provide for a 5 year supply of housing and that Land at School Lane should be allocated for around 25 homes to help address this deficiency.

Site and Surrounding Area

1.2 The site lies adjacent to the village of Minster Lovell and the B4047 Burford Road some 3 miles (5km) west of Witney and 4 miles (6km) north of Carterton. There is an off-road cycle path to Witney (within reasonable cycling distance) and an hourly bus service to Witney. The village also has a number of amenities including a small shopping parade, Post Office, Primary School, Public House and Butcher. There are also several businesses along the Brize Norton Road.

1.3 The site is a single 2.5ha open grassland field immediately north of the Burford Road and west of School Lane. It is part of the north facing slope of the Windrush Valley. A site plan is attached at Appendix 1.

1.4 The site lies some 1m below the Burford Road and is screened by a strong hedgerow along the road frontage such that the open nature of the site is not readily perceptible from this frontage.

1.5 On the southern side of Burford Road is some modern development which is also mostly set back from the road frontage. The White Hart Public House (Listed Grade II) along with the War Memorial and Methodist Church frame the Brize Norton Road junction opposite the site.

1.6 There is a farm access in the south western corner and a strong hedgerow bounds to the west along with a Thames Water pumping station.

1.7 School lane bounds to the east. The lane lies some 1.5m below the site and views are filtered through by boundary vegetation.

1.8 School Lane leads to Little Minster. College Farm within Little Minster lies at the southern end of the site and there is a scattering of modern and historic buildings along School Land and School Hill.

<td>1.9 School Lane and College Farm fall within a Conservation Area. A Conservation Area Appraisal has been prepared by the Council. The site is not identified in the appraisal as where there is a notable sensitive view into or out of the Conservation Area. Buildings adjacent the site are identified as Locally Listed including College Farm and the Old School.</td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td>1.10 The site forms part of the northern slopes of the Windrush Valley and falls within the Cotswold AONB. The West Oxfordshire Landscape Assessment (WOLA) identifies the site as part of the Upper Windrush Character Area and part of Semi-Enclosed Valley Side Farmland which is noted to be sensitive to views within an across the valley but where there may be limited opportunities to accommodate small scale development within a strong landscape structure. The settlement pattern identifies scattered villages along the valley with Charteville (New Minster) a notable exception being sited on higher land.</td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td>1.11 The site is well screened from the Burford Road, but there are some more immediate views through boundary hedgerows from School Lane. The site is appreciable but not prominent in middle distance views back from the opposite side of the valley just south of Asthall Leigh. From here existing dwellings at Little Minster and north of the Burford Road are well screened by existing trees.</td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td>1.12 There is no planning history of direct relevance to the site. The site lies within Flood Zone 1 Low Risk.</td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td>1.13 Access is available to School Lane and to the Burford Road. Further technical work is underway to establish the most appropriate access point.</td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td>1.14 Lagan Homes have only recently acquired an interest in the site and as such the site has not previously been submitted to the Council or considered in the Strategic Housing and Economic Land Availability Assessment (SHELAA).</td>
</tr>
<tr>

<td></td>
<td></td>
<td></td>
<td></td>
<td>Key Planning Site Considerations</td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td>1.15 Lagan Homes are in the process of undertaking technical and development design work to inform a planning application and this is likely to be available in advance of further WOLP 2031 examination hearings. Without prejudice to this further work, the following planning considerations are identified as of particular relevance to the potential allocation of the site.</td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td>The principle of housing development in Minster Lovell, north of the Burford Road</td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td>1.16 Minster Lovell is identified as a village in the Local Plan 2031. Draft WOLP Policy H2 permits new housing adjacent to villages to meet housing needs. As such housing development on the site would be acceptable in principle.</td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td>1.17 Draft Policies H2 and WIT4 seek delivery of 4,400 homes in the Witney Sub Area including Minster Lovell. Delivery is proposed through three Strategic Development Areas (SDAs - West, East and North Witney) each with strategic highway improvements. Land West of Minster Lovell is proposed for allocation confirming the suitability of the settlement for additional housing development.</td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td>1.18 There is residual windfall requirement of 304 homes within the Witney Sub-Area.</td>
</tr>
</tbody>
</table>
1.19 In Edgars opinion, there is a significant risk of delays in delivery on SDAs which will likely result in continuing housing supply deficits. There is a need to address deficiencies in the 5 year housing supply. Given the long lead in times of SDAs, addressing the current supply deficiencies is best achieved through allocating additional non-strategic developments such as Land at School Lane, Minster Lovell.

1.20 Land at School Lane lies adjacent to Minster Lovell, close to amenities and public transport links. The village bus stops, public house and shops are located on the opposite site of the Burford Road to the site in very close proximity. The village school lies within 500m to the south. The site is also within cycling distance of the West Witney employment areas (2km) and Witney Town Centre (5km). In locational terms, it is sustainable. Indeed, the site lies closer to village amenities than the proposed allocation west of the village.

1.21 It is noted that Table 4.1 of the plan includes Minster Lovell as a village within the settlement hierarchy but this has been modified to (MM 14) to include reference to Minster Lovell ‘south of the Burford Road’. Lagan Homes object to this modification.

1.22 In Edgars opinion, the development of Land at School Lane and north of the Burford Road can comply with Policy H2 in being adjacent to a village in the settlement hierarchy.

1.23 There is no reason why land at School Lane, north of the Burford Road, is in any way less sustainable in locational terms than other land adjoining the village. Indeed, land at School Lane is in closer proximity to many of the villages amenities, including the school, shops and public house than other land on the edge of the village.

1.24 Draft Policy OS2 Locating development in the right places states that villages are suitable for limited development which respects the village character and local distinctiveness and would help to maintain the vitality of these communities. Development should form a logical complement to the settlement pattern, protect landscape character and settlement identity.

1.25 The site does not appear to have been part of the historic Chartist settlement for which Minster Lovell is known. The site does lie within the Cotswolds AONB and adjacent to a Conservation Area.

1.26 The site is not identified in the Council’s Conservation Area appraisal as where there is a notable sensitive view into or out of the Conservation Area.

1.27 Views of the site are already filtered by vegetation and topography. The WOLA identifies that this area of the Windrush Valley can accommodate development within a strong landscape structure. Indeed, in views from across the valley, existing landscape features act as a screen to existing dwellings on the Burford Road.

1.28 The setting of the Conservation Area and AONB can be preserved and enhanced through a low density but high quality development within a strong and extensive landscape structure. Although the extent of the land is 2.5ha, only around 25 dwellings are proposed leaving significant scope for open space and landscaping.

1.29 In Edgars opinion, a development of this scale does not comprise ‘major’ development for the purposes

<td>CPRE feels that the focus in Carterton should be to strengthen the core of the town. Therefore, CPRE is supportive of the release of REEMA Central for housing and of the intention to increase the density at REEMA North, yielding an additional allocation of a total of 300 more homes across the 2 sites. Therefore, CPRE supports clauses 9.3.5-9.3.6, 9.3.36 &amp; 9.3.50. However, the REEMA areas cover 146 acres in total. The last information from the MOD indicated that 742 SFA homes are needed, which at the usual JSP density of 12 per acre, will require 62 acres, leaving 84 acres spare. North and Central areas cover approximately 70 acres (22 at REEMA North and 48 at REEMA Central), so the allocation of 300 houses in addition to the existing 200 is modest, even accounting for some retail or leisure land. CPRE also feels that there is likely to be potential in other REEMA areas in the town and it now appears that past claims of increasing housing need generated by RAF Brize Norton were unfounded. The existing houses are at an approximate density of 6 homes per acre, as they are not well-planned. Therefore, no further expansion of the town should occur until these sites achieve their potential and any future development in Carterton should be focused at REEMA. It is clearly preferable to development on open countryside and CPRE agrees with WODC that it will improve the style and image of the town. It is development that would lead to clear betterment and would be likely to be well supported in the community. In line with the need, mostly apartments and small homes should be built, with a few larger gateway properties for kerb appeal. Some housing for the elderly would be beneficial. That means that the density could be relatively high, in line with most town centre developments. It would not be unreasonable to expect a density of 20-30 per acre or 50-75 per ha to be achieved in line with other mixed developments in the area, giving a total potential of at least 1,680 homes in REEMA North and Central areas alone, based on 50 units per ha.</td>

In line with the need, mostly apartments and small homes should be built, with a few larger gateway properties for kerb appeal. Some housing for the elderly would be beneficial. That means that the density could be relatively high, in line with most town centre developments. It would not be unreasonable to expect a density of 20-30 per acre or 50-75 per ha to be achieved in line with other mixed developments in the area, giving a total potential of at least 1,680 homes in REEMA North and Central areas alone, based on 50 units per ha. In fact, Carterton has the least infrastructure and facilities of the three main towns and lags behind in terms of employment opportunities, as noted in the Draft Local Plan clauses 2.26, 9.3.10, 9.3.39 &amp; 9.3.42. There is a pre-existing imbalance between numbers of jobs and homes/ workers, meaning that out-commuting is high. It's the furthest from Oxford and has no A road access. There is mention in 9.3.15 and 9.3.67 of upgrading the B4477 in Brize Norton to an A road at a cost of £3.9M, but clauses 7.48 &amp; policy T2 are vague about funding. It appears that there is no firm commitment or allocated funding. It is not clear that the MOD would in fact provide an A road or appropriate funding.</td>

</tbody>
</table>
either where the £7.2M for westbound slips onto the A40 will come from at Minster Lovell.

Carterton should not therefore be seen as the obvious place to put any houses that other areas do not want, as has been suggested by some.

If a significant number of houses were moved from Witney to Carterton, Carterton would encounter significantly more growth per capita than Witney. Carterton could not sustain such growth without further major incursion into open countryside in neighbouring parishes (over and above that already caused by Shilton Park, Carterton North and Carterton East in Brize Norton and Shilton Parishes), which CPRE considers unacceptable.

CPRE feels that the focus in Carterton should be to strengthen the core of the town.

Therefore, CPRE is supportive of the release of REEMA Central for housing and of the intention to increase the density at REEMA North, yielding an additional allocation of a total of 300 more homes across the 2 sites. Therefore, CPRE supports clauses 9.3.5-9.3.6, 9.3.36 & 9.3.50.

However, the REEMA areas cover 146 acres in total. The last information from the MOD indicated that 742 SFA homes are needed, which at the usual JSP density of 12 per acre, will require 62 acres, leaving 84 acres spare. North and Central areas cover approximately 70 acres (22 at REEMA North and 48 at REEMA Central), so the allocation of 300 houses in addition to the existing 200 is modest, even accounting for some retail or leisure land. CPRE also feels that there is likely to be potential in other REEMA areas in the town and it now appears that past claims of increasing housing need generated by RAF Brize Norton were unfounded. The existing houses are at an approximate density of 6 homes per acre, as they are not well-planned.

Therefore, no further expansion of the town should occur until these sites achieve their potential and any future development in Carterton should be focused at REEMA. It is clearly preferable to development on open countryside and CPRE agrees with WODC that it will improve the style and image of the town. It is development that would lead to clear betterment and would be likely to be well supported in the community. In line with the need, mostly apartments and small homes should be built, with a few larger gateway properties for kerb appeal. Some housing for the elderly would be beneficial. That means that the density could be relatively high, in line with most town centre developments. It would not be unreasonable to expect a density of 20-30 per acre or 50-75 per ha to be achieved in line with other mixed developments in the area, giving a total potential of at least 1,680 homes in REEMA North and Central areas alone, based on 50 units per ha.

least 1,680 homes in REEMA North and Central areas alone, based on 50 units per ha. In fact, Carterton has the least infrastructure and facilities of the three main towns and lags behind in terms of employment opportunities, as noted in the Draft Local Plan clauses 2.26, 9.3.10, 9.3.39 & 9.3.42. There is a pre-existing imbalance between numbers of jobs and homes/workers, meaning that out-commuting is high. It’s the furthest from Oxford and has no A road access. There is mention in 9.3.15 and 9.3.67 of upgrading the B4477 in Brize Norton to an A road at a cost of £3.9M, but clauses 7.48 & policy T2 are vague about funding. It appears that there is no firm commitment or allocated funding. It is not clear either where the £7.2M for westbound slips onto the A40 will come from at Minster Lovell. Carterton should not therefore be seen as the obvious place to put any houses that other areas do not want, as has been suggested by some.

If a significant number of houses were moved from Witney to Carterton, Carterton would encounter significantly more growth per capita than Witney. Carterton could not sustain such growth without further major incursion into open countryside in neighbouring parishes (over and above that already caused by Shilton Park, Carterton North and Carterton East in Brize Norton and Shilton Parishes), which CPRE considers unacceptable.

If the proposed modifications seek to emphasise that Carterton is notable for an imbalance between employment within the sub-area and the economically active population, identifying an out-commuting rate of 60%, which is characterised as relatively high. However this should be set in the context of the District as a whole, the eastern areas of which have a strong functional relationship with Oxford in economic terms, and from where around 50% of the District’s economically active residents commute out of the District to work62. In respect of the parish of Carterton, this corresponds closely to the boundary of the urban area and displays a relatively high percentage of people travelling less than 2km to their place of work (34.8%), compared to the County (22.8%) and national (20%) averages63(Appendix 7). The implication therefore that the Carterton urban area displays a peculiar imbalance between homes and jobs and consequently should be demoted as a location for additional housing growth is considered to be misplaced. However, even if this premise is accepted the status of Carterton within the settlement hierarchy as a Main Service Centre (to which growth will be directed) does not align with the approach now set out within the proposed modifications. The approach is unjustified and inconsistent having regard to the SA process and the role of the Carterton in the settlement hierarchy. The modification at 9.3.44 also betrays the inconsistencies in the approach to planning for growth at Carterton by listing only non-strategic scale site allocations in Table 9.2, based on the proclaimed imbalance between homes and jobs, before advising that further housing sites will be identified through any subsequent review of the Local Plan (without making this contingent upon the delivery of employment growth at the settlement).

7.2 Table 9.2 should be amended to include strategic scale housing growth (in the form of SDA development) at West Carterton consistent with the SA Option 2 strategy and with the role of Carterton as a Main Service Centre.
CPRE feels that the focus in Carterton should be to strengthen the core of the town. Therefore, CPRE is supportive of the release of REEMA Central for housing and of the intention to increase the density at REEMA North, yielding an additional allocation of a total of 300 more homes across the 2 sites. Therefore, CPRE supports clauses 9.3.5-9.3.6, 9.3.36 & 9.3.50.

However, the REEMA areas cover 146 acres in total. The last information from the MOD indicated that 742 SFA homes are needed, which at the usual JSP density of 12 per acre, will require 62 acres, leaving 84 acres spare. North and Central areas cover approximately 70 acres (22 at REEMA North and 48 at REEMA Central), so the allocation of 300 houses in addition to the existing 200 is modest, even accounting for some retail or leisure land. CPRE also feels that there is likely to be potential in other REEMA areas in the town and it now appears that past claims of increasing housing need generated by RAF Brize Norton were unfounded. The existing houses are at an approximate density of 6 homes per acre, as they are not well-planned.

Therefore, no further expansion of the town should occur until these sites achieve their potential and any future development in Carterton should be focused at REEMA. It is clearly preferable to development on open countryside and CPRE agrees with WODC that it will improve the style and image of the town. It is development that would lead to clear betterment and would be likely to be well supported in the community. In line with the need, mostly apartments and small homes should be built, with a few larger gateway properties for kerb appeal. Some housing for the elderly would be beneficial. That means that the density could be relatively high, in line with most town centre developments. It would not be unreasonable to expect a density of 20-30 per acre or 50-75 per ha to be achieved in line with other mixed developments in the area, giving a total potential of at least 1,680 homes in REEMA North and Central areas alone, based on 50 units per ha.

In fact, Carterton has the least infrastructure and facilities of the three main towns and lags behind in terms of employment opportunities, as noted in the Draft Local Plan clauses 2.26, 9.3.10, 9.3.39 & 9.3.42. There is a pre-existing imbalance between numbers of jobs and homes/ workers, meaning that out-commuting is high. It’s the furthest from Oxford and has no A road access. There is mention in 9.3.15 and 9.3.67 of upgrading the B4477 in Brize Norton to an A road at a cost of £3.9M, but clauses 7.48 & policy T2 are vague about funding. It appears that there is no firm commitment or allocated funding. It is not clear either where the £7.2M for westbound slips onto the A40 will come from at Minster Lovell.

Carterton should not therefore be seen as the obvious place to put any houses that other areas do not want, as has been suggested by some.

If a significant number of houses were moved from Witney to Carterton, Carterton would encounter significantly more growth per capita than Witney. Carterton could not sustain such growth without further major incursion into open countryside in neighbouring parishes (over and above that already caused by Shilton Park, Carterton North and Carterton East in Brize Norton and Shilton Parishes), which CPRE considers unacceptable.

<td>Limited</td>
<td>AT THE LOCAL LEVEL &gt; Carterton Sub Area &gt; MAIN 119</td>
<td>2.43 Table 9.2 sets out the anticipated housing delivery in the Carterton Sub-Area. The Sub-Area has been set an indicative housing requirement of 2,600 new dwellings to assist in meeting the District wide requirement of 13,200 new dwellings. As is clear from Table 9.2 the Plan as currently drafted, including the proposed new allocations in the Sub-Area, would deliver only 2,552 dwellings in the Sub-Area.</td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td>2.44 Clearly therefore not only is the overall Plan failing to make adequate provision for its housing requirement this is also specifically the case within the Carterton Sub-Area. As discussed above in relation to the overall housing land supply, it is important that the Plan not only makes sufficient provision to meet the objectively assessed need for the District but also, as required by the NPPF, allows sufficient flexibility to allow for changing circumstances.</td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td>2.45 Whilst additional housing could be provided for through Neighbourhood Plans there is no guarantee of this, and no mechanism in place in the policy should they not deliver. Currently the only Neighbourhood Plan under preparation in the Sub-Area is in relation to Shilton and as at an early stage of preparation having only been designated on 5th October 2016. Shilton is not an identified settlement in the Council’s settlement hierarchy and has also not been assessed in the Council’s Settlement Sustainability Report (November 2016) and as such is classified as a hamlet or open countryside. Clearly therefore given the settlement’s scale and poor sustainability it is unlikely that the settlement would be capable of accommodating any development of real significance.</td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td>2.46 Within the Sub-Area Carterton is the only Main Service Centre and Bampton is the only Rural Service Centre. The only currently proposed allocations in the Sub-Area are at Carterton. A number of existing commitments are also identified in the Sub-Area the majority of which are already Carterton, although 160 dwellings are identified at Bampton and a further 79 are identified at Aston. Aston is identified as a village in the Council’s settlement hierarchy and is ranked 28th in the Council’s Settlement Sustainability Report (unweighted).</td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td>2.47 In light of the above comments regarding the housing supply at both a District and Sub-Area level, in order to make the Plan sound it is considered that additional allocations should be made and the potential for reserve allocations to be considered to allow additional flexibility. Bampton is recognised by the Council as a sustainable settlement in the Council’s proposed settlement hierarchy and this is supported by its ranking in the Settlement Sustainability Report. Currently Bampton is the only settlement in the top two tiers of the settlement hierarchy which is not proposed to receive an allocation. This is despite proposed paragraph 5.21b stating that: “The rural service centres of Bampton, Burford and Charlbury will also be required to make provision for new housing with existing commitments being complemented by a number of site allocations.”</td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td>2.48 Whilst it is acknowledged that a development of 160 new homes is currently under construction to the north of New Road by CALA Homes, it is considered that the sustainability of Bampton, as recognised in the grant of that permission and in the Settlement Hierarchy study, would allow it to accommodate additional development</td>
</tr>
</tbody>
</table>
beyond that already committed. The Council’s pre-application advice response (Appendix One) in relation to our client’s site at Aston Road/Mount Owen Road, Bampton acknowledged that:

“As a rural centre, consideration is being given to the scope for further development at Bampton. However, the Council would prefer to see new development being delivered on a plan-led basis, rather than through ad hoc planning applications.”

2.49 No in principle objections were received to development at Bampton in general but it was the form, scale and location of such development which was a matter for further consideration. At this time, no substantive technical objections have been received on the application.

2.50 As set out in the Planning Statement (Appendix Two) which accompanies the planning application for development of our client’s site, the development potential of locations to the south and west of Bampton are constrained by flood risk, whilst areas to the north are more sensitive in landscape terms. It is therefore considered that land to the east of Bampton represents the only viable location to accommodate development at the settlement, which it must be remembered is in the second highest tier of settlements in the District after only Witney, Carterton and Chipping Norton, and the only settlement within these top two tiers where development is not proposed.

2.51 The planning application for the development of the site at New Road/Mount Owen Road clearly demonstrates the suitability of Bampton as a location for development in general and the appropriateness of our client’s site in particular to accommodate this development. The range of studies that have been undertaken to support the planning application demonstrate that a high quality development will be achieved at the site, and that there are no environmental, technical or other reasons why planning permission should not be granted in this case. Further details of the proposals are provided in the Planning Statement at Appendix Two and Design and Access Statement at Appendix Three.

2.52 We are in the process of working through the technical responses received in respect of the application with both West Oxfordshire District Council and Oxfordshire County Council. The application clearly demonstrates that there is no harm as a result of the proposals which would significantly and demonstrably outweigh the substantial benefits which would be achieved. Whilst it is recognised that concerns have been raised locally regarding the ability of Bampton to accommodate additional development, the Council themselves have recognised the sustainability of the settlement and it is important to recognise that the allocations proposed through the Local Plan are to cover the plan period to 2031.

2.53 As such, and in light of the comments above regarding the Council’s housing supply, it is considered that land at Aston Road/Mount Owen Road, Bampton should be allocated for 160 new homes. This will ensure that the Plan makes adequate provision to meet the proposed housing requirement for the Sub-Area with some flexibility, as required by the NPPF, and will help to address the shortfall in the overall housing supply which the Plan as currently drafted anticipates. Furthermore given the scale of the proposed allocation and the associated lower up-front infrastructure requirements, when
compared to some of the proposed Strategic Development Areas in particular, the site will help to boost the Council’s five year housing land supply through early delivery and assist in meeting the backlog over the first five years as advocated by the NPPG. Allocation of the site will assist in ensuring the Plan is positively prepared, justified, effective and consistent with National Policy.

Carleton Sub Area

Objection is raised to MM119 in that despite the draft Plan recognising that Carleton is a sustainable location for development for new homes (Paragraph 9.3.41), the change to Paragraph 9.3.42 is of concern in light of the fact that recent jobs growth (since the 2011 Census) linked to changes at RAF Brize Norton has not been taken into account by West Oxfordshire District Council in determining housing land allocations in the vicinity of Carleton. Since 2011 there have been an additional 2,500 jobs created at RAF Brize Norton with Carleton being identified as a main area for service men and women to live (10 - 15% of reservations at Swinbrook Park have been from service personnel) Economic activity is high within Carleton and the town has a vital role within the District as a whole.

Despite this, the Council appear to not favour further growth due to erroneous assumptions on the imbalance between the number of jobs and economically active people in Carleton. For the reasons set out elsewhere in these representations, Carleton should be a focus for new housing given its role and relative lack of higher order constraints to development. This is underscored by the failure to recognise the expansion effect of RAF Brize Norton and the economic role Carleton already plays, which needs to be complemented by the provision of new homes. The suitability of Carleton for sustainable growth was recognised in the Sustainability Appraisal which accompanied the submitted Local Plan. In the joint statement of common ground agreed between WODC and Bloombridge Development Partners (doc ref: WOLP32) dated 28th October, 2015, it was common ground that: “WODC acknowledges that as set out in Bloombridge’s representations, this percentage share for Carleton did not take into account the jobs at RAF Brize Norton, located within this sub-area.

In particular, the job numbers used in the snapshot report (including Figures 2.14 and 2.15) were based on BRES data which excludes HM forces personnel. Given that Carleton is home to RAF Brize Norton, the parties agree that this represents an important omission.

In response to this issue, the Council asked its consultants to prepare a short addendum, published in April 2015 (ECONa) This was submitted alongside the original report and other background Local Plan documents.”

The WODC Economic Snapshot report January 2015 states that:

“One area that needs further investigation is the potential impact of increased activity at Brize Norton. The likelihood and quantum of this are not known at this stage, but there is the potential for a significant impact on the Carleton and Witney markets.’

The WODC Economic Snapshot Addendum report (April 2015) confirms that:

“Figure 2.15 from the West Oxfordshire Economic Snapshot report shows the share of Employment and Economically Active Workers in the District by Sub Area. This graph shows a significant excess of economically active workers over jobs for Carleton. The data for jobs and workers are taken from different data sources and as noted in subsequent paragraphs the
employment figures for Carterton ‘may not reflect the full extent of MoD activity in the sub area’.

Using workplace employment data from the Census we are able to provide a comparison which does include HM Forces employment at Carterton as recorded by the Census.

Reproducing Figure 2.15 using Census Workplace data for employment instead of the BRES data used in the original report shows a larger share of the district’s jobs as being located in Carterton at 21.3% compared to 24.0% of the district's economically active residents who live in the Carterton sub area."

However, it is considered that the 2011 Census workplace number remains an under-estimate of the number of jobs currently available in the Carterton sub-area. We consider that the re-location of personnel to RAF Brize Norton since 2011 following the closure of RAF Lyneham (in July 2011, i.e. after the Census Date) and other MOD initiatives designed to stimulate jobs in the private sector (e.g. RAF Brize Norton’s Programme Gateway) are both key factors that have served to increase job numbers in the Carterton sub-area beyond the 10,264 jobs referred to in Table 1 of the Statement of Common Ground signed between Bloombridge and the Council (WOLP32). WODC acknowledges that since 2011 there may have been a modest increase in job numbers associated with RAF Brize Norton but considers that the 2011 Census data remains robust for planning purposes. We cannot see any sound, statistically based evidence to support WODC’s conclusion here - the April 2015 Update used Census data, but the 2,500 jobs are excluded from the Census. The resultant changes in the housing-jobs balance for Carterton remain an omission that goes to the heart of the spatial strategy and the distribution of housing. There are very serious soundness concerns here.

The jobs created since July 2011 are not captured in the 10,264-figure identified by the Council’s evidence. As a minimum, an additional 1,400 jobs should be added to take account of the move of the C130 Hercules from RAF Lyneham in July 2011 (i.e. after the Census Date), with more jobs associated with the remaining units at Lyneham, plus the Air Tanker Hub and the Airbus National Training Centre, since July 2011. This is estimated to comprise approximately 2,500 new jobs for the Carterton subarea since the Census Date (27 March 2011). This is exciting and dynamic economic change which should be recognised in the draft Plan.

The jobs created since July 2011 are not captured in the 10,264-figure identified by the Council’s evidence. As a minimum, an additional 1,400 jobs should be added to take account of the move of the C130 Hercules from RAF Lyneham in July 2011 (i.e. after the Census Date), with more jobs associated with the remaining units at Lyneham, plus the Air Tanker Hub and the Airbus National Training Centre, since July 2011. This is estimated to comprise approximately 2,500 new jobs for the Carterton subarea since the Census Date (27 March 2011). This is exciting and dynamic economic change which should be recognised in the draft Plan.

The Town Council’s Master Plan for Carterton seeks to deliver a Vision for the town which includes:
1. Delivery of a vibrant and attractive town centre;
2. Provision of a full range of services and facilities for the community;
3. Creation of attractive public spaces;
4. An increase in employment opportunities by identifying new sites to complement housing growth;
5. Delivery of sustainable planned growth and improved connectivity to the town centre.

The Master Plan supports the growth of North Carterton and seeks the provision of new facilities in including a hotel, sporting facilities, a new cemetery, allotments, new public spaces, medical facilities, a day and community centre and public transport improvements.

It is clear that to reflect the ambition of the Town Council, to respond to the expansion of RAF Brize Norton and the economic role Carterton already provides, and to ensure the delivery of much needed new homes in a sustainable and comparatively affordable location, there is significant benefit to the delivery of residential led development to the north of Carterton. At present the plan is not positively prepared in respect of its proposals for the Carterton sub-area and is not justified using proportionate evidence.
Objection is raised to MM119 in that despite the draft Plan recognising that Carterton is a sustainable location for development for new homes (Paragraph 9.3.41), the change to Paragraph 9.3.42 is of concern in light of the fact that recent jobs growth (since the 2011 Census) linked to changes at RAF Brize Norton has not been taken into account by West Oxfordshire District Council in determining housing land allocations in the vicinity of Carterton. Since 2011 there have been an additional 2,500 jobs created at RAF Brize Norton with Carterton being identified as a main area for service men and women to live (10 - 15% of reservations at Swinbrook Park have been from service personnel). Economic activity is high within Carterton and the town has a vital role within the District as a whole.

Despite this, the Council appear to not favour further growth due to erroneous assumptions on the imbalance between the number of jobs and economically active people in Carterton. For the reasons set out elsewhere in these representations, Carterton should be a focus for new housing given its role and relative lack of higher order constraints to development. This is underscored by the failure to recognise the expansion effect of RAF Brize Norton and the economic role Carterton already plays, which needs to be complemented by the provision of new homes. The suitability of Carterton for sustainable growth was recognised in the Sustainability Appraisal which accompanied the submitted Local Plan. In the joint statement of common ground agreed between WODC and Bloombridge Development Partners (doc ref: WOLP32) dated 28th October, 2015, it was common ground that:

"WODC acknowledges that as set out in Bloombridge's representations, this percentage share for Carterton did not take into account the jobs at RAF Brize Norton, located within this sub-area. In particular, the job numbers used in the snapshot report (including Figures 2.14 and 2.15) were based on BRES data which excludes HM forces personnel. Given that Carterton is home to RAF Brize Norton, the parties agree that this represents an important omission.

In response to this issue, the Council asked its consultants to prepare a short addendum, published in April 2015 (ECONla). This was submitted alongside the original report and other background Local Plan documents."

The WODC Economic Snapshot report January 2015 states that:

"One area that needs further investigation is the potential impact of increased activity at Brize Norton. The likelihood and quantum of this are not known at this stage, but there is the potential for a significant impact on the Carterton and Witney markets."

The WODC Economic Snapshot Addendum report (April 2015) confirms that:

"Figure 2.15 from the West Oxfordshire Economic Snapshot report shows the share of Employment and Economically Active Workers in the District by Sub Area. This graph shows a significant excess of economically active workers over jobs for Carterton. The data for jobs and workers are taken from different data sources and as noted in subsequent paragraphs the employment figures for Carterton 'may not reflect the full extent of MoD activity in the sub area'.

Using workplace employment data from the Census we are able to provide a comparison which does include HM Forces employment at Carterton as recorded by the Census.
Reproducing Figure 2.15 using Census Workplace data for employment instead of the BRES data used in the original report shows a larger share of the district’s jobs as being located in Carterton at 21.3\% compared to 24.0\% of the district’s economically active residents who live in the Carterton sub area."

However, it is considered that the 2011 Census workplace number remains an under-estimate of the number of jobs currently available in the Carterton sub-area. We consider that the re-location of personnel to RAF Brize Norton since 2011 following the closure of RAF Lyneham (in July 2011, ie after the Census Date) and other MOD initiatives designed to stimulate jobs in the private sector (e.g. RAF Brize Norton’s Programme Gateway) are both key factors that have served to increase job numbers in the Carterton sub-area beyond the 10,264 jobs referred to in Table 1 of the Statement of Common Ground signed between Bloombridge and the Council (WOLP32). WODC acknowledges that since 2011 there may have been a modest increase in job numbers associated with RAF Brize Norton but considers that the 2011 Census data remains robust for planning purposes. We cannot see any sound, statistically based evidence to support WODC's conclusion here - the April 2015 Update used Census data, but the 2,500 jobs are excluded from the Census. The resultant changes in the housing-jobs balance for Carterton remain an omission that goes to the heart of the spatial strategy and the distribution of housing. There are very serious soundness concerns here.

The jobs created since July 2011 are not captured in the 10,264-figure identified by the Council’s evidence. As a minimum, an additional 1,400 jobs should be added to take account of the move of the C130 Hercules from RAF Lyneham in July 2011 (i.e. after the Census Date), with more jobs associated with the remaining units at Lyneham, plus the Air Tanker Hub and the Airbus National Training Centre, since July 2011. This is estimated to comprise approximately 2,500 new jobs for the Carterton subarea since the Census Date (27 March 2011). This is exciting and dynamic economic change which should be recognised in the draft Plan.

The Town Council’s Master Plan for Carterton seeks to deliver a Vision for the town which includes:

1. Delivery of a vibrant and attractive town centre;
2. Provision of a full range of services and facilities for the community;
3. Creation of attractive public spaces;
4. An increase in employment opportunities by identifying new sites to complement housing growth;
5. Delivery of sustainable planned growth and improved connectivity to the town centre.

The Master Plan supports the growth of North Carterton and seeks the provision of new facilities including a hotel, sporting facilities, a new cemetery, allotments, new public spaces, medical facilities, a day and community centre and public transport improvements.

It is clear that to reflect the ambition of the Town Council, to respond to the expansion of RAF Brize Norton and the economic role Carterton already provides, and to ensure the delivery of much needed new homes in a sustainable and comparatively affordable location, there is significant benefit to the delivery of residential led development to the north of Carterton. At present the plan is not positively prepared in respect of its proposals for the Carterton sub-area and is not justified using proportionate evidence.

<td>Thank you for inviting me to comment on the proposed new Local Plan. I realise that there is a great need for housing, and I see that the proposed number that WODC is required to find sites for has increased from 10500 to 15950. This seems a very large increase, and for all it may be needed, locating it sensibly is very important. I would like to comment on the development near to Carterton. I am aware of planned development to the East of Carterton within Brize Norton Parish. This is for 700 houses and other proposals to build on previous housing sites or brown field sites seem sensible. However, any other large scale plans, for example to the North on Kilkenny farm or Foxbury farm I feel should be considered very carefully. I was advised that these would probably never be approved as sites, as that would be building on open farmland and would be against policy. However, one is aware that policies change, and this may no longer be the case. However, I believe that housing should be built where it is needed, or as close as possible. When one sees the constant stream of cars leaving Carterton from about 6.15 each morning to get down the A40 before it jams, one realises that Carterton has possibly become a dormitory town for people working far away. I suspect that there has been very little real growth in jobs within the town, and really would firms want to locate there when there is Witney so nearby? Therefore, by building large numbers of housing in Carterton may not help the terrible transport problems that the county suffers at present. Finally on the subject of Carterton, by building to the North or North East of the town within Brize Norton Parish, where the houses will be so far from the centre of the town will probably produce a satellite enclave where people may choose to shop etc in Witney, as it has more to offer, and therefore this will only cause more and more use of cars which is against the</td>

| MM224         |                         | Hugh Williams   | -                | Williams          | 428        | > SECTION 9 - STRATEGY AT THE LOCAL LEVEL > Carterton Sub Area > MAIN 119 | I have written on a few occasions in the past regarding the slow strangulation of the countryside as urban sprawl continues to be given favour.  
There must surely come a time where the powers that be actually take into consideration the DUTY OF CARE that they have to the countryside & also the people who live there.  
There are numerous areas on BROWNFIELD LAND available (nb. in the UK generally) which should be fully considered before any permissions are even considered on GREENFIELD LAND.  
Proposed Schemes: Alvescot Downs (Carterton West) and development of the land north of Carterton in Brize Norton Parish  
From the attached (West Oxfordshire District Council Census 2011) you can see that the Carterton population rose from 11,805 in 2001 to 15,769 in 2011.  
An increase of circa 25% in 10 years.  
I understand that both Crest Nicholson and Christchurch College are moving to push their respective (& somewhat sizeable) schemes forwards - collectively 2,400 new dwellings (1,200 units each).  
Taking an average household of 3 people (not an especially high figure) this would amount to a further 7,200 people. In short, from the 2011 figure (population of 15,769) this would suggest a population increase in the order of just over 45% in just two schemes. This is simply not sensible & has to be wholly unsustainable with the infrastructure in place?  
In the strongest possible terms I would suggest that any substantial scheme on the (presumably) green belt land to the west of Carterton/north of Alvescot would be a mistake that the locale would not recover from.  
Once this land is built on it is blighted in perpetuity.  
Notwithstanding the obvious environmental impact the actual physical construction of such a scheme would trigger, the exponential traffic increase, light/noise pollution and pressure on services would be extraordinary - to Shilton, Alvescot & in fact Carterton.  
Having lived in Shilton for 7 years now it has not once escaped my attention that certain existing and rather dilapidated BROWNFIELD LAND sites in central Carterton are very much in need of bringing up to modern standards where road infrastructure and services (i.e. power, water, electricity) are already in place. This seems so obvious to me but perhaps this is more expensive to develop and therefore has a considerable bearing on House Builders, their Residual Valuations and ultimately their 20% DEVELOPER’S PROFIT?  
Please be assured this is not a “NIMBY” approach, it simply strikes me that there are far better existing & more appropriate sites in the existing built-up areas of Carterton that would hugely benefit from an injection of capital & sensible planning/regeneration rather than Carterton simply bleeding out into another field when there is utterly no need to do so whatsoever.  
There is a perception that Carterton needs to grow as Brize Norton has become the main MOD hub. If other MOD stations have closed down does that not provide immediate land on which to build 2,000+ new homes if... |

<td>&gt; SECTION 9 - STRATEGY AT THE LOCAL LEVEL &gt; Carteron Sub Area &gt; MAIN 120</td>
<td>construction in central Carterton hits the cash-flow too hard? If major development continues at the current rate what happens in 5-15 years’ time when the precedent has been set? Does Carterton simply expand until it’s merges with another area that has made the same irreversible mistakes? At what stage do Carterton &amp; say Bampton become Carterton-cum-Bampton? As a Chartered Surveyor of some 25 years’ experience I will be keenly interested to see how this matters progress. There are many basis upon which to vote against sizeable urban sprawl in the countryside. The environmental aspect is one which I have not laboured here but is certainly worth flagging. To cover existing open (greenfield) land with 2,400 dwellings, associated roads, driveways, services etc is not an environmentally smart move. To then power them in perpetuity thereafter even less so. In summary, I support the Local Plan as now submitted to the inspector, and in particular I support its rejection of development on Alvescot Downs known as ‘Carterton West’ and on the area known as ‘North Carterton’ in Brize Norton.</td>

| MM741         | CPRE Oxfordshire        | Helen CPRE Oxon | Mrs | Marshall | 1485 | > SECTION 9 - STRATEGY AT THE LOCAL LEVEL > Carteron Sub Area > MAIN 122 | CPRE feels that the focus in Carterton should be to strengthen the core of the town. Therefore, CPRE is supportive of the release of REEMA Central for housing and of the intention to increase the density at REEMA North, yielding an additional allocation of a total of 300 more homes across the 2 sites. Therefore, CPRE supports clauses 9.3.5-9.3.6, 9.3.36 & 9.3.50. However, the REEMA areas cover 146 acres in total. The last information from the MOD indicated that 742 SFA homes are needed, which at the usual JSP density of 12 per acre, will require 62 acres, leaving 84 acres spare. North and Central areas cover approximately 70 acres (22 at REEMA North and 48 at REEMA Central), so the allocation of 300 houses in addition to the existing 200 is modest, even accounting for some retail or leisure land. CPRE also feels that there is likely to be potential in other REEMA areas in the town and it now appears that past claims of increasing housing need generated by RAF Brize Norton were...

<td>MM776</td>
<td>Sterling Rose</td>
<td>Matt Corcoran</td>
<td>Mr Corcoran</td>
<td>unfounded. The existing houses are at an approximate density of 6 homes per acre, as they are not well-planned. Therefore, no further expansion of the town should occur until these sites achieve their potential and any future development in Carterton should be focused at REEMA. It is clearly preferable to development on open countryside and CPRE agrees with WODC that it will improve the style and image of the town. It is development that would lead to clear betterment and would be likely to be well supported in the community. In line with the need, mostly apartments and small homes should be built, with a few larger gateway properties for kerb appeal. Some housing for the elderly would be beneficial. That means that the density could be relatively high, in line with most town centre developments. It would not be unreasonable to expect a density of 20-30 per acre or 50-75 per ha to be achieved in line with other mixed developments in the area, giving a total potential of at least 1,680 homes in REEMA North and Central areas alone, based on 50 units per ha. Thank you for notifying us on the updated main modifications for the new WODC local plan. Sterling Rose are working with the landowners to bring the site forward for comprehensive and viable residential led development. As a starting point, advice in the Framework (para 157) states – * Local Plans should plan positively for the development and infrastructure required in the area to meet the objectives, principles and policies of this Framework. * Allocate sites to promote development and flexible use of land, bringing forward new land where necessary, and provide detail on form, scale, access and quantum of development where appropriate; Please can I also point WODC in the direction of para 182 which states – Plans should be, * Positively prepared – the plan should be prepared based on a strategy which seeks to meet objectively assessed development and infrastructure requirements, including unmet requirements from neighbouring authorities where it is reasonable to do so and consistent with achieving sustainable development; Sterling Rose support WODC in preparing a new Local Plan and in doing so support the principles of the policy CA1a. However, some comments below and attached are suggested with track changes to the draft policy. From a review of the emerging Local Plan technical evidence base, we believe that this site will make a very positive contribution to much need housing requirements in the District. Furthermore, the delivery of this site will help to ease the pressure of development on more sensitive Green Belt and AONB sites. To that end, the revised Masterplan (attached) has been submitted to WODC as part of on-going pre-application discussions. The proposal includes the following quantum of development. Masterplan: * Houses -86 units in a mix of 2, 3 and 4 beds. * Apartments – 164 units in a mix of 1 and 2 bed flats and 3 and 4 storey blocks * Care Home -80 bed facility- slightly enlarged floorplate from the scheme that was consented.</td>

| MM786         | Oxfordshire County Council | Amada Jacobs (OCC) | Mrs | Jacobs | 2199 | > SECTION 9 - STRATEGY AT THE LOCAL LEVEL > Carterton Sub Area > MAIN 125 | * Pub – single/2 storey pub with associated car parking aimed primarily as a “food pub”; perhaps similar to the Marstons type operation.  
* Nursery/Creche- small facility opposite the Care Home and sharing parking with the pub  
Total residential units: 250  
Design approach:  
We looked at maintaining the same road hierarchy and position within the site  
The inclusion of small apartment blocks within the body of the site mirrors the height that was proposed previously by the Cottsway Extra Care Scheme- we think a variety of design and height/orientation should make for a varied street-scene along the main estate road  
We have maintained just 2 storey housing along the north side of the estate road to ensure the scale of development does not impact on the existing properties on Milestone Road  
We think that the eastern portion of the site next to the Carterton Industrial Estate can accommodate detached apartment units provided the proposed structural landscaping belt to the eastern boundary is retained and a suitable internal building layout is developed to ensure habitable rooms do not face towards the industrial units.  
The Care Home would still be 3 storeys as the consented scheme and is positioned no closer to the western boundary with the caravan park than previously.  
The Milestone Road frontage was previously proposed to be infilled with chalet bungalow type supported living units; we think that a suitable massing for the proposed pub with the single storey element adjacent nos. 95a and b Milestone Road should work in terms of the street frontage- indeed we believe there is the potential to create a keynote/local landmark building that would lift the feel of Milestone Road. All pub servicing and car parking would be to the rear in a screened car park.  
Ecology and Natural Environment  
In all cases reference should be made to the District Council’s ecologist for specific details on each site. It is assumed that before firm proposals are brought forward for each site an appropriate ecological, landscape and visual impact assessment will be undertaken including surveys for protected and threatened species.  
The permanent loss of land of existing and potential future habitat value should be recognised with a corresponding investment in biodiversity and other green infrastructure resources that provide a range of benefits including biodiversity, water management and contribute to physical and mental well-being. Additional off-site enhancement should be provided where insufficient environmental gains cannot be secured within the development boundary.  
Carterton – REEMA  
There may be particular opportunities to integrate existing vegetation.  
Protected bat species may be present in the existing buildings. |
There are opportunities to create new green infrastructure that will benefit the town more widely. Investment in the adjacent Shill Brook Conservation Target Area should be sought to ensure that there is an appropriate gain in net biodiversity.

e) necessary supporting transport infrastructure, including proposals to mitigate the impact of traffic associated with the development.

Stagecoach supports the renewed allocation of this previously developed site, that is directly served by the Company's core commercial Carterton-Witney-Oxford services. It is likely to benefit from any future service improvements, including Carterton and Witney to/from Oxford Eastern Arc, arising from the committed A40 Science Vale Transit Phase 1 Scheme (Eynsham P+R and bus lanes).

Stagecoach is well aware that the site has a long planning history, but that no delivery has yet commenced. We note that the combined quantum across the two sites remains about 500 dwellings, accounting for 200 units committed within the allocation. However we also are concerned that in practice the total number of units deliverable is likely to drop, from this and previous levels identified. While this may be consistent with DIO/Annington's current aspirations there is in our view a case to make this a minimum figure to allow flexibility for the promoters to be flexible in how this very sustainable site is brought forward, and for what housing tenures (including housing to need the needs of the Forces).

CPRE supports the inclusion of the Milestone Road site in 9.5.53a-c as an allocation. It’s a large site in a built up area. However, bearing in mind the past care home permissions, it is preferable that the site should include housing for the elderly if possible, which all forms part of the housing need. The sites would be best as mixed use. In that case a development density of 25 units per acre or 60 per ha has been achieved at similar sites in Witney (Buttercross). The capacity is therefore more like 360 units.

Land at Milestone Road

Main Modification 126 (paragraphs 9.3.53) introduces a new allocation south of Carterton. Albeit, the principle of the development had been established through previous applications including 12/1019/P/FP (93 extra care apartments), 12/1020/P/OP (105 open market homes). However, as identified in MM126, such applications have now been finally disposed of due to difficulties with regard to land assembly. It is considered that the scheme cannot be relied upon as a housing allocation. The site has been identified for these reasons to be removed from the 5-year supply assumptions in the recent West Oxfordshire Housing Land Supply Position Statement 2016, however, this remains an allocation with the assumption that a scheme can be approved and completed within the plan period.

<td>&gt; SECTION 9 - STRATEGY AT THE LOCAL LEVEL &gt; CARTERTON SUB AREA &gt; MAIN 128, The approach given to the identification of individual allocations (as set out under the relevant sub-areas within chapter 9) and their associated policies is strongly supported. Where relevant, individual policies require the provision of schools as part of the wider allocated development, including the number and size of schools required (for example Main Modifications 103, 140 and 155). Where the proposed housing numbers do not trigger the need for a new school, the policy requires appropriate provision of or a contribution to the necessary supporting infrastructure (for example Main Modifications 128 and 131). This approach is supported by the EFA. You will have no doubt taken account of the key strategic policies to reiterate this position, including securing developer contributions through s106 and CIL, but it would be helpful if they were explicitly referenced within the document. In particular, as below: The National Planning Policy Framework (NPPF) advises that local planning authorities (LPAs) should take a proactive, positive and collaborative approach to ensuring that a sufficient choice of school places is available to meet the needs of communities and that LPAs should give great weight to the need to create, expand or alter schools to widen choice in education (para 72). The EFA support the principle of safeguarding land for the provision of new schools to meet government planning policy objectives as set out in paragraph 72 of the NPPF. Support is also given for the siting of schools within the allocated sites in locations which promote sustainable travel modes for pupils, staff and</td>
<td></td>
</tr>
</tbody>
</table>
visitors. There is also a need to ensure that the education contributions made by developers through the Community Infrastructure Levy are sufficient to cover the increase in demand for school places that is likely to be generated by a development. When new schools are developed, local authorities should also seek to safeguard land for any future expansion of new schools where demand indicates this might be necessary.

West Oxfordshire District Council should also have regard to the Joint Policy Statement from the Secretary of State for Communities and Local Government and the Secretary of State for Education on ‘Planning for Schools Development’ (2011) which sets out the Government’s commitment to support the development of state-funded schools and their delivery through the planning system.

Overall, the EFA commends the main modifications proposed. They seek to ensure that adequate future education provision across the district is provided.

<td>&gt; SECTION 9 - STRATEGY AT THE LOCAL LEVEL &gt; Carton Sub Area &gt; MAIN 129</td>
<td>With regard to the Swinbrook Road development outlined in 9.5.53d-f, CPRE feels that there should be a road link from REEMA North to the central area between the new David Wilson northern developments and Shilton Park, so that there is a better link for the associated residents with the town centre (as currently, access is convoluted, so the developments feel like satellites), but also so that access to the Country Park is opened up as a facility to benefit the whole town. There appears to be an appropriate corridor of land running from the corner of REEMA North and along the Shilton Park boundary. Only a short section of road would be needed to improve the relationship between these new developments and the town, avoiding the current satellite feel. It would run from the north western corner of REEMA North and adjacent to Stocks Lane and Boundary Way.</td>

Dear Planning Policy

Ref: Main 119, Main 126-129 - Land at Milestone Road, Carterton, proposed 200 homes.

I write concerning the above site and the proposal that it is designated for a development of 200 homes, including some that are affordable. This site was previously granted permission for the development of a care homes and individual bungalows, however this was not built (despite promises made at the planning committee meeting that I attended; that it would be built and the older people moved into it by November of that year!). You own consultation document makes it clear that owing to difficulties with land assembly, these permission have now been disposed.

In order to develop this site you must assume that the difficulties with land assembly have gone away, but you do not make it clear how they are to be overcome. Until they are, I would suggest that no housing development could take place on this site.

I would question the suitability of this site for any sort of development, given that it is more of less "land locked" of three sides. It is bounded by the Brize Norton airfield at the back, and any development would be very close to the runway so that noise mitigation measures would need to be in place for any dwellings. There are only two places where the land in question touches Milestone Road, and one of those already has buildings on it (I think the old Doris Watts Care home).

The idea of 200 homes - at least 200 cars and possibly 400 or even more - exiting onto Milestone Road is ridiculous. Milestone Road is already used as a rat run for traffic going to and from Brize Norton via Gate 1 at the end of Black Bourton Road. An increase in traffic will be unbearable for local residents. Added to which, Milestone Road is a minor road. It has a terrible surface, despite some top dressing last year, and will need a significant upgrade to cope with the traffic.

I am also concerned that this proposal means that those people who live on that side of Milestone Road are going to find themselves surrounded by a housing development. This is not a pleasant prospect for those residents.

Milestone Road contains, I suspect, fewer than 200 homes, this proposed development will double that number and there will be a commensurate impact on infrastructure such as drains and sewage; possibly electricity and broadband unless allowance is made for this. The proposed density of 200 homes is far too high for this site and the local area.

I have noted that work to upgrade the electricity supply has already taken place as a new sub station has been installed, presumably to allow for development at this site. I find this concerning that provision is being made when no agreement has been reached and when the draft local plan states that this site is anticipated for long term development. If that is so, then why has a new sub station appeared in the last week?

I understand why this site has been considered for residential development, but if it should go ahead, I would suggest that:-
1. The density of housing should be much lower;

2. Given the number of bungalows and caravans in the immediate vicinity, the emphasis should be on single storey dwellings at the front of the site where it comes close to Milestone Road and along the boundary with the caravan park. This is to avoid overwhelming bulk and massing impacting on the street scene and neighbouring properties.

3. Taller properties should be at the rear of the site where it has a boundary with the air base, and they should be no taller that the existing building that is on the air base along this boundary. (And yes, I know you are going to say that these details will be covered by the planning application when it is made.)

In summary my concerns are density of development, access to Milestone Road, pressure on infrastructure, increased traffic and potential congestion.

Lois Stock

2 Whittington Place

Carterton OX18 3QL

(My property fronts onto Milestone Road as it is on the corner of Milestone Road/Whittington Place).

---

Stagecoach strongly supports this allocation. Although the site is not currently within easy reach of existing frequent commercial bus services, it adds logically to a critical mass of committed development around the northern flank of the town, which is likely to support the future development of the commercial bus network in Carterton in the reasonably near future. There are three potential credible means by which bus services might be extended/diverted or enhanced in this area: via Shilton Park and Elmhurst Way; a local loop terminating in the Swinbrook Road/Shilton Road area; or enhancement of services between Carterton and Burford should this route prove to be commercially sustainable in the longer term.

Policy CA1b b) Provision for satisfactory vehicular access to Land at Swinbrook Road:

Stagecoach supports the specific requirement that suitable vehicular access is achieved for this land to come forward. In line with the requirement in NPPF para 17 and 29 that transport systems should be balanced in favour of sustainable modes, Stagecoach advises that implementation of the previously-consented Bus-only link to south to Swinbrook Road (ref 13/1752/P/FP) is essential if this site and the wider area of committed and completed development is to have any access to bus services. The lack of such services today weighs significantly against the sustainability of the proposed allocation, as the nearest regular bus services are approaching a mile away.

---

Our clients note that the Examination Inspector stated at paragraph 4.2 in his Preliminary Findings - Part 2 that the "3 value zones" approach to affordable housing provision adopted by the Council "was justified" at the time that he published his findings. However, he did state at paragraph 4.1 that it was likely that the viability evidence would need to be updated before the Examination is re-opened and at paragraph 4.2 that "the boundaries between the 3 zones could have been drawn differently." Our clients would endorse these comments and in the absence of any updated evidence from the Council, the company reserves its position.
**Comment ID**: MAIN 131

Regarding the soundness or otherwise of the “3 value zones” approach and the soundness or otherwise of the boundaries between the three zones. Accordingly, our clients would wish to take part in any hearing sessions at which these matters are discussed.

Our clients note that Policy H3 proposes a 50% rate in the “high value zone”, which includes Eynsham. This is higher than the percentage figure suggested for West Oxfordshire in the county-wide SHMA. That figure was 40%. It is also higher than the percentages adopted by neighbouring districts: in Cherwell the percentage in the adopted Local Plan is 30% or 35% depending on location; and in the Vale it is 35% across the district. In the absence of any updated evidence from the Council to justify 50% affordable housing provision in the “high value zone”, our clients reserve their position regarding the soundness or otherwise of the Council’s approach and would wish to take part in any hearing session at which this matter is discussed.

The previous points notwithstanding, our clients welcome the acknowledgment in Policy H3 that the level of affordable housing to be provided on qualifying sites will be subject to viability testing. This is essential in dealing with large strategic sites such as the West of Eynsham SDA where there is a significant amount of infrastructure to provide. In this regard, our clients note also that at paragraph 4.2 in his Part 2 Preliminary Findings the Examination Inspector made the point at his paragraph 4.2 that:

> "Later hearings will need to assess whether the combination of affordable housing and infrastructure requirements and the proposed CIL charge are justified for particular locations."

**Comment (plain text)**

Ecology and Natural Environment

In all cases reference should be made to the District Council’s ecologist for specific details on each site. It is assumed that before firm proposals are brought forward for each site an appropriate ecological, landscape and visual impact assessment will be undertaken including surveys for protected and threatened species.

The permanent loss of land of existing and potential future habitat value should be recognised with a corresponding investment in biodiversity and other green infrastructure resources that provide a range of benefits including biodiversity, water management and contribute to physical and mental well-being. Additional off-site enhancement should be provided where insufficient environmental gains cannot be secured within the development boundary.

Carterton – Swinbrook Road

The existing landscape should be maintained and the development, if it proceeds should be integrated with Kilkenny Country Park and Kilkenny Lane to the east. Opportunities to improve water management and green infrastructure provision should be sought.

**Comment (plain text)**

b) provision of satisfactory vehicular access and appropriate pedestrian and cycle connections;

The County Council has experienced significant difficulties in securing appropriate mitigation measures for the impact of strategic development areas where portions of the site have come forward as separate planning applications. To help reduce the occurrence of this issue we propose this additional text:

The Council requires proposals for the site to be brought forward by means of a single planning application for the site in order to achieve a comprehensive development and to ensure the timely provision of infrastructure, services, open space and other facilities in a properly coordinated fashion.

<td>Ms</td>
<td>Powell</td>
<td>928</td>
<td>&gt; SECTION 9 - STRATEGY AT THE LOCAL LEVEL &gt; Carterton Sub Area &gt; MAIN 131</td>
<td>The approach given to the identification of individual allocations (as set out under the relevant sub-areas within chapter 9) and their associated policies is strongly supported. Where relevant, individual policies require the provision of schools as part of the wider allocated development, including the number and size of schools required (for example Main Modifications 103, 140 and 155). Where the proposed housing numbers do not trigger the need for a new school, the policy requires appropriate provision of or a contribution to the necessary supporting infrastructure (for example Main Modifications 128 and 131). This approach is supported by the EFA. You will have no doubt taken account of the key strategic policies to reiterate this position, including securing developer contributions through s106 and CIL, but it would be helpful if they were explicitly referenced within the document. In particular, as below: The National Planning Policy Framework (NPPF) advises that local planning authorities (LPAs) should take a proactive, positive and collaborative approach to ensuring that a sufficient choice of school places is available to meet the needs of communities and that LPAs should give great weight to the need to create, expand or alter schools to widen choice in education (para 72). The EFA support the principle of safeguarding land for the provision of new schools to meet government planning policy objectives as set out in paragraph 72 of the NPPF. Support is also given for the siting of schools within the allocated sites in locations which promote sustainable travel modes for pupils, staff and visitors. There is also a need to ensure that the education contributions made by developers through the Community Infrastructure Levy are sufficient to cover the increase in demand for school places that is likely to be generated by a development. When new schools are developed, local authorities should also seek to safeguard land for any future expansion of new schools where demand indicates this might be necessary. West Oxfordshire District Council should also have regard to the Joint Policy Statement from the Secretary of State for Communities and Local Government and the Secretary of State for Education on 'Planning for Schools Development’1 (2011) which sets out the Government’s commitment to support the development of state-funded schools and their delivery through the planning system. Overall, the EFA commends the main modifications proposed. They seek to ensure that adequate future education provision across the district is provided.</td>

<td>&gt; SECTION 9 - STRATEGY AT THE LOCAL LEVEL &gt; Carterton Sub Area &gt; MAIN 132</td>
<td>Reference is made to the “Carterton Masterplan” asserting that three areas outside the town, including Alvescot Down, have some further development potential. We are not aware of any evidence that Carterton Town Council has adduced to support this claim. The status of the “Masterplan” as a planning document is ambiguous – is it for example part of the evidence base for the Local Development Framework? - and caution should be exercised in quoting it here. It is almost inevitable that any future review of the Local Plan will entail revisiting some alternative options, but the weight of evidence which has accumulated during the Local Plan process to date - as well as in considering a planning application - must surely militate against referring to land to the west of Carterton as a &quot;reasonable&quot; alternative.</td>

<td>- Crest Strategic Projects</td>
<td>1475</td>
<td>&gt; SECTION 9 - STRATEGY AT THE LOCAL LEVEL &gt; Carterton Sub Area &gt; MAIN 132</td>
<td>7.3 The modification at 9.3.54 is unjustified having regard to the evidence and does not accurately or fully portray the strategic merits of allocating land at Carterton to meet development requirements during the current plan period. As is outlined elsewhere within this set of representations the rationale the Council has followed to determine its site allocation strategy is confused and does not align with the evidence base. The SA process has not been applied consistently, such that strategic options that are available at Carterton, and which would be in accordance with the proposed spatial strategy have not been selected for inclusion. Conversely, sites that are not aligned with the spatial strategy of the Local Plan, and which perform similarly or less well than the Carterton options against the SA criteria, have been included. The decision-making process followed is unclear and is not supported by the evidence base. As a consequence the Plan is unsound. 7.4 The unqualified undertaking that strategic scale development will be countenanced as part of a subsequent Plan review also does not reflect the rationale at 9.3.43, which requires realignment between homes and jobs in the town before further strategic residential development will be allocated. The approach to boosting employment within the town to a level that would rebalance this relationship is uncertain and indicates a lack of real determination or strategic thinking. It creates the impression that this factor is being used as a screen to preclude residential development. 7.5 Any reference to land west of Carterton being considered and rejected as an SDA within the current plan period should be deleted.</td>

<td>I support the West Oxfordshire future plan as it is with No planned housing for Alvescot Downs. I would like to make a suggestion about roads and that is the center of Carterton could surely use a lights controlled roundabout. The traffic Queues in the rush hours are extensive and really shouldn't happen in such a small town. I note that RAF Brize Norton traffic uses as many alternative routes as possible and that many cars leaving the Base do so at earlier and later times than spot on the hour, so they are obviously doing their bit, but I do think a very small change would result in much improved traffic flow in Carterton central. The problem, as I see it is that cars turning across the traffic (Right Turns) cause the hold-ups, so the change could simply be sequencing the traffic lights in a circular sequence rather than the current East-West / North South sequence.</td>

Our clients note that Policy H3 proposes a 50% rate in the "high value zone", which includes Eynsham. This is higher than the percentage figure suggested for West Oxfordshire in the county-wide SHMA. That figure was 40%. It is also higher than the percentages adopted by neighbouring districts: in Cherwell the percentage in the adopted Local Plan is 30% or 35% depending on location; and in the Vale it is 35% across the district. In the absence of any updated evidence from the Council to justify 50% affordable housing provision in the "high value zone", our clients reserve their position regarding the soundness or otherwise of the Council's approach and would wish to take part in any hearing session at which this matter is discussed.

The previous points notwithstanding, our clients welcome the acknowledgment in Policy H3 that the level of affordable housing to be provided on qualifying sites will be subject to viability testing. This is essential in dealing with large strategic sites such as the West of Eynsham SDA where there is a significant amount of infrastructure to provide. In this regard, our clients note also that at paragraph 4.2 in his Part 2 Preliminary Findings the Examination Inspector made the point at his paragraph 4.2 that:

"Later hearings will need to assess whether the combination of affordable housing and infrastructure requirements and the proposed CIL charge are justified for particular locations."

Given our representations made in respect of:
1. The inadequacy of the overall housing requirement - which should be 688dpa (560 more homes in the plan period);
2. The unrealistic prospect that Eynsham Garden Village will deliver entirely within the plan period at a rate of 220dpa; with a consequential shortfall of around 760 homes;
3. That a number of allocations should be either reduced in size or deleted;
4. That the plan fails to account fully for the post July 2011 increase in jobs at RAF Brize Norton;
5. That allocations at two of the Carterton sites in the draft plan are not deliverable;
6. That further growth at Carterton would fully reflect the spatial strategy which seeks to focus on main service centres and would be the catalyst for infrastructure delivery and economic growth; and
7. That north Carterton growth would be consistent with the Carterton Master Plan.

It is considered that the alternative sites north of Carterton should be included within the draft Plan to ensure delivery of new homes in a sustainable location, which support the regeneration of Carterton and reflect its expanding economic role and to address the shortfall of housing in the plan due to the
Accordingly, we invite the Inspector to consider allocation of two alternative sites at Carterton. Land North of Swinbrook Park (250 homes currently under construction) is promoted by David Wilson Homes (see Appendix 1: master plan) and would provide 115 new homes immediately adjacent to an existing residential development the proposal also includes a large extension to the Kilkenny Country Park for recreation use for the wider locality. This would define the settlement limits and also provide a suitable buffer of greenspace to Shilton village as well as providing opportunities for cycle and pedestrian access between Shilton and Carterton. The site presents opportunities to enhance additional opportunities to walk and cycle to and from Carterton town centre.

The accompanying Landscape and Visual Appraisal prepared by Barton Willmore (Appendix 3) concludes that there is therefore the opportunity to successfully accommodate residential development on Land North of Swinbrook Park, immediately adjoining the existing consented residential development, currently under construction, on the northern edge of Carterton, and set to the south of a substantial swath of proposed Country Park, forming an extension to the existing Kilkenny Lane Country Park.

Kilkenny Farm land (see Appendix 2: master plan 2012) as previously outlined provides a sustainable option to West Oxfordshire for land within Carterton for 300 homes in the short term and up to 750 homes plus Sha of employment land for small and medium sized businesses. Importantly, both the 300 homes first phase at Kilkenny Farm and the 115 homes at Swinbrook Park could be delivered within the first five years of the plan period. The Sustainability Appraisal states that:

"Land to the north (Kilkenny Farm) is poorly related to the town and poorly served by public transport; a significant incursion into the open countryside; and sensitive landscape, particularly for the northern parts. It was acknowledged that a reduced development in the south-east area could potentially address landscape concerns."

We have outlined above how this opinion cannot be relied upon. We are clear, solely from a landscape point of view, that Kilkenny Farm can accommodate 500 to 750 units (Kirkham, page 7) with “good opportunities to create a substantive landscape structure... maintaining the identity of the settlements of and around Carterton” (Kirkham, page 36). When other factors are taken into account, such as noise, light pollution, air quality, contamination and flooding it is clear that Kilkenny Farm performs better than Carterton East (700 homes with a resolution to grant planning permission). There are fewer risk areas, and Kilkenny Farm offers a higher quality, more sustainable ‘New Rural’ residential environment. Given this context, we are concerned that the SA fails to adequately consider the reasonable alternatives.

Bloombridge’s representations on the SA (8 May 2015) are relevant here. The table below illustrates our concerns by attributing a score of '2' to a '++', '1' for '+' and, for example, '-2' for '- -'. The difference is just 1 point between East Carterton (a total of +5) and North Carterton, Kilkenny Farm (a total of +4), and this is solely attributable to the difference in scores on flood risk. Yet on this objective, East Carterton is recorded as being adjacent to an area of medium and high flood risk (Flood Zones 2 and 3), whilst Kilkenny Farm is Flood Zone 1 (low risk). This score therefore has to be an aberration or, put another way, it is clear that Kilkenny Farm is as sustainable and as acceptable as...

| East Carterton. In the context of the AONB settlements and growth at the 'Superbase', the findings of the SA ought to have highlighted a clear and uncontroversial way forward for WODC.

As a matter of common sense, a 'Garden Village' at Kilkenny Farm (first proposed in 2012) presents a completely deliverable housing site, with an option of 300 units initially, and a further 450 units either together or as the need arises. This is consistent with the Carterton Town Master Plan and is a logical addition to the 115 units at Swinbrook Park. The SA does not rule out development at Kilkenny Farm and, at a district-wide level, we would expect our site to score very highly and be at the top of the list of options for accommodating the expected increase in housing numbers.

We are disappointed that WODC did not revisit the SA in light of the representations made by Bloombridge, as illustrated in the table below (ATTACHED)

The (phased) scale of development at Kilkenny Farm would not be disproportionate considering the overall extent of Carterton. A limit of 750 units would also address concerns regarding potential development on the northern parts of Kilkenny Farm, which would extend in to the more open landscape, which as a result is more sensitive in landscape and visual terms.

Consistent with the Carterton Town Councils Masterplan and their Spatial Strategy which seeks development to the north of Carterton, significant employment provision, new facilities, infrastructure and Country Park extension, Kilkenny Farm presents a sustainable opportunity to support the growth and economic prosperity of Carterton. New development at Carterton will support the delivery of infrastructure improvements, such as that in the Council's IDP which states at Paragraph 3.10 that:

"Following an evaluation of different options by Oxfordshire County Council, the B4477 Minster Lovell Road has been identified as a priority for upgrading to A-road standard together with the provision of west facing slip roads at the junction of the B4477 and A40."

The accompanying Landscape and Visual Appraisal prepared by Barton Willmore (Appendix 3) concludes that proposals for Land at Kilkenny Farm include proposed residential development set within a landscape framework located on the southern part of land at Kilkenny Farm, predominantly to the south of the area of woodland at Lodge Plantation. The proposed residential development would be set around the existing built form of Kilkenny Farm, would be to the south of existing residential development along Burford Road, and would be contained to the east by the Burford Road and associated residential development and clusters of farms to the immediate east of Burford Road.

The proposed residential development would also be located on the lower lying land, generally below 110m AOD, and within the area that benefits form greater enclosure provided by the framework of existing vegetation, such that there would be limited landscape and visual effects, and potential green infrastructure, biodiversity and recreational benefits, including in relation to the generally southern aspect.

A broad swathe of open landscape would be retained to the north, providing distance and separation between the proposed residential development and the Cotswolds AONB, the setting of the AONB would be sympathetically addressed. And, as proposed in the Carterton Town Master Plan, the Country Park would be extended all the way to Shilton Road.
There is therefore the opportunity to successfully accommodate residential development on the land at Kilkenny Farm, within the southern part of the area, to the south of Lodge Plantation, on lower lying land and where it is set within the context of existing scattered built form and greater existing framework of vegetation.

The inclusion of the two sites at north Carterton are required to ensure that the plan is positively prepared and consistent with national policy in meeting development needs effectively and supporting economic growth (and regeneration of the town centre) in Carterton.

Alternative Options

MM132 refers to Alternative Options at Carterton, including to the north of the town: this includes our clients’ interests at Swinbrook Park and Kilkenny Farm respectively. Paragraph 9.3.54 acknowledges that these areas are identified as having some future development potential in the Carterton Master Plan:

“... having regard to the overall housing requirement and evidence prepared in support of the Local Plan these sites have not been allocated at this point but will be re-considered as part of any subsequent review of this Local Plan alongside any other reasonable alternatives.”

Given our representations made in respect of:
1. The inadequacy of the overall housing requirement - which should be 688dpa (560 more homes in the plan period);
2. The unrealistic prospect that Eynsham Garden Village will deliver entirely within the plan period at a rate of 220dpa: with a consequential shortfall of around 760 homes;
3. That a number of allocations should be either reduced in size or deleted;
4. That further growth at Carterton would fully reflect the spatial strategy which seeks to focus on main service centres and would be the catalyst for infrastructure delivery and economic growth; and
5. That north Carterton growth would be consistent with the Carterton Master Plan.

It is considered that the alternative sites north of Carterton should be included within the draft Plan to ensure delivery of new homes in a sustainable location, which support the regeneration of Carterton and reflect its expanding economic role and to address the shortfall of housing in the plan due to the points outlined above.

Accordingly, we invite the Inspector to consider allocation of two alternative sites at Carterton. Land North of Swinbrook Park (250 homes currently under construction) is promoted by David Wilson Homes (see Appendix 1: master plan) and would provide 115 new homes immediately adjacent to an existing residential development the proposal also includes a large extension to the Kilkenny Country Park for recreation use for the wider locality. This would define the settlement limits and also provide a suitable buffer of greenspace to Shilton village as well as providing opportunities for cycle and pedestrian access between Shilton and Carterton. The site presents opportunities to enhance additional opportunities to walk and cycle to and from Carterton town centre.
The accompanying Landscape and Visual Appraisal prepared by Barton Willmore (Appendix 3) concludes that there is therefore the opportunity to successfully accommodate residential development on Land North of Swinbrook Park, immediately adjoining the existing consented residential development, currently under construction, on the northern edge of Carterton, and set to the south of a substantial swathe of proposed Country Park, forming an extension to the existing Kilkenny Lane Country Park.

Kilkenny Farm land (see Appendix 2: master plan 2012) as previously outlined provides a sustainable option to West Oxfordshire for land within Carterton for 300 homes in the short term and up to 750 homes plus Sha of employment land for small and medium sized businesses. Importantly, both the 300 homes first phase at Kilkenny Farm and the 115 homes at Swinbrook Park could be delivered within the first five years of the plan period. The Sustainability Appraisal states that:

“Land to the north (Kilkenny Farm) is poorly related to the town and poorly served by public transport; a significant incursion into the open countryside; and sensitive landscape, particularly for the northern parts. It was acknowledged that a reduced development in the south-east area could potentially address landscape concerns.”

We have outlined above how this opinion cannot be relied upon. We are clear, solely from a landscape point of view, that Kilkenny Farm can accommodate 500 to 750 units (Kirkham, page 7) with “good opportunities to create a substantive landscape structure... maintaining the identity of the settlements of and around Carterton” (Kirkham, page 36). When other factors are taken into account, such as noise, light pollution, air quality, contamination and flooding it is clear that Kilkenny Farm performs better than Carterton East (700 homes with a resolution to grant planning permission). There are fewer risk areas, and Kilkenny Farm offers a higher quality, more sustainable ‘New Rural’ residential environment. Given this context, we are concerned that the SA fails to adequately consider the reasonable alternatives.

Bloombridge’s representations on the SA (8 May 2015) are relevant here. The table below illustrates our concerns by attributing a score of ‘2’ to a ‘++’, ‘1’ for ‘+’ and, for example, ‘-2’ for ‘-’. | MM792        | Alvescot Parish Council  | Alvescot Parish Council | Mrs Hoad | 2326 | > SECTION 9 - STRATEGY AT THE LOCAL LEVEL > Carterton Sub Area > MAIN 132 | Main 132: paragraph 9.3.54
Reference is made to the "Carterton Masterplan" asserting that three areas outside the town have some further development potential. Alvescot Parish Council is not aware of any evidence that Carterton Town Council has adduced to support this view. The status of the "Masterplan" as a planning document is ambiguous - is it for example part of the evidence base for the Local Development Framework? – and caution should be exercised in quoting it here.

It is almost inevitable that any future review of the Local Plan will entail revisiting some alternative options, but the weight of evidence which has accumulated during the Local Plan process to date - as well as in considering a planning application - must surely militate referring to land to the west of Carterton as a "reasonable" alternative.

We hope that these comments are helpful and that the District Council succeeds in persuading the Inspector of the draft plans' robustness.

If the question of a potential development site in this Parish ("Carteron West") should be re-opened in the course of inspection, the Parish Council would expect to be invited to address the Inspector. |

Carterton Town Council do not have a Neighbourhood Plan as required for compliance with MAIN 1 1.6.  
MAIN 132 9.3.54 and 9.3.59, MINOR 72 9.3.13, MINOR 81 9.3.59, MINOR 83 9.3.77.  
The above paragraphs refer to the 'Carterton Master Plan' implying that it is an approved legally compliant document.  
The CARTERTON MASTER PLAN is not a Neighbourhood Plan. However, the way it is referred to in the Draft Local Plan, certainly gives that impression. It is an aspirational document only which meets neither the requirement of planning law nor is it based on sound planning data or consultation with WODC and neighbouring Parishes affected by it. Additionally, there are significant differences between it and the draft Local Plan.  
Although the content may be acceptable for reference to aspirations within the boundaries of Carterton, it cannot carry any weight to matters outside of the Carterton town boundaries.  
With this in mind, it should be made clear for the sake of transparency, that the Carterton Master Plan is not an approved document as required by NPPF and Planning Law and does not comply with the requirements of Strategy 9.3.40.

<td>7.6 The modification needs to be considered in the context of the whole of the employment sub-section which begins at paragraph 9.3.57. Paragraph 9.3.58 states that there is a need to address the out-commuting ‘issue’ and therefore to increase the supply of business land in Carterton. However, the effect of this in policy terms is to identify four hectares of land currently used for leisure/sports purposes on the corner of Monahan Way/Carterton Road and to ‘allocate’ it for employment use subject to relocating the current use to an equally convenient, suitable and accessible location. No location is identified. No further allocations for employment development are identified despite the objective (9.3.60) to identify at least 10 ha of additional employment land during the Plan period, presumable to fulfill the aspiration to rebalance homes and jobs within the town. The Plan is failing to plan positively to deliver against the claimed ambition to address the imbalance between jobs and homes and is unsound in this regard.</td>

<td>There is a need to allocate land for at least ten hectares of employment land and four hectares of replacement playing fields to provide for future employment land requirements in and around Carterton. The text of the proposed modification refers to the need to work in partnership with the Town Council and landowners to identify at least ten hectares of high quality business land over the plan period, adding that this should include the provision of four hectares of land at the corner of Monahan Way and Carterton Road which is allocated for employment uses subject to relocation of the sports pitches. The proposed modifications do not identify any new additional employment land or land for sports pitches in the Carterton area. The absence of any indication where such employment land or sports pitches should be allocated means there is doubt about the deliverability of the proposal set out in the modification.</td>

| MM793         | Carterton Town Council        | Mr Spurs        | 2327       | > SECTION 9 - STRATEGY AT THE LOCAL LEVEL > Carterton | Carterton Town Council has had an opportunity to review the comments at Page 201/202, para 9.3.98 Policy CA 3 – Carterton Sub-Area Strategy in the revised Local Plan which is being presented to West Oxfordshire District Council on Wednesday 26th October 2016. Carterton Town Council has the following comments to make. |
As you know, Carterton is the only settlement in West Oxfordshire that is relatively unconstrained from an environmental point of view, particularly to the north where, for example, the District Council’s own landscape studies (Hopwood, 2009 and Kirkham, 2012) identified Kilkenny Farm as a suitable location for up to 750 houses.

The Carterton Town Master Plan (April 2015), an extensive and well thought through proposal by leading consultancy WYG, based on extensive local consultation, supported development to the north of Carterton and provided a joined up strategy for housing and employment growth, with environmental improvements (e.g. an extended Country Park) and a major regeneration initiative in the town centre (funded by new development). The Town Council was astonished that these proposals were not carried forward into the Carterton Sub-Area Chapter of the draft Local Plan last year. Worse, we believe the draft Local Plan substantially underestimated the economic needs and potential of RAF Brize Norton; and the Council believes that West Oxfordshire District Council officers have accepted that they missed out 2,500 jobs from their analysis. These are all highly material points that, even now, are missing from the proposals in the latest revised amended local plan.

Put simply, there is no case for further development in Chipping Norton, Woodstock and Witney ahead of Carterton. Why has the Council’s Master Plan been ignored? Do any of these other settlements have anything comparable? Do any of these settlements have a latent economic asset like RAF Brize Norton? Are any of these settlements in the same need? Are the benefits linked to new development in any other settlement so clear and important? Surely the revised Local Plan is the opportunity to address the pressing needs of Carterton and to set a planned-for future for our town?

The Council wishes to register its very strong objections.

What is needed is a Plan that sets out a positive future for Carterton - now. The Council have had no meaningful engagement with officers since the draft Local Plan failed at last year’s EIP. It appears that officers have expended a lot of effort in an attempt to maintain the status quo in relation to housing numbers. This is not satisfactory. The time could have been used much more productively working with Carterton Town Council to take the Town Master Plan to the next level - beyond being an aspirational document.

Carterton Town Council therefore asks that growth is directed to the land around Carterton. This will not be an unpopular strategy at the district-wide level and, when considered alongside the constraints, needs and benefits, it is likely to be the most sustainable solution for the plan area from an economic, environmental and social point of view. This strategy is supported by developers and land owners.

Clearly the strategy outlined in the amended local plan needs to change. Given we are dealing with a twenty year Local Plan, the Town Council is not prepared to put the future of the town on hold.

Carterton Town Council would be derelict in its duty if it failed to provide constructive comment to the

I am pleased that you have continued to reject development to the west of the town and also to the north of Shilton Park.  
I also admire your optimism that the MoD will be a partner that you can work well with over the period of the plan. The example of Reema North is not a very encouraging one and it is appalling that a site that should now have 200 homes built on it is still empty.  
I am very disappointed and object strongly to any plans to turn the sports pitches on the corner of Monahan Way into employment land. This idea makes no sense to me at all.  
These sports pitches are well used, they have recently refurbished facilities (paid for by WODC), they are easy to get to by car, bus, on foot or by bike and they will link up with the proposed sports pitches in the East Carterton development to create a large multi use sports area. In addition these facilities are also used for service personnel repatriations. Where is there another site in Carterton that meets these same standards? Who will pay for the new facilities? |
| MM370         | Brize Norton Parish Council | Mrs              | Peach            | Peach             | 703        | > SECTION 9 - STRATEGY AT THE LOCAL LEVEL > Carterton Sub Area > MAIN 134 | Policy CA3  
Unsound as 27% of the new homes are focused in Brize Norton. |
| MM370         | Brize Norton Parish Council | Mrs              | Peach            | Peach             | 707        | > SECTION 9 - STRATEGY AT THE LOCAL LEVEL > Carterton Sub Area > MAIN 134 | Policy CA3  
Unsound as BNPC consider this to be a poor use of land that has been put forward without appropriate consultation and does not identify a reasonable alternative that is proposed. |
Ø Carterton Sub-Area
Overall, we agree with WODC that the focus in Carterton should be to strengthen the core of the town. We agree also with the proposal to absorb the additional housing allocated to Carterton within the existing strategic sites and other sites within the town already identified as suitable for development. We support the strengthening of the sub-areas CTA and most ecologically rich location along the Shill Brook.

Ø General Comments

It is clear that the need for housing for Services families is in decline and that the REEMA housing is no longer fit for purpose. Therefore, we are supportive of the release of REEMA Central for housing and of the intention to increase the density at REEMA North, yielding an additional allocation of a total of 300 more homes across both sites. Therefore, we support clauses 9.3.5, 9.3.6, 9.3.36 & 9.3.50.

However, the REEMA areas in the town cover 146 acres in total. The most recent information from the MOD indicated that 742 Service Family Accommodation (SFA) homes are needed, which at the usual 'JSP' density of 12 per acre, will require 62 acres, leaving 84 acres spare. (The demand has fallen due to increased Single Living Accommodation (SLA) units 'inside the wire' and a move towards Service families owning their own homes. Also, outsourcing operational and support services is strong in the current economic climate.)

North and Central REEMA areas cover approximately 70 acres (22 acres at REEMA North and 48 acres at REEMA Central), so the allocation of 300 houses in addition to the existing 200 is modest, even accounting for some retail or leisure land. As noted in the Draft Local Plan, there is likely to be potential in other REEMA areas in the town and it now appears that past claims of the increasing housing need generated by RAF Brize Norton were completely unfounded. The existing 885 houses (as of 2011) are at an approximate density of 6 homes per acre, as they are not well-planned, so there is significant potential to be unlocked in the land, especially since the houses clearly need replacing.

Therefore, no further expansion of the town should occur until these sites achieve their potential and any future development in Carterton should be focused at REEMA. It is clearly preferable to development on open countryside and we agree with WODC that it will improve the style and image of the town. It is development that would lead to clear betterment and would be well supported by the community.

In line with the need, mostly apartments and small homes should be built there, with a few larger gateway properties for kerb appeal. High density housing should be built closest to the centres of towns or cities. Some housing for the elderly would be beneficial. That means that the density could be relatively high, in line with most town centre developments. At the Buttercross site in Witney, 186 units have been built on 7 acres, so the density of 26.5 has been achieved. Buttercross is a good looking development and does not feel overcrowded.

It is a mixed use site with some housing for the elderly. That means that there are 1 bed and 2 bed units, but this is the sort of housing that is needed for the young too- flats and studios. In any event, the REEMA land should include some housing for the young and elderly and that would push up the density. Normal family estates are usually built at 16 properties per acre. Therefore, it would not be unreasonable to conservatively expect a density of 20 homes per acre to be achieved at REEMA, giving a total potential of 1,680 homes in REEMA North and Central areas alone.

Relative to its size, Carterton is already getting a similar number of houses per capita than
Witney, if not, a little more (2,600 houses for Carterton with 16,000 residents in 2011 as noted in clause 2.4, so 0.162 homes per capita, versus 4,400 houses for Witney with 28,000 residents in 2011, so 0.157 homes per capita), Carterton grew faster than any other sub-area in the last decade and at nearly twice the rate of Witney (Carterton’s population grew by 37.3%, whilst Witney’s population growth was 21.4% and the rest of the District was stagnant as taken from ONS data), with practically no improvements in services and facilities. Witney on the other hand has thrived.

In fact, Carterton town has the least infrastructure and facilities of the three main towns and lags behind in terms of employment opportunities, as noted in the Draft Local Plan clauses 2.26, 9.3.10, 9.3.39 & 9.3.42. There is a pre-existing imbalance between numbers of jobs and homes/ worker, meaning that out-commuting is high. It’s the furthest from Oxford and has no A-Road access and no train station. There is mention in 9.3.15 and 9.3.67 of upgrading the B4477 in Brize Norton to an A-Road at a cost of £3.9M, but clauses 7.48 & policy T2 are vague about the security of funding. It appears that there is no firm commitment or allocated funding. It’s not clear either where the £7.2M for westbound slips onto the A40 will come from at Minster Lovell. Carterton should not therefore be seen as the obvious place to put any houses that other areas do not want, as is being suggested.

If for argument’s sake, Witney North’s allocation was relocated to Carterton, the latter would be allocated 4,000 homes (0.250 new homes per capita), whilst Witney would be allocated 3,000 homes (0.107 new homes per capita). So there would be approx. 2.5 times more growth in Carterton than in Witney. Carterton could not sustain such growth without further major incursion into open countryside in neighbouring parishes (over and above that already caused by Shilton Park, Carterton North and Carterton East in Brize Norton and Shilton Parishes), which we consider would be unacceptable.

We support the existing designation of the Shill Brook as a Conservation Target Area as noted in 9.3.27, 9.3.88 and 9.3.90 and agree with the planned enhancement, so that the natural environment and ecology in this area and adjacent Local Wildlife Sites and the SSSI are protected. In this regard, we support policies OS2 & OS4 which seek to protect important landscape, conserve the natural environment and habitats of biodiversity value.

This is not a new or revised point in the Draft Local Plan, but it does mean that the alternative option to the West of Carterton as noted in 9.3.54-56 is not suitable to replace Witney North for example, as the Shill Brook (the most ecologically sensitive location in the sub-area) would be breached and the natural environment disturbed. The high cost of the infrastructure for this site would limit affordable housing provision. Also, this site is in prominent open countryside, unbounded on all 4 sides. The alternative options to the North are in open countryside too and so as above, REEMA should be the next priority for development in the town.

We believe that the windfall allowance stated in 9.3.48 of 262 for the sub-area in 15 years is modest, especially in view of the REEMA potential and also in the town centre as part of retail redevelopments.

We support the inclusion of the Milestone Road site in 9.3.53a-c as an allocation. It’s a relatively large site in a built up area. However, bearing in mind the past care home permissions, it is preferable that the site should include housing for the elderly if possible, which all forms part of the housing need. The site would be best as mixed use. In that case a development density of 26.5 units per acre has been achieved at similar sites in Witney. The capacity is therefore more like 400 units on 6Ha or 15 acres. Even without care for the elderly, a focus on small units as starter homes would achieve a higher density than that assumed.
With regard to the Swinbrook Road development outlined in 9.3.53d-f, we feel that there should be a road link from REEMA North to the central area between the new David Wilson northern developments, this allocation at Swinbrook Road and Shilton Park, so that there is a better link for the associated residents with the town centre. Currently, access to the northern developments is convoluted and the development main entrances point away from the town towards other settlements, like Witney or Burford, which become more likely shopping destinations. As a result, the developments feel like satellites and this new road would create a central hub between the town to the south and the new north western and north eastern developments of recent years. Also, this road would ensure that access to the Country Park is opened up as a facility to benefit the whole town. There appears to be an appropriate corridor of land running from the corner of REEMA North and along the Shilton Park boundary. Only a short section of road would be needed to improve the relationship between these proposed, new and existing relatively new developments and the town, avoiding the current satellite feel. The road would run from the north western corner of REEMA North and adjacent to Stocks Lane and Boundary Way.

We support the town centre improvement in 9.3.77 & 9.3.87 and feel that the commencement of redevelopment of REEMA will be enough to encourage businesses and kick start the town centre regeneration, whilst satellite developments have been proven to be ineffective. Ideally, an initiative like Marriot’s Walk (in Witney), including some parking and housing and aimed at leisure, rather than convenience goods, should be pursued as that is what made the difference in Witney. It’s possible therefore that some housing could be incorporated in the town centre.

Further Detail on 9.3.54 Carterton West Alternative Site

Carterton West is cited as a potential alternative option in 9.3.54 and therefore might be vulnerable if one of the other allocations is dropped. It is an inappropriate application for the development of over 1,000 houses in open countryside. It has been the subject of a planning application that was refused. Much of the planning application submission was subjective. Where objective comments were made, they were based on flawed technical arguments and data. The detail of key mitigation measures was vague with unreadable illustrations in some cases and contradictions in the text. The essence of the merits of the application appeared to be quantum as opposed to substance. The site is noted as unsuitable on the latest SHLEAA and has repeatedly been considered unsuitable by past inspectors.

With regard to some key technical points, the site is in open landscape. In the application, the developer glossed over significant environmental impacts, yet provided great detail about minor issues, which were claimed as benefits. In reality, benefits were exaggerated and any ‘net benefits’ – i.e. those over and above the requirements associated with building over 1,000 houses – would be minimal. So, benefits would mostly simply be what is needed for developing this site. Some impacts, like pollution from concrete construction in the Shill Brook were not even considered. Many arguments on the extent of impacts in general were subjective and mitigation of harm was weak and predominately no more than normal good practice for construction activity. The traffic impact was acknowledged as significant, though was under-stated, and major issues such as disruption and exacerbating of accident black spots were not considered. The flood mitigation proposal was flawed, but even then, the developer was unable to claim any betterment at application stage. This was a crucial step change, as betterment of the wider flooding situation was used to gather early support for the scheme. The creation of
an ecology park was also used to garner support, but the developer made no commitment to fund it.

Exploring some aspects of the site’s suitability in more detail, it is in open unconstrained countryside and is permanently separated from Carterton by the Shill Brook. It is not close to, or well related to, existing services and facilities. It is between the conservation areas of Alvescot and Shilton (see fig. 8.6) causing light pollution and affecting their setting.

Significant construction would be required in the Shill Brook valley, a Biodiversity Area and the most ecologically sensitive zone in the sub-area. In particular, a bridge will be constructed with significant retaining walls due to the steep slope of the site. ‘Gateway’ houses are proposed in this area and are purely a requirement of the developers as a means of signposting the development. There is also a five acre flood storage pond alongside the Shill Brook, where levels will be lowered. The ecology park area will need to be flattened out too as at present the ground is steep in places and so is not suitable for access. The earthworks would therefore be significant. This will destroy the natural environment and cause pollution downstream at the SSSI. The site is home to a number of protected species, but no significant protection measures are proposed. Instead, the developer relies on a suggested man-made ecology park created in mitigation after significant construction work destroying the natural environment. The developer claims betterment, but the detriment is clear. Such a proposal would only provide betterment on a brown field site, with no existing ecology of merit. The construction activity would also pollute the Shill Brook, as would the traffic fumes in the long term. The ecology park is simply an idea designed to disguise the damage done to a natural, sensitive environment, when clearly the most sustainable course of action is to leave it alone. In any event, the developer made no commitment to fund the ecology park.

Therefore, this site is contrary to policy OS2 and H2, which states that new development adjoining service centres must meet the requirements of OS2. Clauses 8.18 & 8.21 indicate that developing near CTAs can present an opportunity for enhancement, but a development that destroys the natural environment and creates a manmade environment after construction would be against policy 8.22, which states that biodiversity off-setting can only be allowed in exceptional circumstances. The Shill Brook CTA is the only one in the sub-area and the adjacent SSSI and two local wildlife sites make it the most ecologically sensitive zone in the sub-area, as illustrated by figures 8.3 & 8.4. It is clearly therefore not appropriate to breach the Shill Brook. It was acknowledged by the developer that the majority of traffic will travel east to jobs and retail centres in Witney and Oxford, bringing excessive traffic through Carterton. Even taking unrealistically low trip rates based on a survey carried out over Easter, and after suggested significant and disruptive traffic mitigation, existing road junctions are at up to 97% of capacity. Traffic would increase by a factor of 2.3 on Alvescot Road, for example, which would be undesirable for residents. With junctions at capacity, there would be no capacity for future growth, even after the proposed upgrades.

Accident black-spots along Alvescot Road between Carterton and Alvescot have not been considered. This stretch of road has a higher accident rate compared to the worst stretch of the notorious A420. The effect on egress from existing side roads on Upavon Way and Alvescot Road has not been considered.

At peak times the gaps between the traffic are small. Traffic in the villages of Shilton, Alvescot, Kencot, Clanfield and Filkins will increase and none of these villages benefit from good roads.

The number of jobs that would be created via employment land on site is small compared to the number of workers the site will create. As most of the workers will travel to Witney or Oxford, it makes no sense to build
on the west side of the town, where traffic has no choice but to travel via the town. It’s the furthest west location in the County and there is no easy route to a main road. Therefore, it is not a sustainable location.

This site is the only one proposed in the sub-area with a main river running through it (the Shill Brook). There is some development proposed in zone 2/3 flood risk areas, including bridge and road construction and gateway houses. This is contrary to clause 8.50 of the Draft Local Plan. There are significant zone 3 areas downstream of the site and upstream too at Shilton, where backing up of the Shill Brook has caused flooding in the past. The developer based his flood mitigation design on the absence of ground water, even though significant ground water was encountered by a Geotechnical Investigation carried out on 17th January 2014. The Geotechnical Consultant recommended further testing, but instead the model is based on ground conditions and soakage test results taken when the site was dry in November 2013. Despite this, calculations show that the mitigation required to avoid flooding on the site itself is extensive. The mitigation does not provide betterment to surrounding areas, as the reduction in the water level in the Shill Brook is minimal. Even based on spurious seasonal dry ground and the associated falsely high permeability, ten acres of attenuation basins and storage are required on the site and still, there is no improvement to the current situation.

Betterment of the flooding situation in the area was one of the developer’s previous main claims, which attracted significant support for the scheme, as it is a requirement of clause 8.55 of the Draft Local Plan. The initial approach was proven to be flawed and simplistic.

More detailed analysis has shown that betterment cannot be achieved, even though the approach is still flawed and in the developer’s favour. In all likelihood, the flooding will be exacerbated to the surrounding villages that suffered badly in 2007. The extensive flood mitigation proposed is not able to achieve betterment regarding flood risk to surrounding villages and may even exacerbate the situation, so future additional houses (which are clearly on the agenda) would increase the flood risk. Crucially, all water storage on site is temporary and the developer relies wholly on discharging into the Shill Brook, which is classified as a Main River. This is the least preferred method under the National Standards for Sustainable Drainage Systems, which are due to come into force this year. The developer admits that discharge volumes into the Shill Brook will increase and the storage will only slow it down, which will not help if the water has nowhere to go due to bottlenecks downstream. Backing up has caused flooding in Shilton in the past. Surface water drainage from a housing estate into the Shill Brook would affect water quality in the SSSI.

There is a bird strike risk with large expanses of water close to the RAF Brize Norton runway.

The site has no services and will need a sewage treatment works, as the Sewage Treatment Works (STW) at Black Bourton is at full capacity and the plan to pump raw sewage across fields to Black Bourton will be costly. The District needs small 1-2 bed units to meet its needs, encouraging an occupancy rate of 1.8 to meet the SHMA model. This model has been used to derive the five-year housing supply and is based on reducing the overall average occupancy in the District. However, the type of development proposed by this application would deliver a mix of housing with a majority of larger family homes. Indeed, the developer claimed that the total population of 1,000 houses would be 2,370 or 2,420 people, depending on which document is used for reference. This is in line with current occupancy in the District and it will maintain existing rates, rather than achieve the figure of 1.8 used to derive the target in the SHMA. The developer made no firm commitment regarding affordable

<td>959</td>
<td>&gt; SECTION 9 - STRATEGY AT THE LOCAL LEVEL &gt; Carterton Sub Area &gt; MAIN 134</td>
<td>Housing provision, keeping it 'subject to viability'. The number of homes required as a minimum on this site to make this development viable is high. This is because there are expensive infrastructure works required to deliver the housing, such as junction upgrades in the town and flood mitigation. We note that the developer has an option on fields around the site and has an intention to build more houses later. We are also aware that the developer is contacting other land owners in areas to the west of the site. This may be considered by some as a positive attribute, as it could be a quick fix to meeting the housing target. However, all the traffic and flooding calculations are based on 1,000 houses maximum and even then, the developer has struggled to prove that the site has capacity for even 1,000 houses. To maintain prosperity, it is important to develop the District in a way that does not detract from its character and appeal. Just building any type of house anywhere is not enough to attract people to fill employment positions or attract businesses to create them. Economic growth is as much about the style, feel and buoyancy of a location as it is about the number of houses built. This site would not provide the right number of houses, of the right type, in the right place.</td>

<td>&gt; SECTION 9 - STRATEGY AT THE LOCAL LEVEL &gt; Carterton Sub Area &gt;</td>
<td>Stagecoach supports the broad strategy and the sites identified, Stagecoach does not support this Policy. There is considerable remaining doubt as to the timing and quantum of delivery of housing at Carterton, and on large strategic and non-strategic sites in particular. Considering the town's size, sustainability, and growing employment base, arising both from military and non-military employment, this remains a weakness of the Plan. Further potential clearly exists to deliver land to provide housing on land north west of Carterton, east of the Shilton Road. In the light of a serious 5-years supply deficit in a District where opportunities for sustainable development are clearly very constrained, it is regrettable that this site, which is being actively promoted for development by a major housebuilder with a strong track record of delivery (including on adjoining land) has been omitted from the Plan. The site is evidently suitable and achievable in the short term, and could deliver approximately 130 homes. It benefits from nearby bus services which could be improved, to much better serve this part of the town where public transport has to date been much more limited. By adding to the critical mass of demand in this area, as what amounts to an additional phase of a comprehensive scheme, this would help catalyse and sustain such improvements. Stagecoach has also expressed its view in the past that land west of Carterton offers a potentially sustainable location for growth on a strategic scale, particularly if sites already identified and allocated in the Sub Area are further delayed or do not come forward at all within the first 5-10 years of the Plan. We maintain this view, as we are of the view that among other things, the site can relatively straightforwardly be integrated into the strong local commercial bus network.</td>

<td>LEVEL &gt; Chipping Norton Sub Area &gt; MIN 91</td>
<td>MIN 91 Iagree the high level of affordable housing need. We live opposite Fox Close housing which is invaluable but not sufficient.. but do we need 1400 new homes on Tank Farm? We accept the Inspector’s ruling that 600 was insufficient, but note the mayor’s comments that development on this scale is ‘the rape of Chipping Norton’. There seems to be an argument that around 1000 new homes would attract sufficient S106 money for further infrastructure improvement. Could that be done at Tank Farm while retaining Glyn Pearman’s woodlands? There was a suggestion at the public meeting that the land proposed for a new primary school is only enough for a 2 form entry. Enough land for a 3 form entry is desirable, even if a start is made with something smaller. The state of the drainage from Albion Street and in West street requires urgent attention, and of course on top side.</td>

<td>109</td>
<td>&gt; SECTION 9 - STRATEGY AT THE LOCAL LEVEL &gt; Chipping Norton Sub Area &gt; MAIN 136</td>
<td>When the Local Plan was originally developed, it made sense to concentrate housing developments in the three market towns. However, it is not appropriate to merely extrapolate the original allocations to take the additional numbers required by the Inspector and the SHMA. In particular, it is not sustainable to allocate an additional 800 homes to the Chipping Norton SDA. The percentage of residents employed locally has been falling steadily over the last decade and is now below 30%. Employment growth in the County is centred on the ‘knowledge spine’ running from Bicester through Oxford to the South. Chipping Norton is too inaccessible to attract significant potential employers, who will want to locate near the clusters along the spine. The main employment locally is for ‘minimum wage’ jobs in retail and caring sectors. New residents looking for professional or technical jobs will be forced to commute by car using the sub-standard A44 towards Oxford or the more dangerous A361 towards Banbury. The bus service to Oxford only runs hourly and has to cope with the severe congestion in the Wolvercote roundabout area. Access to the North Cotswold railway line at Kingham is also difficult - the connecting bus service is now sparse and unreliable following the County Council cuts, not as implied in para. 7.58. The additional 800 homes must be allocated nearer to Oxford with easy access to a railway line, thereby linking easily to the main employment areas in the County. The modified Plan already picks up on this logic, by proposing the Eynsham garden village with good links to Hanborough station (and with the potential to be eventually linked to a re-opened railway line to Witney) and with employment areas nearer to the ‘knowledge spine’ clusters. The Chipping Norton “800” should therefore be reallocated to the Eynsham area or sites even nearer to Oxford, with a start date earlier than the 2021 proposed for the garden village. The Chipping Norton Eastern Link Road proposed as part of the Tank Farm SDA will not achieve the reduction in HGVs through the town centre - the vast majority of HGVs are on the A44 towards Evesham, not on the A361. The link road will be a “road from nowhere to nowhere”. The money on the link would be wasted and reduce the likelihood of achieving a proper Chipping Norton by-pass on the A44. The commercial viability of the Stagecoach S3 bus to Oxford and the availability of a cadre of local drivers is dependent upon an overnight bus park in Chipping Norton. As part of the masterplan for the Tank Farm development a site of at least 0.3 Ha should be set aside for this vital bus parking.</td>
</tr>
</tbody>
</table>
The dramatic increase in housing proposed for Tank Farm is excessive and completely out of proportion with the layout of the town especially with the large number of houses that are already being built. The original number of 600 that was proposed was already too large, but to increase this to 1400 is ridiculous as there is no local demand for this number of housing and a large number of homes will be far too excessive for local people and, so called 'affordable housing' is a misnomer as many locals cannot afford these. It also drives up the prices of the existing housing stock.

There has been little provision or thought for employment. Some companies, within Chipping Norton who want to expand and cannot get office space and especially not affordable space to build. This plan has no provision for this so will drive these companies out of town causing more people to travel - mainly by car as many bus routes have been cut.

Many new people moving to this development will be from out of town so will be working in larger surrounding towns - travelling to other towns like Banbury, Witney, Stratford, Oxford or Cheltenham causing increased car usage and traffic problems. Chipping Norton already has a problem with traffic and pollution - this will only make it worse and could actually take trade away from what is a thriving town centre.

The 'sweetener' of a link road would not be effective as most traffic is on the A44 and is not heading to or from Burford - meaning that they would still have to go through the centre of town. I believe that Burford is also considering a weight limit.
development. AONB and Landscape Impact

8.4 Chipping Norton lies on the eastern edge of the Cotswold Area of Outstanding Natural Beauty and the impact of any outward expansion of the town must be considered carefully in terms of the impact upon the setting of the AONB. The Landscape and Visual Review (May 2014) prepared by Kirkham Landscape Planning Ltd represents the most up to date assessment of the impact of outward expansion on Chipping Norton on the AONB. The LVR concluded that a landscape-led approach to the siting, layout, mass and scale of development would be essential to the delivery of a scheme, which could fit comfortably into the landscape. The need to protect the key landscape, visual and settlement characteristics of this area was identified as determining factors in limiting the extension of the development.

8.5 In conclusion, the LVR considered that the housing capacity of the site should be limited to 500 dwellings. Final numbers would be dependent on more detailed assessments, and factors such as housing needs, the requirement for Green Infrastructure and an appropriate built form for each area in keeping with the local character.

8.6 Notwithstanding these findings, the Council has now sought to increase the capacity of Tank Farm both through increased density of development and expansion of the development area to more than double the size of the allocation, compared to that proposed within the submission version of the Local Plan (1,400 dwellings against 600 dwellings). Policy CN1 fails to secure a landscape-led approach to the masterplanning of the site and includes areas for development which the LVR had excluded specifically because of the potential for adverse impacts on the setting of the AONB and landscape character.

8.7 The Council has failed to provide any landscape evidence to support the step change in planned development at the Chipping Norton SDA and therefore the proposed modification is in direct conflict with the evidence base.

Heritage Impact

8.8 Paragraph 9.4.30 of the Local Plan highlights the key issues and challenges facing Chipping Norton which include the conservation and enhancement of the historic environment. Chipping Norton contains a Conservation Area, numerous listed buildings and a scheduled ancient monument. The NPPF, paragraph 132 requires local planning authorities to take account of the impact of proposed development on the significance of a designated heritage asset, affording great weight to the asset’s conservation. Paragraph 137 requires LPAs to look for opportunities for new development within the setting of heritage assets to enhance or better reveal their significance. In this regard, paragraph 141 requires LPAs to make information about the significance of the historic environment gathered as part of plan-making publicly accessible.

8.9 The SA Addendum Report acknowledges that the previous SA identified minor negative effects on the historic environment due to the proximity of development to the Conservation Area. The SA Addendum proposes the inclusion of policy criteria requiring archaeological investigation and a strengthening of Policy CN1. However, such policy provisions are effective only insofar as they control the development of a site that has already been allocated; they are ineffective tools in establishing whether or not it is appropriate to allocate land for development per se. Such decisions should more appropriately be based on an assessment of the historic environment more widely to establish whether the principle of development is acceptable.

8.10 Notwithstanding national policy, the Local Plan modifications have been prepared in absence of any assessment of the historic environment or the impact of development upon identified heritage assets. In the absence of such evidence, the Council cannot be confident that the allocation of land at Tank Farm would not cause harm to the identified heritage assets.

Reasonable Alternatives
8.11 The Sustainability Appraisal (Addendum Report 2016) highlights the limited potential for outward expansion of Chipping Norton due to the extent of the Cotswold AONB which wraps around much of the town. As a result of the policy constraint imposed by the AONB, only land east of Chipping Norton has been tested through the Local Plan since 2010. Following the uplift in housing need, the Council reviewed options available and reaffirmed its conclusion that land east of Chipping Norton remains the only potential direction for strategic growth. An assessment of its potential to accommodate up to 1,400 dwellings has been carried out through the refreshed SA.

8.12 It is accepted that the land east of Chipping Norton represents the only realistic option for the outward expansion of Chipping Norton. However, the Council has failed to consider properly, through a direct comparison of all of the available options at the three towns, all reasonable alternatives for accommodating the uplift in housing numbers to meet West Oxfordshire’s housing needs identified by the SHMA. The Local Plan is underpinned by a spatial strategy which serves to direct a significant proportion of growth to the three main towns. To ensure the spatial strategy is met through the allocation of the most suitable and sustainable options for development it is reasonable to expect that the Council should have undertaken a direct comparative assessment of the strategic development options available at all three towns.

8.13 Under such an approach the land east of Chipping Norton should have been assessed against all other available options at Witney and Carterton with the most sustainable site selected for allocation. However, the comparative exercise is limited by location; only sites within the same town are compared i.e. North Witney is compared to East Witney and West Carterton is compared to North Carterton.

8.14 Paragraph 4.38 of the SA Addendum Report confirms that only one strategic development option has been assessed using the full SA framework and in order to meet the required uplift in housing need, the land to the east of the town remains the only potential direction of strategic growth due to AONB constraints.

8.15 The LPA has failed to undertake a proper and fair assessment of all reasonable alternatives that would be capable of meeting the district wide uplift in housing numbers. The comparative exercise that has been carried out is partial and insufficiently thorough and therefore it must be questionable whether the proposed increase in the scale of the SDA at Chipping Norton represents one of the most sustainable options to accommodate the uplift, alongside East Witney and North Witney.

I would question whether Chipping Norton will need all these new houses. Where would the occupants be employed? If they are to be employed in Oxford the houses should be there. The roads into Oxford are already packed in the morning and evening and cannot cope with any more commuters from Chipping Norton.

Also, the current sewers are overflowing at times in West Street and this needs to be addressed before any more houses are built.

HGVs need to be moved out of Chipping Norton. The current road suggestion will not alleviate that as most lorries are heading in the Moreton in Marsh and Evesham direction.

The major change to the Local Plan for Chipping Norton is the increase from 600 to 1,400 homes (almost a 250% increase) at the East Chipping Norton Strategic
STRATEGY AT THE LOCAL LEVEL > Chipping Norton Sub Area > MAIN 136

Development Area (ECNSDA), known locally as Tank Farm - reference: MAIN 136 to MAIN 144 inclusive.

There is also a new proposal for an ‘eastern link road’ which is also covered in changes MAIN 136 to MAIN 144 to the Local Plan.

CPRE wishes to raise objections to these proposed changes on the following grounds.

Air Quality

WYG were appointed by Oxfordshire County Council to prepare a strategic Chipping Norton Transport Options Study (CNTOS).

This study concluded that ‘Given that an existing AQMA is already declared in this location, it might be reasonable to conclude that all development options would be likely to exacerbate air quality management issues’ (paragraph 11.1.6 of the report).

The building of 1,400 homes at Tank Farm was one of these development options.

The report also notes ‘in each case predicted traffic volumes on the A44 High Street / Horsefair corridor would be expected to increase reasonably substantially over and above the 2016 surveyed flows, exacerbating existing environmental degradation (notably air quality issues) within the town centre(paragraph 10.1.2).

The study also attempted to ‘identify potential mitigation measures that would offer realistic scope to both accommodate development and help to mitigate the impact of this development and existing environmental issues within the town centre, notably associated with the declared AQMA on the A44 High Street / Horsefair (plus the southern section of the A361 Banbury Road and West End)’ (paragraph 9.1.3).

The report concludes that ‘the three outline schemes assessed (the Rollright bypass, central area zonal weight restriction and town centre gyratory) would likely be unsuitable mitigation options for a variety of reasons including preclusive cost, lack of likely effectiveness and / or unacceptable knock-on impacts’ (paragraph 10.6.1).

The transport consultants employed by OCC and WODC therefore believe that the ECNSDA would worsen air quality management issues in the centre of Chipping Norton and that the 3 possible mitigation schemes to reduce the air pollution are not viable.

The existing AQMA has been in operation for many years and no solution has been found to this problem. The existing levels of air pollution in the centre of Chipping Norton are already adversely affecting the health of people living and working there. Yet WODC is proposing to build new houses in Chipping Norton which will worsen air pollution and increase the risk to health of people in centre of the town without having a viable strategy for reducing these levels. It could be argued that NO ADDITIONAL HOUSING should be allowed until a workable solution to the existing air quality problem is devised, implemented and shown to be effective.

Road Safety

Road safety issues in the centre of Chipping Norton are very closely connected with
the problem of air pollution: both are caused by modern levels of traffic trying to get through an ancient market town the central area of which was originally laid out in the 13th Century.

Horse Fair is the narrowest part of the A44 as it passes through the town. Here the road is narrow as are the pavements. This puts vehicles and pedestrians into close proximity. It has been the site of several fatal accidents in recent years. Road safety concerns are not restricted just to the Horse Fair. Local people also know that it is becoming increasingly difficult to cross several of the roads in the town centre safely because of the increased volume of the traffic as well as vehicles being driven at speeds inappropriate for the town centre.

The Local Plan accepts the need for the Council to ‘address the relatively high rate of fatalities and serious injuries on the District’s road network’ (paragraph 2.40). Work needs to be carried out to identify measures to improve safety in Horse Fair and other areas within the centre of the town. It also needs to be identified how these improvements will be funded. Again all of this work needs to be carried out before significant development is allowed to go ahead at the ECNSDA.

Traffic

The increase from 600 to 1,400 homes at the ECNSDA has profound implications for traffic in Chipping Norton and the surrounding area. The Chipping Norton Transport Options Study informed the preparation of the latest version of the Local Plan and in particular supported the option for 1,400 homes at the ECNSDA together with the Eastern Link Road. This option is of course the major change from the previous version of the Local Plan for Chipping Norton and is referenced in MAIN 27, MAIN 136 and MAIN 138 to MAIN 144 inclusive. This section of these comments outlines some concerns in a number of areas concerning traffic and arising from these changes to the Local Plan:

- Other traffic related comments

The way the Transport Options Study was carried out

The Transport Options Study report is an important document which played a major part in influencing the decision to put forward the 1,400 homes at the ECNSDA option in the Local Plan. Important decisions are to be made with respect to the future of Chipping Norton based on the findings of the study. Does a study which was principally carried out on one day only provide sufficiently robust and accurate data on which to base these crucial decisions?

The manual traffic counts and the ANPR surveys were carried out on a Tuesday in March and were intended to assess “normal” traffic conditions. However there are times of the week when traffic in Chipping Norton tends to be heavier than normal principally Monday mornings and Friday afternoons. Also Wednesdays tend to be busier because of the weekly market. Why weren’t the surveys carried out during these busier times of the week?
In the summer many visitors and tourists come to Chipping Norton or pass through it on the way to see the Cotswolds or to visit major tourist attraction such as Blenheim Palace. There are not many tourists or visitors who choose to come to the area in early March which is when the traffic surveys were carried out. In the spring and summer there is also likely to be an increase in HGVs travelling to and from the fruit and vegetable growing areas in Worcestershire and other areas to the west of the town. Why wasn’t the traffic survey work repeated again say in June in order to assess whether the traffic levels are significantly higher at that time of year?

The ANPR count locations were positioned such that they may have missed a substantial amount of local traffic within the town e.g. parents living in the areas off West Street/Churchill Road taking children to the Chipping Norton School and local residents driving into the centre to shop.

The findings of the Transport Options Study

The Transport Options Study report paints a bleak picture of what will happen to traffic in Chipping Norton if 1,400 homes are built at the ECNSDA even with the proposed Eastern Link Road:

* Increased traffic through Chipping Norton as outlined in paragraph 11.1.21 of the report:

"However, delivery of the new eastern distributor road as a stand-alone measure would be insufficient to fully offset and mitigate the impact on the town centre of the traffic growth anticipated by 2031 (both resulting from development on the Tank Farm site and general background growth on the network anticipated by this time). Furthermore, the beneficial minimisation of additional traffic flows on the A44 High Street would come at a cost of increasing traffic on peripheral routes around the town resulting from a combination of redistribution and the increased level of development on the Tank Farm site."

* The report also reports that this option "would be likely to exacerbate air quality management issues" – paragraph 11.1.15.
* The health of residents and people working in the centre of Chipping Norton would be put further at risk – see section CN4 above.
* Three mitigation options were examined and all were judged to be unsuitable for a variety of reasons – paragraph 10.6.1

In addition the study reports that the computer modelling of future traffic flows predicts that 2 of the main junctions in Chipping Norton would “operate well in excess of their theoretical capacity” and that the other 3 “would all remain operating within or, worst-case, at capacity for all of the potential development scenarios” – paragraph 11.1.16.

The report goes on to say that the computer software used may underestimate the capacity of roads in towns such as Chipping Norton and seeks to compare them with roads in other towns. The conclusion at this point is that "the operational impact of
<table>

<th>Document Full Path</th>
<th>Comment (plain text)</th>
</tr>
</thead>
</table>

- Additional traffic flows resulting from each of the development scenarios on the existing network might be far less onerous than the model results indicate” – paragraph 11.1.17. At the very least this suggests that the future performance of the main road junctions within Chipping Norton are difficult to predict and that if the computer modelling turns out to be correct then two of those junctions will be operating well above their capacity.

Other traffic related comments

The Transport Options Study calculated ‘the estimated delivery costs of upgrading an existing route via Rollright Lane and the A3400 to the north of the town to act as an east-west bypass of the town serving as an alternative for through-movements of traffic on the A44’ – paragraph 10.3.3 and Figure 31.

The study report then goes on to say that ‘this option was considered unviable on the grounds of cost’ – paragraph 11.1.18.

However neither in the Local Plan nor in the Transport Options Study report is there any calculation of estimated delivery costs of the proposed Eastern Link Road. This seems a surprising omission as it makes comparisons between the 2 schemes impossible. It leaves unanswered the question of whether the funding for the proposed Eastern Link Road would be better spent on the upgrading of the Rollright/A3400 route.

Paragraph 9.4.40 of the Local Plan (MAIN 138) contains the statement with reference to the proposed 1,400 homes and the Eastern Link Road: ‘..... there could also be a diversion of a large proportion of HGV movements from Chipping Norton Town Centre, thereby possibly having a beneficial effect in terms of improving air quality - a key issue for the town.’

A similar claim is made in paragraph 9.4.56 (MAIN 142). But doesn’t the Transport Options Study for Chipping Norton conclude that ‘delivery of the new eastern distributor road as a stand-alone measure would be insufficient to fully off-set and mitigate the impact on the town centre of the traffic growth anticipated by 2031’ (paragraph 11.1.21)?

The Transport Options Study report also concludes that this option “would be likely to exacerbate air quality management issues” – paragraph 11.1.15.

Chipping Norton has been waiting for a solution to its traffic related problems for decades:

* The use of the Rollright/A3400 route to remove traffic for the centre of the town has been in discussion for many years.

* The town has been experiencing severe air quality issues and the associated detrimental effects on people’s health for at least a decade.

* An AQMA for the centre of Chipping Norton has now been in operation for over 8 years with no significant remedial action being taken.
* The same area covered by the AQMA is also an accident blackspot with a record of a fatal accident every 12 years and a serious RTA every 2 years on a stretch of road that is only about 200 metres in length.

* All the time traffic through Chipping Norton increases and these problems get worse.

When the latest version of the Local Plan proposes a huge increase in the number of houses in the town would it not be reasonable to expect that the document would propose measures which would alleviate Chipping Norton’s traffic related problems. However all that is offered is a proposal that will in fact increase traffic in the town with all the consequent detrimental effects of this including a predicted worsening of the air quality problems. Is it unrealistic for the town’s residents and visitors to expect a better solution than this?

Car parking

Local residents as well as visitors are well aware of the current problems with regard to car parking in Chipping Norton. This is recognised in the Local Plan: 'The availability of adequate public parking capacity is a key constraint in Chipping Norton' (paragraph 9.4.30) and 'Improvements to the efficiency and availability of public car parking in Chipping Norton will be sought as appropriate' (paragraph 9.4.60).

The Local Plan states: ‘The scale and mix of uses in the local centre would be intended to meet the needs of the development and not compete with the Town Centre’ (paragraph 9.4.49). This presumably means that a large proportion of the people living in the proposed ECNSDA would use the town centre shops together with the Aldi store to do their main shopping.

A few people may walk, cycle or use public transport when shopping in the centre of Chipping Norton. However given the distance especially from the far parts of the ECNSDA to the town centre together with the fact that there would be a hill to climb on the way back most people will use their cars when shopping in the town and especially if doing a large weekly shop.

The increase in the number of homes in the ECNSDA from 600 to 1,400 will therefore increase significantly the need for extra car parking in the town centre. Land in or adjacent to the town centre is very scarce in Chipping Norton. Before development is permitted at the ECNSDA the problem of how to provide significant extra car parking capacity in the town centre needs to be resolved and funding secured for this.

School capacity

The Local Plan recognises the need for significant increases in school provision if the enlarged ECNSDA goes ahead: ‘It is a requirement of any proposed development on this site that a new primary school will be provided. The site is close to the existing
secondary school where there is adequate capacity to absorb additional pupil numbers despite the increased size of the allocation' (paragraph 9.4.48).

The overall housing requirement (2,400) represents an 80% increase in the number of houses in Chipping Norton and would mean that the population would increase by around the same percentage. It is also appropriate to assume that the number of school age children would rise by around the same order of magnitude requiring a new primary school approaching the size of the existing primary schools added together. Chipping Norton School would also have to almost double its existing size. The main issue with regard to increasing school capacity at both the primary and secondary levels would appear to be ensuring that adequate funds are available to carry this in time to cope with the increased demand – see below for a discussion of the funding requirements of the enlarged ECNSDA.

Meeting the housing needs of local people

One of the Core Objectives identified in the Local Plan is: 'CO4 Locate new residential development where it will best help to meet local housing needs and reduce the need to travel' (paragraph 3.7).

Locating 1,400 homes at ECNSDA does not support this Core Objective. Presumably the 600 homes proposed in the previous version of the Local Plan were felt to be adequate to meet local housing needs. The occupants of the additional 800 homes will presumably move into the area from outside and many of those of working age will commute to work thus directly working contrary to Core Objective 4. Moreover many will travel to work by car and thus increase pressure on roads locally.

Ensuring Chipping Norton retains its special character as a Cotswold market town

The Local Plan recognises the special character of Chipping Norton:

‘Chipping Norton will strengthen its role as a centre of enterprise in the northern part of the District. It will continue to be an economically and socially strong market town serving the needs of a large rural area. Its distinctive historic character and fine setting will be conserved and enhanced at the same time as accommodating new development to meet identified needs.’ (paragraph 3.2)

The overall housing requirement (2,400) represents an 80% increase in the number of houses in Chipping Norton and would mean the population would increase from around 6,500 to almost 12,000. Similar towns locally which have seen this scale of growth have changed fundamentally and such a growth in population over a relatively short time period must put at risk the special character of the town.

Although provision has been made for an additional 9 hectares of business land it is unlikely that sufficient new jobs will be created in the town to support the majority of the people of working age living in the new homes in the ECNSDA. The Local Plan notes that 'the number of people living and working in the town has fallen from 50% to 36% since 2001' (paragraph 9.4.30). Undoubtedly that percentage will fall further if the current proposal to build 1,400 homes goes ahead.

The danger is that Chipping Norton will become more and more a dormitory town
for people working in London, Oxford and other places and that this will alter its fundamental character.

Resisting pressures for an out of town supermarket

With the likely increase in the population consequent on the building of 1,400 new homes in the ECNSDA it is surely only a matter of time before one of the major supermarkets puts forward plans for a large new store on the outskirts of Chipping Norton.

Places such as Witney have been able to build large supermarkets sufficiently close to the town centre that the new stores complement and support the town centre. There is no such site near to the centre of Chipping Norton.

Any large supermarket proposed in the future for Chipping Norton would be so far from the town centre that it would have a serious detrimental effect on the shops and businesses there.

There is real concern that WODC would not be able to prevent a future scheme for a large out of town supermarket going ahead given the significantly increased population and the financial and legal resources available to a major supermarket chain.

The Local Plan recognises this threat: ‘Chipping Norton is the main focus for retail and leisure activities within this sub-area. The town has a strong and diverse retail offer but remains vulnerable to out of centre development. We will through the Local Plan therefore seek to safeguard and reinforce the role of Chipping Norton Town Centre’ (paragraph 9.4.61). However there is no explanation of how pressures for ‘out of centre development’ will be resisted and this remains an area of real concern for local people given the plans to build so many new homes in the town.

Funding of measures to lessen the impact of the ECNSDA

Several areas will require significant investment if the current plans for the ECNSDA go ahead including:

* - Measures to reduce air pollution
* - Improvements to road safety in Chipping Norton
* - New road
* - Other improvements to roads in and around the town
* - Extra car parking
* - Improving conditions throughout the town and surrounding areas for pedestrians and cyclists, including accessibility to bus and rail services
* - New primary school
* - Significant expansion of secondary school
* - Mitigation measures for the impact on the Conservation Target Area (CTA) and the SSSI

Not all of this will come from developer funding. We are also in a time of reductions in council funding and economic uncertainty in the post Brexit era. In addition it has to be taken into account that there will be large demands for funding in all areas of WODC where substantial house building is proposed. It is therefore legitimate to ask:
where will the rest of the funding will come from in order to ensure that the building of 1,400 homes in the ECNSDA does not have major negative impacts on the town and its surrounding area?

If there really is a need for 1,400 new homes in the ECNSDA then market forces will ensure that developers and building firms will go ahead and build the houses. A real concern to local people is that the houses will be built but funds will turn out to be insufficient to ensure that the measures outlined above can be

The proposed level of housing at Tank Farm been increased from 600 – 1,400 dwellings, partly through allocation of land in the ownership of my Client, to the east of the proposed development area.

This expansion is supported and it is confirmed that the land is available, deliverable and developable.

My Client is working with other the other main landowners and promoters to bring forward the development.

The draft Plan could be considered unsound (not positively prepared or effective) if it does not provide enough housing and facilities in the earlier part of the plan.

The SDA will not make a significant contribution to the delivery of housing or community infrastructure, including the link road, until towards the end of the plan period (just 200 homes in the first 5 years). Therefore, there is a need for the other sites in Chipping Norton and the wider sub-area to make a difference early on by providing new homes, improved facilities and contributing to measures to help with traffic and air quality management.

Main 136 – Anticipated Housing Delivery in the Chipping Norton Sub-Area

2.41 Table 9.3 sets out the anticipated housing delivery in the Chipping Norton Sub-Area. The Sub-Area has been set an indicative housing requirement of 2,400 new dwellings to assist in meeting the District wide requirement of 13,200 new dwellings. As is clear from Table 9.2 the Plan as currently drafted, including the proposed new allocations in the Sub-Area would deliver only 2,326 new dwellings in the Sub-Area.

2.42 Clearly therefore not only is the overall Plan failing to make adequate provision for its housing requirement this is also specifically the case within the Chipping Norton Sub-Area. As discussed above in relation to the overall housing land supply, it is important that the Plan not only makes sufficient provision to meet the objectively assessed need for the District but also, as required by the NPPF, allows sufficient flexibility to allow for changing circumstances.

2.43 Whilst additional housing could be provided for through Neighbourhood Plans there is no guarantee of this, and no mechanism in place in the policy should they not deliver. Currently the only Neighbourhood Plan area designated in the Sub-Area is in relation to the made Chipping Norton Neighbourhood Plan, which does not allocate any sites for

<td>&gt; SECTION 9 - STRATEGY AT THE LOCAL LEVEL &gt; Chipping Norton Sub Area &gt; MAIN 136</td>
<td>Chipping Norton is a town of approximately 2,500 households (2011 census), and so in total the proposed development will roughly double the size of the town. Even without the proposed development at tank farm, the town is due to grow by almost 50%. Whilst it does make some sense to concentrate development in towns, to impose a doubling of the town's population in a short space of time is disproportionate. I submit, therefore, that the proposed development at Tank Farm should be removed from the plan - or significantly reduced to make the total provision of new housing more commensurate with the size of the existing town, and the facilities provided therein. Furthermore, whilst there is a small consideration in the proposal to provide some local employment, it is widely accepted that the majority of the new residents will need to commute to Oxford, or further afield. It should be noted that Chipping Norton is connected by an infrequent and slow bus service to Oxford only. Consequently, the majority of journeys are made by car - on already overly congested roads.</td>

<td>1861</td>
<td>&gt; SECTION 9 - STRATEGY AT THE LOCAL LEVEL &gt; Chipping Norton Sub Area &gt; MAIN 136</td>
<td>For reasons set out above in relation to other Proposed Modifications, the allocation of housing growth to the Chipping Norton Sub-Area is insufficient. It fails to have regard to the potential of the smaller settlements to accommodate growth. As is evident from the commentary in paragraph 9.4.6 of the Plan, the other principal settlements of Enstone and Middle Barton have historically been deemed to suitable for housing growth but, particularly in the case of Middle Barton, have not witnessed significant growth since the end of the 1990s. Given the overall growth requirements that must now be accommodated in the district, and the</td>
</tr>
</tbody>
</table>

consequences in terms of unprecedented housing delivery rates, a delivery-focused strategy must result in a greater distribution of development across the district. Moreover, given the imperative to front-load the clearance of the housing backlog, and to enhance the delivery trajectory during the early years of the plan period, both of which are reflected in the need to improve the five year supply of deliverable housing land, the allocation of smaller, immediately deliverable sites associated with lower order settlements must be included in the strategy.

Objection is therefore raised to the failure to include the omission site comprising land north of Holliers Crescent, Middle Barton within Table 9.3. The inclusion of the site is necessary to contribute to redressing the backlog, achieving and maintaining a five year supply of deliverable housing land, and 'meeting' the OAN during the Plan period. It is also required to maintain a sustainable rural settlement that provides a service centre role for its rural hinterland.

Inclusion of the site would be entirely consistent with the development strategy of the Plan, which is that:

Beyond the rural service centres, some development will be supported in the villages, but this will be limited to that which respects the village character and local distinctiveness and would help maintain the vitality of the local community. A number of site allocations are proposed to ensure the delivery of new housing on suitable, available sites. (para. 4.19)

The omission site is commensurate with the size of the village, will respect the village character and local distinctiveness, and will help to maintain the vitality of the local community. It should therefore be included in the site allocations to ensure the delivery of new housing on suitable, available sites.

We enclose a plan (Appendix 2) showing Sharba Homes interests at Chipping Norton. It currently features in the Strategic Housing Land Availability Assessment (SHLAA) as Site 270. An appeal was dismissed for a proposal to develop the whole parcel of land in 2014, primarily due to its impact on the setting of Bliss Mill. The location within the AONB and Conservation were also of concern, however sensitive developments in such locations have been justified elsewhere in the face of the urgent need for housing, such as Burford Road, Penhurst School, and further afield in Milton-under-Wychwood and Stonesfield. However we now propose a far reduced site area which addresses the core reason for refusal, in that it does not a) impinge on the primary rural setting of the Mill and b) it does not impinge beyond the urban backcloth from the main viewpoint of the Mill. The residual impacts of the development can be mitigated by sensitive design and landscaping as has been achieved in similar locations elsewhere in the District.

Chipping Norton has had its target for housing increased from 400 to 2400 during the numerous

<td>Dunleavy</td>
<td>445</td>
<td>&gt; SECTION 9 - STRATEGY AT THE LOCAL LEVEL &gt; Chipping Norton Sub Area &gt; MAIN 136</td>
<td>I am a resident of Chipping Norton and wish to submit comments on the following Main Modifications to the Local Plan: MAIN 136 MAIN 138 MAIN 139 MAIN 140 MAIN 142 MAIN 143 There are two important changes which are described in these sections: the proposal to increase the number of homes in the ECNSDA from 600 to 1,400 and the proposal for a new ‘eastern link road’. My comments are concerned with these two major proposed changes. I am opposed to the increase in the number of homes in the ECNSDA from 600 to 1,400 for a number of reasons including the following: * this change goes against some of the Council’s own Core Objectives as specified in the Local Plan document e.g.: “CO4 Locate new residential development where it will best help to meet local housing needs and reduce the need to travel” (paragraph 3.7). The previous version of the Local Plan proposed 600 homes in the ECNSDA. This was presumably felt to meet local housing needs. 2,400 additional homes in Chipping Norton is a ludicrous notion. It is the consequence of flawed Government analysis which will only compound the issues facing the country: - There are already enough houses in the country. Most of them are no longer affordable to those who need them, and many are located away from London and the South East; - Housing should not be a “commodity” to be traded and used as a means of creating wealth. Building more houses benefits, mostly if not exclusively, house builders. There is no longer any meaningful link between the price of a house and average pay. House prices in London, inflated at the high end by foreign and other “investors” has completely distorted the rest of the “market” in London and knocked on to the rest of the country; - Emphasis should be place on moving away from home ownership and new housing should be rental, public and private. Renting a house should not carry a stigma. Owning a house should not be a means to creating excessive wealth. - The Government has fuelled the dramatic rise in house prices by allowing London and the South East to soak up investment. HS2, Cross Rail, Heathrow expansion are all massive projects that benefit London and serve to further alienate the rest of the country.</td>
</tr>
</tbody>
</table>
Adding a further 800 homes does not ‘locate new residential development where it will best help to meet local housing needs’.  
* The change from 600 to 1,400 homes is an increase of around 250% but the Local Plan does not specify why such a large increase is necessary.  
* The Chipping Norton Transport Options Study informed the preparation of the latest version of the Local Plan. The Local Plan and the Transport Options Study report admit that even with the eastern link road by 2031 traffic in the town centre will have increased.  
* This will mean that the centre of Chipping Norton (which is already an AQMA) will have higher levels of air pollution with the increased detrimental effects on the health of local people.  
* The centre of Chipping Norton is already an accident blackspot with 19 fatal and serious RTAs on the A44 as it passes through Horse Fair over the last three decades. Extra traffic will increase the likelihood of further worsening of road safety in the town which is contrary to the Council’s commitment to ‘address the relatively high rate of fatalities and serious injuries on the District’s road network’ (paragraph 2.40).  
* There are therefore a number of profound and possibly detrimental implications of the proposal to increase the number of homes in the ECNSDA to 1,400. A significant concern for local people is that the houses will be built without the funding materialising to pay for the mitigation measures. This fear is magnified since but the Local Plan does not contain any costed plan as to how these will be managed.  
* The Local Plan says that even with 1,400 homes at the ECNSDA the town centre will not be adversely affected. If this is the case then it must be envisaged that most people living there will do their main shopping in the town centre shops and/or the Aldi store. This will further increase traffic in the town. Was this factor taken into account in the Transport Options Study?  
* The Local Plan talks about a demand for business space in the town but this demand is not quantified. Space has been allocated for this purpose but there is no indication of how additional jobs will be created in the town. The concern is that if 1,400 homes are built at the ECNSDA then without a significant level of new employment in the town Chipping Norton will become a dormitory town with the vast majority of the residents in these new homes commuting to work adding to pressure on roads and contrary to the Local Plan’s Core Objective CO4.  

In summary I would like to state that I do not believe that the proposal to increase the number of homes at the ECNSDA from 600 to 1,400 is in the best interest of the people of Chipping Norton.

| MM315         |                         | Richard Gwinn   |                  | Gwinn             | 574       | > SECTION 9 - STRATEGY AT THE LOCAL LEVEL > Chipping Norton Sub Area > MAIN 136 | his modification increases significantly the number of properties to be built in the Chipping Norton SDA. This is backed up by unsound evidence and is not appropriate to the existing community. In particular:  
  a) Part of the Vision in section 3.2 is to “play a role in helping to meet wider needs, without significant change to the intrinsic character of the District.” Increasing the population of the town by 50% will inevitably change its character. Especially as the driver for the increase is the need to house those working in Oxford, so turning a working town into a dormitory town.  
  b) Core Objective CO2 is to “Ensure that new developments are suitably located and well designed to protect and enhance the individual form, character and identity of our towns and villages as well as contributing to the quality of life in West Oxfordshire.” This fails for the same reasons as the Vision statement.  
  c) Core Objective CO3 is to “Promote safe, vibrant and prosperous town and village centres and resist proposals that would damage their vitality and viability or adversely affect measures to |
improve those centres.” Whilst a modest increase in population will help the town, this huge increase, aimed at commuters into Oxford, will be detrimental. The plan mentions that the proposed development is within walking and cycling distance of the town centre, although it offers no evidence to support this. I visit the town centre most days and have never seen more than one bicycle in the cycle parking there. The area around the town is too hilly for most of the population to cycle. A straw poll of people living in the Parkers Circus estate (which is closer to the town centre than is the SDA) indicates that none walk when going into town to do their shopping. These were all fit, active people. The town centre is also not safe. In the last few years, people have been killed by passing traffic while on the pavement at Horsefair. The proposed link road appears to be a “road to nowhere” as the majority of traffic (especially commercial traffic) enters or leaves the town on the A44 Moreton-in-Marsh road. This will become even more the case if a weight restriction is put on the ancient bridge in Burford, as has been suggested. In that event, no heavy vehicles will use this relief road. This increase in traffic will also affect air quality, which is already at illegal levels.

d) Core Objective CO4 is to “Locate new residential development where it will best help to meet local housing needs and reduce the need to travel.” Policy T1 – Sustainable Transport says that “Priority will be given to locating new development in areas with convenient access to a good range of services and facilities and where the need to travel by private car can be minimised, due to opportunities for walking, cycling and the use of public transport, particularly where this would help to reduce traffic congestion on the routes around Oxford and the Air Quality Management Areas at Witney and Chipping Norton.” The increase proposed in the modification is mainly to serve Oxford. There is no train link to Oxford. The bus to Oxford takes over an hour and is infrequent. The bus service from Kingham Station does not wait if a train is delayed, resulting in a possible two-hour wait for the bus that meets the next train. I see no solution to this problem as buses have to keep to timetables. Everyone I know has stopped using this bus, resulting in more car journeys and a station car park that can’t cope. The alternative is to travel to the station by driving through country lanes and the village of Churchill in contravention of Policy T1. The increased local traffic will make air quality worse. There is nothing in the proposed plan to solve these problems.

e) The proposed plan states in para 7.74 that “In Chipping Norton public car parking spaces in the town centre are insufficient to meet current needs.” There is nothing in the proposed plan to solve this problem.

General comments.
Chipping Norton is one of the highest towns in West Oxon and is built mainly on hills with narrow streets except for the main roads of M4 and A36f in places the underground infrastructure (overflowing sewers/rainwater drainage - shared system) is already creaking with too much use and the road problems we have are well documented and accepted as being unfit for purpose by OCCA/VODC with a serious air quality problem in the centre of town. It might also be worth mentioning here that when an OCC employee was recently asked 'how many of West Oxfordshires main A roads are fit for the very large HGV’s we see nowadays? The answer was 'none of them'!

CHIPPING NORTON NEIGHBOURHOOD PLAN - on 3rd March 2016 a referendum was held in the town accepting the CNNP which was then adopted. In this plan it was mentioned in several places that any future development has to be sustainable and it is felt that whilst 600 homes on Tank Farm were possibly sustainable 1400 homes are not - please see notes 213141516 below. It is felt that WODC in their draft Local Plan entirely ignoring the spirit of the CNNP.
In February 2014 the Town accepted that it would have to take some new houses and reluctantly agreed that 600 on the area known as Tank Farm (the south half of the SDA) could be acceptable subject to suitable planning and mix of houses and infrastructure.

Little contact has been made since then except for a plan that was attached to a planning application in the nearby area in the middle of 2015. Nothing officially has been given since the meeting on 14th February 2014 until 23rd August 2016 when in a meeting between CNTC and OCC a plan using 800 homes plus 80 extra care beds was tabled and alterations suggested including no access at the southerly perimeter.

The next contact was the recent suggestion of 1400 houses. Considering that the allotment land to the south of the SDA is owned by the Town it seems strange that discussion about the possible of purchase of any land requirement has not yet happened - for sake of absolute clarity the William Fowler Allotment land is not for sale.

We also get the impression that some pressure might have been brought to bear on local land owners to go along with OCC plans - and please bear in mind that the majority of the land we are discussing is owned by OCC - thank goodness there are some 'ransom sites' to protect the town from being totally overrun and spoilt.

We also feel that discussions with other stakeholders have not taken place - we back this statement up with the recent planning application at the Pillars which is adjacent to the northern edge of the SDA with no vehicular access which apparently shows no coherent masterplan. Chipping Norton Town Council totally reject the new local plan for the SDA for the following reasons in brief:-

1) 1400 new homes on Tank Farm are not sustainable
2) The local employment of residents has fallen over the last 10 years and is now below 30%
3) The majority of local employment tends to be 'low paid' jobs in retail catering and caring sectors
4) 'High paid' jobs i.e. professional or technical jobs tend to be in what is now called the 'knowledge spine' which is difficult to access from Chipping Norton unless you drive as we have a poor train and bus service
5) Narrow and congested roads (including the main A44/A361 at Horsefair where the worst pollution in Oxfordshire has been ignored for many years by OCC and WODC. The best long term solution to Horsefair are the road improvements needed around the Rollright Stones, which have been discarded due to cost - now budgeted at £18 million by OCC's consultants
6) The cost of the Eastern Relief road has not yet been tabled but has to be close to the figures in 5)
7) The traffic figures being used from the survey carried out by WYG are erroneous - two points immediately stand out - a) it is stated that there have been no traffic related accidents in Horsefair in the last 5 years - we know that there have been 3 DEATHS in the period and b) it is stated that the busiest time of the day on Burford Road (A361) at Chipping Norton School (a large comprehensive 1200 pupils) is between 0700 and 0800, but in reality this is really 0815 to 0845.
8) We dispute the figures given to us by OCC and others which show that only 30% of the HGV's that transit through Horsefair use the 4361 towards Burford and a massive 10% use the A44 east and west towards Oxford/Moreton-in-Marsh/Evesham and the 4361 north to Banbury.

We have been advised by independent traffic consultants that the figures are probably nearer to 15% respectively 85%. We therefore consider the Eastern Relief Road to be ill-advised.

9) An independent expert has recently been shown our traffic problem and has walked around the town and agrees with the Town Council that a one way system using Albion Street and the High Street would go a long way to deter HGV’s improve the air quality ease congestion and add few badly needed parking spaces. This could be achieved comparatively quickly and at a much lower cost than building either road.

10) Parking according to WODC’s figures this town is on average at 110% capacity when it comes to public carparks and on-street parking. A second storey on New Street car park would help alleviate the problem but would not completely resolve the problem.

<tr>
<td>MM741</td>
<td>CPRE Oxfordshire</td>
<td>Helen CPRE Oxon Mrs Marshall</td>
<td>Mrs Marshall 1604</td>
<td>&gt; SECTION 9 - STRATEGY AT THE LOCAL LEVEL &gt; Chipping Norton Sub Area &gt; MAIN 137</td>
<td>The major change to the Local Plan for Chipping Norton is the increase from 600 to 1,400 homes (almost a 250% increase) at the East Chipping Norton Strategic Development Area (ECNSDA), known locally as Tank Farm - reference: MAIN 136 to MAIN 144 inclusive. There is also a new proposal for an ‘eastern link road’ which is also covered in changes MAIN 136 to MAIN 144 to the Local Plan. CPRE wishes to raise objections to these proposed changes on the following grounds. Air Quality WYG were appointed by Oxfordshire County Council to prepare a strategic Chipping Norton Transport Options Study (CNTOS). This study concluded that ’Given that an existing AQMA is already declared in this location, it might be reasonable to conclude that all development options would be likely to exacerbate air quality management issues’ (paragraph 11.1.6 of the report). The building of 1,400 homes at Tank Farm was one of these development options.</td>
<td></td>
</tr>
</tbody>
</table>
The report also notes ‘in each case predicted traffic volumes on the A44 High Street / Horsefair corridor would be expected to increase reasonably substantially over and above the 2016 surveyed flows, exacerbating existing environmental degradation (notably air quality issues) within the town centre (paragraph 10.1.2). The study also attempted to ‘identify potential mitigation measures that would offer realistic scope to both accommodate development and help to mitigate the impact of this development and existing environmental issues within the town centre, notably associated with the declared AQMA on the A44 High Street / Horsefair (plus the southern section of the A361 Banbury Road and West End)’ (paragraph 9.1.3). The report concludes that ‘the three outline schemes assessed (the Rollright bypass, central area zonal weight restriction and town centre gyratory) would likely be unsuitable mitigation options for a variety of reasons including preclusive cost, lack of likely effectiveness and / or unacceptable knock-on impacts’ (paragraph 10.6.1). The transport consultants employed by OCC and WODC therefore believe that the ECNSDA would worsen air quality management issues in the centre of Chipping Norton and that the 3 possible mitigation schemes to reduce the air pollution are not viable.

The existing AQMA has been in operation for many years and no solution has been found to this problem. The existing levels of air pollution in the centre of Chipping Norton are already adversely affecting the health of people living and working there. Yet WODC is proposing to build new houses in Chipping Norton which will worsen air pollution and increase the risk to health of people in centre of the town without having a viable strategy for reducing these levels. It could be argued that NO ADDITIONAL HOUSING should be allowed until a workable solution to the existing air quality problem is devised, implemented and shown to be effective.

Road Safety

Road safety issues in the centre of Chipping Norton are very closely connected with the problem of air pollution: both are caused by modern levels of traffic trying to get through an ancient market town the central area of which was originally laid out in the 13th Century.

Horse Fair is the narrowest part of the A44 as it passes through the town. Here the road is narrow as are the pavements. This puts vehicles and pedestrians into close proximity. It has been the site of several fatal accidents in recent years. Road safety concerns are not restricted just to the Horse Fair. Local people also know that it is becoming increasingly difficult to cross several of the roads in the town centre safely because of the increased volume of the traffic as well as vehicles being driven at speeds inappropriate for the town centre.

The Local Plan accepts the need for the Council to ‘address the relatively high rate of fatalities and serious injuries on the District’s road network’ (paragraph 2.40). Work needs to be carried out to identify measures to improve safety in Horse Fair and other areas within the centre of the town. It also needs to be identified how these improvements will be funded. Again all of this work needs to be carried out before significant development is allowed to go ahead at the ECNSDA.
The increase from 600 to 1,400 homes at the ECNSDA has profound implications for traffic in Chipping Norton and the surrounding area. The Chipping Norton Transport Options Study informed the preparation of the latest version of the Local Plan and in particular supported the option for 1,400 homes at the ECNSDA together with the Eastern Link Road. This option is of course the major change from the previous version of the Local Plan for Chipping Norton and is referenced in MAIN 27, MAIN 136 and MAIN 138 to MAIN 144 inclusive. This section of these comments outlines some concerns in a number of areas concerning traffic and arising from these changes to the Local Plan:

· The way the Transport Options Study was carried out
· The findings of the Transport Options Study
· Other traffic related comments

The way the Transport Options Study was carried out

The Transport Options Study report is an important document which played a major part in influencing the decision to put forward the 1,400 homes at the ECNSDA option in the Local Plan. Important decisions are to be made with respect to the future of Chipping Norton based on the findings of the study. Does a study which was principally carried out on one day only provide sufficiently robust and accurate data on which to base these crucial decisions?

The manual traffic counts and the ANPR surveys were carried out on a Tuesday in March and were intended to assess “normal” traffic conditions. However there are times of the week when traffic in Chipping Norton tends to be heavier than normal principally Monday mornings and Friday afternoons. Also Wednesdays tend to be busier because of the weekly market. Why weren’t the surveys carried out during these busier times of the week?

In the summer many visitors and tourists come to Chipping Norton or pass through it on the way to see the Cotswolds or to visit major tourist attraction such as Blenheim Palace. There are not many tourists or visitors who choose to come to the area in early March which is when the traffic surveys were carried out. In the spring and summer there is also likely to be an increase in HGVs travelling to and from the fruit and vegetable growing areas in Worcestershire and other areas to the west of the town. Why wasn’t the traffic survey work repeated again say in June in order to assess whether the traffic levels are significantly higher at that time of year?

The ANPR count locations were positioned such that they may have missed a substantial amount of local traffic within the town e.g. parents living in the areas off West Street/Churchill Road taking children to the Chipping Norton School and local residents driving into the centre to shop.

The findings of the Transport Options Study

The Transport Options Study report paints a bleak picture of what will happen to traffic in Chipping Norton if 1,400 homes are built at the ECNSDA even with the
proposed Eastern Link Road:

* Increased traffic through Chipping Norton as outlined in paragraph 11.1.21 of the report:
  "However, delivery of the new eastern distributor road as a stand-alone measure would be insufficient to fully offset and mitigate the impact on the town centre of the traffic growth anticipated by 2031 (both resulting from development on the Tank Farm site and general background growth on the network anticipated by this time). Furthermore, the beneficial minimisation of additional traffic flows on the A44 High Street would come at a cost of increasing traffic on peripheral routes around the town resulting from a combination of redistribution and the increased level of development on the Tank Farm site."

* The report also reports that this option "would be likely to exacerbate air quality management issues" – paragraph 11.1.15.

* The health of residents and people working in the centre of Chipping Norton would be put further at risk – see section CN4 above.

* Three mitigation options were examined and all were judged to be unsuitable for a variety of reasons – paragraph 10.6.1
In addition the study reports that the computer modelling of future traffic flows predicts that 2 of the main junctions in Chipping Norton would "operate well in excess of their theoretical capacity" and that the other 3 "would all remain operating within or, worst-case, at capacity for all of the potential development scenarios" – paragraph 11.1.16.

The report goes on to say that the computer software used may underestimate the capacity of roads in towns such as Chipping Norton and seeks to compare them with roads in other towns. The conclusion at this point is that "the operational impact of additional traffic flows resulting from each of the development scenarios on the existing network might be far less onerous than the model results indicate" – paragraph 11.1.17. At the very least this suggests that the future performance of the main road junctions within Chipping Norton are difficult to predict and that if the computer modelling turns out to be correct then two of those junctions will be operating well above their capacity.

Other traffic related comments

The Transport Options Study calculated ‘the estimated delivery costs of upgrading an existing route via Rollright Lane and the A3400 to the north of the town to act as an east-west bypass of the town serving as an alternative for through-movements of traffic on the A44’ – paragraph 10.3.3 and Figure 31. The study report then goes on to say that ‘this option was considered unviable on the grounds of cost’ – paragraph 11.1.18.
However neither in the Local Plan nor in the Transport Options Study report is there any calculation of estimated delivery costs of the proposed Eastern Link Road. This seems a surprising omission as it makes comparisons between the 2 schemes impossible. It leaves unanswered the question of whether the funding for the proposed Eastern Link Road would be better spent on the upgrading of the Rollright/A3400 route.

Paragraph 9.4.40 of the Local Plan (MAIN 138) contains the statement with reference to the proposed 1,400 homes and the Eastern Link Road: ‘..... there could also be a diversion of a large proportion of HGV movements from Chipping Norton Town Centre, thereby possibly having a beneficial effect in terms of improving air quality - a key issue for the town.’.

A similar claim is made in paragraph 9.4.56 (MAIN 142). But doesn't the Transport Options Study for Chipping Norton conclude that ‘delivery of the new eastern distributor road as a stand-alone measure would be insufficient to fully off-set and mitigate the impact on the town centre of the traffic growth anticipated by 2031’ (paragraph 11.1.21)?

The Transport Options Study report also concludes that this option ‘would be likely to exacerbate air quality management issues’ - paragraph 11.1.15.

Chipping Norton has been waiting for a solution to its traffic related problems for decades:

* The use of the Rollright/A3400 route to remove traffic for the centre of the town has been in discussion for many years.

* The town has been experiencing severe air quality issues and the associated detrimental effects on people’s health for at least a decade.

* An AQMA for the centre of Chipping Norton has now been in operation for over 8 years with no significant remedial action being taken.

* The same area covered by the AQMA is also an accident blackspot with a record of a fatal accident every 12 years and a serious RTA every 2 years on a stretch of road that is only about 200 metres in length.

* All the time traffic through Chipping Norton increases and these problems get worse.

When the latest version of the Local Plan proposes a huge increase in the number of houses in the town would it not be reasonable to expect that the document would propose measures which would alleviate Chipping Norton’s traffic related problems. However all that is offered is a proposal that will in fact increase traffic in the town with all the consequent detrimental effects of this including a predicted worsening of the air quality problems. Is it unrealistic for the town’s residents and visitors to expect a better solution than this?
Local residents as well as visitors are well aware of the current problems with regard to car parking in Chipping Norton. This is recognised in the Local Plan: ‘The availability of adequate public parking capacity is a key constraint in Chipping Norton’ (paragraph 9.4.30) and ‘Improvements to the efficiency and availability of public car parking in Chipping Norton will be sought as appropriate’ (paragraph 9.4.60).

The Local Plan states: ‘The scale and mix of uses in the local centre would be intended to meet the needs of the development and not compete with the Town Centre’ (paragraph 9.4.49). This presumably means that a large proportion of the people living in the proposed ECNSDA would use the town centre shops together with the Aldi store to do their main shopping. A few people may walk, cycle or use public transport when shopping in the centre of Chipping Norton. However given the distance especially from the far parts of the ECNSDA to the town centre together with the fact that there would be a hill to climb on the way back most people will use their cars when shopping in the town and especially if doing a large weekly shop.

The increase in the number of homes in the ECNSDA from 600 to 1,400 will therefore increase significantly the need for extra car parking in the town centre. Land in or adjacent to the town centre is very scarce in Chipping Norton. Before development is permitted at the ECNSDA the problem of how to provide significant extra car parking capacity in the town centre needs to be resolved and funding secured for this.

School capacity
The Local Plan recognises the need for significant increases in school provision if the enlarged ECNSDA goes ahead: ‘it is a requirement of any proposed development on this site that a new primary school will be provided. The site is close to the existing secondary school where there is adequate capacity to absorb additional pupil numbers despite the increased size of the allocation’ (paragraph 9.4.48). The overall housing requirement (2,400) represents an 80% increase in the number of houses in Chipping Norton and would mean that the population would increase by around the same percentage. It is also appropriate to assume that the number of school age children would rise by around the same order of magnitude requiring a new primary school approaching the size of the existing primary schools added together. Chipping Norton School would also have to almost double its existing size.

The main issue with regard to increasing school capacity at both the primary and secondary levels would appear to be ensuring that adequate funds are available to carry this in time to cope with the increased demand – see below for a discussion of the funding requirements of the enlarged ECNSDA.

Meeting the housing needs of local people
One of the Core Objectives identified in the Local Plan is: ‘CO4 Locate new residential
development where it will best help to meet local housing needs and reduce the need to travel’ (paragraph 3.7).
Locating 1,400 homes at ECNSDA does not support this Core Objective. Presumably the 600 homes proposed in the previous version of the Local Plan were felt to be adequate to meet local housing needs. The occupants of the additional 800 homes will presumably move into the area from outside and many of those of working age will commute to work thus directly working contrary to Core Objective 4. Moreover many will travel to work by car and thus increase pressure on roads locally.

Ensuring Chipping Norton retains its special character as a Cotswold market town

The Local Plan recognises the special character of Chipping Norton: ‘Chipping Norton will strengthen its role as a centre of enterprise in the northern part of the District. It will continue to be an economically and socially strong market town serving the needs of a large rural area. Its distinctive historic character and fine setting will be conserved and enhanced at the same time as accommodating new development to meet identified needs.’ (paragraph 3.2)

The overall housing requirement (2,400) represents an 80% increase in the number of houses in Chipping Norton and would mean the population would increase from around 6,500 to almost 12,000. Similar towns locally which have seen this scale of growth have changed fundamentally and such a growth in population over a relatively short time period must put at risk the special character of the town.

Although provision has been made for an additional 9 hectares of business land it is unlikely that sufficient new jobs will be created in the town to support the majority of the people of working age living in the new homes in the ECNSDA. The Local Plan notes that ‘the number of people living and working in the town has fallen from 50% to 36% since 2001’ (paragraph 9.4.30). Undoubtedly that percentage will fall further if the current proposal to build 1,400 homes goes ahead.

The danger is that Chipping Norton will become more and more a dormitory town for people working in London, Oxford and other places and that this will alter its fundamental character.

Resisting pressures for an out of town supermarket

With the likely increase in the population consequent on the building of 1,400 new homes in the ECNSDA it is surely only a matter of time before one of the major supermarkets puts forward plans for a large new store on the outskirts of Chipping Norton.

Places such as Witney have been able to build large supermarkets sufficiently close to the town centre that the new stores complement and support the town centre. There is no such site near to the centre of Chipping Norton.

Any large supermarket proposed in the future for Chipping Norton would be so far from the town centre that it would have a serious detrimental effect on the shops and businesses there.
There is real concern that WODC would not be able to prevent a future scheme for a large out of town supermarket going ahead given the significantly increased population and the financial and legal resources available to a major supermarket chain.

The Local Plan recognises this threat: 'Chipping Norton is the main focus for retail and leisure activities within this sub-area. The town has a strong and diverse retail offer but remains vulnerable to out of centre development. We will through the Local Plan therefore seek to safeguard and reinforce the role of Chipping Norton Town Centre' (paragraph 9.4.6). However there is no explanation of how pressures for 'out of centre development' will be resisted and this remains an area of real concern for local people given the plans to build so many new homes in the town.

Funding of measures to lessen the impact of the ECNSDA

Several areas will require significant investment if the current plans for the ECNSDA go ahead including:

* Measures to reduce air pollution
* Improvements to road safety in Chipping Norton
* New road
* Other improvements to roads in and around the town
* Extra car parking
* Improving conditions throughout the town and surrounding areas for pedestrians and cyclists, including accessibility to bus and rail services
* New primary school
* Significant expansion of secondary school
* Mitigation measures for the impact on the Conservation Target Area (CTA) and the SSSI

Not all of this will come from developer funding. We are also in a time of reductions in council funding and economic uncertainty in the post Brexit era. In addition it has to be taken into account that there will be large demands for funding in all areas of WODC where substantial house building is proposed. It is therefore legitimate to ask: where will the rest of the funding will come from in order to ensure that the building of 1,400 homes in the ECNSDA does not have major negative impacts on the town and its surrounding area?

If there really is a need for 1,400 new homes in the ECNSDA then market forces will ensure that developers and building firms will go ahead and build the houses. A real concern to local people is that the houses will be built but funds will turn out to be insufficient to ensure that the measures outlined above can be

<td>993</td>
<td>MAIN 137 para 9.4.36 Parker Knoll Site: business use and replacement allocation</td>
<td>Stagecoach notes the deletion of the paragraph. A relatively small part of this site is currently used as an Operating Centre by Stagecoach to support the operation of service S3 (Chipping Norton/Charlbury – Woodstock – Oxford) in particular. This site is subject to active redevelopment proposals that are likely to require Stagecoach to find an alternative, if early morning departures and late evening services are to continue to be offered on the route. A replacement “outstation” site is very likely to be needed. Stagecoach further notes that the enlarged allocation East of Chipping Norton (MAIN 138) makes specific provision for commercial uses on a 9Ha site north of London Road forming part of a proposed enlarged allocation. This site could provide suitable replacement premises to accommodate both existing operational requirements, and their likely expansion in support of the higher levels of demand likely to arise from the planned growth of the town.</td>

<td>MAIN 138</td>
<td>When the Local Plan was originally developed, it made sense to concentrate housing developments in the three market towns. However, it is not appropriate to merely extrapolate the original allocations to take the additional numbers required by the Inspector and the SHMA. In particular, it is not sustainable to allocate an additional 800 homes to the Chipping Norton SDA. The percentage of residents employed locally has been falling steadily over the last decade and is now below 30%. Employment growth in the County is centred on the ‘knowledge spine’ running from Bicester through Oxford to the South. Chipping Norton is too inaccessible to attract significant potential employers, who will want to locate near the clusters along the spine. Nevertheless it will still be appropriate to safeguard the allocation of 9 Ha for business use on the land north of the London Road, separated from dwellings. The main employment locally is for ‘minimum wage’ jobs in retail and caring sectors. New residents looking for professional or technical jobs will be forced to commute by car using the sub-standard A44 towards Oxford or the more dangerous A361 towards Banbury. The bus service to Oxford only runs hourly and has to cope with the severe congestion in the Wolvercote roundabout area. Access to the North Cotswold railway line at Kingham is also difficult – the connecting bus service is now sparse and unreliable following the County Council cuts, not as implied in para. 7.58. The additional 800 homes must be allocated nearer to Oxford with easy access to a railway line,</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>
thereby linking easily to the main employment areas in the County. The modified Plan already picks up on this logic, by proposing the Eynsham garden village with good links to Hanborough station (and with the potential to be eventually linked to a re-opened railway line to Witney) and with employment areas nearer to the ‘knowledge spine’ clusters. The Chipping Norton "800" should therefore be reallocated to the Eynsham area or sites even nearer to Oxford, with a start date earlier than the 2021 proposed for the garden village.

The Chipping Norton Eastern Link Road proposed as part of the Tank Farm SDA will not achieve the reduction in HGVs through the town centre - the vast majority of HGVs are on the A44 towards Evesham, not on the A361. The link road will be a "road from nowhere to nowhere". The money on the link would be wasted and reduce the likelihood of achieving a proper Chipping Norton by-pass on the A44.

The commercial viability of the Stagecoach S3 bus to Oxford and the availability of a cadre of local drivers is dependent upon an overnight bus park in Chipping Norton. As part of the masterplan for the Tank Farm development a site of at least 0.3 Ha should be set aside for this vital bus parking.

The dramatic increase in housing proposed for Tank Farm is excessive and completely out of proportion with the layout of the town especially with the large number of houses that are already being built. The original number of 600 that was proposed was already too large, but to increase this to 1400 is ridiculous as there is no local demand for this number of housing and a large number of homes will be far too excessive for local people and, so called ‘affordable housing’ is a misnomer as many locals cannot afford these. It also drives up the prices of the existing housing stock.

There has been little provision or thought for employment. Some companies, within Chipping Norton who want to expand and cannot get office space and especially not affordable space to build. This plan has no provision for for this so will drive these companies out of town causing more people to travel - mainly by car as many bus routes have been cut.

Many new people moving to this development will be from out of town so will be working in larger surrounding towns - travelling to other towns like Banbury, Witney, Stratford, Oxford or Cheltemham causing increased car usage and traffic problems. Chipping Norton already has a problem with traffic and pollution - this will only make it worse and could actually take trade away from what is a thriving town centre.

The ‘sweetener’ of a link road would not be effective as most traffic is on the A44 and is not heading to or from Burford - meaning that they would still have to go through the centre of town. I believe that Burford is also considering a weight limit.

Main 138: Paragraphs 9.4.40–9.4.50

8.16 Paragraphs 9.4.41-9.4.43 seek to explain the basis for increasing the size of the allocation from the 500 homes proposed in the Local Plan consultation paper (August 2014) to 1,400 homes proposed through the Main Modifications. Whilst this commentary is helpful to those commenting on the main modifications to gain an appreciation of the Council's approach, it is unnecessary for such text to be included in the final adopted Local Plan; the Local Plan policy approach should be supported and justified by the Local Plan’s evidence base. In accordance with the NPPF, the evidence base should be adequate, up-to-date and relevant in respect of the economic, social and environmental characteristics and prospects of the area (paragraph 158), GL Hearn therefore recommends deletion of these paragraphs.
8.17 In this regard, the commentary provided through this Plan modification fails to demonstrate a sound basis for the uplift in the scale and capacity of the allocation. Paragraph 9.4.42 advises that the site is not affected by flooding or heritage assets despite the presence of known potential archaeological significance in the area and the relative proximity of the site to the town centre, which is covered by a Conservation Area and contains numerous listed buildings. The text goes on to state that there are no significant constraints to the site coming forward, notwithstanding the site's location within the setting of the Cotswold Area of Outstanding Natural Beauty and the loss of best and most versatile agricultural land which the SA Addendum Report maintains as a major negative effect of the enlarged allocation (paragraph 4.42). Indeed the impact of the proposals on the landscape is entirely overlooked through the proposed modifications.

8.18 Whilst it is acknowledged that the site lies outside of the AONB and is relatively flat, significant outward expansion of Chipping Norton on the scale proposed in an elevated location close to the AONB would inevitably have an impact on landscape, which it would be reasonable to conclude may be adverse. A thorough up to date assessment based on the proposed scheme (not an earlier, smaller iteration) is essential before any firm conclusion can be drawn as to the soundness of the allocation.

8.19 At the time of the Pre-Submission Local Plan, the allocation of Tank Farm for 600 homes was based on the landscape evidence provided by the Chipping Norton Landscape Assessment (CNLA) (2009) prepared by Amanda Hopwood Landscape Consultancy64 and the Kirkham Landscape and Visual Review of Strategic Site Options (2014)65.

8.20 The CNLA assessed Tank Farm as part of the wider Area E1 "East of Chipping Norton: Plateau". It describes the area as plateau with a ridge side falling and steepening to the south east:

Much of the area is a high open landscape with high intervisibility...Development on the highest flatter ground [Tank Farm] would be prominent, but is capable of being screened; without screening it is an intrusion into the rural landscape to the south and east and at odds with the generally soft edges of the town.(ES29, CNLA).

8.21 The CNLA's findings continue at ES30:

Large scale development would be extremely prominent in the sloping edge of ridge location. A small scale extension no higher than 2 storeys into the field immediately east and south of the water tower could be acceptable, but only if set within a strong planted belt.

8.22 These findings were deemed to limit the potential for large scale development, of the type now proposed via the Local Plan modifications, at Tank Farm. They supported the identification of a single field, immediately south of the development known as Parker's Circus, avoiding further substantive incursion into the open countryside.

8.23 The area of land proposed through the Main Modifications for 200 homes and 9 hectares of employment uses was assessed by the CNLA as part of Area D. This relatively flat plateau sits immediately alongside the Cotswold AONB and has high local and medium district landscape/visual importance, with medium-high landscape/visual sensitivity. The assessment found that enclosure and screening of the site is fragile and any development near the south/east of the area would need wide additional screening belts along London Road and to the east of the development to mitigate...
8.24 The Kirkham Landscape and Visual Review of Chipping Norton Strategic Site Option 204 (May 2014) (LVR) was based on an assessment of Site 204 (38ha) taken from the Strategic Housing Land Availability Assessment (Figure 1F). The LVR acknowledges that the site lies within the setting of the Cotswold AONB (paragraph 3.1).

8.25 The LVR concluded that the proposed site option is:
In a sensitive landscape and visual location within E1 and (its development) will inevitably lead to an adverse landscape and visual impact on the perception of the eastern edge of the town and extend the town beyond its current containment by the ridgeline...A landscape-led approach to siting, layout, mass and scale of the development is therefore essential. (Paragraph 8.4, GL Hearn emphasis).

8.26 Whilst the LVR acknowledges that the impact of the development on the AONB should be low, this would be the case only if the following recommendations are met:

1. Exclusion of land south-east of the site (Table 8.3 recommends that the south-eastern part of the site option is omitted and retained as open fields due to the strong connection with the rolling landscape);
2. Development areas broken up by large-scale provision of open space, tree and woodland planting;
3. Provision of extensive tree belts including advance planting of major tree belts/woodland areas (minimum 30m wide) along the 220m contour plateau edge east of the water tower and school;
4. Design and layout to reflect the small-scale character of the town in a landscaped historic pattern.

8.27 Due to the sensitivity of the site; the elevated position and prominence in the landscape (viewed from the east); and location within the setting of the AONB, the LVR was able to support an estimated housing capacity limited to 500 homes on a development area smaller than that promoted through the SHLAA Update (2014).

8.28 The Council’s landscape evidence has not been refreshed to support the proposed modifications, and therefore the conclusions of LAN5 and LAN2 constitute the most up to date evidence to inform the proposed allocation of the SDA at Chipping Norton.

8.29 On this basis there is a surprising lack of evidence and justification for the expansion of the SDA as proposed; which comprises substantial expansion of the development area to the north and east and a more than doubling (133%) of the quantum of development. On the basis that the Council’s own landscape evidence does not support development on this scale (within an SA process that appears to assign great weight in certain cases to landscape sensitivity) and therefore the proposed modification to the SDA is unsound. To state simply that the site lies outside the AONB (9.4.42) and that by implication this removes any constraint in landscape terms is misleading having regard to the evidence base, especially so when the SA Addendum Report accepts there is “some uncertainty (remains) as details for mitigation/enhancement for landscape and biodiversity effects are dependent upon detailed masterplan.”

8.30 As is the case elsewhere within the Local Plan the Council appears content to rely on uncertain mitigation strategies as justification for allocating land for development in circumstances where the
8.31 The Council is relying on the Tank Farm area to provide development on a scale that the evidence base does not support in the absence of any alternative solution at Chipping Norton. The encircling of the town by the AONB dramatically curtails options for development. However, instead of acknowledging this constraint and therefore examining the available options across the three towns against one another, the Council has chosen to proceed with a partial analysis of development options limited to individual settlements, with no transparent explanation of how the uplift in numbers is apportioned.

8.32 The Council’s spatial strategy requires a significant proportion (or most depending on how the findings of the SA are interpreted) of housing growth to be directed to the three main towns of Witney, Carterton and Chipping Norton. In the context of the higher housing requirement to meet West Oxfordshire’s housing needs all reasonable alternatives for strategic development should be considered in a comparative manner to ensure that the most sustainable development proposals are brought forward to meet identified needs.

8.33 Delivery of 600 homes at Tank Farm was broadly consistent with the evidence base at the time of the Pre-Submission Local Plan and offered a relatively well-balanced and sound approach (in principle) to meeting the housing requirement as defined by the Council at the time, in accordance with the findings of the SA.

8.34 The proposed increase in the housing requirement to bring the target into line with the SHMA would now justify an approach to apportionment across the three towns that remains cognisant of the preferred spatial approach to distribution supported by the SA, and which recognises the relative capacity of each location to sustainably absorb further growth. This demands that options at the three towns should be compared against each other to ensure that, from a District-wide perspective, the most sustainable apportionment, taking all material factors into account is arrived at.

8.35 As rehearsed above, the Pre-Submission allocation of Tank Farm was limited to 600 homes on the basis of the landscape evidence, which does not support a greater scale of development. To maintain an approach consistent with the spatial strategy and the evidence base the Council should give proper consideration, on a comparative basis, to all reasonable alternatives for accommodating strategic development at the main towns, rather than adopt an approach which runs contrary to its own strategy and which sets the evidence base aside. However, the method adopted through the Council’s Sustainability Appraisal and Addendum has sought to appraise the strategic site options for each town in isolation. As a result, Tank Farm continues to perform well as a strategic development option at Chipping Norton because it is the ONLY development option at the town. No consideration has been given to its credentials compared with sites at Witney or Carterton.

8.36 In this regard, the LVR66 considered four options for outward expansion of Carterton. Whilst it acknowledged that the development of any of these options would result in some harm to the landscape, visual or settlement attributes, it recommended that all four options be pursued further as all had potential to meet West Oxfordshire’s housing needs. These options included the Crestland West of Carterton (Option B).
8.37 The LVR undertook a similar review of the four strategic development options around Carterton:

* Option A – East of Carterton
* Option B – West of Carterton
* Option C – Kilkenny Farm, Carterton
* Option D – North of Carterton

8.38 Of the four options D and A performed the best in landscape terms and the LVR indicated that reduced areas of these sites could be delivered in combination to deliver around 600 – 900 homes. The Council has since resolved to grant planning permission for 700 homes at East Carterton (Option A). Therefore it is reasonable to assume that delivery of North Carterton may only achieve a modest contribution towards the Council’s revised housing target.

8.39 The LVR also considered delivery of Option D concurrently with Option C. However, it concluded that the visual impact on the northern setting of Carterton would be “substantial”.

8.40 The LVR acknowledged that any development West of Carterton would lead to some harm, however, it was acknowledged that through comprehensive development as an integrated extension to the town, with its own settlement character, the site could achieve substantial development. Whilst the Council may have discounted land west of Carterton as too large, based on the lower housing target at the Pre-Submission stage, given the findings of the LVR, the Council should revisit the site’s potential as a reasonable alternative to other strategic development options across the three main towns as a sound and reasoned option for meeting the higher housing target. In this context, delivery of development West of Carterton would outperform the enlarged proposals for Tank Farm in landscape terms and would be capable of delivering in excess of the 800 new homes directed to Tank Farm.

Transport Impact

8.41 The Council seeks to justify the proposed expansion of the Tank Farm allocation in large part on the basis is will help to deliver an Eastern Link Road to divert traffic around the east of Chipping Norton to avoid the Air Quality Management Area within the town centre. Paragraph 9.4.43 advises that the link road would mitigate traffic impacts of additional growth and divert a large proportion of HGV movements away from Chipping Norton Town Centre, potentially delivering benefits to air quality.

8.42 The Chipping Norton Transport Options Study (July 2016), prepared by WYG evaluates the impact of potential residential development scenarios and associated transport schemes at Chipping Norton. A review of the existing network at AM and PM peak times found that all key highway links were operating within theoretical limits. However, it acknowledged that this was a strategic assessment based on a relatively simplistic and high level assessment of indicative capacities (paragraph 5.2.5).

8.43 The Study appraised the impacts of a 1,500 unit scheme at Tank Farm with the eastern link road taking the form of a distributor road capable of accommodating a larger volume of traffic than would be generated by the development, including HGV movements. It ‘concludes’ that 1,500 new homes would potentially give rise to an increase in traffic movements around Chipping Norton of

<td>CPRE Oxfordshire</td>
<td>Helen CPRE Oxon</td>
<td>Marshall 1605</td>
<td>&gt; SECTION 9 - STRATEGY AT THE LOCAL LEVEL &gt; Chipping Norton Sub Area &gt; MAIN 138</td>
<td>The major change to the Local Plan for Chipping Norton is the increase from 600 to 1,400 homes (almost a 250% increase) at the East Chipping Norton Strategic Development Area (ECNSDA), known locally as Tank Farm - reference: MAIN 136 to MAIN 144 inclusive. The building of 1,400 homes at Tank Farm was one of these development options. The report also notes 'in each case predicted traffic volumes on the A44 High Street / Horsefair corridor would be expected to increase reasonably substantially over and above the 2016 surveyed flows, exacerbating existing environmental degradation (notably air quality issues) within the town centre(paragraph 10.1.2). The study also attempted to 'identify potential mitigation measures that would offer realistic scope to both accommodate development and help to mitigate the impact of this development and existing environmental issues within the town centre, notably associated with the declared AQMA on the A44 High Street / Horsefair (plus the southern section of the A361 Banbury Road and West End)' (paragraph 9.1.3). The report concludes that 'the three outline schemes assessed (the Rollright bypass, central area zonal weight restriction and town centre gyratory) would likely be unsuitable mitigation options for a variety of reasons including preclusive cost, lack of practicality, lack of capacity and potential for adverse environmental impact.'</td>

The transport consultants employed by OCC and WODC therefore believe that the ECNSDA would worsen air quality management issues in the centre of Chipping Norton and that the 3 possible mitigation schemes to reduce the air pollution are not viable.

The existing AQMA has been in operation for many years and no solution has been found to this problem. The existing levels of air pollution in the centre of Chipping Norton are already adversely affecting the health of people living and working there. Yet WODC is proposing to build new houses in Chipping Norton which will worsen air pollution and increase the risk to health of people in centre of the town without having a viable strategy for reducing these levels. It could be argued that NO ADDITIONAL HOUSING should be allowed until a workable solution to the existing air quality problem is devised, implemented and shown to be effective.

**Road Safety**

Road safety issues in the centre of Chipping Norton are very closely connected with the problem of air pollution: both are caused by modern levels of traffic trying to get through an ancient market town the central area of which was originally laid out in the 13th Century.

Horse Fair is the narrowest part of the A44 as it passes through the town. Here the road is narrow as are the pavements. This puts vehicles and pedestrians into close proximity. It has been the site of several fatal accidents in recent years.

Road safety concerns are not restricted just to the Horse Fair. Local people also know that it is becoming increasingly difficult to cross several of the roads in the town centre safely because of the increased volume of the traffic as well as vehicles being driven at speeds inappropriate for the town centre.

The Local Plan accepts the need for the Council to ‘address the relatively high rate of fatalities and serious injuries on the District’s road network’ (paragraph 2.40). Work needs to be carried out to identify measures to improve safety in Horse Fair and other areas within the centre of the town. It also needs to be identified how these improvements will be funded. Again all of this work needs to be carried out before significant development is allowed to go ahead at the ECNSDA.

**Traffic**

The increase from 600 to 1,400 homes at the ECNSDA has profound implications for traffic in Chipping Norton and the surrounding area. The Chipping Norton Transport Options Study informed the preparation of the latest version of the Local Plan and in particular supported the option for 1,400 homes at the ECNSDA together with the Eastern Link Road. This option is of course the major change from the previous version of the Local Plan for Chipping Norton and is referenced in MAIN 27, MAIN 136 and MAIN 138 to MAIN 144 inclusive. This section of these comments outlines some concerns in a number of areas concerning traffic and arising from these changes to the Local Plan:
The way the Transport Options Study was carried out

The Transport Options Study report is an important document which played a major part in influencing the decision to put forward the 1,400 homes at the ECNSDA option in the Local Plan. Important decisions are to be made with respect to the future of Chipping Norton based on the findings of the study. Does a study which was principally carried out on one day only provide sufficiently robust and accurate data on which to base these crucial decisions?

The manual traffic counts and the ANPR surveys were carried out on a Tuesday in March and were intended to assess "normal" traffic conditions. However there are times of the week when traffic in Chipping Norton tends to be heavier than normal principally Monday mornings and Friday afternoons. Also Wednesdays tend to be busier because of the weekly market. Why weren't the surveys carried out during these busier times of the week?

In the summer many visitors and tourists come to Chipping Norton or pass through it on the way to see the Cotswolds or to visit major tourist attraction such as Blenheim Palace. There are not many tourists or visitors who choose to come to the area in early March which is when the traffic surveys were carried out. In the spring and summer there is also likely to be an increase in HGVs travelling to and from the fruit and vegetable growing areas in Worcestershire and other areas to the west of the town. Why wasn't the traffic survey work repeated again say in June in order to assess whether the traffic levels are significantly higher at that time of year?

The ANPR count locations were positioned such that they may have missed a substantial amount of local traffic within the town e.g. parents living in the areas off West Street/Churchill Road taking children to the Chipping Norton School and local residents driving into the centre to shop.

The findings of the Transport Options Study

The Transport Options Study report paints a bleak picture of what will happen to traffic in Chipping Norton if 1,400 homes are built at the ECNSDA even with the proposed Eastern Link Road:

* Increased traffic through Chipping Norton as outlined in paragraph 11.1.21 of the report:

"However, delivery of the new eastern distributor road as a stand-alone measure would be insufficient to fully off-set and mitigate the impact on the town centre of the traffic growth anticipated by 2031 (both resulting from development on the Tank Farm site and general background growth on the network anticipated by this time). Furthermore, the beneficial minimisation of additional traffic flows on the A44 High Street would come at a cost of increasing traffic on peripheral routes around the town."
resulting from a combination of redistribution and the increased level of development on the Tank Farm site."

* The report also reports that this option "would be likely to exacerbate air quality management issues" – paragraph 11.1.15.
* The health of residents and people working in the centre of Chipping Norton would be put further at risk - see section CN4 above.
* Three mitigation options were examined and all were judged to be unsuitable for a variety of reasons – paragraph 10.6.1
In addition the study reports that the computer modelling of future traffic flows predicts that 2 of the main junctions in Chipping Norton would “operate well in excess of their theoretical capacity” and that the other 3 “would all remain operating within or, worst-case, at capacity for all of the potential development scenarios” – paragraph 11.1.16.

The report goes on to say that the computer software used may underestimate the capacity of roads in towns such as Chipping Norton and seeks to compare them with roads in other towns. The conclusion at this point is that “the operational impact of additional traffic flows resulting from each of the development scenarios on the existing network might be far less onerous than the model results indicate” – paragraph 11.1.17. At the very least this suggests that the future performance of the main road junctions within Chipping Norton are difficult to predict and that if the computer modelling turns out to be correct then two of those junctions will be operating well above their capacity.

Other traffic related comments

The Transport Options Study calculated ‘the estimated delivery costs of upgrading an existing route via Rollright Lane and the A3400 to the north of the town to act as an east-west bypass of the town serving as an alternative for through-movements of traffic on the A44’ – paragraph 10.3.3 and Figure 31.

The study report then goes on to say that ‘this option was considered unviable on the grounds of cost’ – paragraph 11.1.18.

However neither in the Local Plan nor in the Transport Options Study report is there any calculation of estimated delivery costs of the proposed Eastern Link Road. This seems a surprising omission as it makes comparisons between the 2 schemes impossible. It leaves unanswered the question of whether the funding for the proposed Eastern Link Road would be better spent on the upgrading of the Rollright/A3400 route.

Paragraph 9.4.40 of the Local Plan (MAIN 138) contains the statement with reference to the proposed 1,400 homes and the Eastern Link Road: ‘... there could also be a diversion of a large proportion of HGV movements from Chipping Norton Town Centre, thereby possibly having a beneficial effect in terms of improving air quality - a key issue for the town.’.

A similar claim is made in paragraph 9.4.56 (MAIN 142). But doesn’t the Transport

Options Study for Chipping Norton conclude that 'delivery of the new eastern distributor road as a stand-alone measure would be insufficient to fully off-set and mitigate the impact on the town centre of the traffic growth anticipated by 2031' (paragraph 11.1.21)?

The Transport Options Study report also concludes that this option "would be likely to exacerbate air quality management issues" – paragraph 11.1.15.

Chipping Norton has been waiting for a solution to its traffic related problems for decades:

* The use of the Rollright/A3400 route to remove traffic for the centre of the town has been in discussion for many years.

* The town has been experiencing severe air quality issues and the associated detrimental effects on people’s health for at least a decade.

* An AQMA for the centre of Chipping Norton has now been in operation for over 8 years with no significant remedial action being taken.

* The same area covered by the AQMA is also an accident blackspot with a record of a fatal accident every 12 years and a serious RTA every 2 years on a stretch of road that is only about 200 metres in length.

* All the time traffic through Chipping Norton increases and these problems get worse.

When the latest version of the Local Plan proposes a huge increase in the number of houses in the town would it not be reasonable to expect that the document would propose measures which would alleviate Chipping Norton’s traffic related problems? However all that is offered is a proposal that will in fact increase traffic in the town with all the consequent detrimental effects of this including a predicted worsening of the air quality problems. Is it unrealistic for the town’s residents and visitors to expect a better solution than this?

Car parking

Local residents as well as visitors are well aware of the current problems with regard to car parking in Chipping Norton. This is recognised in the Local Plan: 'The availability of adequate public parking capacity is a key constraint in Chipping Norton' (paragraph 9.4.30) and 'Improvements to the efficiency and availability of public car parking in Chipping Norton will be sought as appropriate' (paragraph 9.4.60).

The Local Plan states: 'The scale and mix of uses in the local centre would be intended to meet the needs of the development and not compete with the Town Centre' (paragraph 9.4.49). This presumably means that a large proportion of the people living in the proposed ECNSDA would use the town centre shops together with the Aldi store to do their main shopping.
A few people may walk, cycle or use public transport when shopping in the centre of Chipping Norton. However given the distance especially from the far parts of the ECNSDA to the town centre together with the fact that there would be a hill to climb on the way back most people will use their cars when shopping in the town and especially if doing a large weekly shop.

The increase in the number of homes in the ECNSDA from 600 to 1,400 will therefore increase significantly the need for extra car parking in the town centre. Land in or adjacent to the town centre is very scarce in Chipping Norton. Before development is permitted at the ECNSDA the problem of how to provide significant extra car parking capacity in the town centre needs to be resolved and funding secured for this.

School capacity

The Local Plan recognises the need for significant increases in school provision if the enlarged ECNSDA goes ahead: ‘it is a requirement of any proposed development on this site that a new primary school will be provided. The site is close to the existing secondary school where there is adequate capacity to absorb additional pupil numbers despite the increased size of the allocation’ (paragraph 9.4.48).

The overall housing requirement (2,400) represents an 80% increase in the number of houses in Chipping Norton and would mean that the population would increase by around the same percentage. It is also appropriate to assume that the number of school age children would rise by around the same order of magnitude requiring a new primary school approaching the size of the existing primary schools added together. Chipping Norton School would also have to almost double its existing size. The main issue with regard to increasing school capacity at both the primary and secondary levels would appear to be ensuring that adequate funds are available to carry this in time to cope with the increased demand – see below for a discussion of the funding requirements of the enlarged ECNSDA.

Meeting the housing needs of local people

One of the Core Objectives identified in the Local Plan is: ‘CO4 Locate new residential development where it will best help to meet local housing needs and reduce the need to travel’ (paragraph 3.7).

Locating 1,400 homes at ECNSDA does not support this Core Objective. Presumably the 600 homes proposed in the previous version of the Local Plan were felt to be adequate to meet local housing needs. The occupants of the additional 800 homes will presumably move into the area from outside and many of those of working age will commute to work thus directly working contrary to Core Objective 4. Moreover many will travel to work by car and thus increase pressure on roads locally.

Ensuring Chipping Norton retains its special character as a Cotswold market town

The Local Plan recognises the special character of Chipping Norton: ‘Chipping Norton will strengthen its role as a centre of enterprise in the northern
part of the District. It will continue to be an economically and socially strong market town serving the needs of a large rural area. Its distinctive historic character and fine setting will be conserved and enhanced at the same time as accommodating new development to meet identified needs.’ (paragraph 3.2)

The overall housing requirement (2,400) represents an 80% increase in the number of houses in Chipping Norton and would mean the population would increase from around 6,500 to almost 12,000. Similar towns locally which have seen this scale of growth have changed fundamentally and such a growth in population over a relatively short time period must put at risk the special character of the town. Although provision has been made for an additional 9 hectares of business land it is unlikely that sufficient new jobs will be created in the town to support the majority of the people of working age living in the new homes in the ECNSDA. The Local Plan notes that ‘the number of people living and working in the town has fallen from 50% to 36% since 2001’ (paragraph 9.4.30). Undoubtedly that percentage will fall further if the current proposal to build 1,400 homes goes ahead.

The danger is that Chipping Norton will become more and more a dormitory town for people working in London, Oxford and other places and that this will alter its fundamental character.

Resisting pressures for an out of town supermarket

With the likely increase in the population consequent on the building of 1,400 new homes in the ECNSDA it is surely only a matter of time before one of the major supermarkets puts forward plans for a large new store on the outskirts of Chipping Norton.

Places such as Witney have been able to build large supermarkets sufficiently close to the town centre that the new stores complement and support the town centre. There is no such site near to the centre of Chipping Norton.

Any large supermarket proposed in the future for Chipping Norton would be so far from the town centre that it would have a serious detrimental effect on the shops and businesses there.

There is real concern that WODC would not be able to prevent a future scheme for a large out of town supermarket going ahead given the significantly increased population and the financial and legal resources available to a major supermarket chain.

The Local Plan recognises this threat: ‘Chipping Norton is the main focus for retail and leisure activities within this sub-area. The town has a strong and diverse retail offer but remains vulnerable to out of centre development. We will through the Local Plan therefore seek to safeguard and reinforce the role of Chipping Norton Town Centre’ (paragraph 9.4.61). However there is no explanation of how pressures for ‘out of centre development’ will be resisted and this remains an area of real concern for local people given the plans to build so many new homes in the town.

Funding of measures to lessen the impact of the ECNSDA
Several areas will require significant investment if the current plans for the ECNSDA go ahead including:

- Measures to reduce air pollution
- Improvements to road safety in Chipping Norton
- New road
- Other improvements to roads in and around the town
- Extra car parking
- Improving conditions throughout the town and surrounding areas for pedestrians and cyclists, including accessibility to bus and rail services
- New primary school
- Significant expansion of secondary school
- Mitigation measures for the impact on the Conservation Target Area (CTA) and the SSSI

Not all of this will come from developer funding. We are also in a time of reductions in council funding and economic uncertainty in the post Brexit era. In addition it has to be taken into account that there will be large demands for funding in all areas of WODC where substantial house building is proposed. It is therefore legitimate to ask: where will the rest of the funding will come from in order to ensure that the building of 1,400 homes in the ECNSDA does not have major negative impacts on the town and its surrounding area?

If there really is a need for 1,400 new homes in the ECNSDA then market forces will ensure that developers and building firms will go ahead and build the houses. A real concern to local people is that the houses will be built but funds will turn out to be insufficient to ensure that the measures outlined above can be

---

**MM714**  
G Pearman  
Mr Pearman  
1615  
> SECTION 9 - STRATEGY AT THE LOCAL LEVEL > Chipping Norton Sub Area > MAIN 138  

My Client owns land to the east of the proposed allocation at the Chipping Norton SDA.

The changes made to Policy CN1 and CN2 set out in the proposed modifications are fully supported, especially the comprehensive development of the allocation via an agreed master plan whilst allowing for individual applications to come forward. In such a situation, it is important to put in place a mechanism to assist in the delivery of the infrastructure needed to support the development, including the proposed link road, new school and open space/landscaping.

In terms of delivery, my Client is working with other landowners and promoters to bring forward the proposed development in a timely manner.

---

**MM727**  
Archstone Land  
Jonathan Porter  
Mr Porter  
1663  
> SECTION 9 - STRATEGY AT THE LOCAL LEVEL > Chipping Norton Sub Area > MAIN 138  

The draft Plan could be considered unsound (not positively prepared or effective) if the proposed SDA with anticipated benefits are not deliverable.

This is a very significant increase in the number of dwellings which it is proposed to deliver through the SDA (almost three times the original figure). It includes all of the additional 600 dwellings for the sub-area, plus 200 re-distributed from the previous draft proposals.

A significant quantity of employment land (up to 7.3 hectares) and a new primary school were already proposed by the much smaller allocation for 600 homes. The only significant additional infrastructure offered by the new SDA for 1,400 homes is the link road. Notwithstanding whether the size of SDA is appropriate for Chipping Norton, it seems essential that the delivery of the road and very significant benefits as a result are proven before all of the site is allocated. Currently, the
<table>
<thead>

<th>Respondent Title</th>
<th>Respondent Surname</th>
<th>Comment ID</th>
<th>Document Full Path</th>
<th>Comment (plain text)</th>
</tr>
</thead>
</table>

amount of diverted HGV traffic and the benefit to the Air Quality Management Area is uncertain.

The timing of the SDA and associated infrastructure is also relevant to consider in terms of the objectives of the Local Plan. Tank Farm has been a draft allocation for some 5 years and still no planning application has been forthcoming. The Housing Delivery Statement of Common Ground for the examination signed by the County and District in October 2015 anticipated occupation of 600 dwellings by 2021/22.

The revised draft housing trajectory suggests that the SDA will only contribute 200 homes over the next 5 years, with all 1,400 homes being completed by 2031. This would likely mean that the benefits from the scheme including the link road to alleviate traffic and poor air quality will not be delivered until near the end of the plan period. In the meantime, more refined measures in the town and new technologies may already have overcome the problem, leaving the road to become entirely enabling infrastructure for the SDA.

We also note the issues of landownership referred to with the allotments land owned by the Town Council. There will need to be assurances that this can be resolved in a timely manner to be certain that the link road and therefore a key motivation for the majority of the SDA is deliverable.

2.45 The Proposed Modifications to the Plan have sought to increase the scale of the development with 1,400 dwellings and 9ha of employment land now proposed, compared to the 600 dwellings and 1.5ha of employment land included for in the submission version of the Plan. The supporting text to the Policy notes that: "Whilst it is a significant increase in housing numbers and employment land provision for this site it is considered that this can be successfully accommodated on the site without undue harm in terms of landscape impact subject to appropriate mitigation, albeit with an extension of the site boundary. It will also help to deliver an alternative strategic transport link for the town and help ensure the viability of a new primary school both of which will be delivered as integral parts of the allocation."

2.46 Chipping Norton is identified as the second most sustainable settlement in the District (after Witney) and as such is considered to be an appropriate location to accommodate additional development to meet the needs of the District. In considering potential locations to accommodate additional development at Chipping Norton as a result of the increased housing requirement in the District, the Sustainability Appraisal Addendum Report highlights that:

"In order to meet with the required uplift in housing need identified, the Council considered again whether there are any other strategic options available and concluded that land to the east of the town remains the only potential direction of strategic growth due to AONB constraints."

2.47 We support the proposed allocation of land to the east of Chipping Norton to accommodate a significant proportion of the needs of the Sub-Area and the District as a
whole. The scale and location of the allocation is considered to be reflective of Chipping Norton's ranking in the settlement hierarchy and the sustainability of the existing settlement.

2.48 The boundaries of the allocation have been extended to the north and east in order to accommodate the increased quantum of development now proposed. Whilst our client’s site at the Pillars, south of Banbury Road had been identified in the submission version of the Local Plan as a SHLAA site with identified capacity to meet some of the wider housing requirement, it now forms part of this wider Strategic Development Area.

2.49 We support the allocation of the site and consider the proposed modification to be a sound approach which addresses the Inspector's concerns expressed in his Preliminary Findings: Part 2 regarding the status of the SHLAA sites and the need for these to be allocated. Our comments regarding the specific requirements of the proposed allocation and the evidence base underpinning the allocation are discussed in turn below.

Masterplanning and Principle of Early Release

2.50 Proposed criterion 'ai' of the Policy requires "comprehensive development for the whole site including land north and south of London Road to be led by an agreed masterplan."

2.51 The Council are currently proposing to address the current backlog in its housing requirement using the Liverpool method as opposed to the Sedgefield method which is advocated by the NPPG and this is borne out in numerous appeal decisions and case law. As per our submissions above we consider that the Plan should make provision to meet the backlog in housing need using the Sedgefield method.

2.52 As currently drafted concern is raised that criterion 'ai' of Policy CN1 would delay the delivery of early phases of the SDA. The supporting text to the Policy states that:

"Given the extent of the proposed SDA, the Council wishes to achieve a comprehensive development and would support in principle the preparation of an overall masterplan for the area incorporating both land to the south and north of the London Road. This would allow for individual applications to potentially come forward for parts of the site in the shorter-term without prejudicing delivery of a more advantageous, comprehensive scheme."

2.53 It is unclear what additional advantages the Council envisage being delivered beyond those secured through the other criterion of the Policy, such as the school. To ensure the Plan is effective it is important that any identified requirements of the proposed allocations are clearly specified to ensure their delivery, and indeed, are justified based on evidence. Furthermore additional requirements than those currently identified would need to be factored into the Strategic Development Area (SDA) Viability Update (2016) to ensure that the proposals are deliverable.

2.54 Although the Council have indicated that they would be supportive of parts of the site coming forward in the shorter-term, the Policy as currently drafted is considered to be ineffective in this regard.
2.55 As highlighted in Section One, an application for the proposed development of land south of Banbury Road, Chipping Norton (The Pillars) is currently pending determination with the LPA, under application reference 16/03416 for up to 100 new homes. This application was submitted in advance of the draft Plan being released and was therefore an unallocated site at that time. It is considered that this application would help to deliver a first phase of development of the SDA, which would contribute to the Council’s five year housing land supply.

2.56 Our comments in respect of the Eastern Link Road are set out in turn below and as such are not repeated here. In summary however the current planning application demonstrates the suitability of Chipping Norton as a location for development in general and the appropriateness of our client’s site in particular to accommodate this development. The range of studies that have been undertaken to support the planning application demonstrate that a high quality development will be achieved at the site, and that there are no environmental, technical or other reasons why planning permission should not be granted in this case. Further details of the proposals are provided in the Planning Statement at Appendix One and Design and Access Statement at Appendix Two.

2.57 We are in the process of working through the technical responses received in respect of the application with both West Oxfordshire District Council and Oxfordshire County Council. The application clearly demonstrates that there is no harm as a result of the proposals which would significantly and demonstrably outweigh the substantial benefits which would be achieved.

2.58 Notably the Council’s Housing Land Supply Position Statement (October 2016) anticipates that the SDA will deliver 200 dwellings to its five year housing land supply. Clearly the current application would make an important contribution towards this anticipated supply figure, and is the only part of the SDA on which an application has been submitted to date. To ensure the early delivery of part of the SDA as envisaged by the Local Plan and Housing Land Supply Position Statement it is important that the Policy requirements are proportionate and facilitate this delivery.

2.59 It is considered that our client’s site is appropriate to be released as an early phase of development and that flexibility should be introduced into the Policy to allow this to occur.

Eastern Link Road

2.60 Criterion d of the Policy requires:
"satisfactory vehicular access arrangements to be agreed in principle with the highway authority and demonstrated through a robust Transport Assessment (TA) to include the provision of an eastern link road connecting the Banbury Road to the B4026/A361 via London Road."

2.61 In seeking to justify the requirement, the supporting text to the Policy states:
"Transport evidence commission on behalf of the District Council by Oxfordshire County Council has tested the implications of a much larger scheme of up to 1,500 dwellings and concludes that if supported by an eastern link road not only would the traffic impact
2.62 The only evidence base document published in support of the Local Plan Proposed Modifications consultation related to transport at Chipping Norton is the 'WYG Transport Planning Chipping Norton Transport Options Study (July 2016)'. The Local Plan supporting text correctly identifies that the Study has assessed a range of options including the delivery of 1,500 dwellings. Importantly however the Study has only assessed the implications of an eastern distributor road linking the A44 London Road to the north of the site and the A361 Burford Road to the south.

2.63 It is clear from the Study that no assessment has been undertaken as part of this work to the effects of extending this eastern distributor road further north to connect with Banbury Road. Clearly in order for this requirement to be justified then additional evidence is required regarding the need for the road to extend up to Banbury Road. At this stage concern is raised that the requirement for the eastern distributor road to extend to Banbury Road is potentially unsound and is certainly not justified in the evidence base.

2.64 The draft Plan makes clear that the route of the eastern distributor road shown on Figure 9.12 is purely indicative. The Chipping Norton Transport Options Study has itself not provided any indication as to the most appropriate route for the road, and in any event, given the concerns raised above, would have provided no indication of its preferred routing in connecting up to Banbury Road.

2.65 From the work undertaken in respect of the current planning application for our client's site at The Pillars, we do have concerns regarding the current indicative alignment and consider that a location to the east of the existing cricket club may prove a more appropriate solution. This would ensure the cricket club is not isolated from the existing settlement by the proposed link road, particularly given the enhanced pedestrian connections to the town centre proposed to be facilitated by the development at The Pillars.

2.66 Furthermore it is questioned whether a link road so close to the centre of Chidding Norton would result in the improvements anticipated by the District and County Council's or whether a connection further to the east, if the northern extent of the proposed road is any event justified or required, may be more appropriate and draw more traffic away from the town centre and AQMA. Clearly further investigation is required on this matter.

2.67 Given the uncertainties and lack of clear evidence regarding the eastern distributor road identified above; understandably the Council have been unable to provide costings for the road in its Infrastructure Delivery Plan (2016). This lack of information also affects the Strategic Development Area (SDA) Viability Update in respect of Chipping Norton. We consider the Viability Update in greater detail below and as such do not repeat our comments here.

2.68 As highlighted above, the supporting text for the Policy states that the proposed link road will mitigate the effects of the proposed SDA, and in addition will have a beneficial
impact on the AQMA by diversion of HGV movements out of the town centre. The link road is therefore not required purely to meet the needs of the development itself, and would have wider benefits required to mitigate the existing AQMA issues. Once clarification is provided as to the scale, form and associated costings of the link road consideration must be given by WODC to the funding arrangements for the road given it is not justified to meet the needs of the development itself.

2.69 The Infrastructure Delivery Plan as currently drafted anticipates that the road will be delivered purely by the East Chipping Norton SDA. Given the above such an approach is not considered to be justified. It is noted that whilst for the East Chipping Norton Link Road the Infrastructure Delivery Plan comments that it “would alleviate traffic through the centre of Chipping Norton and help to deliver improvements to the Air Quality Management Area (AQMA)” with regards to the northern distributor road to be provided as part of the North Witney SDA the Infrastructure Delivery Plan states that it is “necessary to support strategic growth to the north of Witney.” The CIL Regulations make clear that any infrastructure contributions must be directly related to the proposed development, and it is apparent that this is not the case in respect of the East Chipping Norton Link Road and as such the cost of the road should not fall to be funded purely by the developers of the SDA.

2.70 Discussions are ongoing with WODC and OCC in respect of the current planning application for the proposed development at The Pillars including in respect of the requirement for the eastern link road. A further meeting is scheduled for January 2016 to discuss this matter and it is anticipated that significant progress will be made ahead of the resumption of the EIP in Spring 2017. As such we wish to reserve our right to comment further on this matter as discussions and unfold, and, if appropriate, we will seek to agree a Statement of Common Ground with WODC/OCC in respect of this matter ahead of the resumption of the EIP.

Sustainability Appraisal

2.71 Enfusion, on behalf of WODC, have prepared a Sustainability Appraisal Addendum Report in respect of the proposed modifications to the Local Plan. In respect of the increased scale and quantum of development proposed at the east Chipping Norton SDA, the Addendum advises that “it is considered that the findings of the strategic level SA [CD2} still remain relevant and valid.” In summary the Addendum concludes that: “the proposed modifications to the strategic site option [and Policy CN1] remove some uncertainties, confirm mitigation measures for potential negative effects, and offer potential enhancements. Some uncertainty remains as details for mitigation/enhancement for landscape and biodiversity effects are dependent upon detailed masterplanning.”

2.72 We support the conclusions of the Sustainability Appraisal Addendum and consider the current application for the development of The Pillars, forming the northern most part of the allocation, demonstrates the sustainability of the proposed allocation. The application demonstrates that the uncertainty regarding landscape and biodiversity can be appropriately addressed in respect of this element of the SDA.

2.73 Given the scale of increase of the proposed SDA since the previous Sustainability

<td>Appraisal was undertaken, to ensure the Plan is underpinned by a robust evidence base we would recommend that the detailed appraisal of the allocation be updated in full to support the summary provided in the Addendum Report. This will help to further demonstrate that the proposed strategy is justified, subject to our comments raised above. Strategic Development Areas Viability Update 2.74 As highlighted above the Local Plan consultation is supported by a Strategic Development Areas (SDA) Viability Update (2016) prepared by Aspinall Verdi. Our concerns regarding the proposed eastern link road have been discussed in detail above and as such are not repeated here. The remaining uncertainties regarding the link road do however have clear implications for the robustness of the Viability Update as at this stage the Council have been unable to cost the link road or secure appropriate funding mechanisms given the requirement for the link road is directly related to the SDA itself. 2.75 A further update is therefore likely to be required to the viability work once further clarity is received on this matter. 2.76 In addition it is noted that the current appraisal for the Chipping Norton SDA identifies a construction cost for infrastructure in year seven of £8,000,000. This is the only infrastructure cost identified in the appraisal. Clearly given the discussion above this cost is not related to the eastern link road. The SDA is also required to deliver a primary school however the Infrastructure Delivery Plan identifies a costing for this of £9,000,000. 2.77 As such it is unclear what the £8,000,000 cost relates to and further clarity will be required in order to ensure the Plan is justified and effective and that the SDA is deliverable.</td>

<td>1743</td>
<td>&gt; SECTION 9 - STRATEGY AT THE LOCAL</td>
<td>CALA fully supports the proposed modification 138. It is working with other landowners and developers to bring forward the proposed development. However, further highway modelling is required to identify the level of benefit that the proposed link road would bring, the type/width of road and its precise alignment. All of these factors could have significant effects on the viability of the SDA. The work will be taken forward as part of the detailed design of the SDA and covered in a comprehensive Transport Assessment. As such the Local Plan must retain a flexible approach to the provision and delivery of the road. In addition, the road is indicatively shown passing over land outside of the SDA boundary. The Council should consider funding from other developments in the Chipping Norton Sub area that would directly benefit from it (as per the wording within Policy T2). The Council must also be willing to use compulsory purchase powers to ensure delivery of the road as a last resort in the public interest.</td>
</tr>
</tbody>
</table>

CALA fully supports the increase in houses allocated to the east of Chipping Norton as set out in Policy CN1. CALA in previous representations sought a comprehensive development of the SDA. It therefore supports the proposed changes set out at paragraph CN1 – ai) to require the comprehensive |

| MM738         | Cala Homes Chiltern     | Cala Homes (Chiltern) | -                | Cala Homes (Chiltern) | 1748       | **LEVEL > Chipping Norton Sub Area > MAIN 138**

- Development of the whole of the SDA to be led by an agreed masterplan. Supporting commentary in paragraph 9.4.45 confirms that this approach will allow for applications to come forward for parts of the site in the shorter-term without prejudicing delivery of a bigger, comprehensive scheme. CALA Homes (Chiltern) agrees with this approach.

- Through this approach it is important to set out a mechanism to secure delivery and funding of key infrastructure (the link road, open space and education facilities). The local planning authority will need to use its powers through the planning application stage to ensure comprehensive delivery.

- It is noted at Appendix 2, that delivery of housing to the east of Chipping Norton is expected between 2017 and 2031. CALA is working collaboratively with the County Council, other landowners and key stakeholders to ensure timely delivery of the site. There is currently a planning application in for circa 100 dwellings on land to the north of London Road. This timescale is therefore achievable and realistic.

- **Paragraph 9.4.44a**

  - CALA recognises the need for a road around the east of the Town and the benefits that this could bring. However, further highway modelling is required to identify if this road is required as currently set out in the Main Modifications, the type of road and its precise alignment.

  - As such CALA requests, as per paragraph 9.4.44a of the Local Plan that the route for the link road remains indicative at this stage to provide flexibility in the detailed design stage. Commentary should be amended to include that the route of the link road should be subject to the masterplanning of the whole site to ascertain the best location and that the viability of the road needs to be assessed.

  - CALA also seeks changes to ensure that other developments in the Chipping Norton sub-area contribute financially to the road if they would benefit from it.

  - The Plan needs to acknowledge that the Council would, as a last resort, consider use of compulsory purchase powers to enable delivery of the road.

- **Paragraphs 9.4.43b and 9.4.44**

  - As set out in representations prepared for the Council’s Pre-Submission Plan in May 2015 the plan accompanying Policy CN1 (Figure 9.12) contains a substantial area of landscape buffering (‘Environmental enhancements including landscape mitigation’, shaded green) to the southern side of the site. It is clear from the Landscape Mitigation Report prepared by Lockhart Garrett (May 2015) that accompanied the May 2015 representations, that such an expansive area is entirely unnecessary and unjustified and should be reduced.

  - It is acknowledged that this part of the site has a higher degree of landscape sensitivity but that the detailed design work for the site will be best placed to more accurately identify the extent of mitigation required. It is a significant concern that the inclusion of such a buffer on the plan will prejudice the proper, comprehensive and effective masterplanning of the site.

- **Paragraph 9.4.44 sets out that at this stage, the extent of the developable area shown is only indicative. This will in turn be informed as part of the comprehensive masterplan which will be**

<td>&gt; SECTION 9 - STRATEGY AT THE LOCAL LEVEL &gt; Chipping Norton Sub Area &gt; MAIN 138</td>
<td>The proposed development is far too large for a town that already suffers from congestion and problems with air quality. Although the proposed link road would theoretically divert some traffic from the town centre, in practise the majority of the “through” traffic continues along the A44, and would therefore be wholly unaffected by the proposal. Furthermore, the proposed new road would deposit vehicles into the already-congested area around the Burford and Churchill Roads, thus compounding the existing problems. The area proposed for development sits at the top of a relatively steep hill, and so although it is theoretically within a short walk/cycle from the town centre, in practise this is unmanageable for people with disabilities, young children and the elderly. Consequently, it is likely that the majority of residents in the proposed new housing would need to drive into the town centre to access shops and facilities, compounding the congestion, parking and air quality problems already faced by the town centre. As I have already highlighted elsewhere, the majority of residents in the new development will need to commute out of the town to access work - adding to the significant congestion problems that are already experienced by the town’s residents who commute to Oxford and further afield for work.</td>

| MM752        | Bloombridge             | Bloombridge             | Mr               | Cutler            | 1967       | > SECTION 9 - STRATEGY AT THE LOCAL LEVEL > Chipping Norton Sub Area > MAIN 138                                                                 | Chipping Norton Sub Area  
The Chipping Norton sub area anticipated delivery in Table 9.3 only amounted to 2,326 and could not deliver 2,400 as suggested by Policy H1 (74 less). Notwithstanding this, a reduction in the Tank Farm proposed allocation to revert to 600 homes should be made and as a consequence the Chipping Norton sub area should plan for 1,530 homes (a reduction of 870 homes).  
Tank Farm  
Main Modification 138 relates to a sizable uplift in allocation number for Land East of Chipping Norton Strategic Development Area (SDA). Previously, the proposed allocation was for 600 homes now includes provision north of London Road. The Sustainability Addendum October 2016 concluded that with the addition of an eastern link road which would reduce previous air quality concerns. The additional housing is reliant on infrastructure delivered on land which is in control of the Town Council.  
Furthermore, a substantial piece of land within the allocation is a Conservation Target Area (CTA).  
The CTA as stated in Main Modification 68 as the potential to be an Ecological constraint, however, it remains to be explored whether the proposal would cause harm to the CTA. Accordingly, the allocation should not be increased in size and should remain at 600 homes. Figure 9.12 (map of site) subject to MM139 should be amended as a consequence, and MM140 amended to reflect the 600 homes in draft.  
Policy CN 1 due to concerns regarding the justification for and deliver of the additional dwellings proposed.                                                                                                                                                                                                                                                                                                                                                     |

<td>&gt; SECTION 9 - STRATEGY AT THE LOCAL LEVEL &gt; Chipping Norton Sub Area &gt; MAIN 138</td>
<td>The proposed 1400 homes to be built in Chipping Norton cannot be supported by the current infrastructure of the town. The Ambulance station has been closed, the fire service is to be reduced, the Horton hospital is to reduced, Chipping Norton hospital was downgraded. The road networks within the town serve approx. 3000 homes; to increase the town by 50% will present huge problems for car users. For pedestrians the pavements will feel even less safe; therefore increasing car usage and for cyclists the risk of using the roads will feel too great. The quality of life therefore will be greatly affected for those living in the town.</td>

<td>&gt; SECTION 9 - STRATEGY AT THE LOCAL LEVEL &gt; Chipping Norton Sub Area &gt; MAIN 138</td>
<td>Some housing development is required in Chipping Norton but the scale proposed of circa 1400 houses would alter the distinctive character of the town irrevocably and do little to reduce daily travel times as more and more new residents commute to Oxford, Banbury, Birmingham and London to work. It would be better to locate large areas of new housing development in the District closer to strategic transport links to the east. I would also question the deliverability of the housing allocation for Chipping Norton. What Chipping Norton really needs is good local employment opportunities before substantial numbers of new houses are built. The fact the town has employment land which has been sitting empty for a decade or more suggests the issue is not availability of land but rather the appetite of employers for locating within the town at some distance from the M40 / A34.</td>

<td>&gt; SECTION 9 - STRATEGY AT THE LOCAL LEVEL &gt; Chipping Norton Sub Area &gt; MAIN 138</td>
<td>With regard to 9.4.41/42/43, mention is made of no flooding issues. However, the Parker Knoll experienced drainage problems. Additionally, the existing properties on the western edge of the SDA are substantially lower than the Tank Farm field. Covering Tank Farm in building will likely create the potential for flooding of the lower lying properties. These properties were until very recently within the town’s conservation zone, but were arbitrarily removed without consultation. This also removed certain planning restrictions which would have applied to any Tank Farm development. Whilst it is outside of the AONB, the western edge of the SDA is the boundary of the AONB, therefore issues of view must be considered.</td>
</tr>
</tbody>
</table>

- The provision of a relief road is being used as a mitigation issue for the increased number of 1400 properties. • As a mitigation of air quality issues in the town, there is a possibility that some HGV traffic would use it, but it is likely to cause other air quality issues.
As an example, the large number of new build housing in Buckingham has 2 entrance/exit points which means that most of the traffic from those houses creates hold ups while trying to access the A421 Buckingham bypass. It is highly likely that a Chipping Norton relief road would experience exactly the same issue.

Consider the issue of moving traffic as opposed to queuing traffic. Currently air quality is bad with the existing traffic which, on the whole, moves without traffic jams. 1400 new houses would create traffic jams, even with a relief road. HGVs would avoid the queuing which would probably occur near the new houses and the new supermarket areas of Aldi and the proposed M&S. It is quite possible therefore that HGVs would still head through the town.

With regard to 9.4.43a/9.4.43b and the potential employment areas. Recent experience has brought in supermarket and Premier Inn jobs, all mostly minimum wage, plus the proposed M&S store. All create increased traffic movements, far beyond people simply commuting to their place of work. Any effort to bring in more higher value employment is likely to run into issues of poor broadband internet provision caused by the increase of 40% in the town population, assuming there is no upgrade to the network.

New business provision is likely to experience the traffic issues outlined above.

For a town with circa 3,000 dwellings currently, expansion of 1,400 on the Tank Farm area to the east of town is completely disproportionate. It would of course completely change the town’s character, but in practical terms it would:
- Develop a valuable farmland area that should not be developed, even though it is not formally included in the “conservation area”;
- Increase the already excessive levels of (traffic) solution;
- Make excessive demands on the town’s already stretched infrastructure - parking, health services and schools, water and drainage.

His modification increases significantly the number of properties to be built in the Chipping Norton SDA. This is backed up by unsound evidence and is not appropriate to the existing community. In particular:

a) Part of the Vision in section 3.2 is to “play a role in helping to meet wider needs, without significant change to the intrinsic character of the District.” Increasing the population of the town by 50% will inevitably change its character. Especially as the driver for the increase is the need to house those working in Oxford, so turning a working town into a dormitory town.

b) Core Objective CO2 is to “Ensure that new developments are suitably located and well designed to protect and enhance the individual form, character and identity of our towns and villages as well as contributing to the quality of life in West Oxfordshire.” This fails for the same reasons as the Vision statement.

c) Core Objective CO3 is to “Promote safe, vibrant and prosperous town and village centres and resist proposals that would damage their vitality and viability or adversely affect measures to improve those centres.” Whilst a modest increase in population will help the town, this huge increase, aimed at commuters into Oxford, will be detrimental. The plan mentions that the

<td></td>
<td>&gt; SECTION 9 - STRATEGY AT THE LOCAL LEVEL &gt; Chipping Norton Sub Area &gt; MAIN 138</td>
<td>proposed development is within walking and cycling distance of the town centre, although it offers no evidence to support this. I visit the town centre most days and have never seen more than one bicycle in the cycle parking there. The area around the town is too hilly for most of the population to cycle. A straw poll of people living in the Parkers Circus estate (which is closer to the town centre than is the SDA) indicates that none walk when going into town to do their shopping. These were all fit, active people. The town centre is also not safe. In the last few years, people have been killed by passing traffic while on the pavement at Horsefair. The proposed link road appears to be a &quot;road to nowhere&quot; as the majority of traffic (especially commercial traffic) enters or leaves the town on the A44 Moreton-in-Marsh road. This will become even more the case if a weight restriction is put on the ancient bridge in Burford, as has been suggested. In that event, no heavy vehicles will use this relief road. This increase in traffic will also affect air quality, which is already at illegal levels.</td>

</table>
CHIPPING NORTON NEIGHBOURHOOD PLAN - on 3rd March 2016 a referendum was held in the town accepting the CNNP which was then adopted. In this plan it was mentioned in several places that any future development has to be sustainable and it is felt that whilst 600 homes on Tank Farm were possibly sustainable 1400 homes are not - please see notes 213141516 below. It is felt that WODC in their draft Local Plan entirely ignoring the spirit of the CNNP.

In February 2014 the Town accepted that it would have to take some new houses and reluctantly agreed that 600 on the area known as Tank Farm (the south half of the SDA) could be acceptable subject to suitable planning and mix of houses and infrastructure.

Little contact has been made since then except for a plan that was attached to a planning application in the nearby area in the middle of 2015. Nothing officially has been given since the meeting on 14th February 2014 until 23rd August 2016 when in a meeting between CNTC and OCC a plan using 800 homes plus 80 extra care beds was tabled and alterations suggested including no access at the southerly perimeter.

The next contact was the recent suggestion of 1400 houses. Considering that the allotment land to the south of the SDA is owned by the Town it seems strange that discussion about the possible of purchase of any land requirement has not yet happened - for sake of absolute clarity the William Fowler Allotment land is not for sale.

We also get the impression that some pressure might have been brought to bear on local land owners to go along with OCC plans - and please bear in mind that the majority of the land we are discussing is owned by OCC - thank goodness there are some ‘ransom sites’to protect the town from being totally overrun and spoilt.

We also feel that discussions with other stakeholders have not taken place - we back this statement up with the recent planning application at the Pillars which is adjacent to the northern edge of the SDA with no vehicular access which apparently shows no coherent masterplan. Chipping Norton Town Council totally reject the new local plan for the SDA for the following reasons in brief :-

1) 1400 new homes on Tank Farm are not sustainable

2) The local employment of residents has fallen over the last 10 years and is now below 30%

3) The majority of local employment tends to be ‘low paid’ jobs in retail,catering and caring sectors

4) ‘High paid’ jobs i.e. professional or technical jobs tend to be in what is now-called the ‘knowledge spine’which is difficult to access from Chipping Norton unless you drive as we have a poor train and bus service
5) Narrow and congested roads (including the main A441A361 at Horsefair where the worst pollution in Oxfordshire has been ignored for many years by OCC and WODC. The best long term solution to Horsefair are the road improvements needed around the Rollright Stones, which have been discarded due to cost - now budgeted at €18 million by OCC’s consultants.

6) The cost of the Eastern Relief road has not yet been tabled but has to be close to the figures in 5).

7) The traffic figures being used from the survey carried out by WYG are erroneous - two points immediately stand out - a) it is stated that there have been no traffic related accidents in Horsefair in the last 5 years - we know that there have been 3 DEATHS in the period and b) it is stated that the busiest time of the day on Burford Road (A361) at Chipping Norton School (a large comprehensive 1200 pupils) is between 0700 and 0800, but in reality this is really 0815 to 0845.

8) We dispute the figures given to us by OCC and others which show that only 30% of the HGV’s that transit through Horsefair use the 4361 towards Burford and a massive 100% use the A44 east and west towards Oxford/Moreton-in-Marsh / Evesham and the 4361 north to Banbury.

9) We have been advised by independent traffic consultants that the figures are probably nearer to 15% respectively 85%. We therefore consider the Eastern Relief Road to be ill-advised.

10) An independent expert has recently been shown our traffic problem and has walked around the town and agrees with the Town Council that a one way system using Albion Street and the High Street would go a long way to deter HGV’s and improve the air quality, ease congestion and add a few badly needed parking spaces. This could be achieved comparatively quickly and at a much lower cost than building either road.

| Ainscough Strategic Land | Ainscough Strategic Land | Ainscough Strategic Land | Chipping Norton SDA (MM138) | 4.2 As part of MM138, land East of Chipping Norton SDA (also known as Tank Farm) has increased from 600 units to 1,400 units, 9ha of employment land, a new link road, primary school, local centre and other requirements. Our principal issues with the ability for this site to deliver relates to its capacity and the complexities associated with delivering the site.  

4.3 Ownerships: The Chipping Norton SDA include two parcels of land, that to the north and south of London Road. There are two private landowners to the north of London Road, and three landowners to the south of London Road including Oxfordshire County Council (OCC) who own the majority of the site, Cala Holmes and a private landowner who owns the land east of the proposed link road.  

4.4 With five separate land ownerships, it is clear that it will not be the most straightforward allocation to deliver in a collective manner as each land owner will have their own priorities / requirements to address which inevitably draws out the process of delivery. Indeed, there are already some issues apparent. |
4.5 An application has submitted in October 2016 by Gallagher Estates for 100 homes on part of the SDA north of London Road (16/03416/OUT). Whilst this is not an issue in itself and would tie in with the Council’s aspiration to see earlier delivery on this part of the site, it is noteworthy that the applicant has not sought to accommodate the required link road and OCC have therefore objected to the scheme.

4.6 Capacity: This is the key issue associated with the site.

4.7 To address the housing requirement within the Chipping Norton sub-area the Council have simply increased the capacity of the single SDA within this sub-area from 600 homes to 1400 homes. The capacity is now more than double than that envisaged within the Submission Draft Plan, and almost three times that of the draft allocation, yet the site has not been increased significantly in size based on Figure 9.12 of the modified Local Plan.

4.8 The extended SDA boundary within the Proposed Modifications includes two main additional parcels of land. One is north of London Road. The other includes existing woodland that is located to the proposed link road, which we would regard as not being suitable for development particularly given it is located in an Area of Conservation for ecological purposes.

4.9 The Proposed Modification envisages that the 200 homes will be provided north of London Road and 1,200 homes south of London Road13. We consider this to be highly optimistic particular given the additional land identified to the south is existing woodland or identified as an area of environmental enhancement on the plan.

4.10 Indeed, representations to the Submission Draft Local Plan by OCC, relating to the land south of London Road, identified the capacity of the Chipping Norton SDA as 652 homes14 (Appendix 7). Indeed, OCC promoted the original increase of the strategic allocation from 550 homes to 660 homes at the time. We are also aware that Savills have made representations on behalf of the promoter CALA Homes, including a Landscape Assessment prepared by Lockhart Garrett (May 2015), which suggest that there was capacity for 700 units on the site south of London Road (Appendix 8).

4.11 It is therefore somewhat worrying that the Sustainability Appraisal Addendum Report (October 2016) states that

"studies indicate that the site could be extended and provided additional houses from 600 to 1,400" yet no capacity studies have been made available to the public and there is no meaningful increase in land take to justify this level of uplift. Indeed, the SA notes that a number of impacts cannot be fully assessed until a master planning process has been carried out.

4.12 Due to these concerns, we have carried out our own capacity analysis of the site. The gross site area of the Chipping Norton SDA is approximately 69.1 ha. The gross residential developable area is 32.8 ha when taking into account the requirement if Policy CN1 and elements shown on Figure 9.12 of the modified Local Plan, which include:

- Employment area (8.3ha);
- Link road (4.7ha);
- Primary school (2.2ha);
- Local centre (2ha); and,
4.13 Of this 32.8 ha gross developable area for residential development, we have applied an industry standard 30% ratio to take account of key spine roads, informal open space, play area, etc, which would result in a 23 ha net developable area. Applying a residential density of 30 dph to this area (which allows for internal road space), the net area results in 689 dwellings across the SDA.

4.14 We note there is a suggestion at paragraph 9.4.44a that the existing allotments could be relocated elsewhere. It is not suggested this land would be made available for residential development and we note this land is not shown within the boundary of the SDA in Figure 9.12. However, even if this land was to be included and development took place to the west of the suggested Link Road route, the capacity of the site would still only deliver circa 780 units across the SDA.

4.15 This indicates that the SDA requirement of 1,400 homes is highly optimistic and we have seen no evidence to suggest this level of development could be accommodated. Indeed, even if you increased the density to 40 dph, which we do not considered would be suitable for the area or delivered by Cala Homes, the capacity of the SDA site would struggle to deliver even 1,000 units.

4.16 In light of this, the Chipping Norton sub-area will not meet it housing target of 2,400 units over the plan period. Additional allocations would enable the Council to address this, such as the suggested site north of Primsdown Industrial Estate, Worcester Road.

4.17 Infrastructure and Delivery: The SDA requires a spine road through the site linking the A44 London Road to the north of the site and the A361.15. We accept that development north of London Road would not necessarily need to wait until the delivery of the link road before being occupied. However, any applications on this parcel of land would need to accommodate the principle of the route.

4.18 Of the remaining homes to the south, whilst it is noted that OCC and Cala Homes are actively promoting the site for development, given the extent to which the parameters of this SDA have altered in recent months, it is reasonable to assume that an application is still some way off and that the delivery of new homes will be delayed. Indeed, far from any detailed design being available on the link road, there is not even any basic alignment drawings for the Link road, which will need to be agreed between the main land owners and progressed. This will take time and is not a simple exercise.

4.19 Conclusions: For the purpose of progressing the delivery calculations from the SDAs, and despite the fact we do not consider the site can accommodate this level of development, we have assumed the capacity of this site will be no more than 1,000 units. This is despite the fact that our robust analysis of the site suggests it will deliver far less.

4.20 In terms of first completions, we accept that some early delivery on the land north of London Road is achievable. Even so, given there is still no permission in place and the current outline application that has been submitted is clearly not compliant with what Oxfordshire County Council wish to achieve (i.e. it does not provide for the link road), we've assumed the first developer would start completing from 2019-20 and the second parcel of land to the north would start delivering shortly afterwards.
4.21 For the remaining land to the south, we believe this is going to take longer to come forward. Ultimately, we think 2 developers would be active on this part of the site (Cala and another). As such, delivery rates are unlikely to go much above 60 units per annum. Based on the NLP rates for a site of this size, it would be 67 dwellings per annum. We have rounded this up to 70 dwellings per annum for ease.

4.22 Even if we assumed an application was also lodged next year, which we think is optimistic the complexities of this site and the fact that the parameters for the scheme have altered considerably, using NLP’s analysis for a lead in period beyond this point for a site of this size (5.3 years), it would result in completions from 2022-23. Ultimately, we consider this to be a reasonable position to take and it would result in a total of 630 units being completed on land south of London Road and 180 to the north, resulting in 810 units across the entire SDA within the plan period.

4.23 As such, even if more could be squeezed out of the site in terms of physical capacity, compared to what we envisage based on our capacity analysis, it is highly unlikely that this would be delivered in the plan period anyway.
However, it may prove very hard to resist the early redevelopment of the Parker Knoll site, and it is also evident that there is much less of a critical dependency attached to the bringing forward of land to the north of London Road for commercial and employment purposes, as this should not greatly constrain the manner or timing of how land to the south is brought forward.

It may also prove to be necessary to progress early delivery of these portions of the allocation, before a comprehensive Master Plan can be prepared and agreed.

Para 9.4.47: provision of North-South Link Road and southern access to Chipping Norton SDA:
Stagecoach notes and strongly endorses the conclusions of the County Council, that both congestion and air quality in the centre of Chipping Norton require that an eastern link road is provided as part of proposals for comprehensive development of the Strategic Development Area East of the town.

Para. 9.4.50 Stagecoach urges that a site of approximately 0.15 Ha. for a replacement bus Operating Centre should be identified with suitable (preferably direct) access from London Road as exactly that kind of necessary infrastructure needed to support the sustainable development of the town. The operational and locational requirements for such a facility are quite particular, and these very greatly constrain the number of suitable sites that reasonably could be considered in any locality. In a largely rural district, with particular landscape and visual sensitivities and a dearth of established employment areas, these constraints are especially severe. Exactly these conditions apply in the case of Chipping Norton.

Stagecoach therefore urges that, given the effective lack of credible alternatives, consideration be given in policy to making provision for a replacement operating Centre within the Local Plan proposals for Chipping Norton, to allow the effective provision of existing bus services to, from and within the town, and for their future improvement. Without such provision it would be a great deal harder to sustain the first journeys from the town in the morning, as would the final arrivals in the evening. At the very least, it would be greatly harder to justify additional service improvements, as “dead” mileage of up to 40 minutes would be required in each direction to depots at Banbury or Oxford.

The nature of this difficulty has already been recognised by the Town Council, and led to attempts being made in the Neighbourhood Plan to try to secure a site allocation. The independent examination of the Neighbourhood Plan concluded that this was properly a matter to be considered through the Local Plan Review.

8.46 Notwithstanding objections to the expansion of Tank Farm, the principle of a comprehensive development supported by an overall masterplan of the area is supported.

8.47 Paragraph 9.4.45 states:
Given the extent of the proposed SDA, the Council wishes to achieve a comprehensive development and would support in principle the preparation of an overall masterplan for the area incorporating both land to the south and north of the London Road. This would allow for individual applications to potentially come forward for parts of the site in the shorter-term without prejudicing delivery of a
8.48 The land allocated at Tank Farm through the Pre-Submission Local Plan was owned by two main parties, namely Oxfordshire County Council and CALA Homes. Expansion of the allocation has brought a number of other land owners into the draft allocation. Paragraph 9.4.44a advises that the proposed eastern link road is likely to be routed across land within the ownership of the Town Council. The Town Council's Mayor, Michael Tysoe has announced publicly the Council's opposition to the proposed expansion of the Tank Farm allocation (Banbury Guardian, 18 October 2016). It therefore reasonable to question whether the Town Council will be willing to release its land to facilitate provision of the road link. Paragraph 9.4.43a also notes that land north of London Road is being actively promoted for development by various parties.

8.49 Therefore, a key advantage of the smaller allocation, namely the limited number of landowners, has been lost through its expansion; the involvement of multiple land interests is likely to slow the pace of delivery through the planning process.

8.50 It is also unlikely to be appropriate to allow individual parcels of land to be brought forward under separate planning applications. Notwithstanding the policy requirement to agree a masterplan, delivery of the site should be carefully co-ordinated to ensure timely delivery of key infrastructure regarded by the Council as crucial to the successful delivery of the enlarged scheme.

8.51 The eastern link road is identified as a key component of the proposed Tank Farm SDA, and is required to help alleviate traffic impacts in the town centre and to contribute to the objective of improving air quality within the AQMA - a core objective of the Local Plan (CO16). The Chipping Norton Transport Options Study (July 2016) explores opportunities to deliver the eastern link road either as a spine road to the development or a distributor road. The distributor road is favoured by the study on the basis of an ability to carry a greater volume of traffic including HGVs around the periphery of the town. However this is not reflected within the access proposals described at 9.4.47 which refers simply to "a 'through route' from north to south". The alignment of the road is yet to be established and therefore it remains uncertain how the eastern link road will be delivered; what land interests will be affected; the proportion of the cost of the scheme, which is to be met by the developer(s) and the Council's expectations in respect of delivery alongside the phasing of development.

8.52 The Council has sought to justify the expansion of Tank Farm through delivery of the eastern link road. However, the policy fails to provide sufficient detail on the form of highway infrastructure required to support this level of development and to demonstrate that the proposed housing and employment development is capable of funding the infrastructure. Moreover, there is no apparent assessment of the visual impact of the eastern link road on the setting of the AONB. In the absence of these details, the expansion of Tank Farm is unsound and unjustified.

MM741 | CPRE Oxfordshire | Helen CPRE Oxon | Mrs Marshall | 1606 | Document Full Path: > SECTION 9 - STRATEGY AT THE LOCAL LEVEL > Chipping Norton Sub Area |

The major change to the Local Plan for Chipping Norton is the increase from 600 to 1,400 homes (almost a 250% increase) at the East Chipping Norton Strategic Development Area (ECNSDA), known locally as Tank Farm - reference: MAIN 136 to MAIN 144 inclusive.

There is also a new proposal for an 'eastern link road' which is also covered in changes MAIN 136 to MAIN 144 to the Local Plan.
CPRE wishes to raise objections to these proposed changes on the following grounds.

**Air Quality**

WYG were appointed by Oxfordshire County Council to prepare a strategic Chipping Norton Transport Options Study (CNTOS).

This study concluded that 'Given that an existing AQMA is already declared in this location, it might be reasonable to conclude that all development options would be likely to exacerbate air quality management issues' (paragraph 11.1.6 of the report). The building of 1,400 homes at Tank Farm was one of these development options. The report also notes 'In each case predicted traffic volumes on the A44 High Street / Horsefair corridor would be expected to increase reasonably substantially over and above the 2016 surveyed flows, exacerbating existing environmental degradation (notably air quality issues) within the town centre (paragraph 10.1.2).

The study also attempted to 'identify potential mitigation measures that would offer realistic scope to both accommodate development and help to mitigate the impact of this development and existing environmental issues within the town centre, notably associated with the declared AQMA on the A44 High Street / Horsefair (plus the southern section of the A361 Banbury Road and West End)' (paragraph 9.1.3).

The report concludes that 'the three outline schemes assessed (the Rollright bypass, central area zonal weight restriction and town centre gyratory) would likely be unsuitable mitigation options for a variety of reasons including preclusive cost, lack of likely effectiveness and / or unacceptable knock-on impacts' (paragraph 10.6.1).

The transport consultants employed by OCC and WODC therefore believe that the ECNSDA would worsen air quality management issues in the centre of Chipping Norton and that the 3 possible mitigation schemes to reduce the air pollution are not viable.

The existing AQMA has been in operation for many years and no solution has been found to this problem. The existing levels of air pollution in the centre of Chipping Norton are already adversely affecting the health of people living and working there. Yet WODC is proposing to build new houses in Chipping Norton which will worsen air pollution and increase the risk to health of people in centre of the town without having a viable strategy for reducing these levels. It could be argued that NO ADDITIONAL HOUSING should be allowed until a workable solution to the existing air quality problem is devised, implemented and shown to be effective.

**Road Safety**

Road safety issues in the centre of Chipping Norton are very closely connected with the problem of air pollution: both are caused by modern levels of traffic trying to get through an ancient market town the central area of which was originally laid out in the 13th Century.

Horse Fair is the narrowest part of the A44 as it passes through the town. Here the road is narrow as are the pavements. This puts vehicles and pedestrians into close...
proximity. It has been the site of several fatal accidents in recent years. Road safety concerns are not restricted just to the Horse Fair. Local people also know that it is becoming increasingly difficult to cross several of the roads in the town centre safely because of the increased volume of the traffic as well as vehicles being driven at speeds inappropriate for the town centre.

The Local Plan accepts the need for the Council to 'address the relatively high rate of fatalities and serious injuries on the District's road network' (paragraph 2.40). Work needs to be carried out to identify measures to improve safety in Horse Fair and other areas within the centre of the town. It also needs to be identified how these improvements will be funded. Again all of this work needs to be carried out before significant development is allowed to go ahead at the ECNSDA.

Traffic

The increase from 600 to 1,400 homes at the ECNSDA has profound implications for traffic in Chipping Norton and the surrounding area. The Chipping Norton Transport Options Study informed the preparation of the latest version of the Local Plan and in particular supported the option for 1,400 homes at the ECNSDA together with the Eastern Link Road. This option is of course the major change from the previous version of the Local Plan for Chipping Norton and is referenced in MAIN 27, MAIN 136 and MAIN 138 to MAIN 144 inclusive. This section of these comments outlines some concerns in a number of areas concerning traffic and arising from these changes to the Local Plan:

- Other traffic related comments

The way the Transport Options Study was carried out

The Transport Options Study report is an important document which played a major part in influencing the decision to put forward the 1,400 homes at the ECNSDA option in the Local Plan. Important decisions are to be made with respect to the future of Chipping Norton based on the findings of the study. Does a study which was principally carried out on one day only provide sufficiently robust and accurate data on which to base these crucial decisions?

The manual traffic counts and the ANPR surveys were carried out on a Tuesday in March and were intended to assess "normal" traffic conditions. However there are times of the week when traffic in Chipping Norton tends to be heavier than normal principally Monday mornings and Friday afternoons. Also Wednesdays tend to be busier because of the weekly market. Why weren't the surveys carried out during these busier times of the week?

In the summer many visitors and tourists come to Chipping Norton or pass through it on the way to see the Cotswolds or to visit major tourist attraction such as Blenheim Palace. There are not many tourists or visitors who choose to come to the area in early March which is when the traffic surveys were carried out. In the spring and summer there is also likely to be an increase in HGVs travelling to and from the fruit and vegetable growing areas in Worcestershire and other areas to the west of the
town. Why wasn’t the traffic survey work repeated again say in June in order to assess whether the traffic levels are significantly higher at that time of year?

The ANPR count locations were positioned such that they may have missed a substantial amount of local traffic within the town e.g. parents living in the areas off West Street/Churchill Road taking children to the Chipping Norton School and local residents driving into the centre to shop.

The findings of the Transport Options Study

The Transport Options Study report paints a bleak picture of what will happen to traffic in Chipping Norton if 1,400 homes are built at the ECNSDA even with the proposed Eastern Link Road:

* Increased traffic through Chipping Norton as outlined in paragraph 11.1.21 of the report:

  "However, delivery of the new eastern distributor road as a stand-alone measure would be insufficient to fully off-set and mitigate the impact on the town centre of the traffic growth anticipated by 2031 (both resulting from development on the Tank Farm site and general background growth on the network anticipated by this time). Furthermore, the beneficial minimisation of additional traffic flows on the A44 High Street would come at a cost of increasing traffic on peripheral routes around the town resulting from a combination of redistribution and the increased level of development on the Tank Farm site."

* The report also reports that this option "would be likely to exacerbate air quality management issues" - paragraph 11.1.15.

* The health of residents and people working in the centre of Chipping Norton would be put further at risk – see section CN4 above.

* Three mitigation options were examined and all were judged to be unsuitable for a variety of reasons – paragraph 10.6.1

In addition the study reports that the computer modelling of future traffic flows predicts that 2 of the main junctions in Chipping Norton would “operate well in excess of their theoretical capacity” and that the other 3 “would all remain operating within or, worst-case, at capacity for all of the potential development scenarios” – paragraph 11.1.16.

The report goes on to say that the computer software used may underestimate the capacity of roads in towns such as Chipping Norton and seeks to compare them with roads in other towns. The conclusion at this point is that "the operational impact of additional traffic flows resulting from each of the development scenarios on the existing network might be far less onerous than the model results indicate" – paragraph 11.1.17. At the very least this suggests that the future performance of the main road junctions within Chipping Norton are difficult to predict and that if the computer modelling turns out to be correct then two of those junctions will be operating well above their capacity.
**Other traffic related comments**

The Transport Options Study calculated ‘the estimated delivery costs of upgrading an existing route via Rollright Lane and the A3400 to the north of the town to act as an east-west bypass of the town serving as an alternative for through-movements of traffic on the A44’ – paragraph 10.3.3 and Figure 31.

The study report then goes on to say that ‘this option was considered unviable on the grounds of cost’ – paragraph 11.1.18.

However neither in the Local Plan nor in the Transport Options Study report is there any calculation of estimated delivery costs of the proposed Eastern Link Road. This seems a surprising omission as it makes comparisons between the 2 schemes impossible. It leaves unanswered the question of whether the funding for the proposed Eastern Link Road would be better spent on the upgrading of the Rollright/A3400 route.

Paragraph 9.4.40 of the Local Plan (MAIN 138) contains the statement with reference to the proposed 1,400 homes and the Eastern Link Road: ‘.... there could also be a diversion of a large proportion of HGV movements from Chipping Norton Town Centre, thereby possibly having a beneficial effect in terms of improving air quality - a key issue for the town.’.

A similar claim is made in paragraph 9.4.56 (MAIN 142). But doesn't the Transport Options Study for Chipping Norton conclude that ‘delivery of the new eastern distributor road as a stand-alone measure would be insufficient to fully off-set and mitigate the impact on the town centre of the traffic growth anticipated by 2031’ (paragraph 11.1.21)?

The Transport Options Study report also concludes that this option “would be likely to exacerbate air quality management issues” – paragraph 11.1.15.

Chipping Norton has been waiting for a solution to its traffic related problems for decades:

* The use of the Rollright/A3400 route to remove traffic for the centre of the town has been in discussion for many years.
* The town has been experiencing severe air quality issues and the associated detrimental effects on people’s health for at least a decade.
* An AQMA for the centre of Chipping Norton has now been in operation for over 8 years with no significant remedial action being taken.
* The same area covered by the AQMA is also an accident blackspot with a record of a fatal accident every 12 years and a serious RTA every 2 years on a stretch of road that is only about 200 metres in length.
* All the time traffic through Chipping Norton increases and these problems get
worse.

When the latest version of the Local Plan proposes a huge increase in the number of houses in the town would it not be reasonable to expect that the document would propose measures which would alleviate Chipping Norton's traffic-related problems. However all that is offered is a proposal that will in fact increase traffic in the town with all the consequent detrimental effects of this including a predicted worsening of the air quality problems. Is it unrealistic for the town’s residents and visitors to expect a better solution than this?

Car parking

Local residents as well as visitors are well aware of the current problems with regard to car parking in Chipping Norton. This is recognised in the Local Plan: ‘The availability of adequate public parking capacity is a key constraint in Chipping Norton’ (paragraph 9.4.30) and ‘Improvements to the efficiency and availability of public car parking in Chipping Norton will be sought as appropriate’ (paragraph 9.4.60).

The Local Plan states: ‘The scale and mix of uses in the local centre would be intended to meet the needs of the development and not compete with the Town Centre’ (paragraph 9.4.49). This presumably means that a large proportion of the people living in the proposed ECNSDA would use the town centre shops together with the Aldi store to do their main shopping.

A few people may walk, cycle or use public transport when shopping in the centre of Chipping Norton. However given the distance especially from the far parts of the ECNSDA to the town centre together with the fact that there would be a hill to climb on the way back most people will use their cars when shopping in the town and especially if doing a large weekly shop.

The increase in the number of homes in the ECNSDA from 600 to 1,400 will therefore increase significantly the need for extra car parking in the town centre. Land in or adjacent to the town centre is very scarce in Chipping Norton. Before development is permitted at the ECNSDA the problem of how to provide significant extra car parking capacity in the town centre needs to be resolved and funding secured for this.

School capacity

The Local Plan recognises the need for significant increases in school provision if the enlarged ECNSDA goes ahead: ‘it is a requirement of any proposed development on this site that a new primary school will be provided. The site is close to the existing secondary school where there is adequate capacity to absorb additional pupil numbers despite the increased size of the allocation’ (paragraph 9.4.48).

The overall housing requirement (2,400) represents an 80% increase in the number of houses in Chipping Norton and would mean that the population would increase by around the same percentage. It is also appropriate to assume that the number of
| School age children would rise by around the same order of magnitude requiring a new primary school approaching the size of the existing primary schools added together. Chipping Norton School would also have to almost double its existing size. The main issue with regard to increasing school capacity at both the primary and secondary levels would appear to be ensuring that adequate funds are available to carry this in time to cope with the increased demand – see below for a discussion of the funding requirements of the enlarged ECNSDA.

Meeting the housing needs of local people

One of the Core Objectives identified in the Local Plan is: 'CO4 Locate new residential development where it will best help to meet local housing needs and reduce the need to travel' (paragraph 3.7).

Locating 1,400 homes at ECNSDA does not support this Core Objective. Presumably the 600 homes proposed in the previous version of the Local Plan were felt to be adequate to meet local housing needs. The occupants of the additional 800 homes will presumably move into the area from outside and many of those of working age will commute to work thus directly working contrary to Core Objective 4. Moreover many will travel to work by car and thus increase pressure on roads locally.

Ensuring Chipping Norton retains its special character as a Cotswold market town

The Local Plan recognises the special character of Chipping Norton:

‘Chipping Norton will strengthen its role as a centre of enterprise in the northern part of the District. It will continue to be an economically and socially strong market town serving the needs of a large rural area. Its distinctive historic character and fine setting will be conserved and enhanced at the same time as accommodating new development to meet identified needs.’ (paragraph 3.2)

The overall housing requirement (2,400) represents an 80% increase in the number of houses in Chipping Norton and would mean the population would increase from around 6,500 to almost 12,000. Similar towns locally which have seen this scale of growth have changed fundamentally and such a growth in population over a relatively short time period must put at risk the special character of the town. Although provision has been made for an additional 9 hectares of business land it is unlikely that sufficient new jobs will be created in the town to support the majority of the people of working age living in the new homes in the ECNSDA. The Local Plan notes that ‘the number of people living and working in the town has fallen from 50% to 36% since 2001’ (paragraph 9.4.30). Undoubtedly that percentage will fall further if the current proposal to build 1,400 homes goes ahead.

The danger is that Chipping Norton will become more and more a dormitory town for people working in London, Oxford and other places and that this will alter its fundamental character.

Resisting pressures for an out of town supermarket

With the likely increase in the population consequent on the building of 1,400 new homes...
Places such as Witney have been able to build large supermarkets sufficiently close to the town centre that the new stores complement and support the town centre. There is no such site near to the centre of Chipping Norton.

Any large supermarket proposed in the future for Chipping Norton would be so far from the town centre that it would have a serious detrimental effect on the shops and businesses there.

There is real concern that WODC would not be able to prevent a future scheme for a large out of town supermarket going ahead given the significantly increased population and the financial and legal resources available to a major supermarket chain.

The Local Plan recognises this threat: ‘Chipping Norton is the main focus for retail and leisure activities within this sub-area. The town has a strong and diverse retail offer but remains vulnerable to out of centre development. We will through the Local Plan therefore seek to safeguard and reinforce the role of Chipping Norton Town Centre’ (paragraph 9.4.61). However there is no explanation of how pressures for ‘out of centre development’ will be resisted and this remains an area of real concern for local people given the plans to build so many new homes in the town.

Funding of measures to lessen the impact of the ECNSDA

Several areas will require significant investment if the current plans for the ECNSDA go ahead including:

- Measures to reduce air pollution
- Improvements to road safety in Chipping Norton
- New road
- Other improvements to roads in and around the town
- Extra car parking
- Improving conditions throughout the town and surrounding areas for pedestrians and cyclists, including accessibility to bus and rail services
- New primary school
- Significant expansion of secondary school
- Mitigation measures for the impact on the Conservation Target Area (CTA) and the SSSI

Not all of this will come from developer funding. We are also in a time of reductions in council funding and economic uncertainty in the post Brexit era. In addition it has to be taken into account that there will be large demands for funding in all areas of WODC where substantial house building is proposed. It is therefore legitimate to ask: where will the rest of the funding will come from in order to ensure that the building of 1,400 homes in the ECNSDA does not have major negative impacts on the town and its surrounding area?

If there really is a need for 1,400 new homes in the ECNSDA then market forces will ensure that developers and building firms will go ahead and build the houses. A real
Concern to local people is that the houses will be built but funds will turn out to be insufficient to ensure that the measures outlined above can be

| MM724         | Gallagher Estates Limited | Gallagher Estates Limited | - | Gallagher Estates Limited | 1691 | > SECTION 9 - STRATEGY AT THE LOCAL LEVEL > Chipping Norton Sub Area > MAIN 139 | Main 138-139 – Policy CN1: Land East of Chipping Norton Strategic Development Area (SDA) – 1,400 homes - and Supporting Text

Principle of the Allocation

2.45 The Proposed Modifications to the Plan have sought to increase the scale of the development with 1,400 dwellings and 9ha of employment land now proposed, compared to the 600 dwellings and 1.5ha of employment land included for in the submission version of the Plan. The supporting text to the Policy notes that:

"Whilst it is a significant increase in housing numbers and employment land provision for this site it is considered that this can be successfully accommodated on the site without undue harm in terms of landscape impact subject to appropriate mitigation, albeit with an extension of the site boundary. It will also help to deliver an alternative strategic transport link for the town and help ensure the viability of a new primary school both of which will be delivered as integral parts of the allocation."

2.46 Chipping Norton is identified as the second most sustainable settlement in the District (after Witney) and as such is considered to be an appropriate location to accommodate additional development to meet the needs of the District. In considering potential locations to accommodate additional development at Chipping Norton as a result of the increased housing requirement in the District, the Sustainability Appraisal Addendum Report highlights that:

"In order to meet with the required uplift in housing need identified, the Council considered again whether there are any other strategic options available and concluded that land to the east of the town remains the only potential direction of strategic growth due to AONB constraints."

2.47 We support the proposed allocation of land to the east of Chipping Norton to accommodate a significant proportion of the needs of the Sub-Area and the District as a whole. The scale and location of the allocation is considered to be reflective of Chipping Norton's ranking in the settlement hierarchy and the sustainability of the existing settlement.

2.48 The boundaries of the allocation have been extended to the north and east in order to accommodate the increased quantum of development now proposed. Whilst our client’s site at the Pillars, south of Banbury Road had been identified in the submission version of the Local Plan as a SHLAA site with identified capacity to meet some of the wider housing requirement, it now forms part of this wider Strategic Development Area.

2.49 We support the allocation of the site and consider the proposed modification to be a sound approach which addresses the Inspector's concerns expressed in his Preliminary Findings: Part 2 regarding the status of the SHLAA sites and the need for these to be allocated. Our comments regarding the specific requirements of the proposed allocation and the evidence base underpinning the allocation are discussed in turn below.
Masterplanning and Principle of Early Release

2.50 Proposed criterion ‘ai’ of the Policy requires "comprehensive development for the whole site including land north and south of London Road to be led by an agreed masterplan."

2.51 The Council are currently proposing to address the current backlog in its housing requirement using the Liverpool method as opposed to the Sedgefield method which is advocated by the NPPG and this is borne out in numerous appeal decisions and case law. As per our submissions above we consider that the Plan should make provision to meet the backlog in housing need using the Sedgefield method.

2.52 As currently drafted concern is raised that criterion ‘ai’ of Policy CN1 would delay the delivery of early phases of the SDA. The supporting text to the Policy states that:

"Given the extent of the proposed SDA, the Council wishes to achieve a comprehensive development and would support in principle the preparation of an overall masterplan for the area incorporating both land to the south and north of the London Road. This would allow for individual applications to potentially come forward for parts of the site in the shorter-term without prejudicing delivery of a more advantageous, comprehensive scheme."

2.53 It is unclear what additional advantages the Council envisage being delivered beyond those secured through the other criterion of the Policy, such as the school. To ensure the Plan is effective it is important that any identified requirements of the proposed allocations are clearly specified to ensure their delivery, and indeed, are justified based on evidence. Furthermore additional requirements than those currently identified would need to be factored into the Strategic Development Area (SDA) Viability Update (2016) to ensure that the proposals are deliverable.

2.54 Although the Council have indicated that they would be supportive of parts of the site coming forward in the shorter-term, the Policy as currently drafted is considered to be ineffective in this regard.

2.55 As highlighted in Section One, an application for the proposed development of land south of Banbury Road, Chipping Norton (The Pillars) is currently pending determination with the LPA, under application reference 16/03416 for up to 100 new homes. This application was submitted in advance of the draft Plan being released and was therefore an unallocated site at that time. It is considered that this application would help to deliver a first phase of development of the SDA, which would contribute to the Council’s five year housing land supply.

2.56 Our comments in respect of the Eastern Link Road are set out in turn below and as such are not repeated here. In summary however the current planning application demonstrates the suitability of Chipping Norton as a location for development in general and the appropriateness of our client’s site in particular to accommodate this development. The range of studies that have been undertaken to support the planning application demonstrate that a high quality development will be achieved at the site, and that there are no environmental, technical or other reasons why planning permission should not be granted in this case. Further details of the proposals are provided in the
Planning Statement at Appendix One and Design and Access Statement at Appendix Two.

2.57 We are in the process of working through the technical responses received in respect of the application with both West Oxfordshire District Council and Oxfordshire County Council. The application clearly demonstrates that there is no harm as a result of the proposals which would significantly and demonstrably outweigh the substantial benefits which would be achieved.

2.58 Notably the Council’s Housing Land Supply Position Statement (October 2016) anticipates that the SDA will deliver 200 dwellings to its five year housing land supply. Clearly the current application would make an important contribution towards this anticipated supply figure, and is the only part of the SDA on which an application has been submitted to date. To ensure the early delivery of part of the SDA as envisaged by the Local Plan and Housing Land Supply Position Statement it is important that the Policy requirements are proportionate and facilitate this delivery.

2.59 It is considered that our client’s site is appropriate to be released as an early phase of development and that flexibility should be introduced into the Policy to allow this to occur.

Eastern Link Road

2.60 Criterion d of the Policy requires: “satisfactory vehicular access arrangements to be agreed in principle with the highway authority and demonstrated through a robust Transport Assessment (TA) to include the provision of an eastern link road connecting the Banbury Road to the B4026/A361 via London Road.”

2.61 In seeking to justify the requirement, the supporting text to the Policy states: “Transport evidence commission on behalf of the District Council by Oxfordshire County Council has tested the implications of a much larger scheme of up to 1,500 dwellings and concludes that if supported by an eastern link road not only would the traffic impact of the additional growth be able to be mitigated but there could also be a diversion of a large proportion of HGV movements from Chipping Norton Town Centre, thereby possibly having a beneficial effect in terms of improving air quality – a key issue for the town.”

2.62 The only evidence base document published in support of the Local Plan Proposed Modifications consultation related to transport at Chipping Norton is the “WYG Transport Planning Chipping Norton Transport Options Study (July 2016)”. The Local Plan supporting text correctly identifies that the Study has assessed a range of options including the delivery of 1,500 dwellings. Importantly however the Study has only assessed the implications of an eastern distributor road linking the A44 London Road to the north of the site and the A361 Burford Road to the south.

2.63 It is clear from the Study that no assessment has been undertaken as part of this work to the effects of extending this eastern distributor road further north to connect with Banbury Road. Clearly in order for this requirement to be justified then additional evidence is required regarding the need for the road to extend up to Banbury Road. At
this stage concern is raised that the requirement for the eastern distributor road to extend to Banbury Road is potentially unsound and is certainly not justified in the evidence base.

2.64 The draft Plan makes clear that the route of the eastern distributor road shown on Figure 9.12 is purely indicative. The Chipping Norton Transport Options Study has itself not provided any indication as to the most appropriate route for the road, and in any event, given the concerns raised above, would have provided no indication of its preferred routing in connecting up to Banbury Road.

2.65 From the work undertaken in respect of the current planning application for our client’s site at The Pillars, we do have concerns regarding the current indicative alignment and consider that a location to the east of the existing cricket club may prove a more appropriate solution. This would ensure the cricket club is not isolated from the existing settlement by the proposed link road, particularly given the enhanced pedestrian connections to the town centre proposed to be facilitated by the development at The Pillars.

2.66 Furthermore it is questioned whether a link road so close to the centre of Chipping Norton would result in the improvements anticipated by the District and County Council’s or whether a connection further to the east, if the northern extent of the proposed road is any event justified or required, may be more appropriate and draw more traffic away from the town centre and AQMA. Clearly further investigation is required on this matter.

2.67 Given the uncertainties and lack of clear evidence regarding the eastern distributor road identified above: understandably the Council have been unable to provide costings for the road in its Infrastructure Delivery Plan (2016). This lack of information also affects the Strategic Development Area (SDA) Viability Update in respect of Chipping Norton. We consider the Viability Update in greater detail below and as such do not repeat our comments here.

2.68 As highlighted above, the supporting text for the Policy states that the proposed link road will mitigate the effects of the proposed SDA, and in addition will have a beneficial impact on the AQMA by diversion of HGV movements out of the town centre. The link road is therefore not required purely to meet the needs of the development itself, and would have wider benefits required to mitigate the existing AQMA issues. Once clarification is provided as to the scale, form and associated costings of the link road consideration must be given by WODC to the funding arrangements for the road given it is not justified to meet the needs of the development itself.

2.69 The Infrastructure Delivery Plan as currently drafted anticipates that the road will be delivered purely by the East Chipping Norton SDA. Given the above such an approach is not considered to be justified. It is noted that whilst for the East Chipping Norton Link Road the Infrastructure Delivery Plan comments that it “would alleviate traffic through the centre of Chipping Norton and help to deliver improvements to the Air Quality Management Area (AQMA)” with regards to the northern distributor road to be provided as part of the North Witney SDA the Infrastructure Delivery Plan states that it is "necessary to support strategic growth to the north of Witney.” The CIL Regulations make clear that any infrastructure contributions must be directly related to the proposed
development, and it is apparent that this is not the case in respect of the East Chipping Norton Link Road and as such the cost of the road should not fall to be funded purely by the developers of the SDA.

2.70 Discussions are ongoing with WODC and OCC in respect of the current planning application for the proposed development at The Pillars including in respect of the requirement for the eastern link road. A further meeting is scheduled for January 2016 to discuss this matter and it is anticipated that significant progress will be made ahead of the resumption of the EIP in Spring 2017. As such we wish to reserve our right to comment further on this matter as discussions unfold, and, if appropriate, we will seek to agree a Statement of Common Ground with WODC/OCC in respect of this matter ahead of the resumption of the EIP.

Sustainability Appraisal

2.71 Enfusion, on behalf of WODC, have prepared a Sustainability Appraisal Addendum Report in respect of the proposed modifications to the Local Plan. In respect of the increased scale and quantum of development proposed at the east Chipping Norton SDA, the Addendum advises that “it is considered that the findings of the strategic level SA [CD2] still remain relevant and valid.” In summary the Addendum concludes that: “the proposed modifications to the strategic site option [and Policy CN1] remove some uncertainties, confirm mitigation measures for potential negative effects, and offer potential enhancements. Some uncertainty remains as details for mitigation/enhancement for landscape and biodiversity effects are dependent upon detailed masterplanning.”

2.72 We support the conclusions of the Sustainability Appraisal Addendum and consider the current application for the development of The Pillars, forming the northern most part of the allocation, demonstrates the sustainability of the proposed allocation. The application demonstrates that the uncertainty regarding landscape and biodiversity can be appropriately addressed in respect of this element of the SDA.

2.73 Given the scale of increase of the proposed SDA since the previous Sustainability Appraisal was undertaken, to ensure the Plan is underpinned by a robust evidence base we would recommend that the detailed appraisal of the allocation be updated in full to support the summary provided in the Addendum Report. This will help to further demonstrate that the proposed strategy is justified, subject to our comments raised above.

Strategic Development Areas Viability Update

2.74 As highlighted above the Local Plan consultation is supported by a Strategic Development Areas (SDA) Viability Update (2016) prepared by Aspinall Verdi. Our concerns regarding the proposed eastern link road have been discussed in detail above and as such are not repeated here. The remaining uncertainties regarding the link road do however have clear implications for the robustness of the Viability Update as at this stage the Council have been unable to cost the link road or secure appropriate funding mechanisms given the requirement for the link road is directly related to the SDA itself.
**2.75** A further update is therefore likely to be required to the viability work once further clarity is received on this matter.

2.76 In addition it is noted that the current appraisal for the Chipping Norton SDA identifies a construction cost for infrastructure in year seven of £8,000,000. This is the only infrastructure cost identified in the appraisal. Clearly given the discussion above this cost is not related to the eastern link road. The SDA is also required to deliver a primary school however the Infrastructure Delivery Plan identifies a costing for this of £9,000,000.

2.77 As such it is unclear what the £8,000,000 cost relates to and further clarity will be required in order to ensure the Plan is justified and effective and that the SDA is deliverable.

**CALA supports the proposed boundary for the Land East of Chipping Norton SDA as set out on figure 9.12.**

However, as per our previous representations the area of landscape mitigation shown on the plan (shaded green) should be deleted. The previously submitted Landscape Mitigation Report prepared by Lockhart Garrett (May 2015) concluded that such an expansive area was entirely unnecessary. It accepted that a “narrow ‘buffer’ area combined with the retention of existing vegetation features would be sufficient to reduce landscape impacts to an appropriate level, and that the open space provision within the development should be used to enable a green infrastructure-led landscape design process with green corridors permeating the entire development. This can be addressed at the masterplanning stage”.

It is acknowledged that this part of the site has a higher degree of landscape sensitivity but that the detailed design work for the site will be best placed to more accurately identify the extent of mitigation required. There is no need for the extent of landscape mitigation to be be identified on the plan. The text at paragraph 9.4.43b and bullet “c“ in Policy CN1 recognises the need for appropriate landscape mitigation.

**As set out in representations prepared for the Council’s Pre-Submission Plan in May 2015 the plan accompanying Policy CN1 (Figure 9.12) contains a substantial area of landscape buffering (‘Environmental enhancements including landscape mitigation’, shaded green) to the southern side of the site. It is clear from the Landscape Mitigation Report prepared by Lockhart Garrett (May 2015) that accompanied the May 2015 representations, that such an expansive area is entirely unnecessary and unjustified and should be reduced.**

It is acknowledged that this part of the site has a higher degree of landscape sensitivity but that the detailed design work for the site will be best placed to more accurately identify the extent of mitigation required. It is a significant concern that the inclusion of such a buffer on the plan will prejudice the proper, comprehensive and effective masterplanning of the site.

**In the Draft Local Plan the Public Right of Way from Glyme Hall was included in the red line area as a**

<td>&gt; SECTION 9 - STRATEGY AT THE LOCAL LEVEL &gt; Chipping Norton Sub Area &gt; MAIN 140</td>
<td>When the Local Plan was originally developed, it made sense to concentrate housing developments in the three market towns. However, it is not appropriate to merely extrapolate the original allocations to take the additional numbers required by the Inspector and the SHMA. In particular, it is not sustainable to allocate an additional 800 homes to the Chipping Norton SDA. The percentage of residents employed locally has been falling steadily over the last decade and is now below 30%. Employment growth in the County is centred on the ‘knowledge spine’ running from Bicester through Oxford to the South. Chipping Norton is too inaccessible to attract significant potential employers, who will want to locate near the clusters along the spine. The main employment locally is for ‘minimum wage’ jobs in retail and caring sectors. New residents looking for professional or technical jobs will be forced to commute by car using the sub-standard A44 towards Oxford or the more dangerous A361 towards Banbury. The bus service to Oxford only runs hourly and has to cope with the severe congestion in the Wolvercote roundabout area. Access to the North Cotswold railway line at Kingham is also difficult – the connecting bus service is now sparse and unreliable following the County Council cuts, not as implied in para. 7.58. The additional 800 homes must be allocated nearer to Oxford with easy access to a railway line, thereby linking easily to the main employment areas in the County. The modified Plan already picks up on this logic, by proposing the Eyesham garden village with good links to Hanborough station (and with the potential to be eventually linked to a re-opened railway line to Witney) and with employment areas nearer to the ‘knowledge spine’ clusters. The Chipping Norton “800” should therefore be reallocated to the Eyesham area or sites even nearer to Oxford, with a start date...</td>

<td>earlier than the 2021 proposed for the garden village. The Chipping Norton Eastern Link Road proposed as part of the Tank Farm SDA will not achieve the reduction in HGVs through the town centre - the vast majority of HGVs are on the A44 towards Evesham, not on the A361. The link road will be a &quot;road from nowhere to nowhere&quot;. The money on the link would be wasted and reduce the likelihood of achieving a proper Chipping Norton by-pass on the A44. The commercial viability of the Stagecoach S3 bus to Oxford and the availability of a cadre of local drivers is dependent upon an overnight bus park in Chipping Norton. As part of the masterplan for the Tank Farm development a site of at least 0.3 Ha should be set aside for this vital bus parking.</td>

accompanied by improvements in support functions as outlined above in A to D. Failure on this point will lead to a disastrous increase in housing population, people and totally unacceptable burdens on services.

The other major conditions of this application must be the construction of 2 link roads, one to the West of Chipping Norton (not shown) and one as detailed in the planning application, i.e. to the North East of Chipping Norton. Both of these link roads would bring a much needed traffic and pollution reduction to the town centre, badly needed now, without the addition of a further 1000 units being constructed.

The definition of affordable housing should be explained in terms of a price comparison between normal prices and affordable prices. This would ensure that prices being offered are fair and affordable.

The Bellway Homes development should be monitored to see that it is achieving adequate sales and that there is therefore a clear and uncompromising demand for another 1000 properties in Chipping Norton.

No due consideration of the effects on the local population of dumping of an extraneous invasion, without thought of employment and services in depth.

1) 1400 new houses will overwhelm Chipping Norton and change its character forever.
2) Not enough consideration into alternative plans have been considered.
3) New link road goes nowhere! So will not help our traffic problems.

Main 140

8.53 These representations raise no objection in principle to the allocation of Tank Farm as a location for housing development at Chipping Norton. However, the substantial expansion of the proposed SDA from 600 to 1,400 dwellings and the addition of a further 9 hectares of employment land are not justified by the evidence.

8.54 For the reasons set out in representations to Main 138 and 139, the expansion of the allocation is not supported by the Council’s evidence base. The landscape evidence relied upon for Chipping Norton has not been reviewed to take into account the proposed modifications and therefore it is reasonable to assume that the Council does not dispute the findings of the Kirkham
Report67, which supports up to 500 dwellings at the site. The Sustainability Appraisal Addendum Report 2016 acknowledges that the findings of the detailed SA in February 2015 in respect of Tank Farm remain relevant and valid.

8.55 Paragraph 4.40 of the SA Addendum states that the: expanded site will still have major positive effects for housing with concomitant minor positive effects for health and well-being;...Positive effects for community SA objectives are strengthened as the larger scale of development could provide further green infrastructure to be detailed in masterplanning.

8.56 The previous SA identified minor negative effects on landscape, as it abuts the AONB, and is adjacent to the Chipping Norton Conservation Area. The SA Addendum purports that the expansion of the development can be accommodated without undue harm to the landscape assets although some uncertainty remains about the significance of effects until detailed masterplan and mitigation measures are established.

8.57 The minor negative effects upon landscape associated with the 600 unit scheme were a result of careful consideration of the recommendations of the Kirkham Report to limit the extent of the development thereby avoiding the most visually prominent parts of the site. Whilst the SA acknowledges that the impact on the setting of the AONB needs to be addressed, the Kirkham Report identifies issues beyond the AONB, noting that the site is located within a sensitive landscape in an area with a high level of inter visibility to the south and east. It concludes that development will inevitably lead to an adverse landscape and visual impact on the perception of the eastern edge of the town and therefore recommends that development is contained within the 220m contour, with wide tranches of woodland planting to screen the development. Subject to these provisions the report concludes that the impact on the AONB should be low.

8.58 However, the proposed expansion of the SDA would step well beyond the limitations established by the Kirkham Report. The report considered a development of up to 900 homes but concluded that around 500 dwellings was the maximum that could be supported in landscape terms. The Council has failed to provide any additional evidence to justify the substantial uplift in the scale of development now proposed; moreover the landscape evidence base fails to provide any assessment of the impact of development above 900 homes, or of the provision of major highway infrastructure or employment development.

8.59 The provisions of Policy CN1 criterion c) in respect of the provision of appropriate landscape measures to mitigate the potential impact of the development are inadequate to overcome the harm to the landscape which would be caused by the enlarged SDA. THE SA Addendum Report recognises that some uncertainty remains as to the significance of effects on the landscape in the absence of detailed masterplanning and mitigation measures. Therefore, if the degree of harm to the landscape remains uncertain, the principle of expanding the allocation prior to further work being undertaken by the Council to confirm that adequate measures can be put in place to mitigate the impact of the development on the AONB and wider landscape is considered to be unsound.

8.60 For the reasons set out in respect of main modification 139, criterion d) lacks the clarity required by an allocation policy to ensure the timely delivery of the eastern link road. The Council's Infrastructure Delivery Plan (November 2016) includes the East Chipping Norton Link Road (page 63). However, the estimated costs and funding gap are "to be identified" with no funding secured to date. On this basis there is no certainty that can be offered to potential developers at this stage on

8.61 There remains a lack of evidence to justify the expansion of the allocation East of Chipping Norton and a lack of clarity on the cost burden placed upon the developer to deliver the infrastructure and mitigation deemed necessary to enable delivery of the allocation. The increase in the scale of development at the SDA proposed via the modifications is considered to be unjustified having regard to the evidence base and is therefore unsound.

The major change to the Local Plan for Chipping Norton is the increase from 600 to 1,400 homes (almost a 250% increase) at the East Chipping Norton Strategic Development Area (ECNSDA), known locally as Tank Farm - reference: MAIN 136 to MAIN 144 inclusive.

There is also a new proposal for an ‘eastern link road’ which is also covered in changes MAIN 136 to MAIN 144 to the Local Plan.

CPRE wishes to raise objections to these proposed changes on the following grounds.

Air Quality

WYG were appointed by Oxfordshire County Council to prepare a strategic Chipping Norton Transport Options Study (CNTOS).

This study concluded that ‘Given that an existing AQMA is already declared in this location, it might be reasonable to conclude that all development options would be likely to exacerbate air quality management issues’ (paragraph 11.1.6 of the report).

The building of 1,400 homes at Tank Farm was one of these development options. The report also notes ‘in each case predicted traffic volumes on the A44 High Street / Horsefair corridor would be expected to increase reasonably substantially over and above the 2016 surveyed flows, exacerbating existing environmental degradation (notably air quality issues) within the town centre(paragraph 10.1.2).

The study also attempted to ‘identify potential mitigation measures that would offer realistic scope to both accommodate development and help to mitigate the impact of this development and existing environmental issues within the town centre, notably associated with the declared AQMA on the A44 High Street / Horsefair (plus the southern section of the A361 Banbury Road and West End)’ (paragraph 9.1.3).

The report concludes that ‘the three outline schemes assessed (the Rollright bypass, central area zonal weight restriction and town centre gyratory) would likely be unsuitable mitigation options for a variety of reasons including preclusive cost, lack of likely effectiveness and / or unacceptable knock-on impacts’ (paragraph 10.6.1).

The transport consultants employed by OCC and WODC therefore believe that the ECNSDA would worsen air quality management issues in the centre of Chipping
Norton and that the 3 possible mitigation schemes to reduce the air pollution are not viable.

The existing AQMA has been in operation for many years and no solution has been found to this problem. The existing levels of air pollution in the centre of Chipping Norton are already adversely affecting the health of people living and working there. Yet WODC is proposing to build new houses in Chipping Norton which will worsen air pollution and increase the risk to health of people in centre of the town without having a viable strategy for reducing these levels. It could be argued that NO ADDITIONAL HOUSING should be allowed until a workable solution to the existing air quality problem is devised, implemented and shown to be effective.

Road Safety

Road safety issues in the centre of Chipping Norton are very closely connected with the problem of air pollution: both are caused by modern levels of traffic trying to get through an ancient market town the central area of which was originally laid out in the 13th Century.

Horse Fair is the narrowest part of the A44 as it passes through the town. Here the road is narrow as are the pavements. This puts vehicles and pedestrians into close proximity. It has been the site of several fatal accidents in recent years.

Road safety concerns are not restricted just to the Horse Fair. Local people also know that it is becoming increasingly difficult to cross several of the roads in the town centre safely because of the increased volume of the traffic as well as vehicles being driven at speeds inappropriate for the town centre.

The Local Plan accepts the need for the Council to ‘address the relatively high rate of fatalities and serious injuries on the District’s road network’ (paragraph 2.40). Work needs to be carried out to identify measures to improve safety in Horse Fair and other areas within the centre of the town. It also needs to be identified how these improvements will be funded. Again all of this work needs to be carried out before significant development is allowed to go ahead at the ECNSDA.

Traffic

The increase from 600 to 1,400 homes at the ECNSDA has profound implications for traffic in Chipping Norton and the surrounding area. The Chipping Norton Transport Options Study informed the preparation of the latest version of the Local Plan and in particular supported the option for 1,400 homes at the ECNSDA together with the Eastern Link Road. This option is of course the major change from the previous version of the Local Plan for Chipping Norton and is referenced in MAIN 27, MAIN 136 and MAIN 138 to MAIN 144 inclusive. This section of these comments outlines some concerns in a number of areas concerning traffic and arising from these changes to the Local Plan:

- Other traffic related comments

The way the Transport Options Study was carried out
The Transport Options Study report is an important document which played a major part in influencing the decision to put forward the 1,400 homes at the ECNSDA option in the Local Plan. Important decisions are to be made with respect to the future of Chipping Norton based on the findings of the study. Does a study which was principally carried out on one day only provide sufficiently robust and accurate data on which to base these crucial decisions?

The manual traffic counts and the ANPR surveys were carried out on a Tuesday in March and were intended to assess "normal" traffic conditions. However there are times of the week when traffic in Chipping Norton tends to be heavier than normal principally Monday mornings and Friday afternoons. Also Wednesdays tend to be busier because of the weekly market. Why weren't the surveys carried out during these busier times of the week?

In the summer many visitors and tourists come to Chipping Norton or pass through it on the way to see the Cotswolds or to visit major tourist attraction such as Blenheim Palace. There are not many tourists or visitors who choose to come to the area in early March which is when the traffic surveys were carried out. In the spring and summer there is also likely to be an increase in HGVs travelling to and from the fruit and vegetable growing areas in Worcestershire and other areas to the west of the town. Why wasn't the traffic survey work repeated again say in June in order to assess whether the traffic levels are significantly higher at that time of year?

The ANPR count locations were positioned such that they may have missed a substantial amount of local traffic within the town e.g. parents living in the areas off West Street/Churchill Road taking children to the Chipping Norton School and local residents driving into the centre to shop.

The findings of the Transport Options Study

The Transport Options Study report paints a bleak picture of what will happen to traffic in Chipping Norton if 1,400 homes are built at the ECNSDA even with the proposed Eastern Link Road:

* Increased traffic through Chipping Norton as outlined in paragraph 11.1.21 of the report:

"However, delivery of the new eastern distributor road as a stand-alone measure would be insufficient to fully off-set and mitigate the impact on the town centre of the traffic growth anticipated by 2031 (both resulting from development on the Tank Farm site and general background growth on the network anticipated by this time). Furthermore, the beneficial minimisation of additional traffic flows on the A44 High Street would come at a cost of increasing traffic on peripheral routes around the town resulting from a combination of redistribution and the increased level of development on the Tank Farm site."

* The report also reports that this option "would be likely to exacerbate air quality
management issues” – paragraph 11.1.15.
* The health of residents and people working in the centre of Chipping Norton would be put further at risk - see section CN4 above.
* Three mitigation options were examined and all were judged to be unsuitable for a variety of reasons – paragraph 10.6.1
In addition the study reports that the computer modelling of future traffic flows predicts that 2 of the main junctions in Chipping Norton would “operate well in excess of their theoretical capacity” and that the other 3 “would all remain operating within or, worst-case, at capacity for all of the potential development scenarios” – paragraph 11.1.16.

The report goes on to say that the computer software used may underestimate the capacity of roads in towns such as Chipping Norton and seeks to compare them with roads in other towns. The conclusion at this point is that "the operational impact of additional traffic flows resulting from each of the development scenarios on the existing network might be far less onerous than the model results indicate" – paragraph 11.1.17. At the very least this suggests that the future performance of the main road junctions within Chipping Norton are difficult to predict and that if the computer modelling turns out to be correct then two of those junctions will be operating well above their capacity.

Other traffic related comments

The Transport Options Study calculated ‘the estimated delivery costs of upgrading an existing route via Rollright Lane and the A3400 to the north of the town to act as an east-west bypass of the town serving as an alternative for through-movements of traffic on the A44’ – paragraph 10.3.3 and Figure 31.

The study report then goes on to say that ‘this option was considered unviable on the grounds of cost’ – paragraph 11.1.18.

However neither in the Local Plan nor in the Transport Options Study report is there any calculation of estimated delivery costs of the proposed Eastern Link Road. This seems a surprising omission as it makes comparisons between the 2 schemes impossible. It leaves unanswered the question of whether the funding for the proposed Eastern Link Road would be better spent on the upgrading of the Rollright/A3400 route.

Paragraph 9.4.40 of the Local Plan (MAIN 138) contains the statement with reference to the proposed 1,400 homes and the Eastern Link Road: ‘…. there could also be a diversion of a large proportion of HGV movements from Chipping Norton Town Centre, thereby possibly having a beneficial effect in terms of improving air quality - a key issue for the town.’.

A similar claim is made in paragraph 9.4.56 (MAIN 142). But doesn't the Transport Options Study for Chipping Norton conclude that 'delivery of the new eastern distributor road as a stand-alone measure would be insufficient to fully off-set and mitigate the impact on the town centre of the traffic growth anticipated by 2031’ (paragraph 11.1.21)?
The Transport Options Study report also concludes that this option “would be likely to exacerbate air quality management issues” – paragraph 11.1.15.

Chipping Norton has been waiting for a solution to its traffic related problems for decades:

* The use of the Rollright/A3400 route to remove traffic for the centre of the town has been in discussion for many years.

* The town has been experiencing severe air quality issues and the associated detrimental effects on people’s health for at least a decade.

* An AQMA for the centre of Chipping Norton has now been in operation for over 8 years with no significant remedial action being taken.

* The same area covered by the AQMA is also an accident blackspot with a record of a fatal accident every 12 years and a serious RTA every 2 years on a stretch of road that is only about 200 metres in length.

* All the time traffic through Chipping Norton increases and these problems get worse.

When the latest version of the Local Plan proposes a huge increase in the number of houses in the town would it not be reasonable to expect that the document would propose measures which would alleviate Chipping Norton’s traffic related problems. However all that is offered is a proposal that will in fact increase traffic in the town with all the consequent detrimental effects of this including a predicted worsening of the air quality problems. Is it unrealistic for the town’s residents and visitors to expect a better solution than this?

Car parking

Local residents as well as visitors are well aware of the current problems with regard to car parking in Chipping Norton. This is recognised in the Local Plan: ‘The availability of adequate public parking capacity is a key constraint in Chipping Norton’ (paragraph 9.4.30) and ‘Improvements to the efficiency and availability of public car parking in Chipping Norton will be sought as appropriate’ (paragraph 9.4.60).

The Local Plan states: ‘The scale and mix of uses in the local centre would be intended to meet the needs of the development and not compete with the Town Centre’ (paragraph 9.4.49). This presumably means that a large proportion of the people living in the proposed ECNSDA would use the town centre shops together with the Aldi store to do their main shopping.

A few people may walk, cycle or use public transport when shopping in the centre of Chipping Norton. However given the distance especially from the far parts of the ECNSDA to the town centre together with the fact that there would be a hill to climb on the way back most people will use their cars when shopping in the town and
especially if doing a large weekly shop.

The increase in the number of homes in the ECNSDA from 600 to 1,400 will therefore increase significantly the need for extra car parking in the town centre. Land in or adjacent to the town centre is very scarce in Chipping Norton. Before development is permitted at the ECNSDA the problem of how to provide significant extra car parking capacity in the town centre needs to be resolved and funding secured for this.

School capacity

The Local Plan recognises the need for significant increases in school provision if the enlarged ECNSDA goes ahead: ‘it is a requirement of any proposed development on this site that a new primary school will be provided. The site is close to the existing secondary school where there is adequate capacity to absorb additional pupil numbers despite the increased size of the allocation’ (paragraph 9.4.48).

The overall housing requirement (2,400) represents an 80% increase in the number of houses in Chipping Norton and would mean that the population would increase by around the same percentage. It is also appropriate to assume that the number of school age children would rise by around the same order of magnitude requiring a new primary school approaching the size of the existing primary schools added together. Chipping Norton School would also have to almost double its existing size. The main issue with regard to increasing school capacity at both the primary and secondary levels would appear to be ensuring that adequate funds are available to carry this in time to cope with the increased demand – see below for a discussion of the funding requirements of the enlarged ECNSDA.

Meeting the housing needs of local people

One of the Core Objectives identified in the Local Plan is: ‘CO4 Locate new residential development where it will best help to meet local housing needs and reduce the need to travel’ (paragraph 3.7).

Locating 1,400 homes at ECNSDA does not support this Core Objective. Presumably the 600 homes proposed in the previous version of the Local Plan were felt to be adequate to meet local housing needs. The occupants of the additional 800 homes will presumably move into the area from outside and many of those of working age will commute to work thus directly working contrary to Core Objective 4. Moreover many will travel to work by car and thus increase pressure on roads locally. Ensuring Chipping Norton retains its special character as a Cotswold market town

The Local Plan recognises the special character of Chipping Norton:

‘Chipping Norton will strengthen its role as a centre of enterprise in the northern part of the District. It will continue to be an economically and socially strong market town serving the needs of a large rural area. Its distinctive historic character and fine setting will be conserved and enhanced at the same time as accommodating new development to meet identified needs.’ (paragraph 3.2)
The overall housing requirement (2,400) represents an 80% increase in the number of houses in Chipping Norton and would mean the population would increase from around 6,500 to almost 12,000. Similar towns locally which have seen this scale of growth have changed fundamentally and such a growth in population over a relatively short time period must put at risk the special character of the town.

Although provision has been made for an additional 9 hectares of business land it is unlikely that sufficient new jobs will be created in the town to support the majority of the people of working age living in the new homes in the ECNSDA. The Local Plan notes that 'the number of people living and working in the town has fallen from 50% to 36% since 2001' (paragraph 9.4.30). Undoubtedly that percentage will fall further if the current proposal to build 1,400 homes goes ahead.

The danger is that Chipping Norton will become more and more a dormitory town for people working in London, Oxford and other places and that this will alter its fundamental character.

Resisting pressures for an out of town supermarket

With the likely increase in the population consequent on the building of 1,400 new homes in the ECNSDA it is surely only a matter of time before one of the major supermarkets puts forward plans for a large new store on the outskirts of Chipping Norton.

Places such as Witney have been able to build large supermarkets sufficiently close to the town centre that the new stores complement and support the town centre. There is no such site near to the centre of Chipping Norton.

Any large supermarket proposed in the future for Chipping Norton would be so far from the town centre that it would have a serious detrimental effect on the shops and businesses there.

There is real concern that WODC would not be able to prevent a future scheme for a large out of town supermarket going ahead given the significantly increased population and the financial and legal resources available to a major supermarket chain.

The Local Plan recognises this threat: 'Chipping Norton is the main focus for retail and leisure activities within this sub-area. The town has a strong and diverse retail offer but remains vulnerable to out of centre development. We will through the Local Plan therefore seek to safeguard and reinforce the role of Chipping Norton Town Centre’ (paragraph 9.4.61). However there is no explanation of how pressures for ‘out of centre development’ will be resisted and this remains an area of real concern for local people given the plans to build so many new homes in the town.

Funding of measures to lessen the impact of the ECNSDA
Several areas will require significant investment if the current plans for the ECNSDA go ahead including:

- Measures to reduce air pollution

| MM714        | G Pearman               | Mr Pearman      | * Improvements to road safety in Chipping Norton  
* New road  
* Other improvements to roads in and around the town  
* Extra car parking  
* Improving conditions throughout the town and surrounding areas for pedestrians and cyclists, including accessibility to bus and rail services  
* New primary school  
* Significant expansion of secondary school  
* Mitigation measures for the impact on the Conservation Target Area (CTA) and the SSSI  
Not all of this will come from developer funding. We are also in a time of reductions in council funding and economic uncertainty in the post Brexit era. In addition it has to be taken into account that there will be large demands for funding in all areas of WODC where substantial house building is proposed. It is therefore legitimate to ask: where will the rest of the funding will come from in order to ensure that the building of 1,400 homes in the ECNSDA does not have major negative impacts on the town and its surrounding area?  
If there really is a need for 1,400 new homes in the ECNSDA then market forces will ensure that developers and building firms will go ahead and build the houses. A real concern to local people is that the houses will be built but funds will turn out to be insufficient to ensure that the measures outlined above can be  
My Client owns land to the east of the proposed allocation at the Chipping Norton SDA.  
The changes made to Policy CN1 and CN2 set out in the proposed modifications are fully supported, especially the comprehensive development of the allocation via an agreed master plan whilst allowing for individual applications to come forward. In such a situation, it is important to put in place a mechanism to assist in the delivery of the infrastructure needed to support the development, including the proposed link road, new school and open space/landscaping.  
In terms of delivery, my Client is working with other landowners and promoters to bring forward the proposed development in a timely manner. |
| MM719        | Empire Homes Limited   |                | INTRODUCTION AND SUMMARY  
i. These representations are submitted in response to the West Oxfordshire Local Plan 2031 – Proposed Modifications Consultation, December 2016 (WOLP 2031 Modifications). They are made by Edgars Limited on behalf of Empire Homes Limited who have land north of the A44 and south of the Banbury Road, Chipping Norton under their control. The land extends to approximately 42 hectares and is identified on the plan attached as Appendix 1 to these representations.  
ii. Empire Homes Limited object to Table 4.1 (Main Modification, MM, 14) Policies H1 (MM24), H2 (MM29 and MM30), CN1 (MM140) and CN2 (MM143) on the basis that insufficient sites for housing have been identified to provide for a five year supply of housing in accordance with national policy.  
iii. Edgars Limited have prepared representations on behalf of a number of clients which demonstrates that a five year land supply cannot be demonstrated when appropriate assumptions are used in accordance with national planning policy and guidance. These representations conclude that only 2.7 year supply can be demonstrated. Edgars consider that additional sites are required to |
be allocated to ensure sufficient housing land supply.

iv. Land north of the A44 and south of the Banbury Road, Chipping Norton is available and capable of delivering residential development in a sustainable location to help boost housing supply, ensure a 5 year supply of housing and provide robustness to ensure that the housing requirement of the modified WOLP 2031 is delivered.

v. The following representations provide further information on the land north of the A44 and south of the Banbury Road, Chipping Norton.

1.0 DELIVERY AT EAST CHIPPING NORTON SDA (Policy CN1, MM138-MM140)

1.1 The East Chipping Norton allocation has been increased from about 600 dwellings at Tank Farm south of the London Road to 1,400 dwellings including 1,200 dwellings south of London Road and 200 north of London Road. The SDA now includes the provision of an Eastern Link Road.

1.2 Limited evidence has been published to demonstrate and assess the impacts of the increased allocation. The previous assessment of Strategic Site Options (Examination Document Ref OTH1) has not been updated. This provides a comprehensive overview of the site and a summary of the site constraints and impacts.

1.3 There would appear to be no evidence document which provides a summary of the modified East Chipping Norton SDA and its constraints. The SHELAA assesses a number of component sites but there is no expression of the overall size of the site and its developable area to ascertain whether delivery is realistic.

1.4 Previous landscape evidence was prepared for the Council by Kirkham Landscape Planning, the Landscaper and Visual Review of Chipping Norton Strategic Site Option (May 2014, Examination Document Ref LAN2). This concludes an indicative housing capacity for the land south of London Road of 500 dwellings within a similar area as now proposed by the Council.

1.5 This is significantly lower than the 1,200 dwellings now assumed by the Council and draws into question the deliverability of this number of dwellings.

1.6 Furthermore, it is noted that the East Chipping Norton SDA now also includes the provision of a link road through the allotment garden land.

1.7 The updated Infrastructure Delivery Plan 2016 does not provide a cost estimate for the provision of the link road. It is unclear what has been assumed for viability purposes.

1.8 Edgars Limited understand that the allotment land is under the ownership of Chipping Norton Town Council who object to the provision of the link road. This draws into question the deliverability of the eastern link road which is now integral to the modified East Chipping Norton allocation.

1.9 In Edgars opinion, the increased allocation at East Chipping Norton is not justified by the published evidence and there is a significant risk that it will not be realised.

1.10 Empire Homes Limited object to Policies H1 (MM24), H2 (MM29 and MM30), CN1 (MM140)

</table>
between 2017 and 2031. CALA is working collaboratively with the County Council, other landowners and key stakeholders to ensure timely delivery of the site. There is currently a planning application in for circa 100 dwellings on land to the north of London Road. This timescale is therefore achievable and realistic.

As set out in representations prepared for the Council’s Pre-Submission Plan in May 2015 the plan accompanying Policy CN1 (Figure 9.12) contains a substantial area of landscape buffering (‘Environmental enhancements including landscape mitigation’, shaded green) to the southern side of the site. It is clear from the Landscape Mitigation Report prepared by Lockhart Garrett (May 2015) that accompanied the May 2015 representations, that such an expansive area is entirely unnecessary and unjustified and should be reduced. It is acknowledged that this part of the site has a higher degree of landscape sensitivity but that the detailed design work for the site will be best placed to more accurately identify the extent of mitigation required. It is a significant concern that the inclusion of such a buffer on the plan will prejudice the proper, comprehensive and effective masterplanning of the site.

Paragraph 9.4.44 sets out that at this stage, the extent of the developable area shown is only indicative. This will in turn be informed as part of the comprehensive master plan which will be prepared for the site (criterion a1) set out in Policy CN1). The green shading shown on the proposed allocation map (Figure 9.12) should be deleted.

The proposed site would remove allotments and community woodland from the use of the town’s residents, thus failing the requirement to be a positive addition to the town. It will also significantly add to the air quality problems and congestion in the town - as previously highlighted. In short, the development is too large to avoid an adverse impact on the town, the Cotswolds AONB and the Rollright Stones Dark Skies Discovery site.

An increased housing allocation to the East of Chipping Norton is supported as it would enable a link road to the east of the town to be delivered. This would not only accommodate development traffic but also help alleviate some traffic going through the centre of Chipping Norton and improve the overall air quality in the Air Quality Management Area within the town. Other schemes (transport and non-transport) will need to be further explored in order to improve air quality in Chipping Norton.

In all cases reference should be made to the District Council’s ecologist for specific details on each site. It is assumed that before firm proposals are brought forward for each site an appropriate ecological, landscape and visual impact assessment will be undertaken including surveys for protected and threatened species.
The permanent loss of land of existing and potential future habitat value should be recognised with a corresponding investment in biodiversity and other green infrastructure resources that provide a range of benefits including biodiversity, water management and contribute to physical and mental well-being. Additional off-site enhancement should be provided where insufficient environmental gains cannot be secured within the development boundary.

East of Chipping Norton

Glyme Valley SSSI lies nearby to the south east of the site. The long-term management and therefore condition of the SSSI may be affected by increased recreational use generated by the development. If development takes place careful consideration of green infrastructure provision – in terms of extent, type and location is required to ensure that off-site recreational impacts are minimised. There are a number of local habitat enhancement initiatives – e.g. agri-environment schemes that are established in the area. There may be opportunities for biodiversity enhancement within the adjacent Glyme and Dorn Valley Conservation Target Area for which it would be appropriate to seek funding from the development.

The eastern edge of the development / perimeter road will be prominent in the local landscape and proposed perimeter road has the potential to fragment the habitats in this area and adversely affect landscape character. These potential impacts should be considered at the master-planning stage.

William Fowler community woodland, to the east of the allotments, should be highlighted on the context map.

The footpath and cycle links to the main body of the town to the west would need careful consideration to ensure that the new development, should it proceed, does not become functionally isolated from the rest of the community.

ECOLOGY AND NATURAL ENVIRONMENT

In all cases reference should be made to the District Council's ecologist for specific details on each site. It is assumed that before firm proposals are brought forward for each site an appropriate ecological, landscape and visual impact assessment will be undertaken including surveys for protected and threatened species.

The permanent loss of land of existing and potential future habitat value should be recognised with a corresponding investment in biodiversity and other green infrastructure resources that provide a range of benefits including biodiversity, water management and contribute to physical and mental well-being. Additional off-site enhancement should be provided where insufficient environmental gains cannot be secured within the development boundary.

West of Eynsham

This includes an area of best and most valuable category agricultural land.

The Chilbrook catchment runs through the proposed site with potential downstream impacts in terms of water quality and flooding. If development proceeds there may be opportunities to include natural flood management infrastructure and enhance biodiversity around the watercourses.
Eynsham Fish Ponds lies to the immediate east of the site and the Wodoland Trusts Eynsham Community Wood to the north. Additional funding will be required to improve the resilience of these sites to deal with the increase in recreational pressure.

There is no indication of the location of landscape enhancement areas on the context map.

| MM786         | Oxfordshire County Council | Amada Jacobs (OCC) | Mrs | Jacobs | 2217 | > SECTION 9 - STRATEGY AT THE LOCAL LEVEL > Chipping Norton Sub Area > MAIN 140 | Appendix 2 – Education Comments
Policy CN1 includes a 2.22ha site for a new primary school. This is appropriate as 1400 new homes would be broadly in line with a new 2 form entry primary school being provided within the site. |
| MM786         | Oxfordshire County Council | Amada Jacobs (OCC) | Mrs | Jacobs | 2254 | > SECTION 9 - STRATEGY AT THE LOCAL LEVEL > Chipping Norton Sub Area > MAIN 140 | Policy CN1 bullet point D
We suggest the following changes to ensure this policy is in line with LTP4. Suggested text to update point ‘d’:
provision of supporting transport infrastructure, including mitigating the impact of traffic associated with the development; the provision of appropriate financial contributions towards LTP4 transport schemes; provision of appropriate public transport (services and infrastructure) serving the site; and provision of a comprehensive network for pedestrians, and cyclists with links to adjoining areas, and key destinations. Provision of individual Travel Plan (and associated Travel Information Packs) for the residential and employment areas, as well as the school. |
| MM85          | Private individual and Town Councillor | Mike and Moni Tysoe | Mr and Mrs | Tysoe | 229 | > SECTION 9 - STRATEGY AT THE LOCAL LEVEL > Chipping Norton Sub Area > MAIN 140 | General comments written as Councillor and as a private individual.
General comments.
Chipping Norton is one of the highest towns in West Oxon and is built mainly on hills with narrow streets except for the main roads of A44 and A361 - in places the underground infrastructure (overflowing sewers/rainwater drainage - shared system) is already creaking with too much use and the road problems we have are well documented and accepted as being unfit for purpose by OCC/WODC with a serious air quality problem in the centre of town. It might also be worth mentioning here that when an OCC employee was recently asked "how many of West Oxon...
main A roads are fit for the very large HGV’s we see nowadays? The answer was ‘none of them’!

CHIPPING NORTON NEIGHBOURHOOD PLAN - on 3rd March 2016 a referendum was held in the town accepting the CNNP which was then adopted. In this plan it was mentioned in several places that any future development has to be sustainable and it is felt that whilst 600 homes on Tank Farm were possibly sustainable 1400 homes are not - please see notes 2/3/4/5/6 below. It is felt that WODC in their draft Local Plan entirely ignoring the spirit of the CNNP.

In February 2014 the Town accepted that it would have to take some new houses and reluctantly agreed that 600 on the area known as Tank Farm (the south half of the SDA) could be acceptable subject to suitable planning and mix of houses and infrastructure.

Little contact has been made since then except for a plan that was attached to a planning application in the nearby area in the middle of 2015. Nothing officially has been given since the meeting on 14th February 2014 until 23rd August 2016 when in a meeting between CNTC and OCC a plan using 800 homes plus 80 extra care beds was tabled and alterations suggested including no access at the southerly perimeter.

The next contact was the recent suggestion of 1400 houses. Considering that the allotment land to the south of the SDA is owned by the Town it seems strange that discussion about the possible purchase of any land requirement has not yet happened - for sake of absolute clarity the William Fowler Allotment land is not for sale.

We also get the impression that some pressure might have been brought to bear on local land owners to go along with OCC plans - and please bear in mind that the majority of the land we are discussing is owned by OCC - thank goodness there are some ‘ransom sites’ to protect the town from being totally overrun and spoilt.

We also feel that discussions with other stakeholders have not taken place - we back this statement up with the recent planning application at the Pillars which is adjacent to the northern edge of the SDA with no vehicular access which apparently shows no coherent masterplan.

Chipping Norton Town Council totally reject the new local plan for the SDA for the following reasons in brief -

* 1400 new homes on Tank Farm are not sustainable
* The local employment of residents has fallen over the last 10 years and is now below 30%
* The majority of local employment tends to be ‘low paid’ jobs in retail/catering and caring sectors
* ‘High paid’ jobs i.e. professional or technical jobs tend to be in what is now-called the ‘knowledge spine’ which is difficult to access from Chipping Norton unless you drive as we have a poor train and bus service
* Narrow and congested roads (including the main A44/A361 at Horsefair where the worst pollution in Oxfordshire has been ignored for many years by OCC and WODC. The best long term solution to Horsefair are the road improvements needed around the Rollright Stones, which have been discarded due to cost - now budgeted at £18 million by OCC’s consultants
* The cost of the Eastern Relief road has not yet been tabled but has to be close to the figures in 5
* The traffic figures being used from the survey carried out by WYG are erroneous - two points immediately stand out - a) it is stated that there have been no traffic related accidents in Horsefair in the last 5 years - we know that there have been 3 DEATHS in the period and b) it is stated that
the busiest time of the day on Burford Road (A361) at Chipping Norton School (a large comprehensive 1200 pupils) is between 0700 and 0800, but in reality this is really 0815 to 0845. * We dispute the figures given to us by OCC and others which show that only 30 % of the HGV's that transit through Horsefair use the A361 towards Burford and a massive 70% use the A44 east and west towards Oxford/Morton-in-Mars / Evesham and the A361 north to Banbury. We have been advised by independent traffic consultants that the figures are probably nearer to 15% respectively 85%. We therefore consider the Eastern Relief Road to be ill-advised * An independent expert has recently been shown our traffic problem and has walked around the town and agrees with the Town Council that a one way system using Albion Street and the High Street would go a long way to deter HGV's / improve the air quality / ease congestion and add few badly needed parking spaces. This could be achieved comparatively quickly and at a much lower cost than building either road. * Parking according to WODC's figures this town is on average at 110% capacity when it comes to public carparks and on-street parking. A second storey on New Street car park would help alleviate the problem but would not completely resolve the problem.

Chipping Norton currently has around 3000 homes. Adding a further 1400 homes (on top of any development currently going through) will increase the size of the town by 50%. The existing services and roads will not cope with this level of increase. This is a small market town, the roads of which were not built to cope with the current volume of traffic, without increasing this by 50%. The junctions of Albion Street, London Road, Banbury Road, Over Norton Road are already very busy at peak times, with Horsefair showing illegal levels of pollution. The volume of HGV and cars along the A44 (the site of the proposed development) - as shown by the WYG Chipping Norton Transport Options document, A096781, points 2.1.3 and 3.2.1 which stress the need to address concerning existing air quality issues within the town centre, particularly along the A44/High Street/Horse Fair corridor that has been declared an Air Quality Management Area. A link road from Banbury Road to Burford Road will not mitigate the current traffic levels, or an extra 50% increase of car traffic as most traffic does not travel via the Burford Road. Point 3.2.5 of the WYG report stresses that findings indicate that diesel cars emit at least as much NOX as buses and HGVs so an increase of cars by 50% will raise pollution levels even further to a dangerous level. Chipping Norton also has 100% employment at present so new residents of these 1400 homes will have to travel to work if they don't already work in Chipping Norton, increasing pollution and traffic levels further for the town and surrounding areas. Added to this sewerage in the town is already problematic with the current levels of housing, due to age. It is unlikely to cope with a 50% increase in housing. Fire services are being reduced, the Ambulance station was closed some years ago, the newly built community hospital has been downgraded and the NHS proposes closing the A&E at the Horton hospital. These infrastructure issues and service reductions pose a significant risk to public safety if housing levels were to increase by 50%.

The CPRE Oxfordshire report of 15 November 2016 supports these points:

‘In the original draft Local Plan, 5,500 new households were planned over the period to 2029 (306 per annum over 18 years). A higher figure of 6,700, based on economic growth forecasts, was ruled out on the basis that it would put infrastructure under pressure, with potential negative sustainability impact. Now, just two years on, we are facing a proposed target of 15,950 houses by 2031 - an average of nearly 800 per annum.

This is completely beyond what has ever been achieved in the past and is not realistically
The proposed plans for Tank Farm are not legally compliant and are unsustainable as they are set out. The increase of homes from the original 600 to 1400 has not been thought through or planned out fully. The issues include, but are not limited to the drainage of the site, the antiquated sewerage system of Chipping Norton, the lack of professional work available in the area and the lack of a fully functional Hospital and medical care.

Drainage from the Tank Farm site - where will it be directed? This area is already prone to flooding at times of heavy rain.

The sewerage system - this is already failing to cope with the town's population especially at times of heavy rain/flooding. Raw sewerage has been forced back up into the West End area of the town during these events.

The proposed plans take away green and leisure space from the community and also negatively impact the wildlife of the area.

The proposed plans will also create a commuter network from Chipping Norton as new residents travel to Oxford, Abingdon and Didcot for the professional jobs they desire. This will create extra burden on the local country road system, leading to extra congestion at bottlenecks and through the town itself. The local transport system is woefully underfunded to cope and the lack of a train station is limiting also.

The plan is not justified as appropriate for Tank Farm as there are other options available, especially if the proposed number of homes is spread around the town and surrounding villages. The plan is not effective in its deliverability over the time period specified, the workforce necessary to build this site is not available/sufficient to build this many homes per year - the number of building companies in Oxfordshire (and also nationally) is not sufficient.

The plan is also not consistent with National Policy, Chipping Norton and Tank Farm in particular are taking an unfair proportion of the overall amount of homes for this area.

Chipping Norton currently has around 3000 homes. Adding a further 1400 homes (on top of any development currently going through) will increase the size of the town by 50%. The existing services and roads will not cope with this level of increase. This is a small market town, the roads of which were not built to cope with the current volume of traffic, without increasing this by 50%. The junctions of Albion Street, London Road, Banbury Road. Over Norton Road are already very busy at peak times, with Horsefair showing illegal levels of pollution. The volume of HGV and cars along the A44 (the site of the proposed development) - as shown by the WYG Chipping Norton Transport Options document, A096781, points 2.1.3 and 3.2.1 which stress the need to address concerning existing air quality issues within the town centre, particularly along the A44/High Street/Horse Fair corridor that has been declared an Air Quality Management Area. A link road from Banbury Road to Burford Road will not mitigate the current traffic levels, or an extra 50% increase of car traffic as most traffic does not travel via the Burford Road. Point 3.2.5 of the WYG report stresses that findings indicate that diesel cars emit at least as much NOX as buses and HGVs so an increase of cars by 50% will raise pollution levels even further to a dangerous level.

Chipping Norton also has 100% employment at present so new residents of these 1400 homes will have to travel to work if they don't already work in Chipping Norton, increasing pollution and traffic levels further for the town and surrounding areas. Added to this sewerage in the town is already problematic with the current levels of housing, due to age. It is unlikely to cope with a 50% increase in housing. Fire services are being reduced, the Ambulance station was closed some years ago, the newly built community hospital has been downgraded and the NHS proposes closing the A&E at the Horton hospital. These infrastructure
Issues and service reductions pose a significant risk to public safety if housing levels were to increase by 50%.

The CPRE Oxfordshire report of 15 November 2016 supports these points:

- In the original draft Local Plan, 5,500 new households were planned over the period to 2029 (306 per annum over 18 years). A higher figure of 6,700, based on economic growth forecasts, was ruled out on the basis that it would put infrastructure under pressure, with potential negative sustainability impact. Now, just two years on, we are facing a proposed target of 15,950 houses by 2031 - an average of nearly 800 per annum.
- This is completely beyond what has ever been achieved in the past and is not realistically achievable.

| MM147 | David Whetstone Mr Whetstone 328 | 1,400 on the Tank Farm area to the east of town would not be a "sustainable integrated community . . . forming a positive addition to the town". It would:
- be a massive housing estate on the edge of Chipping Norton;
- completely overload existing infrastructure;
- increase the provision of housing in an area of the country that should not be expanded. UK PLC needs to invest and encourage investment away from the South East. |
| MM154 | Caroline Brooks - - 336 | I am concerned at the volume of traffic currently going through the town, in particular HGVs, for which the roads are quite unsuited and have already resulted in one recent fatality. This problem would intensify with increased housing unless a by-pass was built. Are there any plans for this?
Do we have the educational facilities to cope with this proposed increase? Will we need more Primary Schools? Will the increased housing be for Chipping Norton’s benefit or will it merely become a dormitory town for Oxford? |
| MM231 | Jane G Dr Griffiths 437 | I am writing to object to the major revision to the Draft Local Plan that proposes the building of 2400 new houses in Chipping Norton by 2031, and specifically about the proposal to build 1400 of them on and adjacent to land at Tank Farm. References in brackets are to the Schedule of Proposed Modifications to the Draft Local Plan, as published on the WODC website.

The figures

- My first objection is that the addition of such a large number of houses will drastically alter the character of the town. The most recent census shows that the population of Chipping Norton was 6337 in 2011. One of the WODC representatives at the consultation in the Town Hall on 23 November said that an average occupancy of 2.4 occupants per new house had been assumed, but that the true figure was likely to be substantially higher. This means that, on the most conservative calculation, the population of the town will increase by 5760; even assuming that the current population may now be nearer 7000 than 6330, that is bower 80%, with the Tank Farm development alone causing an increase of over 50%. |

</table>
Even in the most general terms, the addition of a vast estate to one side of the town, with an attendant population increase on this scale, will clearly change the character of the town almost out of recognition. More specifically, the proposed new houses will turn Chipping Norton from a vibrant working town into a dormitory town. The Draft Local Plan states specifically that the increase in the total number of proposed new houses to 2400 is in order to meet the unmet housing needs of Oxford (see changed text at MAIN15, 4.17 and again in the margin at MAIN24). This clearly implies that the vast majority of the new residents will be commuters. The Plan mentions provision of ‘9 hectares’ of business land as part of the Tank Farm development, but does not indicate how many potential new jobs this might create; it seems highly improbable that there will be enough to compensate for such a large population increase, of whom at least half to two-thirds are likely to be working adults.

No consideration of infrastructure

My second objection relates to the lack of thought that has been given to the kind of infrastructure that is required for this scale of development. The Draft Plan discusses local needs (MAIN59), and makes much of the proposed new road that would link the London Road with the Burford Road. While it is possible that this would go some way towards alleviating the problem of additional traffic through the town centre that the new housing would cause, it will do nothing for the town’s connections to other centres, such as Witney, Banbury, and – especially – Oxford. Since, according to the Draft Local Plan’s own rationale, the majority of the new residents will inevitably be commuters, the new houses will place particular pressure on the A44. This is a country road, not a commuting road, and at peak periods it is already very difficult indeed to get to and from either Oxford itself or one of its Park & Rides. The Draft Plan discusses the A40 at some length (MAIN60), but mentions the A44 only once, as an adjunct to the A40 (MAIN60, 7.28). No positive strategy is offered here; it is stated merely that ‘where appropriate, we will seek contributions from new development towards solutions to the A40 and also the A44 congestion problem’, indicating that any solutions that are found will be purely retroactive. It is extraordinary that development on such a large scale, aimed to a great extent at commuters, should be proposed without any thought having been given to how the road would cope, how it might be improved, or what alternatives might be put in place.

A secondary concern here is that the way in which the proposed new link road is described is obfuscatory. Section MAIN62 acknowledges that one of the main traffic problems in Chipping Norton is the high volume of HGV traffic that passes through on the way to Evesham, and then implies that the new road might partially alleviate it – but a link between the London Road and the Burford Road will have no effect on Evesham traffic, which will continue to pass through the town centre on the A44. At the very least, the wording of this section should acknowledge that.

Another instance of misleading phrasing is found at MAIN66 (7.58). This is where it is cursorily acknowledged that none of the three main towns earmarked for development is directly served by rail; the bus link from Chipping Norton to Kingham is mentioned as a mitigating factor. There is no mention, however, of the fact that this is one of the services (the X8) from which funding was recently withdrawn; it is now running a reduced service, and its existence is under threat. It is therefore not sound to rely on it as part of the future infrastructure.

Proposed development contravenes the Neighbourhood Plan
The proposed development and ensuing population increase are not in accordance with the overarching vision of the Neighbourhood Plan, which is of Chipping Norton as: ‘A working Cotswold town thriving economically and socially as a rural hub while maintaining its strong sense of community spirit and conserving and enhancing its character, high-quality historic built and natural environments, local services and facilities.’

The Plan specifically states that the fact that the town’s residents have: ‘a strong desire to retain its unique character was key to agreeing the overarching vision of the Plan from which its objectives and policies have been derived', and that these objectives and policies were established in consultation with WODC.

The WODC website itself states that: 'The Chipping Norton Neighbourhood Plan [http://www.westoxon.gov.uk/media/1381350/Chipping-Norton-Neighbourhood-Plan-2015-2031.pdf] was formally made part of West Oxfordshire District Council's development plan on 15 March 2016, following the positive outcome of the referendum, where over 90% of those who voted were in favour of the plan.'

Now, only seven months later, that plan is being flagrantly disregarded.

Proposed development contravenes the Draft Local Plan’s own principles

The proposed development also contravenes several of the Draft Plan’s own principles, in particular that all development should:

* ‘Be of a proportionate and appropriate scale to its context having regard to the potential cumulative impact of development in the locality’ (MAIN16)

* ‘Be supported by all necessary infrastructure’ (MAIN16)

* ‘Form a logical complement to the existing scale and pattern of development and/or the character of the area’ (MAIN16)

* ‘minimise the need to travel’ (MAIN17; cf. also Policy T1)

It also contravenes the assurance given in the Draft Plan that: ‘The Council will continue to work with communities to promote and enhance the attractiveness of all town centres addressing, where possible, issues of publicity, security, parking and accessibility, and improvements to the public realm. Enhancing the character and improving the environment of town centres is an important part of strengthening their role. The older town centres in West Oxfordshire have distinct and historic characters, strongly influenced by Cotswold building designs and materials, and by their roles as market towns. The conservation, enjoyment and enhancement of their historic environment is a significant consideration.’ (MAIN56, 6.84)

Summary

The Draft Local Plan and the proposed development at Tank Farm are not sound because, in contravention of several of the Local Plan’s own principles as well as the Chipping Norton Neighbourhood Plan, they will significantly alter the character of the town and are inadequately supported by the proposed infrastructure.

| MM242         |                         | Jon Fletcher   | -                | Fletcher          | 448        | > SECTION 9 - STRATEGY AT THE LOCAL LEVEL > Chipping Norton Sub Area > MAIN 140 | The dramatic proposed increase in the number of planned houses East of Chipping Norton is more than twice that which was originally proposed, not taking into account other existing and planned developments in the town. It is not in-line with the current or proposed infrastructure of Chipping Norton, and will have a negative effect on the local environment (including increased pollution) and the town’s existing population. Chipping Norton town centre already has high levels of air pollution. Facilities and services in the town have already been reduced and continue to be under threat. The additional proposed housing will increase the pressure. 

The need for housing is generated by a lack of available housing in Oxford but the commute to Oxford is not sustainable for the majority by distance and the limited public transport available from Chipping Norton. 

Employment opportunities within the town are already limited, and the proposed plan does little practically to improve this, other than allocating some land for employment. Historically this does not guarantee employment opportunities for the town, allocated employment land at the Parker Circus housing development is still unused and undeveloped, the separate proposed plan for development of this land is in fact a mixture of commercial and residential properties. 

The proposed A361 link road does little to address the heavy HGV traffic using the A44 road through the town centre. The increase in traffic due to the increase in population from the proposed development would actually increase traffic through the town centre. 

One large development of housing is not sympathetic to the natural development of the town or for the future integration of it’s inhabitants with the existing population. 

The ownership of the land (OCC) may be creating a biased influence on the revised proposals of the plan. |
| MM244         |                         | Jonathan Powell| Mr               | Powell            | 450        | > SECTION 9 - STRATEGY AT THE LOCAL LEVEL > Chipping Norton Sub Area > MAIN 140 | See attached response form |
| MM255         |                         | Kate Ward      | -                | Ward              | 465        | > SECTION 9 - STRATEGY AT THE LOCAL LEVEL > Chipping Norton Sub Area > MAIN 140 | Chipping Norton Draft Local Plan 

I wish to register my strong objection to the proposal to build 2400 new houses in Chipping Norton by 2031 and particularly to the proposal to build 1400 of them in one vast estate on and adjacent to Tank Farm. This proposal seems to be at the expense of Chipping Norton and takes no account of the impact on the town itself and the inadequacy of the local infrastructure, communication and transportation links in the absence of sufficient local employment opportunities. The proposals flagrantly disregard the Chipping Norton Neighbourhood Plan which was made part of WODC’s development plan. 

This amount of new housing could double the population of Chipping Norton; this would alter the |
nature and character of this currently thriving market town, forcing it to become a dormitory town. Your representative at a town meeting earlier this month confirmed that this would be the case since there are no plans first to create significant employment opportunities in the area even though 9 hectares have been designated ‘business land’. Recent history has shown that, whilst the need for employment has been recognised, plans for the development of job creating businesses have come to nought. I believe that, prior to the construction of any residential estates, proper plans should be drawn up, commitments made and action taken to create a range of employment opportunities for residents.

The proposed new ‘link road’, routed through the new estate, joining the London Road and the Burford Road, will do nothing to address the continuing problem of heavy traffic on the A44, including ever-larger HGVs, currently routed through the town centre; it is deceitful to suggest that this would address current traffic problems.

Furthermore I object to these proposals on the grounds that they contravene the principles of the Draft Local Plan which state clearly that all development should be of a proportionate and appropriate scale to its context, should form a logical complement to the existing scale and pattern of development and/or the character of the area, and minimise the need to travel.

| MM261         |                         | Linda and Clive | Mrs              | Rand              | 474        | > SECTION 9 - STRATEGY AT THE LOCAL LEVEL > Chipping Norton Sub Area > MAIN 140 | Principle of East Chipping Norton SDA

We consider that the land east of Chipping Norton is the only acceptable direction of growth for the town and so we support the principle of expansion here. The wording of the policy itself (not just the supporting text) should be tightened to

* require that a comprehensive master plan for the whole SDA allocation be prepared, with full public involvement.
* that must include the Eastern Distributor Road from Banbury Road to Burford Road
* prior to the submission of an application for outline consent.

The reason is in order to prevent cherry picking, which has already started with two applications for residential and one for retail development, to ensure that the EDR is delivered by the development and to ensure that all development within the SDA contributes on an equitable basis towards infrastructure costs.

Amount of development

The threshold for the justification of the EDR is not clear. OCC’s Traffic Study by WYG examined three scenarios but jumped from an 850 home option to a 1,500 home option. There must be an intermediary level at which the road is viable and justifiable.

Further, it is not clear what proportion of the additional 800 homes is intended to cater for Oxford’s unmet need; there appears to be insufficient rationale other than expediency. Catering for Oxford’s unmet need will involve an increase in journeys to and from Oxford and the ability of people living in Chipping Norton to access jobs and services in Oxford is far from easy. Chipping Norton is an unsustainable location in terms of access to centres of employment and services, particularly Oxford. It is not the right place for homes to cater for Oxford’s unmet need. For example

* Sustainable transport: Whilst a superficial glance indicates that bus services exist to Stratford,
Banbury, Oxford, Witney and the rail station at Kingham, in reality these services are far from comprehensive. The journey to Oxford takes about 60 minutes, whether by bus or private car, with frequently severe delays at the approach to Oxford, and generating traffic through villages en route. Bus services to other towns are day-time only. The X8 bus link from town to the rail station is under threat and has already been run down with no evening or weekend service. The train journey from Kingham has an irregular timetable, with significant gaps during the mid afternoon period. The 2011 Census reveals, as a result, that only 4% of Chipping Norton residents use public transport to get to work whilst 61% of residents are reliant upon the private car for their journey to work. Development in Chipping Norton that aims to cater for Oxford's unmet need would exacerbate out commuting and increase journeys by private car.

* Access to Services: Services are increasingly being concentrated in Oxford. For example, with respect to hospital care: the removal of maternity and NHS beds from Chipping Norton Community Hospital; the running down of Consultant-led Maternity, Special Care Baby Unit, the 24/7 Children’s Ward, 36 stroke and adult medical beds and 10 trauma beds, A&E, orthopaedics and Critical Care Unit at the Horton Hospital, Banbury. This results in patients needing to take lengthy journeys to Oxford, where hospitals are already under pressure, access by private car difficult, and have grossly inadequate parking. This poses a potential threat to patients’ safety.

* Town’s infrastructure: Whilst the policy seeks new infrastructure to meet the need generated by the additional development, the capacity of the town centre is highly constrained and it could not cater for the demands placed on it by an increase in population of 50%. This is evidenced by, for example, the recent approval of an out of centre ALDI store, because no town centre site was available; the fact that town centre car parks are full by 9am and there is very little scope for their expansion; the fact that WODC officers recently recommended refusal of office development in the grounds of an existing town centre office building because, inter alia, there was insufficient capacity in town centre car parks to cater for the office workers.

We therefore consider that catering for Oxford’s unmet need will cause an increase in unsustainable out-commuting, increasing the community by 50% will overstretch the town’s infrastructure and so we consider that the allocation at East Chipping Norton SDA should be reduced in size to that which meets local needs only and which justifies the construction of the EDR.

<td>MM268</td>
<td></td>
<td>Marcus Colchester</td>
<td>Dr</td>
<td>Colchester</td>
<td>481</td>
<td>&gt; SECTION 9 - STRATEGY AT THE LOCAL LEVEL &gt; Chipping Norton Sub Area &gt; MAIN 140</td>
<td>I am a professional community development consultant with expertise in land tenure and sustainable development. I have consulted ALL the major documents on the WODC website about the modified local development plan. The proposal for an expanded Strategic Development Area in Chipping Norton has serious logical and planning inconsistencies, including the following: 1. Housing need: The expanded plan responds to housing needs in Oxford City not in Chipping Norton. It will thus exacerbate, not resolve, West Oxfordshire’s already high rates of out-commuting and over-reliance on private cars. Since 1976, Chipping Norton’s housing units have expanded at a rate of about 29 units per year, already outstripping growth in local employment opportunities. The proposed development would increase the rate of housing expansion to 160 units per year, placing critical burdens on transportation, traffic flow and infrastructures and is entirely contrary to WODC’s sustainable development policy (and see below). 2. Employment opportunity: Since 2001, local employment rates in Chipping Norton have declined from 50% to 36%, while the quality of local employment has also declined. The proposed expansion plan will rapidly worsen these trends. The provision of 9 ha. of land for employment generation is...</td>
</tr>
</tbody>
</table>
welcome but, even if these options are developed (details of the number of new jobs expected are lacking in eg 6.24) they will only accommodate a part of existing local employment demands and not those of the proposed expanded population.

3. Affordable Homes: It is claimed that 40% of the new housing in the Tank Farm area will be ‘affordable’. However the current trends show that even small flats and lower cost housing in the Chipping Norton area are not affordable to young residents and newly married couples, who are being forced to out-migrate to Banbury and Evesham Vale.

4. Transport: Chipping Norton lacks a railway station, while bus links to Oxford and Banbury are infrequent and slow. The expansion plan makes no clear provisions for improved public transport and seems to assume increased reliance on road transport. The plans make no mention of improved cycling access and safety.

5. Traffic congestion: Chipping Norton already experiences serious traffic congestion, especially during peak hours. The planned expansion of Chipping Norton as a dormitory town for out-commuters, without a linked sustainable transportation plan, will undoubtedly worsen this situation. Indeed the town already suffers from being a transit route for HGVs, most going along the east-west axis. The provision of the link road on a north-south axis, while facilitating access and commuting to and from the Tank Farm area, will not appreciably lessen the HGV problem.

6. Pollution: Chipping Norton already suffers unacceptable air pollution which exceeds statutory levels, while West Oxfordshire as a whole already has a higher carbon footprint than the national average largely owing to an over-reliance on private cars and service vehicles. No measures are proposed to address the existing problem, yet the expansion plan is likely to increase the number of local cars and service vehicles by as much as 50% creating a toxic environment that will be deleterious to residents’ health. This too seems inconsistent with WODC’s expressed commitment to sustainable development.

7. Road safety: West Oxfordshire already has above average road deaths compared to the national average. The current plan, with its reliance on road cars for out-commuting, will inevitably exacerbate this serious problem.

8. Other infrastructure: Chipping Norton’s fire service is currently overstretched. The sewage system is also critically overloaded. Details of how the expansion plan will deal with these deficiencies are lacking.

I believe the Local Plan to be unsound in relation to the increase in housing numbers (main 24), and specifically the increase on the Tank Site Farm site from 600 to 1400 (Main 27).

Firstly, the infrastructure in Chipping Norton is already struggling to meet the demands of the current population and cannot sustain the extra numbers suggested in the modifications. In particular the sewers are already unable to cope, posing a health risk which would only worsen if the development were to go ahead as planned. Local amenities are also not currently set up to cope with any increase, the fire station only has one fire engine and the community hospital has also been recently downgraded.

The local roads would undoubtedly suffer with the addition of more traffic on the town’s roads. Currently the main roads through town have congestion problems due to small junctions and
I wish to record my views/objections to the proposed plan for 1400 homes etc on the Tank Farm site at Chipping Norton.

1) The number of homes and other units proposed in this one block is too large for the town and will overwhelm the towns services. It will also encroach attractive and productive farmland.

2) The proposed plans would require purchase of part of New Chalford Farm and demolition of young woodland that is, and will be, an important carbon sink and wildlife habitat for the area.

3) The proposed large link road would be and expensive white elephant. It will not sufficiently reduce the HGV traffic (30% or less) through the centre of Chipping Norton, which will remain dangerous and seriously polluted. It is clearly unwise to propose polluting vehicles and dangerous HGVs travelling though dense domestic dwelling space. The proposed road would also take up valuable space for houses or open space with insufficient gain for the town. Money set aside for

| MM294        |                         | Neil Fisher     | Dr Fisher        | 509        | > SECTION 9 - STRATEGY AT THE LOCAL LEVEL > Chipping Norton Sub Area > MAIN 140 | such a road would be much better spent elsewhere.  
4) There are other more suitable areas around Chipping Norton that can make up any district shortfall in housing from reducing the size of the Tank farm development, with less deleterious impact.  
As a health centre, we recognise and support in principle the need for new housing within the East Chipping Norton Strategic Development Area and the surrounding area to meet the needs of the population; we are prepared to work collaboratively with WODC and OCC to ensure the provision of high quality Primary Healthcare that meets the needs of the 1,400 new homes proposed as well as any new homes in surrounding towns and villages who choose to register with us, whilst not to the detriment of our existing 15,000 patients.  
Due to a number of complex factors, including funding pressures, recruitment difficulties, ageing population and increasing patient demand, the model for providing primary healthcare nationally is rapidly evolving in to a far more multidisciplinary service delivery model; added to that is clearly steer from central government that health services should increasingly be moved from secondary to community settings. The implication of this, in a town planning perspective, is that the traditional models for determining what primary healthcare provision may be needed (by square footage) may no longer be reliable.  
We therefore have concerns that no specific provision is currently made within these plans for increasing the capacity of the current health centre in Chipping Norton; under the current plans, the health centre would become land locked, precluding any future expansion / extension that may be needed. Whilst provision was made within the planning of our new health centre for some growth in population and services, based on historic growth figures, this provision will not be adequate to handle such a large increase in our patient population or the current trends in NHS provision.  
We would therefore hope that OCC and WODC pay serious consideration to our previously made proposal that the sliver of land adjacent to the current health centre plot (heading directly north, and currently allocated as residential land and containing 7 housing plots and car parking) be allocated to the health centre to be set aside as a contingency for the inevitable need to expand the current health centre in the coming years.  
We feel, that if this small provision was agreed, then we could provide full support as a health centre to the current plans. We would be very willing to meet with you to discuss this further. |
| MM27         |                         | andrewwildman   | MR Wildman       | 51         | > SECTION 9 - STRATEGY AT THE LOCAL LEVEL > Chipping Norton Sub Area > MAIN 140 | One thing not mentioned that will be absolutely key with a development of this size is a plan for increase parking close to the town centre. The proposal mentions that the new development is 'within walking distance of the town'. People rarely walk that far. There is not enough parking for the town centre as it is and more attempts to park in the existing car parks will cause congestion and frustration. New residents would more likely start to drive to out of town retail parks (thereby congesting the access routes). The town needs people to shop locally and if it is to grow and businesses to sustain, new customers will need new parking. If the proposed development does not include some edge of town parking (The existing Tank Farm or the old Parker Knoll sites being the best spots) then this opportunity will be lost forever and the town will suffer.  
The current drains in the town do not cope with the current amount of water run-off. The proposed development is on higher ground and will overload any of the town drainage to a point where it will cause flooding and pipes to burst. It happens already. A plan for this will need considerable |

MM305 |  | Peter Nuttall | Mr | Nuttall | 526 | > SECTION 9 - STRATEGY AT THE LOCAL LEVEL > Chipping Norton Sub Area > MAIN 140 | It is very likely that the new development will house people who work in or around Oxford. The road from Chipping Norton to Oxford is beyond capacity and in Enstone in winter is very hazardous. Increasing the amount of traffic on those roads will make travelling through Enstone, Woodstock and into Oxford from the Yarnton roundabout impossible. Comprehensive public transport will be essential if it stands any chance if working.

AW

My background is, I attended what was then Chipping Norton Grammar School, lived in The Leys through my university years and 4 years ago moved to Over Norton.

My career was in engineering. I latterly was head of infrastructure projects at British Nuclear Fuels, Sellafield, where I was responsible for projects in the range £30 – 200million.

I write as a concerned resident and an expert on scoping, managing and delivering infrastructure projects.

I am happy to give any assistance I can to WODC and would be pleased to participate in any oral examination.

Representation

I attended the recent public consultation in the town hall Chipping Norton, where WODC are proposing a major project including 1400 new houses, industrial units, a link road and a new primary school. As I see it the project is only an outline proposal, with not sufficient information to allow any decision to go forward as there are so many outstanding issues.

I sincerely hope that this is a consultation, not merely a communication of a "done deal". As such I provide some comments o the proposal.

The scale of the proposal

I do not have the percentages but 1400 homes + the additional infrastructure projects is an unprecedented increase in the size of a small. Historic market town.

It is also, not market led. 1400 homes, say up the 3000 adult wage earners. Where are the jobs that these people are going to do? Certainly not in Chipping Norton or for at least a 10 mile radius around the town. These will be surely commuters who will add to the chaos on the roads which are already at capacity or over capacity at peak times.

Local services, sewerage etc.

We know that the local sewerage is at capacity as at times of high rainfall it is overloaded and foul and drain water is mixed. There is no place in the plan to see what will be needed to upgrade the capacity of the present system

The proposed link road and traffic through the town
The present proposal will inevitably make this problem worse.

Environmental issues

As long standing as the traffic problem, and of course associated with it is the problem of air pollution. This has become more a headline issue nationally in recent months. The cabinet outside the Crown and Cushion tells us that air pollution in the town is unacceptable yet nothing is done about it. The present proposal with up to 1400 houses, over 2000 additional cars will again make the problem worse.

Parking in the town

Parking in the town is at capacity, particularly on market days and Saturdays.

2000 more cars coming in to Chipping Norton for goods and services. Where are they going to park? An extra level on the New St Park? No mention of this in the plan.

Industrial Units

Again, I strongly feel that industrial units should be demand led. An industrial unit was build years ago on the Parker Knoll site. It is unused, unloved and abandoned.

Overall comments

From experience, many projects fail because they are looked at piecemeal and not holistically. By any measure the propose plan is a major project. At present it is the vaguest sketchy plan. I am frankly surprised and disappointed that the WODC feel they have sufficient information to put this forward as a plan with their approval.

I would have expected that a project of this magnitude be supported by an economic, social and environmental impact statement.

This would lead to viability study. Only then should it go to the Council for approval.

There is no supporting evidence to show that any of this has been done.

At present there is simply not enough information for this to go forward.
In the leaflet circulated at the meeting we were asked to tick one or more of 4 boxes. forward as a proposal.
My informed opinion is that 1400 houses is too much, although we do need more housing.

Consultation on proposed modifications to the submission Draft West Oxfordshire Local Plan (2011 - 2031).

I refer to the email I received from Mr Andrew Thomson dated 11/11/2016 inviting response to the above.

My response, which relates to Chipping Norton, is set out in the attached document.

While writing to you, I need to bring your attention to actions by the Chipping Norton Town Council to subvert the Draft Local Plan and supporting infrastructure by:

* Sponsoring/encouraging random and piecemeal development (on land not designated in the Draft Local Plan) such as 300+ further housing units on AONB land by Archstone as an extension to the existing 200+ housing units currently under construction by Bellway. A planning application supported by the Town Council is to be submitted to “limit” the DLP (Draft Local Plan) proposed development land situated at Tank Farm. Clearly a tactical move.

* Associated with 1 above, the Town Council are to propose a one way traffic system combining the main A44 thoroughfare through the town with Albion Street as an alternative to the proposed vital eastern link road proposed in the DLP. Such a one way system would be totally inappropriate for the volume of traffic (both light vehicles and HGVs) and would not address the issues of traffic in and through the town (which is referred to in the attached document). The proposed link road is a vital part of the infrastructure required to support the major increase in housing being proposed.

Neither point 1 or 2 above has been agreed with the residents/electorate of the Town.

Please note my objection to the forthcoming planning application by Archstone, referred to above.

Yours sincerely,
Richard Collings.
3. Infrastructure required to support the DLP housing proposals.

The number of housing units being proposed:

The number of housing units required is presented as scientific assessment. It is not, it is driven by political imperative and the so called “need” for CN to contribute to meeting the “unmet Oxford city requirement”. As a consequence, the proposed modifications to the DLP for CN have resulted in massive increase in the number of housing units both in absolute and relative terms. The numbers are also in excess of the conclusions of the recent independent study of housing requirement carried out on behalf of WODC.

The excessive number of housing units (particularly the huge increase for Tank Farm from 600 to 1400 units referred to in MAIN 27,136,138) now being proposed will increase the population of the town by around 50% which is far too rapid expansion in the timeframe of the WODC DLP and hence more than the town can sensibly absorb and provide the necessary infrastructure for (see below for comments on impacts on infrastructure). The character of the town will also be irretrievably adversely affected.

CN should not be contributing to the “unmet” Oxford housing requirement, for very obvious reasons relating to traffic congestion on the roads through CN and onwards towards Oxford for employment (which CN cannot provide) and consequent pollution. Housing and employment should go together as can be seen driving down the M5 in Somerset. Here you will see very sensible and truly sustainable development. There is no sense in generating even more traffic congestion and consequent pollution as people travel 20+ miles away from CN. All the major routes just become even more gridlocked. CN will never provide the employment for the level of housing addition being proposed. Page 34 of the DLP document gives insufficient attention to the issue of local job provision ("the balance between local jobs and houses") and much sensible comment from the previous version of the DLP has been deleted no doubt due to political pressure!

For the reasons above, the “unmet” housing requirement for Oxford should be met by building a number of satellite villages around and close to Oxford like the one proposed north of Eynsham. These village developments would be self supporting and hence truly sustainable (as opposed to development proposed for CN which will not be truly sustainable) by having their “own” supporting infrastructure met as part of each village development plan – schools, health services, retail (to avoid unnecessary travelling by road) and good road connections to the main and truly local employment centers in and around Oxford – local housing with easily accessible local employment is the only truly sustainable development.

The consequential impact of the absolute and relative number of these housing units.

Certainly CN does need some new housing, particularly affordable, but not at the excessive levels now being proposed which will have huge impacts on infrastructure which are not properly addressed in the DLP and modifications. The DLP does not properly identify and size the impact of the scale of housing being proposed. This is not rocket science and can be done “per 1000 units”. A few of the impacts are as follows:

* Traffic congestion and consequent pollution in and around CN: This is NOT just about HGV traffic. As stated above building at the scale proposed will generate much more private vehicle congestion
and gridlock in and through the town of CN. The proposed eastern link road is a sound idea but will do nothing for HGV and private cars travelling through the town towards Evesham. CN town already has a severe (and it is measured/monitored) traffic pollution issue. As reported recently by the BBC, we already have the most congested roads in Europe and congestion is costing the UK £13billion per annum. There have also been recent High Court cases regarding dangerous (to health) levels of traffic generated pollution above WHO and EU standards which the UK Government are required to take action to reduce. So on this point alone the DLP is clearly defective.

* Traffic congestion and consequent pollution between CN and main centres of employment: Without local jobs for all the inhabitants of the new housing there will be a huge increase in (unnecessary) commuting. All this consequential unnecessary vehicular traffic impacts the carbon footprint (global warming) which should have a major bearing on the DLP but it clearly does not. Time wasted in traffic queues travelling to places of work for both private cars and commercial traffic is a major reason for UK low productivity.

* Parking provision: There is already insufficient parking provision in CN. This situation will obviously worsen with over 1000 additional homes proposed. Lack of parking provision impacts the business of local retailers in the town, many of which are “independents” and hence contribute to the vibrancy of CN as one of the UK’s leading market towns. The CN Theatre, which is vital to CN, will “die” if patrons cannot park. As a volunteer usher I often have to greet “latecomers” who have been circling the town looking for parking and this is in the evenings!

* GP health services: Although CN is blessed with a modern health centre this does not mean that timely GP appointments can be obtained. It is already extremely busy and under pressure. With over 1000 additional homes proposed, many more GPs will be required or the currently under pressure service will rapidly deteriorate.

There are of course many other infrastructure demands which will need to be addressed on account of such a huge increase in the number of additional homes proposed, such as school places or sewerage infrastructure. This brings me to my next point.

Infrastructure required to support the DLP modified housing proposals:

Any Plan (if it is to be regarded as a competent Plan) has to identify all consequential impacts. These impacts then need to be sized/costed (not rocket science – in my commercial life I have been responsible for much more extensive and challenging business Plans than the DLP) and then have their own individual Plans, which must be funded to deliver the supporting infrastructure in parallel with the main Plan. This is no more than common sense in the real world of commerce. The wording in the DLP (such as Policy OS5 – Supporting Infrastructure) is far too inadequate and hence the DLP and proposed modifications cannot be regarded as a competent Plan. It is clearly defective and unsound, and if this major increase in housing goes ahead without the supporting infrastructure being put in place in parallel, time will then prove and confirm that the DLP, and the current review of modifications to the DLP, was incompetent and unsound. Who will take responsibility for this?

Summary of key points:

* The proposed increase in housing units (MAIN 27,136,138) from 600 to 1400 at Tank Farm is excessive, will increase the population of the town by around 50%, hence too rapid an expansion in the timeframe of the DLP and more than the town can sensibly absorb. Hence the DLP and proposed modifications are unsound.

* CN should not be contributing to the “unmet Oxford city requirement” for reasons of major...

| MM315        |                         | Richard Gwinn   | -                | Gwinn             | 577        | > SECTION 9 - STRATEGY AT THE LOCAL LEVEL > Chipping Norton Sub Area > MAIN 140 | increase in traffic congestion, pollution, carbon footprint impact. Jobs in Oxford are too far distant and truly sustainable development is to align local jobs with local housing. Hence this requirement would be best met by a number of satellite villages around but close to Oxford. Hence the DLP and proposed modifications in this respect are defective and unsound. * The DLP is far too weak on supporting infrastructure (eg, Policy OS5) and hence the DLP and proposed modifications are defective and unsound, cannot therefore be considered to be a competent Plan and should not therefore be signed off.  

* His modification increases significantly the number of properties to be built in the Chipping Norton SDA. This is backed up by unsound evidence and is not appropriate to the existing community. In particular:  

  a) Part of the Vision in section 3.2 is to "play a role in helping to meet wider needs, without significant change to the intrinsic character of the District." Increasing the population of the town by 50% will inevitably change its character. Especially as the driver for the increase is the need to house those working in Oxford, so turning a working town into a dormitory town.  

  b) Core Objective CO2 is to "Ensure that new developments are suitably located and well designed to protect and enhance the individual form, character and identity of our towns and villages as well as contributing to the quality of life in West Oxfordshire." This fails for the same reasons as the Vision statement.  

  c) Core Objective CO3 is to "Promote safe, vibrant and prosperous town and village centres and resist proposals that would damage their vitality and viability or adversely affect measures to improve those centres." Whilst a modest increase in population will help the town, this huge increase, aimed at commuters into Oxford, will be detrimental. The plan mentions that the proposed development is within walking and cycling distance of the town centre, although it offers no evidence to support this. I visit the town centre most days and have never seen more than one bicycle in the cycle parking there. The area around the town is too hilly for most of the population to cycle. A straw poll of people living in the Parkers Circus estate (which is closer to the town centre than is the SDA) indicates that none walk when going into town to do their shopping. These were all fit, active people. The town centre is also not safe. In the last few years, people have been killed by passing traffic while on the pavement at Horsefair. The proposed link road appears to be a "road to nowhere" as the majority of traffic (especially commercial traffic) enters or leaves the town on the A44 Moreton-in-Marsh road. This will become even more the case if a weight restriction is put on the ancient bridge in Burford, as has been suggested. In that event, no heavy vehicles will use this relief road. This increase in traffic will also affect air quality, which is already at illegal levels.  

  d) Core Objective CO4 is to "Locate new residential development where it will best help to meet local housing needs and reduce the need to travel." Policy T1 - Sustainable Transport says that "Priority will be given to locating new development in areas with convenient access to a good range of services and facilities and where the need to travel by private car can be minimised, due to opportunities for walking, cycling and the use of public transport, particularly where this would help to reduce traffic congestion on the routes around Oxford and the Air Quality Management Areas at Witney and Chipping Norton." The increase proposed in the modification is mainly to serve Oxford. There is no train link to Oxford. The bus to Oxford takes over an hour and is infrequent. The bus service from Kingham Station does not wait if a train is delayed, resulting in a possible two-hour wait for the bus that meets the next train. I see no solution to this problem as buses have to keep to timetables. Everyone I know has stopped using this bus, resulting in more car journeys and a station... |

| MM327        |                         | Christopher and Rosie Herdman-Newton | -                 | Herdman-Newton    | 602        | > SECTION 9 - STRATEGY AT THE LOCAL LEVEL > Chipping Norton Sub Area > MAIN 140 | The car park that can't cope. The alternative is to travel to the station by driving through country lanes and the village of Churchill in contravention of Policy T1. The increased local traffic will make air quality worse. There is nothing in the proposed plan to solve these problems. 

e) The proposed plan states in para 7.74 that “In Chipping Norton public car parking spaces in the town centre are insufficient to meet current needs.” There is nothing in the proposed plan to solve this problem. |
| MM87         |                         | S Jackman       | Ms                | Jackman           | 610        | > SECTION 9 - STRATEGY AT THE LOCAL LEVEL > Chipping Norton Sub Area > MAIN 140 | My comments mostly relate to the Environmental and Heritage Assets objectives under 8:2-30, 8:58-88, which my wife and I believe the Proposed Modification plans are completely at odds with. 

HERITAGE: It is inevitable that the addition of such a large number of new houses will increase the population and traffic and pressure on infrastructure and services of Chipping Norton to an unsustainable extent, and lead to the utter destruction of community cohesion. It will compromise the unique and historic character of Chipping Norton as a 'real' Cotswold town for which it is famous. Chippy's uniquely rich heritage as an ancient market town and its vibrant, friendly human community, and its beautiful historic houses and buildings set in such beautiful countryside, is why people love living here and why visitors come to enjoy it from all over the world. 

ENVIRONMENT: Chipping Norton is the hub of an important farming community set within the Cotswolds AONB, where sustainable and enlightened farming practices and Nature conservation and the regeneration of wildlife habitat and biodiversity is recognised by statute to be of prime importance, surely. The proposed modification plans fly in the face of such priorities, seeming rather to serve the interests of developers, planners and landowners who have only their own financial interests at heart, and do not consider the common wealth of the community as a whole. Chipping Norton is in severe danger of being turned into a soulless and inhuman dormitory town where the health and beauty of its natural environment is being gradually eroded. |

Chipping Norton currently has around 3000 homes. Adding a further 1400 homes (on top of any development currently going through) will increase the size of the town by 50%. The existing services and roads will not cope with this level of increase. This is a small market town, the roads of which were not built to cope with the current volume of traffic, without increasing this by 50%. The junctions of Albion Street, London Road, Banbury Road, Over Norton Road are already very busy at peak times, with Horsefair showing illegal levels of pollution. The volume of HGV and cars along the A44 (the site of the proposed development) - as shown by the WYG Chipping Norton Transport Options document, A096781, points 2.1.3 and 3.2.1 which stress the need to address concerning existing air quality issues within the town centre, particularly along the A44/High Street/Horse Fair corridor that has been declared an Air Quality Management Area. A link road from Banbury Road to Burford Road will not mitigate the current traffic levels, or an extra 50% increase of car traffic as most traffic does not travel via the Burford Road. Point 3.2.5 of the WYG report stresses that findings indicate that diesel cars emit at least as much NOX as buses and HGVs so an increase of cars by 50% will raise pollution levels even further to a dangerous level. 

Chipping Norton also has 100% employment at present so new residents of these 1400 homes will have to travel to work if they don't already work in Chipping Norton, increasing pollution and traffic levels further for the town and surrounding areas. 

Added to this sewerage in the town is already problematic with the current levels of housing, due to age. It is unlikely to cope with a 50% increase in housing. Fire services are being reduced, the Ambulance station was closed some years ago, the newly built community hospital has been downgraded and the NHS proposes closing the A&E at the Horton hospital. These infrastructure issues and service reductions pose a significant risk to public safety if housing levels were to increase by 50%. |
The CPRE Oxfordshire report of 15 November 2016 supports these points: 'In the original draft Local Plan, 5,500 new households were planned over the period to 2029 (306 per annum over 18 years). A higher figure of 6,700, based on economic growth forecasts, was ruled out on the basis that it would put infrastructure under pressure, with potential negative sustainability impact. Now, just two years on, we are facing a proposed target of 15,950 houses by 2031 - an average of nearly 800 per annum. This is completely beyond what has ever been achieved in the past and is not realistically achievable.'

| MM334         | Sarah Kettlewell | -                | Kettlewell        | 618               | > SECTION 9 - STRATEGY AT THE LOCAL LEVEL > Chipping Norton Sub Area > MAIN 140 | I wish to comment on the proposed erection of 1400 houses on Tank Farm, Chipping Norton.  
* This enormous number of houses, with the necessary extra school, shops, health provision etc. is too overwhelming for a small historic market town such as Chipping Norton.  
* The consequent burden of extra traffic, water, waste and other services would be unacceptable in a town already under pressure in these areas.  
* Since many of the previous work sites (Bliss Mill, Parker Knoll, Penhurst School etc.) were redesignated for housing, where will the people work?  
* A large area of young woodland, essential to provide a carbon sink as well as valuable habitat for wildlife, would be destroyed.  
* The proposed link from Banbury Road to Burford Road might relieve the congested and polluted town centre of about 30% of present HGV traffic. But it would run right through the new residential area with consequential pollution, noise, danger to pedestrians and wasted housing space.  
On the other hand, widening and improvement of the existing road between the A3400 and the A44 would, by extrapolation, filter nearly 70% of the current HGV traffic away from the town centre. Calculations indicate that the cost of this work would be similar to the Burford Road link but without the collateral disadvantages.  
* If the population of Chipping Norton has to be enlarged to this extent (almost doubled), it would be less damaging to spread the developments more widely. A 1400-house estate in one area is not acceptable in this beautiful old town. |
| MM344         | Stephen Bywater | -                | Bywater           | 645               | > SECTION 9 - STRATEGY AT THE LOCAL LEVEL > Chipping Norton Sub Area > MAIN 140 | I wish to register my disapproval of the current plans to site 1500 new house at Chipping Norton (Tank farm plus other sites)  
There are three main strands to my protest.  
1/ This will double the size of the town fundamentally changing the nature of Chipping Norton making it essentially a dormitory town, there not being enough local industry to support such a population.  
2/ It will inevitably result in a large no of cars leaving the town each day, clogging up the roads of local villages even more than at present and expelling a lot of toxic fumes into the atmosphere. (Hardly green planning)  
3/ There appear to be no plans to improve the infrastructure - Hospital, surgery, schools etc, other

**Respondent Name:** Jeremy Flawn
**Comment ID:** 744
**Comment:**

> The enormous increase from a suggested 600 homes on the Chipping Norton Tank Farm site to up to 1500 seems to me entirely disproportionate and neither soundly thought out nor justified.

1. As the schedule makes clear in several places, much of this housing is to provide for "unmet needs" in Oxford City, despite the fact that Chipping Norton is twenty miles away from Oxford. The implication is, therefore, that many of those who may one day end up living on the Tank Farm site will be commuting into Oxford, adding large amounts of traffic to an already crowded and polluted road system.

2. This being so, it seems illogical to project that an eastern link road will ease the traffic situation in any way whatsoever. The vast majority of traffic in and out of Chipping Norton even now travels on the A44 south to Oxford or north to Evesham, not on the A361 to Burford. The proportion of HGV traffic removed from a polluted town centre by such a proposed road would be minimal.

3. The damage done by building such a road, on the other hand, would be considerable and irreversible. The schedule's authors purport to promote environmental protection, planting of woodland, hedgerows, allotments, etc. with the consequent destruction of a wide range of natural habitats.

4. Increasing the number of houses in a small market town such as Chipping Norton by 50% will also have a deleterious effect on local infrastructure, which already struggles to support the current population. What thought has been put into renewing a sewerage system that fails to cope now when it rains? Where will the doctors, dentists, teachers, etc. who will be required to serve this much larger population base be found?

In conclusion, so large an increase is unsustainable and potentially undeliverable. This is not a plan thought out to meet the needs of the community of Chipping Norton, but to satisfy the number-crunching of those who have to put houses somewhere, anywhere (?) to meet the needs of Oxford City. I urge you to consider the impact on local infrastructure and, perhaps more importantly, the local natural environment, and reduce the size of the Tank Farm project to more sensible and realistic proportions.

**Comment:**

> OCC P&F strongly supports the amendments to policy CN1 which provide for an enlarged SDA. OCC P&F is keen to work with the District Council to secure the delivery of this important strategic site. As the major landowner within the SDA, OCC Property & Facilities is working with other landowning parties and promoters to ensure that the site can be delivered as planned.
A Strategic Development Area (SDA) of 1,400 homes is proposed at the eastern edge of Chipping Norton coming close to the Glyme Valley Site of Special Scientific Interest (SSSI). An existing footpath link between the site and this nationally designated site exists and we are concerned that impacts on the SSSI, eg in form of recreational pressure, might not have been fully assessed. The southern part of the SDA also appears to extend into the Glyme & Dorn CTA. Whilst the CTA designation does not preclude development we would expect development to contribute to the aims and objectives of the CTA. We can see no evidence that biodiversity impacts have been considered when making this allocation.

We could also not find any information on whether the potential link road between the B4028 and the A44 has been assessed in ecological terms.

General comments.

Chipping Norton is one of the highest towns in West Oxon and is built mainly on hills with narrow streets except for the main roads of M4 and A36f in places the underground infrastructure (overflowing sewers/rainwater drainage - shared system) is already creaking with too much use and the road problems we have are well documented and accepted as being unfit for purpose by OCC/VODC with a serious air quality problem in the centre of town. It might also be worth mentioning here that when an OCC employee was recently asked 'how many of West Oxfordshires main A roads are fit for the very large HGV's we see nowadays?' The answer was 'none of them!'

CHIPPING NORTON NEIGHBOURHOOD PLAN - on 3rd March 2016 a referendum was held in the town accepting the CNNP which was then adopted. In this plan it was mentioned in several places that any future development has to be sustainable and it is felt that whilst 600 homes on Tank Farm were possibly sustainable 1400 homes are not - please see notes 213141516 below. It is felt that WODC in their draft Local Plan entirely ignoring the spirit of the CNNP.

In February 2014 the Town accepted that it would have to take some new houses and reluctantly agreed that 600 on the area known as Tank Farm (the south half of the SDA) could be acceptable subject to suitable planning and mix of houses and infrastructure.

Little contact has been made since then except for a plan that was attached to a planning application in the nearby area in the middle of 2015. Nothing officially has been given since the meeting on 14th February 2014 until 23rd August 2016 when in a meeting between CNTC and OCC a plan using 800 homes plus 80 extra care beds was tabled and alterations suggested including no access at the southerly perimeter.

The next contact was the recent suggestion of 1400 houses. Considering that the allotment land to the south of the SDA is owned by the Town it seems strange that discussion about the possible of purchase of any land requirement has not yet happened - for sake of absolute clarity the William Fowler Allotment land is not for sale.

We also get the impression that some pressure might have been brought to bear on local land owners to go along with OCC plans - and please bear in mind that the majority of the land we are discussing is owned by OCC - thank goodness there are some 'ransom sites'to protect the town from being totally overrun and spoilt.
We also feel that discussions with other stakeholders have not taken place - we back this statement up with the recent planning application at the Pillars which is adjacent to the northern edge of the SDA with no vehicular access which apparently shows no coherent masterplan. Chipping Norton Town Council totally reject the new local plan for the SDA for the following reasons in brief:

1) 1400 new homes on Tank Farm are not sustainable
2) The local employment of residents has fallen over the last 10 years and is now below 30%
3) The majority of local employment tends to be ‘low paid’ jobs in retail/catering and caring sectors
4) ‘High paid’ jobs i.e. professional or technical jobs tend to be in what is now-called the ‘knowledge spine’ which is difficult to access from Chipping Norton unless you drive as we have a poor train and bus service
5) Narrow and congested roads (including the main A44/A361 at Horsefair where the worst pollution in Oxfordshire has been ignored for many years by OCC and WODC. The best long term solution to Horsefair are the road improvements needed around the Rollright Stones, which have been discarded due to cost - now budgeted at €18 million by OCC’s consultants
6) The cost of the Eastern Relief road has not yet been tabled but has to be close to the figures in 5)
7) The traffic figures being used from the survey carried out by WYG are erroneous - two points immediately stand out - a) it is stated that there have been no traffic related accidents in Horsefair in the last 5 years - we know that there have been 3 DEATHS in the period and b) it is stated that the busiest time of the day on Burford Road (A361) at Chipping Norton School (a large comprehensive 1200 pupils) is between 0700 and 0800, but in reality this is really 0815 to 0845.
8) We dispute the figures given to us by OCC and others which show that only 30 % of the HGV’s that transit through Horsefair use the 4361 towards Burford and a massive 75% use the A44 east and west towards Oxford/Moreton-in-Marsh / Evesham and the 4361 north to Banbury.

We have been advised by independent traffic consultants that the figures are probably nearer to 15% respectively 85%. We therefore consider the Eastern Relief Road to be ill-advised
9) An independent expert has recently been shown our traffic problem and has walked around the town and agrees with the Town Council that a one way system using Albion Street and the High Street would go a long way to deter HGV’s improve the air quality, ease congestion and add few badly needed parking spaces. This could be achieved comparatively quickly and at a much lower cost than building either road.
10) Parking according to WODC’s figures this town is on average at 110% capacity when it comes to public carparks and on-street parking. A second storey on New Street car park would help alleviate the problem but would not completely resolve the problem.

<td>The Board notes that the allocation for this site has risen from 600 to 1,400 homes. Although the site is outside the AONB a development of this size has the potential to adversely affect the setting of the AONB. The Board supports the inclusion of paragraph o) with relation to the impacts of lighting on the nearby AONB and the Rollright Stones Dark Skies Discovery Site. However we consider that paragraph c) could be strengthened to include reference to the AONB as follows, c) the provision of appropriate landscaping measures to mitigate the potential impact of development on the wider landscape, in particular the Cotswolds AONB to the south of the site:</td>
<td>Revised Local Plan for Chipping Norton I do not agree with the revised local plan. 1500 homes dropped onto Tank Farm is too many. This site is on a hill with the extra water/sewerage produced flowing downhill into the town would put extra strain onto the Victorian sewer system in place where flooding has already taken place. The main traffic flow in north south with large vehicles and lorries causing the traffic problems. A new primary school but no plans to increase junior or secondary school. In fact this plan would build right up to the secondary school boundary leaving only the school playing fields a possible expansion of the school. A school which already has a wide catchment area. There are two council-owned care homes planned plus at least one more private retirement complex. Will the health centre be able to cope? The Horton Hospital in Banbury is under threat with downsizing/closure making more traffic to the J.R. in Oxford. Yes, the town does need some housing. There are a number of sites around the town where smaller developments could be accommodated. Also the outlying villages such as Churchill, Dean, Chadlingham etc. have an elderly population. Their housing will be outside a local’s price range and would therefore be bought by wealthy town dwellers and used as weekend retreats, thus making empty villages during the week and an end to rural villages.</td>

<td>1608</td>
<td>&gt; SECTION 9 - STRATEGY AT THE LOCAL LEVEL &gt; Chipping Norton Sub Area &gt; MAIN 141</td>
<td>The major change to the Local Plan for Chipping Norton is the increase from 600 to 1,400 homes (almost a 250% increase) at the East Chipping Norton Strategic Development Area (ECNSDA), known locally as Tank Farm - reference: MAIN 136 to MAIN 144 inclusive. The building of 1,400 homes at Tank Farm was one of these development options. The report also notes ‘in each case predicted traffic volumes on the A44 High Street / Horsefair corridor would be expected to increase reasonably substantially over and above the 2016 surveyed flows, exacerbating existing environmental degradation (notably air quality issues) within the town centre(paragraph 10.1.2). The study also attempted to ‘identify potential mitigation measures that would offer realistic scope to both accommodate development and help to mitigate the impact of this development and existing environmental issues within the town centre, notably associated with the declared AQMA on the A44 High Street / Horsefair (plus the southern section of the A361 Banbury Road and West End’) (paragraph 9.1.3). The report concludes that ‘the three outline schemes assessed (the Rollright bypass, central area zonal weight restriction and town centre gyratory) would likely be unsuitable mitigation options for a variety of reasons including preclusive cost, lack</td>
<td></td>
</tr>
</tbody>
</table>
of likely effectiveness and / or unacceptable knock-on impacts' (paragraph 10.6.1).

The transport consultants employed by OCC and WODC therefore believe that the ECNSDA would worsen air quality management issues in the centre of Chipping Norton and that the 3 possible mitigation schemes to reduce the air pollution are not viable.

The existing AQMA has been in operation for many years and no solution has been found to this problem. The existing levels of air pollution in the centre of Chipping Norton are already adversely affecting the health of people living and working there. Yet WODC is proposing to build new houses in Chipping Norton which will worsen air pollution and increase the risk to health of people in centre of the town without having a viable strategy for reducing these levels. It could be argued that NO ADDITIONAL HOUSING should be allowed until a workable solution to the existing air quality problem is devised, implemented and shown to be effective.

Road Safety

Road safety issues in the centre of Chipping Norton are very closely connected with the problem of air pollution: both are caused by modern levels of traffic trying to get through an ancient market town the central area of which was originally laid out in the 13th Century.

Horse Fair is the narrowest part of the A44 as it passes through the town. Here the road is narrow as are the pavements. This puts vehicles and pedestrians into close proximity. It has been the site of several fatal accidents in recent years.

Road safety concerns are not restricted just to the Horse Fair. Local people also know that it is becoming increasingly difficult to cross several of the roads in the town centre safely because of the increased volume of the traffic as well as vehicles being driven at speeds inappropriate for the town centre.

The Local Plan accepts the need for the Council to ‘address the relatively high rate of fatalities and serious injuries on the District’s road network’ (paragraph 2.40). Work needs to be carried out to identify measures to improve safety in Horse Fair and other areas within the centre of the town. It also needs to be identified how these improvements will be funded. Again all of this work needs to be carried out before significant development is allowed to go ahead at the ECNSDA.

Traffic

The increase from 600 to 1,400 homes at the ECNSDA has profound implications for traffic in Chipping Norton and the surrounding area. The Chipping Norton Transport Options Study informed the preparation of the latest version of the Local Plan and in particular supported the option for 1,400 homes at the ECNSDA together with the Eastern Link Road. This option is of course the major change from the previous version of the Local Plan for Chipping Norton and is referenced in MAIN 27, MAIN 136 and MAIN 138 to MAIN 144 inclusive. This section of these comments outlines some concerns in a number of areas concerning traffic and arising from these changes to the Local Plan:
The Transport Options Study report is an important document which played a major part in influencing the decision to put forward the 1,400 homes at the ECNSDA option in the Local Plan. Important decisions are to be made with respect to the future of Chipping Norton based on the findings of the study. Does a study which was principally carried out on one day only provide sufficiently robust and accurate data on which to base these crucial decisions?

The manual traffic counts and the ANPR surveys were carried out on a Tuesday in March and were intended to assess “normal” traffic conditions. However there are times of the week when traffic in Chipping Norton tends to be heavier than normal principally Monday mornings and Friday afternoons. Also Wednesdays tend to be busier because of the weekly market. Why weren’t the surveys carried out during these busier times of the week?

In the summer many visitors and tourists come to Chipping Norton or pass through it on the way to see the Cotswolds or to visit major tourist attraction such as Blenheim Palace. There are not many tourists or visitors who choose to come to the area in early March which is when the traffic surveys were carried out. In the spring and summer there is also likely to be an increase in HGVs travelling to and from the fruit and vegetable growing areas in Worcestershire and other areas to the west of the town. Why wasn’t the traffic survey work repeated again say in June in order to assess whether the traffic levels are significantly higher at that time of year?

The ANPR count locations were positioned such that they may have missed a substantial amount of local traffic within the town e.g. parents living in the areas off West Street/Churchill Road taking children to the Chipping Norton School and local residents driving into the centre to shop.

The findings of the Transport Options Study

The Transport Options Study report paints a bleak picture of what will happen to traffic in Chipping Norton if 1,400 homes are built at the ECNSDA even with the proposed Eastern Link Road:

* Increased traffic through Chipping Norton as outlined in paragraph 11.1.21 of the report:

*However, delivery of the new eastern distributor road as a stand-alone measure would be insufficient to fully off-set and mitigate the impact on the town centre of the traffic growth anticipated by 2031 (both resulting from development on the Tank Farm site and general background growth on the network anticipated by this time). Furthermore, the beneficial minimisation of additional traffic flows on the A44 High Street would come at a cost of increasing traffic on peripheral routes around the town*
resulting from a combination of redistribution and the increased level of development on the Tank Farm site.

* The report also reports that this option "would be likely to exacerbate air quality management issues" – paragraph 11.1.15.
* The health of residents and people working in the centre of Chipping Norton would be put further at risk – see section CN4 above.
* Three mitigation options were examined and all were judged to be unsuitable for a variety of reasons – paragraph 10.6.1
In addition the study reports that the computer modelling of future traffic flows predicts that 2 of the main junctions in Chipping Norton would "operate well in excess of their theoretical capacity" and that the other 3 "would all remain operating within or, worst-case, at capacity for all of the potential development scenarios" – paragraph 11.1.16.

The report goes on to say that the computer software used may underestimate the capacity of roads in towns such as Chipping Norton and seeks to compare them with roads in other towns. The conclusion at this point is that "the operational impact of additional traffic flows resulting from each of the development scenarios on the existing network might be far less onerous than the model results indicate" – paragraph 11.1.17. At the very least this suggests that the future performance of the main road junctions within Chipping Norton are difficult to predict and that if the computer modelling turns out to be correct then two of those junctions will be operating well above their capacity.

Other traffic related comments

The Transport Options Study calculated ‘the estimated delivery costs of upgrading an existing route via Rollright Lane and the A3400 to the north of the town to act as an east-west bypass of the town serving as an alternative for through-movements of traffic on the A44’ – paragraph 10.3.3 and Figure 31.

The study report then goes on to say that ‘this option was considered unviable on the grounds of cost’ – paragraph 11.1.18.

However neither in the Local Plan nor in the Transport Options Study report is there any calculation of estimated delivery costs of the proposed Eastern Link Road. This seems a surprising omission as it makes comparisons between the 2 schemes impossible. It leaves unanswered the question of whether the funding for the proposed Eastern Link Road would be better spent on the upgrading of the Rollright/A3400 route.

Paragraph 9.4.40 of the Local Plan (MAIN 138) contains the statement with reference to the proposed 1,400 homes and the Eastern Link Road: ‘..... there could also be a diversion of a large proportion of HGV movements from Chipping Norton Town Centre, thereby possibly having a beneficial effect in terms of improving air quality - a key issue for the town.’.

A similar claim is made in paragraph 9.4.56 (MAIN 142). But doesn't the Transport
Options Study for Chipping Norton conclude that 'delivery of the new eastern distributor road as a stand-alone measure would be insufficient to fully off-set and mitigate the impact on the town centre of the traffic growth anticipated by 2031' (paragraph 11.1.21)?

The Transport Options Study report also concludes that this option "would be likely to exacerbate air quality management issues" – paragraph 11.1.15.

Chipping Norton has been waiting for a solution to its traffic related problems for decades:

* The use of the Rollright/A3400 route to remove traffic for the centre of the town has been in discussion for many years.

* The town has been experiencing severe air quality issues and the associated detrimental effects on people’s health for at least a decade.

* An AQMA for the centre of Chipping Norton has now been in operation for over 8 years with no significant remedial action being taken.

* The same area covered by the AQMA is also an accident blackspot with a record of a fatal accident every 12 years and a serious RTA every 2 years on a stretch of road that is only about 200 metres in length.

* All the time traffic through Chipping Norton increases and these problems get worse.

When the latest version of the Local Plan proposes a huge increase in the number of houses in the town would it not be reasonable to expect that the document would propose measures which would alleviate Chipping Norton’s traffic related problems. However all that is offered is a proposal that will in fact increase traffic in the town with all the consequent detrimental effects of this including a predicted worsening of the air quality problems. Is it unrealistic for the town’s residents and visitors to expect a better solution than this?

Car parking

Local residents as well as visitors are well aware of the current problems with regard to car parking in Chipping Norton. This is recognised in the Local Plan: 'The availability of adequate public parking capacity is a key constraint in Chipping Norton' (paragraph 9.4.30) and 'Improvements to the efficiency and availability of public car parking in Chipping Norton will be sought as appropriate' (paragraph 9.4.60).

The Local Plan states: 'The scale and mix of uses in the local centre would be intended to meet the needs of the development and not compete with the Town Centre' (paragraph 9.4.49). This presumably means that a large proportion of the people living in the proposed ECNSDA would use the town centre shops together with the Aldi store to do their main shopping.
A few people may walk, cycle or use public transport when shopping in the centre of Chipping Norton. However, given the distance especially from the far parts of the ECNSDA to the town centre together with the fact that there would be a hill to climb on the way back most people will use their cars when shopping in the town and especially if doing a large weekly shop.

The increase in the number of homes in the ECNSDA from 600 to 1,400 will therefore increase significantly the need for extra car parking in the town centre. Land in or adjacent to the town centre is very scarce in Chipping Norton. Before development is permitted at the ECNSDA the problem of how to provide significant extra car parking capacity in the town centre needs to be resolved and funding secured for this.

School capacity

The Local Plan recognises the need for significant increases in school provision if the enlarged ECNSDA goes ahead: ‘it is a requirement of any proposed development on this site that a new primary school will be provided. The site is close to the existing secondary school where there is adequate capacity to absorb additional pupil numbers despite the increased size of the allocation’ (paragraph 9.4.48).

The overall housing requirement (2,400) represents an 80% increase in the number of houses in Chipping Norton and would mean that the population would increase by around the same percentage. It is also appropriate to assume that the number of school age children would rise by around the same order of magnitude requiring a new primary school approaching the size of the existing primary schools added together. Chipping Norton School would also have to almost double its existing size. The main issue with regard to increasing school capacity at both the primary and secondary levels would appear to be ensuring that adequate funds are available to carry this in time to cope with the increased demand – see below for a discussion of the funding requirements of the enlarged ECNSDA.

Meeting the housing needs of local people

One of the Core Objectives identified in the Local Plan is: ‘CO4 Locate new residential development where it will best help to meet local housing needs and reduce the need to travel’ (paragraph 3.7).

Locating 1,400 homes at ECNSDA does not support this Core Objective. Presumably the 600 homes proposed in the previous version of the Local Plan were felt to be adequate to meet local housing needs. The occupants of the additional 800 homes will presumably move into the area from outside and many of those of working age will commute to work thus directly working contrary to Core Objective 4. Moreover many will travel to work by car and thus increase pressure on roads locally.

Ensuring Chipping Norton retains its special character as a Cotswold market town

The Local Plan recognises the special character of Chipping Norton:

‘Chipping Norton will strengthen its role as a centre of enterprise in the northern
part of the District. It will continue to be an economically and socially strong market town serving the needs of a large rural area. Its distinctive historic character and fine setting will be conserved and enhanced at the same time as accommodating new development to meet identified needs.’ (paragraph 3.2)

The overall housing requirement (2,400) represents an 80% increase in the number of houses in Chipping Norton and would mean the population would increase from around 6,500 to almost 12,000. Similar towns locally which have seen this scale of growth have changed fundamentally and such a growth in population over a relatively short time period must put at risk the special character of the town. Although provision has been made for an additional 9 hectares of business land it is unlikely that sufficient new jobs will be created in the town to support the majority of the people of working age living in the new homes in the ECNSDA. The Local Plan notes that ‘the number of people living and working in the town has fallen from 50% to 36% since 2001’ (paragraph 9.4.30). Undoubtedly that percentage will fall further if the current proposal to build 1,400 homes goes ahead.

The danger is that Chipping Norton will become more and more a dormitory town for people working in London, Oxford and other places and that this will alter its fundamental character.

Resisting pressures for an out of town supermarket

With the likely increase in the population consequent on the building of 1,400 new homes in the ECNSDA it is surely only a matter of time before one of the major supermarkets puts forward plans for a large new store on the outskirts of Chipping Norton.

Places such as Witney have been able to build large supermarkets sufficiently close to the town centre that the new stores complement and support the town centre. There is no such site near to the centre of Chipping Norton.

Any large supermarket proposed in the future for Chipping Norton would be so far from the town centre that it would have a serious detrimental effect on the shops and businesses there.

There is real concern that WODC would not be able to prevent a future scheme for a large out of town supermarket going ahead given the significantly increased population and the financial and legal resources available to a major supermarket chain.

The Local Plan recognises this threat: ‘Chipping Norton is the main focus for retail and leisure activities within this sub-area. The town has a strong and diverse retail offer but remains vulnerable to out of centre development. We will through the Local Plan therefore seek to safeguard and reinforce the role of Chipping Norton Town Centre’ (paragraph 9.4.61). However there is no explanation of how pressures for ‘out of centre development’ will be resisted and this remains an area of real concern for local people given the plans to build so many new homes in the town.

Funding of measures to lessen the impact of the ECNSDA
Several areas will require significant investment if the current plans for the ECNSDA go ahead including:

* Measures to reduce air pollution
* Improvements to road safety in Chipping Norton
* New road
* Other improvements to roads in and around the town
* Extra car parking
* Improving conditions throughout the town and surrounding areas for pedestrians and cyclists, including accessibility to bus and rail services
* New primary school
* Significant expansion of secondary school
* Mitigation measures for the impact on the Conservation Target Area (CTA) and the SSSI

Not all of this will come from developer funding. We are also in a time of reductions in council funding and economic uncertainty in the post Brexit era. In addition it has to be taken into account that there will be large demands for funding in all areas of WODC where substantial house building is proposed. It is therefore legitimate to ask: where will the rest of the funding will come from in order to ensure that the building of 1,400 homes in the ECNSDA does not have major negative impacts on the town and its surrounding area?

If there really is a need for 1,400 new homes in the ECNSDA then market forces will ensure that developers and building firms will go ahead and build the houses. A real concern to local people is that the houses will be built but funds will turn out to be insufficient to ensure that the measures outlined above can be

Nick Small, Stagecoach Bus Dr Small 998

> SECTION 9 - STRATEGY AT THE LOCAL LEVEL > Chipping Norton Sub Area > MAIN 141

MAIN 141 para 9.4.52 Business Park North of London Road –

Land to the east of the draft allocation is identified as an area of future expansion. This is strongly supported by Stagecoach. This may assist in the shorter term in providing for a suitable operating Centre for bus services serving Chipping Norton and the wider area, as discussed above.

---

**MM45**

Nigel Rose Mr Rose 112

> SECTION 9 - STRATEGY AT THE LOCAL LEVEL > Chipping Norton Sub Area > MAIN 142

When the Local Plan was originally developed, it made sense to concentrate housing developments in the three market towns. However, it is not appropriate to merely extrapolate the original allocations to take the additional numbers required by the Inspector and the SHMA. In particular, it is not sustainable to allocate an additional 800 homes to the Chipping Norton SDA. The percentage of residents employed locally has been falling steadily over the last decade and is now below 30%. Employment growth in the County is centred on the 'knowledge spine' running from Bicester through Oxford to the South. Chipping Norton is too inaccessible to attract significant potential employers, who will want to locate near the clusters along the spine. The main employment locally is for 'minimum wage' jobs in retail and caring sectors. New residents looking for professional or technical jobs will be forced to commute by car using the sub-standard A44 towards Oxford or the more dangerous A361 towards Banbury. The bus service to Oxford only runs hourly and has to cope with the severe congestion in the Wolvercote roundabout area. Access to the North Cotswold
railway line at Kingham is also difficult - the connecting bus service is now sparse and unreliable following the County Council cuts, not as implied in para. 7.58. The additional 800 homes must be allocated nearer to Oxford with easy access to a railway line, thereby linking easily to the main employment areas in the County. The modified Plan already picks up on this logic, by proposing the Eynsham garden village with good links to Hanborough station (and with the potential to be eventually linked to a re-opened railway line to Witney) and with employment areas nearer to the 'knowledge spine' clusters. The Chipping Norton "800" should therefore be reallocated to the Eynsham area or sites even nearer to Oxford, with a start date earlier than the 2021 proposed for the garden village.

The Chipping Norton Eastern Link Road proposed as part of the Tank Farm SDA will not achieve the reduction in HGVs through the town centre - the vast majority of HGVs are on the A44 towards Evesham, not on the A361. The link road will be a "road from nowhere to nowhere". The money on the link would be wasted and reduce the likelihood of achieving a proper Chipping Norton by-pass on the A44.

The commercial viability of the Stagecoach S3 bus to Oxford and the availability of a cadre of local drivers is dependent upon an overnight bus park in Chipping Norton. As part of the masterplan for the Tank Farm development a site of at least 0.3 Ha should be set aside for this vital bus parking.

| MM479 | Crest Strategic Projects | Crest Strategic Projects | Crest Strategic Projects | Crest Strategic Projects | Main 142 | 8.62 The link road is regarded as an "integral element" of the SDA (paragraph 9.4.56) to divert a large percentage of the HGV movements and improve air quality. However, the additional transport evidence produced on behalf of Oxfordshire County Council notes that the 600 unit scheme would result in the lowest levels of traffic on all key approaches into the town centre, despite the absence of a link road (paragraph 9.1.3). Moreover, the predicted traffic flows on the High Street corridor for all development scenarios (+600, +850 and +1500) would be substantially higher than existing volumes as surveyed in 2016 (paragraph 9.1.4) and traffic flows elsewhere on the network would also increase, principally as a result of the impact of the increased level of development itself (paragraph 9.1.5). Therefore, the Council's assertions that the link road would mitigate the impact of the development, improve air quality and divert HGVs are not corroborated by the evidence base. | Main 145: Paragraphs 9.5.1-9.5.3a | The WODCPlan amazingly seems ignorant of the OCCs 'West Oxfordshire Weight Limit Zone' which is in the process of implementation in 2017. Others at WODCare fully aware. Consequently:
new paragraph after 9.4.56
- "The West Oxfordshire Weight Limit Zone which is in the process of being implemented by Oxfordshire County Council will reduce HGV traffic through Chipping Norton and reduce the air pollution substantially." |
9.1 The importance of the role that Eynsham has so play in meeting identified development needs is solely in the context of responding to the unmet housing needs of Oxford City, based on the preferred spatial strategy that underpins the Local Plan and the evidence base that the Council has prepared to support policy making. Paragraph 9.5.1 should be qualified to make clear that Eynsham has been identified as a candidate location that potentially has an important role to play in helping to meet the unmet housing needs of Oxford under the duty to cooperate.

9.2 The modifications to 9.5.3 are unsubstantiated by evidence and cannot be relied upon as presenting a clear and convincing justification for development in this location. The officers advised their Members initially in the main report to Council on proposed modifications to the Local Plan that the inclusion of development allocations at Woodstock would cause no harm either to the historic character of the settlement or to the setting of Blenheim Palace. However, this was subsequently revised to acknowledge harm, although this was suggested to be at a level that would not cause ‘undue harm’ (Appendix 10).

9.3 Nevertheless, the importance is that harm is recognised and admitted: In a plan-making context it is therefore necessary in demonstrating clear and convincing justification, as required by the NPPF, to demonstrate why development should be allocated in this location compared to other available locations (that accord with the overall spatial strategy). The Council has not carried out this exercise sufficiently to provide such justification and therefore the proposed allocations at Woodstock are unsound and should be deleted from the Local Plan.

9.4 The proposed modifications applying to Long Hanborough are considered to be justified and reasonable in the context of the setting and proximity to Blenheim Palace and the wider landscape setting referred to. The drafting refers to recently approved schemes for 169 homes and 50 homes, but does not refer to the 3 March 2016 refusal of a scheme for 120 dwellings on land adjoining the station (Appendix 11). Importantly, in the context of the Council’s approach to and treatment of heritage considerations, there appears to be a distinct difference in the approach taken to the assessment of heritage considerations from a development management perspective, compared to the plan-making exercise. In the reasons for refusal heritage and landscape considerations are afforded significant weight by the Council in the determination. Reason 4 is set out below:

The site is located within the setting of the Blenheim Park Grade 1 Listed Park and Garden, World Heritage Site and the Grade II Listed Old Farmhouse. An agricultural landscape setting for these heritage assets is provided by farmland to the north and south of the A4095, the wider Evenlode Valley and Cotswolds AONB north of the A4095. The proposed development would replace a large parcel of agricultural land forming an important gap in development, with a housing estate, which would be materially harmful, altering the setting of these heritage assets by imposing an extensive and visually significant development within this landscape. In addition views of the assets from the public footpath 238/1/10 would be dramatically changed by the presence of the housing, reducing the appreciation of them in an open landscape. By reason of the nature, scale and proximity of the development, the proposal is contrary to Local Plan Policies BE8, BE11, emerging Local Plan Policies EH7 and EW1 and section 12 of the NPPF, in particular paras 131, 132, 134 and 137. The harm in relation to these heritage assets is considered less than substantial (regarding para. 134 of the NPPF), but this harm is not outweighed by any benefits of the proposal.

9.5 There are striking similarities between the proposal subject to this refusal and the three proposed allocations at Woodstock. However in the case of Woodstock the sites are either closer to the WHS site, or are located within an area of acknowledged sensitivity to the setting. In two out of

</tr>
</tbody>
</table>

Norton are already adversely affecting the health of people living and working there. Yet WODC is proposing to build new houses in Chipping Norton which will worsen air pollution and increase the risk to health of people in centre of the town without having a viable strategy for reducing these levels. It could be argued that NO ADDITIONAL HOUSING should be allowed until a workable solution to the existing air quality problem is devised, implemented and shown to be effective.

Road Safety

Road safety issues in the centre of Chipping Norton are very closely connected with the problem of air pollution: both are caused by modern levels of traffic trying to get through an ancient market town the central area of which was originally laid out in the 13th Century.

Horse Fair is the narrowest part of the A44 as it passes through the town. Here the road is narrow as are the pavements. This puts vehicles and pedestrians into close proximity. It has been the site of several fatal accidents in recent years.

Road safety concerns are not restricted just to the Horse Fair. Local people also know that it is becoming increasingly difficult to cross several of the roads in the town centre safely because of the increased volume of the traffic as well as vehicles being driven at speeds inappropriate for the town centre.

The Local Plan accepts the need for the Council to ‘address the relatively high rate of fatalities and serious injuries on the District’s road network’ (paragraph 2.40). Work needs to be carried out to identify measures to improve safety in Horse Fair and other areas within the centre of the town. It also needs to be identified how these improvements will be funded. Again all of this work needs to be carried out before significant development is allowed to go ahead at the ECNSDA.

Traffic

The increase from 600 to 1,400 homes at the ECNSDA has profound implications for traffic in Chipping Norton and the surrounding area. The Chipping Norton Transport Options Study informed the preparation of the latest version of the Local Plan and in particular supported the option for 1,400 homes at the ECNSDA together with the Eastern Link Road. This option is of course the major change from the previous version of the Local Plan for Chipping Norton and is referenced in MAIN 27, MAIN 136 and MAIN 138 to MAIN 144 inclusive. This section of these comments outlines some concerns in a number of areas concerning traffic and arising from these changes to the Local Plan:

· Other traffic related comments

The way the Transport Options Study was carried out

The Transport Options Study report is an important document which played a major part in influencing the decision to put forward the 1,400 homes at the ECNSDA option in the Local Plan. Important decisions are to be made with respect to the future of Chipping Norton based on the findings of the study. Does a study which was principally carried out on one day only provide sufficiently robust and accurate
data on which to base these crucial decisions?

The manual traffic counts and the ANPR surveys were carried out on a Tuesday in March and were intended to assess “normal” traffic conditions. However there are times of the week when traffic in Chipping Norton tends to be heavier than normal principally Monday mornings and Friday afternoons. Also Wednesdays tend to be busier because of the weekly market. Why weren’t the surveys carried out during these busier times of the week?

In the summer many visitors and tourists come to Chipping Norton or pass through it on the way to see the Cotswolds or to visit major tourist attraction such as Blenheim Palace. There are not many tourists or visitors who choose to come to the area in early March which is when the traffic surveys were carried out. In the spring and summer there is also likely to be an increase in HGVs travelling to and from the fruit and vegetable growing areas in Worcestershire and other areas to the west of the town. Why wasn’t the traffic survey work repeated again say in June in order to assess whether the traffic levels are significantly higher at that time of year?

The ANPR count locations were positioned such that they may have missed a substantial amount of local traffic within the town e.g. parents living in the areas off West Street/Churchill Road taking children to the Chipping Norton School and local residents driving into the centre to shop.

The findings of the Transport Options Study

The Transport Options Study report paints a bleak picture of what will happen to traffic in Chipping Norton if 1,400 homes are built at the ECNSDA even with the proposed Eastern Link Road:

* Increased traffic through Chipping Norton as outlined in paragraph 11.1.21 of the report:

"However, delivery of the new eastern distributor road as a stand-alone measure would be insufficient to fully off-set and mitigate the impact on the town centre of the traffic growth anticipated by 2031 (both resulting from development on the Tank Farm site and general background growth on the network anticipated by this time). Furthermore, the beneficial minimisation of additional traffic flows on the A44 High Street would come at a cost of increasing traffic on peripheral routes around the town resulting from a combination of redistribution and the increased level of development on the Tank Farm site."

* The report also reports that this option “would be likely to exacerbate air quality management issues” – paragraph 11.1.15.

* The health of residents and people working in the centre of Chipping Norton would be put further at risk – see section CN4 above.

* Three mitigation options were examined and all were judged to be unsuitable for a variety of reasons – paragraph 10.6.1
In addition the study reports that the computer modelling of future traffic flows predicts that 2 of the main junctions in Chipping Norton would "operate well in excess of their theoretical capacity" and that the other 3 "would all remain operating within or, worst-case, at capacity for all of the potential development scenarios" – paragraph 11.1.16.

The report goes on to say that the computer software used may underestimate the capacity of roads in towns such as Chipping Norton and seeks to compare them with roads in other towns. The conclusion at this point is that "the operational impact of additional traffic flows resulting from each of the development scenarios on the existing network might be far less onerous than the model results indicate" – paragraph 11.1.17. At the very least this suggests that the future performance of the main road junctions within Chipping Norton are difficult to predict and that if the computer modelling turns out to be correct then two of those junctions will be operating well above their capacity.

Other traffic related comments

The Transport Options Study calculated ‘the estimated delivery costs of upgrading an existing route via Rollright Lane and the A3400 to the north of the town to act as an east-west bypass of the town serving as an alternative for through-movements of traffic on the A44’ – paragraph 10.3.3 and Figure 31.

The study report then goes on to say that ‘this option was considered unviable on the grounds of cost’ – paragraph 11.1.18.

However neither in the Local Plan nor in the Transport Options Study report is there any calculation of estimated delivery costs of the proposed Eastern Link Road. This seems a surprising omission as it makes comparisons between the 2 schemes impossible. It leaves unanswered the question of whether the funding for the proposed Eastern Link Road would be better spent on the upgrading of the Rollright/A3400 route.

Paragraph 9.4.40 of the Local Plan (MAIN 138) contains the statement with reference to the proposed 1,400 homes and the Eastern Link Road: ‘..... there could also be a diversion of a large proportion of HGV movements from Chipping Norton Town Centre, thereby possibly having a beneficial effect in terms of improving air quality - a key issue for the town.’.

A similar claim is made in paragraph 9.4.56 (MAIN 142). But doesn't the Transport Options Study for Chipping Norton conclude that ‘delivery of the new eastern distributor road as a stand-alone measure would be insufficient to fully off-set and mitigate the impact on the town centre of the traffic growth anticipated by 2031’ (paragraph 11.1.21)?

The Transport Options Study report also concludes that this option “would be likely to exacerbate air quality management issues” – paragraph 11.1.15.

Chipping Norton has been waiting for a solution to its traffic related problems for decades:
<table>
<thead>
<tr>
<th>Comment (plain text)</th>
</tr>
</thead>
<tbody>
<tr>
<td>* The use of the Rollright/A3400 route to remove traffic for the centre of the town has been in discussion for many years.</td>
</tr>
<tr>
<td>* The town has been experiencing severe air quality issues and the associated detrimental effects on people's health for at least a decade.</td>
</tr>
<tr>
<td>* An AQMA for the centre of Chipping Norton has now been in operation for over 8 years with no significant remedial action being taken.</td>
</tr>
<tr>
<td>* The same area covered by the AQMA is also an accident blackspot with a record of a fatal accident every 12 years and a serious RTA every 2 years on a stretch of road that is only about 200 metres in length.</td>
</tr>
<tr>
<td>* All the time traffic through Chipping Norton increases and these problems get worse.</td>
</tr>
<tr>
<td>When the latest version of the Local Plan proposes a huge increase in the number of houses in the town would it not be reasonable to expect that the document would propose measures which would alleviate Chipping Norton's traffic related problems. However all that is offered is a proposal that will in fact increase traffic in the town with all the consequent detrimental effects of this including a predicted worsening of the air quality problems. Is it unrealistic for the town's residents and visitors to expect a better solution than this?</td>
</tr>
<tr>
<td>Car parking</td>
</tr>
<tr>
<td>Local residents as well as visitors are well aware of the current problems with regard to car parking in Chipping Norton. This is recognised in the Local Plan: 'The availability of adequate public parking capacity is a key constraint in Chipping Norton' (paragraph 9.4.30) and 'Improvements to the efficiency and availability of public car parking in Chipping Norton will be sought as appropriate' (paragraph 9.4.60).</td>
</tr>
<tr>
<td>The Local Plan states: 'The scale and mix of uses in the local centre would be intended to meet the needs of the development and not compete with the Town Centre' (paragraph 9.4.49). This presumably means that a large proportion of the people living in the proposed ECNSDA would use the town centre shops together with the Aldi store to do their main shopping.</td>
</tr>
<tr>
<td>A few people may walk, cycle or use public transport when shopping in the centre of Chipping Norton. However given the distance especially from the far parts of the ECNSDA to the town centre together with the fact that there would be a hill to climb on the way back most people will use their cars when shopping in the town and especially if doing a large weekly shop.</td>
</tr>
<tr>
<td>The increase in the number of homes in the ECNSDA from 600 to 1,400 will therefore increase significantly the need for extra car parking in the town centre. Land in or adjacent to the town centre is very scarce in Chipping Norton. Before</td>
</tr>
</tbody>
</table>
development is permitted at the ECNSDA the problem of how to provide significant extra car parking capacity in the town centre needs to be resolved and funding secured for this.

School capacity

The Local Plan recognises the need for significant increases in school provision if the enlarged ECNSDA goes ahead: 'it is a requirement of any proposed development on this site that a new primary school will be provided. The site is close to the existing secondary school where there is adequate capacity to absorb additional pupil numbers despite the increased size of the allocation' (paragraph 9.4.48).

The overall housing requirement (2,400) represents an 80% increase in the number of houses in Chipping Norton and would mean that the population would increase by around the same percentage. It is also appropriate to assume that the number of school age children would rise by around the same order of magnitude requiring a new primary school approaching the size of the existing primary schools added together. Chipping Norton School would also have to almost double its existing size. The main issue with regard to increasing school capacity at both the primary and secondary levels would appear to be ensuring that adequate funds are available to carry this in time to cope with the increased demand – see below for a discussion of the funding requirements of the enlarged ECNSDA.

Meeting the housing needs of local people

One of the Core Objectives identified in the Local Plan is: 'CO4 Locate new residential development where it will best help to meet local housing needs and reduce the need to travel' (paragraph 3.7).

Locating 1,400 homes at ECNSDA does not support this Core Objective. Presumably the 600 homes proposed in the previous version of the Local Plan were felt to be adequate to meet local housing needs. The occupants of the additional 800 homes will presumably move into the area from outside and many of those of working age will commute to work thus directly working contrary to Core Objective 4. Moreover many will travel to work by car and thus increase pressure on roads locally.

Ensuring Chipping Norton retains its special character as a Cotswold market town

The Local Plan recognises the special character of Chipping Norton:

'Chipping Norton will strengthen its role as a centre of enterprise in the northern part of the District. It will continue to be an economically and socially strong market town serving the needs of a large rural area. Its distinctive historic character and fine setting will be conserved and enhanced at the same time as accommodating new development to meet identified needs.' (paragraph 3.2)

The overall housing requirement (2,400) represents an 80% increase in the number of houses in Chipping Norton and would mean the population would increase from around 6,500 to almost 12,000. Similar towns locally which have seen this scale of growth have changed fundamentally and such a growth in population over a
relatively short time period must put at risk the special character of the town. Although provision has been made for an additional 9 hectares of business land it is unlikely that sufficient new jobs will be created in the town to support the majority of the people of working age living in the new homes in the ECNSDA. The Local Plan notes that 'the number of people living and working in the town has fallen from 50% to 36% since 2001' (paragraph 9.4.30). Undoubtedly that percentage will fall further if the current proposal to build 1,400 homes goes ahead.

The danger is that Chipping Norton will become more and more a dormitory town for people working in London, Oxford and other places and that this will alter its fundamental character.

Resisting pressures for an out of town supermarket

With the likely increase in the population consequent on the building of 1,400 new homes in the ECNSDA it is surely only a matter of time before one of the major supermarkets puts forward plans for a large new store on the outskirts of Chipping Norton.

Places such as Witney have been able to build large supermarkets sufficiently close to the town centre that the new stores complement and support the town centre. There is no such site near to the centre of Chipping Norton.

Any large supermarket proposed in the future for Chipping Norton would be so far from the town centre that it would have a serious detrimental effect on the shops and businesses there.

There is real concern that WODC would not be able to prevent a future scheme for a large out of town supermarket going ahead given the significantly increased population and the financial and legal resources available to a major supermarket chain.

The Local Plan recognises this threat: ‘Chipping Norton is the main focus for retail and leisure activities within this sub-area. The town has a strong and diverse retail offer but remains vulnerable to out of centre development. We will through the Local Plan therefore seek to safeguard and reinforce the role of Chipping Norton Town Centre’ (paragraph 9.4.61). However there is no explanation of how pressures for ‘out of centre development’ will be resisted and this remains an area of real concern for local people given the plans to build so many new homes in the town.

Funding of measures to lessen the impact of the ECNSDA Several areas will require significant investment if the current plans for the ECNSDA go ahead including:

* Measures to reduce air pollution
* Improvements to road safety in Chipping Norton
* New road
* Other improvements to roads in and around the town
* Extra car parking
* Improving conditions throughout the town and surrounding areas for pedestrians and cyclists,
including accessibility to bus and rail services
* - New primary school
* - Significant expansion of secondary school
* - Mitigation measures for the impact on the Conservation Target Area (CTA) and the SSSI

Not all of this will come from developer funding. We are also in a time of reductions in council funding and economic uncertainty in the post Brexit era. In addition it has to be taken into account that there will be large demands for funding in all areas of WODC where substantial house building is proposed. It is therefore legitimate to ask: where will the rest of the funding will come from in order to ensure that the building of 1,400 homes in the ECNSDA does not have major negative impacts on the town and its surrounding area?

If there really is a need for 1,400 new homes in the ECNSDA then market forces will ensure that developers and building firms will go ahead and build the houses. A real concern to local people is that the houses will be built but funds will turn out to be insufficient to ensure that the measures outlined above can be

> SECTION 9 - STRATEGY AT THE LOCAL LEVEL > Chipping Norton Sub Area > MAIN 142

The draft Plan could be considered unsound (not positively prepared or effective) if the SDA cannot deliver the necessary infrastructure on time.

Any benefit from the proposed Tank Farm SDA link road will only be delivered towards the end of the plan period at the earliest (around 15 years’ time). In the meantime, it will be important for smaller sites to contribute for other measures in the Town Centre to help reduce congestion and improve air quality for current generations in accordance with draft Policy T2.

- Cala Homes (Chiltern)
1735

> SECTION 9 - STRATEGY AT THE LOCAL LEVEL > Chipping Norton Sub Area > MAIN 142

Paragraphs 9.4.56 and 9.4.57

The same issue is raised as per our comments on Main Modification 62.

CALA supports the provision of an eastern link road, recognizing the benefits that this could bring to improve air quality in Chipping Norton Town Centre.

However, further highway modelling is required to identify the level of benefit that this road would bring, the type/width of road and its precise alignment. All of these factors could have significant effects on the viability of the SDA. The work will be taken forward as part of the detailed design of the SDA and covered in a comprehensive Transport Assessment. As such the Local Plan must retain a flexible approach to the provision and delivery of the road.

In addition, the road is indicatively shown passing over land outside of the SDA boundary. The Council should consider funding from other developments in the Chipping Norton Sub area that would directly benefit from it. The Council must also be willing to use compulsory purchase powers to ensure delivery of the road as a last resort in the public interest.

<td>MAIN 142 – Policy 9.4.56</td>
<td>More recently on behalf of the District Council, Oxfordshire County Council have commissioned additional transport evidence for Chipping Norton to help inform the Local Plan. The report concludes that the provision of an eastern link road for Chipping Norton could have a beneficial impact on HGV movements through the town centre, potentially diverting a large percentage of HGV movements and thereby having a beneficial impact on air quality. The provision of this link road is therefore an integral element of the proposed East Chipping Norton Strategic Development Area (SDA). The proposed placement of the road would seem to be one of few options but will have little or no impact on the amount of lorries passing through the town. Those lorries travel the A44 and impact the High Street and New Street going to and from Worcester and or Cheltenham. The link road doesn't address this and would likely only cause more congestion on the Burford Road which would run past the Secondary School.</td>

Having a viable strategy for reducing these levels. It could be argued that NO ADDITIONAL HOUSING should be allowed until a workable solution to the existing air quality problem is devised, implemented and shown to be effective.

**Road Safety**

Road safety issues in the centre of Chipping Norton are very closely connected with the problem of air pollution: both are caused by modern levels of traffic trying to get through an ancient market town the central area of which was originally laid out in the 13th Century.

Horse Fair is the narrowest part of the A44 as it passes through the town. Here the road is narrow as are the pavements. This puts vehicles and pedestrians into close proximity. It has been the site of several fatal accidents in recent years. Road safety concerns are not restricted just to the Horse Fair. Local people also know that it is becoming increasingly difficult to cross several of the roads in the town centre safely because of the increased volume of the traffic as well as vehicles being driven at speeds inappropriate for the town centre.

The Local Plan accepts the need for the Council to 'address the relatively high rate of fatalities and serious injuries on the District’s road network' (paragraph 2.40). Work needs to be carried out to identify measures to improve safety in Horse Fair and other areas within the centre of the town. It also needs to be identified how these improvements will be funded. Again all of this work needs to be carried out before significant development is allowed to go ahead at the ECNSDA.

**Traffic**

The increase from 600 to 1,400 homes at the ECNSDA has profound implications for traffic in Chipping Norton and the surrounding area. The Chipping Norton Transport Options Study informed the preparation of the latest version of the Local Plan and in particular supported the option for 1,400 homes at the ECNSDA together with the Eastern Link Road. This option is of course the major change from the previous version of the Local Plan for Chipping Norton and is referenced in MAIN 27, MAIN 136 and MAIN 138 to MAIN 144 inclusive. This section of these comments outlines some concerns in a number of areas concerning traffic and arising from these changes to the Local Plan:

- Other traffic related comments

The way the Transport Options Study was carried out

The Transport Options Study report is an important document which played a major part in influencing the decision to put forward the 1,400 homes at the ECNSDA option in the Local Plan. Important decisions are to be made with respect to the future of Chipping Norton based on the findings of the study. Does a study which was principally carried out on one day only provide sufficiently robust and accurate data on which to base these crucial decisions?

The manual traffic counts and the ANPR surveys were carried out on a Tuesday in
March and were intended to assess "normal" traffic conditions. However there are times of the week when traffic in Chipping Norton tends to be heavier than normal principally Monday mornings and Friday afternoons. Also Wednesdays tend to be busier because of the weekly market. Why weren’t the surveys carried out during these busier times of the week?

In the summer many visitors and tourists come to Chipping Norton or pass through it on the way to see the Cotswolds or to visit major tourist attraction such as Blenheim Palace. There are not many tourists or visitors who choose to come to the area in early March which is when the traffic surveys were carried out. In the spring and summer there is also likely to be an increase in HGVs travelling to and from the fruit and vegetable growing areas in Worcestershire and other areas to the west of the town. Why wasn’t the traffic survey work repeated again say in June in order to assess whether the traffic levels are significantly higher at that time of year?

The ANPR count locations were positioned such that they may have missed a substantial amount of local traffic within the town e.g. parents living in the areas off West Street/Churchill Road taking children to the Chipping Norton School and local residents driving into the centre to shop.

The findings of the Transport Options Study

The Transport Options Study report paints a bleak picture of what will happen to traffic in Chipping Norton if 1,400 homes are built at the ECNSDA even with the proposed Eastern Link Road:

* Increased traffic through Chipping Norton as outlined in paragraph 11.1.21 of the report:

"However, delivery of the new eastern distributor road as a stand-alone measure would be insufficient to fully off-set and mitigate the impact on the town centre of the traffic growth anticipated by 2031 (both resulting from development on the Tank Farm site and general background growth on the network anticipated by this time). Furthermore, the beneficial minimisation of additional traffic flows on the A44 High Street would come at a cost of increasing traffic on peripheral routes around the town resulting from a combination of redistribution and the increased level of development on the Tank Farm site."

* The report also reports that this option "would be likely to exacerbate air quality management issues" - paragraph 11.1.15.
* The health of residents and people working in the centre of Chipping Norton would be put further at risk – see section CN4 above.
* Three mitigation options were examined and all were judged to be unsuitable for a variety of reasons – paragraph 10.6.1

In addition the study reports that the computer modelling of future traffic flows predicts that 2 of the main junctions in Chipping Norton would “operate well in excess of their theoretical capacity” and that the other 3 “would all remain operating
within or, worst-case, at capacity for all of the potential development scenarios” – paragraph 11.1.16.

The report goes on to say that the computer software used may underestimate the capacity of roads in towns such as Chipping Norton and seeks to compare them with roads in other towns. The conclusion at this point is that "the operational impact of additional traffic flows resulting from each of the development scenarios on the existing network might be far less onerous than the model results indicate” – paragraph 11.1.17. At the very least this suggests that the future performance of the main road junctions within Chipping Norton are difficult to predict and that if the computer modelling turns out to be correct then two of those junctions will be operating well above their capacity.

Other traffic related comments

The Transport Options Study calculated ‘the estimated delivery costs of upgrading an existing route via Rollright Lane and the A3400 to the north of the town to act as an east-west bypass of the town serving as an alternative for through-movements of traffic on the A44’ – paragraph 10.3.3 and Figure 31.

The study report then goes on to say that ‘this option was considered unviable on the grounds of cost’ – paragraph 11.1.18.

However neither in the Local Plan nor in the Transport Options Study report is there any calculation of estimated delivery costs of the proposed Eastern Link Road. This seems a surprising omission as it makes comparisons between the 2 schemes impossible. It leaves unanswered the question of whether the funding for the proposed Eastern Link Road would be better spent on the upgrading of the Rollright/A3400 route.

Paragraph 9.4.40 of the Local Plan (MAIN 138) contains the statement with reference to the proposed 1,400 homes and the Eastern Link Road: ‘.... there could also be a diversion of a large proportion of HGV movements from Chipping Norton Town Centre, thereby possibly having a beneficial effect in terms of improving air quality - a key issue for the town.’.

A similar claim is made in paragraph 9.4.56 (MAIN 142). But doesn't the Transport Options Study for Chipping Norton conclude that ‘delivery of the new eastern distributor road as a stand-alone measure would be insufficient to fully off-set and mitigate the impact on the town centre of the traffic growth anticipated by 2031’ (paragraph 11.1.21)?

The Transport Options Study report also concludes that this option "would be likely to exacerbate air quality management issues” – paragraph 11.1.15.

Chipping Norton has been waiting for a solution to its traffic related problems for decades:

* The use of the Rollright/A3400 route to remove traffic for the centre of the town has been in discussion for many years.
<table>
<thead>
<tr>
<th>Comment (plain text)</th>
</tr>
</thead>
</table>

* The town has been experiencing severe air quality issues and the associated detrimental effects on people’s health for at least a decade.

* An AQMA for the centre of Chipping Norton has now been in operation for over 8 years with no significant remedial action being taken.

* The same area covered by the AQMA is also an accident blackspot with a record of a fatal accident every 12 years and a serious RTA every 2 years on a stretch of road that is only about 200 metres in length.

* All the time traffic through Chipping Norton increases and these problems get worse.

When the latest version of the Local Plan proposes a huge increase in the number of houses in the town would it not be reasonable to expect that the document would propose measures which would alleviate Chipping Norton’s traffic related problems. However all that is offered is a proposal that will in fact increase traffic in the town with all the consequent detrimental effects of this including a predicted worsening of the air quality problems. Is it unrealistic for the town’s residents and visitors to expect a better solution than this?

**Car parking**

Local residents as well as visitors are well aware of the current problems with regard to car parking in Chipping Norton. This is recognised in the Local Plan: ‘The availability of adequate public parking capacity is a key constraint in Chipping Norton’ (paragraph 9.4.30) and ‘Improvements to the efficiency and availability of public car parking in Chipping Norton will be sought as appropriate’ (paragraph 9.4.60).

The Local Plan states: ‘The scale and mix of uses in the local centre would be intended to meet the needs of the development and not compete with the Town Centre’ (paragraph 9.4.49). This presumably means that a large proportion of the people living in the proposed ECNSDA would use the town centre shops together with the Aldi store to do their main shopping.

A few people may walk, cycle or use public transport when shopping in the centre of Chipping Norton. However given the distance especially from the far parts of the ECNSDA to the town centre together with the fact that there would be a hill to climb on the way back most people will use their cars when shopping in the town and especially if doing a large weekly shop.

The increase in the number of homes in the ECNSDA from 600 to 1,400 will therefore increase significantly the need for extra car parking in the town centre. Land in or adjacent to the town centre is very scarce in Chipping Norton. Before development is permitted at the ECNSDA the problem of how to provide significant extra car parking capacity in the town centre needs to be resolved and funding secured for this.
School capacity

The Local Plan recognises the need for significant increases in school provision if the enlarged ECNSDA goes ahead: "it is a requirement of any proposed development on this site that a new primary school will be provided. The site is close to the existing secondary school where there is adequate capacity to absorb additional pupil numbers despite the increased size of the allocation" (paragraph 9.4.48).

The overall housing requirement (2,400) represents an 80% increase in the number of houses in Chipping Norton and would mean that the population would increase by around the same percentage. It is also appropriate to assume that the number of school age children would rise by around the same order of magnitude requiring a new primary school approaching the size of the existing primary schools added together. Chipping Norton School would also have to almost double its existing size. The main issue with regard to increasing school capacity at both the primary and secondary levels would appear to be ensuring that adequate funds are available to carry this in time to cope with the increased demand – see below for a discussion of the funding requirements of the enlarged ECNSDA.

Meeting the housing needs of local people

One of the Core Objectives identified in the Local Plan is: "CO4 Locate new residential development where it will best help to meet local housing needs and reduce the need to travel" (paragraph 3.7).

Locating 1,400 homes at ECNSDA does not support this Core Objective. Presumably the 600 homes proposed in the previous version of the Local Plan were felt to be adequate to meet local housing needs. The occupants of the additional 800 homes will presumably move into the area from outside and many of those of working age will commute to work thus directly working contrary to Core Objective 4. Moreover many will travel to work by car and thus increase pressure on roads locally.

Ensuring Chipping Norton retains its special character as a Cotswold market town

The Local Plan recognises the special character of Chipping Norton:

'Chipping Norton will strengthen its role as a centre of enterprise in the northern part of the District. It will continue to be an economically and socially strong market town serving the needs of a large rural area. Its distinctive historic character and fine setting will be conserved and enhanced at the same time as accommodating new development to meet identified needs.' (paragraph 3.2)

The overall housing requirement (2,400) represents an 80% increase in the number of houses in Chipping Norton and would mean the population would increase from around 6,500 to almost 12,000. Similar towns locally which have seen this scale of growth have changed fundamentally and such a growth in population over a relatively short time period must put at risk the special character of the town.

Although provision has been made for an additional 9 hectares of business land it is unlikely that sufficient new jobs will be created in the town to support the majority
of the people of working age living in the new homes in the ECNSDA. The Local Plan notes that 'the number of people living and working in the town has fallen from 50% to 36% since 2001' (paragraph 9.4.30). Undoubtedly that percentage will fall further if the current proposal to build 1,400 homes goes ahead.

The danger is that Chipping Norton will become more and more a dormitory town for people working in London, Oxford and other places and that this will alter its fundamental character.

Resisting pressures for an out of town supermarket

With the likely increase in the population consequent on the building of 1,400 new homes in the ECNSDA it is surely only a matter of time before one of the major supermarkets puts forward plans for a large new store on the outskirts of Chipping Norton.

Places such as Witney have been able to build large supermarkets sufficiently close to the town centre that the new stores complement and support the town centre. There is no such site near to the centre of Chipping Norton.

Any large supermarket proposed in the future for Chipping Norton would be so far from the town centre that it would have a serious detrimental effect on the shops and businesses there.

There is real concern that WODC would not be able to prevent a future scheme for a large out of town supermarket going ahead given the significantly increased population and the financial and legal resources available to a major supermarket chain.

The Local Plan recognises this threat: 'Chipping Norton is the main focus for retail and leisure activities within this sub-area. The town has a strong and diverse retail offer but remains vulnerable to out of centre development. We will through the Local Plan therefore seek to safeguard and reinforce the role of Chipping Norton Town Centre' (paragraph 9.4.61). However there is no explanation of how pressures for 'out of centre development' will be resisted and this remains an area of real concern for local people given the plans to build so many new homes in the town.

Funding of measures to lessen the impact of the ECNSDA

Several areas will require significant investment if the current plans for the ECNSDA go ahead including:

* · Measures to reduce air pollution
* · Improvements to road safety in Chipping Norton
* · New road
* · Other improvements to roads in and around the town
* · Extra car parking
* · Improving conditions throughout the town and surrounding areas for pedestrians and cyclists, including accessibility to bus and rail services
* · New primary school
* · Significant expansion of secondary school
Not all of this will come from developer funding. We are also in a time of reductions in council funding and economic uncertainty in the post Brexit era. In addition it has to be taken into account that there will be large demands for funding in all areas of WODC where substantial house building is proposed. It is therefore legitimate to ask: where will the rest of the funding will come from in order to ensure that the building of 1,400 homes in the ECNSDA does not have major negative impacts on the town and its surrounding area?

If there really is a need for 1,400 new homes in the ECNSDA then market forces will ensure that developers and building firms will go ahead and build the houses. A real concern to local people is that the houses will be built but funds will turn out to be insufficient to ensure that the measures outlined above can be

My Client owns land to the east of the proposed allocation at the Chipping Norton SDA. The changes made to Policy CN1 and CN2 set out in the proposed modifications are fully supported, especially the comprehensive development of the allocation via an agreed master plan whilst allowing for individual applications to come forward. In such a situation, it is important to put in place a mechanism to assist in the delivery of the infrastructure needed to support the development, including the proposed link road, new school and open space/landscaping. In terms of delivery, my Client is working with other landowners and promoters to bring forward the proposed development in a timely manner.

INTRODUCTION AND SUMMARY

i. These representations are submitted in response to the West Oxfordshire Local Plan 2031 – Proposed Modifications Consultation, December 2016 (WOLP 2031 Modifications). They are made by Edgars Limited on behalf of Empire Homes Limited who have land north of the A44 and south of the Banbury Road, Chipping Norton under their control. The land extends to approximately 42 hectares and is identified on the plan attached as Appendix 1 to these representations.

ii. Empire Homes Limited object to Table 4.1 (Main Modification, MM, 14) Policies H1 (MM24), H2 (MM29 and MM30), CN1 (MM140) and CN2 (MM143) on the basis that insufficient sites for housing have been identified to provide for a five year supply of housing in accordance with national policy.

iii. Edgars Limited have prepared representations on behalf of a number of clients which demonstrates that a five year land supply cannot be demonstrated when appropriate assumptions are used in accordance with national planning policy and guidance. These representations conclude that only 2.7 year supply can be demonstrated. Edgars consider that additional sites are required to be allocated to ensure sufficient housing land supply.

iv. Land north of the A44 and south of the Banbury Road, Chipping Norton is available and capable of delivering residential development in a sustainable location to help boost housing supply, ensure a 5 year supply of housing and provide robustness to ensure that the housing requirement of the modified WOLP 2031 is delivered.

v. The following representations provide further information on the land north of the A44 and south of the Banbury Road.
1.0 DELIVERY AT EAST CHIPPING NORTON SDA (Policy CN1, MM138-MM140)

1.1 The East Chipping Norton allocation has been increased from about 600 dwellings at Tank Farm south of the London Road to 1,400 dwellings including 1,200 dwellings south of London Road and 200 north of London Road. The SDA now includes the provision of an Eastern Link Road.

1.2 Limited evidence has been published to demonstrate and assess the impacts of the increased allocation. The previous assessment of Strategic Site Options (Examination Document Ref OTH1) has not been updated. This provides a comprehensive overview of the site and a summary of the site constraints and impacts.

1.3 There would appear to be no evidence document which provides a summary of the modified East Chipping Norton SDA and its constraints. The SHELAA assesses a number of component sites but there is no expression of the overall size of the site and its developable area to ascertain whether delivery is realistic.

1.4 Previous landscape evidence was prepared for the Council by Kirkham Landscape Planning, the Landscaper and Visual Review of Chipping Norton Strategic Site Option (May 2014, Examination Document Ref LAN2). This concludes an indicative housing capacity for the land south of London Road of 500 dwellings within a similar area as now proposed by the Council.

1.5 This is significantly lower than the 1,200 dwellings now assumed by the Council and draws into question the deliverability of this number of dwellings.

1.6 Furthermore, it is noted that the East Chipping Norton SDA now also includes the provision of a link road through the allotment garden land.

1.7 The updated Infrastructure Delivery Plan 2016 does not provide a cost estimate for the provision of the link road. It is unclear what has been assumed for viability purposes.

1.8 Edgars Limited understand that the allotment land is under the ownership of Chipping Norton Town Council who object to the provision of the link road. This draws into question the deliverability of the eastern link road which is now integral to the modified East Chipping Norton allocation.

1.9 In Edgars opinion, the increased allocation at East Chipping Norton is not justified by the published evidence and there is a significant risk that it will not be realised.

1.10 Empire Homes Limited object to Policies H1 (MM24), H2 (MM29 and MM30), CN1 (MM140) and CN2 (MM143) on the basis that the modified plan has not identified sufficient housing land to provide for a 5 year supply of housing and contend that Land north of the A44 and south of the Banbury Road, Chipping Norton should be allocated to assist with the delivery of the East Chipping Norton SDA.

The draft Plan could be considered unsound (not positively prepared or effective) if it does not provide for enough community infrastructure in the earlier part of the plan.

<td>1767</td>
<td>&gt; SECTION 9 - STRATEGY AT THE LOCAL LEVEL &gt; Chipping</td>
<td>CALA recognises the need for a road around the east of the Town and the benefits that this could bring. However, further highway modelling is required to identify if this road is required as currently set out in the Main Modifications, the type of road and its precise alignment. As such CALA requests, as per paragraph 9.4.44a of the Local Plan that the route for the link road remains indicative at this stage to provide flexibility in the detailed design stage. Commentary should be amended to include that the route of the link road should be subject to the masterplanning of the whole site to ascertain the best location and that the viability of the road needs to be assessed. CALA also seeks changes to ensure that other developments in the Chipping Norton sub-area contribute financially to the road if they would benefit from it. The Plan needs to acknowledge that the Council would, as a last resort, consider use of compulsory purchase powers to enable delivery of the road.</td>
</tr>
</tbody>
</table>

**INTRODUCTION AND SUMMARY**

1. These representations are submitted in response to the West Oxfordshire Local Plan 2031 – Proposed Modifications Consultation, December 2016 (WOLP 2031 Modifications). They are made by Edgars Limited (Edgars) on behalf of the owners of land adjoining the north west side of 34 Churchill Road, Chipping Norton. The land comprises approximately 4.5ha and is identified on the plan attached as Appendix 1 to these representations.
ii. The owners object to Policies H1 (Main Modification (MM) 24), H2 (MM29 and MM30) and CN2 (MM143) on the basis that insufficient sites for housing have been identified to provide for a five year supply of housing in accordance with national policy.

iii. Edgars have prepared representations on behalf of several clients which demonstrate that a five year land supply cannot be demonstrated when appropriate assumptions are used in accordance with national planning policy and guidance. These representations conclude that only a 2.7 year supply can be demonstrated. Edgars consider that additional non-strategic sites are required to be allocated to ensure a sufficient housing land supply.

iv. Land at 34 Churchill Road and adjoining land to the north west is under the control of one family. It is available now and can deliver around 75 homes in a sustainable location to help boost housing supply, ensure a 5 year supply of housing and provide robustness to ensure that the housing requirement of the modified WOLP 2031 is delivered.

v. The following representations provide further information on the site at Churchill Road and should be read in conjunction with Edgars’ general representations regarding housing supply which are not repeated here.

1.0 LAND NORTH WEST OF 34 CHURCHILL ROAD, CHIPING NORTON

1.1 Our clients object to Policies H1 (Main Modification (MM) 24), H2 (MM29 and MM30) and CN2 (MM143) on the basis that the modified plan has not identified sufficient housing land to provide for a 5 year supply of housing and that land at 34 Churchill Road and adjoining land to the north west should be allocated for around 75 homes to help address this deficiency.

Site and Surrounding Area

1.2 The site is situated in the south western part of Chipping Norton, which is the third largest town in the district offering both residents and visitors a good range of services and facilities. The site lies approximately 700m from the town centre and is a similar distance from Chipping Norton Leisure Centre and Chipping Norton School (secondary). There are bus stops located on Churchill Road (within 150m of No. 34 Churchill Road), which provide access to a high frequency service to Oxford (S3) and a slightly less frequent service to Banbury (488). There is also a service (X8) that links Chipping Norton with Kingham Railway Station. The site is therefore in a highly sustainable location.

1.3 The site comprises approximately 4.5 hectares of land, identified on the plan attached at Appendix 1. The land forms part of the side of a valley and slopes downwards from the south east to the north west of the site. There is a two story dwellinghouse at 34 Churchill Road with vehicular access and egress to the front of the property via dropped kerbs in two locations. Access to the land at the rear (north west) of 34 Churchill Road is via an agricultural gate and grassed track situated between numbers 34 and 32 Churchill Road. The land north west of 34 Churchill Road is not currently actively used for agriculture, except for occasional grazing. Consequently, it could be described as unmanaged grassland, declining in quality. This land is divided into two parts, almost equal in area, by a tree-lined stream which runs from the site’s southernmost corner to its northernmost corner. The trees along this line are substantial and mature and are effective as a visual barrier.
1.4 The principal north-eastern and south-eastern site boundaries are shared with residential properties at The Leys and Lords Piece Road respectively. The rear gardens which back onto the site include considerable tree cover in the more Representations on behalf of the owners of land north west of 34 Churchill Road, Chipping Norton West Oxfordshire Local Plan 2031 Proposed Modifications Consultation, December 2016 4 historic environment of The Leys. There is less tree cover in the 20th century residential development at Lords Piece Road which forms the more elevated backdrop to the site. There is a small group of industrial buildings, with a high number of trees in the curtilages, immediately adjacent to the site’s northwestern boundary along the route of a former railway line in the floor of the valley. The group contains some relatively modern structures, which are unremarkable, but among them sits Bliss Mill. This is an imposing 19th century building (now converted to apartments), Grade II* listed and a notable local landmark. Beyond the industrial buildings lies the Chipping Norton Regulated Pastures, which is common land with open public access for recreation. Open countryside lies to the south west of the site.

1.5 The site falls within the Cotswolds Area of Outstanding Natural Beauty, the Chipping Norton Conservation Area and the setting of the listed building (Bliss Mill).

1.6 The ‘Cotswolds AONB Landscape Strategy and Guidelines’ (adopted in June 2016) states in relation to ‘Vale of Moreton Farmed Slopes’ Character Area (in which the site is situated) that the expansion of existing settlements onto the Farmed Slopes is regarded as a local force for change, with a range of potential landscape implications including the ‘encroachment of built development onto the Farmed slopes intruding into the landscape, particularly on the more prominent upper slopes’.

1.7 It is to be noted in this instance that the site does not occupy the uppermost slopes. The existing substantial tree cover, both on the perimeter and a belt running through the site, makes the land less visually prominent than the common land to the north west and the open countryside to the south west.

1.8 The Chipping Norton Conservation Area Character Appraisal identifies the bowl-shaped valley landscape setting of Bliss Mill as the most significant area of open space in the Conservation Area. While it is envisaged that within the Conservation Area the existing buildings, land uses, historic settlement patterns and open spaces should remain largely undisturbed, the guidance does enable development where views into and out of Chipping Norton, as well as views within Chipping Norton, are not harmed and where existing features of historic, visual or natural importance, such as trees, hedgerows, ponds, stone walls, paths and tracks are incorporated.

1.9 The site is not within an area that is at risk from flooding.

1.10 The site has not previously been submitted to the Council or considered in the Strategic Housing and Economic Land Availability Assessment (SHELAA).

1.11 Additional technical work, including a Landscape and Visual Impact Assessment is currently
being undertaken and likely to be available in advance of further WOLP 2031 examination hearings. Without prejudice to this further work, the following planning considerations are identified as relevant to the potential allocation of the site.

The principle of housing development at Chipping Norton

1.12 Chipping Norton is identified as a Main Service Centre in the Local Plan 2031. Draft WOLP Policy H2 permits new housing on undeveloped land adjoining the built-up area to meet identified housing needs. As such housing development on the site would be acceptable in principle.

1.13 Draft Policies H2 and CN2 seek to secure the delivery of 2,400 new homes focused on Chipping Norton. Delivery is proposed partly through a strategic mixed used development area of around 1,400 dwellings on the eastern side of Chipping Norton. The provision of an eastern link road is an integral part of the proposed Strategic Development Area (SDA).

1.14 In Edgars opinion, there is a significant risk of delays in delivery on SDAs which is likely to result in continuing housing supply deficits. There is a need to address deficiencies in the 5 year housing supply. Given the long lead in times of SDAs, addressing the current supply deficiencies is best achieved through allocating additional non-strategic developments such as Land at 34 Churchill Road and adjoining land to the north west.

1.15 In Edgars opinion, the development of Land at 34 Churchill Road and adjoining land to the north west can comply with Policy H2 in being adjacent to the built up area of a Main Service Centre in the settlement hierarchy. Settlement character, AONB landscape and Conservation Area

1.16 Draft Policy OS2Locating Development in the Right Places states that a significant proportion of new homes, jobs and supporting services will be

Representations on behalf of the owners of land north west of 34 Churchill Road, Chipping Norton West Oxfordshire Local Plan 2031 Proposed Modifications Consultation, December 2016 focused within and on the edge of the main service centres of Witney, Carterton and Chipping Norton. Development is required to:

- form a logical complement to the existing scale and pattern of development and/or the character of the area;
- Be compatible with adjoining uses and not have a harmful impact on the amenity of existing occupants;
- as far as is reasonably possible protect or enhance the local landscape and the setting of the settlement/s;
- be provided with safe vehicular access and safe and convenient pedestrian access to supporting services and facilities; and
- Conserve and enhance the natural, historic and built environment.

1.17 The site is surrounded on three sides by existing residential and industrial development. It is considered that allocating the site for housing would form a logical extension of the existing built-
up area, without encroaching on the more visually prominent parts of the valley that would otherwise cause harm to the setting of Bliss Mill.

1.18 Use of the land for housing is entirely compatible with the adjoining residential development at The Leys and Lords Piece Road. The retention of existing trees and hedgerows, especially on the perimeter of the site, will help to ensure that there is no harmful impact on the amenity of the existing occupiers of properties in these two roads. It will also help to preserve and enhance the character and appearance of the conservation area.

1.19 A new all-purpose access road is capable of being provided off Churchill Road following demolition of the existing dwelling at No. 34. A 6.0m wide access road with 9.0m radii (like the Lords Piece Road/Churchill Road junction) with 2.0m wide footways each side would be constructed. Junction visibility splays of 2.4m x 43m are readily available in accordance with the 30mph speed limit on Churchill Road. An offset distance of 20m (centreline to centreline) would be provided between the new access and the cul-de-sac on the opposite side of Churchill Road, named Edward Stone Rise. This specification would facilitate a development of up to 150 dwellings. However, having regard to the importance and sensitivity of the landscape, the character and appearance of the Conservation Area and the setting of the listed building, it is considered that around 75 dwellings would represent a more appropriate scale of development for this site.

Representations on behalf of the owners of land north west of 34 Churchill Road, Chipping Norton

1.20 If the total number of dwellings on the site generated a need for a separate emergency access, this could be achieved by utilising existing rights of access to the gate in the northern corner of the site, from The Leys/Station Road. It would also provide an additional means of access for pedestrians and cyclists. In this manner, the development would be provided with safe vehicular access and safe and convenient pedestrian access to supporting services and facilities.

1.21 The character and appearance of the AONB and the Conservation Area can be preserved and enhanced through a high quality evidence based development within a strong and extensive landscape framework. While the extent of the land is 4.5ha, around 75 dwellings are proposed leaving significant scope for open space and landscaping.

1.22 In Edgars opinion, a development of this scale does not comprise ‘major’ development for the purposes of NPPF paragraph 116 and that a development within a strong landscape framework will not have a significant adverse impact on the landscape and scenic beauty of the wider AONB. The public benefits of the scheme would outweigh any harm to the Conservation Area and the setting of Bliss Mill.

1.23 Although further work is being undertaken, Edgars consider that development can be achieved on the site which makes an important contribution to meeting housing land supply in a sustainable location, without significant impact on the settlement character, AONB or the Conservation Area.

1.24 Further detailed technical information is likely to be available during the next stages of the WOLP 2031 Examination.

For similar reasons set out in relation to Main Modification 136, objection is raised to Main Modification 143 since it fails to include land north of Holliers Crescent, Middle Barton as a housing allocation for approximately 100-120 dwellings.
The omission site is identified on the site location plan included in Annex 1 to these representations. The overall site area extends to approximately 7.88 hectares. However, the preliminary concept plans also included in Annex 1 indicates a developable area of approximately 3.72 hectares. The scale of development proposed is commensurate with the scale and character of the village. It is therefore acceptable in principle within the terms of the emerging development strategy irrespective of whether Middle Barton is categorised as a village or specifically as a Rural Service Centre.

The concept plan demonstrates the potential to deliver significant community benefits in terms of:

- Extension of existing sports pitches on land to the west.
- Extension of existing children's play area / open space.
- Community park through which could be provided east-west connections between an existing footpath that borders the site to the east, and one that runs on a north-south axis through the site towards its western boundary. - Provision of off-street car parking for existing residential properties.
- Provision of a Community Orchard and Allotments
- Provision of a signal-controlled crossing facility, by way of a Puffin Crossing, on the B4030 North Street which would enhance the safety of pedestrian routes to the Primary School (see Transport Note at Annex 2 to these submissions).

Access is proposed from Holliers Crescent to the south of the site. The site inclines gently upwards from its southern boundary adjacent to Holliers Crescent. The land is in agricultural use, and has few landscape features. It is not subject to any environmental or restraint designations. Whilst part of Middle Barton is a designated Conservation Area, the site is not within the designation and is separated from it by modern housing estate development to the south of the site.

Preliminary assessments have been undertaken and found as follows:

- Ecology: an extended Phase 1 Habitat Survey with protected species survey has been undertaken (November 2016). This found the site to have little biodiversity value.
- Arboriculture: an arboricultural assessment has been undertaken (November 2016) which included the omission site and considerable additional land to the north. This found that, by virtue of all the existing tree cover being confined to the boundaries, development of the site in accordance with the concept plan will result in no significant tree or hedgerow loss. All existing trees will be retained within the green infrastructure, and with the opportunity for it to be reinforced with new planting.

A preliminary Transport Note is also included with these representations (at Annex 2), the findings of which can be summarised as follows:

- The site can be satisfactorily accessed via a single point comprising a simple priority junction directly from Holliers Crescent.
- Pedestrian permeability to and through the site will be maximised, with the potential for new connections to the recreation ground to the west and from there through to Worton Road, that would also benefit the existing community to the south.

- The site is within reasonable walking distance of a range of everyday facilities, and accessibility can be enhanced through the creation of new pedestrian routes that connect with existing public rights of way and enhance permeability for the existing community. Connections to the Primary School can be enhanced through provision of a Puffin Crossing on the B4030, North Street.

- The site is within reasonable cycling distance of key local employment hubs to the west, and Heyford Railway Station to the west. Covered cycle parking is already available at the Station.

- There are rail services from Heyford Station to Banbury (16 minutes) and Oxford (15 minutes) from where there are fast connections to Birmingham, Reading, London and may other destinations. Heyford Station is also accessible by bus with a journey time of 10 minutes, including at a time to coincide with work journeys. As set out in the Transport note, the proposed development can assist with improving public transport both directly through financial contributions, and indirectly through additional patronage from an increased resident population.

- The settlement has reasonable accessibility by bus services, and the proposed development offers potential for enhancement through proportional contributions.

The overall benefits of the proposed development are considerable, and can be summarised as follows:

- Accommodating necessary housing growth on a site that is immediately deliverable, and can thus make a positive contribution to alleviating the shortfall in the five year supply of deliverable housing land, and the backlog that it incorporates.

- Accommodating housing growth on a site that is free from environmental constraints (landscape, heritage, biodiversity, flood risk etc).

- Delivering growth that will contribute to the retention and development of local services and community facilities in villages through increasing the critical mass of population that is necessary to support them, for the benefit of residents of the settlement itself and the communities in the hinterland that it serves.

- Allocating housing growth that can deliver direct community benefits for the settlement (as outlined above).

- Allocating housing growth that will contribute importantly to the choice of locations in which to live, whilst maintaining realistic a choice to undertake work journeys by transport modes other than the car (and in particular by train).

- Allocating a site that can, and will, contribute to the requirement to boost significantly the supply of housing to 'meet' the objectively assessed needs for the District, including the unmet needs arising from the city of Oxford.

- Delivering much needed affordable housing.

1. The extent of the proposed development will change the character of Chipping Norton. A 30% increase in the population over a short (15 year) time period is a major change. I believe the councils original proposal in the previous version of the local plan is more realistic.  
2. The traffic burden in the centre of Chipping Norton is already heavy, with HGVs being a particular concern. However, the proposed 'bypass' will not help with this as most traffic is from Evesham towards Oxford and Banbury (and vice versa). A new road from the Burford Road will therefore not |

<td>affect the bulk of the traffic passing through the town. Consequently, this road will cut into the countryside and further affect the character of the town without providing an great benefit. Instead I propose that HGVs be re-routed away from the town by means of (a) Road signage (as previously proposed by Oxfordshire County Council) and (b) a weight restriction on the bridge at Burford - thus preventing HGVs coming from Burford to Chipping Norton. These would provide a much cheaper alternative to a new road. 3. The current sewage and drainage infrastructure of Chipping Norton already overflows at times of heavy rain. It will need to enhanced in advance of any additional demand placed on it.</td>

<td>&gt; SECTION 9 - STRATEGY AT THE LOCAL LEVEL &gt; Chipping Norton Sub Area &gt; MAIN 143</td>
<td>his modification increases significantly the number of properties to be built in the Chipping Norton SDA. This is backed up by unsound evidence and is not appropriate to the existing community. In particular: a) Part of the Vision in section 3.2 is to &quot;play a role in helping to meet wider needs, without significant change to the intrinsic character of the District.&quot; Increasing the population of the town by 50% will inevitably change its character. Especially as the driver for the increase is the need to house those working in Oxford, so turning a working town into a dormitory town. b) Core Objective CO2 is to &quot;Ensure that new developments are suitably located and well designed to protect and enhance the individual form, character and identity of our towns and villages as well as contributing to the quality of life in West Oxfordshire.&quot; This fails for the same reasons as the Vision statement. c) Core Objective CO3 is to &quot;Promote safe, vibrant and prosperous town and village centres and resist proposals that would damage their vitality and viability or adversely affect measures to improve those centres.&quot; Whilst a modest increase in population will help the town, this huge increase, aimed at commuters into Oxford, will be detrimental. The plan mentions that the proposed development is within walking and cycling distance of the town centre, although it offers no evidence to support this. I visit the town centre most days and have never seen more than one bicycle in the cycle parking there. The area around the town is too hilly for most of the population to cycle. A straw poll of people living in the Parkers Circus estate (which is closer to the town centre than is the SDA) indicates that none walk when going into town to do their shopping. These were all fit, active people. The town centre is also not safe. In the last few years, people have been killed by passing traffic while on the pavement at Horsefair. The proposed link road appears to be a &quot;road to nowhere&quot; as the majority of traffic (especially commercial traffic) enters or leaves the town on the A44 Moreton-in-Marsh road. This will become even more the case if a weight restriction is put on the ancient bridge in Burford, as has been suggested. In that event, no heavy vehicles will use this...</td>

<td>&gt; SECTION 9 - STRATEGY AT THE LOCAL LEVEL &gt; Chipping Norton Sub Area &gt; MAIN 143</td>
<td>relief road. This increase in traffic will also affect air quality, which is already at illegal levels. d) Core Objective CO4 is to “Locate new residential development where it will best help to meet local housing needs and reduce the need to travel.” Policy T1 – Sustainable Transport says that “Priority will be given to locating new development in areas with convenient access to a good range of services and facilities and where the need to travel by private car can be minimised, due to opportunities for walking, cycling and the use of public transport, particularly where this would help to reduce traffic congestion on the routes around Oxford and the Air Quality Management Areas at Witney and Chipping Norton.” The increase proposed in the modification is mainly to serve Oxford. There is no train link to Oxford. The bus to Oxford takes over an hour and is infrequent. The bus service from Kingham Station does not wait if a train is delayed, resulting in a possible two-hour wait for the bus that meets the next train. I see no solution to this problem as buses have to keep to timetables. Everyone I know has stopped using this bus, resulting in more car journeys and a station car park that can't cope. The alternative is to travel to the station by driving through country lanes and the village of Churchill in contravention of Policy T1. The increased local traffic will make air quality worse. There is nothing in the proposed plan to solve these problems. e) The proposed plan states in para 7.74 that “In Chipping Norton public car parking spaces in the town centre are insufficient to meet current needs.” There is nothing in the proposed plan to solve this problem. Chipping Norton is one of the highest towns in West Oxon and is built mainly on hills with narrow streets except for the main roads of M4 and A36f in places the underground infrastructure (overflowing sewers/rainwater drainage - shared system) is already creaking with too much use and the road problems we have are well documented and accepted as being unfit for purpose by OCCA/VODC with a serious air quality problem in the centre of town. It might also be worth mentioning here that when an OCC employee was recently asked 'how many of West Oxfordshires main A roads are fit for the very large HGV's we see nowadays?' The answer was 'none of them!' CHIPPING NORTON NEIGHBOURHOOD PLAN - on 3rd March 2016 a referendum was held in the town accepting the CNNP which was then adopted. In this plan it was mentioned in several places that any future development has to be sustainable and it is felt that whilst 600 homes on Tank Farm were possibly sustainable 1400 homes are not - please see notes 213141516 below. It is felt that WODC in their draft Local Plan entirely ignoring the spirit of the CNNP. In February 2014 the Town accepted that it would have to take some new houses and reluctantly agreed that 600 on the area known as Tank Farm (the south half of the SDA) could be acceptable subject to suitable planning and mix of houses and infrastructure. Little contact has been made since then except for a plan that was attached to a planning application in the nearby area in the middle of 2015. Nothing officially has been given since the meeting on 14th February 2014 until 23rd August 2016 when in a meeting between CNTC and OCC a plan using 800 homes plus 80 extra care beds was tabled and alterations suggested including no access at the southerly perimeter.</td>
<td></td>
</tr>
</tbody>
</table>
The next contact was the recent suggestion of 1400 houses. Considering that the allotment land to the south of the SDA is owned by the Town it seems strange that discussion about the possible purchase of any land requirement has not yet happened - for sake of absolute clarity the William Fowler Allotment land is not for sale.

We also get the impression that some pressure might have been brought to bear on local land owners to go along with OCC plans - and please bear in mind that the majority of the land we are discussing is owned by OCC - thank goodness there are some 'ransom sites' to protect the town from being totally overrun and spoilt.

We also feel that discussions with other stakeholders have not taken place - we back this statement up with the recent planning application at the Pillars which is adjacent to the northern edge of the SDA with no vehicular access which apparently shows no coherent masterplan. Chipping Norton Town Council totally reject the new local plan for the SDA for the following reasons in brief:

1) 1400 new homes on Tank Farm are not sustainable
2) The local employment of residents has fallen over the last 10 years and is now below 30%
3) The majority of local employment tends to be 'low paid' jobs in retail/catering and caring sectors
4) 'High paid' jobs i.e. professional or technical jobs tend to be in what is now-called the 'knowledge spine' which is difficult to access from Chipping Norton unless you drive as we have a poor train and bus service
5) Narrow and congested roads (including the main A441/A361 at Horsefair where the worst pollution in Oxfordshire has been ignored for many years by OCC and WODC. The best long term solution to Horsefair are the road improvements needed around the Rollright Stones, which have been discarded due to cost - now budgeted at £18 million by OCC's consultants
6) The cost of the Eastern Relief road has not yet been tabled but has to be close to the figures in 5)
7) The traffic figures being used from the survey carried out by WYG are erroneous - two points immediately stand out - a) it is stated that there have been no traffic related accidents in Horsefair in the last 5 years - we know that there have been 3 DEATHS in the period and b) it is stated that the busiest time of the day on Burford Road (A361) at Chipping Norton School (a large comprehensive 1200 pupils) is between 0700 and 0800, but in reality this is really 0815 to 0845.
8) We dispute the figures given to us by OCC and others which show that only 30% of the HGV’s that transit through Horsefair use the A361 towards Burford and a massive 70% use the A44 east and west towards Oxford/Moreton-in-Marsh/Evesham and the 4361 north to Banbury.

We have been advised by independent traffic consultants that the figures are probably nearer to 15% respectively 85%. We therefore consider the Eastern Relief Road to be ill-advised
9) An independent expert has recently been shown our traffic problem and has walked around the town and agrees with the Town Council that a one way system using Albion Street and the High Street would go a long way to deter HGV’s and improve the air quality, ease congestion and add
The major change to the Local Plan for Chipping Norton is the increase from 600 to 1,400 homes (almost a 250% increase) at the East Chipping Norton Strategic Development Area (ECNSDA), known locally as Tank Farm - reference: MAIN 136 to MAIN 144 inclusive.

There is also a new proposal for an ‘eastern link road’ which is also covered in changes MAIN 136 to MAIN 144 to the Local Plan.

CPRE wishes to raise objections to these proposed changes on the following grounds.

Air Quality

WYG were appointed by Oxfordshire County Council to prepare a strategic Chipping Norton Transport Options Study (CNTOS).

This study concluded that ‘Given that an existing AQMA is already declared in this location, it might be reasonable to conclude that all development options would be likely to exacerbate air quality management issues’ (paragraph 11.1.6 of the report). The building of 1,400 homes at Tank Farm was one of these development options. The report also notes ‘in each case predicted traffic volumes on the A44 High Street / Horsefair corridor would be expected to increase reasonably substantially over and above the 2016 surveyed flows, exacerbating existing environmental degradation (notably air quality issues) within the town centre(paragraph 10.1.2).

The study also attempted to ‘identify potential mitigation measures that would offer realistic scope to both accommodate development and help to mitigate the impact of this development and existing environmental issues within the town centre, notably associated with the declared AQMA on the A44 High Street / Horsefair (plus the southern section of the A361 Banbury Road and West End)’ (paragraph 9.1.3).

The report concludes that 'the three outline schemes assessed (the Rollright bypass, central area zonal weight restriction and town centre gyratory) would likely be unsuitable mitigation options for a variety of reasons including preclusive cost, lack of likely effectiveness and / or unacceptable knock-on impacts’ (paragraph 10.6.1).

The transport consultants employed by OCC and WODC therefore believe that the ECNSDA would worsen air quality management issues in the centre of Chipping Norton and that the 3 possible mitigation schemes to reduce the air pollution are not viable.

The existing AQMA has been in operation for many years and no solution has been found to this problem. The existing levels of air pollution in the centre of Chipping
Norton are already adversely affecting the health of people living and working there. Yet WODC is proposing to build new houses in Chipping Norton which will worsen air pollution and increase the risk to health of people in centre of the town without having a viable strategy for reducing these levels. It could be argued that NO ADDITIONAL HOUSING should be allowed until a workable solution to the existing air quality problem is devised, implemented and shown to be effective.

Road Safety

Road safety issues in the centre of Chipping Norton are very closely connected with the problem of air pollution: both are caused by modern levels of traffic trying to get through an ancient market town the central area of which was originally laid out in the 13th Century.

Horse Fair is the narrowest part of the A44 as it passes through the town. Here the road is narrow as are the pavements. This puts vehicles and pedestrians into close proximity. It has been the site of several fatal accidents in recent years. Road safety concerns are not restricted just to the Horse Fair. Local people also know that it is becoming increasingly difficult to cross several of the roads in the town centre safely because of the increased volume of the traffic as well as vehicles being driven at speeds inappropriate for the town centre.

The Local Plan accepts the need for the Council to 'address the relatively high rate of fatalities and serious injuries on the District’s road network' (paragraph 2.40). Work needs to be carried out to identify measures to improve safety in Horse Fair and other areas within the centre of the town. It also needs to be identified how these improvements will be funded. Again all of this work needs to be carried out before significant development is allowed to go ahead at the ECNSDA.

Traffic

The increase from 600 to 1,400 homes at the ECNSDA has profound implications for traffic in Chipping Norton and the surrounding area. The Chipping Norton Transport Options Study informed the preparation of the latest version of the Local Plan and in particular supported the option for 1,400 homes at the ECNSDA together with the Eastern Link Road. This option is of course the major change from the previous version of the Local Plan for Chipping Norton and is referenced in MAIN 27, MAIN 136 and MAIN 138 to MAIN 144 inclusive. This section of these comments outlines some concerns in a number of areas concerning traffic and arising from these changes to the Local Plan:

· Other traffic related comments

The way the Transport Options Study was carried out

The Transport Options Study report is an important document which played a major part in influencing the decision to put forward the 1,400 homes at the ECNSDA option in the Local Plan. Important decisions are to be made with respect to the future of Chipping Norton based on the findings of the study. Does a study which was principally carried out on one day only provide sufficiently robust and accurate
data on which to base these crucial decisions?

The manual traffic counts and the ANPR surveys were carried out on a Tuesday in March and were intended to assess “normal” traffic conditions. However there are times of the week when traffic in Chipping Norton tends to be heavier than normal principally Monday mornings and Friday afternoons. Also Wednesdays tend to be busier because of the weekly market. Why weren’t the surveys carried out during these busier times of the week?

In the summer many visitors and tourists come to Chipping Norton or pass through it on the way to see the Cotswolds or to visit major tourist attraction such as Blenheim Palace. There are not many tourists or visitors who choose to come to the area in early March which is when the traffic surveys were carried out. In the spring and summer there is also likely to be an increase in HGVs travelling to and from the fruit and vegetable growing areas in Worcestershire and other areas to the west of the town. Why wasn’t the traffic survey work repeated again say in June in order to assess whether the traffic levels are significantly higher at that time of year?

The ANPR count locations were positioned such that they may have missed a substantial amount of local traffic within the town e.g. parents living in the areas off West Street/Churchill Road taking children to the Chipping Norton School and local residents driving into the centre to shop.

The findings of the Transport Options Study

The Transport Options Study report paints a bleak picture of what will happen to traffic in Chipping Norton if 1,400 homes are built at the ECNSDA even with the proposed Eastern Link Road:

* Increased traffic through Chipping Norton as outlined in paragraph 11.1.21 of the report:

"However, delivery of the new eastern distributor road as a stand-alone measure would be insufficient to fully off-set and mitigate the impact on the town centre of the traffic growth anticipated by 2031 (both resulting from development on the Tank Farm site and general background growth on the network anticipated by this time). Furthermore, the beneficial minimisation of additional traffic flows on the A44 High Street would come at a cost of increasing traffic on peripheral routes around the town resulting from a combination of redistribution and the increased level of development on the Tank Farm site."

* The report also reports that this option “would be likely to exacerbate air quality management issues” – paragraph 11.1.15.

* The health of residents and people working in the centre of Chipping Norton would be put further at risk – see section CN4 above.

* Three mitigation options were examined and all were judged to be unsuitable for a variety of reasons – paragraph 10.6.1
In addition the study reports that the computer modelling of future traffic flows predicts that 2 of the main junctions in Chipping Norton would “operate well in excess of their theoretical capacity” and that the other 3 “would all remain operating within or, worst-case, at capacity for all of the potential development scenarios” – paragraph 11.1.16.

The report goes on to say that the computer software used may underestimate the capacity of roads in towns such as Chipping Norton and seeks to compare them with roads in other towns. The conclusion at this point is that “the operational impact of additional traffic flows resulting from each of the development scenarios on the existing network might be far less onerous than the model results indicate” - paragraph 11.1.17. At the very least this suggests that the future performance of the main road junctions within Chipping Norton are difficult to predict and that if the computer modelling turns out to be correct then two of those junctions will be operating well above their capacity.

Other traffic related comments

The Transport Options Study calculated ‘the estimated delivery costs of upgrading an existing route via Rollright Lane and the A3400 to the north of the town to act as an east-west bypass of the town serving as an alternative for through-movements of traffic on the A44’ – paragraph 10.3.3 and Figure 31.

The study report then goes on to say that ‘this option was considered unviable on the grounds of cost’ - paragraph 11.1.18.

However neither in the Local Plan nor in the Transport Options Study report is there any calculation of estimated delivery costs of the proposed Eastern Link Road. This seems a surprising omission as it makes comparisons between the 2 schemes impossible. It leaves unanswered the question of whether the funding for the proposed Eastern Link Road would be better spent on the upgrading of the Rollright/A3400 route.

Paragraph 9.4.40 of the Local Plan (MAIN 138) contains the statement with reference to the proposed 1,400 homes and the Eastern Link Road: ‘….. there could also be a diversion of a large proportion of HGV movements from Chipping Norton Town Centre, thereby possibly having a beneficial effect in terms of improving air quality - a key issue for the town.’.

A similar claim is made in paragraph 9.4.56 (MAIN 142). But doesn't the Transport Options Study for Chipping Norton conclude that ‘delivery of the new eastern distributor road as a stand-alone measure would be insufficient to fully off-set and mitigate the impact on the town centre of the traffic growth anticipated by 2031’ (paragraph 11.1.21)?

The Transport Options Study report also concludes that this option “would be likely to exacerbate air quality management issues” - paragraph 11.1.15.

Chipping Norton has been waiting for a solution to its traffic related problems for decades:
* The use of the Rollright/A3400 route to remove traffic for the centre of the town has been in discussion for many years.

* The town has been experiencing severe air quality issues and the associated detrimental effects on people’s health for at least a decade.

* An AQMA for the centre of Chipping Norton has now been in operation for over 8 years with no significant remedial action being taken.

* The same area covered by the AQMA is also an accident blackspot with a record of a fatal accident every 12 years and a serious RTA every 2 years on a stretch of road that is only about 200 metres in length.

* All the time traffic through Chipping Norton increases and these problems get worse.

When the latest version of the Local Plan proposes a huge increase in the number of houses in the town would it not be reasonable to expect that the document would propose measures which would alleviate Chipping Norton’s traffic related problems. However all that is offered is a proposal that will in fact increase traffic in the town with all the consequent detrimental effects of this including a predicted worsening of the air quality problems. Is it unrealistic for the town’s residents and visitors to expect a better solution than this?

Car parking

Local residents as well as visitors are well aware of the current problems with regard to car parking in Chipping Norton. This is recognised in the Local Plan: ‘The availability of adequate public parking capacity is a key constraint in Chipping Norton’ (paragraph 9.4.30) and ‘Improvements to the efficiency and availability of public car parking in Chipping Norton will be sought as appropriate’ (paragraph 9.4.60).

The Local Plan states: ‘The scale and mix of uses in the local centre would be intended to meet the needs of the development and not compete with the Town Centre’ (paragraph 9.4.49). This presumably means that a large proportion of the people living in the proposed ECNSDA would use the town centre shops together with the Aldi store to do their main shopping.

A few people may walk, cycle or use public transport when shopping in the centre of Chipping Norton. However given the distance especially from the far parts of the ECNSDA to the town centre together with the fact that there would be a hill to climb on the way back most people will use their cars when shopping in the town and especially if doing a large weekly shop.

The increase in the number of homes in the ECNSDA from 600 to 1,400 will therefore increase significantly the need for extra car parking in the town centre. Land in or adjacent to the town centre is very scarce in Chipping Norton. Before
School capacity

The Local Plan recognises the need for significant increases in school provision if the enlarged ECNSDA goes ahead: ‘it is a requirement of any proposed development on this site that a new primary school will be provided. The site is close to the existing secondary school where there is adequate capacity to absorb additional pupil numbers despite the increased size of the allocation’ (paragraph 9.4.48).

The overall housing requirement (2,400) represents an 80% increase in the number of houses in Chipping Norton and would mean that the population would increase by around the same percentage. It is also appropriate to assume that the number of school age children would rise by around the same order of magnitude requiring a new primary school approaching the size of the existing primary schools added together. Chipping Norton School would also have to almost double its existing size. The main issue with regard to increasing school capacity at both the primary and secondary levels would appear to be ensuring that adequate funds are available to carry this in time to cope with the increased demand – see below for a discussion of the funding requirements of the enlarged ECNSDA.

Meeting the housing needs of local people

One of the Core Objectives identified in the Local Plan is: ‘CO4 Locate new residential development where it will best help to meet local housing needs and reduce the need to travel’ (paragraph 3.7).

Locating 1,400 homes at ECNSDA does not support this Core Objective. Presumably the 600 homes proposed in the previous version of the Local Plan were felt to be adequate to meet local housing needs. The occupants of the additional 800 homes will presumably move into the area from outside and many of those of working age will commute to work thus directly working contrary to Core Objective 4. Moreover many will travel to work by car and thus increase pressure on roads locally.

Ensuring Chipping Norton retains its special character as a Cotswold market town

The Local Plan recognises the special character of Chipping Norton:

‘Chipping Norton will strengthen its role as a centre of enterprise in the northern part of the District. It will continue to be an economically and socially strong market town serving the needs of a large rural area. Its distinctive historic character and fine setting will be conserved and enhanced at the same time as accommodating new development to meet identified needs.’ (paragraph 3.2)

The overall housing requirement (2,400) represents an 80% increase in the number of houses in Chipping Norton and would mean the population would increase from around 6,500 to almost 12,000. Similar towns locally which have seen this scale of growth have changed fundamentally and such a growth in population over a
relatively short time period must put at risk the special character of the town. Although provision has been made for an additional 9 hectares of business land it is unlikely that sufficient new jobs will be created in the town to support the majority of the people of working age living in the new homes in the ECNSDA. The Local Plan notes that 'the number of people living and working in the town has fallen from 50% to 36% since 2001' (paragraph 9.4.30). Undoubtedly that percentage will fall further if the current proposal to build 1,400 homes goes ahead.

The danger is that Chipping Norton will become more and more a dormitory town for people working in London, Oxford and other places and that this will alter its fundamental character.

Resisting pressures for an out of town supermarket

With the likely increase in the population consequent on the building of 1,400 new homes in the ECNSDA it is surely only a matter of time before one of the major supermarkets puts forward plans for a large new store on the outskirts of Chipping Norton.

Places such as Witney have been able to build large supermarkets sufficiently close to the town centre that the new stores complement and support the town centre. There is no such site near to the centre of Chipping Norton.

Any large supermarket proposed in the future for Chipping Norton would be so far from the town centre that it would have a serious detrimental effect on the shops and businesses there.

There is real concern that WODC would not be able to prevent a future scheme for a large out of town supermarket going ahead given the significantly increased population and the financial and legal resources available to a major supermarket chain.

The Local Plan recognises this threat: 'Chipping Norton is the main focus for retail and leisure activities within this sub-area. The town has a strong and diverse retail offer but remains vulnerable to out of centre development. We will through the Local Plan therefore seek to safeguard and reinforce the role of Chipping Norton Town Centre' (paragraph 9.4.61). However there is no explanation of how pressures for 'out of centre development' will be resisted and this remains an area of real concern for local people given the plans to build so many new homes in the town.

Funding of measures to lessen the impact of the ECNSDA

Several areas will require significant investment if the current plans for the ECNSDA go ahead including:

* Measures to reduce air pollution
* Improvements to road safety in Chipping Norton
* New road
* Other improvements to roads in and around the town
* Extra car parking
* Improving conditions throughout the town and surrounding areas for pedestrians and cyclists,
Including accessibility to bus and rail services
- New primary school
- Significant expansion of secondary school
- Mitigation measures for the impact on the Conservation Target Area (CTA) and the SSSI

Not all of this will come from developer funding. We are also in a time of reductions in council funding and economic uncertainty in the post Brexit era. In addition it has to be taken into account that there will be large demands for funding in all areas of WODC where substantial house building is proposed. It is therefore legitimate to ask: where will the rest of the funding will come from in order to ensure that the building of 1,400 homes in the ECNSDA does not have major negative impacts on the town and its surrounding area?

If there really is a need for 1,400 new homes in the ECNSDA then market forces will ensure that developers and building firms will go ahead and build the houses. A real concern to local people is that the houses will be built but funds will turn out to be insufficient to ensure that the measures outlined above can be.

<td>&gt; SECTION 9 - STRATEGY AT THE LOCAL LEVEL  &gt; Eynsham Woodstock Sub Area &gt; MAIN 145</td>
<td>We support paragraph 9.5.1 which identifies Long Hanborough as one of three main settlements within the Eynsham – Woodstock Sub Area. This is wholly appropriate given the range of services available at Long Hanborough and the location, at the eastern end of the village, of one of the few mainline railway stations in the District. Paragraph 9.5.3a We object to Paragraph 9.5.3a which now states that Long Hanborough has a ‘limited role’ and is only suitable for ‘very modest levels of further development’. As set out in detail in our representations to Policy OS2 Long Hanborough is, on the Council’s own evidence, a ‘Rural Service Centre’. It is a Rural Service Centre that has in fact become more sustainable in recent months with the consenting of additional residential development which will also deliver significantly enhanced doctors’ surgery and primary school provision. The settlement is even more sustainable now than it was when the Local Plan was originally drafted. Furthermore, as recognised elsewhere in the Local Plan, Hanborough Station is one of the key transport nodes in the District, has seen substantially increased levels of patronage in recent years, and from 2018 GWR proposes a greater frequency and capacity of trains from this station, which will only add to its importance and the demand for its services. As such it is wholly illogical for the Council to now suggest that Long Hanborough is less sustainable than it was, or that its role should be more limited than it was. In fact, quite the opposite is true. The Council’s own SHELAA confirms that land adjacent to Hanborough Station is available, which is located both outside the AONB and the Green Belt, and it would be wholly appropriate for the village to accommodate materially higher levels of development in the context of the materially higher level of housing required in West Oxfordshire.</td>

<td>MAIN 145 sets out the appropriateness of Eynsham to accommodate additional residential development, particularly due to its proximity and connections to Oxford and also because of the size of the settlement. We support this modification, we agree that Eynsham is a sustainable and appropriate location for growth and we note that this approach is supported by the Sustainability Assessment Addendum which states: “Thus, taking into account the proximity to Oxford and the Oxfordshire knowledge spine, together with the relatively good level of public transport available, two new strategic options for potential growth were identified.” (Para 3.12) The Sustainability Assessment Addendum provides a robust assessment of the proposed allocation to the</td>
</tr>
</tbody>
</table>
west of Eynsham, we agree with the conclusions of this assessment and consider it represents a justified and sound assessment of the proposed future growth.

Regarding Eynsham’s “proximity and connections to Oxford City”, are you really happy for Eynsham and the Garden City to become commuter belt suburbs? As you point out in paragraph 9.5.11, around 30% of workers in this sub-area already commute to Oxford, which “contributes towards traffic congestion along key routes including the A40 and A44”.

Proposed modification - Downgrading of Long Hanborough: The proposed modifications involve the downgrading of Long Hanborough from a service centre, to a lower order village. This change pertains to numerous modifications, we therefore set out our response below which we wish to be considered in response to the following modifications: MAIN3, MAIN13, MAIN14, MAIN15, MAIN59, MAIN66, MAIN145, MAIN149.

Detailed comments particular to each modification are set out in detail against the relevant reference in following sections.

We object to proposed modifications which suggests the downgrading of Long Hanborough from a rural service centre to a village. The submission plan confirmed the rural service centres were classified as such because they benefited from a range of services and facilities which supported the village and surrounding area. They are able to support additional homes in the short-term, while proposed growth can enhance the role of the settlement in supporting the surrounding rural area (paragraph 4.18). This approach was directly in line with the plan’s objective 1 ‘strong market towns and villages’ and objective 4 ‘sustainable communities with access to services and facilities’, both of which remain un-modified.

Long Hanborough retains the same services and facilities which existed at the time the plan was submitted, furthermore planning permission has been granted which allows significant expansion of the primary school (15/03341/FUL). While additional housing has been permitted no evidence has been produced to suggest additional homes would result in any harm to the character or sustainability of the settlement. The village therefore remains well placed to fulfil the role of a rural service centre.

The downgrading of Long Hanborough proposed through modifications is largely unexplained and not supported by any evidence. The Council cite the creation of a ‘new’ service centre through the northern expansion of Eynsham as justifying the downgrading of Long Hanborough as the new development will need to “develop a critical mass of services and facilities” (paragraph 2.5a).

We are concerned the Council’s explanation suggests an intention to restrict the development of Long Hanborough and reduce services in the village in order to encourage their replacement in the new development. A restrictive approach to development stifling an existing sustainable settlement and vibrant community is clearly at odds with the Plan’s vision, policies of the NPPF and good planning practice.

The provision of an additional service centre would be entirely in line with the Plan objectives. If the development proposed north of Eynsham is to proceed it is clearly preferable that Long Hanborough maintains its status as a service centre complementing any new facilities created. The need to retain the service centre is particularly pronounced due to the unclear deliverability of the proposed site north of Eynsham, even if the site is delivered this will not be until the latter part of the plan period, therefore there is a need for services and facilities in the interim.

This is a written Response to the Public Consultation on the Amended WODC Local Plan 2031 by Professor Emeritus John Dowling, of the J R Smith School of Business, Queen’s University, Canada and Sometime Visiting Fellow, Templeton now Green Templeton College, University of Oxford, resident at 126 Dovehouse Close, Eynsham OX29 4EY

Introduction

As Eynsham residents, we are being invited to respond to a WODC consultation on a plan so far reaching and complex that it necessarily simultaneously engages with every level of local government from the DCLG, the County, this and other districts to innumerable Neighbourhood plans in various stages of development. This means that the various interdependent functional areas - transportation, housing, mineral extraction, education, medical care and so on - operate within different if overlapping jurisdictional competences and procedures. At the same time, the whole structure of local government is undergoing an immense renewal and reform with such bodies as the Oxfordshire Local Enterprise Partnership and the Oxford Growth Board forming a template for the economic planning of the County based on the incorporation of the universities, local government as a whole and commercial business-led regional economic development. All of this takes place within a DCLG-led policy of County-wide amalgamation of County and District Councils in a Unitary Authority which will be supported by grants from central government tax raising powers and possibly, in time, the issuance of unitary authority long term bonds. These powerful incentives will have to address the current stand-off between the County and the City and District Councils over paramountcy in the future unitary authority if these incentives are to be won. Thus, here in Eynsham and West Oxfordshire generally, we are being asked to work within a structure of local disaggregated government which is itself in the process of change and transformation to reflect a new and highly controverted governance.

Eynsham in the new political economy

The particular problem faced by Eynsham in this emerging politically-emerging restructuring is shaped by two overwhelming realities: firstly, that the changes proposed are transformative in scale and character and secondly that Eynsham despite its prominent strategic role in the Oxford-centred economic development (e.g an expansion in the first phase of 250% in its housing) is relatively modest in its present political influence in the contexts of both the WODC and the County governance. This sense of relative impotence is raised to shock and near paranoia by its being talked of that Eynsham is possibly being transferred from the District to the City if one of the PwC options for unitary government is adopted in such a way as to permit its needs becoming for WODC someone else’s problem and for the highly pressed City an expense and perhaps lower priority they may be unlikely to address. This pessimistic scenario may lie behind the extreme language in the Eynsham Society letter calling upon the DCLG to not fund the Garden Village Expression of Interest. It might even give rise to a hope that the whole local Plan can be scuppered along with the GV EOI.

I think it fair to say along with Mrs Fletcher, past Chair of the Eynsham Society and past Hon Secretary of the CPRE, that “this is the biggest thing to hit Eynsham in a hundred years” and it represents a change in the way some see the Village and its place in Oxford and Oxfordshire’s economic development. Eynsham, in my view, has had three major phases in the past century or so: its ferry and then road crossing of the Thames west of Oxford and the coming of the canals made it an important and lively commercial centre important enough to have its own courthouse; later industrialization and the introduction of motor transport rendered the village

something of a backwater while retaining a strong local sense of identity as a rural centre for services. Gradually it attracted retirees and professionals and this gave rise to a strongly protectionist stratum, often well educated and experienced, who through the Eynsham Society formed a preservationist component alongside the Village’s Parish government. The preservation mantra revolved around two main themes: one was the idealisation of the natural ancient rural way of life, a sort of pre-lapsarian shared illusion, and the second was to seek to protect the rural idyll behind the inadequate infrastructure, notably the Toll bridge over the Thames and more latterly the congestion on the A40. It is this exclusive view that has been shocked by the power of the new regional economic policy, the scale of the expansion which, should it reach the 10,000 houses permitted by the Garden Village prospectus, would sextuple the present population.

However, as someone who lived at Stanford for most of the seventies, I saw the origin of the new economy base of the commercial development of Silicon Valley at its inception and in Stanford, MIT, Caltech, UCL and Cambridge we see centres of the Witty plan to focus national economic development around eighteen major universities of which Oxford is one. The role of linking the intellectual human potential in the best universities to their regional economies is the core of industrial strategy and it has to be recognised that this is crucial to the funding of the universities themselves (doesn’t Stanford own half the royalties of Google and other world wide companies?) Thus as an addition to the historic sources of income from land, to public funds, they now must look to the economic development of their intellectual labour. This phase incorporates Eynsham within the ambit of the Universities in the case of Oxford supported by funding from the City of £300m and the work of Oxford Science Innovations just as the Village was in earlier days before another Reform, within the ambit of the Abbey itself living in large part on its intellectual labour.

These then are some of the problems facing Eynsham as we come to adapt to the new version of an old economic model.

What has been very encouraging in the context of these changes for the Village and in the structure of the whole of local governance is that the Chair of the Eynsham Parish Council, Councillor Gordon Beach, convened a Public Meeting of the Chairs of the OXLEP, the County and District Councils and a senior official of the City. What is notable about this is that we had in the same room high representatives of the bodies that jointly will have to plan and implement the plan for Eynsham and if they can do so or maybe have imposed upon them, form a Unitary Authority. But speaking positively, this body for the first time addressed or heard addressed perhaps, the scale of change and some if not all of the problems facing Eynsham, should possible political neglect through a careless transfer of Eynsham from District to City occur. This Meeting revealed both the shock to the romantic idyll idealised by some, and the actual potential of an investment-led future with Eynsham as a key part of the new economy of Eynsham, Oxfordshire and the national economy.

Implementation of the latter option is evident in the relationship of Eynsham to Oxford, of the new rail service to London and the proposed one to Milton Keynes and Cambridge. Eynsham offers then one of the best connected locations in the country at one of the points on the triangle Oxford, Cambridge, London and has the advantage of the Cotswolds to the west stretching to Bath and to the Severn Valley. Taken with the excellence of local education and the enormous need for housing for university, hospital, local government services and commercial employment, Eynsham is a central desirable location for inward investment and housing. Nor is this in any way alien to the character of the place where Siemens have developed a world provision of high technology based on low temperature physics and Polar Technology do the same in material science.

So to set out the difficulties in the current planning process is also to recognise the steps symbolised by the joint participation in the Public Meeting of the seriousness of the problems facing Eynsham and the resolution to address them.

<td>&gt; SECTION 9 - STRATEGY AT THE LOCAL LEVEL &gt; Eynsham Woodstock Sub Area &gt; MAIN 145</td>
<td>I wish to record my objections to the proposed changes to the above draft Local Plan but also to the draft itself, as a whole, as it represents some of the worst applications of planning thinking and activity that could be operated in a large geographical area where good planning is required. If good planning is implemented, it will enhance the environment for current residents and create opportunities to sensitively accommodate many additional residents who need, or will need homes in the area. If bad planning is adopted, the result will be the damaging of many parts of West Oxfordshire by reason of panic decisionmaking. The further and most immediate consequences will be a poor built environment, gridlocked transport infrastructure, inadequate schooling at both primary and secondary levels and wholly inadequate medical and wider facilities and amenities. That will ensure current and future residents are forced to live in a far less amenable environment than is necessary and without the chance to preserve and enhance the community spirit that well planned...</td>
</tr>
</tbody>
</table>

But the rural idyll school have a point; when after the meeting I read the Eynsham Society submission, I found we both stressed the sensitive hydrology where we live in a sweep of the river that already has a large flood plain, which gave rise to a case at the Court of Appeal. It has to be recognised that the altered and increased run-off may alter the path of the five tributaries flowing into the river at this point and therefore affect the flood plain adversely. We must set a limit on the spatial distribution of housing that takes account of the sensitivity of the local hydrology.

Similarly, the impact of so great an increase in population will call for addressing the issues of congestion in transportation. The Wolvercote redesign is very helpful but the plan for a car park and a one way easterly bus lane might solve some of the present congestion as might a small westerly bus lane at the Cassington lights but these will only alleviate existing congestion to some degree and the large investment in employment and population surely call for a high tech solution. I remain wedded to a reversible or tidal bus lane - it is relatively low cost, it is economical of road space and while it calls for safety barriers and direction indicators this is well within the budgetary scale appropriate to the increasing population and the tax revenues that it will bring leaving to one side the funding possibilities linked to Unitary local government. A progressive improvement of the congestion from new housing will need to be reflected in a greater mass transport capacity. The problem of the Swinford Bridge calls for a new bridge with presumably the buy out of the present owner’s rights but as the amortisation of such a charge could be very long, it is not so inconceivable.

But I leave to last the key point, which is that it cannot be that Eynsham become an orphan parish consigned to the unkind care of commercial piecemeal developers. The virtues of the Garden Village EOI are three and they must be retained: firstly it provides for planning in depth, secondly it makes explicit inward investment in a Science Park, and thirdly, that it is provisional so that if granted, an open ended reconsideration of its location can be considered in depth. Can this be done pending the as-yet unresolved unitary government? Can the scale of both the changes and the possibilities be appreciated and genuinely resolved? Can we become a star of the newly emerged economy, rather than a black hole? I believe if we take sufficient care, we can. The key is that there should be in depth planning funded by the Garden Village if possible, and, if not, raised by an ad hoc consortium raising funding jointly consisting of OxLEP, OGB, and the County, District and City acting together, if necessary, anticipating the establishment of the Unitary body. Can the problems of Eynsham, acute as they are, be resolved as a special case in joint proto-unitary planning?

Respectfully submitted

John Dowling, Ph D

N.B. in the spirit of the Public Meeting and recognising the depth of the risks we face and therefore the breadth of co-operation upon which we now depend, I am copying these thoughts to all of the bodies concerned.

<td></td>
<td></td>
<td>Eynsham suffers high land and housing cost by reason of its attractive and thriving community, a very beneficial environment for living and its good facilities. It needs to grow and as part of a Neighbourhood Planning process, the community has shown a considerable willingness to see growth of the right kind that delivers the type and nature and style of growth that emulates the existing situation and ensures that what we have is not damaged and what we achieve is an enhancement. The key to delivering such growth is that it should be carefully managed and husbanded in parallel with a series of infrastructure changes that will see the community and its growth move forward in a sustainable fashion. To achieve this, there needs to be a clear vision of what the local area will look like and how that will fit into a wider framework.</td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td>Sadly, this draft Local Plan and the proposed changes consistently presents knee jerk reactions to external problems. It tables actions but fails to consider at all in many cases and wholly inadequately, in others, the consequences of what is being proposed.</td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td>In particular, it is common knowledge and understanding that traffic on the A40 is log jammed in both directions (Eastward and westwards) at peak commuting times. Traffic on all other peripheral roads used as alternative routes are equally jammed. The Toll Bridge to the east of Eynsham, giving alternative access towards Oxford, is a constant obstacle for traffic movement. A proposal to create a 1000 space Park &amp; Ride at Eynsham with an incomplete bus lane eastwards is the only road enhancement envisaged to carry traffic east/west. It is possible that these improvements will make the current traffic position better although it even that is not certain. What is absolutely crystal clear is that building the additional housing growth west of Eynsham that is envisaged, will generate significant traffic flow eastwards and the most likely destination of that eastbound traffic (and westbound in the evening) will be past Eynsham and towards Oxford or via the A44/A34 or A40/M40. Thus traffic generated to the west will swamp any proposed infrastructure upgrades even before any development in or near Eynsham is taken into account.</td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td>If one now adds the proposed growth of 2200 houses in the land north of Eynsham and the A40 plus a further 1000 houses to the west of Eynsham and increases those numbers as it becomes clear from the draft Local Plan that these numbers are merely the start, it is immediately self evident that a potential traffic gridlock is almost guaranteed to be established relatively quickly into even a slowly phased build out programme. Nowhere in the documentation is there any evidence that the planners have considered the implications of this infrastructure crisis in their sustainability assessments. On the contrary, there seems to be a simple but totally misplaced blind faith that all will be well. It is obvious that because there is no vision, they have opted for a &quot;solution&quot; that is big enough to perhaps be used as a lever to squeeze some infrastructure funding out of developers. However, nowhere is it evident that the planners have identified actions that could ameliorate the problems that they are about to create. Instead, it would appear that as with wider infrastructure issues and facilities, there is only a vague notion of what might be done and no clear and present intention to solve these issues commensurate with a specific plan to build 3200 plus houses in a very close geographical area.</td>

<td></td>
<td>There is a reference to an additional primary school being created but (and putting aside whether Tilgarsley is a Garden Village or merely a large extension to Eynsham) no reference to equivalent medical facilities to support such a large number of new households. The present GP facility is good but stretched and they have indicated in a public meeting that they have real fears that the development that is proposed is far too large for the existing facilities to support (even if it expands) but the growth would not be large enough to sustain the Government funding tests to enable the creation of a new facility. Again, this is clear evidence that there...</td>
</tr>
</tbody>
</table>
is no vision, no understanding of the implications of the knee jerk growth proposal and no plan in place or even in contemplation to address it.

The current excellent secondary education facility in Eynsham could be grown to accommodate some of the extra demand from such a proposed housing growth. However, that is a further infrastructure factor and nowhere is it touched upon, let alone is it properly addressed.

As part of the thriving community of Eynsham, there is significant employment in nearby industrial parks. However, the workforce is largely concentrated within 2 major firms. Siemens struggles to recruit engineers in part because prospective employees physically cannot get to site because of road infrastructure problems. Indeed, much of the current industrial land near Eynsham is poorly developed and the primary reason is that road infrastructure is poor and business has voted with its feet to work elsewhere. The proposal to build a new Science Park on the A40 to the west of Eynsham as part of this Eynsham expansion is a further example of "cart before horse". More housing and more science based employment would be excellent for the village and the region. However, before embarking on growth, it is good practice to look at the building blocks that would make a success of such growth and, essentially, for it to be sustainable. The first is to be able to get to and from the buildings and housing. A second prerequisite is to deliver what is wanted and not an ill-considered, unfunded and totally unsustainable bundle of stuff that has only been conceived with a view to ticking a box on a list of deliverables that government has said must be contained within a Local Plan.

Government is right to require a wide range of issues to be addressed in a Local Plan. However, it is for Local planners to respond to by producing something that makes sense. This draft does not make sense. It is filled more by flaws than by genuine solutions.

Eynsham deserves far better than this draft because it is open minded to change and foresees and wishes to embrace growth. However, WODC has mistaken a willingness to look at sustainable growth that works in the context of a thriving exemplar community, as a justification to create a convenient dumping ground for all the insoluble problems that it has created for itself over past years through failing to properly address planning as a tool and an opportunity for real beneficial change.

For the above reasons, I would invite WODC to think again. If it fails to listen to the many concerns from Eynsham that it knows full well are heartfelt and substantively held, then it can expect resolute opposition when the Inspector comes to consider whether or not the draft Local Plan should be made. At present, in my view, it is not fit for purpose.

Regarding Eynsham’s ‘proximity and connections to Oxford City’, are you really happy for Eynsham and the Garden City to become Oxford commuter belt suburbs? As you point out in Para 9.5.11, around 30% of workers in this sub-area already commute to Oxford, which ‘contributes towards traffic congestion along key routes including the A40 and A44’.

I have now attended two consultation events in Eynsham, and I regret that I was unimpressed at the responses to our questions to the panel of representatives from the Local Authorities and the LEP on Monday 5th December. Our questions were met with buck-passing, and the only answers were either that it was too late to influence as had already been made (as in the case of the assessment of Oxford’s unmet housing need) or too soon as in the responses to all questions of detail about the proposed Green Village.
Eynsham Futures has worked tirelessly over many months and has been highly consultative and collaborative in its work on the Neighbourhood Plan ensuring that the proposals were explained. WODC were involved throughout. At the last public consultation there was an emerging consensus that well planned housing development was right in terms of meeting housing need and could be managed so that it enhances rather than damages the community of Eynsham. Although challenging, there seems to be a degree support for the Green Village provided the need for transport infrastructure is adequately addressed in advance, a proper green buffer between the two settlements probably reducing the overall number of homes, and retaining our proposals for 650 homes in Eynsham to meet local need.

Officers from WODC were consulted and involved throughout the Neighbourhood Plan process, but as we now know they had significant plans for the Expression of Interest for the Green Village that they did not share. Compounded now by the failure to address any of our valid concerns it is not surprising that the Eynsham community feels that our views are regarded as not relevant.

Scale and Infrastructure

The scale of developments proposed in and around Eynsham are totally disproportionate to the size of the existing settlements and with proposals for the the rest of West Oxon.

Eynsham is expected to accommodate 2,200 houses to the north and a further 1,000 to the west, more than doubling the size of the existing village. No other town or village is asked to approve developments on anything like that scale. It is not clear that all potential sites in West Oxfordshire have been rigorously assessed and it now seems that because our neighbourhood plan recognised the need for housing to meet local need we are now regarded as a soft touch. There is no reason why all of Oxford’s unmet need should be on one site. Witney and Carterton are both attractive places for commuters with bus routes.

I support the proposal for 650 homes to the west of Eynsham, with the criteria clearly spelt out in the Neighbourhood Plan in terms of quality, environmental concerns, and focusing on smaller units to meet identified local need. It is unacceptable to increase this to include Oxford’s unmet need.

The proposals - (or lack of) for the A40 are nothing short of astonishing. The congestion on the A40 has been recognised for years - as acknowledged by Cllr Huxpeth. The “solution” to the current problem is a bus lane going one way, but stopping short of the city. There are no proposals to meet the demands of ten years of construction, nor of an extra 4,000 households using the road.

This scale of development is completely unacceptable without significant improvements to the A40 in advance. Options for a light railway or tram (recognised as possibilities in last years OCC consultation) are written off despite the fact that the situation has totally changed. The minimum should be a bus lane in both directions, a high quality cycle path and the community path to Botley.

In Eynsham an extension to the bypass extending up from Station Road to meet the A40 is also essential to reduce traffic through the village and to cope with building on the west of Eynsham.

The principles of a Green Village demand that infrastructure needs are met but it is not clear that these will be in place from the start to meet the needs of initial residents. The impact on Eynsham’s schools, medical services shops etc have not been addressed.
The Green Village concept and practicalities

As is clear from our neighbourhood plan, the vast majority of people in Eynsham are concerned about housing need, and the difficulty that many local people, especially young people have in finding affordable housing in our area - both in Oxford and Eynsham. This is why Eynsham Futures are proposing significant new housing of 650 homes mitigating as far as possible the impact on the existing village. I support that proposal.

The assessment of the county's housing need suggests and growth of 50% without giving any proper rationale for this very high figure. It appears to be based on projections and economic arguments, ignoring social and environmental consequences, and heavily influenced by the two universities.

We have been given no evidence that such growth is actually needed particularly in the light of possible contraction of the car industry and Science research post Brexit. I do not understand how such an important decision can be made with no consultation at all. Furthermore the fact that the local districts agreed to it appears to mean that we can have no discussion or challenge the assumption that the new technological revolution is going to create a lot of jobs that need to be based on this particular area. Oxfordshire County Council and the Districts should review and consult on Oxford's unmet housing need given new economic forecasts.

Surely the Local Plan is the point at which these competing demands need to be balanced to take into account the interests of the local communities and the environment.

There is no evidence provided to support the notion of yet another science area as part of the Green Village, and if there is a clear identified need, surely a more appropriate brownfield site is the underused existing industrial site to the south of the village.

We are given no reassurances that the new housing will actually alleviate Oxford's housing waiting list, or if relocation of existing tenants could release housing for those in most need in the city. When we asked for detail the response was that it is too early... yet we are being asked to approve the "plan". There is insufficient commitment in the Local Plan to genuinely meet local need, nor to the need for smaller, affordable housing, a mixture of rented, shared ownership, retirement bungalows etc.

It is clear from all recent developments in our area that developers make more money from large detached houses. Such houses are mostly bought by affluent people from outside Oxfordshire, doing nothing to meet local housing need and simply pushing up house prices. How can it be guaranteed that the Garden Village will meet unmet local need and the properties will not be bought by London commuters?

The existing A40 does not constitute adequate separation according to the principles of the Green Village. A proper buffer could be created by moving the A40 to the north, the other side of the millennium wood and creating green space between the existing village and a reduced size Green Village.

<td>&gt; SECTION 9 - STRATEGY AT THE LOCAL LEVEL &gt; Eynsham Woodstock Sub Area &gt; MAIN 146 Main 146: Paragraph 9.5.7a We object to paragraph 9.5.7a which, consistent with the Council's unsound approach generally, seeks to underplay the sustainability / suitability of Long Hanborough as a location for development, and misrepresents the relationship of the village to Hanborough Station. We take no issue with the updating of this paragraph to reflect the recently approved residential developments at the village - which is a matter of fact. However, we are unclear why the Council proposes to delete the previous reference (in paragraph 9.5.6) to the factual position that house prices in Long Hanborough are amongst the highest in the District, reflecting the good level of accessibility with Hanborough Station. We are not aware of any evidence to suggest that house prices in Long Hanborough are no longer amongst the highest in the District, and the Council itself acknowledges that rail services at Hanborough Station are due to improve further – presumably making it even more attractive and adding further to house price pressure in the village. The Council's amendment in this regard may initially be seen as only a minor and irrelevant one. However, it is part of a package of changes proposed by the Council which, together, seek to deliberately downplay the importance of Long Hanborough and its suitability for development. Any such downplaying / downgrading is wholly inconsistent with the available evidence. We further note that the Council retains its unjustified position that Hanborough Station (which for some reason the Council does not name in this paragraph) is located to the east of the village, rather than being at the eastern end of the village. The Council is aware from evidence submitted to the recent Public Inquiry relevant to proposals for 120 new homes on land adjacent to Hanborough Station, that it is clear that the station and the business park form part of the village.</td>

<td>&gt; SECTION 9 - STRATEGY AT THE LOCAL LEVEL &gt; Eynsham Woodstock Sub Area &gt; MIN 96</td>
<td>The part-upgrading of the A40 might cope with existing congestion. The addition of a further 12,750 houses to the West Oxon. A40 catchment area, many of which will house Oxford workers, will reinstate and exacerbate the problem! The existing policy needs to be abandoned. The present A40 cycle route is not 'good' - it is poorly maintained and hazardous. We need a two way cycle path located on the southern verge of the A40 to avoid two crossings of the A40 by Eynsham cyclists, and to orientate homecoming evening cyclists away from westbound headlights. Urgent adoption of the B4044 Eynsham to Botley cycle/path plan to compensate for the loss of one A40 cycle lane and to provide a unique route to Oxford West and the station, taking the cyclists off this dangerous road! and thus easing the passage of cars to Oxford West, Oxford South and the A34. Priority bus lane, and cyclepath, along Eynsham eastern bypass to the tollbridge; a major commuting corridor. Provision of a joined up cycling/walking network within Eynsham village, with paths at least 2m wide - unlike the narrow, token path alongside the eastern bypass (3.12.CO11).</td>

| MM786 | Oxfordshire County Council | Amada Jacobs (OCC) | Mrs | Jacobs | 2257 | > SECTION 9 - STRATEGY AT THE LOCAL LEVEL > Eynsham Woodstock Sub Area > MIN 96 | corridor to Oxford through a proposed Park & Ride site at Eynsham and a bus lane along the A40 eastbound into Oxford. We will also work with Oxfordshire County Council to identify funding for their long term strategy for the A40 which will involve dualling between Witney and Eynsham and a westbound bus lane.

Amendments to Paras 9.5.17 further state that: “Funding of £35m has been made available through the local growth fund and will be used to implement improvements including the provision of a new park and ride site to the north of Eynsham.”

We support these amendments to the plan which set out information on the agreed Park & Ride facility, we consider these amendments are justified and will assist with the delivery of sustainable development and are therefore sound. |
| MM786 | Oxfordshire County Council | Amada Jacobs (OCC) | Mrs | Jacobs | 2258 | > SECTION 9 - STRATEGY AT THE LOCAL LEVEL > Eynsham Woodstock Sub Area > MIN 96 | Public transport availability in this area is good with railway stations at Tackley, Combe and Long Hanborough, the latter being one of the District’s largest and most well-used stations. Parking Car parking facilities have recently been expanded at Longhanborough to improve capacity and there are aspirations for further station improvements including additional parking, a footbridge and new platform so that any trains extended from Oxford can terminate and turnaround. To fully realise the potential of the Cotswold line, further redoubling will be required at the eastern and western ends of the line, between Wolvercote Junction and Hanborough, and from west of Evesham towards Pershore. This would allow up to three trains per hour to Hanborough and/or Charlbury and two trains per hour between London and Worcester, with a journey time under two hours. |
| MM381 | Eynsham Society | Jolyon Cox (Hon. Sec., Eynsham Society) | Dr | Cox | 802 | > SECTION 9 - STRATEGY AT THE LOCAL LEVEL > Eynsham Woodstock Sub Area > MIN 96 | Public transport in the south of the sub area is more limited however, due to the relative isolation of settlements from the rail network and the lack of bus service provision between villages and key destinations. |

9.5.17 “Eynsham has access to very good bus services, with regular premium services to Oxford, Witney and Carterton. There is a need to improve bus journey times however through Eynsham and approaching the Wolvercote roundabout on the edge of Oxford. Funding of £35m has been made available through the local growth fund and will be used to implement improvements including the provision of a new park and ride site to the north of Eynsham, coupled with the provision of an eastbound bus lane between the park and ride and the Duke’s Cut canal bridge near Wolvercote. Woodstock is served by the S3 premium bus service to Oxford, Charlbury and Chipping Norton.”

The A40 improvements are still under consultation until January 2017, and it is premature to assume in the draft Plan that they will take place. While the eastbound bus lane could reduce transit times to Oxford city centre, it is unlikely to assist those commuting to the major employment sites in Headington (JR, Nuffield and

<td>1005</td>
<td>&gt; SECTION 9 - STRATEGY AT THE LOCAL LEVEL &gt; Eynsham Woodstock Sub Area &gt; MAIN 148</td>
<td>Churchill hospitals, Oxford Brookes University, Oxford University Old Road Medical Campus) and Cowley (BMW), who make up the vast majority of the Oxford-bound commuter traffic. Adding another 2,750 dwellings at Eynsham, specifically to house those whom Oxford cannot accommodate, would add 5,000+ commuters (few if any houses in this area will be affordable on a single salary). Even if these commuters were able to reach their destination readily by bus, it would require up to 100 additional buses during rush-hour, or about one per minute, which is clearly not achievable – even the proponents of the A40 plan do not envisage more than one-tenth of this service level. The remaining new commuters would be forced to add to the unsustainable levels of existing road traffic, for which the A40 plans would provide no relief whatever. It is the height of irresponsible folly to suggest planting such a large number of new houses in a single location with wholly inadequate transport infrastructure and no solution even proposed.</td>

<td>1084</td>
<td>&gt; SECTION 9 - STRATEGY AT THE LOCAL LEVEL &gt; Eynsham Woodstock Sub Area &gt; MAIN 148</td>
<td>Stagecoach notes and supports the modification, that draws the conclusion that this Sub-area has a particularly important role to play in meeting the District’s housing and wider development needs, by virtue of its proximity to Oxford City. Stagecoach notes and agrees with the conclusions that the evidence base in the round points to the greatest opportunities being available around Eynsham; and equally that significant opportunities exist around Woodstock. There are already strong commercial public transport services offered in and nearby both settlements, which are likely to be considerably further strengthened in future, not least given the alignment with measures being brought forward through the adopted LTP4 “Connecting Oxfordshire” and the supporting Oxford Transport Strategy. The role of Hanborough as a service centre, and a key rail node, is one that certainly warrants further development opportunities being pursued, as the text states, which would take advantage of the opportunities offered by existing and future improved public transport. It is not clear to us that the evidence entirely supports the conclusion that such opportunities are quite as limited as the Plan states.</td>

<td></td>
<td></td>
<td></td>
<td></td>
<td>whilst we do not object in principle to the identification of opportunities for development at Eynsham, we object to the deletion of references to Long Hanborough as one of the locations with the greatest potential for further development in this sub-area, and we are unclear as to the process adopted by the Council in concluding that Eynsham provides the greatest potential for further development. Whilst some additional development has been approved in Long Hanborough in recent months, the Council was right to identify this as a location with one of the greatest potentials for development, and this remains the case. The scheduled improvements and aspirations for Hanborough Station only add to this potential, together with the recently approved improvements to both doctors and education provision in the village.</td>
</tr>
</tbody>
</table>
The Council's evidence base confirms that Long Hanborough is a Rural Service Centre, like Eynsham. However, Long Hanborough of course benefits from Hanborough Station which is located at the eastern end of the village, and which is recognised by the Council to be one of the District's largest and well used stations. Paragraph 9.5.32 identifies that there are planned improvements to train frequency and capacity, and aspirations for much more substantial improvements. It is difficult, therefore, to see how the Council has so clearly come to the view of the potential at Eynsham, whilst Long Hanborough is ignored and actively, and unjustifiably, downgraded to 'Village' status. Our objections to Policy EW2 expand upon this issue.

Paragraph 9.5.33
For the reasons set out in our objection to paragraph 9.5.32, and set out in detail in our representations to Policies OS2 and EW2, we object to the statement at paragraph 9.5.33 that there is only scope for 'very modest levels' of development at Long Hanborough.

The Council identifies here that Long Hanborough offers fewer services than Eynsham or Woodstock 'other than the railway station'. Whilst this may seem minor of itself, it is part of a suite of proposed changes to the Local Plan which together seek to downplay the sustainability of Long Hanborough and its suitability for development, in a way that is inconsistent with the available facts and evidence.

This throw-away reference to the benefits of the station is unjustified and inappropriate. This is of course one of the only mainline stations in the District – a station that the Council itself identifies as being one of the District’s largest and most well-used stations, and a station where improvements to the frequency and capacity of trains are proposed in 2018 and where there are aspirations for even more significantly enhanced provision. To treat the availability and location of this station as if it is irrelevant to the sustainability credentials of Long Hanborough, is inappropriate and impossible to justify or reconcile with the facts or evidence.

| MM491 Crest Strategic Projects | Crest Strategic Projects | Crest Strategic Projects | - | - | 1516 | > SECTION 9 - STRATEGY AT THE LOCAL LEVEL > Eynsham Woodstock Sub Area > MAIN 148 | Main 148: Paragraphs 9.5.30–9.5.33

9.9 The ‘key’ role that the Rural Service Centre sub areas have to play, in accordance with their status, should be qualified and defined clearly, so there is no ambiguity. The level of development assigned to each area should be consistent with the spatial strategy that has been selected via the SA process; the role of the Eynsham-Woodstock sub-area is distinct only insofar as it has a requirement to help meet the unmet needs of Oxford, which will sit alongside its secondary role in helping to meet development needs in accordance with its Rural Service Centre function (in accordance with the spatial strategy).

9.10 The potential for a significant scale of development within the sub-area in the vicinity of Eynsham rests on the evidence prepared for the Oxford Growth Board (OGB) by LUC70, which looked specifically at options for meeting the unmet housing needs of Oxford. While an extension to the west of the village was examined, this was only considered as an option to help meet Oxford’s housing needs (not West Oxfordshire’s) and comprised 550 dwellings within the Plan period, not 1,000. There is no presumption in the Council’s own SA of the preferred spatial strategy that supports a distribution including 1,000 dwellings to the west of Eynsham (strategic scale development).

9.11 The chosen spatial strategy comprises of two spatial options: Option 2, which directs a significant proportion/most development to the Main Service Centres, with a particular focus on the three main towns; and Option 5, which proposes a new village to respond to the unmet needs of Oxford. There is no clear, systematic evidential route that can be followed that leads the objective observer of the plan formulation process to a strategic urban extension to Eynsham to help meet the housing needs of West Oxfordshire. As such the allocation is considered to be unsound and should be deleted.

9.12 The modifications introduced at 9.5.32a are unsubstantiated (as set out within this suite of representations) and should be deleted.

| MM751 Goldfield Estates | Goldfield Estates | - | - | 1860 | > SECTION 9 - STRATEGY AT THE LOCAL LEVEL > Eynsham Woodstock Sub Area > MAIN 148 | As per proposed modifications Main Modification 148 and Main Modification 150, the Consortium generally supports the total indicative housing requirement of 5,500 homes for the Eynsham-Woodstock sub-area as a minimum threshold for housing delivery over the plan period. It is however, noted that such a figure should not be considered an absolute or ‘up to’ level of housing delivery. The Consortium therefore consider that the wording of relevant policies should reflect specified housing requirements as a minimum target.

As such, the Consortium supports as a minimum that the proposed West Oxfordshire Garden Village will deliver around 2,200 new homes by 2031 to contribute entirely towards meeting the housing needs of Oxford. |

<p>| MM780 North A40 Land Consortium | North A40 Land Consortium | - | - | 2133 | &gt; SECTION 9 - STRATEGY AT THE LOCAL LEVEL &gt; Eynsham Woodstock Sub Area &gt; MAIN 148 | As per proposed modifications Main Modification 148 and Main Modification 150, the Consortium generally supports the total indicative housing requirement of 5,500 homes for the Eynsham-Woodstock sub-area as a minimum threshold for housing delivery over the plan period. It is however, noted that such a figure should not be considered an absolute or ‘up to’ level of housing delivery. <td>I wish to comment particularly on Paragraph 9.5.32 This raises two potential areas for development: 1,000 homes to the west of the village and 2,200 in a 'new garden village' to the north of the village. Taken together, these would more than double the size of Eynsham and would totally change its character. Many residents are not opposed to reasonable expansion of the village but it seems completely unreasonable to expect Eynsham to absorb 1,000 homes within the village as well as the proposed 'garden village', which would be in a location not far enough away from the existing settlement to be a separate entity.</td>

<td>I understand that in the light of the difficulty of navigating the feedback document, it is acceptable to send comments in an email. I have a few comments on the following paragraphs. Paragraph 9.5.32 This raises two potential areas for development. 1,000 homes to the west of the village and 2,200 in a 'new garden village' to the north of the village. Taken together, these would more than double the size of Eynsham and would destroy its character. Reasonable expansion of the village would be perfectly acceptable, and would meet the approval of many residents, but this goes well beyond the bounds of that. It is quite clear that the 'new village' is far too close to the existing settlement of Eynsham to meet the requirements of a garden village (where separation is a criterion), and I'm surprised at the poor judgement of WODC in putting forward such an inappropriate development. In my view, even the 1,000 homes west of the village is excessive - a figure of several hundred would be more appropriate. But the 'garden village' is hugely disproportionate.</td>

| MM328         |                         | Russ Canning    | Mr Canning       | 613        | > SECTION 9 - STRATEGY AT THE LOCAL LEVEL > Eynsham Woodstock Sub Area > MAIN 148 | Not Sound. The current schematic site layout for the proposed “Garden Village” identifies a clearly defensible northern boundary based upon a tree and hedgerow-lined watercourse, which forms a “fold” in the gently undulating pastoral landscape. Any “future expansion” beyond this natural boundary would be contrary to the Local Plan policies identified above. All reference to expansion should be explicitly removed from the Plan. Any future expansion would:  
• Severely impact upon the high quality Cotswold landscape that characterizes the setting for both Freeland and Church Hanborough villages to the north.  
• Would intrude into the beautiful Evenlode valley.  
• Would sterilize mineral reserves.  
• Would intrude onto areas of restored landfill.  
• Would intrude further into farmland that has significant biodiversity value.  
• Would exacerbate the coalescence of Eynsham, Freeland and Church Hanborough.  
• Create a continuous, amorphous, suburban sprawl between Eynsham and Long Hanborough. |
| MM357         |                         | Tony Bovey       | Mr Bovey         | 817        | > SECTION 9 - STRATEGY AT THE LOCAL LEVEL > Eynsham Woodstock Sub Area > MAIN 148 | 9.5.32: subject to strategic caveats above, Eynsham area has scope for more employment and development of a high skill, dynamic and high wage scientific complex of interlinked activities. Shape of the potential Garden Village should be modified to increase north - south extent (for better access to Hanborough Station and reduce adverse traffic impact on Eynsham) and reduce its east west extent (provided there is convenient access to the Park and Ride). |
| MM376         | Stagecoach in Oxfordshire/Stagecoach West | Nick Small, Stagecoach Bus | Dr Small | 1007 | > SECTION 9 - STRATEGY AT THE LOCAL LEVEL > Eynsham Woodstock Sub Area > MAIN 149 | MAIN 149 para 9.5.34 Role in meeting Oxford’s unmet housing needs. Stagecoach notes and supports the conclusion of the Council that the sub-area is well located to play an important role in meeting Oxford’s unmet housing needs, subject to major infrastructural improvements being brought forward. It is especially important that the Plan supports the delivery of key measures in Oxfordshire’s Local Transport plan “Connecting Oxfordshire”, and the subordinate Oxford Transport Strategy, to ensure that in so doing, the opportunities for sustainable transport are fully taken up. Without this, the transport impacts of this growth on links towards the City, within the District and in adjoining Authorities, would in all probability be unacceptable, based on the modelling already undertaken by the County Council. Resolving this question will require further micro-simulation work, to better understand the issues, and refine and develop measures proposed, and others that may well be required. There is a great deal of potential for growth in the sub-area to take advantage of good public transport links in the short term Longer-term, the provision of new Outer Park and Ride sites at both Eynsham and on the A44 corridor (site to be determined) would need to take advantage of further enhancements in bus frequency. |
on the corridors passing both sites.

We also agree that there is potential to develop the rail station at Hanborough into a stronger public transport hub. However we believe that this potential is most likely to relate to existing and improved bus routes running along the A4095 to Witney, for which it is the nearest rail-head, rather than from the south, at Eynsham, from where very frequent bus service links to a much broader and more frequent rail services available at Oxford Station, are already provided. These will no doubt be enhanced with services serving the proposed Park and Rode site, which would be very accessible from the proposed new Garden Village at Tilgarsley; and these conceivably might also include links to Oxford Parkway station in the longer term, as part of improved public transport connectivity to the Oxford Eastern Arc.

Historic England welcomes and supports Proposed Main Modification MAIN149 for the addition of the requirement that "The historic environment needs to be conserved and enhanced", as part of the positive strategy for conserving and enjoying, and clear strategy for enhancing, the historic environment as required by the National Planning Policy Framework.

The 'Main Modifications' form states that "There is severe traffic congestion on the A40 between Eynsham and Oxford peak times". This was before the proposed expansion of Eynsham and other villages, including the garden village(12,750), which would double or treble the size of the Eynsham feeder-area to the A40. Why not sort out the existing commuter problem before adding to it? ‘Meeting Oxford’s unmet need’ will not be helped by creating yet another problem, and is unsound planning.

We support the Council’s acknowledgement that the District can play an important role in helping meet Oxford City’s unmet housing needs alongside major infrastructure enhancements. We also support the specific recognition that there is potential to develop Hanborough Station as a stronger transport interchange with additional parking (with the need for improved access from the south presumably associated specifically with the Garden Village proposals due to their distance from the station).

9.13 The references to the role in meeting unmet housing needs arising from Oxford City is supported, as is the acknowledged need to ensure that the important heritage assets within the area are conserved and enhanced. There is potential only for limited development at Woodstock and not at a scale that would require allocation. Policies OS2 and H2 would both allow for development at Woodstock, in its capacity as a Rural Service Centre, in accordance with the criteria set out within the policies. Application of the criteria would ensure that proposals coming forward via the development management/planning application route would be assessed having regard to the identified material factors and determined accordingly. An appropriate scale of development would therefore continue to be delivered at Woodstock following adoption of the Plan.

9.14 In accordance with the spatial strategy the final bullet point should be amended to refer to the potential for some development at the Rural Service Centres in accordance with the provisions of the settlement hierarchy.

<td>1917</td>
<td>&gt; SECTION 9 - STRATEGY AT THE LOCAL LEVEL &gt; Eynsham Woodstock Sub Area &gt; MAIN 149</td>
<td>Proposed modification- Downgrading of Long Hanborough: The proposed modifications involve the downgrading of Long Hanborough from a service centre, to a lower order village. This change pertains to numerous modifications, we therefore set out our response below which we wish to be considered in response to the following modifications: MAIN3, MAIN13, MAIN14, MAIN15, MAIN59, MAIN66, MAIN145, MAIN149. Detailed comments particular to each modification are set out in detail against the relevant reference in following sections. We object to proposed modifications which suggests the downgrading of Long Hanborough from a rural service centre to a village. The submission plan confirmed the rural service centres were classified as such because they benefited from a range of services and facilities which supported the village and surrounding area. They are able to support additional homes in the short-term, while proposed growth can enhance the role of the settlement in supporting the surrounding rural area (paragraph 4.18). This approach was directly in line with the plan's objective 1 'strong market towns and villages' and objective 4 'sustainable communities with access to services and facilities', both of which remain un-modified. Long Hanborough retains the same services and facilities which existed at the time the plan was submitted, furthermore planning permission has been granted which allows significant expansion of the primary school (15/03341/FUL). While additional housing has been permitted no evidence has been produced to suggest additional homes would result in any harm to the character or sustainability of the settlement. The village therefore remains well placed to fulfil the role of a rural service centre. The downgrading of Long Hanborough proposed through modifications is largely unexplained and not supported by any evidence. The Council cite the creation of a 'new' service centre through the northern expansion of Eynsham as justifying the downgrading of Long Hanborough as the new development will need to &quot;develop a critical mass of services and facilities&quot; (paragraph 2.5a). We are concerned the Council's explanation suggests an intention to restrict the development of Long Hanborough and reduce services in the village in order to encourage their replacement in the new development. A restrictive approach to development stifling an existing sustainable settlement and vibrant community is clearly at odds with the Plan's vision, policies of the NPPF and good planning practice. The provision of an additional service centre would be entirely in line with the Plan objectives. If the development proposed north of Eynsham is to proceed it is clearly preferable that Long Hanborough maintains its status as a service centre complementing any new facilities created. The need to retain the service centre is particularly pronounced due to the unclear deliverability of the proposed site north of Eynsham, even if the site is delivered this will not be until the latter part of the plan period, therefore there is a need for services and facilities in the interim. The submitted plan set out clear objectives which the following policies sought to deliver sustainable</td>

| MM756        | Cantay Estates          | Cantay Estates  | -                | 1938       | > SECTION 9 - STRATEGY AT THE LOCAL LEVEL > Eynsham Woodstock Sub Area > MAIN 149 | Proposed modification - Expansion of Eynsham: The proposed modifications introduce a significant strategic development to the north of Eynsham to meet Oxford City's unmet housing need. This change pertains to numerous modifications, we therefore set out our response below which we wish to be considered in response to the following modifications: MAIN3, MAIN7, MAIN9, MAIN13, MAIN14, MAIN15, MAIN23, MAIN24, MAIN27, MAIN58, MAIN60, MAIN149. Detailed comments particular to each modification are set out in detail against the relevant reference in following sections.

The same modification seeks to introduce the new strategic development north of Eynsham. The proposed development is of a strategic scale in a location which previously only saw limited development. The strategic area has been newly introduced at the examination stage, rather than through the extensive consultation process which should inform fundamental decisions in plan making.

The proposed 'Garden Village' is a strategic site suggested to be a new standalone settlement. Such a development is a clear departure from the submitted spatial strategy which emerged from the earlier consultation stages and was informed by the evidence base. The proposed new development is a clear departure from the proposed development plan, not a mere modification.

The proposed changes to the plan are so significant that they amount to a fundamentally different strategy to that submitted for examination. Should the Council wish to make such a fundamental change it should be done so through a new plan informed by a suitable evidence base and following a formal consultation process. To do otherwise would undermine the credibility of the plan and public confidence in the planning process.

A consequence of the limited considerations which have informed the introduction of the development area is considerable uncertainty as to the achievability of the proposed scheme. The site was previously discounted as unsuitable for development within the submitted SHLAA, no updated document has been published to revise this status. Noise impacts, segregation across the A40 and landscape impacts are all identified as being prohibitive to development. No information has been produced to demonstrate how these issues may be overcome, nor whether they are less pronounced at any other development site. Similarly the proposal was dismissed as not being realistic in the submitted SA, little is offered to justify such a fundamental change in stance.

Development strategy for the proposed site is deferred to a later Area Action Plan, we consider however development parameters must be set out and explored in order to ensure the proposed scheme is achievable. The Plan also refers to an expression of interest submitted to Government seeking to obtain Garden Village status for the development, unlocking funding streams to deliver infrastructure to unlock the site.

Although an expression has been submitted, no decision has yet been issued. In excess of 50 similar expressions have been made nationally, therefore Garden Village status is far from guaranteed. Proper exploration must be made as to the sustainability, suitability and deliverability of this site and essential infrastructure in the event it does not secure Garden Village status.

MAIN9: The propose modification identifies the proposed expansion north of Eynsham to be an 'exemplar' development with regard to design and environmental performance. The aspirations for the development are laudable, however only very high level initial assessments have been undertaken to establish whether this is deliverable, particularly in the context of the landscape previously considered vulnerable to development.

<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td>MAIN23: The proposed alteration to the wording from the ‘majority’ of development being delivered in the district’s towns, to a significant proportion, confirms the proposed expansion to the north of Eynsham to be a deviation from the strategy set out under policy OS2 in the Submission Plan. We consider the fundamental change of the strategy renders this a new plan, it should therefore be developed as such, rather than processed through modifications.</td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td>MAIN25: We welcome the proposed increase in housing provision within the plan to reflect the objectively assessed need set out in the Oxfordshire SHMA (660 dwellings per annum). Although the headline figure for housing provision is increased the means of meeting that need is somewhat unclear in the document. The proposed site allocations fall someway short of the accepted housing requirement. Allocated sites and suggested windfalls total 11,545 homes, some 1,655 homes below the housing target for West Oxfordshire (13,200). Although not clearly stated it seems the Plan is reliant on a significant number of sites which have on the deliverability of these sites.</td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td>The published housing supply position paper sets out the Council’s assumptions on the deliverability of permitted homes. This is set against a backdrop of previous under-delivery in relation to the objectively assessed need, including in the initial five years of the plan period. The anticipated delivery of homes from larger sites (more than ten units) is particularly optimistic given the recent under-delivery of homes and the longstanding nature of several of the outline planning permissions. The anticipated delivery figures (Appendix 1) do not appear to assume all planning permissions granted for larger sites will be implemented. The assessment of smaller sites makes a concession (9.1%) in acknowledgement that not all permissions will be implemented; an allowance for non-delivery of larger sites is also required. While uncertainty exists as to the deliverability of a significant proportion of the required housing supply questions remain as to the soundness of the plan. Robust evidence should be produced to show the permitted sites can be relied upon to deliver homes, additional allocations should also be made to mitigate against any shortfall.</td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td>MAIN27: The allocation of non-strategic sites is welcomed and we believe imperative if the housing need of the district is to be satisfied. We are concerned that those sites allocated have not been selected through thorough testing, including consideration of all reasonable alternatives as set out by the regulations. As a consequence the soundness of the allocations and broader plan is in doubt. We have raised our concerns with regard to the unpublished SHELAA earlier in these representations; those comments also apply to this modification. The fact that the plan preceded the assessment significantly undermines the credibility of the plan as an evidence based document as do shortcomings in the assessment. We consider Long Hanborough to be a suitable location for development as it benefits from an excellent range of services and facilities, including a railway station. We believe additional development sites should be permitted in the village alongside those proposed in the modifications. The proposed development site at Tuckwells Pit, Church Road (SHELAA ref 225) is a suitable location for new development. It can sensitively accommodate new homes in a location which benefits from access to key services and facilities. A Landscape and Visual Impact Assessment has confirmed development of the site can have a beneficial effect on the landscape while the off-road cycleway on Main Road provides viable access to the railway station.</td>
</tr>
</tbody>
</table>
MAIN29: The proposed modifications seek to rely upon windfall development to fulfill the housing requirement at a rate of 125 homes per year. Although this policy is informed by previous delivery rates the published SHELAA suggests insufficient developable sites exist to fulfill that rate of development throughout the plan period. As the Council’s own SHELAA suggests insufficient sites are available to fulfill the suggested windfall rate either the evidence, or the proposed strategy must be unsound.

Historic windfall delivery rates have been achieved in the district’s larger settlements including those designated as service centres. The proposed downgrading of Long Hanborough reduces the likelihood of homes being delivered in the village further reducing the chances of windfall housing rates being maintained. Although an alternative service centre is proposed to be provided this is for delivery within the plan period and therefore will not give rise to any windfalls.

MAIN59: The proposed emphasis on the desirability of locating development in locations with access to public transport is at odds with the modification suggesting downgrading Long Hanborough’s settlement status. The village is one of only two in the district which benefit from a significant railway station.

MAIN60: The plan identifies significant challenges upon the A40, particularly with regard to access to Oxford. Although several alleviation options are suggested none is carried forward in plan proposals which acknowledges necessary funding is not available.

The proposed strategic development area at Eynsham is suggested on the basis that alleviation of A40 issues could be provided, however their achievability is unknown. The uncertainty of delivery of necessary highway improvements calls into question the suitability of the proposed strategic development area. The Plan which relies upon this area to meet its portion of Oxford’s unmet housing need cannot be sound until the site is known to be deliverable.

MAIN66: The proposed modification underlines a success in the current plan period in encouraging use of railway connections in the district, particularly from Long Hanborough. The modification acknowledges the capability of the rail corridor to remove vehicles from the A40 as residents travel toward Oxford and London, and the desirability of increasing capacity of Hanborough station and the railway link.

The modification supports improvements to the rail connection and acknowledges the need to provide the proposed development north of Eynsham with connections to Hanborough station. It is perverse therefore that the plan seeks to restrict development in Long Hanborough as developments in the village could provide easy access to the railway station and contribute to providing enhanced services and facilities. We consider the village should retain its rural service centre status and consideration given to additional non-strategic allocations to make the most of this opportunity for sustainable development.

MAIN145: The proposed modification suggests Long Hanborough is not in a position to support significant levels of additional development, however no evidence is provided as to any particular harm which would arise from residential development over and above that in the plan.

The document identifies the opportunity in the village in enhancing sustainable transport options through improvements to the station, this presents scope for new homes to be developed with a tangible benefit for the district. No unique sensitivities are identified, we therefore believe additional housing development should be allocated (beyond that proposed) and windfalls encouraged in Long Hanborough.

MAIN149, 180: We welcome the acknowledgement in the modification of the potential for enhancement of Hanborough Station as a transport interchange, however the proposed downgrading of the settlement is
clearly at odds with this and undermines the aspiration for improvements. Such an approach is also at odds with the NPPF’s encouragement of environmentally sustainable development.

The modification suggests increased car parking at the station, whilst this could encourage rail commuters from rural areas it is clearly preferable to remove the need for car use altogether. Additional cycle parking should be provided and homes provided in locations which already benefit from access to the station by sustainable means.

New homes created in Long Hanborough would benefit from existing foot and cycle access to the station, therefore they could be delivered early in the plan period and support enhanced rail services without need for additional car journeys. To seek to restrict this undermines the aspiration of the plan.

The Council suggest the proposed northern extension of Eynsham could benefit from sustainable access options through creation of new foot/cycle routes from the south. These would be more distant than any point within Long Hanborough, furthermore their delivery cannot at this point be guaranteed. If the Council wishes to make the most of opportunities presented by rail routes from Hanborough permitting of additional development in the village is clearly the correct path.

The area has good rail service availability with railway stations at Tackley, Combe and Long Hanborough.

No consideration seems to have been given to spreading some of Oxford’s unmet needs wider, offering at least some alternative to living in one ‘village’ location with one transport option. Lifestyle choice is at least as important as just being close to Oxford if this is not to be an Oxford overspill estate.

Bus services (eg. 11) have just been cut back, making it more difficult to get from Hanborough to Eynsham & Oxford. Expansion of Long Hanborough (west, south & possibly east) & Eynsham (west & north) will dramatically alter the character of these villages & the surrounding natural landscape which are supposed to be so special. Light pollution will escalate, roads will become choked with traffic, schools & doctors surgeries will not be able to cope. Green fields will be concreted over. All because of the grossly inflated housing targets inflicted on local communities by central government.

Woodstock is part of the Eynsham-Woodstock Sub Area. WTC note that the level of housing proposed for Woodstock in the new version of the Plan has risen from roughly 150 to 670. This is at odds with WODC’s recognition in the Plan that the town is of national and international significance. There are currently in the region of 1,500 dwellings in Woodstock. The level of housing proposed in the Plan will make Woodstock half the size again. This is totally unsustainable. WTC note that sites on the edge of Woodstock have been submitted to Cherwell District Council to be considered for allocations to help meet Oxford’s unmet housing need. If these were allocated as well, the town would double in size. Entirely unsustainable.
The level of housing proposed will destroy Woodstock’s distinctive character and ultimately affect the tourism upon which the town relies. It is difficult to see how anyone would wish to visit a historic town, which has become heavily congested and pedestrian unfriendly (pollution, noise etc...).

WTC would draw WODC’s attention to a questionnaire it recently prepared, asking residents what they felt about the level of housing proposed at Woodstock. There was clear concern by local residents over development proposed for the town. A copy of the questionnaire can be found at Annex 1 of this representation and a report on the results can be found at Annex 2. WTC would also point out that it carried out two other formal Parish Polls in recent years and the feedback was the same - Woodstock cannot sustain further development.

The analysis below shows how each of the sites proposed for allocation in Woodstock are unsuitable, even in isolation. When combined together it shows WODC’s approach to development in Woodstock as unsympathetic and not considered properly.

In addition, there is an alarming lack of evidence to support crucial assumptions made about the sites.

I am writing to you with great concern over the proposal for an extra 670 houses in Woodstock. My family and I have lived in Woodstock for 17 years, and in that time we have seen a great deal of change. Every few years there has been a proposed development which has caused a great deal of stress for local residents, resulting in a feeling that we can no longer simply live our lives in peace as we await the next proposal. Four years ago, Blenheim Estate bought the land adjoining Old Woodstock with the promise from the late Duke that he would never build on this land. And yet here we are again.

In Old Woodstock, we have a thriving, happy community. Our children play out in the streets and in the playground, and are constantly in and out of each other's houses. Neighbours look after the elderly folk on our estate. Residents enjoy the recreational facilities at the end of Rosamund Drive and walk in the fields alongside our estate. This kind of community is very, very precious and the importance of community should not be forgotten in the Local Plan.

I am objecting not only to the proposed development in Old Woodstock, but to all 670 houses planned for Woodstock. We have already had two significant developments built close to the secondary school, along with smaller developments at Young's Garage and along Banbury Road, and some 'in-filling'. The impact of these developments has already become apparent, and forms the basis of my objection as follows. Any extra development would have an unimaginable effect.

1. Schools.
   * The primary school expanded a few years ago when the children of Old Woodstock did not get places; this year our children are once again not getting into the primary school as recent developments close the school have effectively squeezed the children of Old Woodstock 'out of catchment'. Thus, the proposed Banbury Road and South East Woodstock developments would impact Old Woodstock.
   * The current level of traffic around both the primary and secondary schools is at a dangerous level; the recent collision between two buses outside the secondary school was an accident waiting to happen.
   * Traffic.
The level of traffic through Woodstock is already high, made considerably worse by the high number of events being staged by Blenheim Palace. Extra houses, with potentially 2 cars per household, will only make this situation worse.

* The pavements along the A44 through Old Woodstock are very narrow, and we struggle to walk along them with the heavy lorries sweeping past. A few years ago the city council removed the school bus which served Old Woodstock, forcing primary-aged children and mums with buggies to walk the mile to school along these unsafe roads.

* Buses which are scheduled to drive down High Street and Market Street are often unable to get down these roads due to careless parking, with the result that three - soon to be four - services regularly continue on to our estate in Old Woodstock to do three-paint-turns. If an extra 120 cars will be accessing a new estate through Vermont Drive, we will see the same chaos with buses and cars vying for the same road space.

* Parking.

* We have an excellent car park in Woodstock, but it is frequently full, especially when large events are taking place in Blenheim Palace. I prefer to park here and walk to collect my son from school, but frequently I am unable to find any space.

* I rarely use the shops in Woodstock as it is not easy to park, so I only use them if I have time to walk from Old Woodstock.

* More and more people are parking along the main road through Woodstock and Old Woodstock due to the parking charges levied by Blenheim. At one point, I counted three cars parked between the zebra crossing (and the Number 95 gate opposite the Black Prince) and the blind bend opposite the pub. Cars also regularly park outside the ‘Blenheim Orange’ house, which is hidden from anyone approaching that bend driving north. Again I have witnessed lorries having to swerve out into oncoming traffic to avoid these cars.

* GP Surgery. Our surgery is small and it serves both Woodstock and many of the surrounding villages. I recently tried to get a non-emergency appointment and was happy to wait a few days, but there were no spaces available, and I was re-directed to a surgery in Kidlington. The currently surgery cannot cope with the existing number of residents, let alone an extra - perhaps 670 x 4 = 2680 residents.

5. Recreation and well-being. I have listed this item last, as it rarely seems to be considered as a factor in planning, but I would ideally list this first. In Old Woodstock we are bounded by the A44 on one side and the Glyme River on the other. For us, the open space to the north is essential for recreation and for mental well-being. I live four houses along from the playground and field, and my kitchen looks out over the road. I see a steady stream of people walking past our house heading for the field, including people who are following the Pathfinder Guide, dog walkers and locals out for a stroll. Children are always in the playground and in the field. For us it is a small piece of heaven. Every year we watch the skylarks nest in the fields, and the long line of self-seeded hollyhocks grow along the footpath in the middle of the field. We see roe deer at dusk and red kites circling overhead. Building a replacement playground in the middle of a new housing estate could never, ever be a substitute.

I implore you to dismiss all 670 houses from your Local Plan. The Woodstock infrastructure simply cannot cope with any more development.

<td>AT THE LOCAL LEVEL &gt; Eynsham Woodstock Sub Area &gt; MAIN 150</td>
<td>Table 9.4 – Anticipated Housing Delivery in Eynsham – Woodstock Sub Area We object to Table 9.4 insofar as it results in double-counting between allocations and windfall assumptions and does not, therefore, deliver as much housing as is suggested. Table 9.4 identifies a windfall allowance for this sub-area of 32 homes in the period 2016 - 2031. However, the Council then proposes to allocate the site at Oliver’s Garage in Long Hanborough for 25 homes. We take no specific issue with the proposed allocation / development of this site. However, as a brownfield site within the urban area this is a site that, if it comes forward, would be a windfall moving forward and would, therefore, be part of the 324 homes allowance. By allocating it specifically, this is in effect double-counting. The Council should either reduce the current windfall allowance by 25 homes or delete the proposed allocation of Oliver’s Garage (the former is probably the easiest and most appropriate).</td>

<td>128</td>
<td>AT THE LOCAL LEVEL &gt; Eynsham Woodstock Sub Area &gt; MAIN 150</td>
<td>Section 4, Policy OS2 - Locating Development in the Right Places states that all development should be ‘of a proportionate and appropriate scale to its context’ and ‘form a logical complement to the existing scale and pattern of development’. It should also ‘avoid the coalescence and loss of identity of separate settlements’ and ‘not have a harmful impact on the amenity of existing occupants’. The proposed extra 1000 houses to the west of Eynsham, together with the proposed Garden Village development of 2200 houses just across the A40 from Eynsham, is out of proportion to the size of the existing village. This kind of rapid large-scale development does not complement any existing scale or pattern of development in the area; furthermore, the addition of the Garden Village will turn Eynsham into a small- to medium-sized town because two settlements so close together will inevitably coalesce, with a resulting loss of identity for Eynsham as it now exists. The proposed building over so much land to the north and west of Eynsham will certainly have a harmful impact on the amenity of existing occupants - even if sufficient new infrastructure is provided, access to cherished open space will be lost, as will the village atmosphere and the semi-rural environment that residents currently enjoy. For all these reasons, the planned large-scale developments at Eynsham do not meet the stated aims of the policy and are therefore unsound within the policy’s own terms. New housing is certainly needed, and no doubt Eynsham is a good location for some of it - but where is the evidence that all the new housing in this area should be put in a single location? Sharing out the Oxford overflow housing more widely would result in a better choice of locations for new residents - not everyone</td>

<td>9.15 The reference to development being focussed at the Rural Service Centres within the sub-area reflects the spatial strategy informed by SA. However the scale of development that the Local Plan proposes is not justified having regard to the evidence base (Eynsham, Woodstock). 9.16 The housing target should be revised to reflect the quantum of development proposed within the submission Local Plan, in addition to which the 2,750 dwelling working assumption, to help meet Oxford’s unmet housing need, should be added; to be delivered in the form of a Garden Village in the Eynsham area. Currently this is proposed at two sites; to the north of the A40 and to the west of the settlement. The Council should consider whether the full obligation could be more sustainably and comprehensively met on land north of the A40 in a single free-standing settlement. The LUC study identified capacity at the Garden Village at a net density below 30 dwellings per hectare. The Council should consider fully whether a higher average density (30-35 dph), which would still accord with Garden Village principles, may allow for a single comprehensive development to be delivered in a more focussed and viable way. 9.17 Table 9.4 should be amended to delete the West Eynsham SDA, adding the balance of the unmet need quota to the proposed Garden Village SDA; the three proposed allocations at Woodstock should be deleted and the indicative housing requirement amended to 4,350. The West Eynsham development area for up to 550 dwellings could be held in reserve as a contingency site to be released if the Garden Village delivery trajectory slows or there are delays in bringing the site forward within the Local Plan period.</td>

</tbody>
</table>
As outlined previously, objection is raised to the proposal for the unmet need from Oxford City being addressed in the period from 2021 onwards, rather than from 2011 based upon under-delivery in the City since then. Whilst delaying delivery of the unmet need until 2021 may reflect the work undertaken by the Oxfordshire Growth Board, as set out above, it is not disputed that North Eynsham will not deliver prior to 2021. However, this underlines the need for the Council to augment its housing land supply to identify and allocate additional land for housing in the short term to meet housing needs in the first half of the plan period and to speed up delivery by proposing some medium sized, deliverable sites. This is especially important given the very significant shortfall of 1,836 homes, the serious affordability concerns in the district (house prices 10 times lowest incomes) and in light of the Inspector’s preliminary findings that it was his initial view that unmet need would need to be taken into account in calculating the 5-year land supply (Paragraph 7.6 (IN015)). A consequential change is therefore required to Paragraph 9.5.37 (MM150) to reflect that for the purposes of 5-year supply over the whole plan period.

Notwithstanding our concern regarding the Council’s approach to only addressing unmet needs from the City of Oxford post 2021, the expectation that North Eynsham will deliver 220 dwellings per annum over a 10-year period is both optimistic and unrealistic. It is highly likely that North Eynsham will continue to deliver homes beyond the plan period. Whilst that in itself is not of concern, this underscores that it is unlikely to yield the number of homes within the plan period as claimed by the Council. The recent NLP report on housing delivery in November 2016 confirms that the average planning approval period for sites of 2,000 or more dwellings is 5 years and the average annual build out rate for sites of 2,000 or more dwellings is 161dpa: This reflects the limits to number of sales outlets possible on a site, and overall market absorption rates. Given the proximity of west Eynsham to the North Eynsham proposal, this is likely to affect the rate of delivery overall in terms of local market competition. We consider that Eynsham is unlikely to yield development completions in 2021 given the need for the planning approval process, including an Area Action Plan prior to a planning application and recognition of a delivery rate of 160dpa and a start in 2022 (the site is unlikely to deliver completions in its first calendar year), the site will only deliver 1,440 homes in the plan period: 760 less than assumed by the Council. Yet there is no Plan B.

<td>&gt; SECTION 9 - STRATEGY AT THE LOCAL LEVEL</td>
<td>1.0 INTRODUCTION 1.1 Kemp &amp; Kemp LLP is instructed by Mactaggart and Mickel Homes Ltd (&quot;our client&quot;) to prepare this submission in response to West Oxfordshire District Council’s (&quot;the Council&quot;) consultation on its Local Plan 2031 - Submission Draft Including Proposed Modifications (&quot;the draft Plan&quot;). 1.2 Our client is promoting Land to the South West of Downs Road, Standlake as a housing allocation with associated services and facilities. The site can be seen, outlined in red, on the plan found at Appendix 1 of this submission. 1.3 Our client notices that the Council is making a number of village housing allocations (Long Hanborough, Stonesfield and Sipton-u-Wychwood for example) in its draft plan. Standlake is a similar village with a similar level of services and facilities (see below). Our client also notices that there are two allocations in Long Hanborough; a village next to the town of Woodstock where significant growth is also proposed. As such, it is suggested that an allocation in Standlake would not add to planned growth in a nearby settlement but would merely help support the existing services and</td>

</tbody>
</table>
facilities within the village.

2.0 WEST OXFORDSHIRE LOCAL PLAN 2031 SUBMISSION VERSION INCLUDING PROPOSED MODIFICATIONS

Background

2.1 The Council first published a Draft Local Plan Part 1 in November 2012. The housing targets in that document were based primarily on South East Plan May 2009 figures extended on a pro-rata basis. The South-East Plan was revoked in March 2013.

2.2 Government guidance in paragraph 49 of the National Planning Policy Framework ("the Framework") states that local authorities should:
"use their evidence base to ensure that their Local Plan meets the full, objectively assessed needs for market and affordable housing in the housing market area"

The guidance goes on to state at paragraph 159 that local authorities should:
"prepare a Strategic Housing Market Assessment to assess their full housing needs, working with neighbouring authorities where housing market areas cross administrative boundaries. The Strategic Housing Market Assessment should identify the scale and mix of housing and the range of tenures that the local population is likely to need over the plan period"

2.3 This guidance led the Oxfordshire local authorities jointly to commission an Oxfordshire Strategic Housing Market Assessment ("SHMA"), which was published in April 2014. This countywide SHMA pointed to a requirement for more housing than had been anticipated previously, which in turn resulted in higher housing targets across the County.

3.0 THE LEVEL OF HOUSING PROPOSED IN THE PLAN

3.1 The SHMA identified a requirement in West Oxfordshire for 660 dwellings per annum (dpa) or 13,200 over a 20-year plan period. In the initial submission version of the draft Plan, the Council argued that the housing figures in the SHMA for West Oxfordshire were based on an abnormally high period of housing building and that consequently, the figures for the district were too high and should be adjusted downwards.

3.2 The Examination in Public ("EiP") into the Submission Draft Plan opened in the autumn of 2015. Following the initial hearing sessions, the Inspector in his preliminary findings stated that the level of housing identified in the Plan was not justified. This led to the Examination being suspended to allow the Council time to carry out further work on the level of housing that should be identified in the Plan.

3.3 The Plan now provides for the full 13,200 dwellings as identified in the SHMA as well as 2,750 new dwellings to assist in meeting Oxford’s unmet housing need for housing (a figure agreed through the Oxfordshire Growth Board).

3.4 Our client supports the position now being adopted by the Council. Anything less
would have been untenable and would have brought in to question the soundness of the Plan.

4.0 STANDLAKE

4.1 Standlake is situated on the A415 approximately 5 miles southeast of Witney. Oxford lies some 10 miles to the east. As of January 2013, its population was approximately 1400.

4.2 In the Council’s draft plan, Standlake is in the ‘village’ category (as opposed to a small village, hamlet or open countryside) so is therefore considered by the Council as one of the more sustainable settlements in the district.

4.3 The Council’s Settlement Sustainability Report November 2016 lists facilities available in Standlake. These include:

- A Full Time Post Office
- A Primary School
- Retail Services
- Community Building
- A Public House
- A Place of Worship
- Playing Fields
- Petrol Filling Station
- Local Employment Opportunities
- Access to a Principle Road
- Daytime Bus Service

5.0 LAND TO THE SOUTH WEST OF DOWNS ROAD, STANDLAKE

5.1 Land to the South West of Downs Road, Standlake is a site of some 13.1 ha, located relatively central to the village. Our client believes the site could accommodate some 150–200 dwellings. An allocation in this location would ease the burden on some other settlements where massive growth is proposed in the draft plan. The following demonstrates further why the site would make an appropriate housing allocation.

Urban Form

5.2 The site is bordered to the east by existing residential development (Heyford Close) as well as to the south (The Glebe). Development of the site would not extend the village boundary into open countryside and would integrate well with the aforementioned existing development.

Access / Transport Links

5.3 Vehicle access can be achieved from Downs Road. A number of pedestrian and cycle links could also be provided to the village’s amenities. The St Giles Church Bus Stop is only some 400m from the site. Government guidance in its ‘Manual for Streets’ suggests a walking distance of 800m is appropriate. Table 1 below shows the regular bus services available at this bus stop.

<td>18 Stagecoach Oxford - Eynsham - Standlake - Bampton X15 Stagecoach Witney - Standlake - Kingston Bagpuize - Abingdon</td>
<td>Heritage and Ecology 5.4 The site is not within or next to a Conservation Area. It does not contain any buildings of historical importance and does not have any designated environmental constraints. Landscape 5.5 The site does not sit within or next to a designated landscape area. As it is next to existing built development, the area has already been urbanised to a good extent. Any development would be sensitive to the location and would add to the character of the existing and surrounding pattern of built form. Flooding 5.6 The site is within Flood Zone 1 which has the lowest risk of flooding.</td>
<td></td>
</tr>
</tbody>
</table>

6.0 SUMMARY AND CONCLUSIONS

6.1 It has already been established by the Council that Standlake is a sustainable location for development. The draft plan does not currently make any allocation in the village. An allocation here would help relieve some of the onus on settlements which have significant growth proposed for them in the draft plan.

6.2 Our client therefore suggests that Land to the South West of Downs Road, Standlake would make a suitable and sustainable allocation for the following reasons:

- The site sits within an already urbanised area of Standlake and has good transport links to Oxford and elsewhere. Any development would integrate naturally with existing higher density development.
- The site is not within a Conservation Area, nor does it contain any historically important buildings.
- The site is in Flood Zone 1 and is not constrained by an environmental or landscape designation.
- The site is available immediately for development.

We enclose a plan (Appendix 3) showing Sharba Homes interest at North Leigh (the area of land to the north of the farm only). We have submitted elsewhere that our discussions with the owners of Myrtle Farm, Long Hanborough have confirmed that this site is NOT available for development and that they have not themselves submitted details of the site for approval and nor have they authorised any party to do so on their behalf. As such, this 50 dwelling proposal is not an available option. The enclosed site at North Leigh can be considered as a suitable alternative given North Leigh is a sustainable location for development as shown by the recent consents there. The development can be screened with appropriate copse planting in the western corner and southern boundary. The site is unaffected by any designations or Eynsham Hall / Park, unlike other sites being promoted in the village. The site can accommodate a development of up to 85 dwellings at a maximum density of 30 dwellings per hectare which is considered appropriate for the area. We can facilitate...

<td>North A40 Land Consortium</td>
<td>-</td>
<td>-</td>
<td>2134</td>
<td>&gt; SECTION 9 - STRATEGY AT THE LOCAL LEVEL &gt; Eynsham Woodstock Sub Area &gt; MAIN 150</td>
<td>As per proposed modifications Main Modification 148 and Main Modification 150, the Consortium generally supports the total indicative housing requirement of 5,500 homes for the Eynsham-Woodstock sub-area as a minimum threshold for housing delivery over the plan period. It is however, noted that such a figure should not be considered an absolute or ‘up to’ level of housing delivery. The Consortium therefore consider that the wording of relevant policies should reflect specified housing requirements as a minimum target. As such, the Consortium supports as a minimum that the proposed West Oxfordshire Garden Village will deliver around 2,200 new homes by 2031 to contribute entirely towards meeting the housing needs of Oxford City. It is noted at paragraph 9.5.40b that delivery is expected between 2021 and 2031, unless delivery can be accelerated. It is emphasised by the Consortium that development should come forward at an appropriate time, as informed by relevant technical evidence. Notwithstanding, the Consortium agrees that the delivery of new homes at the proposed Garden Village should be treated separately for the purposes of 5 year housing land supply.</td>

<td>2180</td>
<td>&gt; SECTION 9 - STRATEGY AT THE LOCAL LEVEL &gt; Eynsham Woodstock Sub Area &gt; MAIN 150</td>
<td>Growth at Eynsham Growth along the A40 corridor at Eynsham is supported in principle. A planned package of improvements is in the conceptual design stages which currently includes a dedicated east bound bus lane from Eynsham to Oxford which will support growth in this location. A park and ride is also planned at Eynsham which will encourage growth along the A40 corridor to undertake sustainable, faster journeys to Oxford. The County Council welcomes further working with West Oxfordshire to secure more funding to enable further improvements along the corridor between Witney and Eynsham. Excellent pedestrian, cycle and public transport links should also be created from the outset to key destinations such Hanborough station and to other services and facilities.</td>

<td>Mrs</td>
<td>Jacobs</td>
<td>2219</td>
<td>&gt; SECTION 9 - STRATEGY AT THE LOCAL LEVEL &gt; Eynsham Woodstock Sub Area &gt; MAIN 150</td>
<td>Appendix 2 – Education Comments Woodstock 21. The Proposed Modifications Plan includes three allocations within Woodstock. A live application is currently being assessed for ‘Land East of Woodstock’ for 300 dwellings. The remaining two are to the north of Woodstock. 22. Oxfordshire County Council objects to the Land North of Banbury Road allocation (250 dwellings). The existing road network would be unable to accommodate the increase in housing without large scale mitigation measures and it is unclear how an allocation of 250 dwellings would be able to deliver this. Additionally the site is in an unsustainable location when considering access to key bus routes and to local amenities. 23. The allocation has further problems in that, together with the allocation ‘North of Hill Rise’ for 120 dwellings, the cumulative growth would be unable to be accommodated at the primary school without the county objecting to growth in the north of Woodstock ahead of a new site and primary solution being found. 24. Longer term this objection may need to be revisited should further allocations in Woodstock be made within the boundary of Cherwell.</td>
</tr>
</tbody>
</table>
Non-strategic sites totalling 670 homes are included for Woodstock, none of which provides a site for school provision. The current primary school is 1.5 form entry, and is full. This scale of development would require up to another form of entry of primary school provision. The school’s current site area would not support this scale of growth. It may be possible to expand the school, to 2 form entry, but the site area would be below government standards. It would not be feasible to expand it beyond 2 form entry, and therefore the scale of growth proposed incurs a significant risk of the school’s capacity being exceeded. The scale of growth is insufficient to make a new school viable. A more sustainable education solution could be provided with a larger scale of housing growth which brought forward a site for a new primary school building. This could be brought forward through a strategic allocation which includes land in Cherwell District Council. An alternative solution could be provided if land adjacent to the primary school site could be made available to facilitate the school’s further expansion. This could create opportunities for new community facilities in the heart of Woodstock.

<td>2.27. The sub-area housing target of 5,500 is noted, however, the table should be modified to ensure that there is total clarity between that part of the supply figure which is for Oxford’s unmet needs and that which is for West Oxfordshire. This will ensure that there is no uncertainty in calculating 5-year housing land supply for West Oxfordshire. In terms of the allocations made, concerns have already been expressed about the Myrtle Farm allocation and the Garden Village. However, notwithstanding that, the anticipated windfall figure of 324 could be further reduced by making additional allocations, notably for land at Long Hanborough (see Section 3 of this Document).</td>

<p>| MM788         | Mr Murray and Mr Blackwell | Mr Murray and Mr Blackwell | Mr Murray and Blackwell | 2312 | &gt; SECTION 9 - STRATEGY AT THE LOCAL LEVEL &gt; Eynsham Woodstock Sub Area &gt; MAIN 150 | 3.0 Omission Site - Land north of the A4095 |
|               |                        |                |                  |            |                  | 3.1. The purpose of this Section of the Representation Statement is to make the case for the allocation of the above site, as shown on the plans attached to this document. This is considered to be sound as it is consistent with the guiding principles in national policy. |
|               |                        |                |                  |            |                  | 3.2. In terms of the principle of development, given that the Plan is allocating additional housing to Long Hanborough and the evidence base supports additional development at the village in its role as a rural service center, it is considered that there is the ability to provide a site for an additional 50 dwellings, subject to masterplanning, in lieu of Myrtle Farm. |
|               |                        |                |                  |            |                  | 3.3. The land is being promoted by the site owners for development. It is available immediately and there are no legal barriers to its development. |
|               |                        |                |                  |            |                  | 3.4. Land North of the A4095 on the eastern edge of the village, between Park Lane and the railway line. |
|               |                        |                |                  |            |                  | 3.5. The attached plan shows the site along with an indicative layout, which was only for capacity testing purposes only. Could you please disregard the layout and utilise the attached plan for site identification purposes. |</p>
<table>

<th>Proposed Use</th>
</tr>
</thead>
<tbody>
<tr>
<td>3.6. Residential Development - up to 50 units, which could be easily delivered in 5 years, subject to planning permission.</td>
</tr>
<tr>
<td>3.7. The Site can provide a mix of open market and affordable housing in accordance with relevant development plan policies.</td>
</tr>
<tr>
<td>Designations</td>
</tr>
<tr>
<td>3.8. The submission site is not subject to any site-specific designations in the emerging Local Plan.</td>
</tr>
<tr>
<td>3.9. The site is not in the flood plain (flood zone 1) and is not immediately adjacent to it or a watercourse.</td>
</tr>
<tr>
<td>Analysis</td>
</tr>
<tr>
<td>3.10. In terms of the principle of development, the emerging Local Plan recognises Long Hanborough as a location for additional housing development.</td>
</tr>
<tr>
<td>3.11. Therefore, the development of the site would be entirely consistent with the strategy already set out in the Local Plan and its development could make an important contribution to housing and supply in the District and could be justified (at its most basic level) by the units which are considered to come form windfall sites in the Eynsham and Woodstock Sub-Area. Therefore, in accordance with paragraph 55 of the Framework, additional development will help maintain the vitality of the village, by providing additional population and demand for the existing services and facilities already available in the village.</td>
</tr>
<tr>
<td>Access</td>
</tr>
<tr>
<td>3.12. In terms of its accessibility, the site is located on the eastern edge of the village, sandwiched between the residential development of Park Lane and the railway line. As a result it has an urbanised context. The site enjoys direct access on the A4095 and there is a combined pedestrian footway/cycleway, which forms the southern boundary of the site. This provides a direct route into the centre of the village, being circa 1km distant. This is within walking/cycling distance for access to the primary school and the Co-Op supermarket, without the need to travel by private car. The A4095 is on a bus route, with bus stops a short distance to the east and west of the site.</td>
</tr>
<tr>
<td>3.13. In addition to the services in the village centre, to the east of the site (on the opposite side of the railway line) is the business park and railway station. These can equally be accessed on foot or by bicycle.</td>
</tr>
<tr>
<td>3.14. In highways terms, the A4095 runs east west past the site and is generally straight, with good visibility in either direction. The site can be accessed directly from the road, via an existing 5 bar wooden gate. The speed limit along this stretch of road is 30mph and there are examples of active speed control measures in the form of speed cameras and automatic warning signs, as well as passive measures, such as highways marking.</td>
</tr>
</tbody>
</table>
Landscape

3.15. As set out above, the site is not subject to any specific landscape designation. It is currently used as pony paddocks.

3.16. A review of the evidence base for the emerging Local Plan shows that the site has not been the subject of any form of landscape assessment. The 1998 Landscape Character Assessment for the District shows the site as being part of an area characterised as ‘semi enclosed valley-side farmland’ in the Lower Evenlode Valley sub area. Page 45 of the document considers that such areas are:

"visually sensitive and any development would need to be closely and sensitively integrated with existing buildings or with a strong landscape structure."

3.17. Whilst the age of the Landscape Assessment means that it clearly pre-dates the NPPF and PPG, even back in 1998, the Assessment provides a framework for the development of this type of site. In the case of this site, it is considered to be suitable for development because of its urbanised context and clear physical boundaries. In this case, whilst its allocation is sought it would equally be able to be delivered as a windfall site, compatible with policy H2 of the emerging Local Plan.

Proximity to the Railway

3.18. The proximity of the site to the Railway line is not considered to be a barrier to development. In supporting this position, the Network Rail response to planning application 15/03797/OUT (a residential development of 120 houses on the south side of the A4095) shows that there are no technical barriers to development in such proximity to the railway line.

Conclusions

3.19. As a result of the above, it is recommended that MAIN172 is replaced with a new policy allocating this site four housing development.

I object to the inclusion of the following planning allocations in the Draft Local Plan 2031:

* Land North of Hill Rise- (120 houses) The nature and location of this proposed allocation on a hill site bordering the heavily trafficked A44 will NOT provide a "safe and suitable access" or exit for vehicles, pedestrians and cyclists. It should be deleted on highway safety grounds due to cumulative increases in traffic and accidents. A similar planning application for this site was rejected in 2013. Nothing material has changed.

* Land North of Banbury Road off Green Lane (250 houses): The location of this proposed allocation adjoins the Glyme and Dorn Rivers Conservation Area. It is an inappropriate and unacceptable use of productive farmland, which will lead to the deterioration and loss of important biodiversity habitats. It will adversely impact upon the bordering natural Conservation Area. Traffic volumes will increase on Banbury, Hensington and Shipton Roads and the A44 with associated increases in traffic accidents and lung damaging air pollution in the area.

I therefore call for the deletion of these traffic and environmentally damaging allocations from the finalized

| MM800 | | Paul O Hagan | Mr | O Hagan | 2335 | > Eynsham Woodstock Sub Area > MAIN 150 | I object to the inclusion of the following planning allocations in the Draft Local Plan 2031:  
* Land North of Hill Rise - (120 houses) The nature and location of this proposed allocation on a hill site bordering the heavily trafficked A44 will NOT provide a “safe and suitable access” or exit for vehicles, pedestrians and cyclists. It should be deleted on highway safety grounds due to cumulative increases in traffic and accidents. A similar planning application for this site was rejected in 2013. Nothing material has changed.  
* Land North of Banbury Road off Green Lane (250 houses):  
The location of this proposed allocation adjoins the Glyme and Dorn Rivers Conservation Area. It is an inappropriate and unacceptable use of productive farmland, which will lead to the deterioration and loss of important biodiversity habitats. It will adversely impact upon the bordering natural Conservation Area.  
Traffic volumes will increase on Banbury, Hensington and Shipton Roads with associated increases in traffic accidents and air pollution.  
I therefore call for the deletion of these traffic and environmentally damaging allocations from the finalized Local Plan 2031. |
| MM801 | | Claire Cadwaladr | Mrs | Cadwaladr | 2336 | > Eynsham Woodstock Sub Area > MAIN 150 | I object to the inclusion of the following planning allocations in the Draft Local Plan 2031:

It is an inappropriate and unacceptable use of productive farmland, which will lead to the deterioration and loss of important biodiversity habitats. It will adversely impact upon the bordering natural Conservation Area. Traffic volumes will increase on Banbury, Hensington and Shipton Roads with associated increases in traffic accidents and lung damaging air pollution in the area. I therefore call for the deletion of these traffic and environmentally damaging allocations from the finalized Local Plan 2031.</td>

AT THE LOCAL LEVEL > Eynsham Woodstock Sub Area > MAIN 150

* Land North of Hill Rise - (120 houses) The nature and location of this proposed allocation on a hill site bordering the heavily trafficked A44 will NOT provide a "safe and suitable access" or exit for vehicles, pedestrians and cyclists. It should be deleted on highway safety grounds due to cumulative increases in traffic and accidents. A similar planning application for this site was rejected in 2013. Nothing material has changed.

* Land North of Banbury Road off Green Lane (250 houses):

The location of this proposed allocation adjoins the Glyme and Dorn Rivers Conservation Area. It is an inappropriate and unacceptable use of productive farmland, which will lead to the deterioration and loss of important biodiversity habitats. It will adversely impact upon the bordering natural Conservation Area.

Traffic volumes will increase on Banbury, Hensington, Shipton Roads and the A44 with associated increases in traffic accidents and lung damaging air pollution in the area.

I therefore call for the deletion of these traffic and environmentally damaging allocations from the finalized Local Plan 2031.

| MM915         |                         | Jane Whelan     | Ms               | Whelan            | 2472      | Woodstock Sub Area > MAIN 150 | I object to the inclusion of the following planning allocations in the Draft Local Plan 2031:  
* Land North of Hill Rise - (120 houses) The nature and location of this proposed allocation on a hill site bordering the heavily trafficked A44 will NOT provide a “safe and suitable access” or exit for vehicles, pedestrians and cyclists. It should be deleted on highway safety grounds due to cumulative increases in traffic and accidents. A similar planning application for this site was rejected in 2013. Nothing material has changed.  
* Land North of Banbury Road off Green Lane (250 houses): The location of this proposed allocation adjoins the Glyme and Dorn Rivers Conservation Area. It is an inappropriate and unacceptable use of productive farmland, which will lead to the deterioration and loss of important biodiversity habitats. It will adversely impact upon the bordering natural Conservation Area.  
Traffic volumes will increase on Banbury, Hensington, Shipton Roads and the A44 with associated increases in traffic accidents and lung damaging air pollution in the area.  
I therefore call for the deletion of these traffic and environmentally damaging allocations from the finalized Local Plan 2031. |

| MM958         |                         | Rosie Redpath   | Ms               | Redpath           | 2519       | Woodstock Sub Area > MAIN 150 > SECTION 9 - STRATEGY AT THE LOCAL LEVEL > Eynsham Woodstock Sub Area > MAIN 150 | I object to the inclusion of the following planning allocations in the Draft Local Plan 2031:  
* Land North of Hill Rise - (120 houses) The nature and location of this proposed allocation on a hill site adjoining the heavily trafficked A44 will NOT provide a “safe and suitable access” or exit for vehicles, pedestrians and cyclists. It should be deleted on highway safety grounds due to cumulative increases in traffic and accidents. A similar planning application for this site was rejected in 2013. Nothing material has changed.  
* Land North of Banbury Road off Green Lane (250 houses):  
The location of this proposed allocation adjoins the Glyme and Dorn Rivers Conservation Area. It is an inappropriate and unacceptable use of productive farmland, which will lead to the deterioration and loss of important biodiversity habitats. It will adversely impact upon the bordering natural Conservation Area.  
Traffic volumes will increase on Banbury, Hensington and Shipton Roads with associated increases in traffic accidents and air pollution.  
I therefore call for the deletion of these traffic and environmentally damaging allocations from the finalized Local Plan 2031. |

Free movement of traffic is difficult enough as it is - generating more in Woodstock and surrounds makes it impossible, bottlenecks and pollution all round. There is a better way. Need not greed. |

<td>I therefore call for the deletion of these traffic and environmentally damaging allocations from the finalized Local Plan 2031. I have personally made my objections known to the press, having been interviewed by an Oxford Mail/Times journalist. My exit onto the A44 from Manor Farm in Old Woodstock is exceptionally dangerous - an accident waiting to happen. Potentially 240 more cars is unthinkable in terms of road safety.</td>

| MM979         |                         | Sharon McGee   | Ms              | McGee             | 2544       | > SECTION 9 - STRATEGY AT THE LOCAL LEVEL > Eynsham Woodstock Sub Area > MAIN 150 | I object to the inclusion of the following planning allocations in the Draft Local Plan 2031:  
* Land North of Hill Rise - (120 houses) The nature and location of this proposed allocation on a hill site bordering the heavily trafficked A44 will NOT provide a "safe and suitable access" or exit for vehicles, pedestrians and cyclists. It should be deleted on highway safety grounds due to cumulative increases in traffic and accidents. A similar planning application for this site was rejected in 2013. Nothing material has changed.  
* Land North of Banbury Road off Green Lane (250 houses): The location of this proposed allocation adjoins the Glyme and Dorn Rivers Conservation Area. It is an inappropriate and unacceptable use of productive farmland, which will lead to the deterioration and loss of important biodiversity habitats. It will adversely impact upon the bordering natural Conservation Area.  
Traffic volumes will increase on Banbury, Hensington, Shipton Roads and the A44 with associated increases in traffic accidents and air pollution.  
I therefore call for the deletion of these traffic and environmentally damaging allocations from the finalized Local Plan 2031. |
| MM980         |                         | Adam Bolter    | Mr              | Bolter            | 2545       | > SECTION 9 - STRATEGY AT THE LOCAL LEVEL > Eynsham Woodstock Sub Area > MAIN 150 | I object to the inclusion of the following planning allocations in the Draft Local Plan 2031:

bordering the heavily trafficked A44 will NOT provide a "safe and suitable access" or exit for vehicles, pedestrians and cyclists. It should be deleted on highway safety grounds due to cumulative increases in traffic and accidents on Manor Road 7 the A44. A similar planning application for this site was rejected in 2013. Nothing material has changed.

* Land North of Banbury Road off Green Lane (250 houses):

The location of this proposed allocation adjoins the Glyme and Dorn Rivers Conservation Area. It is an inappropriate and unacceptable use of productive farmland, which will lead to the deterioration and loss of important biodiversity habitats. It will adversely impact upon the bordering natural Conservation Area.

Traffic volumes will increase on Banbury, Hensington, Shipton Roads and the A44 with associated increases in traffic accidents and lung damaging air pollution in the area.

I therefore call for the deletion of these traffic and environmentally damaging allocations from the finalized Local Plan 2031.

| MM1000       |                         | J E Walker | - | Walker | 2571 | LOCAL LEVEL > Eynsham Woodstock Sub Area > MAIN 150

I object to the inclusion of the following planning allocations in the Draft Local Plan 2031:

* Land North of Hill Rise - (120 houses) The nature and location of this proposed allocation on a hill site bordering the heavily trafficked A44 will NOT provide a "safe and suitable access" or exit for vehicles, pedestrians and cyclists. It should be deleted on highway safety grounds due to cumulative increases in traffic and accidents on Manor Road 7 the A44. A similar planning application for this site was rejected in 2013. Nothing material has changed.

<td>I am responding to the Local Plan consultation with regard to proposals for Eynsham. First, we are developing a Neighbourhood Plan. This is near completion and as it will be compliant with the Local Plan - should be the vehicle for managing growth in the Parish. Second, all the development (3,200 homes) proposed for the Village should be included in the Garden Village north of the A40. The village should not have to contend with a large, brand new settlement AND excessive development to the west. Third, the proposal to build 1000 homes to the west is wildly out of scale with the village and will wreck its rural character, prevent easy access to the countryside, and will generate unmanageable additional traffic. I very strongly object to the scale of this proposal. The sites in the west should be held in reserve and any prospective development limited to 400-500 inclusive of the Thornbury rd development. There certainly shouldn’t be any development south of Chilbridge. Fourth, the recently agreed speculative development on Thornbury road should be carefully planned so not all access is via Thornbury rd. Finally, we would ask that growth in Eynsham is carefully phased with the Garden Village given priority.</td>

<td>Comments are made on behalf of Eynsham Parish Council. Para 9.5.37 / Table 9.4: Comment: Unsound – options haven’t been assessed adequately and as a result lack of reserve sites may prejudice delivery of enough homes up to 2031. The changes to the LP make no allowance for non-delivery of any particular site. There is no reserve provision that we can see within district, sub-area or even within the SDA/AAP areas at Eynsham. Table 9.4 is typical, requirement is 5500 but total of proposed sites is 5474 showing no spare sites within the sub-region. In contrast, the Eynsham Neighbourhood Plan (ENP) accepts the figure of 3200 new homes within the Parish but which it considers would be better constructed within the new Garden Village north of the A40. There are strong indications from other ‘new communities’ that a new settlement of 2200 houses will struggle to fund the necessary infrastructure, especially on land that has been put forward for housing with the consequent...</td>

<td>high expectation for the land value that will be realised. Building more houses, sooner, is the best way to minimise the risk of inadequate infrastructure provision. Developers will need to provide infrastructure before houses are built as there is no spare primary school capacity and obviously no roads; there will therefore be more than usual pressure from the financial backers of such a major project to build quickly to cover these costs - something that WODC should be focussing on to ensure a better build rate than has achieved over recent years. The ENP currently recommends 600 new homes to the west of Eynsham as its reserve site for development in the future, but with the possibility of development within the currency of the 2031 Plan if problems are found that delay or limit the delivery of new homes north of the A40.</td>

<td>Requirement for specific policy on Oxford Green Belt Given the large-scale development now proposed just outside the Oxford Green Belt at Eynsham, CPRE believes that WODC should bring forward a specific Green Belt policy which lays out the Council's policy and intentions in detail. References scattered through the text of the Plan to &quot;protecting&quot; &quot;acting in line with Government's Green Belt objectives&quot; etc. are not specific and so are difficult to apply to real situations. A Policy is needed not just to show the constraints which have been applied in the process of producing the Local Plan, but as a template against which future planning applications can be judged. This would also make sense in the context of Para 9.5.40h which refers to a potential extension of the Green Belt in the vicinity of the new Garden Village. Whilst this may be the desired outcome, the risk is of course that the alternative - encroachment onto the Green Belt - is the more likely proposal to come forward. A robust policy is therefore required to set out WODC's position.</td>

<td>Nick Small, Stagecoach Bus</td>
<td>Dr</td>
<td>Small</td>
<td>1009</td>
<td>Woodstock Sub Area &gt; MAIN 152</td>
<td>MAIN 152 paras 9.5.40a-c Strategic Development Areas at Eynsham Stagecoach recognises and concurs with the conclusion drawn by the Council from the evidence base before the Examination that, subject to suitable infrastructure being put in place, Eynsham and its immediate environs represents one of the most sustainable location to accommodate development, and in particular, help provide for the contribution the District needs to make towards meeting the objectively-assessed housing needs of the City of Oxford. It is evident that this potential should be dependent on the delivery of the radically improved levels of reliability and significantly reduced bus journey times that ought to be achievable when then committed A40 Science Transit Phase 1 is delivered, that will unlock the direct bus route from Eynsham to Oxford Northern Gateway and beyond to both the City Centre, and the Eastern Arc, which now accounts for about as many jobs as the central area. This new regular direct bus link will be essential to ensure that relevant attractive bus services will be available to a large number of motorists that today cannot take advantage of credible convenient public transport options. Stagecoach is already committed to putting such links in place when reliable journeys can be provided, following the delivery of the bus lanes. Strategic development in Eynsham, much of it directly related to the proposed Park and Ride site, will significantly assist in delivering a further critical mass of demand to support higher service frequencies, thus helping create and sustain sufficient volumes to provide services of still higher frequency, further assisting in the relevance and convenience of these services to potential users. At the same time it is worth noting that frequent services exist, and will continue, from Eynsham to both Witney and Carterton, offering an even fuller range of local journey options without the need to rely on personal car use.</td>

<td>Kent</td>
<td>1148</td>
<td>&gt; SECTION 9 - STRATEGY AT THE LOCAL LEVEL &gt; Eynsham Woodstock Sub Area &gt; MAIN 152</td>
<td>The ‘expression of interest’ in a Garden Village (GV) of 2,200 houses in Eynsham Area to accommodate the needs of Oxford’s industry is totally illogical. Building closer to Oxford, even in the green belt, would be more logical. Why no assessment of reviewing the Green Belt around Oxford, and locating more housing accessible to existing jobs, facilities, social networks and extended bus routes, without the necessity of commuting? The late inclusion of proposals for a ‘Garden Village’ of 2,200 houses adjacent to the A40 and to Eynsham, did not take account of the draft ENP and does not leave proper time for consideration if, owing to the constraints of the ‘Strategic Housing Market Assessment’, the Modified Local Plan has to be decided by March 2017. The proposed development of 3,200 new houses (EW1a and EW1b) will more than double the size of existing Eynsham Area (2000 houses) and will completely change the nature of Eynsham village. The quantum of development in and around Eynsham is disproportionate. The effect on the existing roads, facilities and services is obvious and severe. Creating and sustaining a balanced community (income, age, ethnicity, house type, etc) will be problematical, especially given the commuting to Oxford. The housing need targets in SMHA are unsubstantiable. Double the Government’s own forecasts! Produced to meet unelected developers’ and businesses’ aspirations. The building industry cannot and will not build to the target (inadequate capacity, too much supply reduces demand/ price, etc). The targets are more than double the previous building rates, which accepting the demand /supply decline after the 2008 Recession, are not</td>

| MM491        | Crest Strategic Projects | -              | Crest Strategic Projects | -              | 1573       | > SECTION 9 - STRATEGY AT THE LOCAL LEVEL > Eynsham Woodstock Sub Area > MAIN 152 | Main 152: Paragraph 9.5.40a-c  

9.18 As set out in response to Main 150 consideration should be given to increasing development at the proposed Garden Village to meet the full 2,750 dwelling requirement prescribed by the Oxford Growth Board (OGB). The Council has noted that development is not anticipated to come forward until after 2021, but there is potential for this to be accelerated. Concentration at the single SDA would allow for numerical and spatial ‘ring-fencing’ of the unmet need component of the housing land supply and would also offer potential scale-related benefits for infrastructure delivery and viability.  

9.19 It is recommended that the West Eynsham SDA be deleted as an allocation. In recognition of the need to provide flexibility and capacity, as part of the plan-making process, to adapt and respond to rapid changes the component of the proposed West Eynsham SDA allocated to help meet the unmet housing needs of Oxford City (550 dwellings) could be identified as a reserve housing allocation to be released if monitoring shows that the Garden Village is not being brought forward sufficiently quickly to respond to meeting the housing needs of Oxford. The site should be reserved only for this purpose with a strict release mechanism identified to ensure that the monitoring exercise relates only to the 2,750 dwelling requirement assigned under the duty to cooperate.|

| MM733        |                         | Angie Titchen   | Dr Titchen       | 1696              | > SECTION 9 - STRATEGY AT THE LOCAL LEVEL > Eynsham Woodstock Sub Area > MAIN 152 | Para 9.5.40 a-d: Strategic Development Areas (SDA) should have local Eynsham involvement. Although Tilgarsley, if it goes ahead, will eventually become a separate entity it will be very similar to Eynsham and will benefit from local knowledge and involvement during the Area Action Plan (AAP) stage (para 9.5.40h) and early build stages.  

I support this involvement because although I accept the concept of a garden village and am not against new development on the west in Eynsham, I am concerned that there could be adverse environmental, ecological and social consequences from building a Garden Village on this site. I say more about this below.  

Para 9.5.40b-c: I am extremely concerned about the total number of new homes proposed in the West Oxfordshire Garden Village and the West Eynsham SDAs. We are not NIMBYs in Eynsham and, as you know, we have embraced and planned for substantial, sustainable development of approximately 600 houses on the west and exploration of a small development on the north, if the A40 was re-routed. This planning was guided by the principle that new residents in Eynsham Parish should enjoy the same much-loved rural character, village feel, services and community spirit that current residents do. However, seeing the figures, I am worried that the huge number of homes overall will almost double the size of our village by 2031 and, I fear, will change it for the worse irreversibly. And I understand there are plans to add another several thousand homes in the life of the next Local Plan. I am aware that the WO Garden Village is to be separate in terms of its infrastructure, but the siting of it in the WODC Expression of Interest, so close to our northern boundary (the A40), belies a social, spatial and visual separation (of which more later).  

3.MAIN 153:  

Para 9.5.40d: I agree with these principles.  

Para 9.5.40e: I strongly disagree that the site has no significant physical constraints. There are known serious flood risks, endangered and vulnerable arable plantlife and a designated Local Wildlife Site. There are also likely to be archeological remains at Tars Grave and on the medieval village of Tilgarsley site. Robert Crocker who farms most of the land within the Garden Village site has been using a farming method to control flooding in this area over recent years and he is concerned that when the land is concreted over, flooding will become a serious risk to the south (presumably including the A40 and Eynsham). He also has wildlife survey evidence (plants, birds, insects, moths) over several years on this land. He is someone who could be invited to contribute to the AAP on these matters?  

I have also heard from a local resident that his relatives own some land within the proposed site (Expression of Interest) and they have refused numerous approaches to sell their land. They do not intend to sell now.  

I imagine that these and similar issues will emerge when the AAP is developed and rigorous enviromental, ecological and archeological surveys are commissioned by WODC.  

Para 9.5.40 h-r: various features of Tilgarsley Garden Village are noted – many of them good ideas – but there should be a commitment to investing in the Area Action Plan as soon as possible, if necessary using local WODC resources.  

I am concerned that the idea of the Garden Village meeting Oxford’s unmet need or an overspill community is actually a sham. It can only be, just an addition to the national pool of new houses, as there are no means by which developers could be forced to sell only to those who currently live or work in Oxford.  

Para 9.40h: Matters of delivery and phasing are critical for me too. If unthought-through and carefully
managed, this delivery, not only for the developing the Garden Village but also the western development could be fatal for Eynsham, given the current and ever increasing traffic congestion on the A40 and in the village centre at peak times. Moreover, the risk of gravel extraction forever looms large around Eynsham and, I understand, most recently on the land immediately east of the Garden Village, north of the A40.

I do not agree with a focussed Oxford Green Belt review for the purpose of building further houses close to the Garden Village. I do, however, support a wider review because I agree strongly with Professor Danny Dorling (see http://www.oxfordtoday.ox.ac.uk/features/how-solve-oxfords-growing-housing-crisis) that, on environmental and social grounds, Oxford’s unmet housing need should be provided near the city limits of Oxford. I understand that Oxford City will review their Local Plan and that WODC should input into this process to make sure that Oxford City bring forward all suitable options within their Green Belt or brownfield sites.

Para 9.5.40i: Regarding accelerating the lead-in time to construction, it is essential that infrastructure is built first, so that residents of the first phase of houses built have all the services they need when they move in. Eynsham’s infrastructure cannot cope with providing a transition period until full services are ready on the new sites. Developers often prefer to build houses first so they can re-oup their investment early by selling them before the infrastructure is built. This need not be the case. The Dorchester Living Group built and completed a 850-pupil school in Heyford Park before building a single house. If Eynsham is expected to provide an infrastructure transition period then, funding to provide temporary accommodation/ provision, for example, extra consulting rooms at Eynsham Medical Centre, will have to be made. This of course would be a waste of money in the long run.

Para 9.5j: Genuinely affordable housing is essential and houses for long-term renting should be built to high standards too as so many people are likely never to be able to afford to buy their own home in the foreseeable future. Sheltered accommodation and a care home should also be built.

Para 9.5k-l: I have very mixed feelings about the Science Park for several reasons. The first relates to the point I make above about the Garden Village not necessarily being populated by researchers, academics and scientists from Oxford, they may be people who work in London, Witney, Oxford or anywhere else in West Oxfordshire. Second, I am not sure that servicing the Science Park (e.g. cleaners, caterers) would be the reason people would go to live there (or could afford to live there). There are probably many residents of Eynsham who might offer those services, but it is likely that they would drive there, thus adding to air pollution and congestion! Third, I have seen no evidence that Oxford Brookes or University of Oxford need this Science Park – there are already a number in and around Oxford. Are the universities sponsoring the Science Park? Is OXLEP going to find funding for all of it? Who else is going to fund it? Especially in the light of Brexit, many researchers are going to find it difficult to be principle investigators on EU funded projects and already, some research projects are foundering due to our impending withdrawal from the European Union. Don’t forget too, that Eynsham has several business parks and the ones on the south are half empty and becoming derelect. I would hate to see a similar fate for the Science Park. Also, why not consider building a Science Park if it is supported on a brownfield site within the Southern Industrial Estates?

Para 9.5m-p: We all know that OCC plans for a Park & Ride and an east-bound bus lane into Oxford are entirely insufficient for improving the A40 problem we have now, let alone when there is the increased traffic from all the new developments in West Oxfordshire. WODC needs to work with OCC to develop a visionary plan for West Oxfordshire including a light electric railway that connects up Carterton, Witney, Woodstock, Eynsham and Oxford. Only then will any of the Local Plan really work and get people out of their cars. Hanborough station is inadequate at the moment as you know also know. The platform would need

| MM745         | Gladman Developments Limited | Richard House (Gladman) | Mr House | 1798 | > SECTION 9 - STRATEGY AT THE LOCAL LEVEL > Eynsham Woodstock Sub Area > MAIN 152 | 10.1 Modifications (152 - 155) in combination propose the allocation of two Strategic Development Areas at Eynsham; West Oxfordshire Garden Village for 2,200 dwellings north of the A40 at Eynsham and land west of Eynsham for 1,000 dwellings. Whilst Gladman has no objection to the concept of new settlements and strategic urban extensions as sustainable means of providing new homes and associated infrastructure, it has concerns about the process of site selection that has been undertaken in respect of these two sites. In particular, it is concerned that all reasonable alternatives for development at Eynsham, the Eynsham/Woodstock Sub-Area and for the location of a new garden village do not appear to have been considered in the Sustainability Appraisal update (Oct 2016) that has been prepared by the Council to accompany the Main Modifications Schedule.  
10.2 In accordance with Section 19 of the 2004 Planning and Compulsory Purchase Act, policies set out in Local Plans must be subject to Sustainability Appraisal (SA). Incorporating the requirements of the Environmental Assessment of Plans and Programmes Regulations 2004, SA is a systematic process that should be undertaken at each stage of the Plan's preparation, assessing the effects of the Local Plan's proposals on sustainable development when judged against reasonable alternatives.  
10.3 The Council should ensure that the results of the SA process clearly justify its policy choices. In meeting the development needs of the area, it should be clear from the results of the assessment why some policy options have been progressed, and others have been rejected.  
Undertaking a comparative and equal assessment of each reasonable alternative, the Council's decision making and scoring should be robust, justified and transparent.  
10.4 Paragraph 3.11 of the 2016 Sustainability Appraisal Update explains that in considering strategic options for growth at Eynsham, consideration was given to the Oxford Growth Options Study prepared by LUC in July 2016 for the Oxfordshire Growth Board. That document considered only three strategic options for the Eynsham area: North, West and Eynsham Park Estate (applicable to land north of the A40 at Barnard Gate) that have never previously been considered. No additional Call for Sites exercise was undertaken by the Council to find sites that might fulfil this objective. The update goes on to say that the North and West options were progressed as reasonable alternatives as they were closest to Oxford and most likely to be deliverable. The Eynsham Park Estate site north of the A40 at Barnard Gate was not progressed as it had not been actively promoted and was found to have a number of major negative sustainability impacts.  
Barnard Gate New Village – Land to the South of the A40  
10.5 Gladman has an interest in 228 hectares of land to the south of the A40 at Barnard Gate. The site is of sufficient scale to accommodate the development of a new community and of sufficient size to provide the infrastructure required to support the new housing which can include, but is not limited to, major road lengthening and a double track laid to enable more frequent trains. When that and bus connectivity as set out in 9.5.40p are done, then this might work.  
Para 9.5.40q providing all the necessary facilities in the new village is good but Para 9.5.40r – good links between Eynsham and Tilgarsley (without the unnecessary and impractical 'iconic bridge') may be used by developers to back-pedal on building expensive infrastructure. Para 40q should be a binding principle, Para 40r is a nice benefit except that safe crossing must be provided for students attending Bartholomew School which should be listed in Policy EW1a.4. |
Improvements along the A40, a new Science Park including a new Park and Ride facility, which can complement a nearby scheme at North Eynsham. The scheme can also provide a new community central hub which can include local shops, a new primary school and community buildings. The settlement could be designed in such a manner that key facilities were accessible for all residents on foot or by bicycle with emphasis placed on sustainable modes of transport.

10.6 The site is within a single ownership and there are no legal barriers which hinder the delivery of development. The Environment Agency’s flood maps confirm the land is not at risk of flooding and the topography of the site means it is readily developable. In the absence of physical or legal barriers the site is deliverable and well placed to make a positive contribution to meeting the identified housing need.

10.7 The site is removed from existing settlements whilst being on a key arterial route. As such, development can be accommodated with minimal disruption to existing residents and accessible without need for additional traffic on rural roads or through local villages whilst occupiers of the new homes would benefit from existing and enhanced sustainable transport connections. The A40 passing the site is presently served by up to four buses every hour to Oxford, Witney and Eynsham providing a viable sustainable transport route for the site. The proposed development is of a sufficient scale to deliver significant infrastructure enhancements, including upgrades to the A40 corridor to the benefit of the broader area.

10.8 A Vision Document for the proposed development has been produced and is attached at Appendix 1 to this submission. As demonstrated in the Vision Document attached, Gladman considers that land south of the A40 at Barnard Gate presents a viable, realistic and preferable alternative to the large-scale expansion of Eynsham as it can deliver a similar range of uses and quantum of housing but with the following added advantages:

- It has a single landowner who has demonstrated a willingness to progress this site and has already started working with a promoter with the necessary expertise and consultant team actively developing proposals;
- Given its separation it can command an identity of a new settlement rather than an extension of Witney or Eynsham but it is conveniently located to ensure the proposal can be designed to avoid any unacceptable impacts to existing villages/towns;
- Being located equidistant from Witney and Eynsham, the impact of the development on local established communities would be lessened with the choice of destination for residents to access services and facilities if necessary;
- It has potential to utilise a more sustainable source of electricity from the solar farm on the north side of the A40;
- It can safeguard/contribute to the future aspirations for highway improvements along the A40;
- Due to the above (and unlike the Eynsham North proposals) it can make a meaningful contribution to housing delivery within the plan period and therefore a sound and valuable addition to the emerging Local Plan.

10.9 As the Council has not considered this site as a reasonable alternative location for strategic growth the Sustainability Appraisal Update is unsound.

<td>Although I strongly believe that more housing is needed and it would seem that WODC has responded to criticism, by Local Plan inspector, in planning for a new garden village adjacent to Eynsham. 1000 houses are already proposed for the west of Eynsham. Building 4000 houses to the north of the A40 creates a new town. Eynsham is a village and the centres mostly residential, based on a pattern of narrow medieval streets and a small square bordered by the church a pub and small cottages. There are other places in West Oxfordshire which could easily accommodate extra housing on a larger scale. Both Woodstock and Chipping Norton have commercial town centres. Oxfords unmet housing need could be dispersed around West Oxfordshire and a smaller settlement of up to 2000 houses would still cause some harm to Eynsham but would be more acceptable.</td>

<td>&gt; SECTION 9 - STRATEGY AT THE LOCAL LEVEL &gt; Eynsham Woodstock Sub Area &gt; MAIN 152</td>
<td>Allocating the whole of Oxford's excess allocation of unmet need to Eynsham and surrounding area is inappropriate because a) There is insufficient infrastructure in Eynsham compared with other sites where less than 500 houses could easily be accommodated. b) the A40 is already extremely busy. Not withstanding the proposed park and ride, more than doubling the population of Eynsham will put excessive strain, there are several other areas where housing could be built on</td>
</tr>
</tbody>
</table>
a green field site either with transport (e.g. rail) or nearer Oxford - e.g. surrounding Stanton St John.

c) Allocating 1000 houses to West Eynsham is inappropriate because about half the site is either floor plain or school playing field. The density of housing required will present a visual eyesore and is inappropriate for a village.

d) at least 250 local need houses could be built in the garden village site rather than west of Eynsham

e) The proposed link roads are inappropriate on the basis of cost, lack of wider economic benefits, serious landscape, amenity and environmental harm.

All in all these changes, which are excessive, appear ill thought out.

I reply to this latest consultation as a respondees to the first one and as a participant in the Examination last year. I therefore want my original comments to remain as they are with the following modifications

1. The level of additional demand to be met in WODC area meets my concern that it was unsound to separate out the allocations to meet local demand and the unmet Oxford demand as separate exercises

2. The making of an allocation to Eynsham area in principle meets a concern I had that without a specific allocation it would create a charter for the ad hoc and uncoordinated development of the area - and the potential that many proposals would only be resolved through a PLI

3. There however is a still a concern that the the proposed ‘new village’ to the north of Eynsham has not been through a thorough evaluation and consultation process of the particular proposal submitted to CLG nor of the alternatives. It also treats this provision as a separate and in effect unrelated exercise from the expansion of Eynsham in the west and south, when they should be treated as single planning process for the expansion of the village

4. Therefore if the total allocation is confirmed then the local plan should hold back from making site specific allocations but require this combined aggregate allocation for the Eynsham area to be brought forward though the Action Area planning process combined with the Neighbourhood plan

The majority of housing in the proposed Garden village and a sizable % of houses to the west are being proposed for Oxford’s unmet need, this is not enforceable unless new home owners are vetted to ensure they fulfil the criteria - developers will not soley sell to Oxfofds unmet need residents. Once purchased the house will also then be-able to be resold on the open market - the unmet need becoming a need again (or rented on the open market)

EYNSHAM:

I believe I will feel the same as many people when I say that the huge urban expansion of the Eynsham area will fundamentally change West Oxfordshire for ever. I believe as do many others that the housing and growth projections are fundamentally floored for Oxfordshire, and it is these that will see more than 3000 houses plus a huge employment site built in the Eynsham area. This is very disappointing.

I can only hope that as a council WODC take their time to ensure that both the ‘Garden Village’ and the 1000 home western extension are exemplar development sites with the best possible...

<td>&gt; SECTION 9 - STRATEGY AT THE LOCAL LEVEL &gt; Eynsham Woodstock Sub Area &gt; MAIN 152</td>
<td>Housing: 9.5.40b The last-minute inclusion of a proposed 'Garden Village' north of the A40 to help house Oxford's 'unmet need' is totally wrong. Oxford needs to deal with its population problems by dealing with the Green Belt south of the city. The citing of a village here would be a disaster environmentally (WOtDC has unerringly picked farmland of the highest environmental value and a very special recycling site). They obviously have not taken into account how the A40 would cope, or the problem of rain water management. And, obviously, it is the opposite side of Oxford from the majority of employment and the hospitals. Oxford should look south and east. 9.5.40b&amp;c The 'Garden Village' proposal plus extra housing to the west of Eynsham would double the housing in Eynsham. This is totally disproportionate. The infrastructure of Eynsham is already at breaking point.</td>
</tr>
</tbody>
</table>

Comments made on behalf of Eynsham Parish Council:

Para 9.5.40 a-c: Comment: Unsound – poor assessment of the alternatives will risk delivery of enough homes - no consideration of single SDA or justification for uncoordinated SDAs.

While the establishment of a Strategic Development Area (SDA) is a good way of ensuring the best outcome from a large development, establishing two separate SDAs on either side of the A40 will result in poor co-ordination between two sites that should be planned, at least in the early stages, to ensure. (We make no distinction between SDA and AAP - there should be one of each)

"Separation and connection of the two settlements shall be made as necessary for mutual benefit and where no significant long-term harm will be caused by one community to the other". ENP v1.3 Para. 16.1.

The ENP notes that connection will be important for:

* Secondary schooling that will be at Bartholomew School for both communities, but may require some extra building on a new site – a sixth form college has been suggested – as the Eynsham site cannot easily accommodate any more building.
* Road connection to the A40 where minimising the junctions will lessen delays to through traffic. There should also be a protected route to allow for improvement to the A40.
* Primary health care - as there are indications that there may be some difficulty ensuring adequate provision on both sites.
Green infrastructure will be an important element in both connecting the communities by foot / bicycle and in screening each from the other and the A40.

Inevitably the first residents of the new settlement will need to use some facilities within Eynsham on a temporary basis while their own are constructed.

Although the ENP suggests that West Eynsham should only be a reserve site for the 2031 Plan, it does accept that the site can be developed at some point and it is best to ensure this is done in co-ordination with its neighbouring site from the outset.

Interestingly, Section 7 - Transport - does treat the AAP as applying to the whole Eynsham area when considering transport matters.

The ENP also recommends that Eynsham Parish Council in the first instance provides some local representation on the AAP.

4.49 Two completely new SDAs are proposed within the Eynsham sub-area; the Garden Village SDA26 which is to become a new Rural Service Centre and West Eynsham SDA. These two SDAs will provide a total of 3,200 homes within the sub-area.  
4.50 It is noted that the Garden Village SDA is proposed as a new, separate Rural Service Centre. However, it is feasible that its role and function would be more akin to a Main Service Centre, especially when coupled with Eynsham. The Garden Village SDA is located next to Eynsham, separated by only the A40, and the Proposed Modifications seek to ensure good links across the A40 so that residents in Eynsham will be able to gain access to the Garden Village services, facilities and amenities and vice versa so that the two Rural Service Centres complement rather than compete with each other27.  
4.51 Furthermore, Eynsham itself is subject to a western extension in the form of the West Eynsham SDA. It is therefore clear that whilst the Eynsham-Woodstock sub-area does not currently have a Main Service Centre, |

<td>Providing “integrated and Accessible travel opportunities” from the proposed site, demands that the fullest possible integration is achieved with the proposed outer Park and Ride site that forms part of Science Transit Phase 1, to be delivered by 2020, and therefore before this site is anticipated to come on-stream to meet Oxford City’s unmet needs, nominally after 2021.</td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td>This dependency is critical in the view of Stagecoach, as it will allow initial phases to benefit directly from high frequency, reliable and direct bus services to a full range of destinations, if they are brought forward as close as possible to the P+R site; and if suitable connectivity is provided across the site boundary for pedestrians and cycles in particular. In the longer term, as demand further grows, it needs to be possible to run bus services terminating within the Garden Village directly through the P+R site to the continue to Oxford City in particular. Such an arrangement will maximise the frequency, and therefore the attractiveness, of the bus service offer at the Park and Ride. It will also help sustain the highest possible frequency of bus services to the Garden Village, as the synergies between locally-arising demand and that from P+R users will create a greatly higher overall combined demand for an integrated service provided in this manner, which can be exploited. This will be essential to making the “fullest possible use” of public transport, as required by NPPF paragraph 17, to best mitigate the transport impacts of the proposals; all the more so as the allocation is expressly proposed to meet housing needs arising outside the district in Oxford City.</td>
<td></td>

### Historic England makes no comment on the principle of the Garden Village proposal but paragraph 9.5.40e or one of the subsequent paragraphs should recognise that the site contains City Farm, a complex of grade II listed buildings and structures. Paragraph 126 of the National Planning Policy Framework requires local planning authorities to recognise (in their local plans) that heritage assets are an irreplaceable resource and to conserve them in a manner appropriate to their significance, and paragraph 132 of the Framework requires great weight to be given the conservation of heritage assets.

### Commercial Estates Group

Specifically, the opportunity provided by land adjacent to Hanborough Station has been wholly ignored in the Council’s process of assessing the most appropriate locations for strategic and non-strategic additional allocations.

This has resulted in the highly unusual position whereby the selected strategic options noted at paragraph 9.5.40o are not directly served by rail but the Council identifies, as a major benefit, the proximity of the proposed allocations at Eynsham to Hanborough Station and the potential to create high quality linkages to Hanborough Station.

The opportunities adjacent to Hanborough Station are of course immediately adjacent to this increasingly important transport hub and as such, and unlike locations at Eynsham or elsewhere, allow for people to walk to the station rather than a need to create wholly new linkages, over a distance of 3km, to it.

### Part of the site, near Lower Road has flooded in the past.

<td>I believe the plan to build the Garden Village so close to the existing village of Eynsham will mean that the two settlements will not be separate - they will naturally form a town consisting of two halves divided by a busy main road, with resulting dangers and inconveniences for all residents. As noted by other respondents, Garden Villages are intended to be separate from other settlements, and the proposed Garden Village will not be separate from Eynsham because of its proximity and the likelihood of sharing services between the two areas.</td>

| MM491         | Crest Strategic Projects | Crest Strategic Projects | - | Crest Strategic Projects | 1579 | Main 153: Paragraph 9.5.40d  
9.20 The quantum of development at the Garden Village SDA should be increased to 2,750 dwellings. |
| MM733         | Angie Titchen           | Dr Titchen      | -                | Titchen           | 1697 | Para 9.5.40 a-d: Strategic Development Areas (SDA) should have local Eynsham involvement. Although Tilgarsley, if it goes ahead, will eventually become a separate entity it will be very similar to Eynsham and will benefit from local knowledge and involvement during the Area Action Plan (AAP) stage (para 9.5.40h) and early build stages. I support this involvement because although I accept the concept of a garden village and am not against new development on the west in Eynsham, I am concerned that there could be adverse environmental, ecological and social consequences from building a Garden Village on this site. I say more about this below. Para 9.5.40b-c: I am extremely concerned about the total number of new homes proposed in the West Oxfordshire Garden Village and the West Eynsham SDAs. We are not NIMBYs in Eynsham and, as you know, we have embraced and planned for substantial, sustainable development of approximately 600 houses on the west and exploration of a small development on the north, if the A40 was re-routed. This planning was guided by the principle that new residents in Eynsham Parish should enjoy the same much-loved rural character, village feel, services and community spirit that current residents do. However, seeing the figures, I am worried that the huge number of homes overall will almost double the size of our village by 2031 and, I fear, will change it for the worse irreversibly. And I understand there are plans to add another several thousand homes in the life of the next Local Plan. I am aware that the WO Garden Village is to be separate in terms of its infrastructure, but the siting of it in the WODC Expression of Interest, so close to our northern boundary (the A40), belies a social, spatial and visual separation (of which more later).  
3.MAIN 153: Para 9.5.40d: I agree with these principles. Para 9.5.40e: I strongly disagree that the site has no significant physical constraints. There are known serious flood risks, endangered and vulnerable arable plantlife and a designated Local Wildlife Site. There are also likely to be archeological remains at Tars Grave and on the medieval village of Tilgarsley site. Robert Crocker who farms most of the land within the Garden Village site has been using a farming method to control flooding in this area over recent years and he is concerned that when the land is concreted over, flooding will... |
become a serious risk to the south (presumably including the A40 and Eynsham). He also has wildlife survey evidence (plants, birds, insects, moths) over several years on this land. He is someone who could be invited to contribute to the AAP on these matters?

I have also heard from a local resident that his relatives own some land within the proposed site (Expression of Interest) and they have refused numerous approaches to sell their land. They do not intend to sell now.

I imagine that these and similar issues will emerge when the AAP is developed and rigorous environmental, ecological and archeological surveys are commissioned by WODC.

Para 9.5.40 h-r: various features of Tilgarsley Garden Village are noted – many of them good ideas – but there should be a commitment to investing in the Area Action Plan as soon as possible, if necessary using local WODC resources.

I am concerned that the idea of the Garden Village meeting Oxford's unmet need or an overspill community is actually a sham. It can only be, just an addition to the national pool of new houses, as there are no means by which developers could be forced to sell only to those who currently live or work in Oxford.

Para 9.40h: Matters of delivery and phasing are critical for me too. If unthought-through and carefully managed, this delivery, not only for the developing the Garden Village but also the western development could be fatal for Eynsham, given the current and ever increasing traffic congestion on the A40 and in the village centre at peak times. Moreover, the risk of gravel extraction forever looms large around Eynsham and, I understand, most recently on the land immediately east of the Garden Village, north of the A40.

I do not agree with a focussed Oxford Green Belt review for the purpose of building further houses close to the Garden Village. I do, however, support a wider review because I agree strongly with Professor Danny Dorling (see http://www.oxfordtoday.ox.ac.uk/features/how-solve-oxfords-growing-housing-crisis) that, on environmental and social grounds, Oxford’s unmet housing need should be provided near the city limits of Oxford. I understand that Oxford City will review their Local Plan and that WODC should input into this process to make sure that Oxford City bring forward all suitable options within their Green Belt or brownfield sites.

Para 9.5.40i: Regarding accelerating the lead-in time to construction, it is essential that infrastructure is built first, so that residents of the first phase of houses built have all the services they need when they move in. Eynsham’s infrastructure cannot cope with providing a transition period until full services are ready on the new sites. Developers often prefer to build houses first so they can re-coup their investment early by selling them before the infrastructure is built. This need not be the case. The Dorchester Living Group built and completed a 850-pupil school in Heyford Park before building a single house. If Eynsham is expected to provide an infrastructure transition period then, funding to provide temporary accommodation/provision, for example, extra consulting rooms at Eynsham Medical Centre, will have to be made. This of course would be a waste of money in the long run.

Para 9.5j: Genuinely affordable housing is essential and houses for long-term renting should be built to high standards too as so many people are likely never to be able to afford to buy their own home in the foreseeable future. Sheltered accommodation and a care home should also be built.

Para 9.5k-l: I have very mixed feelings about the Science Park for several reasons. The first relates to the point I make above about the Garden Village not necessarily being populated by researchers, academics and scientists from Oxford, they may be people who work in London, Witney, Oxford or anywhere else in West
Oxfordshire. Second, I am not sure that servicing the Science Park (e.g. cleaners, caterers) would be the reason people would go to live there (or could afford to live there). There are probably many residents of Eynsham who might offer those services, but it is likely that they would drive there, thus adding to air pollution and congestion! Third, I have seen no evidence that Oxford Brookes or University of Oxford need this Science Park – there are already a number in and around Oxford. Are the universities sponsoring the Science Park? Is OXLEP going to find funding for all of it? Who else is going to fund it? Especially in the light of Brexit, many researchers are going to find it difficult to be principle investigators on EU funded projects and already, some research projects are foundering due to our impending withdrawal from the European Union. Don’t forget too, that Eynsham has several business parks and the ones on the south are half empty and becoming derelect. I would hate to see a similar fate for the Science Park. Also, why not consider building a Science Park if it is supported on a brownfield site within the Southern Industrial Estates?

Para 9.5m-p: We all know that OCC plans for a Park & Ride and an east-bound bus lane into Oxford are entirely insufficient for improving the A40 problem we have now, let alone when there is the increased traffic from all the new developments in West Oxfordshire. WODC needs to work with OCC to develop a visionary plan for West Oxfordshire including a light electric railway that connects up Carterton, Witney, Woodstock, Eynsham and Oxford. Only then will any of the Local Plan really work and get people out of their cars. Hanborough station is inadequate at the moment as you know also know. The platform would need lengthening and a double track laid to enable more frequent trains. When that and bus connectivity as set out in 9.5.40p are done, then this might work.

Para 9.5.40q providing all the necessary facilities in the new village is good but Para 9.5.40r – good links between Eynsham and Tilgarsley (without the unnecessary and impractical ‘iconic bridge’) may be used by developers to back-pedal on building expensive infrastructure. Para 40q should be a binding principle, Para 40r is a nice benefit except that safe crossing must be provided for students attending Bartholomew School which should be listed in Policy EW1a.4.

Below is a shortened version of the Eynsham Society’s own response to the draft Plan, submitted separately.

The draft Plan has a disproportionate and potentially devastating effect on Eynsham, which has the misfortune to be immediately outside the Oxford Green Belt and hence faces unremitting pressure from developers. In consequence, it doubled in size between 1960 and 2001 and has been expanded further since then. The draft Plan provides for an additional 3,200 dwellings (including the supposed “Garden Village”, in practice an extension of Eynsham), which would more than double its size again, permanently affect its setting in the landscape and almost certainly destroy its cohesion as a community by changing it from a vibrant village to an under-resourced town without a commercial centre. It is notable (and unacceptable) that of these 3,200 houses only 450 (14%) would be to meet local housing need.

Eynsham accepts that it needs a proportionate amount of new housing, and volunteers in the Eynsham Futures Group have devoted much time and effort over the last two years to preparing a draft Neighbourhood Plan detailing how this could best be delivered. Options identified include a small development either to the west of the village (caution is needed here to prevent sprawl as there is no strong boundary) or north of the A40 in part of the...
area where the "Garden Village" is now proposed. By pre-empting the only suitable sites, the draft Plan renders all this work nugatory and destroys any pretence of "localism".

The "Garden Village" – to be inauspiciously named "Tilgarsley" after a village somewhere in the area which was wiped out by the Black Death - is presented as though it were a self-contained and bounded independent settlement, as required by the prospectus for Garden Villages at https://www.gov.uk/government/publications/locally-led-garden-villages-towns-and-cities. However, it is from the outset intended to accommodate Oxford overflow rather than local people, and would rely on oversubscribed secondary school places and medical facilities in Eynsham, so would certainly not be self-contained. It would be at best an Oxford dormitory and at worst a social housing ghetto.

CPRE considers that Oxford overspill is exaggerated and that with so many out-commuters from West Oxfordshire already, there is double counting. Also, with the current A40 issues, this District may not be suitable. It’s therefore debatable whether WODC should have to contribute 2,750 homes to Oxford's unmet need. So whilst Eynsham is the closest to Oxford and so perhaps the most obvious location, in our view the number of houses planned is too many. We are aware of City Farm in the area of the proposed Garden Village and would suggest at the very least that this area remains untouched in perpetuity and that protection is put in place.

Given that the "Garden Village" is proposed purely to provide part (2,200 of 2,750) of the Oxford overspill accommodation, the proposal in 9.5.40k to include a Science Park is irrational. If its employees are to be housed in the "Garden Village", they cannot be considered to be "Oxford overspill" (since they will neither live nor work in Oxford) and the settlement will not be fulfilling its specific purpose. If they are not, on the other hand, it will simply add to the already unsustainable levels of A40 traffic and make an intolerable situation even worse.

Main Modification 153 (MM153) of the West Oxfordshire Local Plan 2031 proposes the allocation of land to the north of the A40 near Eynsham for the creation of a new Garden Village. The allocation proposes to deliver - 'around 2,200 new homes by 2031'.

The newly identified strategy (through MM153) for the creation of a strategic area of growth to the north of the A40 near Eynsham is fully supported for the reasons set out within paragraphs 9.5.40d to 9.5.40r and policy EW1a of the Plan. This identification of a strategic area of growth within this location has the opportunity to provide long term housing and economic growth for West Oxfordshire, Oxford City, the Oxford City Deal area and wider Oxfordshire for the emerging Plan period and for many years beyond 2031.

It is considered that the strategy as proposed within the Local Plan could be more positive and ambitious by recognising and identifying the significant potential for long term growth to the north and west of Eynsham. Attached to these representations is a development concept that shows how the area to the north and west of Eynsham could grow into a series of interlinked and sustainable Garden Villages. Whilst each village would have its own identity utilising and building upon the principles of the Garden City movement the creation of these villages represents an opportunity to create a single sustainable community with the existing village of Eynsham as its focus.

The strategy as currently proposed within MM153 places too much emphasis on the creation of a Garden Village that appears to represent a separate settlement and community to that of the existing village of Eynsham. A strategic area of growth to the north of the A40 and to the west of the existing village should be
seen as one entity and one sustainable place. The existing village of Eynsham should be at the heart of the growth. The opportunity as presented through the attached Garden Villages concept can create a serious of cohesive and interlinked villages that evolve around the existing village.

Whilst the intentions of the identified strategy for long term growth in West Oxfordshire are fully supported, objection is raised to the inclusion within the Plan of an indicative site boundary (as shown on Figure 9.15a) for the creation of the Garden Village. Although the Plan makes it clear in paragraphs 9.5.40g that this is an 'indicative' area and should not be taken as 'definitive' at this point in time, it is considered that all references to a site boundary for the Garden Village proposal (whether indicative or not) should be removed from the Plan for the following reasons:

1) Within the identified indicative site boundary there is no formal collaborative agreement in place between landowners to bring this area forward for development. Without such an agreement in place there are significant concerns as to whether the land is available and deliverable;

2) At present there is no detailed evidence to demonstrate that the land identified within the indicative boundary is the most suitable to bring forward the type and quantum of development that is proposed. Land surrounding the indicative site boundary is no less constrained or suitable.

Paragraph 9.5.40e: While mention is made of "commercial development on the southern boundary along the A40", once again the existence of David Einig Contracting, right in the middle of the proposed Garden Village site, is completely ignored. Why?

"The site has no significant physical or policy constraints", you say. What about the flood risks, picked up in the 2016 SFRA, the high wildlife and habitat value of the site (of European importance for arable plants), and the listed buildings (ignored in the Local Plan)?

"It falls outside the Oxford Green Belt. "True, but only just, and a strong case could be made for extending the Green Belt westwards, or for extending the Cotswolds AONB eastwards. Eynsham parish is, after all, within the Wychwood Project Area. It is anomalous having this strip of land, valuable in itself, outside the protected areas.

Paragraph 9.5.40p: What is meant by "a southern access point from Lower Road" to Hanborough Station? Is this yet another new road? Will it go through Greenfield land to the north of the Garden Village?

Paragraph 9.5.40r: To say that the services and facilities in Eynsham and the Garden Village will play "a complementary rather than a competing role" is an unfounded assertion. You cannot at this stage say, or predict, which it will be.

I am writing following a meeting of the Eynsham Labour Party Branch.

The modifications in relation to the proposal for a garden village the other side of the A40 are unsound as this

<td>would not constitute a free-standing settlement as per the eligibility criteria for garden villages as set out in the document &quot;Locally-led Garden Villages, Towns and Cities&quot; by the Department for Communities and Local Government of March 2016, on page 7. It would hence serve to convert the existing village of Eynsham into a town, and a town with a dangerous, congested highway running through the middle. It is said this is needed to meet the unmet housing need of Oxford, but existing sites within the Oxford ring road have not been exhausted, eg present park and ride sites, which will no longer be needed with current plans to locate these facilities outside the ringroad. Inhabitants of houses within the ringroad will not require to use the already overburdened routes into the city from W Oxfordshire. Moreover, building over the land north of the A40 from Eynsham is likely to cause flooding to the existing Eynsham village, and also to new homes built in the new garden village. Houses are needed for homeless and vulnerable people in Oxford and Eynsham, but it is unclear how such people will be able to afford homes typical of a village, ie with at least two bedrooms and a garden. How will adequate GP services be provided to all the new residents proposed, given that the NHS is currently closing GP surgeries in West Oxfordshire?</td>

<td>9.5.40n This is totally the wrong site for a Park and Ride. It should be situated to the west, nearer Witney (for obvious reasons). The idea of a bus lane to Duke’s Cut would be laughable if it were not so pathetic. This would result in solid traffic jams from the Wolvercote roundabout back past Duke’s Cut. If a bus lane is put in it needs the bridge to be widened. 9.5.40r An ’Iconic bridge’ – no thank you. You are drawing a picture of a totally urban landscape. Surely a ‘Garden Village’ is supposed to be completely separate?</td>

<td>MAIN 153</td>
<td>Comments made on behalf of Eynsham Parish Council. Para 9.5.40d and q; Comment: Unsound – poor wording may result in failure to deliver community infrastructure to support the new housing. As already noted, having two SDAs will result in poor co-ordination between two important large sites. An important aspect of the modern Garden Village concept is that it is a new community and should not share community facilities with existing settlements. While the ENP accepts that this will not be strictly adhered to in every particular – and there may be some mutual benefits if the planning is co-ordinated – it is important that the principle of separate facilities for the new settlement is firmly established in the Local Plan. This will ensure that the high level of developer funding necessary for a Garden Village is forthcoming from landowners and developers who will naturally push back against the cost of building so much new infrastructure if they can find a loop-hole through which to do so. The ENP has a Vision specific to the new settlement: ENV1-7 (that is - the full Vision for Eynsham Village) shall be shared by a new settlement which shall be built according to Garden Village principles as a new, separate, community. Neither settlement should be dependent on the other; any shared facilities shall be done for mutual benefit and without harm to either. [ENV 8]</td>
</tr>
</tbody>
</table>
We consider that the principles of building infrastructure in advance and duplicating all the facilities of Eynsham as far as is practical should be spelled out.

Para 9.5.40r: Comment: Unjustified, no consideration of alternatives

This paragraph appears to be supporting the idea of a bridge between the two communities. ENP 16.20-24 discusses the alternatives and necessity of ensuring safe crossing for school students in particular. It is assumed that 9.5.40r is discussing foot/cycle connection - this should be made clearer.

The first occurrence of the name Tilgarsley appears in the paragraph without any explanation. Up to this point the term Garden Village has been used.

<td>&gt; SECTION 9 - STRATEGY AT THE LOCAL LEVEL &gt; Eynsham Woodstock Sub Area &gt; MAIN 155</td>
<td>Having studied the local proposed plan for West Oxfordshire I would like to make two points regarding what I would like the planners to take into consideration. The second area regards the proposed West Oxon Garden Village Eynsham. I have concerns regarding the section of this plan which is to the west side of Cuckoo Lane and bordering the A40 road. There is an existing bridleway which is marked on the western boundary of the development. This must be preserved and protected for the local riders. With so many extra vehicles in that area due to the huge local development I would also like to suggest that a pagasus crossing is put on the A40 so allowing the riders/cyclist/walkers to cross safely. One has just been installed at the A34 Chiltern area. which has been a great improvement for local riders who use a network of bridleways in that area. Horse riders are a minority countryside user such as walkers and cyclists and just a vulnerable when on the public road. And with more housing/business areas being built it is even more important to provide extra off road access so as to split horses from motorised vehicles. There are many horses/livery/yards/training centres in West Oxon so there is a huge need to provide more off road riding. To back up my reason for the above comments the facts are that on average in this country there is one road accident a day where vehicles are involved with a horse on the highway resulting in either the horse or rider or both being injured. During the last 5 year period that has resulted in 38 riders being killed, 181 horses destroyed and over 2075 road traffic incidents involving equines. These proposed developments are an excellent opportunity to build in more multi use tracks for the minority countryside users in Oxfordshire.</td>

<td>&gt; SECTION 9 - STRATEGY AT THE LOCAL LEVEL &gt; Eynsham Woodstock Sub Area &gt; MAIN 155</td>
<td>The proposals for the garden village are a nonsense. When added to the other proposals for additional housing in West Oxfordshire there will be a huge volume of additional traffic on the A40 which cannot even cope with present levels. The provision of park and ride facilities (1000 spaces) will hardly cope with the additional demand let alone ameliorate current overcrowding of the road. There must be a more substantial plan than a park and ride with a bus lane to cope with the A40 issue otherwise it will be difficult to attract new business to the garden village and may also negatively affect existing business in both Eynsham and Witney. We are fiddling with tactical transport planning rather than creating a new vision for</td>
</tr>
</tbody>
</table>
the future of transport in West Oxfordshire. Once a grand vision is set out, it will be a lot easier to determine where additional housing should go. The current approach puts the (housing) cart before the (transport) horse.

Representation on behalf of Oxford Aggregates

This is a representation to the consultation on proposed changes to the draft Local Plan made on behalf of Oxford Aggregates. Oxford Aggregates is collaboration between Hanson UK and Smith and Sons (Bletchington) Ltd for the purpose of coordinating future sand and gravel extraction from land east of Eynsham.

Hanson and Smiths have extensive landholdings between Eynsham and Cassington. Together with third parties including the Blenheim Estate these lands have substantial proven reserves of sharp sand and gravel which have been nominated to Oxfordshire County Council for potential future mineral working.

The Oxfordshire Minerals and Waste Local Plan Core Strategy (August 2015) seeks to make provision for a steady and adequate supply of sharp sand and gravel to meet the built development needs of the county. The land in the Lower Evenlode Valley Between Eynsham and Yarnton is identified in the MWLP as a future strategic resource area where aggregate mineral extraction will take place.

The MWLP also seeks to safeguard important known resources of sharp sand and gravel to ensure that such resources are not needlessly sterilised; that they remain potentially available for future use and are considered in future development decisions.

The proposal for the West Oxfordshire Garden Village to the north of the A40 at Eynsham with significant new housing and associated development presents a possible future constraint on mineral working. This would be contrary to the safeguarding objectives of the MWLP.

Our industry is dependent on a thriving economy and welcomes new housing and built development but we can only work minerals where they occur and the needless sterilisation of finite resources should be avoided wherever possible.

The impact of the housing proposals on neighbouring mineral land must be acknowledged by WODe and considered in advance of detailed master planning of the garden village. Appropriate environmental buffers and advance tree planting to minimise future conflicts should be identified to ensure that the mineral resources are not compromised and remain potentially available for future use.

Should appropriate buffers and mitigation be planned in advance and both mineral working and the West Oxfordshire Garden Village proceed on a similar timescale, then there is a significant opportunity to achieve:

- a sustainably delivered (i.e. very local, minimising carbon emissions arising from delivery) supply of aggregates and concrete to the new development and
- a beneficial afteruse of the mineral extraction area with potential open space, wetlands and increased public access complementing the garden village and Eynsham.

Garden villages are required to be independent communities:
