<td>&gt; SECTION 9 - STRATEGY AT THE LOCAL LEVEL &gt; Eynsham Woodstock Sub Area &gt; MAIN 155</td>
<td>“14. The garden village must be a new discrete settlement, and not an extension of an existing town or village. This does not exclude proposals where there are already a few existing homes.” (Locally-Led Garden Villages, Towns and Cities, by The Department for Communities and Local Government: <a href="https://www.gov.uk/government/uploads/system/uploads/attachment_data/file/508205/Locally-led_garden_villages__towns_and_cities.pdf">https://www.gov.uk/government/uploads/system/uploads/attachment_data/file/508205/Locally-led_garden_villages__towns_and_cities.pdf</a>) The proposed new development is very close to the northern edge of Eynsham, and it is not clear from this plan how it will be made into a separate discrete settlement, as opposed to a large suburb of Eynsham, which will have been turned by this development from a village into a town. Moreover, such an ‘Eynsham Town’ would be a settlement divided by a busy and dangerous road.</td>

</table>

| MM721        | The Blenheim Palace Estate | Neilson | - | 1626 | > SECTION 9 - STRATEGY AT THE LOCAL LEVEL > Eynsham Woodstock Sub Area > MAIN 155 | Policy EW1a Tingersley Garden Village Blenheim Estates object to the absence of an appropriate and robust land allocation process in support of the proposed Garden Village. As a consequence, the allocation of the Garden Village appears unjustified and to some considerable degree, “rushed-through.” The site has only been considered as part of a high level, Oxfordshire Growth Board assessment of a small number of sites, the overall purpose of which WAS NOT the identification of the most appropriate location and site for a new Garden Village in West Oxfordshire District. There has not been a robust options assessment. There is no evidence to demonstrate that a thorough District-wide assessment took place and that the proposed site for a Garden Village has emerged through an open and transparent consultation process, allowing for the appropriate comparison of sites and for the kind of consultation appropriate to the proposed Local Plan allocation of land in the open countryside for thousands of houses. The allocation of a new Garden Village in the countryside for thousands of houses is a matter of District-wide, strategic significance. It is therefore crucial to be able to demonstrate that any such allocation is fully justified, further to a thorough site selection and assessment process, the whole of which should be supported by robust consultation. No such substantive evidence exists. Rather, the proposed allocation appears to have been chosen following a severely limited and largely closed process, the purpose of which, in any case, was not to select a Garden Village. There is an absence of thorough, tested evidence, including appropriate comparative evidence and sustainability assessment, to demonstrate that the chosen site is the optimal site in the District for a Garden Village – or for any form of major development - to contribute to Oxford's unmet need. The selection of any |
such site must emerge through an appropriate process. It is not something to be "pulled out of a hat" and squeezed into an inappropriately short time frame, simply to fit into the Local Plan timescale.

Blenheim Estates has no "in-principle" objection to the development of a new Garden Village in West Oxfordshire. This may end up being at Tingersley - however, it is essential that any such proposal is the end-result of a thorough, appropriate and robust assessment supported by consultation. This is simply not the case for "Tingersley."

The proposed allocation is supported by sparse, incomplete and largely untested information. The case for the allocation is, as a consequence, insufficient and unconvincing. It has not emerged through, or been tested by, any form of open and transparent consultation. There is a notable absence of appropriate option and comparison testing. There is a notable absence of consultation.

As set out, the Garden Village appears as a last-minute change to a much-delayed draft Local Plan. The Local Plan is an inappropriate vehicle for the unveiling of a proposal of strategic significance without robust justification.

The creation of a new settlement in the open countryside is a significant step and needs to be fully justified. Such an approach, for example, lacks the sustainability advantages of expanding an existing settlement, where infrastructure, services and facilities already exist. Consequently, the need and evidence for a Garden Village in the open countryside needs to be compelling. It needs to be demonstrated that it comprises a sustainable approach supported by a convincing audit trail, demonstrating a robust assessment and allocation process.

The case for Tingersley is not compelling. It has not emerged through a robust process. There is insufficient evidence to demonstrate that it comprises the most sustainable way for West Oxfordshire to meet Oxford’s unmet need, due to a lack of comparison, testing, consultation and sustainability appraisals.

If West Oxfordshire District Council wishes to pursue a Garden Village approach to meeting Oxford’s unmet need, then this should be done in the appropriate manner. However, West Oxfordshire District Council readily accepts that the consideration of options and sustainability have not been properly considered:

"The Council could choose to develop a different package of housing sites to meet the housing target. However, any significant changes, such as the inclusion of another sustainability appraisal, transport modelling and viability, before the suggested Local Plan main modifications could be published for consultation. This could lead to additional delays to the Local Plan and is therefore not recommended." (Paragraph 5.25, Note to Committee in support of changes to draft Local Plan).

Sustainable development underpins planning. Nowhere does national planning policy or advice suggest that sustainability can conveniently be ignored if there is a perceived need to rush proposals through.

Sustainability goes to the very heart of good planning. As the Tingersley site has not emerged through an appropriately robust process, there is an absence of evidence to demonstrate that it represents the most sustainable, deliverable solution to meeting Oxford’s unmet need. There is an absence of evidence to demonstrate that the proposal is readily deliverable. The constraints to the creation of a brand new settlement are considerable. In the absence of clear evidence to the contrary, there can be no certainty that the proposed allocation will actually meet its purpose of addressing Oxford's unmet need within a realistic and appropriate timescale.
It is suggested by West Oxfordshire District Council that "Other options in West Oxfordshire scored poorly through evaluation process" (3.32). However "Growth Board apportionment process" (5.24), which itself was not an exercise to identify a new Garden Village but something entirely different, only assessed three other locations in the whole District. West Oxfordshire District Council’s Report to Committee goes on to state that two strategic options were considered in the Eynsham-Woodstock area, but that one of these comprised a site mostly in Cherwell – it is hard to imagine how such a site could therefore have comprised one of the (very few) options "considered" to meet Oxford’s unmet need.

The consideration of a couple of sites as part of a Growth Board apportionment process and not, for example, a "Garden Village Assessment Process," does not comprise an appropriately robust District-wide assessment for the allocation of a new Garden Village.

It appears that the attempt to rush through the allocation of a site for a new Garden Village is partly in response to the previous delays to the Local Plan. This appears to have resulted in a proposal regardless of the need for appropriate appraisals, modelling and crucially – an open and transparent approach to the consideration of options via appropriate consultation.

Thus, whilst Blenheim Estates supports the decision to provide for at least 2750 dwellings to meet Oxford’s unmet need, this should not be done so on the currently proposed basis of allocating land at Tingersley for a new "Garden Village."

The severely limited assessment of sites supporting the Growth Board proposals comprises an inappropriate evidence base upon which to justify the proposed Garden Village allocation. The selection of a major new strategic site must follow a robust site assessment and consultation process. It must be supported by appropriate and rigorous testing. Only then can there be some kind of assurance that any proposed site represents an appropriate, sustainable and justified choice.

Given the absence of an appropriate evidence base, Blenheim Estates is concerned that the proposed Garden Village could, for example, compromise the appropriate sustainable growth of Eynsham. The scant information provided as part of the "Technical Evaluation Process" supporting the Garden Village allocation provides inappropriate justification. For example, it is a serious concern that the Garden Village, were it to come forward, could compromise the delivery of Eynsham West as a result of severe market conflict between the two sites, not least due to the need for hundreds of houses to be sold each year within one small housing market area.

There is no market evidence to support the inference that Eynsham could support unprecedented market sales for a sustained period of time. This is just one aspect of the uncertainty that exists in respect of the viability/delivery of the proposed Garden Village. Other areas of uncertainty include the provision of appropriate infrastructure and services, and appropriate phasing to ensure sustainable growth in respect of the delivery of affordable housing, education, public transport, highway improvements, safeguarding local character and maintaining the vitality and viability of Eynsham town centre.

It is suggested that the Garden Village would play a key role as a "transport and business hub." This is odd, given that the site proposed could only ever support a tremendous increase in motor vehicle travel, including car commuting to Oxford. Unlike Long Hanborough, three kilometres away, the site has no train station. Thus, rather than having regard to national planning policy and providing for more opportunities for people to walk and cycle to excellent rail provision at Hanborough, through for example, the continued sustainable growth of Long Hanborough, WODC is choosing to promote more motor vehicle movements by creating a road-based "transport and business hub" in the open countryside adjacent to the A44.

<td>MM64</td>
<td>Transition Eynsham Area</td>
<td>Rosalind Kent</td>
<td>Mrs</td>
<td>Kent</td>
<td>165</td>
<td>&gt; SECTION 9 - STRATEGY AT THE LOCAL LEVEL &gt; Eynsham Woodstock Sub Area &gt; MAIN 155</td>
<td>To seek to create a so-named motor-vehicle based “key transport hub role” in the open countryside whilst, at the same time, purposefully seeking to prevent sustainable development within walking and cycling distance of the District’s most important railway station, just one hour from Paddington, does not make any sense. Rather, it appears to represent poor planning and does not comprise sustainable development. Whilst, in general terms, the provision of park and ride in the District is to be welcomed, the reality is that building one alongside a new settlement in the open countryside will only, initially, partially relieve a current problem. In reality, the creation of 2,500 new homes, adding around another 10,000 new car journeys per day over and above those resulting from the western expansion of Eynsham, would massively add to the major congestion problems associated with the A40 and the surrounding network, regardless of a new Park and Ride.</td>

<td>-</td>
<td>-</td>
<td>1671</td>
<td>&gt; SECTION 9 - STRATEGY AT THE LOCAL LEVEL &gt; Eynsham Woodstock Sub Area &gt; MAIN 155</td>
<td>The sudden revelation that WODC has made an ‘expression of interest’ in a ‘Garden Village’ on the north side of Eynsham, very close to the A.40 has come as a big surprise to Eynsham residents, and the timing, just before Christmas, leaves no time for considered thought or fact-gathering. The fact that the Garden Village of 2,200+ homes is intended to serve Oxford City’s ‘unmet need’ for workers in Oxford is totally unreasonable for two main reasons: * Together with the 1000 houses proposed for ‘West Eynsham’, making 3,200 new houses in all, the present village of under 2,000 houses will be totally swamped and changed in nature from a self-contained Cotswold village to a dormitory suburb of Oxford. * In the words of the planners (section 9.5.34) there is already “severe traffic congestion on the A40 between Eynsham and Oxford at peak times and on other key routes including the A4095 and A44.” The inadequate plans to remedy this, as displayed in the recent A40/Park&amp;Ride exhibition will hardly solve the present problem, let alone cope with the deluge of extra commuters created by the building of an estimated 12,500 more houses in the West Oxfordshire part of the A40 catchment area. This imposition from ‘on high’ needs challenging, legally if necessary, if we are to retain the identity of our village and to avoid the worst commuter jams in Britain. Surely the solution is either to build more homes in Oxford, regardless of green belt, where workers can use minor roads for a shorter and quicker journey to work, or to bring the business to the villages eg to Eynsham’s south business park, with appropriate worker housing nearby, thereby abolishing commuting.</td>

<td></td>
<td></td>
<td></td>
<td>Eynsham Garden Village and West Eynsham Strategic Development Area MAIN2 of the draft plan confirms that an Area Action Plan is proposed for Eynsham to address the issue of unmet housing need arising from Oxford City. Whilst not objecting to the principle of strategic development at Eynsham, concern is raised regarding the quantum of housing which is deliverable within the Plan period to 2031. This allocation is for 1,000 dwellings and estimated for delivery between 2018 and 2027 (Appendix 2 of the Local Plan). Within the Local Plan ‘Vision’ (MAIN 9), the ‘Vision’ for Eynsham Garden Village is that it will be “selfcontained”. We question whether this is either achievable or desirable given the SDA’s proximity to Eynsham (particularly when taking into account the proposed West Eynsham SDA) We question to what extent the proposed Garden Village of 2,200 homes can really achieve this. It is</td>
</tr>
</tbody>
</table>
unrealistic that with any development in such close proximity to an existing town (Eynsham) that there will not be some shared use of services and facilities and a desirability for these facilities to be shared.

The combined allocation of West Eynsham SDA and Eynsham Garden Village is 3,200 units within the plan period. In order to meet OANtherefore, there is a very significant requirement for both of these sites to deliver, in full, within the plan period. This does not provide any flexibility for delays within the build-out phase.

Policy EW1a, a) ‘Up to 2500 homes...’ would give flexibility to shift provision from West Eynsham to Tilgarsley to improve prospect of overall delivery of the required total homes. Scope of Area Action Plan should include both Eynsham sites – this is hinted at but isn’t clearly stated.

Should the Garden Village go ahead on the proposed site and with this number of homes, many of us in Eynsham would prefer that all of Oxford’s unmet need (2,750) and West Oxfordshire’s need of 450 homes are built in the Garden Village (which provides more infrastructure funding from the developers) and West Eynsham is left in reserve.

EW1a f) should be emphasised more as there is no existing infrastructure in this case.

The Garden Village is being presented as a separate village community with its own infrastructure. However, my personal view and that of many Eynsham residents is that a ‘structural landscape buffer’ or thin and landscaped strip as shown in the Expression of Interest is completely unacceptable. Rather, as villages are around the UK, it should be separated spatially, visually and socially by substantial countryside - at least two fields in depth and trees separation. It should be much more than a hedge with trees and a bit of landscaping. Such a separation will help the new village to develop its own identity, separate from Eynsham and its own community spirit. It will promote good relationships between the communities and both will enjoy a rural feel and village character. It will also retain something of our county’s wildlife heritage.

I am contacting you regarding the preliminary plans for the Eynsham Village Development by West Oxford District Council [WODC] which unfortunately incorporates the main base of operations for David Einig Contracting.

The proposed village development includes DEC’s recycling operation which has PERMANENT planning permission. It also includes DEC’s access road off the B449 which has been used as one of the main roads into the scheme, this is also the access to the adjacent field of City Farm.

DEC is not interested in selling. This site is keen to DEC’S company development. The site is ideally located to Oxford and the main road network which ensures that lorry movements from work around Oxford are kept to a minimum. This site has Permanent Planning Permission and is designated in the Oxfordshire’s County Councils Minerals & Waste Local plan as a site of strategic importance. DEC have invested a lot of money improving and purchasing new plant for the site, making it a cleaner, safer and more environmentally friendly operation.

There is however no reason why the New Wintles recycling site cannot coexist along with a carefully thought out development plan for both new housing and business premises with the introduction of appropriate buffer zones. As this will be the closest recycling yard to the proposal and as a local business, if development does takes place, DEC could potentially assist the project by moving waste from groundworks and by supplying the recycled aggregates across temporary site roads rather than using the highway which will provide an environmental bonus.

We would be happy to provide further information on the site to assist in the future design and build and
have provided the below information for this reason.

Site Information: The New Wintles Farm Recycling site benefits from permanent planning permission for a Recycling site which was granted on 22nd July 2010 (10/0066/P/CM). The Site is not in the Oxford Green Belt and the closest residential property is 240m to the east of the site. The site is not in an area at risk of flooding and it is not within any specific landscape designation. It is rare to find such a good location as this, with the appropriate separation of the site from sensitive receptors; good transport connections; close to the source of waste and point of use of the recycled materials; outside the Green Belt; and with no other landscape designation.

The Site is well screened, a non-sensitive location on land that has previously been developed. This site is not deemed an environmentally sensitive location, nor one with any statutory designation for the protection of flora or fauna. It is not a wetland, a coastal zone, a mountain or forest, nature reserve or park. It is not designated for wildlife or near any areas of dense population. It is not in an area in which the environmental quality standards laid down in Community legislation have already been exceeded and it is not located in proximity to any landscapes of historical, cultural or archaeological significance.

C&D waste recycling facilities require a large site that must not be too close to residential properties, commercial uses and other sensitive receptors, because of the potential that the activity has for causing disturbance. The general policy of restraint on development in Oxfordshire means that urban areas are intensively developed, and there are therefore few if any sites that are large enough, with the appropriate separation to sensitive land uses. This site is perfect for its use and with proper research should never have been included in your proposal.

The site has been nominated in the Oxfordshire Minerals and Waste Local Plan: Part 2 – Site Allocations Document and more importantly it has been identified by Oxfordshire County Council as a site for strategic waste facilities. This site makes a major contribution to aggregate recycling in the county, there is an overriding need for this site and it is of major importance as a recycling site for the future of the County.

Should WODC wish to pursue their current development plan, they would need to demonstrate that they could offer DEC an equal or better alternative site close by with full permanent planning permission which would be acceptable to OCC Mineral & Waste Authority, local residents and my investors. I suggest that the enormous cost of doing this would far exceed any development proceeds especially as much of the surrounding land has been subject to infill and the land still has a number of methane vents.

DEC currently employs 100 local people and many of these jobs would be put in jeopardy should we not be able to operate from this site.

Finally it should be noted that the land is still shown in your documents as belonging to McKenna Plant. This is incorrect and should be amended to David Einig Plant Ltd.

If you have any further questions, requirements for information or concerns, please do not hesitate to contact us.

The eastern part of site, adjacent to Lower Road (the Eynsham – Hanborough road) is partly underlain by deposits of sharp sand and gravel, some of which has previously been worked. These mineral deposits lie within the ‘Thames, Lower Windrush and Lower Evenlode Valleys from Standlake to Yarnton’ strategic resource area for sharp sand and gravel which is included as a principal location for aggregate minerals extraction in policy M3 of the submitted Oxfordshire Minerals and Waste Local Plan: Part 1 – Core Strategy 2015. In due course, specific sites for mineral working are to be identified within the strategic resource areas listed in policy M3 for allocation in Part 2 of the Plan, the Site Allocations Document.

Under policy M8 of the submitted Core Strategy, the strategic resource areas listed in policy M3 are included within mineral safeguarding areas, within which mineral resources are safeguarded for possible future use. In respect of this, policy M8 states:"Development that would prevent or otherwise hinder the possible future working of the mineral will not be
permitted unless it can be shown that:

- The site has been allocated for development in an adopted local plan or neighbourhood plan; or
- The need for the development outweighs the economic and sustainability considerations relating to the mineral resource; or
- The mineral will be extracted prior to the development taking place."

Policy M8 in the submitted Core Strategy reflects saved policy SD10 in the adopted Oxfordshire Minerals and Waste Local Plan 1996. Mineral safeguarding areas were not identified at that time but policy M8 states:

‘Mineral resources will be conserved for the benefit of future generations. Development which would sterilise or make the extraction of a mineral significantly more difficult will not be permitted unless it can be shown that the need for the development outweighs the economic and sustainability considerations relating to the mineral resource.’

In relation to preparation of the new Oxfordshire Minerals and Waste Local Plan, a large area of land, including parcels on both sides of Lower Road, has been nominated to the County Council by the landowners for consideration as a potential site for allocation in the Plan for sand and gravel extraction. A plan showing this site nomination (no. SG-08) is attached to this letter.

Policy on safeguarding of mineral resources covers not just those mineral deposits that would be directly sterilised by development within a proposed development site but also any adjoining or adjacent mineral deposits which the development concerned would effectively prevent or prejudice by virtue of the need for unworked ‘buffer’ distances between any future mineral working and sensitive development such as housing and schools to ensure adequate mitigation from adverse effects on amenity or other important environmental interests.

There is a permitted and operational waste recycling facility at New Wintles Farm that is included within the site. A plan showing the area of the permitted site is attached. This is a strategic level facility of importance for recycling of construction, demolition and excavation waste and for the production of recycled aggregate for use in place of land-won primary mineral. This facility is listed in Appendix 2 of the submitted Oxfordshire Minerals and Waste Local Plan: Part 1 - Core Strategy 2015 as a site that is safeguarded for future waste management use by Policy W11 of the Plan. In respect of safeguarded sites, policy W11 states:

‘Proposals for development that would prevent or prejudice the use of a site safeguarded for waste management will not be permitted unless: 4

- the development is in accordance with a site allocation for development in an adopted local plan or neighbourhood plan; or
- equivalent waste management capacity can be appropriately and sustainably provided elsewhere; or
- it can be demonstrated that the site is no longer required for waste management.’

There is no available evidence to show that the safeguarding of mineral resources or of the New Wintles Farm waste management facility have been properly taken into consideration in the proposed West Oxfordshire Garden Village, on land north of the A40 at Eynsham. Therefore the County Council objects to this proposal.

<td>&gt; SECTION 9 - STRATEGY AT THE LOCAL LEVEL &gt; Eynsham Woodstock Sub Area &gt; MAIN 155</td>
<td>Ecology and Natural Environment In all cases reference should be made to the District Council’s ecologist for specific details on each site. It is assumed that before firm proposals are brought forward for each site an appropriate ecological, landscape and visual impact assessment will be undertaken including surveys for protected and threatened species. The permanent loss of land of existing and potential future habitat value should be recognised with a corresponding investment in biodiversity and other green infrastructure resources that provide a range of benefits including biodiversity, water management and contribute to physical and mental well-being. Additional off-site enhancement should be provided where insufficient environmental gains cannot be secured within the development boundary. West Oxfordshire Garden Village City Farm to the north-east has been identified by Plantlife as a (non-statutory) site of European importance for rare arable plants. There are Local Wildlife Sites identified nearby. City Farm and the adjoining areas are also of particular importance for farmland birds, supported by the strong network of field boundary hedgerows. Increased recreational pressure arising from the proposed development would be likely to have an impact beyond what might be expected from the basic footprint of the development and should be considered in assessing site impacts. The Woodland Trusts Eynsham Community Wood lies on the southern edge of the area and will require additional resources to ensure it remains resilient in the face of increased recreational pressure. There are areas of best and most valuable agricultural land in the south, to the west of the park and ride site.</td>

<td>I do not believe Policy EW1a allows the delivery of sustainable development in accordance with the policies in the NPPF, particularly paragraph 7: ‘Achieving Sustainable Development - a social role’. The lives of the residents of Eynsham and of the new Garden Village will inevitably become entwined (e.g. the contributions to secondary school capacity suggest that children from the Garden Village will attend Bartholomew School, resulting in social contact with children and families from Eynsham). In fact, it is most likely that, over time and as both developments grow, they will come to be seen as one settlement. And yet this settlement will be divided by an extremely busy road posing a potential hazard for those trying to cross it (young people are, notoriously, risk-takers), and a danger to all residents from air pollution. As a result this new Garden Village cannot be described as ‘a high quality built environment, with accessible local services’.</td>

| MM19          | Labour Party            | Eynsham Labour Branch | Ms               | Dawson            | 360       | > SECTION 9 - STRATEGY AT THE LOCAL LEVEL > Eynsham Woodstock Sub Area > MAIN 155 | Comments on Local Plan by Eynsham Labour Party Branch at meeting held on 21st November 2016:  

While it was agreed that more housing was necessary, this must be affordable by local families who really need them, who have been priced out of the local market. A number of very serious questions were raised regarding the new Local Plan for West Oxfordshire:

* According to the document produced by the Department of Communities and Local Government on Garden Villages [1][#_ftn1] , the second Eligibility Criteria (page 7) is that "the garden village must be a new discrete settlement, and not an extension of an existing town or village". This is clearly not the case with the proposed garden village on the northern side of the A40. The size of this and its immediate proximity to existing Eynsham, and the fact it is still within the Eynsham parish boundaries, would make Eynsham into a town the size of Witney. Moreover, it would be a town with an extremely dangerous road running through the middle of it, which would be an accident waiting to happen. Children accessing educational facilities not available in their half of the new town, mothers in a hurry to access shops, pub goers etc may all feel the need to skip using the bridge planned. So the question arises – why here? It is understood that places in West Oxfordshire actually want development.

* 50% of the housing is to be affordable and 20% social housing, which we welcome in principle. However, what does "affordable" mean? We think it should mean that a family on a salary of a maximum £20,000 can afford to buy or rent. In principle, self-build sounds interesting, but how would this be organized to make it a viable option for those with few savings? Buying to let should also be controlled. Quality standards should also include sound proofing, as many families, especially those with young children, suffer from neighbour disputes over stress caused by sound travelling in badly built housing.

* Infrastructure and congestion is a concern, and if this "village" were to go ahead, all roads and services required should be in place before any housing is inhabited.

* Access to green areas and footpaths is of great importance to existing Eynsham inhabitants and must be maintained.

* What is the idea of the "science park"? What does "B class High Tech" mean? Is the park for research, or is this just another term for an industrial park? Are there not other industrial parks in the area which still have spare capacity? If it is for research, which part of Oxford University is interested in this, and will they still have the funds for it after Brexit and the loss of EU funding for research?

* On the development to the West of Eynsham, the current frequent floods around the Chilbrook make building houses there unwise. These occur without prior warning and can be devastating to householders.

[1][#_ftnref1] March 2016, Locally-led Garden Villages, Towns and Cities, Department of Communities and Local Government |

| MM246         | Judith Luna             | -               | Luna             | 453               | > SECTION 9 - STRATEGY AT THE LOCAL LEVEL > Eynsham Woodstock | Policy EW1a  
The proposed Garden Village is elsewhere referred to in the Plan as 'free-standing' and 'self-contained'. It is therefore essential that effective infrastructure is put in place to support the housing at the same time. If this is not done the Garden Village will be reliant on Eynsham for its facilities, including schooling, GP practice, and retail and other amenities. The Eynsham GP practice and schools are either at, or close to, capacity, and there |
Sub Area > MAIN 155

will be a detrimental impact to Eynsham inhabitants if adequate provision is not made in timely fashion. Any increase in traffic on roads within Eynsham will lead to gridlock, delayed bus journeys, and increased pollution and worsening air quality. I am also concerned about the increased flood risk from concreting a large area to the north of the A40 and to the west of Eynsham, especially from flash floods once run-off areas have been lost.

> SECTION 9 - STRATEGY AT THE LOCAL LEVEL > Eynsham Woodstock Sub Area > MAIN 155

The 'new village'

It is a horrific thought that the most unspoilt, diverse natural area should be chosen for the new village - that said I will continue.

What a ridiculous thought that building a new village just on the other side of the A40 would mean it would be separate.

Would the development build a new School, Shops, Surgery before any houses? The answer to that was a big no so all the occupants of the first development would naturally come to Eynsham for schools, doctors, and provisions. It is a lovely welcoming village and they would continue to feel part of it.

Why can't the new village go further north, leaving some fields all round so that that village could also be in better surroundings and not pressed against the A40? Thus giving it a separate identity.

I intend to go to the consultation about the A40 to see whether any notice was taken from the last consultation.

I live in Eynsham and I have been looking at the proposals to increase the size of the village by building north of the A40. If you have ever tried to get a doctors appointment at Eynsham you would know that unless a new health centre is built first, the health care of Eynsham residence will be like a third world country. Build the infrastructure and facilities first before a single new house is occupied. The local hospitals are pushed to breaking point and with an ageing population the whole system is on the verge of a meltdown. I know this for a fact as my wife works in the NHS and I have had cause to require its services recently. It's not free, we pay a lot for it but it is unable to cope. This problem is real and will not go away. It must be addressed before any new houses are built.

The proposal to locate a Garden Village north of Eynsham does not comply with the concept of a Garden Village for the following reasons: the site is not freestanding; public transport links rely on the congested A40 and the full to capacity Hanborough Station; it will be a dormitory for Oxford commuters, as it cannot be assumed that future residents will work in the proposed science park; it will have severe environmental and landscape impacts on an unprotected area.

The location of development in this location also contradicts existing policies, e.g OS2, in that it will result in the loss of open space that makes an important contribution to the character of the area. The proposed location is within an important green corridor linking the west of Oxford with the Cotswolds.

The changes to the LP make no allowance for non-delivery of any particular site. There is no reserve provision that we can see within district, sub-area or even within the SDA/AAP areas at Eynsham.

(This is a duplication of comment on table 9.4 included for completeness) The Eynsham Neighbourhood Plan (ENP) accepts the figure of 3200 new homes within the Parish but which it considers would be better constructed within the new Garden Village north of the A40. There are strong indications that a new

Comments made on behalf of Eynsham Parish Council

EW1a: Comment: Unsound – may prejudice delivery of enough homes up to 2031

The changes to the LP make no allowance for delivery of any particular site. There is no reserve provision that we can see within district, sub-area or even within the SDA/AAP areas at Eynsham.

[This is a duplication of comment on table 9.4 included for completeness] The Eynsham Neighbourhood Plan (ENP) accepts the figure of 3200 new homes within the Parish but which it considers would be better constructed within the new Garden Village north of the A40. | MM321         |                        | Robert Crocker  | Mr Crocker       | 590               | > SECTION 9 - STRATEGY AT THE LOCAL LEVEL > Eynsham Woodstock Sub Area > MAIN 155 | settlement of 2200 houses will struggle to fund the necessary infrastructure, especially on land which has been put forward for housing with the consequent high expectation for the land value that will be realised. Building more houses, sooner, is the best way to minimise the risk of inadequate infrastructure provision. The numbers should be amended to reflect the need for reserve provision.
EW1a f) and h): Comment: Unsound – principles are not clearly stated; may prejudice delivery of supporting infrastructure rendering new homes unsustainable.
Reasons as specified for 9.40d – the provision of adequate infrastructure to ensure a ‘free standing’ settlement should be included in the wording of the policy.
Para f) appears to be a ‘stock’ phrase that needs strengthening in the special circumstances of creating a new community.
EW1a g): Comment: Unsound – lacks justification or proper consideration of alternatives.
The general thrust of the paragraph is to be supported but the choice of Hanborough Station as a ‘transport interchange’ given that the village is losing its ‘rural service centre’ function is odd. While good links to the railway station are encouraged in the ENP as a benefit to Eynsham and Tilgarlesly, the station is not an ideal location for any form of interchange. Instead, the new Park and Ride at Eynsham should be promoted as the primary interchange in the sub-region, ideally served by buses going to the hospital and employment sites of east Oxford in addition to those already going to the city centre. This hub will serve residents of Eynsham and Tilgarley and some buses should go through each settlement to encourage maximum local usage; it will also serve Witney, Carterton and the rest of the District with the option of arriving by car or bus at the interchange. A bus service to and from Hanborough should connect with both station and village to present a wide range of public transport options to as many people as possible district-wide. Provision of a cycle path to link Eynsham, Tilgarley and Hanborough Station is a valuable bonus.
The proposed Garden Village will adversely affect my farm. The land has been for Wildlife first for many years and serves as a crucial offset to the intensive agriculture that surrounds. The whole area is a wildlife haven, the loss of any part will have immeasurable consequences. I ask you please to read the following.
Objections to building north of the A40...Garden Village etc.
* Loss of rich, ecological site. The habitat is unique to this area. Removing any part will unbalance the whole. It has taken decades to create this wildlife haven.
* Flooding. Development north of the A40 will affect the hydrology of this highly, balanced area.
* Coalescence of Eynsham / Freeland / Hanborough. Building to the north of the A40 will inevitably lead to urban sprawl and the indicative site for Tilgarley (Black Death) Garden Village is too close to Eynsham. Move it northwards and it is too close to Freeland.
* Traffic congestion. The location chosen by WODC (by default) is already too congested without a realistic hope of remedy. The suggested location leaves no room for traffic management and lasting alterations.
* The topography is unsuitable for large scale development. The land rises up over Acre Hill and the buildings would be visible from Oxford. WODC maintain the ‘Garden Village’ is not site specific...if so, consider building the Garden Village in a better location. i.e. Middle Leigh (Barnard Gate)
* Oxford City is surrounded by a horse shoe of urban sprawl. From Abingdon to Radley, Kennington, Cowley, Headington, Barton and back to Kidlington. The only rural Green corridor left is the one into West Oxfordshire leading on to the Cotswolds...Area of Outstanding Natural Beauty. This corridor must be protected...don't devalue our rural heritage.
* Proposed park and Ride is in the wrong place. It should be built adjacent to the existing A40 Eynsham roundabout, allowing traffic from the Hanboroughs, Standlake and Eynsham easier access, there is adequate room to make the roundabout 3 lanes.

The proposal to locate a “Garden Village” adjacent to the village of Eynsham is fundamentally flawed on the following 8 counts:  

1. The areas of search for a suitable site were highly selective and, in particular did not address the land to the south of the A40 at Barnard Gate brought forward by the Eynsham Hall Estate. The Barnard Gate South site displays fundamental characteristics which make it significantly more suited to accommodating a “Garden Village” than Eynsham North, including:  

- A featureless, flat topography as opposed to the gentle undulations of the rising ground to the north of the A40 which links the Thames Valley to the south with the Cotswolds immediately to the north.  
- A mature network of tree belts which were planted 40 years ago as game cover but which would now envelope new development minimizing its landscape impact and visual intrusion.  
- A sterile, intensively farmed, ecology as opposed to the highly sensitive and valuable habitats at City Farm, the currently proposed site of the “Garden Village”.  
- A “Garden Village” south of the A40 near Barnard Gate would be genuinely freestanding and would not pose the threat of coalescence and loss of landscape setting to Eynsham, Freeland and Church Hanborough villages.  
- The site’s proximity to the route of the former Witney Branch Line provides the opportunity for a truly sustainable transport link into the employment centres of Oxford, Witney and Carterton.  
- Being within a single ownership, the Barnard Gate South site is deliverable within the Plan Period.  

2. The selection of Eynsham North has been hurriedly made with no reference to Freeland or Church Hanborough Parish Councils. There have been no parish council briefings or public meetings for residents of either Freeland or Church Handborough and as a result there is little awareness amongst local people of the devastating impact the proposed “Garden Village” will have upon their quality of life. The sole basis of the site’s selection being expediency, with no strategic, long term, joined up vision. This vision would see a genuinely free standing “Garden Village” at Lower Barnard Gate, linked to a Science and Technology employment zone at Carterton to the west and Oxford city to the east, initially by bus service but ultimately by light rail or tram based upon the Witney branch line route.  

3. Eynsham North is too close to Oxford city and would form a suburban dormitory, rather than an...
4. Eynsham North would not be a freestanding community but grafted onto the village of Eynsham. The residents of Eynsham have worked hard to produce their Neighborhood Plan which has been effectively shelved by WODC in adding a further 2,200 homes to the 1,000 identified by the Neighborhood Plan on flat land to the west of the village.

5. Eynsham North would effectively lead to the coalescence of the settlements of Eynsham, Freeland and Long Hanborough, contrary to policy and good spatial planning principles.

6. Eynsham North would impact severely upon the landscape settings of Eynsham, Freeland and Church Hanborough. The Sustainability Appraisal of alternative sites confirmed that construction of a Garden Village in this location would result in Severe, Long Term, Landscape and Visual impacts. [Oxford Sustainable Options Assessment, LUC, September 2016.]

7. Eynsham North would be divorced from the service centre of Eynsham village by a major highway with all its associated noise, vibration, air pollution and safety issues, contrary to all good planning practice.

8. A “Garden Village” in this location would be divorced from the long term vision of reopening the Witney Branch Line to the south of the A40 as a light rail or tram service which would also link Carterton to Oxford. This being a truly “sustainable” transport solution, as opposed to a further Park & Ride, which will simply generate intensified local traffic movements as commuters access the facility.

<td>Confusion over whether this is a separate or linked development- my understanding is that it should be self contained- then why is it so close to Eynsham and 2 rural service centres so close to each other? Suggest if it goes ahead, this development should take all of Eynsham’s share of Oxford’s unmet need, rather than splitting it between 2 Eynsham sites and/or spreading the provision more widely. It should be distinctly separate, and it should not take services away from Eynsham (doctors, shops, secondary school, library etc). Also there is some confusion between providing Oxford’s housing and providing new employment- it is of course desirable to live near work, but what confidence is there that this will be achieved? Most will probably struggle to get into Oxford along an increasingly congested A40.</td>

<td>&gt; SECTION 9 - STRATEGY AT THE LOCAL LEVEL &gt; Eynsham Woodstock Sub Area &gt; MAIN 155</td>
<td>Whilst I appreciate the need for additional housing in the Oxfordshire region I find the proposal for the Garden Village to the North of Eynsham to be totally wrong and perverse in a number of ways. This development would dramatically change the whole nature of this rural area and seriously affect the quality of the lives of those who live in the villages. Such developments are absolutely fine in the appropriate areas but not when imposed between small rural villages. Many roads in the West Oxon area are overloaded causing much misery to those who have no option but to use them. Without first implementing drastic improvements any further developments which will increase the traffic should not be entertained. Dualling the A40 between Witney and the Wolvercote roundabout and providing a direct connection to the A34 from the A40 would greatly improve traffic flow. Small local improvements such as park and rides, tram links and dedicated bus routes will help but they will not help those who are travelling through the region and there are many who are obliged to do so.</td>

</table>
1. These representations are submitted in response to the West Oxfordshire Local Plan 2031 – Proposed Modifications Consultation, December 2016 (WOLP 2031 Modifications). They are made by Edgars Limited on behalf of Bike Safe.

2. Bike Safe are a registered charity which was set up to promote an off-road multipurpose path for cyclists and pedestrians along the B4044 between Eynsham and Botley/Oxford, via Farmoor. The path crosses the boundary between the Vale of White Horse and West Oxfordshire districts.

3. Bike Safe have prepared technical design work for the path received in principle support for the proposed community path from Vale of White Horse planning officers and Oxfordshire County Council through a pre-application planning request (Ref 15/V1482/PEM).

4. Bike Safe and the B4044 Community Path project are also explicitly referenced in the submitted draft West Oxfordshire Local Plan 2031 which states that:

   9.5.49 Active travel will be positively encouraged to capitalise on the proximity of this sub-area to Oxford City. Existing pedestrian and cycle routes will be safeguarded and opportunities for new and enhanced routes will be identified. Where appropriate, we will seek walking and cycling schemes from new development either directly or through a financial contribution. Initial work has been instigated by a local group called ‘bikesafe’ looking at the potential to introduce a dedicated cycle route along the B4044 Eynsham Road. The Council will work with the group and other relevant partners including the County Council to further consider the merits and possibility of this scheme being taken forward.

5. The draft West Oxfordshire Local Plan recognises the potential of the B4044 community path to facilitate active and sustainable travel to Oxford City. The commitment to work with the group is welcomed.

6. Bike Safe however object to Policy EW1a West Oxfordshire Garden Village SDA (Main Modification 155) and Policy EW1b West Eynsham SDA (Main Modification 158) due to the lack of reference to contributions from these developments towards the provision of the B4044 Community Path.

7. Both of these allocations are substantial and will generate significant traffic from the new housing and to the proposed new business park.

8. The B4044, although a ‘B-road’, is a well-used commuter route between Oxford, Science Vale and West Oxfordshire.

9. The B4044 community path will connect and provide a safe route for around 15,000 people living in the three parishes along the route- Eynsham, Cumnor and North Hinksey. It will also provide an attractive and sustainable commuter route for cyclists between the Eynsham and West Oxford growth areas.

10. The B4044 road surface is poor in places and there is no provision for pedestrians and cyclists along this road. The verge is full of hidden holes and un-safe to walk on. The road is a key route which carries up to 12,000 vehicles per day with speeds up to 50mph. The carriageway is too narrow for two vehicles and a bicycle to pass safely. The road winds along its route which limits opportunities for vehicles to safely overtake walkers or cyclists. This frustrates drivers and stops most cyclists and pedestrians from using it. It is just too
11. The community path will have a number of key benefits:

- i. Much more attractive for commuters to cycle with reduced congestion and CO2 emissions;
- ii. Improved and sustainable connections for existing communities to access facilities at Farmoor, Botley, The Hill End Centre and Oakenholt Care Home;
- iii. Health benefits of walking and cycling and improved connectivity and social inclusion;
- iv. Safer road conditions for cars and buses;
- v. Improved countryside access including to the Thames Path.

12. The route has widespread public support. It also has the support of the Parish Councils through which it passes and key businesses such as Stagecoach and Siemens. Initial discussions have been held with the major landowners who have indicated their support.

13. As a charity Bike Safe has raised significant funds from the public through sponsored rides and runs and from grant giving bodies. This has enabled environmental surveys to be undertaken and the commissioning of the technical design by engineers InfrastructCS. The environmental surveys and the technical path design has been made available to the Council and can be made available to the Local Plan Inspector on request.

14. Based on this technical design the cost of providing the path will be significant and is estimated at £2.9m.

15. Bike Safe propose to continue to raise funds to contribute towards the planning and build costs and is unique in Oxfordshire in helping to raise this local contribution.

16. The delivery of the path however will require additional funding. Given the location of the proposed SDAs at Eynsham, the additional traffic generated on the B4044 will make conditions worse for pedestrians and cyclists.

17. Bike Safe consider is necessary that these SDAs should make financial contributions towards the implementation of B4044 Path to achieve the suggested focus on sustainable travel and to mitigate their traffic impact.

18. This is in accordance with paragraph 9.5.49 of the plan as quoted above. Bike Safe consider, however, that the wording of Policies EW1a and EW1b should include a specific reference to the B4044 path.

Freeland Councillors feel that there has been a complete lack of consultation about the Garden Village. The first they heard about it was in an email from WODC in mid-August this year advising them of an initial "Expression of Interest" about the site. Yet barely a couple of months further on, the Draft Local Plan has been updated to state that the Garden Village "will be built," yet there has been no formal consultation with local parishes at all. This is totally unacceptable and therefore it should not be included in the Draft Local Plan as a definite, otherwise it is pointless feeding back comments to WODC when this is already a "fait accompli".

Whilst Councillors recognise the need for development to provide housing where it is needed, they do not feel that the Eynsham Garden Village is in the correct location. They do, however, wish to support the Eynsham Parish Council Neighbourhood Plan, in which they support the development of the area to the West of Eynsham that will provide up to 1,000 houses.

Freeland Councillors absolutely object to the Garden Village development going ahead in the proposed location and will not be offering their support to this proposal. It would effectively lead to the coalescence of
Eynsham and Freeland/Church Hanborough villages contrary to policy. The proposed alternative Garden Village location recently put forward south of the A40 in the vicinity of Barnard Gate is a more sustainable alternative.

They feel the development is far too large for the proposed location, the local infrastructure is insufficient to cope with the huge number of cars that will be generated from such a site and the proposed Park and Ride facility would also be far too small to cope - or to take a significant number of cars off the A40. They believe the whole site, which will generate in excess of an additional 4,000 cars, will just exacerbate the nightmare that is the daily congestion already experienced on the local road network between the A4095 and the A40.

To state in the Plan that “there will be a strong emphasis on the provision of high quality local employment opportunities in order to encourage increased self-containment and reduce the need for out-commuting” is simply making a huge assumption that a large proportion of the Garden Village residents will work at the new science park, thus reducing the amount of traffic generated by the site. This is purely speculative and cannot be relied upon as evidence, leaving the unanswered question of how will the additional traffic be compensated for?

No doctor’s surgery has been provided in the plans, and both local surgeries are already operating at full capacity with no room to take on the number of additional patients that would be generated from a development of this size.

West Oxfordshire is predominantly rural, which residents choose to live in because of the attraction of the rural villages. As the updated (June 2014) SHLAA states, “although Freeland does not include a conservation area, the surrounding geography and landscape impose significant constraints upon further expansion of the village…..This gently rolling vale landscape creates an important rural outlook from the road, with views of the nearby service centre being hidden by the gradual rise in the adjacent fields.”

In addition Policy CO2 of the Local Plan states that a key Objective is to “Ensure that new developments are suitably located and well designed to protect and enhance the individual form, character and identity of our towns and villages as well as contributing to the quality of life in West Oxfordshire.” A Development of this scale and in the proposed location will significantly compromise the quality of life of residents of Freeland, Church Hanborough and Eynsham and is clearly in contradiction to this policy.

As you will note from the above one of the key themes running through the assessment is that the area is visually sensitive and any development would be highly prominent and exposed which would be very detrimental to the approach to Freeland village from the A40. The complete erosion and destruction of the rural approach to Freeland village is a major concern for the Councillors, plus they feel the Garden Village will also change the whole character of Eynsham village for the worse and they do not believe the Garden Village will be self-sufficient based on the evidence they have read so far.

The area included within the proposed Garden Village is mainly farmland and to have this completely destroyed and replaced with Science Parks, Park and Ride facilities and a huge amount of housing, is just totally unacceptable. The Updated Draft Local Plan proposes up to 2,200 homes initially but goes on to state that there is the possibility of significantly more and Councillors are very concerned that because this proposed site already abuts the Freeland Parish boundary, it will eventually spread beyond the boundary right into Freeland, thus having a
major detrimental impact on the rural approach to our village. This is contrary to Policy EH1 of the Local Plan which seeks to conserve and enhance the quality, character and intrinsic distinctiveness of the landscape setting.

Policy CO14 is to "Conserve and enhance the high quality of West Oxfordshire with protection and promotion of its diverse landscape, biodiversity and geological interests..." The area included in the Garden Village is one of the most species-rich areas for wildlife in Oxfordshire, with vast numbers of species of flora and fauna being found in the area, which feed out into the wider surrounding countryside. It has been designated as a Local Wildlife Site since 1977 and has been surveyed regularly since then. Grassland plants of national conservation concern which are found at City Farm include Field Scabious, Ragged-Robin, Tormentil and Devil's-bit Scabious, which are all on the Red List for England. The area of City Farm has also been designated a Site of European Importance for arable plants.

4.52 Capacity: The West Oxfordshire Garden Village SDA is a new allocation in the Proposed Modifications of 2,200 homes. Whilst the capacity of the site has not been justified, and the vision within the Expression of Interest (EOI) simply identifying broad residential areas, we do not take issue with these capacity figures.

4.53 It was expected that the Government would make an announcement in the autumn on whether they will support West Oxfordshire’s garden village concept through their garden village programme. The Council suggest that should Government financial support is made available then the delivery of this new strategic development area could be accelerated. If the EOI is not successful, its delivery may be slower. At the time of writing it is unknown whether the Government support the West Oxfordshire Garden Village SDA.

4.54 The Council’s trajectory assumes the slower rate of delivery, without Government financial support, but still expects first completion by 2021-22, four years from now. The EOI identifies ways of speeding up the delivery of the Garden Village so that the necessary 2,200 homes are completed by the end of the plan period.

4.55 Ownerships: There is a total of 19 different landowners within the SDA, requiring residual land assembly.

4.56 Delivery: It is still unknown whether the site would be brought forward by a promotion partnership, development partnership or full joint public/private venture and as yet there are no identified developers on board. Thus, the Council’s expected start in 2020-21 is considered to be highly optimistic and there is no justification for the 220 dpa build out rate.

4.57 The Council anticipate that the use of incentives to developers to increase their build-out rates such as financial support and waivers on planning conditions which are conditional are required to achieve these build-out rates. However, the precise mechanism for this is yet to be established and in our view only adds to the complexity in bringing the site forward. Indeed, developers will not commence until this matter has been trashed out.

4.58 Exactly how the site is to be phased is also still to be decided and depends on the as yet unprepared Garden Village Infrastructure Delivery Plan which will identify key infrastructure and infrastructure dependencies mapping.

4.59 Infrastructure: The following infrastructure is required and will be delivered in whole, or in part, through CIL or developer funding: A40 duelling improvements, and western bus lane; enhanced access and parking to Hanborough Station; walking/cycle connections across the A40 to Eynsham, including a new landmark footpath.

</tbody>
</table>

4.60 Conclusions: Without any justification for the Council’s build out rates we have applied a build out rate of 161 dpa to the delivery of this SDA. We also consider the commencement of development by 2021 is highly unlikely. Bearing in mind the site has only recently been formally identified in the Local Plan and the fact that a range of services will need to be delivered alongside the proposals, it is our view that NLP’s average lead in time (3.9 years) for an application and average period between submission of an application to first commencement (6.1 years) is entirely justified in the case of this particular scheme.

4.61 This would result in development starting in 2026/27. However, in order to be robust we have commenced the site at 2024/25, resulting in 1,127 homes being built within the plan period.

| MM424         | Natural England          | Marc Turner     | Mr Turner        | 941        | > SECTION 9 - STRATEGY AT THE LOCAL LEVEL > Eynsham Woodstock Sub Area > MAIN 155 | The approach given to the identification of individual allocations (as set out under the relevant sub-areas within chapter 9) and their associated policies is strongly supported. |

Where relevant, individual policies require the provision of schools as part of the wider allocated development, including the number and size of schools required (for example Main Modifications 103, 140 and 155). Where the proposed housing numbers do not trigger the need for a new school, the policy requires appropriate provision of or a contribution to the necessary supporting infrastructure (for example Main Modifications 128 and 131). This approach is supported by the EFA.

You will have no doubt taken account of the key strategic policies to reiterate this position, including securing developer contributions through s106 and CIL, but it would be helpful if they were explicitly referenced within the document. In particular, as below:

The National Planning Policy Framework (NPPF) advises that local planning authorities (LPAs) should take a proactive, positive and collaborative approach to ensuring that a sufficient choice of school places is available to meet the needs of communities and that LPAs should give great weight to the need to create, expand or alter schools to widen choice in education (para 72).

The EFA support the principle of safeguarding land for the provision of new schools to meet government planning policy objectives as set out in paragraph 72 of the NPPF. Support is also given for the siting of schools within the allocated sites in locations which promote sustainable travel modes for pupils, staff and visitors. There is also a need to ensure that the education contributions made by developers through the Community Infrastructure Levy are sufficient to cover the increase in demand for school places that is likely to be generated by a development. When new schools are developed, local authorities should also seek to safeguard land for any future expansion of new schools where demand indicates this might be necessary.

West Oxfordshire District Council should also have regard to the Joint Policy Statement from the Secretary of State for Communities and Local Government and the Secretary of State for Education on ‘Planning for Schools Development’ (2011) which sets out the Government’s commitment to support the development of state-funded schools and their delivery through the planning system.

Overall, the EFA commends the main modifications proposed. They seek to ensure that adequate future education provision across the district is provided.

| MM424         | Natural England          | Marc Turner     | Mr Turner        | 941        | > SECTION 9 - STRATEGY AT THE LOCAL LEVEL > Eynsham Woodstock Sub Area > MAIN 155 | The impact of these new allocations on traffic levels on the A34 and potential consequential air pollution impacts on the Oxford Meadows SAC needs to be addressed. |

</table>
| MM491        | Crest Strategic Projects | Crest Strategic Projects | - | Crest Strategic Projects | 1584       | > SECTION 9 - STRATEGY AT THE LOCAL LEVEL > Eynsham Woodstock Sub Area > MAIN 156 | Main 156: Paragraphs 9.5.40s–9.5.41b
9.22 There is no evidential basis for allocating part of the proposed West Eynsham SDA as an SDA to help meet the housing needs of West Oxfordshire. Such an approach is not in accordance with the chosen spatial strategy that underpins the Local Plan. The unmet housing needs of Oxford that are assigned to West Oxfordshire could potentially be dealt with in full at the single proposed Garden Village location, north of the A40. As a contingency measure land to the West of Eynsham, identified by the LUC study, on which the Council appears to rely, could then be identified as a reserve/contingency site to be released if a prescribed monitoring exercise reveals that the Garden Village is delayed.
9.23 The terms of reference of the LUC report are clear: the role of the potential location was considered and tested as a candidate to help meet the unmet housing needs of Oxford. The proposed amendment set out within the GL Hearn representations would be consistent with the evidence base and would support flexible and proactive plan-making.
9.24 Paragraph 9.5.41a highlights the inconsistencies that are apparent within much of the decision-making that the Council has undertaken in compiling the modifications version of the Local Plan. The impact on landscape is identified as a key consideration in determining which sites to allocate to deliver the proposed spatial strategy. SA criterion 14 addresses the objective of conserving and enhancing landscape character and the historic environment. The proposed modification advises that compared to alternative site options the proposed West Eynsham SDA is preferable in these terms. Comparison of the site with alternative site options considered via the SA exercise demonstrates71 that this is not the case: The West Eynsham SDA (1,000 dwellings) scored the same as the West Carterton (1,000 dwellings) and North Carterton (1,200 dwellings) SDA options in the 2016 SA Addendum. While this is important in itself, what is more notable is the fact that both options at Carterton would be in accordance with the proposed spatial strategy selected for meeting the housing needs of West Oxfordshire and therefore allocation of either or both of these options in preference to land to the west of Eynsham would be aligned with the evidence base.
9.25 A further factor militating against the land at Eynsham is the acknowledged multiplicity of land owners who would need to be corralled into cooperation to ensure that a comprehensive and deliverable scheme could be delivered. In contrast the land West of Carterton is controlled by a single house builder (Crest Nicholson) with an enviable and long-standing track record of delivering successful, high quality strategic-scale developments. |
<p>| MM726        | JA Pye Oxford Ltd       | JA Pye Oxford Ltd | - | JA Pye Oxford Ltd | 1648       | &gt; SECTION 9 - STRATEGY AT THE LOCAL LEVEL &gt; Eynsham Woodstock Sub Area &gt; | The identification of a Strategic Development Area (SDA) to the west of Eynsham for 1,000 houses is supported. JA Pye Oxford Ltd owns land at Fruitlands (see attached Location Plan) and through the sensitive and sustainable development of this site for limited residential development there is a significant opportunity to create pedestrian and cycle links from the existing village through and beyond Fruitlands to the larger development opportunity beyond. The creation of these sustainable links will allow integration of the West Eynsham SDA with the existing village. |</p>

However, if there is to be development of the Western Eynsham SDA, then our Neighbourhood plan proposes that building should only take place north of the Chilbrook, so that rare wildlife south of the Chilbrook is protected. In addition, this would retain the rural walks, running and cycle rides that so many of us in Eynsham need for our health and well-being as well as the lovely views of Eynsham’s conservation area over the fields, when approaching from Twelve Acre Farm and the Nunney. I support the detailed landscape and visual impact assessment outlined in 9.5.41a.
9.5.40z: Please also consider a cycle path to the Toll Bridge that will join up with a cycle/community path to Botley when it is eventually built. |
| MM751        | Goldfield Estates        | Goldfield Estates | -                | -                | 1862       | > SECTION 9 - STRATEGY AT THE LOCAL LEVEL > Eynsham Woodstock Sub Area > MAIN 156 | MAIN 156 Paras 9.5.40s-9.5.41b sets out the proposals to allocate land to the west of Eynsham for development and notes the considerable developer interest in this area to date. This amendment notes the suitability of the area for development and allocation and states that this has been demonstrated through the Council’s Strategic Housing and Employment Land Availability Assessment (SHELAA) and as part of the Local Plan Sustainability Appraisal (SA) process alongside other reasonable alternatives. We support this change and consider that this consideration has followed the correct procedure and is legally compliant, positively prepared and sound. |
| MM751        | Goldfield Estates        | Goldfield Estates | -                | -                | 1885       | > SECTION 9 - STRATEGY AT THE LOCAL LEVEL > Eynsham Woodstock Sub Area > MAIN 156 | MAIN 60 Paras 7.23-7.28 notes the current traffic issue along the A40 and notes that improvement in capacity may be achieved and that the current junction at Eynsham is a contributory factor. We would suggest that the new junction to the proposed Park & Ride facility to the north of Eynsham should also be utilised to provide access to the allocation to the west of Eynsham to avoid creating more than one new access to the A40 principal route, to maximise accessibility to the Park & Ride site and to manage the way that new development traffic accesses the main road network to ensure that this does not contribute to any further issues to the capacity of the network. We appreciate the views of the community expressed in the Autumn 2015 consultation 'Investing in the A40' and we recognise the need to future proof A40 access design proposals to accommodate a future possible westbound bus lane and possible future dual carriageway along this section of the A40. We understand that there will be ‘funding gap’ issues associated with the delivery of new strategic infrastructure and we will work with the Highway and Planning Authorities to identify necessary measures to mitigate the impact of development traffic and where appropriate contributions to strategic transport improvements that would be of wider benefit to the local community.
Amendments to Paras 7.27-7.27b provide a summary of the improvements proposed along the A40, including the Park & Ride facility and note that the council have been considering funding options for this these. MAIN 65 Para 7.54 also notes the proposed Park & Ride facility at Eynsham will be delivered in conjunction with improvements to the A40. MAIN 156 Paras 9.5.40x-9.5.40y explains the benefit to the community of providing the West Eynsham SDA link road to give additional journey choice and to remove unnecessary through traffic.
These paragraphs also note that appropriate consideration will need to be given to the connection to the A40 and to the Garden Village to the north. We assert the land to the west of Eynsham could provide necessary funding contributions to deliver an appropriate standard of link road and to provide and enhanced junction to the A40, which would support the delivery of the infrastructure required for the Park & Ride facility, particularly for non-car modes of travel from the wider Eynsham village. Development of the Site in the short term can respond to the identified housing need and also enable the early delivery of essential infrastructure for the West Eynsham SDA, co-ordinated and closely designed with the evolving work on the 2017 planning application by Oxfordshire County Council for the Park & Ride site. |
The pre-submission version of the Neighbourhood Plan for Eynsham is currently out for consultation until the 31st of January 2017. The emerging Neighbourhood plan seeks to accommodate the proposed growth set out in the Local Plan, including the proposed modifications. Of importance Proposed Policy ENP17 covers the western expansion area, point A) of the policy states: “Development west of Eynsham shall have vehicular access from the A40 at only one point”. The supportive explains that the single access point will be achieved through the consolidation of junctions. The Site Options Assessment which supports the pre-submission version of the Neighbourhood Plan sets out preferred details of how this access can be achieved. Maps W1, W2 and N1 all show one consolidated access point to the north of the Site. An extract of Map W1 is below (see original representation).

Gavin Barwell’s written ministerial statement on 12th December 2016 gives further support and weight to the Neighbourhood Planning process. We consider it is vital that the access aspirations for the western expansion area, as set out in the emerging Neighbourhood Plan accord with the emerging Local Plan. We request that the Local Plan be amended to reflect this and further exploration of the issue be considered in the hearings to ensure that the Plan is robust and effective in this delivery on this point.

Paragraph 9.5.40x: Which SHELAA are we talking about here? Has the 2016 SHELAA, announced in March, been published? I could not find it.

In the West Oxfordshire Strategic Housing Land Availability Assessment (SHELAA) of just two-and-a-half years ago (June 2014), the land north of the A40 now proposed for the Garden Village was classified as “Not Suitable” for development. The document said: “Noise impact and unacceptable impact of development on open countryside.” Why have you ignored your own advice, and how come it is now OK to have precisely this impact on open countryside?

As mentioned before, in a comment on paragraph 7.43c, this new western link road for Eynsham will slow down traffic on the A40, at the junction, and the bypass to the east already removes through-traffic from the centre of Eynsham.

A key consideration for this site is traffic impact not only in terms of the traffic impact of the proposed development but also the potential to deliver strategic transport improvements that would be of wider benefit to other residents and employees. In particular, a major urban extension such as this presents the opportunity to provide a new western link road for Eynsham serving the new development and also providing a strategic road connection from the A40 to the B4449 to the south, thereby providing additional journey choice and also helping to remove unnecessary through-traffic.

The West of Eynsham SDA will need to be served by a spine road to distribute trips arising from the development onto the surrounding road network.

9.5.40x and y: Comment: Unsound – the need for a Link Road to provide access has not been objectively considered in relation to the harm it will cause to local amenity and of alternative, less intrusive, road access.

Both statements indicate that a Link Road is to be constructed as part of the western development as a clearly prejudged matter. Not only is the nature of the road undefined but there is no allowance in the statements for considering alternative access that may be necessary to ensure viability (hence deliverability) or the trade-off between harms and benefits that different road options would incur.

Recognition of the common needs of the two developments either side of the A40 is positive and should be seen as a justification for a single SDA covering the whole area. The real problem of road access is not within the development area but immediately outside it on the A40 and at the Toll bridge. These issues are only mentioned in passing, presumably because developers cannot be forced to improve pre-existing problems, although they might prefer to see their contribution towards road transport used to provide real benefits for their potential purchasers or tenants rather than providing link roads of dubious value.

9.5.41a: Comment: Unsound – assumptions may prove wrong and jeopardise delivery of house numbers.

The reference to the Neighbourhood Plan in 9.5.40v is meaningless if the results of the work and consultation are ignored. The ENP agrees that the northern part of the site is suitable for housing for the reasons given, but it is equally clear that the southern section is far less suitable and certainly does not come into the ‘easily mitigated’ category. The ENP recommends that the southern part of the site be used as open-access green space incorporating the SUDS features necessary for this flood-zone affected site. The reference to ‘alternative site options’ is misleading as there are no alternative sites offered – a general weakness within the Local Plan.

9.5.41b: Comment: Unsound – the numbers are a serious over-estimate of what can be delivered.

The Neighbourhood Plan recognises that part of the site can deliver significant numbers of new homes at the appropriate time. However, overestimating what can be achieved puts the overall housing delivery at risk or sub-standard and inappropriate development will result - neither harm will result if numbers are kept reasonable. The high number suggested originates from a proposal put forward by Berkeley Strategic Homes that does not take into account the on-site design and mitigation issues mentioned in 9.5.41a; there is no

<td>&gt; SECTION 9</td>
<td>Although mention is made of suggested, currently unfunded, improvements to the A40 between Witney and Eynsham, it has to be recognised that the route will still be subject to the congestion problems nearer to Oxford. Also because of the problems created by any perturbations, the only reliable long term solution will be to re-open the old railway line between Yarnton Junction and Witney. A re-opening of the Witney line will provide direct rail access to the economic growth areas in Oxfordshire and beyond and to Heathrow Airport. To this end the line of the old railway should be safeguarded from development along with any necessary deviations around developments that have occurred since the railway was closed. The old line crosses the southern tip of the West Eynsham site and the proposed western link road. It is important to ensure that the link road does not block railway reopening and at the same time this area would be a prime location for a railway station served by the link road, giving direct access for the residents of the 1000 new houses.</td>

available and was not put forward for inclusion in the SHELAA by us or anyone else with the legal right to do so.

We have asked for this to be corrected on 2 other occasions. Would you please remove our section of land from the SHELAA map and other documents before we seek legal advice.

**Main 158 Policy EW1b**

West of Eynsham Strategic Development Area

Stagecoach is aware that two sites within the scope of the draft allocation are already the subject of positive determinations, totalling together just under 240 dwellings.

Stagecoach notes and strongly supports paragraph 9.4.40z, that points out the need for the best possible pedestrian and cycle links to the east, to allow residents to take advantage of service provided in Eynsham. This includes existing high-frequency bus services to Witney and Oxford, operating as service S1, up to every 10 minutes at peak times.

Stagecoach wishes to make clear to the Council and the Enquiry that:

* It intends to maintain a high quality bus service from Eynsham via Swinford Toll Bridge and Botley to Oxford, beyond the point in time when the bus priority measures are delivered along the A40. * It supports the principle of a western link road for Eynsham, as set out at 9.5.40x, not least because it would no doubt significantly reduce traffic levels on Witney Road, Eynsham, and through the existing historic core of the settlement, which would assist in the efficient and reliable operation of buses along the S1 route, for which negotiating a stretch of single carriageway road in the town is currently especially challenging.

* A western link road should not be seen as the sole basis for likely provision of frequent and bus services directly serving the proposed urban extension. It is, however, possible that in the longer term, direct bus links from origins in rural areas south west of Eynsham might prove to be sustainable feeding into high-frequency bus services at the Park and Ride, especially at peak times. Notwithstanding this, frequencies on such a service will no doubt be limited, especially compared with the S1 route. The core service to the settlement should be assumed to operate via the current S1 route. Therefore the pedestrian and cycle connectivity to the east of the SDA is essential for residents to take advantage of that service.

* The provision of the highest quality of connectivity for cycles (and pedestrians) across the A40 to the Park and Ride terminal will also be essential. It is assumed that this would be provided as part of the junction arrangement design for the western link road with the A40 in due course.

Stagecoach broadly supports the modifications and Policy EW1b (e) in particular.

However the effectiveness of this part of the Policy would be enhanced by making more explicit reference to the need to ensure the best possible pedestrian and cycle links are provided to the main direct high-frequency public transport services available on Witney Road in Eynsham, and at the proposed new Park and

| MM451         | English Heritage       | Historic England | Mr              | Small             | 1088       | > SECTION 9 - STRATEGY AT THE LOCAL LEVEL > Eynsham Woodstock Sub Area > MAIN 158 | Ride site, as follows:  
"e) the provision of other supporting transport infrastructure, including proposals to mitigate the impact of traffic associated with the development in particular the impact on the existing village, and incorporating a comprehensive network for sustainable modes of pedestrians, cyclists and public transport with the best possible links connectivity provided to adjoining areas. This should include including a particular emphasis on improving pedestrian and cycle linkages from the SDA into Eynsham, to the West Oxfordshire Garden Village (including the Park and Ride Terminal) and into the surrounding countryside."

| MM57          | CB#73                  | Dr             | Baker           | 127               | > SECTION 9 - STRATEGY AT THE LOCAL LEVEL > Eynsham Woodstock Sub Area > MAIN 158 | The southern end of the proposed new western link road for Eynsham is shown as cutting through the scheduled monument of sites discovered by aerial photographs at Foxley Farm. Historic England considers that, without further details, a new major route could cause substantial harm to the significance of the monument, which is a designated heritage asset of the highest significance.

In accordance with paragraphs 132 and 133 of the National Planning Policy Framework, substantial harm should be wholly exceptional and only allowed if it can be demonstrated that the substantial harm is necessary to achieve substantial public benefits that outweigh that harm. We are not convinced that harm to the scheduled monument cannot be avoided, which should be the objective, or that, if the harm is unavoidable, the public benefits of the proposed road outweigh the harm, and we therefore object to the proposed routing of this road.

In addition, the south-east corner of the site abuts the Eynsham Conservation Area. As a designated heritage asset, great weight should be given to its conservation in accordance with paragraph 132 of the National Planning Policy Framework and any development of this site should therefore conserve or enhance the special interest, character and appearance of the Conservation Area as part of the positive strategy for conserving and enjoying, and clear strategy for enhancing, the historic environment as required by the Framework. This should be a criterion in Policy EW1b.

| MM59          | RWB                    | Dr             | Barltrop        | 132               | > SECTION 9 - STRATEGY AT THE LOCAL LEVEL > Eynsham Woodstock Sub Area > MAIN 158 | Policy EW1b: West Eynsham Strategic Development Area
Policy EW1b: West Eynsham Strategic Development Area
It seems unsound to include the West Eynsham SDA option, in this form or at all:
-- Does the inclusion consider adequately the alternative of the Tilgarsely / Eynsham North Garden Village option?
-- Does it have local Eynsham involvement? Should the policy not be guided by the preferences emerging from Eynsham Parish Council and the Eynsham Future initiative? Those appear to be recommending the Garden Village option as more strategic than the West Eynsham option.
-- The development of an A40-B4449 link road and housing south of Chilbridge Rd would result in serious loss of landscape and amenity for the large part of Eynsham that adjoins this area. In comparison, building north of the A40 would not result in anywhere near a comparable loss of landscape and amenity. |

<td>-</td>
<td>Berkeley Strategic Land Ltd</td>
<td>1785</td>
<td>&gt; SECTION 9 - STRATEGY AT THE LOCAL LEVEL &gt; Eynsham Woodstock Sub Area &gt; MAIN 158</td>
<td>4.0 POLICY EW1b: WEST EYNSHAM STRATEGIC DEVELOPMENT AREA (SDA) 4.1 Berkeley supports the proposed West Eynsham Strategic Development Area (SDA) as described at paragraphs 9.5.40s – 9.5.41b, at Figure 9.15 and in Policy EW1b. This proposed allocation will: * Assist in meeting the Council's increased requirement for housing; * Be ideally placed to assist in meeting Oxford’s unmet need; * Deliver a site for a new primary school; * Contribute by way of direct provision and financial contributions to - improved community infrastructure (health, library provision, community buildings, sport and recreation provision, public open space, etc.); - secondary and special needs education provision * Provide further support for the existing village centre and assist in the delivery of additional services and facilities within the strategic allocation; * Assist in the delivery of a new road linking the A40 with the B4449 thereby reducing congestion in the village centre; and * Open up opportunities for additional employment-generating development at and adjacent to the Oasis Business Park on the south side of the village. 4.2 As indicated above, Berkeley has control over the majority of the proposed West of Eynsham SDA as shown on Figure 9.15b. Berkeley has a proven track record in promoting and delivering large, complex strategic sites. Some of its current projects include 1,250 homes with associated services facilities and infrastructure on Land North-East of Bury St Edmunds; circa 500 homes at Abbey Barn South in High Wycombe; and 750 homes with associated services facilities and infrastructure (including a link road and a primary school) at Warfield, near Bracknell).</td>
<td></td>
</tr>
</tbody>
</table>
4.3 Berkeley’s approach in dealing with large strategic sites is to take the lead on but to work constructively with the Local Planning Authority and other stakeholders in developing a comprehensive masterplan/Development Brief for the site. Berkeley therefore welcomes the reference in Policy EW1b b) to “a comprehensive development led by an agreed masterplan”: Berkeley will be looking at the site comprehensively; and will take the lead in preparing the masterplan.

4.4 The other major landowner in the area identified on Figure 9.15b is Oxfordshire County Council (“OCC”). Berkeley is in early discussions with OCC and is confident that, consistent with the requirements of Policy EW1B, it can work with OCC and the other landowners to deliver a “sustainable integrated community” that will be “a positive addition to Eynsham”. Berkeley is also confident that it can deliver “about 1,000 homes with a balanced and appropriate mix of house types and tenures.” Berkeley would point out however that the process of determining the appropriate “balance” and “mix of house types and tenures” will be influenced significantly by viability issues, which will require discussion and agreement between the Council and the landowners to determine the priorities in terms of infrastructure provision/delivery.

4.5 Berkeley notes that at paragraph 9.5.40u in the Plan it states that “the suitability of the site for strategic development has been assessed in broad terms as part of countywide joint working carried out to determine the apportionment of unmet need from Oxford City. Reference is made also to the assessment made as part of the Council’s SHELAA process and the Local Plan SA. Berkeley has also carried out its own assessment and has looked, in particular, at transportation, flood risk and landscape issues. Further work in this regard (and in other disciplines) has been commissioned to inform the forthcoming Local Plan Examination but from the work done to date, Berkeley can confirm that there are no ‘showstoppers’: the land is suitable for development, available and deliverable.

4.6 Berkeley also notes the reference at paragraph 9.5.40v to the Neighbourhood Plan for Eynsham. Berkeley is aware that Eynsham Futures has recently published the pre-submission version of the Plan for consultation. Berkeley will be responding to that consultation and is keen to work with Eynsham Futures to ensure that there is a consistent and ‘joined-up’ approach to the planning and development of the West of Eynsham SDA.

4.7 Berkeley notes that Eynsham Futures wants the vehicular access to new development to the west to be primarily from the A40 and the B4449. This is consistent with Berkeley’s plans and the requirement in the Submission Draft Plan for “a new western link road funded by and provided as an integral part of the development and taking the opportunity to link effectively with the existing road network on the western edge of the village” (Policy EW1b c)).

4.8 It states at paragraph 9.5.40y in the supporting text to Policy EW1b that “appropriate consideration will also need to be given to the relationship between [the] proposed access arrangements onto the A40 from this site [the West of Eynsham SDA] and from the proposed Garden Village to the north.” Berkeley would go further: it is essential there is a coordinated approach to both sites which, based on the work carried out to date by Berkeley, points to a new roundabout on the A40 as close as possible to the western-most point of the proposed West of Eynsham SDA. This should be reflected in Policy EW1b.

4.9 In this regard, account also needs to be taken of Oxfordshire County Council’s ("OCC") plans for a new park and ride facility north of the A40 and south of the proposed Garden Village access to which should also be integrated with the proposed SDAs north and south of the A40. This should also be reflected in Policy EW1b. Again, based on the work done to date by Berkeley, the best solution would be for cars to access the park and ride from the new roundabout and for buses to use a restricted/dedicated access further east along the A40. Berkeley will be making detailed representations to OCC in this regard in response to the current consultation on these park and ride proposals.
4.10 In addition, appropriate safeguards need to be put in place to secure the southern access to the western link road off the B4449. Berkeley is aware that the Council has resolved to approve an application for new employment-generating development close to the indicative junction with the B4449 shown on Figure 9.15b. Berkeley understands that on the basis that that application is also contrary to policy, the Council is insisting that the applicant enters into a S106 Obligation to ensure that the development assists in facilitating and does not prejudice the delivery of the southern part of the relief road or the junction with the B4449. Given the strategic function of the relief road, it is essential that the Council holds firm on this point and that it is given the full weight of development plan policy.

4.11 Based on the comments made in paragraphs 4.7 – 4.9 above, Berkeley objects to criterion c) in Policy EW1b and suggests that the criterion is amended as follows:

c) provision of a new western link road funded by and provided as an integral part of the development that will include: and taking the opportunity to link effectively
- Effective links with the existing road network on the western edge of the village;
- A new integrated junction on the A40 that will also provide access to the Garden Village and the proposed Park and Ride Facility north of the A40;
- A new junction on to the B4449
The Council will resist any piecemeal development that might prejudice the delivery of this strategic transport improvement

4.12 The first two dashed points at c) above should also be included in Policy EW1a, which relates to the proposed Garden Village north of the A40.

4.13 For the avoidance of doubt, Berkeley would wish to participate at any hearing sessions at which the Land West of Eynsham SDA is discussed and at which the access to the Garden Village and the new Park and Ride is discussed.

<td>&gt; SECTION 9 - STRATEGY AT THE LOCAL LEVEL &gt; Eynsham Woodstock Sub Area &gt; MAIN 158</td>
<td>POLICY H3 – AFFORDABLE HOUSING</td>
</tr>
</tbody>
</table>

5.1 Berkeley notes that the Examination Inspector stated at paragraph 4.2 in his Preliminary Findings - Part 2 that the "3 value zones" approach to affordable housing provision adopted by the Council "was justified" at the time that he published his findings. However, he did state at paragraph 4.1 that it was likely that the viability evidence would need to be updated before the Examination is re-opened and at paragraph 4.2 that "the boundaries between the 3 zones could have been drawn differently."

5.2 Berkeley would endorse these comments and in the absence of any updated evidence from the Council, the company reserves its position regarding the soundness or otherwise of the "3 value zones" approach and the soundness or otherwise of the boundaries between the three zones. Accordingly, Berkeley would wish to take part in any hearing sessions at which these matters are discussed.

5.3 Berkeley notes that Policy H3 proposes a 50% rate in the "high value zone", which includes Eynsham. This is higher than the percentage figure suggested for West Oxfordshire in the county-wide SHMA. That figure was 40%. It is also higher than the percentages adopted by neighbouring districts: in Cherwell, the percentage in the adopted Local Plan is 30% or 35% depending on location; and in the Vale it is 35% across the district. 5.4 In the absence of any updated evidence from the Council to justify 50% affordable housing provision in the "high value zone", Berkeley reserves its position regarding the soundness or otherwise of the Council’s approach and would wish to take part in any hearing session at which this matter is discussed.
5.5 The previous points notwithstanding, Berkeley welcomes the acknowledgement in Policy H3 that the level of affordable housing to be provided on qualifying sites will be subject to viability testing. This is essential in dealing with large strategic sites such as the West of Eynsham SDA where there is a significant amount of infrastructure to provide.

5.6 Berkeley notes also that at paragraph 4.2 in his Part 2 Preliminary Findings the Examination Inspector made the point at his paragraph 4.2 that:

"Later hearings will need to assess whether the combination of affordable housing and infrastructure requirements and the proposed CIL charge are justified for particular locations."

Consistent with this comment, Berkeley would propose that Policy H3 is amended to make it clear that the level of affordable housing on sites that are identified in the Plan as Strategic Development Areas (which includes the Land West of Eynsham SDA) will be determined on a site by site basis having regard to the infrastructure requirements and any CIL charge relating to each site.

Area prior to any development taking place. The results of the investigation and recording should inform the final layout of the development and be deposited in a public archive. Particular consideration will need to be given to the scheduled monument adjacent to the B4449.

k) appropriate measures to mitigate flood risk including the use of sustainable drainage methods to ensure that post-development surface water run-off rates are attenuated to achieve a reduction in greenfield run-off rates. The sustainable drainage systems should be designed to provide a biodiversity enhancement.

l) connection to the mains sewerage network which includes infrastructure upgrades where required including any necessary phasing arrangements.

m) demonstrate the use of renewable energy, sustainable design and construction methods, with a high level of energy efficiency in new buildings.

n) the developer will be required to set aside 5% of the developable plots for those wishing to undertake custom/self-build.”

We have concerns regarding point b) of the proposed policy which requires development to be led by a masterplan. The interest from developers in bring this area forward for development is well established, Appeal reference APP/03125/W/15/3136815 was allowed in August 2016 for development of 77 new homes on land to the east of the Site. The Inspector noted that the development would not prejudice the comprehensive delivery of a future development to the west.

We recognise that the provision of necessary infrastructure is essential to unlock strategic development sites and in our opinion phased planning and phased planning applications will be necessary to continue delivery of new homes to the west of Eynsham. A number of local authorities are now recognising the importance of such a phased approach and in that context we would respectfully draw your attention to the recent recommendations agreed by Arun Local Plan Sub-Committee on 6 December 2016 http://www.arun.gov.uk/local-plan-sub-committee where it was agreed to invite planning applications:

‘For the first phases of sites being investigated as potential strategic a/locations, where these phases do not adversely affect the delivery of either the whole a/location or the emerging Local Plan and that any infrastructure requirements can be delivered proportionately without adversely affecting the delivery of infrastructure required for the potential allocation or emerging local Plan as a whole.”

We consider that the Site could come forward for development in advance of a masterplan for the wider area provided that a plan for the identified physical and social infrastructure for the wider can be identified and not prejudiced; this can be demonstrated through a planning application. Given the identified housing needs we consider that the policy should allow flexibility for early delivery to ensure that it provides a justified approach to securing development.

Notwithstanding our comments to point b) of the policy we support this proposed new Policy. We consider that the proposed policy will ensure a comprehensive approach to development and will provide an effective policy for delivering new development that is consistent with national policy, supportive by robust evidence, is justified and legally compliant.
LOCAL LEVEL > Eynsham Woodstock Sub Area > MAIN 158

consider that the link road should connect to the proposed junction of the A40 that will be created by the proposed Park & Ride facility. The link road would then pass through the site, we would suggest that this link could be secured through a legal agreement for an approval of this site to provide a connection through the south.

We appreciate that the alignment of the SDA link road shown in proposed Figure 9.15b is indicative, however, the highway geometry for an acute approach to the A40, as indicated, some distance to the west of Eynsham, will be difficult to achieve in practice and sensibly the SDA spine road should link directly to the proposed Park & Ride junction, to minimise new junctions on the A40 primary route and to focus and manage movement in the area of the Park & Ride site.

There will be a number of existing and new residents of Eynsham who will drive to the Park & Ride to catch the bus service to Oxford, but it is expected that there will be a significant number of pedestrians and cyclists who will also access the Park & Ride site. Direct and safe movement will be important. The new junction will also give the opportunity to re-plan and improve bus services to Eynsham village using the new SDA link road. Oxfordshire County Council’s Park & Ride consultation runs to the 12th January 2017 and we making representation to OCC to future proof the design of the A40 junction accordingly.

Having provided the most appropriate connection to the A40, as described above, the West Eynsham SDA link road would be able to perform the highways and transport function described in the draft Policy text. It is unlikely in our view that the link road would be designed as a ‘by-pass’; it would most likely serve as a residential distributor road to the development, for efficiency of infrastructure and to provide frontage activity and over-looking for pedestrians and cyclists.

The spine road will provide the most appropriate and direct route to the A40/Park & Ride site and for connectivity to the proposed Garden Village to the north. Clear, safe crossings of the A40 will be required, sensibly focussed on the new A40 Park & Ride junction. It is likely that ace will have to consider access to the proposed Garden Village in parallel with the design and development of the Park & Ride site.

Early resolution of the detailed layout of the A40 access will facilitate the comprehensive development of the West Eynsham SDA. Given the need for OCC to meet their funding ‘window’ for the Parle & Ride scheme, it is important that the SDA A40 access is resolved as soon as possible. It is our Intention to work closely with OCC in the planning and design of the A40 junction, following the expected Committee approval to proceed with the detailed design in Spring 2017.

We support the proposed modifications to the Local Plan in particular the increase in growth, in accordance with the submitted evidence and the proposed allocation to the west of Eynsham. We consider that the further evidence submitted and the revised approach to growth to be fully justified and legally sound. We have raised concerns, namely in relation the potential delay in the delivery of the proposed allocation to the west of Eynsham in addition to proposing highways connection of this area to the A40 which we assert must be reconsidered.

4.1 Our clients also support the proposed West Eynsham Strategic Development Area (SDA) as described at paragraphs 9.5.40s – 9.5.41b, at Figure 9.15 and in Policy EW1b. This proposed allocation will:

- Assist in meeting the Council’s increased requirement for housing;

<td>and Countryside Act 1981. Sustaining an open field here will ensure that the rural village edge can be quickly accessed down the bridleway and it is imperative to retain the rural feel to the village and provide rural and undisturbed open spaces for human well being and the protection of many species. The link road has many significant dis-benefits to Eynsham and the whole village would be surrounded by road. It would not make any valuable traffic gains over the eastern bypass and little has been evidenced in terms of proper evaluation of cost, benefits and alternatives for improving local transport infrastructure at Masterplan stage. A Link road and housing would also have a negative visual impact on walkers along the bridleway and accessibility to the outer bridleway would be inappropriate if divided by a link road thus cutting off the village from the current easily accessible space. Additionally the Merton Close development was built as a ‘rural exception’ site defining (by being beyond) the village edge for the south-west corner. It is therefore inappropriate that a development much further out and detached by the intervening flood zone should be placed south of the Chil.</td>

<td>&gt; SECTION 9 - STRATEGY AT THE LOCAL LEVEL &gt; Eynsham Woodstock Sub Area &gt; MAIN 158</td>
<td>Policy EW1b (following 9.5.41b) e) the provision of other supporting transport infrastructure, including proposals to mitigate the impact of traffic associated with the development in particular the impact on the existing village, and incorporating a comprehensive network for pedestrians, cyclists and public transport with links to adjoining areas, including a particular emphasis on improving linkages into Eynsham, to the West Oxfordshire Garden Village and into the surrounding countryside. We suggest the following changes to ensure this policy is in line with LTP4. Suggested text to replace point 'e)': provision of supporting transport infrastructure, including mitigating the impact of traffic associated with the development; the provision of appropriate financial contributions towards LTP4 transport schemes such as the A40 Strategy; provision of appropriate public transport (services and infrastructure) serving the site; and provision of a comprehensive network for pedestrians, and cyclists with links to adjoining areas, including the park and ride, Eynsham village, Tilgarsley Garden, and Hanborough Station. Provision of individual Travel Plan (and associated Travel Information Packs) for the residential and employment areas, as well as the school. The County Council has experienced significant difficulties in securing appropriate mitigation measures for the impact of strategic development areas where portions of the site have come forward as separate planning applications. To help reduce the occurrence of this issue we propose this additional text: The Council requires proposals for the site to be brought forward by means of a single planning application for the site in order to achieve a comprehensive development and to ensure the timely provision of infrastructure, services, open space and other facilities in a properly coordinated fashion.</td>

<td>&gt; SECTION 9 - STRATEGY AT THE LOCAL LEVEL &gt; Eynsham Woodstock</td>
<td>Development West of Eynsham. This cannot be described as ‘of a proportionate and appropriate scale to its context’ because it will have ‘harmful impact on the amenity of existing occupants’ without mitigating infrastructure in place. The sustainability of secondary school, heath, and sewerage provision will be problematic with the increase in population envisaged by this large extension of the village.</td>
<td></td>
</tr>
</tbody>
</table>

Policy OS2

The proposed development of 1000 houses west of Eynsham is not compatible with the General Principle that all development should be of a proportionate and appropriate scale to its context; the size of the development is disproportionate to the existing size of the village and it will have a ‘harmful impact on the amenity of existing occupants’ (General Principle 4) unless significant mitigating infrastructure improvements

</table>
| MM377         | Bike Safe               | Ian Leggett     | Mr Leggett       | 761               | > SECTION 9 - STRATEGY AT THE LOCAL LEVEL > Eynsham Woodstock Sub Area > MAIN 158 | 1. These representations are submitted in response to the West Oxfordshire Local Plan 2031 – Proposed Modifications Consultation, December 2016 (WOLP 2031 Modifications). They are made by Edgars Limited on behalf of Bike Safe.  
2. Bike Safe are a registered charity which was set up to promote an off-road multipurpose path for cyclists and pedestrians along the B4044 between Eynsham and Botley/Oxford, via Farmoor. The path crosses the boundary between the Vale of White Horse and West Oxfordshire districts.  
3. Bike Safe have prepared technical design work for the path received in principle support for the proposed community path from Vale of White Horse planning officers and Oxfordshire County Council through a pre-application planning request (Ref 15/V1482/PEM).  
4. Bike Safe and the B4044 Community Path project are also explicitly referenced in the submitted draft West Oxfordshire Local Plan 2031 which states that:  
9.5.49 Active travel will be positively encouraged to capitalise on the proximity of this sub-area to Oxford City. Existing pedestrian and cycle routes will be safeguarded and opportunities for new and enhanced routes will be identified. Where appropriate, we will seek walking and cycling schemes from new development either directly or through a financial contribution. Initial work has been instigated by a local group called ‘bikesafe’ looking at the potential to introduce a dedicated cycle route along the B4044 Eynsham Road. The Council will work with the group and other relevant partners including the County Council to further consider the merits and possibility of this scheme being taken forward.  
5. The draft West Oxfordshire Local Plan recognises the potential of the B4044 community path to facilitate |
<table>

</tr>
</thead>
</table>

active and sustainable travel to Oxford City. The commitment to work with the group is welcomed.

6. Bike Safe however object to Policy EW1a West Oxfordshire Garden Village SDA (Main Modification 155) and Policy EW1b West Eynsham SDA (Main Modification 158) due to the lack of reference to contributions from these developments towards the provision of the B4044 Community Path.

7. Both of these allocations are substantial and will generate significant traffic from the new housing and to the proposed new business park.

8. The B4044, although a ‘B-road’, is a well-used commuter route between Oxford, Science Vale and West Oxfordshire.

9. The B4044 community path will connect and provide a safe route for around 15,000 people living in the three parishes along the route- Eynsham, Cumnor and North Hinksey. It will also provide an attractive and sustainable commuter route for cyclists between the Eynsham and West Oxford growth areas.

10. The B4044 road surface is poor in places and there is no provision for pedestrians and cyclists along this road. The verge is full of hidden holes and unsafe to walk on. The road is a key route which carries up to 12,000 vehicles per day with speeds up to 50mph. The carriageway is too narrow for two vehicles and a bicycle to pass safely. The road winds along its route which limits opportunities for vehicles to safely overtake walkers or cyclists. This frustrates drivers and stops most cyclists and pedestrians from using it. It is just too unsafe.

11. The community path will have a number of key benefits:

i. Much more attractive for commuters to cycle with reduced congestion and CO2 emissions;
ii. Improved and sustainable connections for existing communities to access facilities at Farmoor, Botley, The Hill End Centre and Oakenholt Care Home;
iii. Health benefits of walking and cycling and improved connectivity and social inclusion;
iv. Safer road conditions for cars and buses;
v. Improved countryside access including to the Thames Path.

12. The route has widespread public support. It also has the support of the Parish Councils through which it passes and key businesses such as Stagecoach and Siemens. Initial discussions have been held with the major landowners who have indicated their support.

13. As a charity Bike Safe has raised significant funds from the public through sponsored rides and runs and from grant giving bodies. This has enabled environmental surveys to be undertaken and the commissioning of the technical design by engineers InfrastructCS. The environmental surveys and the technical path design has been made available to the Council and can be made available to the Local Plan Inspector on request.

14. Based on this technical design the cost of providing the path will be significant and is estimated at £2.9m.

15. Bike Safe propose to continue to raise funds to contribute towards the planning and build costs and is unique in Oxfordshire in helping to raise this local contribution.

16. The delivery of the path however will require additional funding. Given the location of the proposed SDAs at Eynsham, the additional traffic generated on the B4044 will make conditions worse for pedestrians and cyclists.

| MM3          |                         | richard andrews | Mr               | Andrews           | 80         | > SECTION 9 - STRATEGY AT THE LOCAL LEVEL > Eynsham Woodstock Sub Area > MAIN 158 | 17. Bike Safe consider is necessary that these SDAs should make financial contributions towards the implementation of B4044 Path to achieve the suggested focus on sustainable travel and to mitigate their traffic impact.  
18. This is in accordance with paragraph 9.5.49 of the plan as quoted above. Bike Safe consider, however, that the wording of Policies EW1a and EW1b should include a specific reference to the B4044 path.  

EW1b Comment: Unsound – lack of consideration of alternatives may result in non-delivery of the total of 3200 homes in the Eynsham area.  
The changes to the LP make no allowance for non-delivery of any particular site. There is no reserve provision within the SDA/AAP areas at Eynsham.  
The Eynsham Neighbourhood Plan (ENP) accepts the figure of 3200 new homes within the Parish and has explained in earlier submissions (9.5.40a) why it may be wiser to build faster in the new settlement north of the A40 to ensure a sustainable free-standing settlement with all the necessary facilities and infrastructure is created.  
The ENP does include 600 new homes to the west of Eynsham as its reserve site for development in the future but with the possibility of development within the currency of the 2031 Plan if problems are found which delay or limit the delivery of new homes north of the A40.  
The ENP considers that 1000 new homes on the proposed site is very optimistic with a high risk of not being able to deliver this number and regards development of the land south of the Chilbridge Road to be very detrimental to both local amenity and rural setting of Eynsham as well as requiring a disproportionately expensive and intrusive Link Road to access what is otherwise a site that is poorly related to the rest of the village.  
Development of the land north of Chilbridge Road can be accessed by a less expensive local road from the A40 and be developed with much less harm to the existing village. The ENP considers this site can readily accommodate 600 new homes. 160 of these have already been given outline consent on a site which has good through pedestrian and cycle access to the village while this site will itself benefit from better access directly to the A40 avoiding village streets. This access through Thornbury Road is not ideal for vehicles as it joins Witney Road at a point opposite Bartholomew School which becomes very congested when students are being dropped off or picked up but does provide an alternative ‘emergency access’ point for a western development.  
The ENP considers that focussing all additional development on the new settlement is important to ensure it can quickly get up and running as a sustainable free-standing community. Therefore it proposes that the western extension of Eynsham be kept in reserve rather than pursued in competition with the new settlement. However, it is accepted that the west of Eynsham is suitable for development at some point and therefore the ENP expresses a strong preference for a single SDA / AAP during the early stages of preparing a Master Plan to both integrate and separate the two communities as necessary so that they can become free-standing, complementary villages.  
EW1b c) Comment: Unsound – no justification has been provided for requiring a link road whose cost may jeopardise the viability of a western extension. |
The ENP once regarded the provision of a western Link Road as a useful way of accessing a western
development. Further study revealed that a Link Road between A40 and B4449 main roads is unattractive
both financially and in terms of amenity and landscape impact with unproven and probably limited economic
benefit. A simple access road running through a development from the A40 to join up with Chilbridge road
will access 600 houses. A Link Road will use space that could otherwise be used for housing, will be much
more expensive to construct with a visually intrusive crossing of the Chil Brook and cross-roads junction with
the private Chilbridge Road and will only allow some 250 extra homes to be built on a site that is not well
related to the rest of the village.

Para c) should not assert that a Link Road should be constructed without allowing due justification or
consideration of alternatives. A lower-cost, less intrusive, spur from the A40, backed up by ‘emergency only’
access along Thornbury and Chilbridge Roads, offers an acceptable alternative and should not be dismissed
without due consideration.

<th>Ainscough Strategic Land</th>
<th>892</th>
<th>West Eynsham SDA (MM158)</th>
</tr>
</thead>
</table>

4.62 Capacity: The West Eynsham SDA is a new allocation in the Proposed Modifications of 1,000 homes.
Whilst the capacity of the site has not been justified we do not take issue with these capacity figures.

4.63 Ownership: The site is within several ownerships and separate land parcels have been promoted for
development through the Strategic Housing and Economic Land Availability Assessment.

4.64 Delivery: Within the SDA there is an application for up to 160 homes off Thornbury Road
(15/03148/OUT) which was validated in August 2015. This application has still to be decided and we are not
aware of a targeted committee date.

4.65 The Council's trajectory identifies first completion at the SDA in 2018-19. Bearing in mind the outline
application has yet to be determined, this could be regarded as a little optimistic. However, we have stuck
with this for the purpose of this assessment noting the 160 dwelling parcel that is subject to the above
application.

4.66 The remaining 840 homes is more complicated and requires the delivery of a link road and other
infrastructure requirements. No application has yet to be lodged and bearing in mind with wider allocation
has only been identified as part of the proposed Modifications to the Local Plan, it would not be unreasonable
to apply NLP's average lead in time of 3.1 years for an application and 6.9 years for commencement. Indeed,
given the proximity of the Garden Village proposal it is inevitable that the impacts of both schemes will need
to be assessed at the same time (most likely through an EIA due to cumulative impact issues), which will draw
out the process.

4.67 Notwithstanding the above concerns, given the site is smaller than the Garden Village and less complex
than that proposal, we could see development start a little sooner (2023-24) than what we have projected for
the Garden Village. In applying this start date to NLP's build out rates of a site this size (105 dpa), the site
would just about be built out by the end of the plan period. However, it is worth noting that the site is on the
cusp of the NLP threshold for a build out rate of 105 dpa. Indeed, sites up to 999 dwellings were put within
the 68 dpa category, which would extend the build out period well beyond the plan period. We have rounded
the annual delivery down to 100 units for ease and consistency with other sites that we have assessed
through this process.

4.68 Infrastructure: The delivery of the remaining SDA (840 homes) is dependent on the delivery of a new
western link road which will serve the new development as well as provide a strategic road connection. The provision of this link road will be sought as an integral part of a comprehensive development to the west of Eynsham. Furthermore, highway improvement which are necessary to bring forward this SDA are dependent on the delivery of the Garden Village SDA which the Council envisage coming forward in 2021-22 and we have suggested would commence in 2024-25.

4.69 Conclusions: Notwithstanding the complexities in Eynsham, we have concluded that there is a small chance of it being complete within the plan period. However, this will be a significant undertaking and does not accord if we apply the assumptions used by NLP. However, in order to take a pragmatic and robust approach, we have maintained that it will be built out within the plan period for the purpose of this assessment.

The West Eynsham strategic development area contains areas of Flood Zone 2 and 3 associated with the Chil Brook.

The allocated site at Woodford Way Car Park, Witney contains an area of Flood Zone 2 originating from the River Windrush.

Paragraph 100 and 101 of the National Planning Policy Framework (NPPF) requires that a Strategic Sequential Test is undertaken to ensure both the strategic allocation, and the Plan are sound. The Strategic Flood Risk Assessment will provide the basis for applying the test and a sequential approach. Once the Sequential Test is undertaken the Exception Test would be required in accordance with Paragraph 102 of the NPPF.

Although mention is made of suggested, currently unfunded, improvements to the A40 between Witney and Eynsham, it has to be recognised that the route will still be subject to the congestion problems nearer to Oxford. Also because of the problems created by any perturbations, the only reliable long term solution will be to re-open the old railway line between Yarnton Junction and Witney. A re-opening of the Witney line will provide direct rail access to the economic growth areas in Oxfordshire and beyond and to Heathrow Airport. To this end the line of the old railway should be safeguarded from development along with any necessary deviations around developments that have occurred since the railway was closed. The old line crosses the southern tip of the West Eynsham site and the proposed western link road. It is important to ensure that the link road does not block railway reopening and at the same time this area would be a prime location for a railway station served by the link road, giving direct access for the residents of the 1000 new houses.

Paragraph 9.5.41c confirms that other than the Garden Village at Eynsham, the only other strategic options considered by the Council in this sub-area were land at Barnards Gate (between Witney and Eynsham) and land to the east of Woodstock (the majority of which is actually in Cherwell).

<td>We do not object in principle to the allocation of the Garden Village at Eynsham. However, it is clear that the Council did not consider, as a reasonable alternative, the opportunity provided on land adjacent to Hanborough Station – land that the Council identifies in the SHELAA as available for development. As set out in our representations to Policies OS2 and EW2, this is a fundamental soundness and legal flaw in the Council's process as the Long Hanborough option is clearly a reasonable alternative to the selected options, providing an opportunity to develop housing in a location: &quot;in close proximity to Oxford and therefore able to meet both Oxford's unmet needs as well as West Oxfordshire's own needs; &quot;that is outside the Green Belt and AONB; &quot;adjacent to Hanborough Station, one of the biggest and most well-used stations in the District, the closest station to Oxford and a station where capacity and frequency improvements are planned, and even more significant aspirations have been identified; and &quot;that is a Rural Service Centre.</td>

Not mentioned in the WODC evidence base (unless I have somehow missed it) is the "Oxford Spatial Options Assessment, Final Report, September 2016", produced by Land Use Consultants (LUC) for the Oxfordshire Growth Board and Oxford City Council. This document makes judgements on suitability of the proposed development sites. Interestingly, "Land north of Eynsham" (Garden Village - 148.21 ha), "Land west of Eynsham" (38.29 ha) and "Eynsham Park Estate, land nr Barnard Gate" (Barnard Gate - largest at 185.51 ha) are all marked orange, not green, for "deliverability". Land west of Eynsham is also orange for (financial)
"viability". The other two are green for viability. So what’s the difference between the proposed Garden Village site and the apparently unsuitable Barnard Gate? Putting it another way, if Barnard Gate and the Garden Village site are both orange/green, why is the former unsuitable but not the latter?

The LUC document says (Table 5.6.19) that, because of the quality of the agricultural land on the proposed Garden Village site, “it is assumed that development here would have a significant negative effect on efficient land use and preserving soil quality”.

The document says (Table 5.6.20) that a minor negative effect on Oxford Meadows SAC (2.5km away) “is considered likely”. So clearly it would be far worse for the “Site of European Importance for Arable Plants” at City Farm.

The document says (Table 5.6.25): “Development at this site would be very likely to give rise to adverse landscape and/or visual effects, and there is some potential for these to be significant; therefore a potential but uncertain significant negative effect is identified. This site is assessed as having medium-high landscape sensitivity [as] a result of its strong rural character with little modern development, frequent woodland cover along field boundaries and at Eynsham Wood [Millennium Wood] and open views, particularly in the east of the site. Some areas of the site are more prominent, such as Acre Hill.”

The document also makes one or two strange, but significant, mistakes. In Table 5.6.24, it correctly mentions the Grade II listed buildings in the Eynsham Village Conservation Area, but inexplicably fails to mention the Grade II listed buildings in City Farm [Garden Village]. In addition, Table 5.6.17 says: “This site [Garden Village] does not include areas of flood zone 3, and only includes less than 1% flood zone 2 in the eastern boundary of the site.” This is manifestly incorrect, as the Environment Agency’s flood risk maps make abundantly clear. In fact, the very definite area of flood zone 3 in the Garden Village must be roughly the same size in percentage terms as the flood zone 3 area in Barnard Gate.

If this document is one on which WODC has based some of its planning decisions, you do wonder how many more mistakes have crept in, and to what extent the Council’s decisions are relying on faulty evidence.

Incidentally, I see that LUC was appointed in May 2015 by Oxfordshire County Council (on behalf of the Oxfordshire Local Authorities) to undertake an assessment of the Green Belt within the County. Is there a conflict of interests here?

The Barnard Gate alternative option is dismissed in a single sentence. It may be for good reasons, but what exactly are these 'sensitivities' that led to its exclusion as a preferred option, and how do they differ from the sensitivities in the two Eynsham sites?
Not mentioned in the WODC evidence base (unless I have somehow missed it) is the ‘Oxford Spatial Options Assessment, Final Report, September 2016’, produced by Land Use Consultants (LUC) for the Oxfordshire Growth Board and Oxford City Council. This document makes judgements on suitability of the proposed development sites. Interestingly, ‘Land north of Eynsham’ (Garden Village – 148.21 ha), ‘Land west of Eynsham’ (38.29 ha) and ‘Eynsham Park Estate, land nr Barnard Gate’ (Barnard Gate – largest at 185.51 ha) are all marked orange, not green, for ‘deliverability’. Land west of Eynsham is also orange for (financial) ‘viability’. The other two are green for viability. So what’s the difference between the proposed Garden Village site and the apparently unsuitable Barnard Gate? Putting it another way, if Barnard Gate and the Garden Village site are both orange/green, why is the former unsuitable but not the latter?

The LUC document says (Table 5.6, 19) that, because of the quality of the agricultural land on the proposed Garden Village site, ‘it is assumed that development here would have a significant negative effect on efficient land use and preserving soil quality’.

The document says (Table 5.6, 20) that a minor negative effect on Oxford Meadows SAC (2.5km away) ‘is considered likely’. So clearly it would be far worse for the ‘Site of European Importance for Arable Plants’ at City Farm.

The document says (Table 5.6, 25): ‘Development at this site would be very likely to give rise to adverse landscape and/or visual effects, and there is some potential for these to be significant; therefore a potential but uncertain significant negative effect is identified. This site is assessed as having medium-high landscape sensitivity [as] a result of its strong rural character with little modern development, frequent woodland cover along field boundaries and at Eynsham Wood [Millennium Wood] and open views, particularly in the east of the site. Some areas of the site are more prominent, such as Acre Hill.’

The document also makes one or two strange, but significant, mistakes. In Table 5.6, 24, it correctly mentions the Grade II listed buildings in the Eynsham Village Conservation Area, but inexplicably fails to mention the Grade II listed buildings in City Farm [Garden Village]. In addition, Table 5.6, 17 says: ‘This site [Garden Village] does not include areas of flood zone 3, and only includes less than 1% flood zone 2 in the eastern boundary of the site.’ This is manifestly incorrect, as the Environment Agency’s flood risk maps make abundantly clear. In fact, the very definite area of flood zone 3 in the Garden Village must be roughly the same size in percentage terms as the flood zone 3 area in Barnard Gate.

If this document is one on which WODC has based some of its planning decisions, you do wonder how many more mistakes have crept in, and to what extent the Council’s decisions are relying on faulty evidence.

Incidentally, I see that LUC was appointed in May 2015 by Oxfordshire County Council (on behalf of the Oxfordshire Local Authorities) to undertake an assessment of the Green Belt within the County. Is there a conflict of interests here?

Para. 9.5.43e acknowledges that land to the east of Woodstock lies partly within West Oxfordshire and primarily within Cherwell District. It states, ‘Whilst the joint work on unmet need concluded that the site had some merit it also had a number of important sensitivities not least the potential impact on the Blenheim Palace World Heritage Site (WHS). The [West Oxfordshire] District Council considers that a smaller development on the portion of the site which is within West Oxfordshire is appropriate and this plan identifies an allocation of 300 homes. There is also a current planning application on the site.’

The potential of this smaller area of land has of course previously been included in your draft Plan in the interest of meeting West Oxfordshire’s needs. We have no objection to that proposal. However, we would ask that development of that site should not prejudice the consideration of land to the east through this Council’s

| MM3          |                         | richard andrews | Mr Andrews       | 81                |            | > SECTION 9 - STRATEGY AT THE LOCAL LEVEL > Eynsham Woodstock Sub Area > MAIN 159 | The comments are made on behalf of Eynsham Parish Council.
<p>|              |                         |                 |                  |                   |            |                   | 9.5.41c Comment: Unsound – the consideration of alternatives noted here were done in such a pre-judged manner as to be open to legal challenge thereby delaying the delivery of much-needed new housing. |
|              |                         |                 |                  |                   |            |                   | The parameters for consideration of 'alternatives' to allocating all of Oxford's unmet need at Eynsham was done in such a way that Eynsham was the only choice of location. A recent questionnaire sent out as part of Eynsham's Neighbourhood Plan consultations has shown that a Garden Village development to provide much needed housing has the support of those responding, but there is much resentment at what is seen as a biased process and particularly the allocation of 550 houses specifically to west Eynsham. This may be used by others opposed to the allocation of any Oxford City housing to West Oxfordshire to attempt a legal challenge that will delay the development process while Eynsham actually wants to get on with the Garden Village as quickly as possible. |
|              |                         |                 |                  |                   |            |                   | There is also a major concern about choice. Allocating all the housing to one place - it is not two sites a few hundred metres apart adjacent to the same A40 are not in reality separate places – treats all the people whose housing need has not been met in Oxford City as clones, not people. They are only being offered one expensive semi-rural location and one already-congested route into the city or beyond. |
| MM448       | Woodstock Town Council  | Woodstock Town Council | Mrs Grant       | 1043              |            | &gt; SECTION 9 - STRATEGY AT THE LOCAL LEVEL &gt; Eynsham Woodstock Sub Area &gt; MAIN 160 | The level of housing proposed in WODC's 'Local Plan 2031 - Submission Draft Including Proposed Modifications' is wholly inappropriate for the location and will ultimately destroy the town's unique historic character. |
|              |                         |                 |                  |                   |            |                   | It is clear from the above that all draft allocations proposed for Woodstock are unsuitable and will be detrimental to the town. Even ICOMOS UK stated that, for Woodstock East, the replacement of open farmland with a major development would have a negative impact on the tranquillity of the closest part of the Blenheim Palace estate in terms of traffic and light pollution. Due to their proximity to Blenheim Palace, it will no doubt make similar comments on the other proposed sites during this consultation. |
|              |                         |                 |                  |                   |            |                   | This will in-turn damage Woodstock's tourism upon which the local economy relies heavily on. |</p>

<td>&gt; SECTION 9 - STRATEGY AT THE LOCAL LEVEL &gt; Eynsham Woodstock Sub Area &gt; MAIN 160</td>
<td>The site assessment carried out by WODC on each site is flawed and in many cases lacking evidence to support important assumptions. Development proposed in the surrounding areas (Witney, Hanborough, Chipping Norton, Kidlington and Oxford Northern Gateway) will severely exacerbate the highways problems already associated with the A4095/A44. Such a large combination of developments around Woodstock will severely compromise the wilderness of our World Heritage Site and spoil the special look of the town. A smaller, or infill development would be far more appropriate in line with the town council’s ‘vision.’</td>

<td>&gt; SECTION 9 - STRATEGY AT THE LOCAL LEVEL &gt; Eynsham Woodstock Sub Area &gt; MAIN 160</td>
<td>I would like to pass you our comments on the draft local plan in relation to the town of Woodstock: • The area of the proposed building would just about double the area of Woodstock town, surrounding it with new development. Arguably it would have been better to just have development on just one site rather than three which will circle the town on all three sides, with Blenheim on the fourth. • This would spoil the town which is particularly historic and noted for its beauty - both natural and architectural. These aspects of Woodstock are not restricted to the Blenheim Palace site alone. It would seem Blenheim is happy to spoil the aspects of the town, provided it doesn’t impact on the immediate vicinity of its own site lines. • The number of houses proposed is very large in relation to the number in Woodstock. • The centre of Woodstock is not able to cope with parking, there is not enough for current needs. Likewise other facilities and community amenities such as schools and the medical centre will not be able to cope with the influx of people. • The roads can’t cope with existing traffic let alone more. Traffic going towards Oxford city is diabolical through Yarnton and Begbroke during the rush hours. It is grossly unfair that Oxford city is not meeting its own housing needs and forcing the shortfall onto the district councils. It has sites it could develop but does not appear to wish to do so. The proposed sites for housing around Woodstock are totally inappropriate. The town does not have the infrastructure, our schools and doctor’s surgery are full. Traffic is becoming a nightmare, particularly for those houses fronting the A44 and the town centre is struggling because there is inadequate parking. Woodstock as a small historic town would be ruined by this over-development. Also consideration should be taken of Cherwell’s proposed sites of ‘Woodstock East’ and land adjoining the A4095 and the airport. Woodstock could become just a dormitory for Oxford - almost joined to Kidlington in 20-30 years. Please stop this development and allow Woodstock to retain its historic character.</td>

<td>Christine Lea</td>
<td>Mrs Lea</td>
<td>-</td>
<td>Lea</td>
<td>MAIN 160</td>
<td>&gt; SECTION 9 - STRATEGY AT THE LOCAL LEVEL &gt; Eynsham Woodstock Sub Area &gt; MAIN 160</td>
<td>The following comments on the Draft West Oxfordshire Plan 2031 relate purely to Woodstock. While I appreciate that we must have growth in the town, I believe the proposed number of houses is too great. The town currently has 1500 homes and has grown organically over hundreds of years. The proposals are for a further 670 homes which would add half as many again. This is totally disproportionate. The sites have been selected because Blenheim wants to sell land at a high price and cares little that it will destroy the viability of the current community. Traffic Already the A44 is overburdened with traffic, including very many heavy lorries which endanger pedestrians on the very narrow pavements. The 120 homes north of Hill Rise would considerably add to this burden as the location is too far from the centre of Woodstock for most people to walk into the town. The 250 houses north of Banbury Road would cause serious traffic issues in the already busy road. With two...</td>
</tr>
</tbody>
</table>
schools on the road plus an evergrowing number of Pye/Blenheim developments the road is probably at capacity in rush hour.

The three developments would add enormously to the problems on the A44 south of Woodstock which is already a serious problem in rush hour. Proposed developments in Long Hanborough and Witney will exacerbate the problems.

Car parking

As West Oxon CC has admitted, parking spaces in Woodstock are now 98 per cent full. Just how does the Council propose to improve this situation? It refuses to charge for parking, it provides hardly any warden coverage so spaces are taken up all day. How will Woodstock cope with around 1000 more cars without dying on its feet? Already local residents are often forced to go outside Woodstock to shop because they cannot park. This is very bad for our loyal local shopkeepers. If I believed West Oxon would take this problem seriously it would be a different matter.

Blenheim, which will gain enormously if these plans are adopted, could quite well create a longterm parking area just inside the Hensington Gate from 8.30am to 6pm for people who work in the town and who would obtain permits from the Palace.

Services

Sewage, water, doctor’s surgery, schools would be just some of the services totally ill equipped to deal with such a large increase in the town’s population. At present our surgery is considered to be the second worst in Oxfordshire. We will not get a new one until Pye/Blenheim get one of the developments approved. The fact that the sale of the police station/building a new surgery was never put out to tender is very concerning. The town is being held hostage by this powerful partnership.

Where we live the foul water drains regularly block and in the past we have had sewerage coming up via the bath plughole and pouring out of the garden manhole. However will the drains cope with all the proposed extra houses?

Loss of natural environment

Those who live in the town and those who visit prize its coherence. Residents did not choose to live in suburbia; they chose a very small town. There is a very attractive town centre and one is quickly out into fields and countryside. Building such large scale developments would have a detrimental effect on the town and its rural surroundings.

Conclusion

While I fully understand that Woodstock must take its fair share of additional development, I maintain that the number of homes proposed is far too high and should be considerably reduced. The Council constantly refers to Woodstock as being a SUSTAINABLE community. With 670 more houses and a town centre which cannot be expanded, it would cease to be sustainable.

I would also point out that the 300 homes east of Woodstock (subject to a current planning application) could be joined by another 1000 if Cherwell gives approval to developing the remainder of the site which is under its jurisdiction. That would truly be the end of Woodstock as we know it.
I object to the inclusion of the following planning allocations in the Draft Local Plan 2031:

1. Land North of Hill Rise- (120 houses) The nature and location of this proposed allocation on a hill site bordering the heavily trafficked A44 will NOT provide a “safe and suitable access” or exit for vehicles, pedestrians and cyclists. It should be deleted on highway safety grounds due to cumulative increases in traffic and accidents. A similar planning application for this site was rejected in 2013. Nothing material has changed.

2. Land North of Banbury Road off Green Lane (250 houses): The location of this proposed allocation adjoins the Glyme and Dorn Rivers Conservation Area. It is an inappropriate and unacceptable use of productive farmland, which will lead to the deterioration and loss of important biodiversity habitats. It will adversely impact upon the bordering natural Conservation Area. Traffic volumes will increase on Banbury, Hensington, Shipton Roads and the A44 with associated increases in traffic accidents and lung damaging air pollution in the area.

I therefore call for the deletion of these traffic and environmentally damaging allocations from the finalized Local Plan 2031.

The identification of sustainable development sites is a matter for your Council. However, you will be aware that there is an on-going cross-boundary strategic issue related to Cherwell making its contribution to Oxford’s unmet housing needs through the on-going Partial Review of the adopted Cherwell Local Plan Local Plan 2011-2031 (Part 1).

This Council consulted on an Issues Paper for the Partial Review of its Local Plan from January to March 2016. That consultation was accompanied by a ‘call for sites’. You will be aware that we are presently consulting on an Options Paper including Areas of Search and potential strategic development sites. Land adjoining Woodstock (next to your proposed allocation for 300 homes - Policy EW1) is included within Cherwell’s Area of Search ‘B’ (North and East of Kidlington) and initial sustainability work has suggested to us that Area B, together with neighbouring Area A (Kidlington and Surrounding Area), should proceed to site assessment. Within Area B, two sites adjoining Woodstock are being promoted by Blenheim Estates – site 22 ‘Land north west of London Oxford Airport, nr. Woodstock (48.72 ha) and site 25 ‘Land east of Marlborough School,
Woodstock’ (6 ha) (see attached extract).

The current consultation period closes on 9 January 2017 and this Council intends to prepare a Proposed Submission Document for consideration by its Executive in April 2017. If approved, officers would proceed to a six week period for representations in time to enable Submission by 20 July 2017 (two years from adoption of the Cherwell Local Plan). This would ensure accordance with para. B.95 of the Cherwell Local Plan.

As officers need to consider the feedback from the current consultation and complete the Local Plan evidence base it is not possible to advise at this stage on whether land at Woodstock would feature in the Proposed Submission document. However, conversely, the land cannot be ruled out. Its relative proximity to Oxford, its situation outside (but adjacent) to the Oxford Green Belt and its location on a main transport corridor which features in the County Council’s Oxford Transport Strategy, are factors that will require close consideration together with Woodstock’s global and local historic assets, its characteristics, constraints and opportunities.

West Oxfordshire’s Local Plan, as Proposed to be Modified, recognises the merits of Woodstock as a location for a ‘reasonable scale of development’ for West Oxfordshire, noting its ‘relatively good range of services and facilities’ and assisted by the town’s dual role as a tourist centre and a service centre (for example, para’s 4.18b, 5.21a, 9.5.3, Policies OS2 and Policy H1).

We note the economic and social facilities referenced (para. 9.5.10) and the economic advantages of the Eynsham-Woodstock sub-area described at para. 9.5.11, specifically the relationship to London-Oxford Airport, Kidlington, Oxford, major employment growth areas to the south of Oxford and the influence of the Oxfordshire knowledge spine. We also note the reference to ‘travel-to-work’ to Oxford and the effect that this has on traffic congestion along key routes including the A40 and A44.

The Modified Plan’s proposals for 650 dwellings on three sites are noted and there is no objection to their inclusion:

- Land east of Woodstock (300 homes)
- Land north of Hill Rise, Woodstock (120 homes)
- Land north of Banbury Road, Woodstock (250 homes)

The reference at para. 5.30c to seek site-specific planning briefs to guide the development of these allocated sites is welcome in the interest of securing high quality design.

A substantial amount of new housing is proposed as part of this allocation. The Council should also undertake a playing pitch strategy to determine what level of new provision is required to support the new housing. Please contact Sport England for assistance.

I support the general thrust of the modification to the local plan. In commenting on the SHLAA consultation in February 2016 I urged WaDC to increase its housing allocations to more closely reflect the SHLAA assessment. I am therefore delighted to see a significant increase in housing allocations for Woodstock. Woodstock desperately needs new housing and the infrastructure that it will generate. Woodstock is amongst the most sustainable of West Oxfordshire service centres as demonstrated by the WODC Settlement Sustainability report. However, I believe that the total housing numbers for Woodstock must take account of land in
Cherwell District Council which may also be zoned for development. It is not realistic (it is unsound) to view the CDC and WaDC proposals in isolation. Woodstock is one community and the District Council boundary does not represent a boundary of local community identity. It is one community and future planning policies must be developed in the light of this reality.

I support the allocation of 670 new homes in Woodstock over the plan period. However, the distribution and location of those homes must be jointly, agreed between WaDC and CDC and in further consultation with the local community. It could mean all 670 homes being built on the Woodstock East site (part within WODC and part within CDC) or the total allocations could be split between the sites identified in both COC’s and WODC’s proposed modifications.

9.29 The site was found by a previous Local Plan Inspector 72 (Appendix 12) to represent a significant incursion into the open countryside to the east of the town. In this instance consideration was given to a potential allocation for 180 dwellings, which would be well-screened by extensive planting belts. However, the Inspector concluded that the size of the development is excessive when measured against the scale of this small, attractive market town73. While it is acknowledged that these conclusions were made more than ten years ago, and in the context of a planning system that operated very differently from the current one, the veracity of the observations remains. Moreover, having regard to the requirements of the current evidentially based plan-making process the Council has failed to provide evidence that is adequate to support allocation of the proposed sites at Woodstock. While the Plan contends that it is reasonable to conclude that residential development in this location represents a sustainable development opportunity it is unclear on what grounds this assumption is based, given that: There is no comprehensive assessment of the heritage assets of the District within the evidence base supporting the Local Plan and the SA process provides no clear and convincing justification for development in this location, considered against all reasonable alternatives. There is a distinct lack of evidence to support the proposed modifications and accordingly they should be deleted from the Local Plan.

The proposed strategic site of Land East of Woodstock in Woodstock and its adjacent proposed Partial Review site in the Cherwell District Council Local Plan consultation running in part concurrently to WODC’s, is under a helicopter flight circuit and jeopardizes operations of London Oxford Airport and therefore also the employment the airport offers which is very significant with some 700-800 jobs provided there.

We agree with the Council that further sustainable development is possible at Woodstock, and this growth will further benefit from measures set out in the County’s adopted Oxford Transport Strategy, including an
Stagecoach therefore supports the identification of the site for the development of 300 dwellings. We concur that the development requirements identified and the nature of constraints and opportunities to allow the District to meet its own growth requirements, and make an appropriate contribution to meeting the City’s growth needs, justify the release of land in this location. In particular, existing bus services connect this site directly to current and committed major employment development at Langford lane, Oxford Airport, Begbroke and Oxford Northern Gateway.

Future proposals set out in the County’s Oxford Transport Strategy, for an outer P+R on the A44 corridor nearby, and the development of a major east-West public transport corridor from Witney via the A4095 and Bladon towards Langford Lane and Oxford Parkway, indicate that this location is anticipated to become still more accessible by sustainable modes, and bus services in particular. Stagecoach has already registered a new half-hourly service 7 from Woodstock, past the site to Longford Lane, Kidlington, Oxford Parkway and the Banbury Road in Oxford, representing a major step in helping to realise this vision, taking effect in early January 2017.

This and future bus service improvements align closely and strongly with the aspirations of Oxford University and Oxford Airport, also point to significant longer term growth in employment in the immediate vicinity within Cherwell District as well as Oxford Northern Gateway further south. Bus services will offer a relevant and attractive choice over personal car use to all these destinations.

The relative attractiveness of the bus as a choice will be further supported by County plans to upgrade the A4260 through Kidlington and the A44 from Bladon to the City as Rapid Transit/bus priority corridors, consultation on which is starting as this consultation closes.

Proportionate contributions should be sought towards measures to facilitate bus priority on the A44 south of the site, that will be identified as part of the County’s Oxford Transport Strategy.

Land East of Woodstock is currently the subject of a planning application (ref: 16/01364/0UT) to which WTC has strongly objected. Through the SA assessment, all the issues identified above for the other two allocations in Woodstock, can be applied to this site, including distance from the centre and proximity to a World Heritage Site.

The site forms part of a larger site which was submitted to WODC under planning application 14/02004/0UT for 1,200 new dwellings (the remainder of the site fell within Cherwell District Council - WODC should be aware that this remainder has been submitted to Cherwell District Council for consideration as an allocation in its Local Plan 2031 Review in order to accommodate some of Oxford’s unmet need).

The application was almost unanimously refused by Councillors in both districts.
ICOMOS UK, which is the official adviser to UNESCO on cultural World Heritage Sites, commented on and objected to the proposal. Its submission of 29 January 2015 stated that the replacement of open farmland with a major development would have a negative impact on the tranquillity of the closest part of the Blenheim Palace estate in terms of traffic and light pollution. A copy of its full response can be found at Annex 4 of this submission. This cannot be disregarded by WODC in allocating the site.

There are however additional complications. This allocation cannot be considered in isolation. Recently an appeal has been allowed in Long Hanborough for 169 dwellings (14/1234/P/OP) with an additional appeal being lodged for 120 dwellings (15/03797/Out) in the same settlement. Houses are also being built in Bladon in the same area. All of these proposals combined, particularly in traffic and pollution terms, would be disastrous for Woodstock. WODC may remember recently when Blenheim hosted 'Countryfile Live' which attracted an extra 120,000 visitors over the four days jamming local roads around Woodstock. The Oxford Mail nicknamed the town "WoodSTUCK". There were similar issues when Blenheim Palace hosted another event in October this year. The A44 suffers from heavy traffic flow, particularly at Woodstock, this is evidenced in the County Council’s Average Daily Traffic Flows Table found at Annex 5 of the submission.

WODC's own assessment of the site in its Strategic Housing Land Availability Assessment (SHLAA) 2014 recommend only 150-180 on the site. This has now risen to an allocation of 300. WTC considers that this is an overdevelopment of the site and goes against what WODC originally thought appropriate for the site.

This site too was considered during the preparation of the current adopted Local Plan 2011 but was again rejected over highway concerns and impacts on local amenity. Indeed the Inspector in his 2004 report stated that:

"The proposal would constitute a significant incursion into the open countryside to the east of the town. I also consider that the size of the proposed development is excessive when measured against the scale of this small, attractive market town."

We strongly object to the proposed housing development to the land east of Woodstock. Woodstock does not have the capacity for 300 more houses. The small town is already heavily congested with traffic, with heavy goods lorries, coaches etc. It is a job to get on to the A44.

We are also plagued with Oxford London Airport, which are flying all sorts of aircraft which is becoming busier and noisier than ever. Not to mention the air pollution caused by the diesel oil used by the fixed-wing airport. We have had first-hand experience of being badly affected by the noise nuisance. The helicopter and fixed-wing aircraft fly so close to our garden and over our house. We have made constant complaints. The big planes are extremely noisy when their engines rev-up. They are jets and heavy-sized aircraft and it is only going to get worse over time.

</tbody>
</table>

Policy EW1c: We support the allocation of land at Woodstock East for around 300 homes.

A requirement to ensure no harm to heritage assets is in direct conflict with national policy, which establishes in Chapter 12 of the Framework that less than substantial harm to a heritage asset should be weighed against public benefits arising.

Woodstock East is a sustainable site in a sustainable location. Its development will contribute towards the sustainable growth of Woodstock and provide for much needed housing in the area. The development of the site for housing has previously been supported by West Oxfordshire District Council. A previous SHLAA recommended its inclusion in the Local Plan as a housing allocation.

Together with other sites allocated for development around Woodstock, the development of this site will make a major contribution towards the improvement and enhancement of local infrastructure and result in significant social, economic and environmental benefits.

The site is readily available and there are no significant constraints to development. Consequently, it will be delivered during the Plan period. Furthermore, there is an opportunity for the sites allocated around Woodstock to be linked together, as they are all in one ownership. This presents the opportunity to deliver a joined up approach to the delivery of infrastructure and services, to further enhance the long term sustainability of the settlement.

The land around Woodstock is owned by Blenheim Estates. Blenheim is an integral part of Woodstock and has been for many Centuries. Blenheim Estates adopts a multi-generational approach to all of its land and property – as can be seen by the exceptional land management and the sensitive Blenheim Estates developments throughout the area.

This is a fundamental point. This site, together with others around Woodstock, can be brought forward in a manner which ensures associated investment into all of the things that make a place sustainable. It is in Blenheim Estates direct interest (and forms the reason for its existence) to invest into Woodstock. The success of Woodstock and that of Blenheim are intertwined.

Blenheim Estates is well placed to ensure that development will be brought forward to enhance the sustainability of Woodstock as a whole. Piecemeal development will be avoided and the combined development of the allocated sites will result in major investment into local infrastructure, facilities and services. For example, a 200 house development could only make a contribution to education, whereas, together, the delivery of say, 770 dwellings, can ensure the provision of a new primary school. This approach can be adopted to all manner of things and given that Blenheim Estates has other strategic landholdings within Woodstock, the allocations can help to release associated opportunities – for example, new community facilities in the town centre and new community facilities for the historic, but threatened,
Woodstock Football Club.

Blenheim Estates has many years of experience as a progressive landlord and intends to become a significant provider of affordable housing. This, combined with the Blenheim Estates' record as a provider of developments of the highest design quality and exceptional property management, will help to ensure that the land allocations support a long term legacy, enabling people of all backgrounds to enjoy the unique characteristics of the area.

There are too many examples across the country of where housing developments fail to provide the comprehensive investment into services, facilities and infrastructure necessary to ensure sustainability. The land allocations at Woodstock provide an exciting opportunity to place sustainable development at the heart of the planning process. They are to be welcomed.

### Ecology and Natural Environment

In all cases reference should be made to the District Council's ecologist for specific details on each site. It is assumed that before firm proposals are brought forward for each site an appropriate ecological, landscape and visual impact assessment will be undertaken including surveys for protected and threatened species.

The permanent loss of land of existing and potential future habitat value should be recognised with a corresponding investment in biodiversity and other green infrastructure resources that provide a range of benefits including biodiversity, water management and contribute to physical and mental well-being. Additional off-site enhancement should be provided where insufficient environmental gains cannot be secured within the development boundary.

Woodstock – Land East of Woodstock

The adjacent Sustrans route is noted. There would appear to be significant opportunities for sustainable travel options from this site.

The Blenheim World Heritage Site, SSSIs, Conservation Target Areas are all situated nearby. There are likely to be impacts on populations of farmland birds.

There are likely to be increased recreational demands on Old Woodstock Line nature reserve and Woodstock Water meadows – both outside the site. Additional investment from the site is required to ensure the future resilience of these recreational and wildlife sites.

### Policy EW1c (following 9.5.41k)

d) provision of satisfactory vehicular access onto the A44 Woodstock Road and appropriate pedestrian and cycle connections.

We suggest the following changes to ensure this policy is in line with LTP4. Suggested text to replace point 'd):

- provision of satisfactory vehicular access, provision of supporting transport infrastructure, including mitigating the impact of traffic associated with the development; the provision of appropriate financial contributions towards LTP4 transport schemes; provision of appropriate public transport (services and infrastructure) serving the site; and provision of a comprehensive network for pedestrians, and cyclists with links to key destinations including integrating with Woodstock, Hanborough Station and Oxford Parkway Station. Provision of individual Travel Plan (and associated Travel Information Packs) for the residential and employment areas.

<td>&gt; SECTION 9 - STRATEGY AT THE LOCAL LEVEL &gt; Eynsham Woodstock Sub Area &gt; MAIN 163</td>
<td>The sustainability appraisal for Woodstock, particularly in regard to the local economy and retail situation is vastly outdated and should have been refreshed in time for the proposed modifications which in themselves are grossly overdue and presented at the 11th hour. The vast increase in dwellings around the town has been accompanied by a huge reduction in retail space. WODC's proposed strategic sites for Woodstock do not account for two large further proposed sites that concurrently appear in the Partial Review consultation of Cherwell District Council's Local Plan - the CDC sites are on the boundary with Woodstock, one over the Shipton Road from the &quot;Land East of Woodstock&quot; site and the other forming an immediate adjacent extension of the &quot;Land East of Woodstock&quot; site. It is misleading and unreasonable not to include consideration of the ramifications especially as WODC and CDC are cooperating in discussions on the strategic sites on respective sites near their boundary in Woodstock. All the three WODC strategic sites in Woodstock and the two CDC partial review sites are owned by the same landlord and form a ring or arch of new-build sites which turn the town into an enclave surrounded by estates on land by a single landowner which raises deep concerns about the potential influence on local government, economy, and other issues. It is unclear why any single landowner should be permitted to effectively monopolize all the proposed strategic sites in this way.</td>

<tr>
<td>MM307</td>
<td>Philip Brunt</td>
<td>Mr Brunt</td>
<td></td>
<td></td>
<td>530</td>
<td>&gt; SECTION 9 - STRATEGY AT THE LOCAL LEVEL &gt; Eynsham Woodstock Sub Area &gt; MAIN 164</td>
<td>1. The existing Barn Piece estate has 112 houses, and the proposed new development would more than double that development, making Old Woodstock a much more crowded area, taken together with Hill Rise and Manor Road (a further 170 existing houses). 2. Old Woodstock has no infrastructure (no shops, no schools or doctors etc) and the proposed site is approximately one mile from the town of Woodstock, accessed only by the busy A44. 3. Footpaths bordering the A44 between Old Woodstock and Woodstock town are narrow, and pedestrians, including mothers with pushchairs, often seem at risk from heavy vehicles and fast moving traffic. Pedestrian and vehicular traffic from the proposed new development would increase safety concerns considerably.</td>
</tr>
</tbody>
</table>
4. The primary school is already over-subscribed, and children from the new development would be unlikely to find places there, resulting in car journeys to other towns and villages. The Marlborough School is almost 2 miles from the proposed site, approached only by the A44 and the town centre.

4. These aspects alone – lack of infrastructure, limited safe access to the town and overcrowding of the area - make this site unsuitable for a development of this size.

6. The proposed access to the new development is via Vermont Drive is also the only access to the existing Barn Piece estate, and a bus route and terminus. It is a residential road, about 100 yards long and 17 feet wide.

There are 10 buses a day (8 on Sunday) which reverse at the junction with Rosamund Drive, and wait in Vermont Drive for an average of 6-7 minutes each. At the time of bus visits, one way traffic only is possible in Vermont Drive, and HGVs passing the bus have to use the pavement. Vans, lorries, coaches and cars often use the Rosamund Drive and Vermont Drive junction to reverse and turn back towards the town. At busy times, when residents are leaving for work or returning home, Vermont Drive and this junction already cannot cope with existing levels of traffic.

7. Vermont Drive is too narrow to support both existing traffic and the extra traffic the proposed development would bring.

7. The suggestion that another access to the proposed site could be made from the A44 north of Hill Rise seems impractical. The A44 is too narrow to allow for right turning traffic in a 50mph limit, and major alterations to Hill Rise would be necessary to arrange an opening from the very narrow service road there.

8. The children’s play area at the end of Rosamund Drive, now intended for closure to give access to the new development, has a special significance for Old Woodstock residents, and will be a tragic loss. In 2013 it was saved from closure when Blenheim Estates purchased the field, following strong local protest and newspaper coverage. It seems unlikely that the play area, together with its associated half-sized football pitch for children, can be re-located within the new development so as to be as accessible and popular as it is now.

8. Above all, the new development would remove a piece of countryside, with a town to town public footpath running through it, which has become important to all local people, particularly those with houses bordering the field. The footpaths along three sides of the field have been used by local families for decades, as shown by a recent Town Council survey identifying well used local paths. The loss of countryside to Old Woodstock would be significant and intrusive.

| MM376         | Stagecoach in Oxfordshire/Stagecoach West | Nick Small, Stagecoach Bus | Dr Small | 1017 | > SECTION 9 - STRATEGY AT THE LOCAL LEVEL > Eynsham Woodstock Sub Area > MAIN 166 | MAIN 166 POLICY EW1d Land North of Hill Rise, Woodstock (120 dwellings) Stagecoach recognises and agrees with the Council that this site is relatively very sustainable. It is served by up to three buses per hour on service S3, running directly via the A44 to Oxford (including Oxford Station) and passing through the major employment proposed at Oxford Northern Gateway. One bus/hour currently terminated by making a reversing manoeuvre at Vermont Drive. This arrangement is far from ideal. Stagecoach would observe that the proposed access arrangements should have regard to facilitating terminating bus services, in order to plan for the best possible future bus service to the site, and one that is not prejudiced by potential conflicts with higher traffic flows once this site is implemented. Such arrangements could take the form of a purpose-designed turning loop, or a roundabout junction at one of the main accesses to the site. While Stagecoach broadly supports the Policy, it is not entirely in conformity with NPPF para. 17 and paras. 29-32, and is therefore unsound as no provision is made to resolve the issues of buses terminating at/near the entrance of the site. This can be resolved simply by amending the draft policy as follows: "c) provision of satisfactory vehicular accesses and appropriate pedestrian and cycle connections including appropriate accommodation of the existing public right of way through the site, and provision of a safe and efficient means for bus services to terminate and turn at the site in forward gear."

| MM448         | Woodstock Town Council | Woodstock Town Council | Mrs Grant | 1040 | > SECTION 9 - STRATEGY AT THE LOCAL LEVEL > Eynsham Woodstock | WTC notes that of the three sites allocated in the Woodstock, only one was deemed worthy of assessment in the WODC’s original Strategic Housing Land Availability Assessment (SHLAA) in 2014. Land North of Hill Rise is one of the sites not assessed in the original SHLAA. |
WODC has now published a Sustainability Appraisal (SA) alongside the draft Plan to assess sites against a number of sustainability objectives. WTC disputes a number of points raised in the SA. WTC had expected an updated SHLAA to be published at the same time as this consultation to show greater detail on how sites were assessed.

SA Objective 6 is to "improve accessibility to all services and facilities". The SA states that Land North of Hill Rise is in close proximity to the town centre. WTC does not concur with this view. The Government’s 'Manual for Streets Guidance' states that 10 minutes' (up to about 800m) is about right for a walkable neighbourhood. In addition, the guidance states that people are more likely to walk if the route is a pleasant one. WODC must consider whether this is achievable from the site as currently the walk into town from the site is indeed very unpleasant and dangerous involving a number of hazardous road crossings. The path is also very narrow in places, bringing pedestrians into close proximity with HGVs and resultant air pollution. This is particularly unsuitable for the elderly and mothers with push chairs.

In reality, the site is nearly 1 kilometre from the centre meaning people will most likely drive to the centre to shop. Bringing more traffic and pollution into the already congested town centre is clearly untenable. The shortage of parking in the centre cannot be overstressed. This is evident in WODC's own parking report (an extract of which can be found at Annex 3 of this submission).

SA Objective 7 seeks to "improve the efficiency of land use". Land North of Hill Rise is a greenfield site but according to the SA, its development will only be a "minor negative". The permanent loss of greenfield land cannot be seen as an efficient use of land so should be considered a "major negative."

SA Objective 10 seeks to address the causes of climate change and reduce greenhouse gas emissions. As with SA Objective 6 above the SA states that as the site is in close proximity to the town centre, emissions will be reduced as a result of fewer car journeys. As identified above, this is clearly not the case as the distance of the site from the centre will result in more car journeys and increased emissions. Therefore the site should be marked down heavily against this Objective.

SA Objective 11 seeks to protect and improve soil and water resources. Again the site’s development is only seen as a "minor negative". The development of a greenfield site will not protect and improve soil so its allocation should be viewed as a "major negative".

Finally, SA Objective 14 seeks to "Conserve and enhance landscape character and the historic environment". The SA states that the site has not been assessed through a recent landscape assessment. The site is on the furthest edge of a nationally and internationally important historic town. WTC cannot understand how a site, in this location, can be allocated without even a landscape assessment.

Moreover, the SA explains that the site sits within close proximity to the Blenheim Palace World Heritage Site, a Registered Park and Garden and a Conservation Area. It then states:

"Overall, it is considered that there is potential for a residual neutral effect with an element of uncertainty until site level assessments have been completed”.

Once again, WTC cannot see how a site can be allocated when WODC is not in possession of all the facts. This is particularly important here where there is potential for negative impacts on a World Heritage Site.

WTC wishes to remind WODC that access to the A44 from this site is extremely difficult and to confirm that it will resist the loss of the playground on the site.

<td>&gt; SECTION 9 &gt; STRATEGY AT THE LOCAL LEVEL &gt; Eynsham Woodstock Sub Area &gt; MAIN 166</td>
<td>Further to my comments dated 20 December 2016 (copy attached), may I draw your attention to the following: With regard to the only access into Old Woodstock Barn Piece Estate via the residential road of Vermont Drive, as from 3 JANUARY 2017 there is an additional usage of this access route. A daily, 30 minute public transport service (Stagecoach No. 7) is also now using Vermont Drive as its terminus/turn-around point into Oxford. This extra service is, of course, most welcome news to all Old Woodstock residents who use public transport but the above proposed future development of 120 houses, creating numerous additional vehicles, would lead to problems within this access area. I would be grateful if this comment could be noted as a new and further reason against the proposal. Notification of an OBJECTION to the proposed development in the WEST OXFORDSIDRE LOCAL PLAN 2031 of ‘LAND NORTH EAST OF HILL RISE’ Old Woodstock is a small and solely housing based Community. It does not have a school, surgery or shop. The proposed plan for 120 houses on land north east of Hill Rise (which would increase the size of the Old Woodstock Community by 50%) does not appear to make provision for resolving the problem of the non-existence of any infrastructure here in the Old Woodstock Community. Demand on the current Woodstock infrastructure is already stretched. [Examples of this: I understand that Woodstock Primary School has filled its capacity; and also personal experience of an 8 day wait for a G.P. appointment.] The only facility provided for Old Woodstock residents is the recreation ground. All of the equipment is well used (swings, slide, etc.) by local children - and by my own young grandchildren. On the same site is a small-sized football pitch which is very much enjoyed by both young and old alike (using as an illustration, a 6 year old boy and myself - his 77 year old grandmother!) The picnic table and bench seats are also much appreciated - allowing for an opportunity to just relax and admire the beautiful countryside view. This safe and easily accessed area would be greatly missed by all ages of the Old Woodstock Community.</td>

| MM468        |                         | Joseph Shaw    | -                | 1169       | > SECTION 9 - STRATEGY AT THE LOCAL LEVEL > Eynsham Woodstock | Proposed development on 'Land north of Hill Rise'  
As a resident of Old Woodstock, I wish to register an objection to the proposed development on 'Land north of Hill Rise'.  
As far as I can see from the plans, access to this development, to include 120 new houses, will be through the only access into Old Woodstock Barn Piece Estate is via a residential road (Vermont Drive).  
This is a route already heavily used, not only by private and commercial vehicles, but by public transport (i.e. the S3 and, latterly, the 500: both buses use Vermont Drive as a turn-around). Speaking only from the viewpoint of a passenger, it also appears to be a difficult and dangerous junction at which to either turn off or onto the A44.  
An additional 120 houses would increase the volume of vehicles by at least 240 - an estimate based upon the fact that these days most people own a vehicle: 2 residents = 2 vehicles. However, noting the current trend, this number could be higher - even for a house with 2 residents. (Two terraced houses in Westland Way both with 2 occupants, have 3 vehicles per household.)  
There is an existing parking problem in Old Woodstock. Westland Way, with its open green space, is a favoured parking site for visitors who then access Blenheim Park on foot through the public routes off the Manor Road section of the A44.  
The additional vehicles resulting from 120 new houses would only exacerbate the problem of both parking and the volume of traffic using the extremely busy and dangerous A44.  
As a non-driver, I walk into Woodstock via the narrow A44 footpaths. The combination of the size and, possibly, excessive speed of the many RGVs constantly using the A44 (Plus the high volume of private vehicles) is, to say the least, very stressful.  
I would be very interested to know how the statement that the A44 has "... effective pedestrian and cycle links to the centre of Woodstock" was able to be made ...Was the route actually travelled by a pedestrian and a cyclist on a test basis?  
As a regular pedestrian user of this route into Woodstock, I fail to recognize any "... effective pedestrian and cycle links to the centre of Woodstock". As a pedestrian, I would welcome a 20mph speed limit on the entire section of the A44 from Old Woodstock and all through the town itself as - it is a safety hazard.  
My description of the A44 as "a safety hazard" is based upon fact: On 15 February 2016 the A44 through Woodstock was closed in both directions after an accident occurred on a narrow section of pavement between a motor vehicle and a pedestrian. (The reason I am aware of the date is that particular morning my son and his family had been due to pick me up to go on holiday with them and were consequently delayed.)  
Even one such accident is one too many.  
At my age, by 2031, I could well be dead; but these comments/observations might perhaps benefit other members of the Old Woodstock Community from being adversely affected by the proposed 'DEVELOPMENT OF LAND NORTH EAST OF HILL RISE'.  
I sincerely trust that the above views will be taken into consideration when any future decisions are made regarding the WEST OXFORDSHIRE LOCAL PLAN 2031.

<td>119</td>
<td>Sub Area &gt; MAIN 166</td>
<td>I write to object strongly to the proposed development to the north of Hill rise in Old Woodstock. I live in Old Woodstock and despite the fact that this is the oldest part of the town we are totally lacking in amenities and infrastructure. Despite a dangerous road, the footpath into town is so narrow that you cannot safely take a pushchair or wheelchair down the hill. When our grandchildren come to visit we have to walk in single file and within inches of cars and lorries. All this makes for a lack of community in this area because we have nowhere to meet. The very second rate playground and the field where these proposed houses could be built are the only communal areas for children and dog walkers. If we lose these we shall have nothing at all! Even if the playground is eventually rebuilt and the path reinstated they will be out of action for some time. We live on the A44 and the traffic is already noisy and dangerous and constantly exceeds the speed limit. Indeed our beloved dog was run over outside our house last year. If you add to the present traffic problems more cars from the proposed new houses plus construction vehicles life is really going to become unbearable for us. I understand that pollution problems on the A44 may already exceed EU limits. My husband's asthma has certainly got worse of late. The field in question is one of the delights of Old Woodstock. Someone has taken the trouble to plant the sides of the footpath with hollyhocks and when they are in bloom the walk to Wootton provides a marvellous respite from the noise of the road which we live with day and night. We are already a much neglected area of the town. PLEASE don't grant planning permission to these 120 houses.</td>
</tr>

</table>
| MM474         |                         | Richard Soanes  | Mr               | Soanes            | 1193       | Sub Area > MAIN 166 | I believe that the land Northeast of Hill Rise is wholly unsuitable for development and therefore should not be included in the West Oxfordshire Local Plan, due to the following reasons:  
  • Old Woodstock has no infrastructure (shops, school, doctors etc.) which means all residents have to travel into town on the busy A44 for everyday hings. This is not the case for other sites in Woodstock.  
  • Would cause significantly more traffic continuing the whole length of A44 through Woodstock, as there are 120 houses planned, increasing Old Woodstock by 50%. Residents are likely to travel to work and school: Oxford, Water Eaton to London, Secondary School, Primary School and also schools in North Oxford, |
Kidlington, Eynsham. This is not the case for other sites in Woodstock.

- Existing parking problems in Woodstock would be made much worse as many Residents will drive into Woodstock due to distance and road conditions (please see point 4 below) being highly inappropriate for everyday safe pedestrian and cycle use. This is the harsh reality local residents know all too well and not the case for other sites.

- Would worsen already serious safety concerns of the A44 which has extremely narrow pavements and very fast traffic. The documents proposing the site states that it has, "effective pedestrian and cycle links to the centre of Woodstock". Those living here know this to absolutely NOT be the case. Old Woodstock just can't take any more residential traffic, as well as at least a year of construction vehicles. Note incidents: van mounting pavement last year seriously injuring a teenager (head injuries), on Thursday 3rd November a Golf appeared to have been hit from the front opposite Hill Rise, with police in attendance. Also, police are regularly monitoring traffic speed exiting Woodstock, opposite Hill Rise. There any many reported incidents of HGVs regularly mounting the pavement on Manor Road. We are horrified by current conditions where we fear for our elderly, parents pushing buggies, teenagers and children.

- Old Woodstock already has a problem with schooling: Currently at capacity with Hill Rise children not getting in. Could go to 2 year intake = only 105 more places. 670 more homes = 200-300 primary children. Also, Hill Rise and any new development would be the last to get a place, so may have to travel (on A44) to Kidlington, Long Hanborough and Yarnton, thereby further exacerbating traffic concerns.

- Pollution levels on the A44 are already suspected to be over the levels permitted by the EU. Residents are in the process of trying to obtain more accurate levels.

- We could lose the use of the play area and football pitch for at the least a year, whilst construction takes place. Children are already at risk having to travel to Woodstock for schooling and other amenities and would then have to travel for play. In addition, it is unlikely that any proposed new play area would be as safe and easy to access for our children as the current site, not to mention whether it would include a half-sized football pitch which is currently in constant use by many members of Old Woodstock and greater Woodstock community.

- Removing a valuable piece of countryside from Woodstock would be intrusive and damaging for our community. An important, idyllic portion of the scenic walk to Wootton would effectively be destroyed. No carefully considered development would be able to avoid this repercussion. Views would be altered to far too great a degree.

- Very strong Old Woodstock community would be destroyed. This has been built up over many years due to the vicinity of the open space, green walkway, play area, footpath. This would be destroyed if open space was taken away. Also for walkers, dog walkers, safe for children. Has been this way for 20-30 years.

- Vermont drive is too narrow to support new and existing traffic.

In summary, the small historic town of Woodstock and in particular Old Woodstock, is already suffering with the recent housing development undertaken. Its infrastructure is extremely strained and on so many levels it
cannot take any more development. I urge you to consider the issues listed above, which illustrate how the site to the Northeast of Hill Rise is extremely unsuitable for development.

Notification of an OBJECTION to the proposed development in the WEST OXFORDSHIRE LOCAL PLAN 2031 of 'LAND NORTH EAST OF HILL RISE'

Old Woodstock is a small and solely housing based Community. It does not have a school, surgery or shop.

The proposed plan for 120 houses on land north east of Hill Rise (which would increase the size of the Old Woodstock Community by 50%) does not appear to make provision for resolving the problem of the non-existence of any infrastructure here in the Old Woodstock Community.

Demand on the current Woodstock infrastructure is already stretched. [Examples of this: I understand that Woodstock Primary School has filled its capacity; and also personal experience of an 8 day wait for a G.P. appointment.]

The only facility provided for Old Woodstock residents is the recreation ground. All of the equipment is well used (swings, slide, etc.) by local children - and by my own young grandchildren.

On the same site is a small-sized football pitch which is very much enjoyed by both young and old alike (using as an illustration, a 6 year old boy and myself - his 77 year old grandmother!) The picnic table and bench seats are also much appreciated - allowing for an opportunity to just relax and admire the beautiful countryside view. This safe and easily accessed area would be greatly missed by all ages of the Old Woodstock Community.

The only access into Old Woodstock Barn Piece Estate is via a residential road (Vermont Drive). This is a route already heavily used, not only by private and commercial vehicles, but by public transport (i.e. the S3 and, latterly, the 500: both buses use Vermont Drive as a turn-around).

Speaking only from the viewpoint of a passenger, it also appears to be a difficult and dangerous junction at which to either turn off or onto the A44.

An additional 120 houses would increase the volume of vehicles by at least 240 - an estimate based upon the fact that these days most people own a vehicle: 2 residents = 2 vehicles. However, noting the current trend, this number could be higher - even for a house with 2 residents. (Two terraced houses in Westland Way both with 2 occupants, have J. vehicles per household.)

There is an existing parking problem in Old Woodstock. Westland Way, with its open green space, is a favoured parking site for visitors who then access Blenheim Park on foot through the public routes off the Manor Road section of the A44.

The additional vehicles resulting from 120 new houses would only exacerbate the problem of both parking and the volume of traffic using the extremely busy and dangerous A44.

<td>Development of Land Northeast of Hill Rise</td>
<td>I believe that the above proposal is totally unsuitable for development and therefore should not be included in the West Oxfordshire Local Plan, due to the following reasons: The increase of 120 homes would further increase traffic driving along the now very busy Manor Road (A44), especially at peak times. As a mother of two, we walk to Woodstock Primary most days and have to be very careful walking on the narrow path. HGV rush pass very close to the edge of the path. I have witnessed a couple of times, 2 vehicles passing in opposite directions clipping their wing mirrors, as Manor Road (A44) is quite narrow in some places. When our children were younger, it wasn’t safe for them to walk alongside a pushchair, so I had to drive into Woodstock. Parking in Woodstock would increase for young families and the elderly, who would have to drive into Woodstock for essentials, i.e. doctors' surgery, shops, post office, dentist, optician. The A44 has an emergency vehicle at least once a day. One morning recently, when walking with our children to school, we had to stop and step back as an HGV mounted the path, while pulling over for an emergency.</td>

<td>&gt; SECTION 9 - STRATEGY AT THE LOCAL LEVEL</td>
<td>It was very useful to meet you on Wednesday 14th at the Woodstock Community Centre. Thank you for your help. After considering the proposals set out, I believe that the land Northeast of Hill Rise, Woodstock, is the wrong place for new housing and should not be included in the West Oxfordshire Local Plan. General objection. Few of the extra population would be employed in Woodstock, most would travel to work in Witney, Oxford, or destinations beyond Oxford. All of these journeys would be through Woodstock, and past Blenheim Palace. Specific objections: access to Woodstock The plans + modifications do not provide satisfactory access to Woodstock (schools, surgery, shops etc.) For pedestrians, particularly parents with children in pushchairs, schoolchildren, the elderly, and the disabled, the walk from the Hill Rise area into Woodstock is hazardous and frightening. In the area of Manor Road, the kerb-kerb width of the A44 is insufficient to allow lorries of legal maximum width to pass each other. Wing mirrors frequently overhang the very narrow pavements in a way potentially lethal to pedestrians. As an additional hazard, the pavements are often obstructed by refuse bins on days when household waste is collected (the bins blow onto the road on stormy days). Between Manor Road and the Black Prince pub, the pavements are slightly wider but pedestrians are confined by high and crumbling walls on both sides of the road. Near the Black Prince pedestrians are protected only by a flimsy barrier from the many heavy lorries, buses, etc., which use this trunk road - some travelling downhill at well in excess of the legal speed limit. Both human health and the environment benefit when people of all ages walk, or cycle, rather than use a car for short journeys. The situation of Old Woodstock does not encourage such activities. Any new footpath and cycle way into Woodstock would have to cross not only the river Glyme but also a wide stretch of water meadows. For safety reasons, it would have to be very well lit, thereby introducing light pollution to an environmentally sensitive area. Finally, if the proposed new development and the existing housing in Rosamund Drive, Vanbrugh Close, etc., were to share a single exit/entry point to the A44 via Vermont Drive, a potentially hazardous situation arises in the case of an emergency. If there is to be extra housing, a second exit onto the A44 is needed, probably requiring the expensive construction of a roundabout on the A44 in the Hill Rise area. I believe that the land Northeast of Hill Rise is wholly unsuitable for development and therefore should not be included in the West Oxfordshire Local Plan, due to the following reasons: Old Woodstock has no infrastructure (shops, school, doctors etc) which means all residents have to travel</td>

| MM521         |                         | Vivienne Insley | -                | Insley            | 1270       | > SECTION 9 - STRATEGY AT THE LOCAL LEVEL > Eynsham Woodstock Sub Area > MAIN 166 | I believe that the land Northeast of Hill Rise is wholly unsuitable for development and therefore should not be included in the West Oxfordshire Local Plan, due to the following reasons:  
  • Old Woodstock has no infrastructure (shops, school, doctors etc) which means all residents have to travel into town on the busy A44 for everyday things. This is not the case for other sites in Woodstock.  
  • Would cause significantly more traffic travelling the whole length of A44 through Woodstock, as there are 120 houses planned, increasing Old Woodstock by 50%. Residents are likely to travel to work and school: Oxford, Water Eaton to London, Secondary School, Primary School and also schools in North Oxford, Kidlington, Eynsham. This is not the case for other sites in Woodstock.  
  • Existing parking problems in Woodstock would be made much worse as many residents will drive into Woodstock, due to distance and road conditions (please see point 4 below) being highly inappropriate for everyday safe pedestrian and cycle use. This is the harsh reality local residents know all too well and not the case for other sites.  
  • Would worsen already serious safety concerns of the A44 which has extremely narrow pavements and very fast traffic. The documents proposing the site states that it has, ‘effective pedestrian and cycle links to the centre of Woodstock’. Those living here know this to absolutely NOT be the case. Old Woodstock just can’t take any more residential traffic, as well as at least a year of construction vehicles. Note incidents: van mounting pavement last year seriously injuring a teenager (head injuries), on Thursday 3rd November a Golf appeared to have been hit from the front opposite Hill Rise, with police in attendance. Also, police are regularly monitoring traffic speed exiting Woodstock, opposite Hill Rise. There any many reported incidents of HGVs regularly mounting the pavement on Manor Road. We are horrified by current conditions where we fear for our elderly, parents pushing buggies, teenagers and children.  
  • Old Woodstock already has a problem with schooling: Currently at capacity with Hill Rise children not getting in. Could go to 2 year intake ~ only 105 more places. 670 more homes ~ 200-300 primary children. Also, Hill Rise and any new development would be the last to get a place, so may have to travel (on A44) to Kidlington, Long Hanborough and Yarnton, thereby further exacerbating traffic concerns.  
  • Pollution levels on the A44 are already suspected to be over the levels permitted by the EU. Residents are in the process of trying to obtain more accurate levels.  
  • We could lose the use of the play area and football pitch for at least a year, whilst construction takes place. Children are already at risk having to travel to Woodstock for schooling and other amenities and would then have to travel for play. In addition, it is unlikely that any proposed new play area would be as safe and easy to access for our children as the current site, not to mention whether it would include a half-sized football pitch which is currently in constant use by many members of Old Woodstock and greater Woodstock community.  
  • Removing a valuable piece of countryside from Woodstock would be intrusive and damaging for our community. An important, idyllic portion of the scenic walk to Wootton would effectively be destroyed. No carefully considered development would be able to avoid this repercussion. Views would be altered to far too great a degree. |
Very strong Old Woodstock community would be destroyed. This has been built up over many years due to the vicinity of the open space, green walkway, play area, footpath. This would be destroyed if open space was taken away. Also for walkers, dog walkers, safe for children. Has been this way for 20-30 years.

Vermont drive is too narrow to support new and existing traffic.

In summary, the small historic town of Woodstock and in particular Old Woodstock, is already suffering with the recent housing development undertaken. Its infrastructure is extremely strained and on so many levels it cannot take any more development. I urge you to consider the issues listed above, which illustrate how the site to the Northeast of Hill Rise is extremely unsuitable for development.

I believe that the land Northeast of Hill Rise is wholly unsuitable for development and therefore should not be included in the West Oxfordshire Local Plan, due to the following reasons:

Old Woodstock has no infrastructure (shops, school, doctors etc) which means all residents have to travel into town on the busy A44 for everyday things. This is not the case for other sites in Woodstock.

This is the harsh reality local residents know all too well and not the case for other sites.  
• Would worsen already serious safety concerns of the A44 which has extremely narrow pavements and very fast traffic. The documents proposing the site states that it has, ‘effective pedestrian and cycle links to the centre of Woodstock’. Those living here know this to absolutely NOT be the case. Old Woodstock just can’t take any more residential traffic, as well as at least a year of construction vehicles. Note incidents: van mounting pavement last year seriously injuring a teenager (head injuries), on Thursday 3rd November a Golf appeared to have been hit from the front opposite Hill Rise, with police in attendance. Also, police are regularly monitoring traffic speed exiting Woodstock, opposite Hill Rise. There any many reported incidents of HGVs regularly mounting the pavement on Manor Road. We are horrified by current conditions where we fear for our elderly, parents pushing buggies, teenagers and children.  
• Old Woodstock already has a problem with schooling- Currently at capacity with Hill Rise children not getting in. Could go to 2 year intake = only 105 more places. 670 more homes = 200-300 primary children. Also, Hill Rise and any new development would be the last to get a place, so may have to travel (on A44) to Kidlington, Long Hanborough and Yarnton, thereby further exacerbating traffic concerns.  
• Pollution levels on the A44 are already suspected to be over the levels permitted by the EU. Residents are in the process of trying to obtain more accurate levels.  
• We could lose the use of the play area and football pitch for at the least a year, whilst construction takes place. Children are already at risk having to travel to Woodstock for schooling and other amenities and would then have to travel for play. In addition, it is unlikely that any proposed new play area would be as safe and easy to access for our children as the current site, not to mention whether it would include a half-sized football pitch which is currently in constant use by many members of Old Woodstock and greater Woodstock. |

The documents proposing the site states that it has, 'effective pedestrian and cycle links to the centre of Woodstock’. Those living here know this to absolutely NOT be the case. Old Wood stock just can’t take any more residential traffic, as well as at least a year of construction vehicles. Note incidents: van mounting pavement last year seriously injuring a teenager (head injuries), on Thursday 3rd November a Golf appeared to have been hit from the front opposite Hill Rise, with police in attendance. Also, police are regularly monitoring traffic speed exiting Woodstock, opposite Hill Rise. There any many reported incidents of HGVs regularly mounting the pavement on Manor Road. We are horrified by current conditions where we fear for our elderly, parents pushing buggies, teenagers and children.

- Old Woodstock already has a problem with schooling. Currently at capacity with Hill Rise children not getting in. Could go to 2 year intake = only 105 more places. 670 more homes = 200-300 primary children. Also, Hill Rise and any new development would be the last to get a place, so may have to travel (on A44) to Kidlington, Long Hanborough and Yarnton, thereby further exacerbating traffic concerns.

- Pollution levels on the A44 are already suspected to be over the levels permitted by the EU. Residents are in the process of trying to obtain more accurate levels.

- We could lose the use of the play area and football pitch for at least a year, whilst construction takes place. Children are already at risk having to travel to Wood stock for schooling and other amenities and would then have to travel for play. In addition, it is unlikely that any proposed new play area would be as safe and easy to access for our children as the current site, not to mention whether it would include a half-sized football pitch which is currently in constant use by many members of Old Woodstock and greater Wood stock community.

- Removing a valuable piece of countryside from Woodstock would be intrusive and damaging for our community. An important, idyllic portion of the scenic walk to Wootton would effectively be destroyed. No carefully considered development would be able to avoid this repercussion. Views would be altered to far too great a degree.

- Very strong Old Woodstock community would be destroyed. This has been built up over many years due to the vicinity of the open space, green walkway, play area, footpath. This would be destroyed if open space was taken away. Also for walkers, dog walkers, safe for children. Has been this way for 20-30 years.

- Vermont drive is too narrow to support new and existing traffic.

In summary, the small historic town of Wood stock and in particular Old Wood stock, is already suffering with the recent housing development undertaken. Its infrastructure is extremely strained and on so many levels it cannot take any more development. I urge you to consider the issues listed above, which illustrate how the site to the Northeast of Hill Rise is extremely unsuitable for development.

I believe that the land Northeast of Hill Rise is wholly unsuitable for development and therefore should not be included in the West Oxfordshire Local Plan, due to the following reasons:

- Old Woodstock has no infrastructure (shops, school, doctors etc) which means all residents have to travel into town on the busy A44 for everyday things. This is not the case for other sites in Woodstock.

- Would causeSignificantly more traffic travelling the whole length of A44 through Woodstock, as there are 120 houses planned, increasing Old Woodstock by 50%. Residents are likely to travel to work and school: Oxford, Water Eaton to London, Secondary School, Primary School and also schools in NorthOxford, Kidlington, Eynsham. This is not the case for other sites in Woodstock.

<td>fast traffic. The documents proposing the site states that it has, ‘effective pedestrian and cycle links to the centre of Woodstock’. Those living here know this to absolutely NOT be the case. Old Wood stock just can’t take any more residential traffic, as well as at least a year of construction vehicles. Note incidents: van mounting pavement last year seriously injuring a teenager (head injuries), on Thursday 3rd November a Golf appeared to have been hit from the front opposite Hill Rise, with police in attendance. Also, police are regularly monitoring traffic speed exiting Woodstock, opposite Hill Rise. There any many reported incidents of HGVs regularly mounting the pavement on Manor Road. We are horrified by current conditions where we fear for our elderly, parents pushing buggies, teenagers and children. • Old Woodstock already has a problem with schooling. Currently at capacity with Hill Rise children not getting in. Could go to 2 year intake = only 105 more places. 670 more homes = 200-300 primary children. Also, Hill Rise and any new development would be the last to get a place, so may have to travel (on A44) to Kidlington, Long Hanborough and Yarnton, thereby further exacerbating traffic concerns. • Pollution levels on the A44 are already suspected to be over the levels permitted by the EU. Residents are in the process of trying to obtain more accurate levels. • We could lose the use of the play area and football pitch for at the least a year, whilst construction takes place. Children are already at risk having to travel to Wood stock for schooling and other amenities and would then have to travel for play. In addition, it is unlikely that any proposed new play area would be as safe and easy to access for our children as the current site, not to mention whether it would include a half-sized football pitch which is currently in constant use by many members of Old Woodstock and greater Wood stock community. • Removing a valuable piece of countryside from Woodstock would be intrusive and damaging for our community. An important, idyllic portion of the scenic walk to Wootton would effectively be destroyed. No carefully considered development would be able to avoid this repercussion. Views would be altered to far too great a degree. • Very strong Old Woodstock community would be destroyed. This has been built up over many years due to the vicinity of the open space, green walkway, play area, footpath. This would be destroyed if open space was taken away. Also for walkers, dog walkers, safe for children. Has been this way for 20-30 years. • Vermont drive is too narrow to support new and existing traffic. In summary, the small historic town of Wood stock and in particular Old Wood stock, is already suffering with the recent housing development undertaken. Its infrastructure is extremely strained and on so many levels it cannot take any more development. I urge you to consider the issues listed above, which illustrate how the site to the Northeast of Hill Rise is extremely unsuitable for development. - Existing parking problems in Woodstock would be made much worse as many residents will drive into Woodstock, due to distance and road conditions (please see point 4 below) being highly inappropriate for everyday safe pedestrian and cycle use. This is the harsh reality local residents know all too well and not the case for other sites.

- Would worsen already serious safety concerns of the A44 which has extremely narrow pavements and very fast traffic. The documents proposing the site states that it has, 'effective pedestrian and cycle links to the centre of Woodstock'. Those living here know this to absolutely NOT be the case. Old Wood stock just can’t take any more residential traffic, as well as at least a year of construction vehicles. Note incidents: van mounting pavement last year seriously injuring a teenager (head injuries), on Thursday 3rd November a Golf appeared to have been hit from the front opposite Hill Rise, with police in attendance. Also, police are regularly monitoring traffic speed exiting Woodstock, opposite Hill Rise. There any many reported incidents of HGVs regularly mounting the pavement on Manor Road. We are horrified by current conditions where we fear for our elderly, parents pushing buggies, teenagers and children.

- Old Woodstock already has a problem with schooling- Currently at capacity with Hill Rise children not getting in. Could go to 2 year intake = only 105 more places. 670 more homes = 200-300 primary children. Also, Hill Rise and any new development would be the last to get a place, so may have to travel (on A44) to Kidlington, Long Hanborough and Yarnton, thereby further exacerbating traffic concerns.

- Pollution levels on the A44 are already suspected to be over the levels permitted by the EU. Residents are in the process of trying to obtain more accurate levels.

- We could lose the use of the play area and football pitch for at the least a year, whilst construction takes place. Children are already at risk having to travel to Wood stock for schooling and other amenities and would then have to travel for play. In addition, it is unlikely that any proposed new play area would be as safe and easy to access for our children as the current site, not to mention whether it would include a half-sized football pitch which is currently in constant use by many members of Old Woodstock and greater Wood stock community.

- Removing a valuable piece of countryside from Woodstock would be intrusive and damaging for our community. An important, idyllic portion of the scenic walk to Wootton would effectively be destroyed. No carefully considered development would be able to avoid this repercussion. Views would be altered to far too great a degree.

- Very strong Old Woodstock community would be destroyed. This has been built up over many years due to the vicinity of the open space, green walkway, play area, footpath. This would be destroyed if open space was taken away. Also for walkers, dog walkers, safe for children. Has been this way for 20-30 years.

- Vermont drive is too narrow to support new and existing traffic.

In summary, the small historic town of Woodstock and in particular Old Woodstock, is already suffering with the recent housing development undertaken. Its infrastructure is extremely strained and on so many levels it cannot take any more development. I urge you to consider the issues listed above, which illustrate how the site to the Northeast of Hill Rise is extremely unsuitable for development.

• Vermont drive is too narrow to support new and existing traffic.  

In summary, the small historic town of Woodstock and in particular Old Woodstock, is already suffering with the recent housing development undertaken. Its infrastructure is extremely strained and on so many levels it cannot take any more development. I urge you to consider the issues listed above, which illustrate how the site to the Northeast of Hill Rise is extremely unsuitable for development. |
| MM549         |                         | Andrew Hill    | -                | Hill              | 1300       | > SECTION 9 - STRATEGY AT THE LOCAL LEVEL > Eynsham Woodstock Sub Area > MAIN 166 | I wish to object to the ill conceived development plans proposed for the land north east of Hill Rise, due to the following reasons:  
• The area behind my house would become considerably noisier and busier.  
• The views to the rear of Hill Rise, which are genuinely beautiful would be lost forever, and I would lose my current right to quiet enjoyment of the space behind my house.  
• The high volume and type of traffic on the A44 is currently known by councils at county, district and local levels, with well in excess of 10000 vehicles using the A44 per day, many of them articulated lorries. A significant increase in traffic would occur through Woodstock on the A44 should the development to the north east of Hill Rise be permitted, and with it conscious knowledge of the attendant increase in risk to pedestrians, particularly along the narrow sections of pavement opposite the Black Prince pub.  
• Vermont Drive is patently too small to take the increase in traffic.  
• I believe that there would be increased noise and loss of privacy to all residents at the rear of Hill Rise.  
• The area to the north east of Woodstock is green belt land, and not an 'infill', another reason making this unsuitable  
• Pollution would increase, potentially well past permissible levels.  
• Old Woodstock has no infrastructure or services, and so all residents must travel into Woodstock itself. Additionally, 80%+ of all commuters head Oxford bound, meaning that traffic through Woodstock would increase if the development were permitted north east of Hill Rise.  
• I understand that local schooling is already at full capacity, with local children now not being able to get into local schools. |

| MM550         |                         | Eliza Cox       | Ms Cox           | 1301       | > SECTION 9 - STRATEGY AT THE LOCAL LEVEL > Eynsham Woodstock Sub Area > MAIN 166 | • I know that Woodstock is an historic town, which will lose its currency and appeal that it currently holds if this development goes ahead.  
• Parking in Woodstock is already a pain, and will be exacerbated by further development.  
• Any permitted development would create a precedent, which is unacceptable.  
• The Blenheim estate is acting recklessly and without any loyalty to the towns people.  
I would finish by saying that the landowner has tried for many, many years to gain planning permission to develop the land north east of Woodstock and has failed at every attempt for many of the same reasons that exist today. Indeed, the situation today regards traffic, infrastructure etc is worse that at any time in the past I would urge you to review these reasons, from which you will logically draw only one conclusion, and that is to refuse this development proposal. |
|               |                         |                 |                  |            |                   | I would like to register my objection to the proposed development of land North of Hill Rise, Old Woodstock.  
After 900 years of organic and sustainable growth the prospect of 670 new and unwanted houses which will double the size of the built area and the population of the town seems absurd. I believe it will irrevocably destroy our rural community, our interaction with the local environment and our community spirited way of life. There are many practical, human and emotional reasons why the continued development of Woodstock should not be permitted. There should be no further residential development in Woodstock since it has met its housing quota and as a long-time resident of Old Woodstock, it is my opinion that the Draft Local Plan for 2031 should not show farmland North of Hill Rise as suitable for future development.  
In my opinion the field is not suitable for development for the following reasons:  
Old Woodstock has no infrastructure which means that residents have to travel into the town on the busy A44 for every day things.  
Parking is inadequate within the town with the current level of population - it will be worse with the additional vehicles generated by further development of the town.  
The volume of traffic using the A44 is very high. Building an additional 120 houses behind Hill Rise will increase not help manage the pollution concerns or accident risk. The number of cars and the cumulative increase in accidents and congestion on the section of A44 adjacent to Hill Rise is clear to see.  
The proposed site will not provide safe and suitable access or exit points for vehicles, pedestrians and cyclists. Old Woodstock is an ancient town. The A44 is incredibly narrow in places and is straining with the current volume of use. We have counted 900 vehicles per/hr for 3 hours every morning and 3 hours every night. At peak times 6 articulated lorries every 10 minutes.  
The land behind Hill Rise has been agricultural for decades and forms the valley side to the River Glyme Valley. The proposed development will adversely affect the wildlife biodiversity habitats which are well established. We are privileged to see bats in our garden and a multitude of summer and winter bird life that will be lost if this habitat is destroyed.  
The field is essential to the way that people connect and integrate with the wider countryside and footpath system north of Old Woodstock. The footpath running through the proposed site is an ancient Public Right of Way that links the Parish of Wootton with Woodstock. Hill Rise was until 1970s part of Wootton and from |

| MM551         |                        | James Cox       | Mr Cox           |                   | 1302       | > SECTION 9 - STRATEGY AT THE LOCAL LEVEL > Eynsham Woodstock Sub Area > MAIN 166 | various locations along the footpath it is possible to see the Parish Churches of Wootton and Woodstock and for that matter the Palace from the field.  
Families with children in Hill Rise are finding it increasingly difficult to gain places at the local Primary School. An increase in population will makes access impossible.  
Local road infrastructure is already at breaking point. Traffic at the school gates is already extremely dangerous. The recent housing development at the back of the Marlborough School (Marlborough Place) has exacerbated the problem and conflict of vehicle movements at peak times and has become extremely dangerous to school children and pedestrians.  
There are 46 houses on Hill Rise, 120 unwanted house would swamp our community and make life intolerable. The town is not equipped to service the needs of such a drastic increase in population. There are few shops, one bank and only one grocery store. The Drs Surgery is difficult to access with the present population.  
Access to the play area and football pitch will be adversely affected.  
Why is necessary to develop Woodstock further? Marlborough Place and Banbury Road are recent development and have met the housing quota.  
Please do your best to allow proportionate development of our Woodstock. Blenheim has so much land it seems unjust that they are preserving the estate at the cost of our beloved town.

Why is necessary to develop Woodstock further? Marlborough Place and Banbury Road are recent development and have met the housing quota. Please do your best to allow proportionate development of our Woodstock. Blenheim has so much land it seems unjust that they are preserving the estate at the cost of our beloved town. For many generations my family have been privileged to live in Woodstock. As far as I'm aware, for all this time the town and Blenheim have co-existed quite happily. - that is until recently. Every weekend and holiday time is taken up with events being held at Blenheim. I don't have a problem with this even though it seems little consideration is given to Blenheim to locals about congestion of our roads and the disruption to our lives. To co-exist, we realise that Blenheim's upkeep is expensive and as we love Blenheim we are happy to endure this. However, we are now being told that the surrounding countryside of our unique and beautiful town is to be 'concreted over' with yet more expensive houses. Supposedly once again, this is to meet the cost of the Palace. Well I find it unbelievable. Decisions which affect us so deeply are being made by people who don't live in Woodstock, have never lived in Woodstock and therefore have no real feeling for the town and the devastating effect this will have on Woodstock. I can understand how previously, farming/cattle didn't make enough revenue for Blenheim's upkeep but we can all see the amount of buildings already finished or under construction on Blenheim’s land, surely you don’t need to continue building at this rate to cover Blenheim’s needs. Some years ago, we, in Old Woodstock fought hard to keep our little Play Park (our only amenity). I remember being reassured when we heard Blenheim had bought the land, thinking “it will be safe with

| MM553         |                         | Jane Rein       | -                | Rein              | 1304       | > SECTION 9 - STRATEGY AT THE LOCAL LEVEL > Eynsham Woodstock Sub Area > MAIN 166 | I wish to object to the inclusion in the Plan of "Land North of Hill Rise". The grounds of my objection are as follows:
1. The building of 120 more houses would place an intolerable strain on the local infrastructure - namely, the Woodstock schools and the surgery.
2. Parking in Woodstock town centre is now virtually impossible during working hours. The building of 120 additional houses in accordance with the Plan would inevitably make a bad situation even worse.
3. There is a public footpath that runs through the area of proposed development. The whole point of public footpaths is to enable people to enjoy a walk in the countryside. Thus, even if the right of way were preserved along the footpath through the proposed area of development, the pleasure of a walk through that area would be lost.
4. The proposed development would destroy existing green fields.
5. Access to the proposed 120 houses through Vermont drive would create additional safety concerns because of the additional number of vehicles that would use that access. There are already concerns about the safety of that access for residents of Old Woodstock. Creating an alternative access from the A44 would bring its own safety concerns.
6. The children's play area and small football pitch (valuable amenities for the children of Old Woodstock) would be lost. |

Blenheim—how wrong I was! I could go on at length the many reasons for not building in the field at the back of Hill Rise but won't because you already know them all and the reasons still hold good today - nothing has changed.

However, I would ask you to think about us, your neighbour (the residents of Old Woodstock) and our quality of life. Would also like you to think about the wonderful Glyme Valley that adjoins the field and all the wildlife that inhabits it, it would decimate it. Walking the field every day, we are constantly in awe of the sheer beauty we see and the tranquility we feel throughout the seasons.

Please consider also, the Flora and Fauna that delight us and the many walkers we meet, enjoying this precious amenity. Have you seen the conservation work that Mr Paul Snell and other environmental organisations have undertaken recently and are planning to continue to undertake?

This will leave a legacy that they can be proud of and future generations can enjoy. I wonder, will you be proud of your legacy?

I have wonderful memories as a child playing in and around the field. We spent hours there exploring, picking wild flowers, watching the deer and having 'play battles' Woodstock vs Old Woodstock. I am well aware how lucky we were, I just want my grandchildren and everyone else's to be just as lucky. Blenheim is fortunate to own a great deal of land; surely it would be possible to build a new village/town on less contentious land, leaving Woodstock to grow at a more natural rate.

Finally, please, please have a heart; don't destroy our precious field.

| I am writing to you concerning the proposed housing development on the farm land behind Hill Rise, Woodstock. Having lived in Woodstock for 30 years I have watched the town develop and change - which is the way it should be.  
In the light of changes however, I firmly believe that the housing development on the land to the North East should NOT now go ahead for many practical reasons:  
• The A44 is a very busy road and the section in front of Hill Rise is a particular accident black spot. Any increase in traffic associated with extra housing can only make the situation worse.  
• Vermont Drive is too narrow to cope with the extra traffic an estate would create. There is frequently a queue of cars waiting to turn out from there during busy periods. Any other access points from the estate would come out onto the dangerous section of road outside our house.  
• We have no facilities up here to support more families - e.g. schools, shops, doctors - sending more traffic onto the main road.  
• Parking in Woodstock town is now a huge problem. As a resident I like to shop locally but because I find the hill and the traffic conditions between Hill Rise and the Woodstock very difficult, I tend to drive into the town - as I suspect others do. (The situation isn’t helped by Blenheim’s £8 parking charge for special events. People park in town and walk in.)  
• The Outstanding primary school in Woodstock is now reaching capacity even though it recently expanded to accommodate more children. Families will tend to drive (the school bus from here was removed many years ago) making the traffic situation around the schools - which is bad now - even worse.  
To summarize, Old Woodstock and the main town are already under huge pressure from the new housing we now have. It is difficult to visualize how we could possibly handle any more. |

<td>Daniel Soanes</td>
<td>Master</td>
<td>Soanes</td>
<td>1307</td>
<td>&gt; SECTION 9 - STRATEGY AT THE LOCAL LEVEL &gt; Eynsham Woodstock Sub Area &gt; MAIN 166</td>
<td>For the above reasons we strongly object to any more housing development. I am writing this letter to ask you to not close the Old Woodstock football pitch and play park, and not to build more houses in Old Woodstock. I have grown up playing in this park and if this park wasn't there, I wouldn't have the friends I have today. This park means a lot to the children and adults of Old Woodstock and it brings people together and creates a nice, friendly environment for us to have fun in. At this park, it may seem to you there are only a few things to do, but the space provides the children of Old Woodstock somewhere to have fun. In the park, there is lots of equipment for kids old and young to play on. The main reason I go the park is to play football on the pitch beside the playground, where I have kickabouts with my friends and get exercise instead of just playing on my Playstation. My 7 year old brother goes to the park to play on the roundabout and the climbing frame, and has made many new friends. My parents love walking in the fields with our pet dog as it is conveniently close to the playground, so they can still keep an eye on us. In this park, we have many social events like Summer parties, etc and these events bring the children and adults of Old Woodstock together. This park and the fields mean a lot to us (the citizens of Old Woodstock) and we will do whatever it takes to keep the park and the fields that we love very much. My brother and I have lived in Old Woodstock all our lives, and having the park here makes life so much more fun and it has brought us closer together. Before we first went to the park, we didn't want anything to do with each other, but playing in this park has made us realise that it's great to have each other's company and that we can have more fun together. This park means everything to me and my brother and we don't want to see it get crushed and replaced by a housing estate. If this park does get destroyed, then other children and siblings won't have the chance to bond with each other, and might never be as close. Also, there will be lots of negatives to building more houses. I know there are positives and negatives for everything, but the negatives in this plan are very bad. Firstly, it would disturb the quiet nature of Old Woodstock, there would be loads more cars driving on our estate making it not as safe. Secondly it would give all the children of Old Woodstock, especially young teenagers like me, nowhere to play or interact with others. Finally, it would mean that if the children of Old Woodstock wanted to play football together, they would have to go to the other end of Woodstock to play which means having to get parents to take them as it's not a safe walk along that very busy main road where the pavement is so narrow in places. Having a new housing estate in Old Woodstock would mean that the small town of Woodstock would become over populated, meaning that there won't be enough places in local schools. New kids moving here would find it boring, and I don't blame them for thinking that, because with no park, football pitch or fields Old Woodstock would be dead. Their parents would probably need to travel out of Woodstock to find a place at a school further away, adding to the traffic. Please Woodstock Council, don't close our park down and build on the football pitch and fields. If you do, us children won't be able to grow up in a quiet, friendly and safe environment like we are now.</td>

| MM557         |                         | Sarah Jane Airey | Ms               | Airey              | 1309       | > SECTION 9 - STRATEGY AT THE LOCAL LEVEL > Eynsham Woodstock Sub Area > MAIN 166 | In relation to Hill Rise:  
  • The A44 just north of Hill Rise is noted for accidents including several fatal ones. Access to a new development would make this dangerous section of the road even more unsafe.  
  • The A44 south cannot be widened to cope with new traffic. It is not a safe stretch of road either, especially for cyclists. My husband was knocked off his bicycle along this stretch of road.  
  • There are no local amenities/shops etc which will inevitably lead to more traffic.  
  • The footpath alongside is very narrow and unsafe if you are wheeling a buggy or wheelchair. Large wide loads can make you feel very vulnerable as they speed past pedestrians. |

<td>I live in Old Woodstock and am 13 years old. I am against the land Northeast of Hill Rise being developed with 120 houses, for the following reasons:</td>
</tr>
<tr>
<td></td>
<td></td>
<td>I walk to and from the Marlborough School everyday along Manor Road. This is an extremely busy and dangerous road. On a regular basis I have felt cars and lorries coming very close to me on the pavement as both the road and the pavements are really narrow in places. This makes me feel nervous and I would not want any more traffic on this road, especially lorries.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>I love living in Old Woodstock as I have the freedom to play in a way I didn't have when I lived in the centre of Woodstock. This is because we have a great football pitch and playground and it is a lovely small, safe community. When I go to the football pitch all age groups and genders get together to play and I would be heartbroken if this were to go. Also our small, friendly community would be changed so much if it were to increase by 50%!</td>
</tr>
<tr>
<td></td>
<td></td>
<td>We often walk from Old Woodstock to Wootton, which is through beautiful countryside and I cannot believe that people would be allowed to build houses there and destroy the wonderful countryside that so many people enjoy all the time.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>We are worried that my little sister will not be able to get into Woodstock Primary School and I don't know where small children would go to school from a new housing estate.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>I think that Old Woodstock is the worst possible place you could choose to build lots of houses. We have no shops, doctors, schools and the road connecting us to the centre of Woodstock is awful. Please don’t spoil our community.</td>
</tr>
<tr>
<td>MM559</td>
<td>NBurton</td>
<td>We are most concerned about the proposed 120 homes behind Hill Rise and oppose it for the following reasons.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>1. There are no facilities, such as surgeries, shops, schools etc. in Old Woodstock so residents have to go into the town centre for day to day needs.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>2. Parking has become a huge problem in the town centre; sometimes it is impossible to park, even in the car park, so residents have to go elsewhere.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>3. I understand that brownfield sites should be chosen for building where possible. Building on good agricultural land in an area which is so unspoilt, and with such lovely views should be a very last resort. Apart from this, The CPRE questions the need for so many houses in Oxfordshire.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>4. The road down into the town is hazardous. There are no “effective pedestrian &amp; cycle links” into the town centre, as has been claimed. There is the main road, which is narrow, hilly, bendy, with narrow pavements (in some places less than 31”) and with windows that overhang and doorsteps which have to be avoided, meaning pedestrians are even closer to the traffic. There is also considerable pollution from the traffic.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>5. Even now, infants due to start school are being denied places and are having to travel several miles towards Oxford. Thus, more traffic, more pollution.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>These are just some of the reasons for this proposal to be turned down.</td>
</tr>
</tbody>

<td>Evans</td>
<td>1312</td>
<td>&gt; SECTION 9 - STRATEGY AT THE LOCAL LEVEL &gt; Eynsham Woodstock Sub Area &gt; MAIN 166</td>
<td>We sincerely hope Woodstock can be saved from further development. I strongly disagree with the planning in Old Woodstock for the reasons below. The traffic is already at a max, crossing the road to catch the S3 to Chipping Norton at 7.30 am is already difficult for my daughter to do. Something I do with her as I don't trust the traffic. The other morning we had to wave the bus down from the wrong side as we couldn't cross the road. Already the traffic going through the town is at its max. Pollution from all the vehicles is already high, more houses- more vehicles more pollution. We have no shops, schools or doctors in Old Woodstock meaning we either walk or drive to our local shops in the middle of Woodstock. Walking is not safe due to the pavements along the A44 and the traffic. Lorries are larger than the width of their lane and hang over the pavements. I do not trust my children walking in as I worry about the size and volume of traffic along that road. Building 120 houses behind Hill Rise means an extra 200 cars driving down the hill and through the town. You cannot park in Woodstock on a regular basis. Doctor appointments - having to park near the library and walk to the doctors. When you are unwell yourself or when your child is unwell, this is not a pleasant journey. The amount of illegal parking during the day and evening has increased. This makes crossing the road and driving very dangerous. Last Friday around 9.00pm I wanted to stop at the Co-op on my way home. I circled the town 3 times trying to park, nothing. There were cars parked outside the Crown all the way up to their doors. There were cars parking in the road beside the parked cars. This is my local shop and I couldn't even park to grab some milk. We try and support our local shops but not able to park the car makes you drive elsewhere. The primary and secondary school is already full meaning children on our road are not getting into their local school. Meaning Wood stock children will need to travel outside their local area, meaning more vehicles on the road. Children born and raised in Wood stock cannot go to their local school! The field behind Hill Rise are used daily by walkers, children and wildlife such as deer, foxes, snakes, bats, rabbits and badgers. The play area and football field is used all year round by families and children. This is the only playground in Old Woodstock. The football field is used by all members of the public, a group of men play football every week through the spring and summer. Often impromptu football games go on by children and parents. The whole community gathers here throughout the spring and summer. We have an annual picnic and rounders’ community get together in the football field. The whole community comes together. I think it is a serious mistake to assume that Wood stock can go on increasing its population. without resulting in problems that can never be solved. The infrastructure cannot be put under more pressure. Blenheim Palace and grounds are a World Heritage Site. We have a duty to preserve the unique and historic town.</td>

<td>AT THE LOCAL LEVEL</td>
<td></td>
<td></td>
<td>&gt; Eynsham</td>
<td>lived in Hill Rise since 1996. We moved from New Road in the town centre to be closer to the countryside. My family have lived, worked and contributed to community affairs in Woodstock for many generations. I strongly feel that Woodstock forms an important part of my identity. After 900 years of organic and sustainable growth the prospect of 670 new and unwanted houses which will double the size of the built area and the population of the town seems absurd. I believe it will irrevocably destroy our rural community, our interaction with the local environment and our community spirited way of life. There are many practical, human and emotional reasons why the continued development of Woodstock should not be permitted. There should be no further residential development in Woodstock since it has met its housing quota and as a long-time resident of Old Woodstock, it is my opinion that the Draft Local Plan for 2031 should not show farmland North of Hill Rise as suitable for future development. In my opinion the field is not suitable for development for the following reasons: • The volume of traffic using the A44 is very high. Building an additional 120 houses behind Hill Rise will increase not help manage the pollution concerns or accident risk. The number of cars and the cumulative increase in accidents and congestion on the section of A44 adjacent to Hill Rise is clear to see. • The proposed site will not provide safe and suitable access exit points for vehicles, pedestrians and cyclists. Old Woodstock is an ancient town. The A44 is incredibly narrow in places and is straining with the current volume of use. We have counted 900 vehicles per/hr for 3 hours every morning and 3 hours every night. At peak times 6 articulated lorries every 10 minutes. • The land behind Hill Rise has been agricultural for decades and forms the valley side to the River Glyme Valley. The proposed development will adversely affect the wildlife biodiversity habitats which are well established. We are privileged to see bats in our garden and a multitude of summer and winter bird life that will be lost if this habitat is destroyed. • The field is essential to the way that people connect and integrate with the wider countryside and footpath system north of Old Woodstock. The footpath running through the proposed site is an ancient Public Right of Way that links the Parish of Woolton with Woodstock. Hill Rise was until 1970s part of Woolton and from various locations along the footpath it is possible to see the Parish Churches of Woolton and Woodstock and for that matter the Palace from the field. • Families with children in Hill Rise are finding it increasingly difficult to gain places at the local Primary School. An increase in population will makes access impossible. • Local road infrastructure is already at breaking point. Traffic at the school gates is already extremely dangerous. The recent housing development at the back of the Marlborough School (Marlborough Place) has exacerbated the problem and conflict of vehicle movements at peak times and has become extremely dangerous to school children and pedestrians. • There are 46 houses on Hill Rise, 120 unwanted house would swamp our community and make life intolerable. The town is not equipped to service the needs of such a drastic increase in population. There are few shops, one bank and only one grocery store. The Drs Surgery is difficult to access with the present population. • Why is necessary to develop Woodstock further? Marlborough Place and Banbury Road are recent development and have met the housing quota.</td>

| MM562         | Pat Crutch              | -               | Crutch          | 1316      | > SECTION 9 - STRATEGY AT THE LOCAL LEVEL > Eynsham Woodstock Sub Area > MAIN 166 | Morally the proposal is wrong. It is unacceptable that the landed gentry can change the character of such a historic town in order to generate money for their estate. The people of the town will be living this legacy not the social elite.  

I hope that you will have the courage to represent the views of the 'common man'. We have a duty to develop and preserve our town sympathetically and for future generations. In my opinion greed is not a justifiable reason to make such a drastic and damaging change to the character of the historic town of Woodstock.  

I am writing to protest at the application to build 120 houses on the field adjoining Hill Rise in Old Woodstock. I had lived in Hill Rise throughout my life until one year ago; I then moved to a smaller house in Old Woodstock which provided a three bedroom house for a young family. I know times change but, in my lifetime, I have seen Old Woodstock lose an Infants’ school, a church, a small glove factory, a public house, a garage with petrol sales and a small grocery shop which leaves residents with just a children’s playground/football practice pitch and a public house (Black Prince) as the only places for social gathering. (Until about the 1970’s Blenheim provided two football pitches in the Old Woodstock area of the park which were much used and appreciated).  

Old Woodstock residents of Hill Rise, Vanburgh Terrace and Mavor Close enjoy and appreciate their open views to the north and east and loss of these facilities must surely lower the value of their properties. There is a public footpath to Wootton across the proposed building area and this has become a much used and much appreciated feature since Barn Piece estate was built in the 1960’s.  

If permission is granted for the proposed 120 houses this will increase Old Woodstock’s housing total by half as much again with no on-the-spot facilities of any sort for the new residents. This large number of houses at such a distance from the town shops and local Schools will necessitate car use and because the town is already full of parked cars it seems unlikely that these new residents will use local shops - much easier to motor on to Kidlington or Oxford. For new residents without cars e.g. young mums with push chairs there would be a long walk into Woodstock along the very busy A44 which has narrow pavement in places. Similarly primary age children would face the long walk to school. From about 1948 there was a school bus to the primary school but this was cancelled a few years ago.  

If no extra vehicle accesses to the A44 were arranged the pressure on the present Vermont Drive would become excessive. Nowadays most houses own two cars; that could provide at least 100 extra vehicles using the junction.  

Would the developers be required to supply sufficient car parking spaces for the new houses? Already there is no spare parking on the Barn Piece estate as it is used by residents of Manor Road as well as those in Barn Piece.  

Could developers be required to retain the playing ground and football pitch present position? The two young trees on the play area were provided and planted at the expense of the Wood stock Natural History Society in 2000; would they be left in place?  

What assessment will be made as to extra pressure on the doctors’ surgery bearing in mind that Hill Rise is only one of two or three extra housing site applications for Woodstock and the surgery seems already to be at full stretch most days.  

Please take in these concerns when considering the suitability of the Hill Rise area for extra housing. There is

<td>Minh Ha Duong</td>
<td>-</td>
<td>Duong</td>
<td>1317</td>
<td>&gt; SECTION 9 - STRATEGY AT THE LOCAL LEVEL &gt; Eynsham Woodstock Sub Area &gt; MAIN 166</td>
<td>I am writing to you because I have heard that there may be plans to develop land northeast of Hill Rise. As a resident of Hill Rise I'd like to voice my concerns as I believe this area is wholly unsuitable for development and therefore should not be included in the West Oxfordshire Local Plan. I understand that 670 new houses are included in the Local Plan. I think that such massive expansion would change the special character of Woodstock and put further strain on the oversubscribed primary school and parking facilities in town. I know that new housing is desirable but would urge that any new developments should be on a reasonable scale, and take into account any strain on infrastructure. I think 120 houses around Old Woodstock (doubling its current size) would be particularly unsuitable. Firstly, it would cause significantly more traffic travelling the whole length of the A44 through Woodstock. Residents already have to travel through Woodstock to access shops, the schools and healthcare services. It's likely they will also travel that way for work (certainly the case for my husband and I). If access to the new estate is to be through Vermont Drive, as shown on the plan, the increased congestion would be horrendous. I already have considerable safety concerns about that section of the A44. We have two young children pushing them along the narrow pavement while lorries speed by is not a pleasant experience. We know of several serious traffic accidents that have occurred along that stretch - increased traffic would worsen our concerns. It would also add to pollution levels. My eldest daughter is lucky to be in Year 1 of Woodstock’s outstanding primary school, and I have just applied for a place for my youngest daughter. Hopefully she will be offered a place as she has a sibling at the school already, but I fear some of my neighbours may not be so fortunate. More new housing would exacerbate this problem. We regularly use the playground in Old Woodstock, and enjoy the open spaces at the back of our houses. Presumably we would not have access to these for at least a year while houses are constructed (and assuming that this amenity would not be lost altogether). Finally, we love the natural, unspoilt beauty of this area. It’s a stunning area of Oxfordshire, and I think it’s special beauty should be preserved. I’m strongly against including the Hill Rise development in the Local Plan for Woodstock, as I know are many of my neighbours. I hope our grave and valid concerns will be taken seriously.</td>

<td>1318</td>
<td>&gt; SECTION 9 - STRATEGY AT THE LOCAL LEVEL &gt; Eynsham Woodstock Sub Area &gt; MAIN 166</td>
<td>I believe that the land Northeast of Hill Rise in Old Woodstock is not suitable for development and should not be included in the west Oxfordshire local plan. I have been an Old Woodstock resident for many years and have seen a massive increase in traffic on the main road the A44 and feel an added 120 houses who’s only exit is onto the A44 would massively congest this road further. We have no amenities in Old Woodstock and therefore all residents have to make trips into Woodstock for the school (which is full), doctors (which has a 2 week waiting list for an appointment) and shops and most will drive. As you are aware parking in Woodstock is almost impossible, to put more houses a drive away would create all sorts of problems with parking. Walking into town is already a risk due to vehicles parking on the footpath due to lack of spaces, anyone with small children or in a wheel chair take a huge gamble! The field in which the development is planned plays a vital role within the Woodstock community, it’s long been a tradition for people to meet up, walk their dogs, have a chat and watch their kids play within this field. It is not just a haven for people but also wildlife with the wildflowers running along the footpath’s and ancient hedgerows with masses of bird life and I feel this could all be lost with such a massive development, nearly</td>

<td>50% increase in households in Old Woodstock. I would like to add that this field has also been used by the air ambulance on more than one occasion to come to the aid of very serious road traffic accidents which have occurred on the strip of the A44. I am aware that housing is needed within West Oxfordshire but feel very strongly that this site is not appropriate and will cause huge problems for the local and wider community in regards to traffic, schooling, health care, pollution, and road safety. I believe that the land Northeast of Hill Rise is wholly unsuitable for development and therefore should not be included in the West Oxfordshire Local Plan, due to the following reasons: Amenities, Old Woodstock has no amenities to cope with an increase of housing to this level. We have no school, shops, library, dentist or surgery nothing but a playground which will be built on if this development goes ahead. So most people will have to go into Woodstock for shopping, doctors, schools etc. With this development being so far out of town it will force people to use their cars and as you are probably aware there is very limited parking within Woodstock so I’m unsure as to where all these extra cars will be able to park. If you can get people to leave their cars at home and walk into town then they will come across problems walking the A44, the pavement gets very narrow at points and hard to push a buggy or wheelchair through, in winter the steep slope up and down past the black prince pub are pretty lethal with ice. Jobs, there are no jobs in old Woodstock for an increase in the population making most people commute which in turn will add more pressure on the road system. Roads, we already have huge problems with the A44 which runs through the middle of Woodstock. pollution, heavy vehicles and congestion could all be worsened by this development. In the short term, lorries and work vehicles having to turn off the A44 to enter this new development could cause not only traffic jams and disruption but no doubt a number of accidents. In the long term, The A44 is a very busy road and we already see congestion at peak times. This particular stretch of the A44 has had four accidents in the last three years that I have witnessed and one of which needed the assistance of an air ambulance which landed in the field where the development is planned. All traffic from this development will only have the A44 as an entrance and exit which will cause huge tailbacks and bottlenecks going through Woodstock and on to Oxford. Schools, We have insufficient school places for old Woodstock, my own child didn’t get into the closest school (Woodstock c e primary) last year so an extra 120 houses would only add to this problem. Wotton primary school, the second closest school to this development is deemed an unsafe route for children to walk so again people will either have to put their children into cars or rely on the council to provide transport for them which will add pressure to the local council stretched funds. The countryside, The Field in which the development is planned is a very important part of Old Woodstock, it’s where our community comes together, we all watch the combine harvester in action each year, celebrate the Queen’s birthdays with big tea party’s and watch the kids in our community play on the football pitch, ride bikes around the field, bird watch and go on adventures in the Oxfordshire countryside. There is the Oxfordshire Way footpath running straight through the middle of the field, we all walk our dogs and children across this path, I can’t see how this will be kept in a new housing development? This field offers a place our children can enjoy the freedom to explore farmland and nature without the worries of a road anywhere near.</td>
<td></td>
</tr>
</tbody>
</table>
It may look like just a piece of arable land but this field is immensely important to everyone that lives around it and I do hope that we will be able to keep this beautiful green space that we all love so much.

I am writing to express some important reasons why the land Northeast of Hill Rise is unsuitable for houses development, and therefore should not be included in the West Oxfordshire Local Plan.

1. RECREATION FACILITIES

During the last few years, young families with small children have moved to live in Old Woodstock, where their children enjoy using the recreation facilities and the football pitch available in the land where the proposed development, if approved, will be built. This will be a very big lost and will deprive them of a safe, healthy and unpolluted open space.

2. INFRASTRUCTURE

At present, there is not any infrastructure in Old Woodstock. We are dependant of the already outgrown facilities in the Town Centre for shops, schools, surgery, church etc. which are accessible by walking, driving, cycling or using the S3 bus coming from Chipping Norton. However, the footpaths at both sides of the A44 road are narrow and dangerous, for both pedestrian and vehicular traffic - not to mention the various private cars parked along the A44 worsening the safety.

3. INCREASE OF TRAFFIC

The centre of Woodstock already suffers with parking problems. It is practically impossible to find a parking space. Many people use the roads and pavements in our estate as a car park now and the situation will worsen when the estate have to cope with 240+ additional cars.

4. ACCESS TO THE NEW DEVELOPMENT

Vermont Drive is a narrow busy road which at present can hardly cope with the existing levels of traffic, leave alone with the additional 240 cars (120 houses x 2 cars per household) that the new development will bring. It will be dangerous, impractical and irresponsible not only for the drivers but also for the elderly population that walk around the estate to keep healthy and enjoyed some fresh air.

5. SCHOOLS

Woodstock Primary School is already oversubscribe, therefore children have to attend schools in neighbouring villages by being taken by schools buses or private cars, which will put pressure on parents and traffic. The Marlborough School is situated almost 2 miles from the proposed site and the only access is via the A44 and town centre, thus worsening the already overcrowded main road at pick times for work and school.

6. SURGERY

The Woodstock Surgery is situated in the centre of town and is already overstretched as it not only serves to the residents of Woodstock but also inhabitants from the neighbouring villages. The premises are very small and there is no room to expand. A new surgery is urgently required. At present, we can only survive and cope thanks to the dedication, hard work and professionalism of our doctors.

I sincerely hope that after your careful consideration of the issues listed above, the Council reach to the

<td>S G Scott</td>
<td>-</td>
<td>Scott</td>
<td>1321</td>
<td>&gt; SECTION 9 - STRATEGY AT THE LOCAL LEVEL &gt; Eynsham Woodstock Sub Area &gt; MAIN 166</td>
<td>I write to suggest that the land bordered by Hill Rise and Vanbrugh Close in Old Woodstock should not be included in the West Oxfordshire Local Plan. The proposed site is remote from the town, and will make a compact, overcrowded area without proper links to the town and other infrastructure. The existing Barn Piece estate has 112 houses and the proposed new development would more than double that development making Old Woodstock an overdeveloped area taken together with Hill Rise and Manor Road (a further 170 existing houses). Old Woodstock has no infrastructure (no shops, no schools or doctors etc) and the proposed site access is approximately one mile from the town of Woodstock, accessed only by the already busy A44. Footpaths bordering the A44 between Old Woodstock and Woodstock Town are extremely narrow and pedestrian, including mothers with pushchairs often seem at risk at present from heavy vehicles and fast moving traffic. More pedestrian and vehicular traffic from the proposed new development would increase safety concerns considerably. (see photos). The primary school in the town is already over-subscribed and children from the new development would be unlikely to find places there, resulting in car journeys to other towns and villages. For older children, the Marlborough School is almost 2 miles from the proposed site approached only by the A44 and the Town Centre. there is no other route to local schools other than the busy A44 with heavy lorries and narrow pavements. These aspects alone - lack of infrastructure, limited safe access to the town and overcrowding of the area - make this site unsuitable for a development of this size, I believe. The proposed access to the new development via Vermont Drive is also the only access to the existing Barn Piece estate and a bus route and terminus. It is a residential road about 100 yards long and only 17 feet wide. The bus service is highly valued locally. There are 10 buses a day (8 on Sunday) which reverse at the junction with Rosamund Drive and wait in Vermont Drive for a few minutes each. At the time of bus visits, one way traffic is only possible in Vermont Drive and HGVs passing the bus have to use the pavement. Vans, lorries, coaches and cars often use the Rosamund Drive and Vermont Drive junction to reverse and turn back towards the town. At busy times, when residents are leaving for work or returning home, Vermont Drive and this junction already cannot cope with existing levels of traffic. Vermont Drive is too narrow to support both existing traffic and the extra traffic the proposed development would bring. The suggestion that another access to the proposed site could be made from the A44 north of Hill Rise, seems impractical. The A44 is too narrow to allow for right turning traffic in a 50mph limit and major alterations to Hill Rise would be necessary to arrange an opening from the very narrow service road there.</td>

<td>1322</td>
<td>The children’s play area at the end of Rosamund Drive, now intended for closure to give access to the new development, has a special significance for Old Woodstock residents and will be a tragic loss. In 2013 it was saved from closure when Blenheim Estates purchased the field, following strong local protest and newspaper coverage. It seems unlikely that the play area, together with its associated half-sized football pitch for children can be relocated in its present form within the new development so as to be as accessible and popular as it is now. Above all the new development would remove a piece of countryside with a town to town public footpath running through it, which has become important to all local people, particularly those with houses bordering the field. The footpaths along three sides of the field have been used by local families for decades, as shown by a recent Town Council survey identifying these as well used local paths familiar to local people of the present time and generations past. The loss of countryside to Old Woodstock would be significant and intrusive. The prospect of the loss of a well loved green field for overcrowded development seems tragic and unnecessary. More houses are needed but not just where someone is prepared to sell a green field, development only on carefully considered appropriate sites.</td>

<td>I am against the development behind Hill Rise because: 1. Woodstock is a unique, ancient, historical town and its unparalleled character should not be sacrificed. 2. It sites in a beautiful landscapeand that should be preserved. 3. There are other brownfield sites which should be used. 4. Some children born and bred in Woodstock cannot now even get a place in the primary school, meaning they must now be taken by car several miles to other schools. This just isn’t fair. More houses will mean more traffic to schools further away. 5. Parking in Woodstock is even worse than a year ago. Eventhe car park now is frequently full up so residents have to shop elsewhere. 6. Vermont Drive is far too narrow for the large increase in traffic which would result if the development goes ahead. It would utterly change its peaceful character for those already living here.</td>
<td></td>
</tr>
</tbody>
</table>

1. There are no shops, schools, surgeries in Old Woodstock so the residents have to go into Woodstock centre for their everyday needs. 2. There are no cycle tracks into the town centre and parts of the footpaths are so narrow (in some places less than 31” or 0.8m ) that to walk into the town is not a pleasant experience. 3. The road from Old Wood stock into the town centre is often very busy, with many huge vehicles. In places the road is so narrow that vehicles are too wide to keep to their side of the road. 4. It is often impossible to park in Wood stock, even in the car park. 5. The primary school is already turning away Wood stock children because there are no more places available. That is appalling. It means more cars going through the town centre to schools further away. We

| MM570         | Trevor Onions   | 1324       | > SECTION 9 - STRATEGY AT THE LOCAL LEVEL > Eynsham Woodstock Sub Area > MAIN 166 | 6. Vermont Drive is far too narrow for the considerable amount of traffic which would be involved and access would be over the play area which my brother was instrumental in having built there.  
7. There are plenty of brownfield sites in other areas which should be built on without using good agricultural land and destroying the lovely countryside round Woodstock.  
8. Woodstock is a unique historic town and should be protected. I think it is a serious mistake to think that its population can go on increasing, without destroying its very special character. |
| MM571         | G Sansom        | 1325       | > SECTION 9 - STRATEGY AT THE LOCAL LEVEL > Eynsham Woodstock Sub Area > MAIN 166 | I am really worried about the possibility of houses being built behind Hill Rise. Most people who would live there would be likely to go towards Oxford for work, so the traffic going through the town would be greatly increased. It would also be greater because both the primary and secondary schools are on another side of Woodstock.  
The pavement from Hill Rise to the town centre is very narrow in places, so a lot of parents are not happy for their children to walk to school.  
I notice that it has been said that there are good pedestrian cycling routes into Woodstock Town Centre. That is definitely not the case. The cycle route is mainly on the main road, in parts where the road is most narrow. Very few parents would want their children to cycle on the road.  
If more people move to the area, it will create an even greater problem for schooling. Already some children are unable to go to the infants school because there are no places. Ideally small children should be able to start school nearby, where they can make local friends and become part of the local community. If they have to go several miles to another school, friendships outside school become far more problematic, meaning much more travel further afield.  
Please don't spoil the character of Woodstock. Say NO to further development. |
| MM572         | Charlotte Guillain | 1326 | > SECTION 9 - STRATEGY AT THE LOCAL LEVEL > Eynsham Woodstock Sub Area > MAIN 166 | We were dismayed to learn that WODChas earmarked land north of Hill Rise in Old Woodstock for 120 new homes.  
There are no facilities in Old Woodstock - no shops, no schools, no health facilities. Anyone moving to new homes on this site will inevitably end up driving into Woodstock for their needs, where there are already huge parking problems. The only route into Woodstock town centre is along the A44, which is already becoming busier and busier. Residents only way of walking into town is along narrow footpaths that feel very unsafe when lorries thunder by. More traffic, caused by more households, would make the route even more congested and less safe for our children walking to school. |

<td>1327</td>
<td>&gt; SECTION 9 - STRATEGY AT THE LOCAL LEVEL &gt; Eynsham Woodstock Sub Area &gt; MAIN 166</td>
<td>In addition, there simply isn’t enough space in the schools or health centre for this many new households and this would also have a knock-on effect to neighbouring villages. One of our biggest concerns would be the loss of the play area in Old Woodstock. This is used by many local families and is a community hub for families to come together and get to know their neighbours. If this disappears it will fracture our community. The open countryside beyond the play area would also be lost. This is enjoyed by local people and visitors alike, with many people using the footpaths across the fields. We urge you to reconsider this site for such a large housing development. Together with other proposals for new houses in and around Woodstock, this would completely change the nature of our town and very possibly deter the many visitors from coming to our shops and businesses.</td>

Those living here know this to absolutely NOT be the case. Old Woodstock just can't take any more residential traffic, as well as at least a year of construction vehicles. Note incidents: van mounting pavement last year seriously injuring a teenager (head injuries), on Thursday 3rd November a Golf appeared to have been hit from the front opposite Hill Rise, with police in attendance. Also, police are regularly monitoring traffic speed exiting Woodstock, opposite Hill Rise. There are many reported incidents of HGVs regularly mounting the pavement on Manor Road. We are horrified by current conditions where we fear for our elderly, parents pushing buggies, teenagers and children.

Indeed, I have been informed that the narrowest part the road is only 5.5m wide and therefore not wide enough to accommodate two lorries (of legal maximum width) passing in opposite directions. Therefore it is not surprising that HGVs are mounting the pavement. Further to this A Road Safety Audit for ‘Woodstock Primary School Parents Group’ (Old Woodstock) stated in November 2010 that, ‘Only limited sections of the only viable route from Old Woodstock to the primary school are considered safe for accompanied children of primary school age. No section of the route is suitable for unaccompanied children of primary school age’. Therefore more traffic and HGV vehicles travelling through this road are going to make it even more dangerous.

Parking is dreadful in Woodstock already and would be made much worse as many residents will drive into Woodstock, due to distance and road conditions (please see point 4 below) being highly inappropriate for everyday safe pedestrian and cycle use. It could be argued that we have a bus service, but the reality is that I know very few people that use this service on a daily basis. Unless you have plenty of time in the day and a bus pass, this is not practical for many families to do on a regular basis. Many families need to travel into town up to several times a day and wouldn't have the time or the money to do so. I think it is important to consider what people actually do (and will continue to do) and not what they 'can' do. In reality I do not know of anyone who uses the bus on a regular daily basis to travel into Woodstock centre. This is the harsh reality local residents know all too well and not the case for other sites.

Old Woodstock already has a problem with schooling. There is already a crisis looming with children from Hill Rise not getting into Woodstock Primary School and Wootton doesn't have capacity. Any children living at the new development may have to travel (on A44) to Kidlington, Long Hanborough and Yarnton, thereby further exacerbating traffic problems.

It would be necessary to remove a valuable piece of countryside from Woodstock which would be intrusive and damaging for our community. An important, idyllic portion of the scenic walk to Wootton would effectively be destroyed. No carefully considered development would be able to avoid this repercussion. Views would be altered to far too great a degree.

Pollution levels on the A44 are already suspected to be over the levels permitted by the EU. Residents are in the process of trying to obtain more accurate levels.

The extremely strong Old Woodstock community would be destroyed. This has been built up over many years due to the vicinity of the open space, green walkway, play area, footpath. This would be destroyed if open space was taken away. Also for walkers, dog walkers, safe for children. Has been this way for 20-30 years.

We could lose the use of the play area and football pitch for at least a year, whilst construction takes place.

Children are already at risk having to travel to Woodstock for schooling and other amenities and would then have to travel for play. In addition, it is unlikely that any proposed new play area would be as safe and easy to

- **SECTION 9 - STRATEGY AT THE LOCAL LEVEL**

I believe that the land Northeast of Hill Rise is wholly unsuitable for development and therefore should not be included in the West Oxfordshire Local Plan, due to the following reasons:

1. **Old Woodstock has no infrastructure (shops, school, doctors etc) which means all residents have to travel into town on the busy A44 for everyday things. This is not the case for other sites in Woodstock.**

2. **Would cause significantly more traffic travelling the whole length of A44 through Woodstock, as there are 120 houses planned, increasing Old Woodstock by 50%. Residents are likely to travel to work and school: Oxford, Water Eaton to London, Secondary School, Primary School and also schools in North Oxford, Kidlington, Eynsham. This is not the case for other sites in Woodstock.**

3. **Existing parking problems in Woodstock would be made much worse as many residents will drive into Woodstock, due to distance and road conditions (please see point 4 below) being highly inappropriate for everyday safe pedestrian and cycle use. This is the harsh reality local residents know all too well and not the case for other sites.**

4. **Would worsen already serious safety concerns of the A44 which has extremely narrow pavements and very fast traffic. The documents proposing the site states that it has, 'effective pedestrian and cycle links to the centre of Woodstock'. Those living here know this to absolutely NOT be the case. Old Woodstock just can't take any more residential traffic, as well as at least a year of construction vehicles. Note incidents: van mounting pavement last year seriously injuring a teenager (head injuries), on Thursday 3rd November a Golf appeared to have been hit from the front opposite Hill Rise, with police in attendance. Also, police are regularly monitoring traffic speed exiting Woodstock, opposite Hill Rise. There any many reported incidents of HGVs regularly mounting the pavement on Manor Road. We are horrified by current conditions where we fear for our elderly, parents pushing buggies, teenagers and children.**

5. **Old Woodstock already has a problem with schooling. Currently at capacity with Hill Rise children not getting in. Could go to 2 year intake = only 105 more places. 670 more homes = 200-300 primary children. Also, Hill Rise and any new development would be the last to get a place, so may have to travel (on A44) to Kidlington, Long Hanborough and Yarnton, thereby further exacerbating traffic concerns.**

6. **Pollution levels on the A44 are already suspected to be over the levels permitted by the EU. Residents are in the process of trying to obtain more accurate levels.**

7. **We could lose the use of the play area and football pitch for at least a year, whilst construction takes place. Children are already at risk having to travel to Woodstock for schooling and other amenities and would then have to travel for play, in addition, it is unlikely that any proposed new play area would be as safe and easy to access for our children as the current site, not to mention whether it would include a half-sized football pitch which is currently in constant use by many members of Old Woodstock and greater Woodstock community.**
Removing a valuable piece of countryside from Woodstock would be intrusive and damaging for our community. An important, idyllic portion of the scenic walk to Wootton would effectively be destroyed. No carefully considered development would be able to avoid this repercussion. Views would be altered to far too great a degree.

Very strong Old Woodstock community would be destroyed. This has been built up over many years due to the vicinity of the open space, green walkway, play area, footpath. This would be destroyed if open space was taken away. Also for walkers, dog walkers, safe for children. Has been this way for 20-30 years.

Vermont drive is too narrow to support new and existing traffic.

In summary, the small historic town of Woodstock and in particular Old Woodstock, is already suffering with the recent housing development undertaken. Its infrastructure is extremely strained and on so many levels it cannot take any more development. I urge you to consider the issues listed above, which illustrate how the site to the Northeast of Hill Rise is extremely unsuitable for development.

We would add that (point 4) walking down the hill and up again (the Black Prince pub on the left) into Woodstock, we often feel currently we are taking our lives in our hands, particularly when taking small grandchildren with us. The paths are too narrow with no grass verge between us and very fast moving traffic, often travelling in excess of 50 miles per hour (30 mph limit) currently. This situation would become much much worse and life threatening.

I believe that the land Northeast of Hill Rise is wholly unsuitable for development and therefore should not be included in the West Oxfordshire Local Plan, due to the following reasons:

Old Woodstock has no infrastructure (shops, school, doctors etc) which means all residents have to travel into town on the busy A44 for everyday things. This is not the case for other sites in Woodstock.

Would cause significantly more traffic travelling the whole length of A44 through Woodstock, as there are 120 houses planned, increasing Old Woodstock by 50%. Residents are likely to travel to work and school: Oxford, Water Eaton to London, Secondary School, Primary School and also schools in North Oxford, Kidlington, Eynsham. This is not the case for other sites in Woodstock.

Existing parking problems in Woodstock would be made much worse as many residents will drive into Woodstock, due to distance and road conditions (please see point 4 below) being highly inappropriate for everyday safe pedestrian and cycle use. This is the harsh reality local residents know all too well and not the case for other sites.

Would worsen already serious safety concerns of the A44 which has extremely narrow pavements and very fast traffic. The documents proposing the site states that it has, 'effective pedestrian and cycle links to the centre of Woodstock'. Those living here know this to absolutely NOT be the case. Old Woodstock already has a problem with schooling—Currently at capacity with Hill Rise children not getting in. Could go to 2 year intake = only 105 more places. 670 more homes = 200-300 primary children. Also, Hill Rise and any new development would be the last to get a place, so may have to travel (on A44) to Kidlington, Long Hanborough and Yarnton, thereby further exacerbating traffic concerns.

Pollution levels on the A44 are already suspected to be over the levels permitted by the EU. Residents are in the process of trying to obtain more accurate levels.

We could lose the use of the play area and football pitch for at least a year, whilst construction takes place. Children are already at risk having to travel to Woodstock for schooling and other amenities and would then have to travel for play, in addition. It is unlikely that any proposed new play area would be as safe and easy to access for our children as the current site, not to mention whether it would include a half-sized football pitch which is currently in constant use by many members of Old Woodstock and greater Woodstock community.

Removing a valuable piece of countryside from Woodstock would be intrusive and damaging for our community. An important, idyllic portion of the scenic walk to Wootton would effectively be destroyed. No carefully considered development would be able to avoid this repercussion. Views would be altered to far too great a degree.

Very strong Old Woodstock community would be destroyed. This has been built up over many years due to the vicinity of the open space, green walkway, play area, footpath. This would be destroyed if open space was taken away. Also for walkers, dog walkers, safe for children. Has been this way for 20-30 years.

Vermont drive is too narrow to support new and existing traffic.

In summary, the small historic town of Woodstock and in particular Old Woodstock, is already suffering with the recent housing development undertaken. Its infrastructure is extremely strained and on so many levels it cannot take any more development. I urge you to consider the issues listed above, which illustrate how the site to the Northeast of Hill Rise is extremely unsuitable for development.

I believe that the land Northeast of Hill Rise is wholly unsuitable for development and therefore should not be included in the West Oxfordshire Local Plan, due to the following reasons:

Old Woodstock has no infrastructure (shops, school, doctors etc) which means all residents have to travel into town on the busy A44 for everyday things. This is not the case for other sites in Woodstock.

Would cause significantly more traffic travelling the whole length of A44 through Woodstock, as there are 120 houses planned, increasing Old Woodstock by 50%. Residents are likely to travel to work and school: Oxford, Water Eaton to London, Secondary School, Primary School and also schools in North Oxford, Kidlington, Eynsham. This is not the case for other sites in Woodstock.

Existing parking problems in Woodstock would be made much worse as many residents will drive into Woodstock, due to distance and road conditions (please see point 4 below) being highly inappropriate for...
everyday safe pedestrian and cycle use. This is the harsh reality local residents know all too well and not the case for other sites.

Would worsen already serious safety concerns of the A44 which has extremely narrow pavements and very fast traffic. The documents proposing the site states that it has, ‘effective pedestrian and cycle links to the centre of Woodstock’. Those living here know this to absolutely NOT be the case. Old Woodstock just can’t take any more residential traffic, as well as at least a year of construction vehicles. Note incidents: van mounting pavement last year seriously injuring a teenager (head injuries), on Thursday 3rd November a Golf appeared to have been hit from the front opposite Hill Rise, with police in attendance. Also, police are regularly monitoring traffic speed exiting Woodstock, opposite Hill Rise. There any many reported incidents of HGVs regularly mounting the pavement on Manor Road. We are horrified by current conditions where we fear for our elderly, parents pushing buggies, teenagers and children.

Old Woodstock already has a problem with schooling- Currently at capacity with Hill Rise children not getting in. Could go to 2 year intake = only 305 more places. 670 more homes = 200-300 primary children. Also, Hill Rise and any new development would be the last to get a place, so may have to travel (on A44) to Kidlington, Long Hanborough and Yarnton, thereby further exacerbating traffic concerns.

Vermont drive is too narrow to support new and existing traffic.

In summary, the small historic town of Woodstock and in particular Old Woodstock, is already suffering with the recent housing development undertaken. Its infrastructure is extremely strained and on so many levels it cannot take any more development. I urge you to consider the issues listed above, which illustrate how the site to the Northeast of Hill Rise is extremely unsuitable for development.

The beautiful town of Woodstock is already straining under the huge numbers of cars, coaches, work vans all competing for space. Building more houses will just add to the problem. Businesses in the town are struggling due to people's inability to park. As this problem gets worse, no-one will try and set up new businesses in the town. We shall become a huge, modern housing estate with a few ancient, redundant buildings in the centre.

I believe that the land Northeast of Hill Rise is wholly unsuitable for development and therefore should not be included in the West Oxfordshire Local Plan, due to the following reasons:

Old Woodstock has no infrastructure (shops, school, doctors etc) which means all residents have to travel into town on the busy A44 for everyday things. This is not the case for other sites in Woodstock.

Would cause significantly more traffic travelling the whole length of A44 through Woodstock, as there are 120 houses planned, increasing Old Woodstock by 50%. I urge you to consider the issues listed above, which illustrate how the site to the Northeast of Hill Rise is extremely unsuitable for development.

I believe that the land Northeast of Hill Rise is wholly unsuitable for development and therefore should not be included in the West Oxfordshire Local Plan. Woodstock needs to plan very carefully on where to build new houses without ruining the town. To choose this field as a place to build 120 houses would be a huge mistake on so many levels.

Old Woodstock has no infrastructure (shops, school, doctors etc) which means all residents have to travel into town on the busy A44 for everyday things. The traffic increase driving through town towards Oxford would put strain on an already busy road.

Existing parking problems in Woodstock would be made much worse as many residents will drive into Woodstock, due to distance and road conditions being highly inappropriate for everyday safe pedestrian and cycle use.

Would worsen already serious safety concerns of the A44 which has extremely narrow pavements and very fast traffic.

Old Woodstock already has a problem with schooling - Currently at capacity with Hill Rise children not getting in. Where would all the extra children go, Woodstock School is only small.

Pollution levels on the A44 are already suspected to be over the levels permitted by the EU. Residents are in the process of trying to obtain more accurate levels.

We could lose the use of the play area and football pitch. Children are already at risk having to travel to Woodstock for schooling and other amenities and would then have to travel for play. In addition, it is unlikely that any proposed new play area would be as safe and easy to access for our children as the current site, not to mention whether it would include a half-sized football pitch which is currently in constant use by many members of Old Woodstock and greater Woodstock community.

Removing a valuable piece of countryside from Woodstock would be intrusive and damaging for our community. An important, idyllic portion of the scenic walk to Wootten School would effectively be destroyed. The footpath runs right through the middle of the field. Views would be altered to far too great a degree and I think Blenheim Palace would be visible from houses built in the field. It’s a world heritage site, I’m not sure that’s in keeping with the status?

Very strong Old Woodstock community would be destroyed. This has been built up over many years due to the vicinity of the open space, green walkway, play area, footpath. This would be destroyed if open space was taken away. Also for walkers, dog walkers, safe for children. Has been this way for 20-30 years.

Vermont drive is too narrow to support new and existing traffic, let alone construction vehicles.

Woodstock’s amenities are already at bursting point, the doctors has a two week waiting list and the primary school is at maximum attendance. Without very careful consideration and town planning Woodstock cannot take any more houses and in particular Old Woodstock.

I urge you to consider the issues listed above, which illustrate how the site to the Northeast of Hill Rise is extremely unsuitable for development. |

| MM587         |                         | Maurice Allen   | -                | Allen             | 1358       | > SECTION 9 - STRATEGY AT THE LOCAL LEVEL > Eynsham Woodstock Sub Area > MAIN 166 | I believe that the land Northeast of Hill Rise is wholly unsuitable for development and therefore should not be included in the West Oxfordshire Local Plan, due to the following reasons:

Old Woodstock has no infrastructure (shops, school, doctors etc) which means all residents have to travel into town on the busy A44 for everyday things. This is not the case for other sites in Woodstock.

Would cause significantly more traffic travelling the whole length of A44 through Woodstock, as there are 120 houses planned, increasing Old Woodstock by 50%. Residents are likely to travel to work and school: Oxford, Water Eaton to London, Secondary School, Primary School and also schools in North Oxford, Kidlington, Eynsham. This is not the case for other sites in Woodstock.

Existing parking problems in Woodstock would be made much worse as many residents will drive into Woodstock, due to distance and road conditions (please see point 4 below) being highly inappropriate for everyday safe pedestrian and cycle use. This is the harsh reality local residents know all too well and not the case for other sites.

Would worsen already serious safety concerns of the A44 which has extremely narrow pavements and very fast traffic. The documents proposing the site states that it has, ‘effective pedestrian and cycle links to the centre of Woodstock’. Those living here know this to absolutely not be the case. Old Woodstock just can’t take any more residential traffic, as well as at least a year of construction vehicles. Note incidents: van mounting pavement last year seriously injuring a teenager (head injuries), on Thursday 3rd November a Golf appeared to have been hit from the front opposite Hill Rise, with police in attendance. Also, police are regularly monitoring traffic speed exiting Woodstock, opposite Hill Rise. There any many reported incidents of HGVs regularly mounting the pavement on Manor Road. We are horrified by current conditions where we fear for our elderly, parents pushing buggies, teenagers and children.

Old Woodstock already has a problem with schooling. Currently at capacity with Hill Rise children not getting in, could go to 2 year intake = only 105 more places. 670 more homes = 200-300 primary children. Also, Hill Rise and any new development would be the last to get a place, so may have to travel (on A44) to Kidlington, Long Hanborough and Yarnton, thereby further exacerbating traffic concerns.

Pollution levels on the A44 are already suspected to be over the levels permitted by the EU. Residents are in the process of trying to obtain more accurate levels.

We could lose the use of the play area and football pitch for at the least a year, whilst construction takes place. Children are already at risk having to travel to Woodstock for schooling and other amenities and would then have to travel for play, in addition, it is unlikely that any proposed new play area would be as safe and easy to access for our children as the current site, not to mention whether it would include a half-sized football pitch which is currently in constant use by many members of Old Woodstock and greater Woodstock community.

Removing a valuable piece of countryside from Woodstock would be intrusive and damaging for our community. An important, idyllic portion of the scenic walk to Woottton would effectively be destroyed. No carefully considered development would be able to avoid this repercussion. Views would be altered to far too great a degree.

Very strong Old Woodstock community would be destroyed. This has been built up over many years due to the vicinity of the open space, green walkway, play area, footpath. This would be destroyed if open space was taken away. Also for walkers, dog walkers, safe for children. Has been this way for 20-30 years. |
Vermont drive is too narrow to support new and existing traffic.

In summary, the small historic town of Woodstock and in particular Old Woodstock, is already suffering with the recent housing development undertaken. Its infrastructure is extremely strained and on so many levels it cannot take any more development. I urge you to consider the issues listed above, which illustrate how the site to the Northeast of Hill Rise is extremely unsuitable for development.

I believe that the land Northeast of Hill Rise is wholly unsuitable for development and therefore should not be included in the West Oxfordshire Local Plan, due to the following reasons:

Old Woodstock has no infrastructure (shops, school, doctors etc) which means all residents have to travel into town on the busy A44 for everyday things. This is not the case for other sites in Woodstock.

Would cause significantly more traffic travelling the whole length of A44 through Woodstock, as there are 120 houses planned, increasing Old Woodstock by 50%. Residents are likely to travel to work and school: Oxford, Water Eaton to London, Secondary School, Primary School and also schools in North Oxford, Kidlington, Eynsham. This is not the case for other sites in Woodstock.

Existing parking problems in Woodstock would be made much worse as many residents will drive into Woodstock, due to distance and road conditions (please see point 4 below) being highly inappropriate for everyday safe pedestrian and cycle use. This is the harsh reality local residents know all too well and not the case for other sites.

Would worsen already serious safety concerns of the A44 which has extremely narrow pavements and very fast traffic. The documents proposing the site states that it has, 'effective pedestrian and cycle links to the centre of Woodstock'. Those living here know this to absolutely NOT be the case. Old Woodstock just can't take any more residential traffic, as well as at least a year of construction vehicles. Note incidents: van mounting pavement last year seriously injuring a teenager (head injuries), on Thursday 3rd November a Golf appeared to have been hit from the front opposite Hill Rise, with police in attendance. Also, police are regularly monitoring traffic speed exiting Woodstock, opposite Hill Rise. There are many reported incidents of HGVs regularly mounting the pavement on Manor Road. We are horrified by current conditions where we fear for our elderly, parents pushing buggies, teenagers and children.

Old Woodstock already has a problem with schooling- Currently at capacity with Hill Rise children not getting in. Could go to 2 year intake - only 105 more places. 670 more homes = 200-300 primary children. Also, Hill Rise and any new development would be the last to get a place, so may have to travel (on A44) to Kidlington, Long Hanborough and Yarnton, thereby further exacerbating traffic concerns.

Pollution levels on the A44 are already suspected to be over the levels permitted by the EU. Residents are in the process of trying to obtain more accurate levels.

We could lose the use of the play area and football pitch for at least a year, whilst construction takes place. Children are already at risk having to travel to Woodstock for schooling and other amenities and would then have to travel for play, in addition, it is unlikely that any proposed new play area would be as safe and easy to access for our children as the current site, not to mention whether it would include a half-sized football pitch which is currently in constant use by many members of Old Woodstock and greater Woodstock community.

Removing a valuable piece of countryside from Woodstock would be intrusive and damaging for our...
community. An important, idyllic portion of the scenic walk to Woottton would effectively be destroyed. No carefully considered development would be able to avoid this repercussion. Views would be altered to far too great a degree.

Very strong Old Woodstock community would be destroyed. This has been built up over many years due to the vicinity of the open space, green walkway, play area, footpath. This would be destroyed if open space was taken away. Also for walkers, dog walkers, safe for children. Has been this way for 20-30 years.

Vermont drive is too narrow to support new and existing traffic.

In summary, the small historic town of Woodstock and in particular Old Woodstock, is already suffering with the recent housing development undertaken. Its infrastructure is extremely strained and on so many levels it cannot take any more development. I urge you to consider the issues listed above, which illustrate how the site to the Northeast of Hill Rise is extremely unsuitable for development.

I would also like to add the following:

I have lived in Old Woodstock for nearly 30 years and having taken grandchildren to and from town in pushchairs using the A44 I know how nerve-wracking it can be. In places the pavement and road are so narrow that when wide vehicles pass one another they are only inches from pedestrians. Plus I have noticed in recent years more cars are parking on the footpaths causing people with pushchairs or using wheelchairs are having to step into the busy road to get around them. More people using this very busy route will increase the likelihood of accidents.

The land Northeast of Hill Rise in my view is unsuitable for development and therefore should not be included in the West Oxfordshire Local Plan, due to the following reasons:

Old Woodstock has no infrastructure (shops, school, doctors etc) which means all residents have to travel into town on the busy A44 for everyday things. This is not the case for other sites in Woodstock.

Would worsen already serious safety concerns of the A44 which has extremely narrow pavements and a regular route for large vehicles. The documents proposing the site states that it has, ‘effective pedestrian and cycle links to the centre of Woodstock’. Those living here know this NOT to be the case. Note incidents: van mounting pavement last year seriously injuring a teenager (head injuries), on Thursday 3rd November a Golf appeared to have been hit from the front opposite Hill Rise, with police in attendance. There any many reported incidents of HGVs regularly mounting the pavement on Manor Road. Fear for the elderly, parents pushing buggies, teenagers and children.

Would cause significantly more traffic travelling the whole length of A44 through Woodstock, increasing Old Woodstock by 50%. Residents are likely to travel to work and school having to go through the town. This is not the case for other sites in Woodstock.

Old Woodstock schooling & medical centre - Currently at capacity with Hill Rise children not getting in. Also, Hill Rise and any new development would be the last to get a place, so may have to travel (on A44) to Kidlington, Long Hanborough and Yarnton, further increasing traffic concerns. Similar capacity concerns for the medical centre.

Existing parking problems in Woodstock would be made much worse as many residents will drive into Woodstock, due to distance and road conditions (please see point 2). This is not the case for other sites in Woodstock.

<td></td>
<td></td>
<td></td>
<td></td>
<td>1. The infrastructure of Woodstock as a compact, unique and historic town cannot take evermore residential development.</td>
</tr>
</tbody>
</table>
2. In Old Woodstock there are no facilities such as shops, schools, doctors’ surgeries etc.

3. Most people living in Old Woodstock have to use the A44 towards Oxford and the road is hazardous with very narrow pavements, a road which is narrow, hilly and bendy.

4. The A44 is busy enough at the moment and we don’t want any more pollution.

5. Parking in Woodstock is becoming more and more impossible. Even the car park is often absolutely full. Parking is taking place on pavements between Hoggrove Hill and Upper Brook Hill making it difficult to get past with pushchairs.

6. I don’t think we should be building on agricultural land, spoiling the lovely views of the countryside and over a well used path to Wootton. We should build on brownfield sites.

I am trying to remain pragmatic but writing to you in the depths of sadness and probably early stages of depression over the prospects for our historic and natural environment in Woodstock if proposals to build 670 unwanted houses is permitted.

Is the Inspectors call for sites SHELAA methodology and the Councils strategic housing target a sound strategy? Haven’t the WODC been working tirelessly and logically on the Local Plan over many years to come to the conclusions that formulate the 2015 Local Plan? Was a similar plan submitted in 2013 not rejected? It does not surprise me that all three sites offered in Woodstock are owned by the Blenheim Estate and it is extremely worrying that this SHELAA process has no public consultation or Environmental Impact Assessment before delivery.

The key reason for revising the draft local plan is that Oxford City Council are unable to provide sufficient land for future housing in order to meet the government quota up to How can it possibly meet strategic and sustainable development criteria if Oxford overspill residents are forced to travel 12 miles into Oxford and spend at least an hour in a car, on a bus, or combination of both? Wouldn’t it be preferable to put employment and housing closer to allow people to walk or bike to work? It already takes an hour to travel to Abingdon from Woodstock. I have no doubt that traffic levels are increasing year on year. Commuters are traveling further and starting their bus and car journeys earlier and earlier just to hold down a job and levels of noise; carbon monoxide; and speeding vehicles are already damaging the character of the town and making living along the A44 Manor Road intolerable.

With a strong populist reaction to the government over Brexit I am certainly questioning the whole ‘top down’ soviet planning target system just as much as the lack of direction and sense of responsibility taken by our Woodstock Town Council in not buying into the ‘Community Plan Process’ until too late (the Vision for Woodstock 2050 now sounds a little over ambitious). The Local Plan is set to condemn us to today’s statistical assessments and today’s political prejudices until 2031!

We are told one thing about the exciting prospect of local governance and the opportunity for local communities to determine their own planning issues and then hear and witness all number of arguments to reduce public spending and services and now we get the SHELAA process. SHELAA puts a gun to our heads and provides an opportunity for fat cat commercial exploitation in place of local authority planning and strategic decision making. What happened to the joined up thinking movement? The Big Idea and Big Society Agenda? The Localism agenda? And now with the revolver at our heads where is the debate, where is the local representation here other than pleading foul to you?
A golden opportunity is being squandered in not providing and delivering a Woodstock, or even an Old Wood stock scale Local Community plan to establish positive economic and sustainable solutions, positive rather than a negative strategies rather than a now conditioned rejection and dismissive attitude towards any sort of development per se? Where are we on even simple local issues like a new surgery, school and local sports pitch provision, the traffic and safety conflicts at the school gates, the lack of parking for our new even more expensive co-op, the crazy 2 way traffic flow in the town centre that makes sitting in the warm more attractive with every circuit and makes shopping less attractive and spending less likely ... nothing gets done!

We are removing the development of strategic environmental planning and design guides to ensure local distinctiveness and we are offered what a Community Infrastructure Levy (CIL). Cynically, a never to be fulfilled bribe, designed to make up, compensate or plaster over the years and years of lack of investment in roads, schools and local health facilities. To help us turn right at the new roundabout and soften the imposition of our new neighbours at the end of the garden where there were previously unrestricted views across to Brill. Brill in Buckinghamshire across the Glyme Valley where they have a very informative Historic Towns Assessment?

Over the past 30 years I have witnessed an increase in through-traffic, the consistent erosion of Open Space, loss of sports faculties, loss of informal recreation access and an overburdened local surgery. The increase in buy to let and rented short term living and long distance commuting has contributed loss in community spirit and a disillusioning disconnect between the town and the Blenheim Estate. How on earth will another 670 houses and doubling the population improve existing local resident’s lives? The Blenheim Estate hosts larger and seemingly more numerous events. Officially the Palace has 525, 000 annual visitors (The Guardian 2010) and the town and residents are subjected to all sorts of temporary traffic constrictions that make accessing Heathrow Airport seem like a breeze. This historic town is creaking under this pressure of cars and lorries and the 900 vehicles an hour that come through every hour. The buildings on Manor Road are crumbling and blackening under the pollution and must be hell to live in when articulated lorries rattle the lampshades at 3:30am! Motor bikes at full throttle come through at 5:30 just as you get back to sleep! Manor Road is starting to look less chocolate box and more like the North Circular Road.

This is a Market town with a high level of International tourism, yet it has struggled to keep its shops. There are obviously many more ways and places to spend your money but I believe the inconvenience in parking in the town doesn’t help. Wood stock town centre is quite honestly in need of a public realm up-lift if it is truly to represent ‘the gateway to the Cotswolds’ and stage a World Heritage Site.

Local scale determination in line with ‘The Coalitions’ proposed planning revolution. The Woodstock Local Plan should already be in place and should have involved the whole community by gathering the views and opinions of as many groups and organisations in the community as possible. There is some retro fitting necessary in Historic Woodstock but in a ‘so called’ civilised and economically savvy society such as ours why do we not start with infrastructure first. Instead we see piecemeal opportunism that caters for and fails to reflect the specific needs of both future and existing communities. Planned infrastructure and public transport capability of absorbing more people and vehicle movements.

The Local Plan states:
‘Development will not be permitted unless appropriate supporting transport, service and community infrastructure is available or will be provided and appropriate provision has been made to safeguard the local environment.’ "The County strategy of directing growth away from Oxford and Central Oxfordshire has over the last two decades placed severe pressures on the infrastructure of the district. Parts of the road system are inadequate and congested with resultant damage to the quality of the local environment. Provision for
pedestrians, cyclists and users of public transport is often poor, and existing educational, community and leisure facilities district-wide are becoming increasingly strained’.

Far from Woodstock fulfilling the aims of the WODC2011 Local Plan it clearly now fails in the aim to protect and improve the town centre in terms of its appearance and the range of services it provides. The ambience and look of the Town is being damaged by traffic congestion, noise and pollution issues. The condition of the streets and buildings is a major concern. Woodstock Town centre should underpin the economic well-being of their town, act as an accessible locations by all means of transport, and function as the cultural and social focus for the town and surrounding area.

So why is there no investment in public realm within the town and continued management of this resource? We are seeing a downward spiral in shop failures and the opening of charity shops and cafes. All leading to a poor image of the town which in turn drives away more businesses and customers. This conflicts with the aim to prevent any loss of vitality and viability in order to protect the important role of our town centre.

How is building over 670 houses 8 miles out of the city going to improve the road congestion and time wasted in traveling around and avoiding the local road network for local people? Why are we locked into this compulsion to buy and consume more countryside, build poor quality housing with built in obsolescence, destroying our environment and generating more rubbish that needs to be disposed of?

If I understand the situation correctly, the withdrawal of the 2015 Local Plan has opened a window of opportunity for increasing WOO housing allocation by 50%. There seems no logic in this figure what’s so ever? Much of this is attributed to the in ability of Oxford City to meet their quota. How makes up the OGB? Should this not be OMG? Why should the rest of the county cover for the housing needs of Oxford? Totally illogical thinking! For my part, if I worked in Oxford it would be more desirable to live in the Wonderful City and walk to work, rather than drive to the park and ride and get on a bus for 3 hours every day? There are over 50,000 students resident and attending Oxford Universities. The answer to solving the housing problems of Oxford is to force and assist the Universities to build their own accommodation and free up the family housing. Enable younger working people to live and work within the City providing desirable, affordable and aspirational accommodation in Oxford at the centre or integrated around the commercial district.

The phrase current government planning guidance requires the WODC to assess the potential suitability for development of sites submitted by landowners should read ‘we are all going to tear up years of Planning Strategy, years of local planning considered and organic thinking in favour of allowing landowners and developers to do the job for us? Throw out the plans of intelligent, qualified and experienced individuals. Throw the country’s green belts and rural communities into the hands of the self-interested and commercial’. How with everything going on in the world are our local administrators so out of touch with public emotion?

The qualities that give our historic towns and cities their distinctiveness and attractiveness also give them a high commercial value to landowners and developers. In Oxford and Woodstock we have historic buildings, woodland, parks and open common land. Obviously there is an appeal to move here from aspirational people and are frequently proposed as sites for “prestigious” developments. City-centre projects are dwarfed by “green field fringe” developments on land with cheaper land values around the edges. Towns such as Oxford and Woodstock are expanding because they are pleasant places in which to live, as well as breeding grounds for hi-tech industries. The existing transport links such as the A44; A40 and A34 are some of the worst roads in the country, and they are getting worse. Any further increase in Woodstock’s population will lead to infrastructure overload, the desecration of Wood stock and Oxford city centres and a steady degradation of the environment and the public realm through Wood stock, Summertown and along the Woodstock Road.
Now great swathes of the rural green belt have been converted into development land to advance these growth plans: in a more permissive planning climate, its continued erosion will be even harder to resist.

SSSI- Natural England have highlighted the Site as a ‘High Priority Wildlife Package Area’. There will be an obligation to assess the application for its likely impact on the SSSI and the LPA should consult Natural England’s Magic Web site. Currently as I would like to think we are a democratic country, The Blenheim Palace wall mysteriously dictates the boundary of our nationally identified designated Site of Social and Scientific Interest (SSSI). Hope the birds and animals have read this or seen the website and respect the 50m from the Estate wall, boundary to the designated World Heritage Site, and SSSI designation situated on the top of the high Cotswold plateau and the Glyme valley slope. And I am sure it’s safer to be on the outside of the wall when they get gun happy over there! The core centre of the SSSI is the sheep dip at The Black Prince Causeway. This is 500 m from the Site but is only part of a natural continuation of the water meadows, Glyme River Valley and Valley catchment area.

Any further housing development along the Glyme Valley will impact on the SSSI and on the natural Glyme Valley Environment. Ironically there will also be a negative impact on the wildlife and biodiversity moving across the A44 and in and out of the Estate.

We have frequent visits to the garden and above from: Barn and Tawny Owls; Deer and monk jack; Badgers and Foxes; Red Kite; Buzzards; Kestrels; Sparrow Hawks and all feed in the field. Herron; Green and Lesser Spotted, Green and Great Spotted Woodpeckers; Lapwing and Skylarks nest in the field; Song thrush, Mistal Thrush and Blackbirds frequent the garden as do Coal, Long-tail, Blue and Great Tits; Field Fare. Redwing are winter visitors to the apple tree. Swifts, Swallows and House Martins forage over the field through the summer. Crows; Jackdaw and Magpie together with Pheasants and Partridge and Woodpigeon are common in the field. Toads and Hedgehogs are garden visitors. The RSPB have given their expert knowledge and designated the Glyme Valley as flood plain grazing marsh habitat. There are over 44 wintering birds recorded.

Nature Conservation and Biodiversity - the law has never been generally effective in giving adequate support to Nature Conservation. Ecologists and Planners are under ridiculous pressure. But, planning guidance on Nature Conservation makes it clear that Nature Conservation Should be a material consideration in planning a new development.

Historic Landscape - there is the potential to lose a valuable part of our local landscape and history. The field is part of a wider open Cotswold landscape that links Wootton with Woodstock. The field is adjacent to the palace walls built to retain the medieval deer park hunting grounds. The setting of the Park and the surrounding countryside are integral to Capability Brown’s late 18 Century Romantic Landscape Design but in many ways represent a far older untouched Agricultural landscape. There are clear indications of historic routes between Wootton and Wood stock and it is suggested from authoritative source that the Public Right of Way is the route of religious trail linking parish churches. Numerous views were planned to look into and out of the park. The wider landscape is more indicative of the medieval royal hunting park of Henry 1 (1100-1135). A full Archaeological Assessment should be undertaken. There is clear indication of Victorian tip in the eastern corner of the site and Roman and Anglo Saxon ditches either side of the site suggest it has massive archaeological potential.

Landscape Value - this Site is typical of a Cotswold Landscape and is on the edge of a conservation area. There are many nationally important estates bordering the site.

In many ways the ancient and natural Glyme Valley landscape with its valley side water-shed catchment sits within the 18 Century modified North Oxfordshire Estate landscape and must be preserved to offer both a natural and biodiverse environment and a visual contract in agricultural landscape.

Once destroyed and buried under brick this more natural Cotswold limestone transition of agricultural linking Woodstock to the broader rural countryside and linking up with the Oxfordshire Estates can never be replaced. There should be an independent Environmental Assessment and landscape Character Assessment to preserve the Rural Cotswold landscape and establish a cohesive and sustainable long term the cohesive planning vision. The Natural Environment is NOT A SUBJECTIVE ISSUE. The preservation of our wildlife and the promotion of sustainable development is imperative for the benefit of future generations.

Enough is enough. There is no more justification in preserving Port Meadow and Marston Common than there is in preserving the Glyme Valley. Population projections are too much of an oversized hammer to older historical environments such as Oxford and Woodstock.

To sum up: There should be no further residential development in Woodstock since it has met its housing quota and as a long-time resident of Old Woodstock, it is my opinion that the Draft Local Plan for 2031 should not show farmland North of Hill Rise as suitable for future development.

The field is not suitable for development for the following reasons:

* Old Woodstock has no shops!!
* Shops in Woodstock are failing. Woodstock is not a well-functioning sustainable shopping environment and infrastructure is being damaged because of traffic.
* Old Woodstock has no infrastructure (shops, school, doctors etc.)
* Older residents are compelled to drive into Woodstock where there is no parking!!
* Woodstock's schools are already over-subscribed and traffic levels around Hensington Road and Shipton Road are already dangerous for school children.
* The volume of traffic using the A44 is very high. Building an additional 120 houses behind Hill Rise will increase not help manage the pollution concerns or accident risk. The number of cars and the cumulative increase in accidents and congestion on the section of A44 adjacent to Hill Rise is clear to see.
* There are safety concerns about the A44 which has extremely narrow pedestrian pavements. There was a recent incident where a van mounted the pavement and seriously injured a pedestrian. It would not be possible to improve cycle and pedestrian links.
* Pollution levels are already unacceptable.
* Access for 200+ more cars onto the high speed A44 north of Hill Rise is blind and dangerous and a link to Vermont Drive would be impossible. It already takes 10 minutes to get out of Vermont Drive and Hill Rise in the rush hour!
* The proposed site will not provide safe and suitable access or exit points for vehicles, pedestrians and cyclists. Old Woodstock is an ancient town. The A44 is incredibly narrow in places and is straining with the current volume of use. We have counted 900 vehicles per/hr for 3 hours every morning and 3 hours every night. At peak times 6 articulated lorries every 10 minutes.
* The land behind Hill Rise has been agricultural for decades and forms the valley side to the River Glyme Valley. The proposed development will adversely affect the wildlife biodiversity habitats which are well established. We are privileged to see bats in our garden and a multitude of summer and winter birdlife that

</tbody>
</table>

will be lost if this habitat is destroyed. Throughout the year the field and the Glyme valley are host to wintering feeding and summer nesting birds.

- Removing a valuable and much loved piece of countryside from Old Woodstock would be Intrusive and very damaging to the Hill Rise Community in particular. There is every chance that Old Woodstock might become a DEAD satellite residential estate with no social and community cohesion.

- The field is essential to the way that people connect and integrate with the wider countryside and footpath system north of Old Woodstock. The footpath running through the proposed site is an ancient Public Right of Way that links the Parish of Wootton with Woodstock. Hill Rise was until 1970s part of Wootton and from various locations along the footpath it is possible to see the Parish Churches of Wootton and Woodstock and for that matter the Palace form the field.

- Local road infrastructure is already at breaking point. Traffic at the school gates is already extremely dangerous because of the narrow roads and necessary large coach transport. The recent housing development at the back of the Marlborough School (Marlborough Place) has exacerbated the problem and conflict of vehicle movements at peak times and has become extremely dangerous to school children and pedestrians.

- There are 46 houses on Hill Rise, 120 unwanted house would swamp our community and make life intolerable. The town is not equipped to service the needs of such a drastic increase in population. There are few shops, one bank and only one grocery store. The Drs Surgery is difficult to access with the present population.

- Why is necessary to develop Woodstock further? Marlborough Place and Banbury Road are recent development and have met the housing quota.

- Morally the proposal is wrong. It is unacceptable that the landed gentry can change the character of such a historic town in order to generate money for their estate. The people of the town will be living this legacy not the social elite.

- There are some valuable views from Hill Rise across the Glyme Valley and also from the field into Blenheim Park. A key view along the public right of way running through the proposed site encapsulates Blenheim Palace and the St Mary Magdalene Church in Woodstock.

| MM605         | Woodstock Town Council  | Mary Ayres      | Mrs Ayres        | 1381               |            | > SECTION 9 - STRATEGY AT THE LOCAL LEVEL > Eynsham Woodstock Sub Area > MAIN 166 | Vanburgh plus the roads are too narrow to carry more traffic, it's bad enough when the bin men come, blocking 3/4 of the road, what about emergency vehicles, with residents parking on roads, they can barely get through as it is!!
I strongly disagree to 120 new homes it would ruin Woodstock as it can't cope with the people it has at the moment! And I personally think it would be disastrous for the residents. |

| MM623         | Woodstock Town Council  | Colin Carritt    | Mr Carritt        | 1418               |            | > SECTION 9 - STRATEGY AT THE LOCAL LEVEL > Eynsham Woodstock Sub Area > MAIN 166 | Neither the main plan nor the modification provides 'satisfactory vehicular accesses, and pedestrian or cycle connections.'
1. Few of the inhabitants of any new housing would be employed in Woodstock, most travelling to work in Witney, Oxford, or destinations beyond Oxford. Almost all these journeys would be by car along the narrow A44 through Woodstock and past Blenheim Palace.
2. Since Old Woodstock has no infrastructure of its own, such as primary and secondary schools, shops, GP surgery, post office or community hall, all residents have to use those of Woodstock Town. For pedestrians, particularly children on their way to and from school, parents with children in pushchairs, the elderly, and the disabled, the walk from the Hill Rise area into Woodstock is both hazardous and frightening. There is concrete evidence to show that in the area of Manor Road the kerb-to-kerb width of the A44 is insufficient to allow lorries of legal maximum width to pass each other without overhanging the pavement, which in some places in less than a couple of feet wide, thus forcing lorries perilously close to pedestrians.
Between Manor Road and the Black Prince pub, pedestrians are confined by high and crumbling walls on both sides of the road. Near the Black Prince they are protected only by a flimsy metal barrier from the many heavy lorries and buses which use this road, some travelling downhill well in excess of the legal speed limit.
3. Walking and cycling benefit from both health and the environment, but the journey from Old Woodstock to Woodstock Town is far safer by car, encouraging residents to make unnecessary car journeys. A new footpath and cycle way into Woodstock would seem to be a solution to this problem, but it would have to cross not only the river Glyme but also a wide stretch of water meadows, including the protected Woodstock Town Watermeadows. Moreover, for safety reasons, it would have to be very well lit, thus introducing light pollution to an environmentally sensitive area.
4. If the proposed new development and the existing housing in Rosamund Drive, Vanbrugh Close, etc., were to share a single entry/exit point to the A44 into Vermont Drive, a potentially hazardous situation arises in the case of emergency. Thus, a second exit onto the A44 would be needed, probably a roundabout on the A44 in the Hill Rise area. This change to the A44, plus the building of a lengthy cycle/pedestrian into Woodstock Town - not to mention the provision of some kind of infrastructure to serve only a couple of hundred households - would make the development of the land to the Northeast of Barn Piece a very expensive venture. |
I support the allocation of 670 new homes in Woodstock over the plan period. However, the distribution and location of those homes must be jointly, agreed between WaDC and CDC and in further consultation with the local community. It could mean all 670 homes being built on the Woodstock East site (part within WODC and part within CDC) or the total allocations could be split between the sites identified in both COC's and WODC's proposed modifications.

I support the allocation of 670 new homes in Woodstock over the plan period. However, the distribution and location of those homes must be jointly, agreed between WODC and CDC and in further consultation with the local community. It could mean all 670 homes being built on the Woodstock East site (part within WODC and part within CDC) or the total allocations could be split between the sites identified in both COC's and WODC's proposed modifications.

I believe that the land Northeast of Hill Rise is unsuitable for development and therefore should not be included in the West Oxfordshire Local Plan. As a resident who moved into Old Woodstock relatively recently, I have been surprised and concerned with the size and number of HGV vehicles along the A44, often at speeds wholly unsuitable for the width and condition of the road on which they are travelling.

We live on Manor Road and there have been a number of reports of trucks mounting curbs and pavements. A new housing development will surely only increase the number of large vehicles using the road and thereby the amount of curb-mounting incidents.

This is not only very worrying for my family, but I would imagine for other families in the Old Woodstock area, particularly those with smaller children and prams. As an ecologist, I can't help but be worried for the future of the resident skylarks, (Alauda arvensis), a wonderful sound and sight to anyone who has walked along the trail from Woodstock to Wootton. This is a species that relies almost entirely on farmland for nesting and breeding, and has seen a significant historical decline in its UK population.

In fact the RSPB have placed the skylark on its Red List due to: "the severe (at least 50%) decline in UK breeding population over last 25 years, and the severe (at least 50%) contraction of UK breeding range over last 25 years". It would be a great shame to be seen to be contributing to the continued elimination of this flagship summer species.

These are a couple of my concerns why I believe the site is unsuitable, and I do hope that you will be reconsidering your plans.

I am concerned about the plan to build behind Hill Rise.

1. The road into Woodstock town centre is a busy, narrow and hilly and would have considerably more traffic.

| MM491 Crest Strategic Projects Crest Strategic Projects | Crest Strategic Projects | - | Crest Strategic Projects | 1599 | > SECTION 9 - STRATEGY AT THE LOCAL LEVEL > Eynsham Woodstock Sub Area > MAIN 166 | Delete | 4) Policy EW1d – land north of Hill Rise, Woodstock

Policy EW1d: We support the allocation of land north of Hill Rise, Woodstock for around 120 homes.

A requirement to ensure no harm to heritage assets is in direct conflict with national policy, which establishes in Chapter 12 of the Framework that less than substantial harm to a heritage asset should be weighed against public benefits arising.

Hill Rise is a sustainable site in a sustainable location. Its development will contribute towards the sustainable growth of Woodstock and provide for much needed housing in the area.

Together with other sites allocated for development around Woodstock, the development of this site will make a major contribution towards the improvement and enhancement of local infrastructure and result in significant social, economic and environmental benefits.

The site is readily available and there are no significant constraints to development. Consequently, it will be delivered during the Plan period. Also, as above, there is an opportunity for the sites allocated around Woodstock to be linked together, as they are all in one ownership. This presents the opportunity to deliver a joined up approach to the delivery of infrastructure and services, to further enhance the long term sustainability of the settlement.

The land around Woodstock is owned by Blenheim Estates. Blenheim is an integral part of Woodstock and has been for many Centuries. Blenheim Estates adopts a multi-generational approach to all of its land and property – as can be seen by the exceptional land management and the sensitive Blenheim Estates

If the houses were built. Most people would be travelling towards Oxford and would cause more congestion and pollution in Woodstock centre.

2. The infants school is already turning children away because there are no more places, so there would be more travelling towards Oxford and pollution.

3. There are no shops, schools, surgeries in Old Woodstock so more traffic on the road into the town centre.

4. Vermont Drive is far too narrow for increased traffic and it would disturb the way of life for those living there.

5. Good agricultural land should not be built on while there are other alternatives, such as brownfield sites.

6. Parking is sometimes impossible in Woodstock, even in the carpark. Another 120 homes would make it much worse.

These are some of the reasons I am against the development.

| MM721 The Blenheim Palace Estate | - | Neilson 1628 | > SECTION 9 - STRATEGY AT THE LOCAL LEVEL > Eynsham Woodstock Sub Area > MAIN 166 | | | |
developments throughout the area.

This is a fundamental point. This site, together with others around Woodstock, can be brought forward in a manner which ensures associated investment into all of the things that make a place sustainable. It is in Blenheim Estates direct interest (and forms the reason for its existence) to invest into Woodstock. The success of Woodstock and that of Blenheim are intertwined.

Blenheim Estates is well placed to ensure that development will be brought forward to enhance the sustainability of Woodstock as a whole. Piecemeal development will be avoided and the combined development of the allocated sites will result in major investment into local infrastructure, facilities and services. For example, a 200 house development could only make a contribution to education, whereas, together, the delivery of say, 770 dwellings, can ensure the provision of a new primary school. This approach can be adopted to all manner of things and given that Blenheim Estates has other strategic landholdings within Woodstock, the allocations can help to release associated opportunities – for example, new community facilities in the town centre and new community facilities for the historic, but threatened, Woodstock Football Club.

Blenheim Estates has many years of experience as a progressive landlord and intends to become a significant provider of affordable housing. This, combined with the Blenheim Estates’ record as a provider of developments of the highest design quality and exceptional property management, will help to ensure that the land allocations support a long term legacy, enabling people of all backgrounds to enjoy the unique characteristics of the area.

There are too many examples across the country of where housing developments fail to provide the comprehensive investment into services, facilities and infrastructure necessary to ensure sustainability. The land allocations at Woodstock provide an exciting opportunity to place sustainable development at the heart of the planning process. They are to be welcomed.

<td>W &amp; R Hutton</td>
<td>Unknown Hutton</td>
<td>1985</td>
<td>&gt; SECTION 9 - STRATEGY AT THE LOCAL LEVEL &gt; Eynsham Woodstock Sub Area &gt; MAIN 166</td>
<td>Our client supports the Council’s position that smaller ‘non-strategic’ allocations can help to ensure a deliverable housing supply in the short-term. Accordingly 15 ‘non-strategic’ sites are proposed for allocation at Paragraph 5.30b, resulting in a potential supply of circa 1,700 dwellings. Of these, land north of Hill Rise, Woodstock has been identified as a proposed allocation for the provision of 120 dwellings. Our Client supports the allocation of land within Woodstock which is identified as a Rural Service Centre and therefore, is one of the most sustainable settlements within the District. The content of paragraph 9.5.41q (MM 164) identifies that the there are landscape sensitivities which relate to the site and that any scheme would need to incorporate landscape mitigation measures. In this regard it is noted that the proposed allocation identified in MM 165 does not follow any natural boundaries but follows an arbitrary line within a larger field. To minimise the landscape impact of the development the boundaries of the allocation should be extended to the natural boundary line therefore ensuring that maximum screening can be achieved. Furthermore, our Client owns land in the vicinity which could be used to provide additional landscaping and/ or open space to maximise the development potential of the allocated site.</td>
<td></td>
</tr>
<tr>
<td>MM77</td>
<td>GDB</td>
<td>Mr Bird</td>
<td>215</td>
<td>&gt; SECTION 9 - STRATEGY AT THE LOCAL LEVEL &gt; Eynsham Woodstock Sub Area &gt;</td>
<td>The modification is unsound as the site proposed for potential development is unsuitable. Access to the Barns Piece estate is limited and problematic for vehicles, cyclists and pedestrians - the development will encourage more vehicles to use the A44 into Woodstock town centre, channelling traffic through a pinch point in the A44 at Manor Road/Farm End. This will increase the dangers to pedestrians in particular given that the pavement is exceptional narrow at this point. There is no existing access to the proposed site from the A44 or from the residential area at Rosamund Drive/Vanbrugh Close. The introduction of housing adjacent to the estate will increase car movements, increase noise, light and air pollution and result in an overall diminution of quality of</td>
<td></td>
</tr>
</tbody>
</table>
The proposal is also on a green field site in an area of landscape value identifiable for populations of red listed birds of conservation concern (skylark and yellowhammer). The proposal will result in the loss of recreational resource as the playground/football pitch and footpath are used by children and family groups, sporting groups, walkers and runners.

Ecology and Natural Environment

In all cases reference should be made to the District Council’s ecologist for specific details on each site. It is assumed that before firm proposals are brought forward for each site an appropriate ecological, landscape and visual impact assessment will be undertaken including surveys for protected and threatened species.

The permanent loss of land of existing and potential future habitat value should be recognised with a corresponding investment in biodiversity and other green infrastructure resources that provide a range of benefits including biodiversity, water management and contribute to physical and mental well-being. Additional off-site enhancement should be provided where insufficient environmental gains cannot be secured within the development boundary.

Woodstock – Land North of Hill Rise

The site is adjacent to the Glyme Valley Conservation Target Area.

There may be hydrological issues relating to Glyme Valley and downstream the Queen Pool SSSI and Woodstock Water meadows.

There will be a need for additional investment in Woodstock Water meadows to ensure the site is able to meet the increased recreational access demands this development would generate.

Policy EW1d (following 9.5.41r)

c) provision of satisfactory vehicular accesses and appropriate pedestrian and cycle connections including appropriate accommodation of the existing public right of way through the site.

The land northeast of Hill Rise is wholly unsuitable for development and therefore should not be included in the West Oxfordshire Local Plan, due to the following reasons:

* As residents are likely to travel to work and school this would cause significantly more traffic travelling on the A44 through Woodstock, as there are 120 houses planned, increasing Old Woodstock by 50%. This is not the case for other sites in Woodstock. It is already very difficult and dangerous getting out of Vermont Drive during busy times and people also have to cross the roads.

* Existing parking problems in Woodstock and on the Old Woodstock estate would be made much worse. Driving is mostly used to get to Woodstock as there are narrow pavements and poor cycling conditions due to very busy traffic.

* Old Woodstock has no infrastructure such as schools, doctors, shops etc, which means all residents have to travel into town on the already very busy A44 daily. Any extension would worsen already serious safety concerns of the A44 which has extremely narrow pavements and very fast traffic. The documents proposing the site states that it has, 'effective pedestrian and cycle links to the centre of Woodstock’. This is absolutely NOT the case. Old Woodstock just can’t take any more residential traffic, as well as at least a year of construction vehicles. There was a serious incidents last year of a van mounting pavement seriously injuring a
teenager and on Thursday 3rd November 2016 a Golf appeared to have been hit near Hill Rise, with police in attendance. All police are regularly monitoring traffic speed exiting Woodstock, opposite Hill Rise. There any many reported incidents of HGVs regularly mounting the pavement on Manor Road. We are horrified by current conditions and fear for our elderly, parents pushing buggies, teenagers and children. I personally have nearly been hit by a van wing mirror while walking down the hill from Old Woodstock towards the pedestrian crossing. The pedestrian crossing is also very dangerous with cars regularly not stopping.

* Old Woodstock already has a problem with schooling. The primary school is already at capacity with children from Old Woodstock not getting in. More homes would mean a significant increase in primary children and an increase need for pre- and post-school childcare. The local WUFA already has waiting lists which has effected the time I can get to my work. Placements at other schools would only increase the amount of car travel in the area.

* Current pollution levels on the A44 need to be measured before extra traffic can be handled.

* We would lose the use of the play area and football pitch for at least a year, whilst construction takes place. Children are already at risk having to travel to Woodstock for schooling and other amenities and would then have to travel for play. In addition, it is unlikely that any proposed new play area would be as safe and easy to access for our children as the current site, not to mention whether it would include a half-sized football pitch which is currently in constant use by many members of Old Woodstock and the greater Woodstock community. The playground is used by my family every weekend and was one of the reasons I purchased the property.

* Removing a valuable piece of countryside from Woodstock would be intrusive and damaging for our community. In addition so near to the world heritage site Blenheim Estate wall. An important, idyllic portion of the scenic walk to Wootton would effectively be destroyed. Wildlife would also be effected. No carefully considered development would be able to avoid these repercussions. The historic views would be altered. The view from my properties bathroom was the main reason I purchased my house.

* Very strong Old Woodstock community would be destroyed. This has been built up over many years due to the vicinity of the open space, green walkway, play area, footpath. This would be destroyed if open space was taken away. Also for walkers, dog walkers, safe for children.

* Vermont Drive and Rosamund Drive are too narrow to support new and existing traffic.

* I would be very nervous in letting my children play outside at the front of my property due to the increaser in traffic and the chaos that would ensue with increased traffic going to the building site.

In summary, the small historic town of Woodstock and in particular Old Woodstock, is already suffering overcrowding and pressure on the local amenities; its infrastructure cannot take any more development. I urge you to consider the issues listed above, which illustrate how the site to the Northeast of Hill Rise is extremely unsuitable for development.

**I believe that the land Northeast of Hill Rise is wholly unsuitable for development and therefore should not be included in the West Oxfordshire Local Plan, due to the following reasons:**

- Old Woodstock has no infrastructure (shops, school, doctors etc) which means all residents have to travel into town on the busy A44 for everyday things. This is not the case for other sites in Woodstock.
- Would cause significantly more traffic travelling the whole length of A44 through Woodstock, as there are 120 houses planned, increasing Old Woodstock by 50%. Residents are likely to travel to work and school: Oxford, Water Eaton to London, Secondary School, Primary School and also schools in North Oxford, Kidlington, Eynsham. This is not the case for other sites.
- Existing parking problems in Woodstock would be made much worse as many residents will drive into Woodstock, due to distance and road conditions (please see point 4 below) being highly inappropriate for everyday safe pedestrian and cycle use. This is the harsh reality local residents know all too well and not the case for other sites.
- Would worsen already serious safety concerns of the A44 which has extremely narrow pavements.
and very fast traffic. The documents proposing the site states that it has, 'effective pedestrian and cycle links to the centre of Woodstock'. Those living here know this to absolutely NOT be the case. Old Woodstock just can’t take any more residential traffic, as well as at least a year of construction vehicles. Note incidents: van mounting pavement last year seriously injuring a teenager (head injuries), on Thursday 3rd November a Golf appeared to have been hit from the front opposite Hill Rise, with police in attendance. Also, police are regularly monitoring traffic speed exiting Woodstock, opposite Hill Rise. There any many reported incidents of HGVs regularly mounting the pavement on Manor Road. We are horrified by current conditions where we fear for our elderly, parents pushing buggies, teenagers and children.

• Old Woodstock already has a problem with schooling: Currently at capacity with Hill Rise children not getting in. Could go to 2 year intake= only 105 more places. 670 more homes= 200-300 primary children. Also, Hill Rise and any new development would be the last to get a place, so may have to travel (on A44) to Kidlington, Long Hanborough and Yarnton, thereby further exacerbating traffic concerns.

• Pollution levels on the A44 are already suspected to be over the levels permitted by the EU. Residents are in the process of trying to obtain more accurate levels.

• We could lose the use of the play area and football pitch for at the least a year, whilst construction takes place. Children are already at risk having to travel to Woodstock for schooling and other amenities and would then have to travel for play. In addition, it is unlikely that any proposed new play area would be as safe and easy to access for our children as the current site, not to mention whether it would include a half-sized football pitch which is currently in constant use by many members of Old Woodstock and greater Woodstock community.

• Removing a valuable piece of countryside from Woodstock would be intrusive and damaging for our community. An important, idyllic portion of the scenic walk to Wootton would effectively be destroyed. No carefully considered development would be able to avoid this repercussion. Views would be altered to far too great a degree.

• Very strong Old Woodstock community would be destroyed. This has been built up over many years due to the vicinity of the open space, green walkway, play area, footpath. This would be destroyed if open space was taken away. Also for walkers, dog walkers, safe for children. Has been this way for 20-30 years.

• Vermont drive is too narrow to support new and existing traffic.

In summary, the small historic town of Woodstock and in particular Old Woodstock, is already suffering with the recent housing development undertaken. Its infrastructure is extremely strained and on so many levels it cannot take any more development. I urge you to consider the issues listed above, which illustrate how the site to the Northeast of Hill Rise is extremely unsuitable for development.

I believe that the land Northeast of Hill Rise is wholly unsuitable for development and therefore should not be included in the West Oxfordshire Local Plan, due to the following reasons:

• Old Woodstock has no infrastructure (shops, school, doctors etc) which means all residents have to travel into town on the busy A44 for everyday things. This is not the case for other sites in Woodstock.

• Would cause significantly more traffic travelling the whole length of A44 through Woodstock, as there are 120 houses planned, increasing Old Woodstock by 50%. <td>9-9-9-166</td>
<td>&gt; SECTION 9 - STRATEGY AT THE LOCAL LEVEL &gt; Eynsham Woodstock Sub Area &gt; MAIN 166</td>
<td>I would like to express my views, objections and representations on the proposed modifications to the West Oxfordshire Local Plan 2031, with particular respect to the proposals for Woodstock. I live in Old Woodstock with two children of primary school age and find the amount of housing proposed in Woodstock to be wholly inappropriate given that it represents an increase in housing of approximately 50% of the current size of the community. With regard to Woodstock, heavy traffic on the A44, lack of parking in the town, lack of facilities such as schooling and health provisions and the distinct lack of, and lack of planning for improvement of the infrastructure, are highly significant problems for the town. The town is currently at full capacity with regard to these issues. Of particular concern to me, is the land North of Hill Rise. I believe it is wholly unsuitable for development and therefore should not be included in the West Oxfordshire Local Plan, due to the following reasons: 1. No Infrastructure/more traffic on A44 Old Woodstock has no infrastructure (shops, school, health etc), meaning all residents have to travel links to the centre of Woodstock'. Those living here know this to absolutely NOT be the case. Old Woodstock just can't take any more residential traffic, as well as at least a year of construction vehicles. Note incidents: van mounting pavement last year seriously injuring a teenager (head injuries), on Thursday 3rd November a Golf appeared to have been hit from the front opposite Hill Rise, with police in attendance. Also, police are regularly monitoring traffic speed exiting Woodstock, opposite Hill Rise. There any many reported incidents of HGVs regularly mounting the pavement on Manor Road. </table>
into town on the busy A44 for everyday things. Further houses would mean more cars and pedestrians on the A44. The majority of residents travel to work and school at the other side of Woodstock requiring them to travel South using the A44 through the town. Likely destinations such as Woodstock, Oxford, Oxford Parkway Station, Marlborough Secondary School, Woodstock Primary School and also schools in North Oxford, Kidlington, Long Hanborough, Witney and Eynsham all require residents to travel on the A44. More traffic would increase the already busy A44 and further exacerbate difficulties at specific points - e.g. at the Hensington Road junction and in Shipton Road during school and rush hour travel times. The recent collision of school buses outside Marlborough School is an example of this issue.

2. Pedestrian Safety - A44 - NOT- 'a comfortable' or 'effective' pedestrian and cycle link/route. Any houses built on the Land North of Hill Rise, would increase the number of pedestrians walking along the main A44, to get to town and both the primary and secondary schools. Walking on the pavements of the A44 into Woodstock is hazardous. Lorries and buses travel over the speed limit very close to pedestrians and often struggle to pass each other. Of significant note is the teenager who was knocked down last year by a van mounting the pavement, resulting in serious head injuries. Traffic police recognise the problem as they are often seen opposite Hill Rise doing speeding checks. The route is used by mothers with young children and buggies walking to the primary school and/or playgroups in the town, and teenagers walking to Marlborough School. There is a bus which - whilst helpful for those with bus passes, single journeys and more time - is expensive and impractical for those making numerous journeys per day and at specific times. The footways on this stretch of road are already inadequate to provide safe walking access from Old Woodstock to Woodstock, with no adequate means of making them sufficient or for providing traffic calming measures.

3. The Character of Woodstock Town suffering due to lack of parking
More residents in Old Woodstock would increase parking in the town. The character of the town is suffering greatly due, in part, to lack of parking for shoppers and visitors. Residents from North of Hill Rise are more likely to drive into Woodstock (especially as the A44 is hazardous - noted above) exacerbating the already problematic parking issues in the town.

4. Infrastructure - Woodstock Primary School
Woodstock Primary School has increased its intake from 30 per year to 45. I have witnessed the expansion of the school yet I see the situation has arisen again, with children in Old Woodstock not sure they will be able to get into the school, with neighbours moving away from Hill Rise and closer to the school for this reason. This, I assume, is partly due to the building that has, and is happening closer to the school at Banbury Road and behind the Marlborough School. Woodstock school Primary School is now at capacity and has approx. 300 pupils. 670 new houses may equate to perhaps 250-300 more children (of all ages, and depending on the type of dwellings built etc). The natural expansion of the school would be to a two year intake of 60 (just another 105 places), but this would soon not be sufficient for even a fraction of the proposed houses. With regard to Old Woodstock, as it is farthest from the school many children from Hill Rise, Barn Piece estate AND any new houses built on the Land North of Hill Rise may be unlikely to get school places within their own community - as the situation stands. An impractical and unfortunate situation for the children and families, but also further adding to the traffic on the A44 as parents would need to drive to villages further afield.

From my visit to the public exhibition and from talking to WODC officials, it is clear that little or no planning has gone in to providing any improved infrastructure to take in to account the planned 50% expansion of the town, in terms of schooling, health provision, parking and highway improvements. Without this the town, which already struggles in these aspects, will fail to cope with the expansion.
5. Character of the Area and Community
Houses built on the Land North of Hill Rise would have a detrimental effect on the wonderful community that has built up over many years between Hill Rise and Barn Piece Estate. There is a strong community life that has been brought about in part by the open space and natural links of the land north of Hill Rise. It is a special and sought after place to live for that reason. The play park, football pitch, woods, footpath, field view and grassy walk create a safe and sociable outdoor space for children, elderly, families, runners, walkers, tourists and dog owners. From verbal reports, photographic evidence and historical maps it has been this way for over 30 years and continues to grow stronger with an summer fete, BBQ's, Halloween party and other social events. The space and community life play an important role in the support, security, health and wellbeing of its residents, and the space is in use by dog walkers and walkers from 5.30am and then is in continual use until the evening, and into the late hours of the summer months.
Please take these views in to account when considering the proposed changes to the 2031 Local Plan.

I would also request that you notify me at the above address of the following matters:

1. The submission of the Local Plan proposed modifications for independent examination;
2. The publication of the recommendations of the person appointed to carry out an independent examination of the Local Plan under Section 20 of the Act;
3. The adoption of the Local Plan.

I write to express my concern regarding the proposed development of the land Northeast of Hill Rise for housing.

is wholly unsuitable for development.

I fully accept the serious need to build more homes in this country but am convinced this proposal is detrimental to the town on Woodstock. I believe this land should not be included in the West Oxfordshire Local Plan, due to the following reasons:

● Old Woodstock has no infrastructure (shops, school, doctors etc) which means all residents have to travel into town on the busy A44 for everyday things. This is not the case for other sites in Woodstock.
● The development would cause significantly more traffic travelling the whole length of A44 through Woodstock.

Residents are most likely to travel to work and school through Woodstock to the detriment of the town and its residents.

The narrow pavements, narrow main road and congestion are a danger to public safety - this danger should not be increased.

Any development should be on the South side of the town.

● Old Woodstock already has a problem with schooling - the development would necessitate the construction of another school.
300 primary children. Also, Hill Rise and any new development would be the last to get a place, so may have to travel (on A44) to Kidlington, Long Hanborough and Yarnton, thereby further exacerbating traffic concerns.

- Pollution levels on the A44 are already suspected to be over the levels permitted by the EU. Residents are in the process of trying to obtain more accurate levels.

- We could lose the use of the play area and football pitch for at least a year, whilst construction takes place. Children are already at risk having to travel to Woodstock for schooling and other amenities and would then have to travel for play. In addition, it is unlikely that any proposed new play area would be as safe and easy to access for our children as the current site, not to mention whether it would include a half-sized football pitch which is currently in constant use by many members of Old Woodstock and greater Woodstock community.

- Removing a valuable piece of countryside from Woodstock would be intrusive and damaging for our community. An important, idyllic portion of the scenic walk to Wootton would effectively be destroyed. No carefully considered development would be able to avoid this repercussion. Views would be altered to far too great a degree.

The strong Old Woodstock community would be destroyed. This has been built up over many years due to the vicinity of the open space, green walkway, play area, footpath. This would be destroyed if open space was taken away. Also for walkers, dog walkers, safe for children. Has been this way for 20-30 years.

In summary, the small historic town of Woodstock and in particular Old Woodstock, is already suffering with the recent housing development undertaken. Its infrastructure is extremely strained and on so many levels it cannot take any more development. I urge you to consider the issues listed above, which illustrate how the site to the Northeast of Hill Rise is extremely unsuitable for development.

Thank you for the opportunity to take part in the consultation on proposed changes to the West Oxfordshire Local Plan, as outlined in your letter of 15th ultimo. I am writing to object to the proposed inclusion on the plan of the land north-east of Hill Rise in Old Woodstock. Specifically:

4.77 Policy EW1c Land East of Woodstock; Policy EWd Land North of Hill Rise, Woodstock; Policy EW1e Land North of Banbury Road, Woodstock: These 3 new Policies provide for smaller non-strategic site allocations in Woodstock. Land east and north is close to the Blenheim Palace World Heritage Site with potential negative effects for its setting but site specific requirements provide mitigation measures, together with other Plan Policies including EW1 and EH7. Positive effects found for housing and communities. Although each non-strategic site allocation is relatively small, there is the potential for them to contribute to cumulative negative effects for landscape and transport in this sub-area – with uncertainty in the longer-term and until further detailed project level studies have been completed.

120 houses will seem tiny when the District is being asked to find space for so many new houses to meet relentless government targets, and to bear the burden of Oxford City’s ‘unmet’ targets etc. But to me, this means a fundamental degradation of my quality of life, the loss of a core definitive aspect of Old Woodstock, having bought the last house on Rosamund Drive, by the Play Area, specifically because of its location on the edge of the field. Living in Old Woodstock is defined by the residential areas of Manor Road, Hill Rise, and the Barn Piece Estate - and its much-loved field. To build on it would be greatly to Old Woodstock's detriment.
I believe that the 'Assessment of Effects' set against SA Objectives, as set out in the 'Eynsham-Woodstock Sub-Area' section of WODC Local Plan: Proposed Modifications: SA Addendum Report, Appendix V SA Non-Strategic Site Options is blithely over-optimistic in seeing 'positives' and employing bland generalizations (the same answers as for other tracts of land that it is proposed to include in the Local Plan). This is in part because it identifies 'positives' for as yet non-existent potential residents of newly-constructed homes, as opposed to focusing on the 'negatives' for those already resident in the area, thus creating an entirely false sense of overall positive effects. For example, it considers (presumably) energy-efficient new homes as having 'potential to incorporate energy and water efficiency measures as well as renewable energy' when I would argue that any development on the site inevitably contribute to climate change – any human activity on a field is going to do this! – thus conjuring up another dubious 'positive'. I also dissent from the prejudicial logic of the 'Assessment of Effects' document. It constantly argues that any new development would (it is supposed) commensurately provide, or augment existing, facilities and infrastructure. That's not an argument likely to persuade people to welcome it; firstly, such improvement in facilities and infrastructure may not happen, or happen to a sufficient degree, and secondly, those of us who have no complaints about the current level of facilities and infrastructure are hardly likely to be wowed by the prospect.

Staying with the Appendix, this development will not do anything to 'Improve Education and Training', while it will certainly have an adverse affect on road congestion and use of the dangerous main road – the only route for cars and pedestrians alike. The 'permanent loss of Greenfield land' is for me a catastrophic negative effect, not a 'minor' one. This development manifestly does nothing to 'Conserve and enhance landscape character and the historic environment', and I don't know how the destruction of this field can be construed to have potentially a 'residual neutral effect'. It is vital to understand that land surrounding Blenheim, though not part of the hallowed UNESCO World Heritage site and AONB, is the vital backdrop to it. The approach to the historic town and the famous park and palace relies for balance on open country framing the Park's shelter belt and surrounding wall. No development, no matter what efforts are made to conform to Policy EH7 regarding 'conserving and enhancing the special character and distinctiveness of the historic environment' can perform this role as perfectly as an area of open countryside!

To be more specific, I object to the proposed inclusion of this land on the following grounds:

* The existing Barn Piece estate that abuts the land proposed for development has 112 houses, and the proposed new development would more than double that development, making Old Woodstock a much more crowded area, taken together with Hill Rise and Manor Road (a further 170 existing houses). The traffic levels through the Barn Piece Estate and my road, Rosamund Drive, and on the A44, would become much worse, for drivers but also for pedestrians. The busyness of the A44 is already a concern, and the estate is getting busier, and is now being used as a turning area for Stagecoach and Oxford Bus Company services.

* The proposed access to the new development is via Vermont Drive is also the only access to the existing Barn Piece estate, and a bus route and terminus. It is a residential road, about 100 yards long and 17 feet wide. Vans, lorries, coaches and cars often use the Rosamund Drive and Vermont Drive junction to reverse and turn back towards the town. At busy times, when residents are leaving for work or returning home, Vermont Drive and this junction already cannot cope with existing levels of traffic. Vermont Drive is too narrow to support both existing traffic and the extra traffic the proposed development would bring.

* Old Woodstock has no infrastructure (no shops, no schools or doctors etc) and the proposed site is approximately one mile from the town of Woodstock, accessed only by the busy A44.

* Footpaths bordering the A44 between Old Woodstock and Woodstock town are narrow, and pedestrians, including mothers with pushchairs, often seem at risk from heavy vehicles and fast moving traffic. Pedestrian
and vehicular traffic from the proposed new development would increase safety concerns considerably. I have been hit by a van wing mirror and witnessed many worrying incidents on the stretch of road running through Old Woodstock.

* The primary school is already over-subscribed, and children from the new development would be unlikely to find places there, resulting in car journeys to other towns and villages. The Marlborough School is almost 2 miles from the proposed site, approached only by the A44 and the town centre.

* These aspects alone – lack of infrastructure, limited safe access to the town and overcrowding of the area - make this site unsuitable for a development of this size.

* The suggestion that another access to the proposed site could be made from the A44 north of Hill Rise seems impractical. The A44 is too narrow to allow for right turning traffic in a 50mph limit, and major alterations to Hill Rise would be necessary to arrange an opening from the very narrow service road there.

* The children’s play area at the end of Rosamund Drive, now intended for closure to give access to the new development, has a special significance for all Woodstock residents, and will be a tragic loss. In 2013 it was saved from closure when Blenheim Estates purchased the field, following strong local protest and newspaper coverage. It seems unlikely that the play area, together with its associated half-sized football pitch for children, can be re-located within the new development so as to be as accessible and popular as it is now.

* Above all, the new development would remove a piece of countryside, with a town to town public footpath running through it, which has become important to all local people, particularly those with houses bordering the field. The footpaths along three sides of the field have been used by local families for decades, as shown by a recent Town Council survey identifying well used local paths. The loss of countryside to Woodstock would be significant and intrusive – this field is like a village green to those of us living in Old Woodstock, and is very much a defining aspect of Old Woodstock’s identity and character. To develop this site would destroy what, for me and my family, is the single most valuable aspect of our Old Woodstock life. The countryside that begins in this field, and the play ground and football pitch facilities, are used not just by Old Woodstock residents, but by people from all over ‘greater’ Woodstock. Also, by walkers who have travelled from further away to begin their journey across Oxfordshire at this well-known gateway – the field northeast of Hill Rise and running directly off from Rosamund Drive, this magical place that is the gateway to the Glyme Valley. In correspondence with the Planning and Sustainable Communities office in 2012 (WODC letter reference 12/01625/ENG), the field was judged to be in ‘open countryside’ and ‘beyond the confines of the town’. This is still the case, and many of us deplore the prospect of losing a field that we use frequently, and which teems with wildlife: pheasant, partridge, deer, kites, rabbits, larks in abundance, and much more.

* The knock-on effects for ‘new’ Woodstock would be significant; traffic levels through the town would obviously rise, and parking challenges would be exacerbated by the arrival of 300+ new residents and their vehicles. There are then the problems associated with schooling that already pertain at Woodstock/Old Woodstock’s current population level.

Thank you for considering these objections. As you will no doubt gather, people in Old Woodstock, and Woodstock generally, are horrified by the proposals for significant development ringing the town and, hopeless though the struggle may be, intend to do our level best to oppose them.

I am writing to express my concerns of the proposed development on the land northeast of Hill Rise. I strongly believe that this site should not be included in the West Oxfordshire Local Plan for the following reasons:

Old Woodstock has no infrastructure (shops, school, doctors, etc.) so all residents have to travel into town on the busy A44 for everyday things. This is not the case for other sites in Woodstock.

- Would cause significantly more traffic travelling the whole length of A44 through Woodstock, as there are 120 houses planned, increasing Old Woodstock by 50%.

Residents are likely to travel to work and school: Oxford, Water Eaton to London, Secondary School, Primary School and also schools in North Oxford, Kidlington, Eynsham. This is not the case for other sites in Woodstock.

- Existing parking problems in Woodstock would be made much worse as many residents will drive into Woodstock, due to distance and road conditions (please see point 4 below) being highly inappropriate for everyday safe pedestrian and cycle use. This is the harsh reality local residents know all too well and not the case for other sites.

- Would worsen already serious safety concerns of the A44 which has extremely narrow pavements and very fast traffic. The documents proposing the site states that it has, 'effective pedestrian and cycle links to the centre of Woodstock'. Those living here know this to absolutely not be the case. Old Woodstock just can't take any more residential traffic, as well as at least a year of construction vehicles. Note incidents: van mounting pavement last year seriously injuring a teenager (head injuries), on Thursday 3rd November a Golf appeared to have been hit from the front opposite Hill Rise, with police in attendance. Also, police are regularly monitoring traffic speed exiting Woodstock, opposite Hill Rise. There any many reported incidents of HGVs regularly mounting the pavement on Manor Road. We are horrified by current conditions where we fear for our elderly, parents pushing buggies, teenagers and children.

- Old Woodstock already has a problem with schooling - Currently at capacity with Hill Rise children not getting in. Could go to 2 year intake = only 105 more places. 670 more homes = 200-300 primary children. Also, Hill Rise and any new development would be the last to get a place, so may have to travel (on A44) to Kidlington, Long Hanborough and Yarnton, thereby further exacerbating traffic concerns and not attending a school which is part of the community.

- Pollution levels on the A44 are already suspected to be over the levels permitted by the EU. Residents are in the process of trying to obtain more accurate levels.

- We could lose the use of the play area and football pitch for at least a year, whilst construction takes place. Children are already at risk having to travel to Woodstock for schooling and other amenities and would then have to travel for play. In addition, it is unlikely that any proposed new play area would be as safe and easy to access for our children as the current site, not to mention whether it would include a half-sized football pitch which is currently in constant use by many members of Old Woodstock and greater Woodstock community.

- Removing a valuable piece of countryside from Woodstock would be intrusive and damaging for our parents, and children.
community. An important, idyllic portion of the scenic walk to Woottoton would effectively be destroyed. No carefully considered development would be able to avoid this repercussion. Views would be altered to far too great a degree.

* Very strong Old Woodstock community would be destroyed. This has been built up over many years due to the vicinity of the open space, green walkway, play area, footpath. This would be destroyed if open space was taken away. Also for walkers, dog walkers, safe for children. Has been this way for 20-30 years.

I hope I have been able to illustrate how the site to the Northeast of Hill Rise is extremely unsuitable for development and these points are taken into serious consideration.

---

**MM134  Ben Bazeley Mr Bazeley 309**

I am writing to ask the West Oxfordshire District Council oppose the development of houses on the field next to Hill Rise.

I am a 15 year old student at the Marlborough School in Woodstock and personally know that our school already has the maximum amount of pupils that it can take without classrooms being overcrowded and learning being affected. In addition, I know from people that attend nearby schools such as Bartholomew School in Eynsham that they have the maximum number of students it can take. The influx of 120 houses will not only put pressure on the Marlborough and surrounding secondary schools but the primary school. Woodstock is trying to take as many young children as possible and Bladon have recently expanded to accommodate the influx of children yet it would not be enough.

As a child with both parents traveling to work on a regular basis I very often walk to school and have witnessed fellow pupils almost being knocked off bikes by lorries, buses, cars and coaches. This I fear will increase anyway because of commuters in and out of Oxford city centre but 120 houses with the national average per household being between one and two cars I fear this issue will heighten and the accident toll will rapidly rise. This is a big problem.

As well as causing problems for local schools and roads, The development of houses will ruin a tranquil area home to a diverse range of animals from deer and Muntjac to Barn owls. The Barn Owl is growing rare because of its habitats being lost and I have noticed the surrounding area being home to quite a few barn owls. Not only will the wildlife suffer. Next to the fields there is a small playground for children in old Woodstock this is a great positive as the next nearest playground is 15 minutes away. As a result of the houses being build I fear the park will be taken away and would increase the amount of people walking or cycling to the next park. This could have a direct casual link with my aforementioned statement that the accident rate will more than likely increase. Or rather than people traveling to the next park they would stay indoors and enhance a national problem which is that young children are spending too much time indoors and lacking vitamin D. This causes children to lack this essential vitamin and cause problems on our already struggling NHS.

The history of “Old Woodstock” would be lost because of new development and cause problems on the already busy A44. Traffic is major problem in Woodstock because tourists visit our culturally rich town for history and filmography reasons. The parking in the town is simply too little to accommodate the tourists and current residents and adding to that would cause more problems than it is worth.

Our town has enjoyed years and years of being a town where everybody knows everybody. Especially in old Woodstock. And I fear that if 120 houses were allowed to be built then problems we can’t control would be allowed to grow. Such as accidents, impact of learning and other problems. This could also impact our historic town. As a result this is why I oppose the building of houses near the street of Hill Rise and ask the WODC to stand up to the development of houses with me and other people from this area.

<td>&gt; SECTION 9 - STRATEGY AT THE LOCAL LEVEL &gt; Eynsham Woodstock Sub Area &gt; MAIN 166</td>
<td>I am writing with regard to the proposed inclusion in the Local Plan of the land to the north east of Hill Rise Woodstock as a site suitable for the development of 120 new homes. I strongly object to the proposed allocation on the following basis. 1. The site is too far away from the centre of Woodstock where all shops, schools, library, doctors etc are located. Most journeys into Woodstock and to the local schools will be made by cars, increasing traffic on the already busy A44. Walking or cycling down the narrow footpath on the A44 into town is dangerous with young children, especially at peak times for school etc. 2. The development will mean the loss of the extremely well used playground and playing field. Even a temporary loss during any redevelopment and relocation will have a dramatic impact on the happiness of local children. 3. There are insufficient local services in Woodstock to cope with the additional homes. School places are already under pressure, with a number of children in Old Woodstock not receiving places at the local primary school. 4. The land represents the only directly accessible open green space for residents of Hill Rise and the adjacent housing estate. The land is in effect a local amenity and well used by residents.</td>

<td>&gt; SECTION 9 - STRATEGY AT THE LOCAL LEVEL &gt; Eynsham Woodstock Sub Area &gt; MAIN 166</td>
<td>I believe that the land Northeast of Hill Rise is wholly unsuitable for development and therefore should not be included in the West Oxfordshire Local Plan, due to the following reasons: * Would cause significantly more traffic travelling the whole length of A44 through Woodstock, as there are 120 houses planned, which would mean approximately 240 more cars. * Residents are likely to travel to work and school: Oxford, Water Eaton to London, Secondary School, Primary School and also schools in North Oxford, Kidlington, Eynsham. * Existing parking problems in Woodstock would be made much worse * Many residents will drive into Woodstock, due to distance and road conditions being highly inappropriate for everyday safe pedestrian and cycle use. Parking chaos occurs for residents near the Woodstock Schools with cars parking on pavements up both sides of the narrow roads as well while they drop off and collect their children. * Would increase the number of already serious safety concerns of the A44 which has extremely narrow pavements and very fast traffic. * The documents proposing the site states that it has, 'effective pedestrian and cycle links to the centre of Woodstock'. Those living in Woodstock know this to absolutely NOTbe the case. More cars will mean more cars parking on the pavement along Manor Road where they already cause a danger to pedestrians as well as those pushing prams or using a wheelchair. It will also add to the number of cyclists using the pavements as unofficial cycle paths causing danger to pedestrians.</td>
</tr>

MM166  Emma O'Regan  - O'Regan 361

I am writing in response to the proposal to build 120 houses on the land North of Hill Rise. We are devastated by this proposal.

The A44 is a dangerous road, with heavy vehicles and a lot of traffic. It can be difficult to turn onto the road and an additional 120 houses will not only add to the traffic, but increase congestion in Old Woodstock and on the A44 through the town.

There is a further risk to flooding at the bottom of the hill. The field and our garden become saturated but manage the heavy rainfall we are becoming so accustomed to. I fear that taking away this green space will increase the risk of flooding for those living further down.

We moved to Woodstock with a growing young family, wanting to have a healthy lifestyle. We make very good use of the local playpark, and the surrounding countryside for walking. In a time of increasing mental health and physical health issues linked to obesity, I cannot comprehend how a well-used field and playpark can be built upon?

In fact, the field is so well used by dog-walkers, that we recently adopted a puppy! My daughter and I now enjoy a walk before school around the field, and we all frequently use the field for dog walking, family walks and nature appreciation. I have not yet had a walk around the field without bumping into at least two other walkers enjoying the beauty of the field.

The field and park provide a community hub – where we meet other families, walkers, dog owners and people enjoying active lifestyles. The children in the community enjoy seeing the famers at work! We have felt so fortunate living here – with our children growing up seeing wildlife in the field and being so in touch with nature. To risk losing this is just so sad.

Our property was built 5 years ago, and planning for it was approved on the grounds that it maximised the use of the beautiful views across the field and would be an aesthetically pleasing place to live. We bought the house because of the views and surrounding open countryside. Every window from the property (excepting the bathroom) is full size and looks out to the field – and we absolutely love it. We were granted planning permission to extend the property, and planned the two extensions in order to further maximise the views. With the new proposal our house would need extensive works, and be drastically altered. I also question why we were granted planning permission – and as a result extended the house to further maximise the views – when if we had known of this proposal, we would have planned it very differently.

The increased noise, light and air pollution will significantly increase. Carbon emissions form people's homes and vehicles, the effect of light pollution on wildlife and the need for change of habitat for many creatures (including some grass snakes - which are protected creatures).

Please consider the detrimental effect on many people in this community, and the effect on healthy lifestyles.

* Use of the play area and football pitch for at least a year would be lost as well as access to footpaths to Wooton, whilst construction takes place. The quality of life would be damaged.

* In summary, the small historic town of Woodstock including Old Woodstock is already suffering with the recent housing development undertaken. Its infrastructure is extremely strained it cannot take any more development.

* I urge you to consider the issues listed above, which illustrate how the site to the Northeast of Hill Rise is extremely unsuitable for development.
I am writing in regard to the housing developments in Woodstock. It is clear that none of these developments should go ahead without also providing for the consequences of extra people and motor traffic.

Expanding Old Woodstock will exacerbate problems along the A44. There have been accidents reported on this stretch of road in the last 12 months, including a pedestrian hit by a van that mounted the pavement. Above and beyond the reported incidents, locals have their own negative experiences: I have had to take action both as a cyclist and a car-driver to avoid accidents on this stretch of road, in both cases with lorries. The narrow sections are terrifying to walk along when lorries thunder past, their wing mirrors often stretching over the pavement. It is the only route for children to get to and from school and everyone one of us who sends their children along the path to secondary school each day already lives in fear of an accident. Please do not let the walk to school even more dangerous.

I am reluctant to accept any development in Old Woodstock but were it to happen, the increased pedestrian traffic would need protecting from the greater flow of motor traffic. These should include: a reduced speed limit along the A44 through the length of Woodstock; a safe option for cyclists (with more cycle racks in town) to reduce car traffic from Old Woodstock to the centre – and alleviate parking problems; an alternative route for passing traffic, especially lorries, to lessen the impact of increased local traffic.

Already, residents of Old Woodstock are not able to secure a place at the Woodstock primary school for their children. The existing primary school needs expanding or a second primary school needs building. If the former, the current traffic problems around the school need investigating. Parking along New Road, Shipton Road, Recreation Road, Green Lane and Kerwood Close, etc. is already impossible at key times. The car park at the library is, even now, sometimes too busy to use. (NB A bus service once ran from Old Woodstock to the primary school but was cut a few years ago for cost-saving.)

The impact of the complete set of Woodstock developments also raises concerns:

Local amenities are already under pressure. As previously mentioned, the primary school is over-subscribed. I believe the surgery also would need to expand were the local population to grow.

Putting more houses without amenities on the outer edges of the town will also bring more car-drivers into the centre and put even more pressure on the limited parking spaces. No developments should be considered without a solution to this problem being part of the equation.

The entrance to Shipton Road from the A44 is challenging and at busy times, traffic turning up Shipton Road backs up onto the A44 or, the other way, as traffic builds up Shipton Road, drivers become impatient and pedestrians are forced to the side. Increasing the volume of cars using this narrow route will cause accidents.

In addition to concerns for Woodstock:

The very large number of developments proposed for West Oxfordshire is going to create massive issues for the flow of traffic into Oxford. Increased and improved bus services as well as safe, well-lit and attractive-to-

<td></td>
<td>Local Plan - Land Northeast of Hill Rise Woodstock</td>
<td>I believe that the land Northeast of Hill Rise, Woodstock is totally unsuitable for development and therefore feel that it should not be included in the West Oxfordshire Local Plan due to the following reasons:</td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td>Safety of residents whilst walking down the A44 into Woodstock. The A44 is already an extremely busy road at all times, however is especially bad during rush hours. As a mother of two young children I find walking to and from school a very worrying and at times dangerous. The pavements are particularly narrow and in places we have to walk single file in order to ensure our safety. Despite the 30mph speed limit, some cars do not adhere to this which can be very frightening. The lorries that already use the road at times have to mount the pavement on Manor Road in order to simply pass each other, putting pedestrians at serious risk. Any development will only cause to amplify these risks, by increasing the number of vehicles that will travel down the A44 into and through Woodstock.</td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td>The loss of the playground and football pitch during the construction of the development. The playground and football pitch are in constant use by older children and families living in old Woodstock. Providing old Woodstock with a real sense of community. It is a place where children of all ages can mix and play and for a lot of them, the place they are able to meet friends from different schools. If this provision is lost during the construction of the development or as a result of it, the children will have to walk or travel to the playground in the centre of Woodstock. This means that their playtime will have to be organised in advance to ensure safety whereas at the moment children regularly pop to the playground for half an hour before tea or bed. Such safety and freedom will be lost.</td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td>The green space which is intended for development is the only green space that residents are use cycle paths with priorities over motor traffic might help.</td>

</table>

able to safely access without crossing the A44. As a family we regularly walk our dog on the footpath and can do so without having to worry about our safety with regards to cars. The footpath is regularly used by not only residents, but walkers and ramblers whom travel to Woodstock to walk in our wonderful countryside. Such people are known to also visit the town and local businesses at the same time. Even the most sympathetic development will take away the beauty of the local area and with it the rich variety of wildlife that inhabit it. Such wildlife as the bats, foxes, deer, pheasants, newts and grass snakes. Wildlife that the children are able to see first hand enhancing learning and increasing their appreciation of nature and how important it is to protect the environment we live in.

• Issue of schooling: We were fortunate enough to get places at the local primary school as a result of the last expansion (primarily for the children of Old Woodstock), however with new developments in the centre and behind the Marlborough school, Old Woodstock children are once again not getting into the school. Therefore further development in Old Woodstock can only mean that families will have to travel along to A44 to other local schools, exacerbating traffic.

• Pollution levels on the A44. The levels of pollution are already suspected to be over the levels permitted by the EU. Something local residents are in the process of finding out. Further development with increased traffic will only cause these to rise.

• Parking problems in Woodstock. Parking within Woodstock is already a huge problem and will only continue to get worse if Old Woodstock is considered for development. Many residents of Old Woodstock already drive into town as a result of the dangerous pedestrian/cycling conditions. Also for many residents the distance to and from town and the walk back up the long arduous hill is too much for them.

• Old Woodstock has no infrastructure (school, shop or doctors). Residents of Old Woodstock

<td>have to regularly go into Woodstock for everyday amenities, as pointed out above to do this many residents have to drive. • Vermont Drive. The proposed access to the new development through Vermont drive is highly unsuitable. It is too narrow to support existing and new traffic that will have to travel along it. Old Woodstock has a strong community in which residents, especially children, feel safe. Increasing its size to nearly double, will have a major impact on the immediate residents and the local community of Woodstock as a whole. I therefore strongly urge you and your team to consider the above points and recognise how unsuitable the area is for any further development.</td>

<td>&gt; SECTION 9 - STRATEGY AT THE LOCAL LEVEL &gt; Eynsham Woodstock Sub Area &gt; MAIN 166</td>
<td>I wish to raise concerns about the potential development of land northeast of Hill Rise. Whilst I am not against development, and understand the need for new housing, I do believe the proposal is an overdevelopment of the local area of Old Woodstock. I am mainly concerned for the following reasons: 1) Children in Old Woodstock have historically already had problems getting into the local primary school because it is oversubscribed. If the school will not expand, and there is no mention of this, this problem will only be exacerbated for families in Old Woodstock. 2) There are already problems accessing health services in Woodstock. 3) I believe if the development went ahead at Hill Rise the problems of parking in town would only get worse. Old Woodstock is furthest from the town, and requires walking up and down a hill. The pedestrian access is not good, and I have received a letter from our MP confirming he agrees with this. I have also been in touch with the OCC about the safety of the pathway to town.</td>
</tr>

<td></td>
<td>Draft Local Plan 2031: Strongest possible objection to building on land north of Hill Rise in Woodstock I am writing to explain why I object so strongly to the proposals to build 120 new homes on land north (north-east) of Hill Rise. Some of the reasons are personal, which I understand will carry little weight, but I want you to know how much this proposal could impact on my life and the life of my family. The other reasons are less personal and relate to the impact on the wider area and the community. Here follows a list of reasons: • Our house, Field House, was built in 2011 and has been designed to enjoy the views over the field which is now under threat of development. We have massive windows and doors throughout the house, downstairs and upstairs, which are all designed to enjoy the views. You can imagine (I have added pictures below) that any development on this field will literally destroy the purpose of the house. We will suddenly have a house which...</td>

<td>--------</td>
<td>------------</td>
<td>-----------</td>
<td>--------------</td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td>has aspects from every room into a housing estate and all our of our rooms, particularly our bedrooms, will become visible from all the new houses. Considering the house was recently built (2011), with planning permission from your office (10/0627/P/FP - 'Views to the north over fields are yet to be fully realised') and recently extended (14/0777/F/FP) to enjoy the aspect of the field this development would cause considerable stress and unhappiness to us as a family as well as having a material cost in terms of the value of the property or in having to spend money to change the nature of our house so it is less exposed. For example we several thousand pounds to rebuild a dry stone wall which will need to be turned into a fence in all probability.</td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td>• As well as enjoying the aspect of the field and countryside, we know how heavily used the area is for walking and recreation for members of the public. Many people walk their dogs daily and 100s more use the area for walking and general recreation. This development would mean people either have to go further from their homes, which is unlikely to happen for children, or not be able to enjoy leisure facilities. Given the general consensus that health is deteriorating among our society I do not think we can afford to remove such a well used recreational space.</td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td>• This links to the removal of the park and football pitch, at least while it is being built and possibly even longer. We use the park often (my children are 4 and 6) and it was one of the reasons we chose to buy our house. My son is just starting to play football regularly and we see 100s of children from the area using the park on a regular basis, One of the main advantages of this park is how safe it is to get to (we don’t need to use the road), how enclosed it is and how many people use it locally, making it feel very safe. The next nearest park would involve us walking to Woodstock town centre, which given the distance and nature of the journey along the busy A44 would not happen.</td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td>• The noise and disruption during building would be particularly harmful for us. As we mentioned already, we have windows overlooking the field from every room and all the noise, pollution and traffic during construction would be particularly troublesome for my family.</td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td>• A final personal issue is that the traffic caused by the new development would make the area more dangerous for children in the area, including my own. Currently we can safely ride bikes and scooters as traffic is relatively light. So long term car use would be massively increased making the area less safe. Other more general issues include:</td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td>• Old Woodstock as an area has no infrastructure such as shops, schools or doctors. We all use Woodstock for these services, so increasing the population here would increase the number of journeys to Woodstock along the dangerous A44 and would increase parking in Woodstock which we know cannot cope with the current parking issues. Building closer to Woodstock or not all all would not cause the same problems.</td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td>• The traffic through Woodstock would also significantly increase as there would be 100s of journeys towards Oxford and London. If the development was built on the south of Woodstock, or not at all, the journeys through historic Woodstock would not be increased.</td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td>• I am told that Woodstock Primary School has refused children places at the school from Old Woodstock as there are not enough places. This development would exacerbate that problem, and raises the issues of where the children in this new development would be educated?</td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td>• Pollution levels would increase significantly for the area. There would potentially be 240 cars (2 per house) driving through the area as well the emissions caused by housing.</td>
</tr>

| MM249         |                         | Julia Johnson  | Johnson           | 457        | > SECTION 9 - STRATEGY AT THE LOCAL LEVEL > Eynsham Woodstock Sub Area > MAIN 166 | why so many people drive to Woodstock). More cars would add to the problems. Construction traffic would make it even worse. I would not be surprised if a young person was seriously hurt or killed using the A44 as it is, let alone with increased traffic.  
• The final issue is that the area is a fantastic place to live as there is a real community of people who live around the 'field'. We walk and play on these fields, the children meet their friends and adults regularly use it for social gatherings. This proposed development would destroy that community. Given all the above points, and the thoughts of Woodstock Town Council who are opposed to this type of development, I hope you will reconsider and revise the local plan so that the development north of Hill Rise is removed for consideration from the local plan. |
| MM250         |                         | Julie Kennedy  | Kennedy           | 458        | > SECTION 9 - STRATEGY AT THE LOCAL LEVEL > Eynsham Woodstock | I wish to make observations on the recent proposals to develop farmland on the northern edge of Woodstock.  
I am concerned at the scale of the development primarily because of  
Added strain on the capacity of the A44 - already a heavily used through route.  
I doubt residents on this new estate will walk to the town to support the shops and amenities (will the Doctors Surgery cope with the additional patient list?). The pavements are narrow and on a rainy day if you use an umbrella you run the risk of being drawn in by the draught from the lorries passing within inches.  
Woodstock is already known for the challenge of finding a parking space, another 120 houses with associated vehicles won't ease this situation – unless you are planning a dormitory community.  
Routing of traffic through Barn Piece  
I believe the proposal is to route traffic to/from the new estate through Barn Piece Estate, via Vermont Drive and Rosamund Drive. This will add congestion to already busy road junctions for residents of Barn Piece. This area is also used as a turning point for the S3 bus service.  
Surely, if this development goes ahead, the large field gate onto the A44, already in place north of Hill Rise, would be a better access point.  
Loss of a communal play/recreational area  
I am concerned about the loss of the playground, the only open play area for children (and others) in Old Woodstock. We need to encourage the next generation to meet and play together face-to-face instead of falling into the virtual world of friendships via computers.  
I am doubtful whether letters from Woodstock residents will have any impact on the outcome of the Local Plan, but I hope the Council will take the time to consider our views.  
Re: Local plan and development of “Land North of Hill Rise”  
Before I comment on the above I would like to mention something that is relevant to wherever any potential development takes place in Woodstock, ie parking. As everyone is aware Woodstock is linked to Blenheim and many visitors to the palace take this opportunity to explore the town. Local people already have real problems in trying to park in town, being it for shopping, a visit to the doctors or pharmacy for example. I |
have popped into town around 8.30 on a weekday to find very little parking available. With an aging population, people who live in Woodstock tend to stay, this lack of parking is a real worry and any development will exacerbate this. Additionally the new bus service linking Woodstock to Oxford Parkway railway station is likely to encourage people from the surrounding villages to use this excellent service, but where will they park?

However, this letter is specifically about Old Woodstock and my objections are as follows:

- Evidently the proposal is to access the new build via Rosamund Drive/ Vanburgh Close. This would destroy the wonderful play area the children of Old Woodstock and Hill Rise have. The play area also has a half-sized football pitch and is used by those outside Old Woodstock. It is also a very safe place for the children to go and play; prior to the building of this play area the children had to play in the streets and this is obviously unsafe.
- The estate is the terminus for many buses to Old Woodstock and this can cause problems at present with buses blocking the road whilst turning. Vermont Drive is too narrow for extra traffic particularly building lorries etc.
- The number of houses proposed is more than the whole of the Barn Piece estate .
- All residents of Old Woodstock use the doctors’ surgery in the town; even now they struggle to cope so this would only get worse.
- The main A44 is already extremely busy and the pavements are very narrow, especially for prams etc. or anyone in a wheelchair. The statement that there is effective pedestrian and cycle links to Woodstock is not true.
- Children walk to the Marlborough School on these narrow pavements . With the pollution levels at a high level this cannot be good for them and additional traffic will make this worse.
- The Primary school is full and children from Hill Rise cannot get in. Any new development could mean children being forced to travel to other local schools.
- Old Woodstock is a community, for example we have Mock Mayor Day something Woodstock doesn’t have. People have walked for years on the edge of the field and onto the green lane. I have lived here for 35 years and this has always been the case.
- This would also spoil the walk to Wootton; the loss of these wonderful open spaces would be an enormous loss to the community.

To conclude, Old Woodstock cannot cope with this proposed development for the above reasons.

I believe that the land Northeast of Hill Rise is wholly unsuitable for development and therefore should not be included in the West Oxfordshire Local Plan. You will have received a number of letters outlining strong reasons why this land should not be developed and I agree with them all wholeheartedly. I would also like to add:

- The proposed entrance to the new housing would cause stationary traffic at the A44 / Vermont Road interchange which would cause pollution as vehicle stand waiting to turn. This junction is directly outside my house and will have a direct impact on the quality of the lives of residents who live in the area. Pollution levels on the A44 are already suspected to be over the levels permitted by the EU .
- The proposal will build over open fields which are used frequently by residents. The field on which the proposed building is planned is the only open space which residents can use to exercise their dogs off-lead. It is a community asset and regular interactions between different members of the community occur here. Holyhocks and other flowers have been planted to enhance the environment for those that use it.
- The field is a haven for wildlife. Skylarks can be found in the fields as can roe deer and other wildlife (foxes

I am writing to object to the proposed housing development of 120 new homes on the land NorthEast of Hill Rise in Woodstock - my apologies but I could not find a specific reference number for this development in the 30 minutes I spent searching your website and the library documents - why was this information, if required for any objection, not included on the Local Plan Exhibition panels?! It seems to me designed to make it difficult to object to any proposal!

I appreciate the need for more housing in Oxfordshire, particularly affordable housing, however this needs to be done in a way which does not severely impact on the quality of life of all of the inhabitants and adversely impact on their health, safety and economic productivity. My objections are as follows:

1) The proposed access to and from the new development is as far as I can see is solely via Vermont drive, which will increase the already large volumes of traffic and associated air pollution on the A44 through Woodstock, and the commuting journey times for all residents, which have already doubled in the past 8 years for those going into Oxford

2) Old Woodstock has no infrastructure (shops, schools, medical facilities) which means all residents and their children will have to either drive (and park!) in Woodstock for everyday necessities, walk or cycle. Residents will not be able to find parks in town due to the inadequate provision for additional parking, so they will have to walk on the narrow sidewalks, which are often already obstructed by illegally parked vehicles and will not allow strollers to pass each other without going onto the road! cycling on the A44 through woodstock is already hazardous in the extreme due to the heavy traffic and poor visibility in places.

3) Access to the school for the increased number of old Woodstock residents will be via Hensington Road, which is already a safety hazard for pedestrians and a traffic chokepoint due to it being very narrow and shared between two way traffic and pedestrians. Woottion School is too small to help accommodate the additional number of children in the area.

4) The plans seem to assume that the developments in Woodstock will not increase parking need in central Woodstock due to the majority of the parking being used by tourists. I cannot see that this assumption is based on any evidence, it has not been my day-to-day experience as a local resident trying to find parking for various reasons. I believe the consequences will be that the parking provision for the additional developments in all of Woodstock will be woefully inadequate, and much more difficult and expensive to correct once the developments have been completed.

<td>&gt; SECTION 9 - STRATEGY AT THE LOCAL LEVEL &gt; Eynsham Woodstock Sub Area &gt; MAIN 166</td>
<td>I strongly advocate for a dedicated shared cycleway/pedestrian walkway running parallel to the A44, with elevation/bridge over the river Glyme, to be a compulsory condition of the old Woodstock development. This would relieve the traffic and associated pollution on the A44, allow the increased number of children in Old Woodstock to more safely travel independently to Woodstock School, and provide a much-needed northern connection to the cycleway along the A44 to Oxford for commuters. Thank you for your consideration.</td>

I live in Old Woodstock and have two children of primary school age. I am opposed to the amount of land being made available for housing in Woodstock.

Heavy traffic on the A44, lack of parking in the town and lack of infrastructure are highly significant problems for the town.

The town is currently at full capacity with regard to these issues. Of particular concern in my more local vicinity is the Land North of Hill Rise.

I believe it is wholly unsuitable for development and therefore should not be included in the West Oxfordshire Local Plan, due to the following reasons:

1. No Infrastructure - more traffic on A44 Old Woodstock has no infrastructure (shops, school, doctors etc.) which means all residents have to travel on the busy A44 for everyday things at the least. This is not so for the other proposed sites in Woodstock. Residents would be likely to travel to work and school at the other side of Woodstock requiring them to travel the entire length of the A44 through the town. Likely destinations such as Woodstock, Oxford, Water Eaton Station to London, Marlborough Secondary School, Woodstock Primary School and also schools in North Oxford, Kidlington, Long Hanborough, Witney and Eynsham, all require residents to travel the entire length of the A44. An increase in traffic would make the road more hazardous, polluted, increase traffic jams and further exacerbate difficulties at specific points - e.g. at the Hensington Road junction and in Shipton Road during school drop-off/pick-up (note collision of buses recently outside Marlborough School).

2. Pedestrian Safety - A44 – NOT – 'a comfortable' or 'effective' pedestrian and cycle link/route. Any houses built on the Land North of Hill Rise, would increase the number of pedestrians walking along the main A44 to get to town and both the primary and secondary schools. There is no walking route that avoids this road but walking on the pavements of the A44 into Woodstock is hazardous. Lorries and buses travel over the speed limit a foot from pedestrians, and often struggle to pass each other. Of significant note is the teenager who was knocked down last year by a van mounting the pavement - she had serious head injuries. On Thursday 3rd November a Golf appeared to have been hit head on opposite Hill Rise, with police in attendance. Traffic police recognise a problem as in during autumn of 2016 they were often positioned opposite Hill Rise doing speeding checks. The route is used by mothers with young children and buggies walking to the primary school and/or playgroups in the town, and teenagers walking to Marlborough School. There is a bus which - whilst helpful for those with bus passes, single journeys and more time - is expensive and impractical for those making numerous journeys per day and at specific times.

3. The Character of Woodstock Town suffering due to lack of parking More residents in Old Woodstock would increase parking in the town. The character of the town is suffering greatly due, in part, to lack of parking for shoppers and visitors. Due to the distance and hazardous walking conditions, residents from North of Hill Rise would be more likely to drive into Woodstock than from the other proposed sites, so further exacerbating the already problematic parking issues in the town.
4. Infrastructure – Woodstock Primary School

Woodstock Primary School has increased its intake from 30 per year to 45. This has happened over the last 6 years since my daughter started because it did not have enough space to accept all of Woodstock children. That year (2010), it is my understanding that 10 children (many from Old Woodstock) did not get into the school and so went to Wootton, Yarnton, Long Hanborough and Kidlington primary schools. I have witnessed the expansion of the school yet I see the situation has arisen again, with children in Old Woodstock not sure they will be able to get into their local school - indeed our neighbours are moving away from Hill Rise and closer to the school for this reason. This, I assume, is partly due to the building that has, and is happening closer to the school at Banbury Road and behind the Marlborough School. Woodstock school Primary School is now at capacity and has approx. 300 pupils. A further 670 new houses may equate to 250-300 more children (of all ages, and depending on the type of dwellings built etc.). The natural expansion of the school would be to a two year intake of 60 (just another 105 places), but this would soon not be sufficient for even a fraction of the proposed houses. With regard to Old Woodstock, as it is farthest from the school many children from Hill Rise, Barn Piece estate AND any new houses built on the Land North of Hill Rise would be unlikely to get school places within their own community - as the situation stands, and if the school expanded to a two year intake alongside further building closer to the school. An impractical and unfortunate situation for the children, families and community, but also further adding to the traffic on the A44 as parents would need to drive to villages further afield.

5. Character of the Area and Community

Houses built on the Land North of Hill Rise would have a detrimental effect on the wonderful community that has built up over many years between Hill Rise and Barn Piece Estate. There is a strong community life that has been brought about in part by the open space and natural links of the Land North of Hill Rise. It is a special and sought after place to live for that reason. The playpark, woods, footpath, field view and grassy walk create a safe and sociable outdoor space for children, teenagers, elderly, families, runners, walkers, tourists and dog owners. From verbal reports, photographic evidence and historical maps it has been this way for at least 30 years and continues to grow stronger with a summer fete, annual BBQ and rounders match, Halloween party and other events. The space and community life play and important role in the support, security, health and wellbeing of its residents, and the space is in use from 5.30am by dog walkers, runners and walkers, and continually by others until the evening, and into the late hours of the summer months.

The character of the community has evolved the way it has due to the open space and it would deteriorate if the space were to be taken away.

Dear Mr Hargraves

I believe that the land Northeast of Hill Rise is wholly unsuitable for development and therefore should not be included in the West Oxfordshire Local Plan, due to the following reasons:

* Old Woodstock has no infrastructure (shops, school, doctors etc) which means all residents have to travel into town on the busy A44 for everyday things. This is not the case for other sites in Woodstock.

* Would cause significantly more traffic travelling the whole length of A44 through Woodstock, as there are 120 houses planned, increasing Old Woodstock by 50%. Residents are likely to travel to work and school: Oxford, Water Eaton to London, Secondary School, Primary School and also schools in North Oxford, Kidlington, Eynsham. This is not the case for other sites in Woodstock.

* Existing parking problems in Woodstock would be made much worse as many residents will drive into Woodstock, due to distance and road conditions (please see point 4 below) being highly inappropriate for everyday safe pedestrian and cycle use. This is the harsh reality local residents know all too well and not the
case for other sites.

* Would worsen already serious safety concerns of the A44 which has extremely narrow pavements and very fast traffic. The documents proposing the site states that it has, ‘effective pedestrian and cycle links to the centre of Woodstock’. Those living here know this to absolutely NOT be the case. Old Woodstock just can’t take any more residential traffic, as well as at least a year of construction vehicles. Note incidents: van mounting pavement last year seriously injuring a teenager (head injuries), on Thursday 3rd November a Golf appeared to have been hit from the front opposite Hill Rise, with police in attendance. Also, police are regularly monitoring traffic speed exiting Woodstock, opposite Hill Rise. There any many reported incidents of HGVs regularly mounting the pavement on Manor Road. We are horrified by current conditions where we fear for our elderly, parents pushing buggies, teenagers and children.

* Old Woodstock already has a problem with schooling– Currently at capacity with Hill Rise children not getting in. Could go to 2 year intake ~ only 105 more places. 670 more homes = 200-300 primary children. Also, Hill Rise and any new development would be the last to get a place, so may have to travel (on A44) to Kidlington, Long Hanborough and Yarnton, thereby further exacerbating traffic concerns.

* Pollution levels on the A44 are already suspected to be over the levels permitted by the EU. Residents are in the process of trying to obtain more accurate levels.

* We could lose the use of the play area and football pitch for at the least a year, whilst construction takes place. Children are already at risk having to travel to Woodstock for schooling and other amenities and would then have to travel for play. In addition, it is unlikely that any proposed new play area would be as safe and easy to access for our children as the current site, not to mention whether it would include a half-sized football pitch which is currently in constant use by many members of Old Woodstock and greater Woodstock community.

* Removing a valuable piece of countryside from Woodstock would be intrusive and damaging for our community. An important, idyllic portion of the scenic walk to Wootton would effectively be destroyed. No carefully considered development would be able to avoid this repercussion. Views would be altered to far too great a degree.

* Very strong Old Woodstock community would be destroyed. This has been built up over many years due to the vicinity of the open space, green walkway, play area, footpath. This would be destroyed if open space was taken away. Also for walkers, dog walkers, safe for children. Has been this way for 20-30 years.

* Vermont Drive is far too narrow to support new and existing traffic.

In summary, the small historic town of Woodstock and in particular Old Woodstock, is already suffering with the recent housing development undertaken. Its infrastructure is extremely strained and on so many levels it cannot take any more development. I urge you to consider the issues listed above, which illustrate how the site to the Northeast of Hill Rise is extremely unsuitable for development.

Yours sincerely

Lucy Floyd (Mrs)
8 Vanbrugh Close, Woodstock OX20 1YB

---

MM277  Martin Galpin  -  Galpin  491  Document Full Path > SECTION 9 - STRATEGY

It was good to meet some of your colleagues at the public exhibition in Woodstock last week. It was very helpful to be able to discuss some of the proposed changes to the local plan in person.
As requested I am writing to share some of my concerns about the planned amendments for Woodstock, and in particular the Hill Rise site. There are a number of reasons why I believe this site inappropriate for development, the most significant of which are:

* Road and pedestrian safety

  * The volume of traffic on the A44, and the fact that it is used many large lorries, means that it is not appropriate for children (or less confident or experienced adults) to cycle to the town or school. This contributes to more journeys being made by car.
  * The footpath into the town is very narrow in places and very close to the road. As you may know, earlier this year a young woman suffered serious head injuries when a van mounted the pavement and knocked her down. As a parent I am already anxious about my children walking into Woodstock when they start secondary school next year, because there is no alternative route for them to walk.
  * The A44 near Hill Rise is a very busy road and is a major concern to me. Over the last 10 years we have seen several serious accidents very close to Hill Rise, with the air ambulance landing in the field (the proposed site for development) on more than one occasion and the road being closed by police numerous times. Within the last year a pedestrian was killed on the A44 not far north of Hill Rise.

* Parking

  * If new housing is to be built in Woodstock it would be helpful if it could be within easy walking distance to the town centre, along a safe route.
  * The distance of Hill Rise from the town, and the fact that that safety is a concern on the walk, means that most people this end of town will often drive in. We already have a shortage of parking in Woodstock meaning I often have to drive around the town several times in search of a space. Adding further housing without significant addition of parking would bring further disruption to the town and may further impact safety on the A44 – in recent months we have seen more cars parking on the A44 itself on the hill into Woodstock and near the Black Prince pub.

* School capacity

  Although we live exactly 1 mile from Woodstock Primary School, our children did not get a place at the school because it was full with children living closer. Even since the school increased capacity a few years ago, other children in Hill Rise have failed to get in.

Adding more houses in this part of the town would add further to this issue and result in more children being driven to schools further away.

Other concerns I have about the Hill Rise site include the potential loss (even temporarily) of the popular play area, loss of green space, increase in traffic and the lack of any kind of infrastructure in Old Woodstock.

Although I am less familiar with it, I also believe that the land north of Banbury Road is not suitable for development on the scale proposed. Traffic access through the town is difficult due to the narrow part of Hensington Road and the alternative routes out of the town are small country lanes that are not equipped for much more traffic.

I have fewer concerns specifically about the proposed site to the east of Woodstock, but do strongly believe that the town of Woodstock is already at capacity and will be impacted by additional development in the

MM288 |  | Mr and Mrs Brooks | - | Brooks | 503 | > SECTION 9 - STRATEGY AT THE LOCAL LEVEL > Eynsham Woodstock Sub Area > MAIN 166 | surrounding areas, e.g. Stonesfield, Bladon and Tackley. Adding any significant number of new homes to the town will need some major improvements to infrastructure such as doctors’ surgery, parking and schools.

Thank you for taking my views into consideration and for the communication about the proposed changes to the plan.

We believe that the land Northeast of Hill Rise is wholly unsuitable for development and therefore should not be included in the West Oxfordshire Local Plan, due to the following reasons:

* Old Woodstock has no infrastructure (shops, school, doctors etc.) which means all residents have to travel into town on the busy A44 for everyday things, which is not the case for other sites in Woodstock.

* This proposal will cause significantly more traffic travelling the whole length of A44 through Woodstock, as there are 120 houses planned, increasing Old Woodstock by 50%. Residents are likely to travel to work and school: Oxford, Water Eaton to London, Secondary School, Primary School and schools in North Oxford, Kidlington, Eynsham. This would worsen already serious safety concerns of the A44 which has extremely narrow pavements and very fast traffic. The documents proposing the site states that it has, ‘effective pedestrian and cycle links to the centre of Woodstock’. Those living here know this to be NOT the case. Old Woodstock just can’t take any more residential traffic, as well as at least a year of construction vehicles. Noted incidents: van mounting pavement last year seriously injuring a teenager (head injuries), on Thursday 3rd November a Golf appeared to have been hit from the front opposite Hill Rise, with police in attendance. Also, police are regularly monitoring traffic speed exiting Woodstock, opposite Hill Rise. Being a resident in this part of Hill Rise we have noticed over the 30 years we have been here the major increase in vehicles passing through the town and have been witness to many of the accidents that have occurred over the years. We also have to witness HGV’s and buses trying to turn round using this slip road, which is not big enough to take such vehicles and often they have to reverse back onto the main road which is a danger in itself. There any many reported incidents of HGVs regularly mounting the pavement on Manor Road. We are horrified by current conditions where we fear for our elderly, parents pushing buggies, teenagers and children.

* Existing parking problems in Woodstock would be made much worse as many residents will drive into Woodstock, due to distance and road conditions being highly inappropriate for everyday safe pedestrian and cycle use. This is the harsh reality residents know all too well and not the case for other sites.

* Old Woodstock already has a problem with schooling. - Currently at capacity with Hill Rise children not getting in. Could go to 2-year intake = only 105 more places. 670 more homes = 200-300 primary children. Also, Hill Rise and any new development would be the last to get a place, so may have to travel (on A44) to Kidlington, Long Hanborough and Yarnton, thereby further exacerbating traffic concerns.

* Pollution levels on the A44 are already suspected to be over the levels permitted by the EU. Residents are in the process of trying to obtain more accurate levels.

* We could lose the use of the play area and football pitch for at least a year, whilst construction takes place. Children are already at risk having to travel to Woodstock for schooling and other amenities and would then have to travel for play. In addition, it is unlikely that any proposed new play area would be as safe and easy to access for our children as the current site, not to mention whether it would include a half-sized football pitch which is currently in constant use by many members of Old Woodstock and greater Woodstock community.

* Removing a valuable piece of countryside from Woodstock would be intrusive and damaging for our community. An important, idyllic portion of the scenic walk to Wootton would effectively be destroyed. No carefully considered development would be able to avoid this repercussion. Views would be altered to far too

<td>Paul Sloan</td>
<td>Mr Sloan</td>
<td>S15</td>
<td>&gt; SECTION 9</td>
<td>I have reviewed the planning application and strongly believe that the land Northeast of Hill Rise is totally unsuitable for development and therefore should not be included in the West Oxfordshire Local Plan. As a resident and a former resident of Long Hanborough it is obvious the local area does not have the infrastructure to support the expansion planned. For Old Woodstock the traffic is already a major concern during peak times and weekends. An additional 120 homes would exacerbate this situation which would bring considerable safety and noise issues to the current residents who have already have to deal with dangerous pathways into the town centre. With children in the local school we already see the pressure on the current education system and adding</td>
</tr>
</tbody>
</table>

* Old Woodstock has no infrastructure and parking in the town is often problematic, with our main car park often being used by local villages to commute by bus into Oxford.

* Events in Blenheim have increased hugely over the years, creating more traffic problems on top of the high level of tourism that it brings.

* Woodstock residents are already facing huge problems placing their children in local schools, with Bladon recently having to increase its intake due to the high demand.

* 120 houses, with possibly more than 240 additional residents would put a significant strain on our doctors surgery, which is already struggling with the current demands.

* The playing area would be a huge loss for the children surrounding Hill Rise, and in fact the only facility that is currently on offer for residents without making the often unsafe journey on foot into the town.

* Other sites in Woodstock are better suited for this type of development, with proposed extra facilities.

* Countryside and wildlife, already diminishing at an outstanding rate throughout this country needs to be valued and preserved.

A few years ago planning was requested for a private house opposite us in Hill Rise, despite objections from other residents it still went ahead. In doing so it changed a detached house with one/two cars into two dwellings on occasions responsible for 6 cars, a lot parking halfway across the pavements on a daily basis. The dustbin lorry on one visit had to abort its journey due to the number of cars parked in the street, and we are just grateful that up to now emergency services haven’t been required in the evenings as access is often problematic. This is an example of how houses keep springing up in areas that were not originally designed for the extra number of cars per household and numerous waste collection bins that have become our normality.

Whilst I understand the demand from the government to increase the number of houses built in this country over the following years is a huge driving force, and that of course no one ever wants these developments in their back yard, I am not convinced that other options have not been explored fully. It also feels that the general public no longer have a voice in having our landscapes changing constantly around us and not always for the best.

I appreciate you taking your time to read this and would be very grateful if you could consider these important factors before deciding on this huge project, and the implications that would effect so many of our lives for years to come.
Further pressure would no doubt not only affect our children’s education, but put unnecessary strain on the schools due to the extra demand any expansion would bring.

Finally I moved to this location for the countryside and living standards for my family to enjoy after spending my former years in major cities. I understand the need for extra housing in the area, but without the relevant infrastructure, schools, roads, public transport, lack of cycle lanes, parking, doctors, dentist… I could go on, the thought of adding to the strain onto a system that is already stretched beyond its capabilities is short sighted, dangerous, and a risk to the community of Woodstock.

I believe that the land Northeast of Hill Rise is wholly unsuitable for development and therefore should not be included in the West Oxfordshire Local Plan, due to the following reasons:

- Old Woodstock has no infrastructure (shops, school, doctors etc) which means all residents have to travel into town on the busy A44 for everyday things. This is not the case for other sites in Woodstock.

- Would cause significantly more traffic travelling the whole length of A44 through Woodstock, as there are 120 houses planned, increasing Old Woodstock by 50%. Residents are likely to travel to work and school: Oxford, Water Eaton to London, Secondary School, Primary School and also schools in North Oxford, Kidlington, Eynsham. This is not the case for other sites in Woodstock.

- Existing parking problems in Woodstock would be made much worse as many residents will drive into Woodstock, due to distance and road conditions (please see point 4 below) being highly inappropriate for everyday safe pedestrian and cycle use. This is the harsh reality local residents know all too well and not the case for other sites.

- Would worsen already serious safety concerns of the A44 which has extremely narrow pavements and very fast traffic. The documents proposing the site states that it has, ‘effective pedestrian and cycle links to the centre of Woodstock’. Those living here know this to absolutely NOT be the case. Old Woodstock just can’t take any more residential traffic, as well as at least a year of construction vehicles. Note incidents: van mounting pavement last year seriously injuring a teenager (head injuries), on Thursday 3rd November a Golf appeared to have been hit from the front opposite Hill Rise, with police in attendance. Also, police are regularly monitoring traffic speed exiting Woodstock, opposite Hill Rise. There any many reported incidents of HGVs regularly mounting the pavement on Manor Road. We are horrified by current conditions where we fear for our elderly, parents pushing buggies, teenagers and children.

- Old Woodstock already has a problem with schooling– Currently at capacity with Hill Rise children not getting in. Could go to 2 year intake = only 105 more places. 670 more homes = 200-300 primary children. Also, Hill Rise and any new development would be the last to get a place, so may have to travel (on A44) to Kidlington, Long Hanborough and Yarnton, thereby further exacerbating traffic concerns.

- Pollution levels on the A44 are already suspected to be over the levels permitted by the EU. Residents are in the process of trying to obtain more accurate levels.

- We could lose the use of the play area and football pitch for at least a year, whilst construction takes place. Children are already at risk having to travel to Woodstock for schooling and other amenities and would then have to travel for play. In addition, it is unlikely that any proposed new play area would be as safe and easy to access for our children as the current site, not to mention whether it would include a half-sized football pitch which is currently in constant use by many members of Old Woodstock and greater Woodstock community.

- Removing a valuable piece of countryside from Woodstock would be intrusive and damaging for our
community. An important, idyllic portion of the scenic walk to Wootton would effectively be destroyed. No carefully considered development would be able to avoid this repercussion. Views would be altered to far too great a degree.

* Very strong Old Woodstock community would be destroyed. This has been built up over many years due to the vicinity of the open space, green walkway, play area, footpath. This would be destroyed if open space was taken away. Also for walkers, dog walkers, safe for children. Has been this way for 20-30 years.

* Vermont drive is too narrow to support new and existing traffic.

In summary, the small historic town of Woodstock and in particular Old Woodstock, is already suffering with the recent housing development undertaken. Its infrastructure is extremely strained and on so many levels it cannot take any more development. I urge you to consider the issues listed above, which illustrate how the site to the Northeast of Hill Rise is extremely unsuitable for development.

1. The existing Barn Piece estate has 112 houses, and the proposed new development would more than double that development, making Old Woodstock a much more crowded area, taken together with Hill Rise and Manor Road (a further 170 existing houses).

2. Old Woodstock has no infrastructure (no shops, no schools or doctors etc) and the proposed site is approximately one mile from the town of Woodstock, accessed only by the busy A44.

3. Footpaths bordering the A44 between Old Woodstock and Woodstock town are narrow, and pedestrians, including mothers with pushchairs, often seem at risk from heavy vehicles and fast moving traffic. Pedestrian and vehicular traffic from the proposed new development would increase safety concerns considerably.

4. The primary school is already over-subscribed, and children from the new development would be unlikely to find places there, resulting in car journeys to other towns and villages. The Marlborough School is almost 2 miles from the proposed site, approached only by the A44 and the town centre.

4. These aspects alone – lack of infrastructure, limited safe access to the town and overcrowding of the area - make this site unsuitable for a development of this size.

6. The proposed access to the new development is via Vermont Drive is also the only access to the existing Barn Piece estate, and a bus route and terminus. It is a residential road, about 100 yards long and 17 feet wide.

There are 10 buses a day (8 on Sunday) which reverse at the junction with Rosamund Drive, and wait in Vermont Drive for an average of 6-7 minutes each. At the time of bus visits, one way traffic only is possible in Vermont Drive, and HGVs passing the bus have to use the pavement. Vans, lorries, coaches and cars often use the Rosamund Drive and Vermont Drive junction to reverse and turn back towards the town. At busy times, when residents are leaving for work or returning home, Vermont Drive and this junction already cannot cope with existing levels of traffic.

7. Vermont Drive is too narrow to support both existing traffic and the extra traffic the proposed development would bring.

7. The suggestion that another access to the proposed site could be made from the A44 north of Hill Rise seems impractical. The A44 is too narrow to allow for right turning traffic in a 50mph limit, and major alterations to Hill Rise would be necessary to arrange an opening from the very narrow service road there.
8. The children's play area at the end of Rosamund Drive, now intended for closure to give access to the new development, has a special significance for Old Woodstock residents, and will be a tragic loss. In 2013 it was saved from closure when Blenheim Estates purchased the field, following strong local protest and newspaper coverage. It seems unlikely that the play area, together with its associated half-sized football pitch for children, can be re-located within the new development so as to be as accessible and popular as it is now.

8. Above all, the new development would remove a piece of countryside, with a town to town public footpath running through it, which has become important to all local people, particularly those with houses bordering the field. The footpaths along three sides of the field have been used by local families for decades, as shown by a recent Town Council survey identifying well used local paths. The loss of countryside to Old Woodstock would be significant and intrusive.

<td>&gt; SECTION 9</td>
<td>I believe that the land to the North East of Hill Rise is wholly unsuitable for development and I therefore object to the proposal being included in the West Oxfordshire Local Plan for the following specific reasons: I am concerned that any development of land North of Hill Rise in Old Woodstock will result in an overloading of both the provision of “run-off” water systems and the existing single sewer arrangement for foul waste. As a resident of Old Woodstock, I have seen with my own eyes the run-off water from the existing road system of the Barn Piece estate forming a “lake” around the green space in Westland Way. At the time, the only option to prevent the houses on the South side flooding was for residents to lift the lid on the foul drain to reduce the water level. This flood risk will be considerably increased by ‘building over’ the field with materials which inhibit water absorption. The sewer has also failed by blockage several times over the last two years; on one occasion discharging raw sewage into Blenheim Lake via the Seven Arches bridge for several days at the end of May 2016 (2 weeks before the Blenheim Triathlon swim/run/bike event) and on another flooding my own premises with sewage as the foul waste of the whole of the existing Barn Piece estate rose in my downstairs bathroom (Photographic evidence available on request). I have further concerns in respect of the safety of children, particularly of primary school age, whose current pedestrian route is along the A44. When my own children were of this age, a bus service was provided due of the well-understood hazards of this road. A44 traffic levels have not reduced in the intervening seven years, but the bus service has been withdrawn by the Council and in the current financial climate this is unlikely to be restored. The A44 pinch-point 20m North of the converted St. Andrews Church is regularly littered with the broken mirrors and wheel trims resulting from minor HGV collisions and pavement clipping/mounting; the pavement is only 70cm wide at this point on the West side. Additional traffic generated by the proposed development will worsen an already poor situation. To conclude, I believe the infrastructure of Old Woodstock is not capable of dealing with an additional development of this size.</td>

<td>&gt; SECTION 9 - STRATEGY AT THE LOCAL LEVEL &gt; Eynsham Woodstock Sub Area &gt; MAIN 166</td>
<td>I am writing to express my concerns and views around the proposition of 120 homes being built on the land North of Hill Rise outlined in the Local Plan. As a resident of Old Woodstock I have become increasingly concerned about road safety in the area and the lack of suitable footpaths and pavements for pedestrians to travel to town by foot. This has worsened considerably in the last few years due to weight of traffic utilizing the A44 and the size of the vehicles that frequent this particular part of road. Any further development of Old Woodstock would increase the risks associated with foot traffic and the risk of a fatal accident would be hugely increased. The increase in traffic and development traffic would also increase the number of vehicles using this stretch of road. On a wider related issue, due to my concerns above, I believe we would see a far greater number of cars travelling from old Woodstock to use Woodstock town thus creating more issues with parking and infrastructure.</td>
<td></td>
</tr>
</tbody>
</table>

Certainly impact on the peaceful enjoyment of our home and garden, causing noise and light pollution.
Terrace Road is already a busy and congested road; this additional concentration of traffic and roadside parking will cause traffic problems and create a safety hazard for other motorists.
The local area will be without a football pitch and play area for the local children. The nearest one after this is over 15mins away.
Would worsen the already serious safety concerns of the A44 which has extremely narrow pavements and fast traffic. Traffic in woodstock is already bad and adding more housing in this area will present a danger to pedestrians and help to worsen the existing traffic on the A44.
Woodstock simple does not have the facilities to cope with the increase in population of this size. Schools are already difficult to get into, the doctor's surgery and it would cause unnecessary strains on the shops, services and parking in the town center.
It would remove a valuable piece of the countryside. As a dog owner who has lived over 20 years in Hill Rise, I have enjoyed the idyllic countryside view from my house and the scenic walk. All of this would be destroyed by the development.
Therefore, we ask that WODC to refuse this Planning Application.

<td>Stan Scott</td>
<td>Mr Scott</td>
<td>644</td>
<td>&gt; SECTION 9 - STRATEGY AT THE LOCAL LEVEL &gt; Eynsham Woodstock Sub Area &gt; MAIN 166</td>
<td>Many of my friends and local Woodstock people don't now use the town due to the influx of tour buses and tourists which make the Woodstock experience horrific for parking and general traffic. The land proposed for development is an integral part of the Old Woodstock community and families, friends and dog walkers regularly gather together to spend time in the playground and wider fields. This is what Living in Woodstock should be centred around and any development would be detrimental to the daily lives of a huge number of people. The countryside around Woodstock is extremely valuable and any loss of this countryside is extremely intrusive and damaging for our small community. I am presuming the entry point for this development would be Vermont Drive which is already too narrow to carry existing traffic levels and utilization of this road as an entry point would have a significant impact on its residents particularly during the development of the proposed site. I urge you to consider my comments on this matter along with the comments and thoughts proposed from the wider community. Woodstock has tremendous historic value and is a town which many people feel proud to call home and the ongoing and proposed development is changing the face of our fantastic town.</td>

<tr>
<td>MM345</td>
<td></td>
<td>Steve New</td>
<td>Dr New</td>
<td>646</td>
<td>&gt; SECTION 9 - STRATEGY AT THE</td>
<td>Further to my letter dated 8 December, an additional and important consideration has arisen with respect to the inclusion in the Local Plan of land north east of Hill Rise in Old Woodstock. This relates to two additional bus services visiting Vermont Drive, the preferred access to the proposed site. Vermont Drive is 17' wide and about 100 yards long, and is the only access road to the existing Barn Piece estate of 112 houses. As well as resident’s vehicles, delivery vehicles and construction vehicles to the various sites already on the estate, there are currently 10 (Service S3) buses a day, entering Vermont Drive from the A44, reverse in Rosamund Drive and return to Vermont Drive, each bus waiting for a few minutes at the stop there. Whilst a bus or other heavy vehicle is using Vermont Drive, another cannot pass it without using the pavement. On 11 December 2016, the Oxford Bus Company commenced a new bus service (Service 500), operating from Woodstock to Oxford via Kidlington and Summertown. These now visit Vermont Drive on a half hourly basis, often at the same time as the S3 service, with the accompanying difficulty of passing safely. On 3 January 2017, Stagecoach are to commence another new service (Service 7) from Old Woodstock to Oxford, also visiting Vermont Drive at half hourly intervals. Frequent and regular bus services to Old Woodstock are welcome and valuable, but it can be seen that Vermont Drive is to become very busy indeed, before the addition of construction traffic or vehicles associated with a new community on land north east of Hill Rise proposed in the Local Plan. Suggestions that alternative or additional access to the proposed site could be made from the busy and dangerous A44 beyond the boundaries of Woodstock, or by transforming the narrow service road adjacent to Hill Rise, seem costly and impractical in real terms. For many reasons, including those above, this site is seen locally as entirely unsuitable for development, and should be deleted from the Local Plan. I'm writing to offer some views about the proposed changes to the Local Plan - and in particular the idea of more housing in the area to the North/East of Hill Rise in Old Woodstock.</td>
</tr>
</tbody>
</table>
My concerns regarding any substantial new development are as follows.

The playing field and playground are important local amenities and are central to the life of the local community. For several years local residents have gathered here for informal, fete-like activities (the last was to celebrate the Queen's 90th birthday). These are substantial, community driven local events that involved running races, rounders, cake competitions, Aunt Sally etc, and dozens of local families. We had a display of historical pictures of Hill Rise and the locality by a local historian. My children make and have made extensive use of the little football pitch and the playground - it's the centre of our local lives. Anything that diminished this facility would be a tragedy for the local community.

The field which lies immediately behind Hill Rise is an important recreational amenity in its own right - there is path that leads diagonally across the field which is lined by hollyhocks - I understand these were planted by a local person some years ago to commemorate a deceased friend. For a long period from the summer to the late autumn, the pathway provides a glorious display of colour - it's breathtakingly beautiful - which for many hundreds of walkers, ramblers and joggers forms a joyous passage across to Wootton.

In addition to these issues, I am worried about the expansion of Woodstock housing without a commensurate growth in essential infrastructure and facilities. The primary school in Woodstock is seriously over-subscribed, and the tiny school in Wootton is under sever financial pressure. The secondary school has limited capacity for expansion. The doctor's surgery is strained to the limit. It is becoming impossible to park in Woodstock. In Old Woodstock, we have no shop. The road into Woodstock - the A44 - is a heavily used road with extraordinarily narrow pavements. It is a dangerous road, and there have been accidents: my children are not able to cycle unaccompanied.

Finally, substantial development in the north of Woodstock would undoubtedly result in further congestion into and from Oxford along the A44.

My main concern about the inclusion of the land north east of Hill Rise in the plan is the impact on traffic which is already an issue on this particularly dangerous stretch of the A44. Since living in Old Woodstock there have been some very serious accidents on this road, it is not a safe road to walk alongside or cycle on. An increase in traffic due to significantly increased housing will only increase the risks. The pavements leading into Woodstock are, in places extremely narrow and dangerous (particularly by the Black Prince,) increased traffic will only make this worse. There are many families with children in Old Woodstock which would increase dramatically with 120 new houses, the only way for them to walk to school is along this stretch of the A44.

The primary school in Woodstock is at capacity, as it was when my children started school. We had no choice but to place them at Wootton School, meaning we have had to drive them to and from school every day for the last 6 years, taking them away from their local community, their friends are not in Woodstock, this was not a choice we made for them, we had no choice. Woodstock did increase their intake a few years ago but are again at capacity, with children in Hill Rise again not getting places this year. They have very little room on site to keep on increasing their intake, the school isn't big enough now and this is without any of the new housing that is being planned.

Another concern is the impact increased housing will have on the infrastructure in Woodstock. It is already almost impossible to park in the town. This causes problems, for example getting to the doctors surgery for appointments and being able to shop there.

I would be grateful if you could consider the points above, which I believe make the land north east of Hill Rise an unsuitable place to build new housing.

| MM378        | Woodstock Action Group | Woodstock Action Group | Dr               | McGurrin         | 763        | > SECTION 9 - STRATEGY AT THE LOCAL LEVEL > Eynsham Woodstock Sub Area > MAIN 166 | On the 16 July 2012 the Woodstock Town Council received an eviction notice from solicitors of Caledonia Property, Ltd giving WTC until August 28, 2012 to vacate the children’s playground at Rosamund Drive, Old Woodstock. Mayor Yoxall planned to meet with Mr. Charles Cayzer of Caledonia property, Ltd in September 2012 in an effort to secure the long-term future of the playground area and football pitch.  
(Source: Minutes of WTC Meeting, 14 August 2012)  
Mayor Yoxall reported, “The Town Council is right behind the residents of Old Woodstock in their efforts to resist the possibility of developers Caledonia Land and Property Limited depriving them of their playground . . . but also of possible housing development on the adjoining field.”  

b. Minutes of Annual Town Meeting, 19 March, 2013  
The Mayor (Yoxall) reported that the notice to quit the Old Woodstock Play Area was withdrawn following protests from the Woodstock Town Council and a large number of residents. He also reported that the play area and the adjoining field are being sold to the Blenheim Estates and “so it has had a happy outcome as they intend to preserve both.”  
Unfortunately, this “happy outcome” has become a not so happy outcome as a result of becoming an allocation site in LP2031.  
c) Woodstock Town Council Meeting, 14 May 2013  
On this date the Town Council heard the serious concerns of Hill Rise residents about this proposed development by the Blenheim Estate, owners of this site. A resident’s petition (115 signatures) was presented and forwarded to the WODC. It was RESOLVED that the WTC object to this planning application and found that the proposed development would result in the loss of an important visual gap on the edge of the Woodstock Conservation Area and that it was a “safe access route for children in the Old Woodstock Play Area.”  
NOTE: The “visual gap” referred to is the logical access to the farmland to the rear of Hill Rise owned by Blenheim Estate for the Land North of Hill Rise (120 houses) allocated in Draft LP 2031.  
The site in question is used by residents to access the rear entrances to their properties and for recreational purposes i.e., dog walkers and ramblers. Children use the “gap” to walk to and from the playground avoiding the main road. The proposed allocation would remove the present playground to a more distant site and conceivably alter the safe route that children use to access the play area.  
Since there are no facilities for shopping, medical care or schools at Hill Rise, this would require the need to |

| MM343         |                         | Stan Scott     | Mr              | Scott             | B22        | > SECTION 9 - STRATEGY AT THE LOCAL LEVEL > Eynsham Woodstock Sub Area > MAIN 166 | I write to suggest that the land bordered by Hill Rise and Vanbrugh Close in Old Woodstock should not be included in the West Oxfordshire Local Plan.  
* The proposed site is remote from the town, and will make a compact, overcrowded area without proper links to the town and other infrastructure.  
* The existing Barn Piece estate has 112 houses, and the proposed new development would more than double that development, making Old Woodstock an overdeveloped area, taken together with Hill Rise and Manor Road (a further 170 existing houses).  
* Old Woodstock has no infrastructure (no shops, no schools or doctors etc) and the proposed site is approximately one mile from the town of Woodstock, accessed only by the already busy A44.  
* Footpaths bordering the A44 between Old Woodstock and Woodstock town are extremely narrow, and pedestrians, including mothers with pushchairs, often seem at risk at present from heavy vehicles and fast moving traffic. More pedestrian and vehicular traffic from the proposed new development would increase safety concerns considerably. (see photos)  
* The primary school in the town is already over-subscribed, and children from the new development would be unlikely to find places there, resulting in car journeys to other towns and villages. For older children, the Marlborough School is almost 2 miles from the proposed site, approached only by the A44 and the town centre. There is no other route to local schools other than the busy A44 with heavy lorries and narrow pavements. |

<td></td>
<td>M J Allsopp</td>
<td>-</td>
<td>893</td>
<td>&gt; SECTION 9 - STRATEGY AT THE LOCAL LEVEL &gt; Eynsham Woodstock Sub Area &gt; MAIN 166</td>
<td>The proposed development of the 'Land North of Hill Rise' in Old Woodstock by erecting 120 houses cannot be justified when infrastructure and increased traffic implications are considered. Absence of schools, shops and employment in Old Woodstock would greatly increase traffic in to Woodstock and beyond via the A44. The narrowness of this road and associated footpaths on the descent from Old Woodstock is already extremely dangerous with rear view mirrors (of vehicles) encroaching a head height over the footpaths. Another potential danger is the very high stone wall on the on the left of this descent. The trees planted behind the top of this wall will destabilize the wall by root growth. Vibration caused by traffic obviously increases the significant danger from collapse. Vermont Drive and Rosamund Drive are typically narrow residential roads built in the 1960s and are the only:</td>
</tr>
</tbody>
</table>

* These aspects alone – lack of infrastructure, limited safe access to the town and overcrowding of the area - make this site unsuitable for a development of this size, I believe.

* The proposed access to the new development via Vermont Drive is also the only access to the existing Barn Piece estate, and a bus route and terminus. It is a residential road, about 100 yards long and only 17 feet wide. The bus service is highly valued locally.

There are 10 buses a day (8 on Sunday) which reverse at the junction with Rosamund Drive, and wait in Vermont Drive for a few minutes each. At the time of bus visits, one way traffic only is possible in Vermont Drive, and HGVs passing the bus have to use the pavement. Vans, lorries, coaches and cars often use the Rosamund Drive and Vermont Drive junction to reverse and turn back towards the town. At busy times, when residents are leaving for work or returning home, Vermont Drive and this junction already cannot cope with existing levels of traffic.

* Vermont Drive is too narrow to support both existing traffic and the extra traffic the proposed development would bring.

* The suggestion that another access to the proposed site could be made from the A44 north of Hill Rise seems impractical. The A44 is too narrow to allow for right turning traffic in a 50mph limit, and major alterations to Hill Rise would be necessary to arrange an opening from the very narrow service road there.

* The children’s play area at the end of Rosamund Drive, now intended for closure to give access to the new development, has a special significance for Old Woodstock residents, and will be a tragic loss. In 2013 it was saved from closure when Blenheim Estates purchased the field, following strong local protest and newspaper coverage. It seems unlikely that the play area, together with its associated half-sized football pitch for children, can be re-located in its present form within the new development so as to be as accessible and popular as it is now.

* Above all, the new development would remove a piece of countryside, with a town to town public footpath running through it, which has become important to all local people, particularly those with houses bordering the field. The footpaths along three sides of the field have been used by local families for decades, as shown by a recent Town Council survey identifying these as well used local paths familiar to local people of the present time and generations past. The loss of countryside to Old Woodstock would be significant and intrusive.

* The prospect of the loss of a well loved green field for overcrowded development seems tragic and unnecessary. More houses are needed, but not just where someone is prepared to sell a green field, development only on carefully considered appropriate sites.

| MM405 |  | Audrey Allsopp |  | Allsopp | B95 | > SECTION 9 - STRATEGY AT THE LOCAL LEVEL > Eynsham Woodstock Sub Area > MAIN 166 | vehicular access to the 150 or so houses of the Barn Piece Estate. Even to consider the use of these roads for access to another 120 houses by probably an extra 200 vehicles or more is really beyond belief. Footpaths mounting by vehicles passing one another is already a danger to pedestrians and it should be recognised that the houses of Barn Piece are ideal first or last family homes. Therefore the residents are mainly young or elderly persons.

The above matters, when seriously considered together with other very valid points raised by other objectors, should clearly indicate the totally unsuitable nature of this development and proposed means of vehicular access.

I believe the proposed site for development in Old Woodstock would be a grave mistake and my reasons are as follows.

1) The road on A44 is already dangerous, the road and pavements are narrow and the mirrors on large lorries often overlap the pavements causing pedestrians great risk.

2) Vermont Drive is too narrow for the many large vehicles who invariably use the pavements to pass other cars, lorries and buses. This road is used daily as access for cars, coaches and lorries.

3) The pavement on the fast side of the A44 has a large high wall on which many trees grow and overhang both behind and over this wall, the roots must therefore grow behind and into the wall, causing bulging and will surely cause some form of collapse one of these days.

4) More houses mean many more cars entering Woodstock town where it is almost impossible to park now and difficult to get to the doctors and shops for people who find walking impossible.

5) To cycle, push a buggy or ride on a handicap vehicle in the A44 road to Woodstock town is very very dangerous and for children walking to school almost life threatening as often parked cars make the matter worse.

On the opposite side of the A44 the pavement is almost non-existent in one place.

We need affordable houses but surely safety must come first and foremost.

Thank you for considering this letter. |
| MM407 |  | Clare Evans | Mrs | Evans | B98 | > SECTION 9 - STRATEGY AT THE LOCAL LEVEL > Eynsham Woodstock Sub Area > MAIN 166 | I oppose the proposed development behind Hill Rose for these reasons.

1) This would greatly increase the traffic going towards Oxford. The road is extremely busy, particularly at rush hours, and the extra traffic would further clog up Woodstock town centre, and increase pollution levels.

2) It is claimed that the site has “effective pedestrian and cycle links to the centre of Woodstock.” This is just not true. There is no specified cycle link. There is a very busy, in places very narrow, main road. Large vehicles take up all one side of the road and sometimes stay across the centre. The pavements are narrow, in some places less than 0.79m wide, windows overhang and doorsteps have to be avoided.

3) Parking in Woodstock is impossible at times and even the car park gets full, so people have to go elsewhere for their shopping - more travel - more pollution.

4) Children approaching school age are being turned away from the infants school, thus having to go to schools further afield - more travel in cars. |

| MM418         |                         | J E Becker     | Mrs             | Becker            | 929        | > SECTION 9 - STRATEGY AT THE LOCAL LEVEL > Eynsham Woodstock Sub Area > MAIN 166 | 5) Surely we shouldn't be building on good farming land, in such a beautiful area. I thought such areas would be protected and brownfield sites used instead.  
6) The CPRE has questioned the need for all these houses in Oxfordshire.  
I think it is a grave mistake to assume that Woodstock can take yet more housing, when the infrastructure is as strained as it is. It is a unique and historic town and deserves protection. |
| MM420         |                         | Charlotte Evans| Ms              | Evans             | 932        | > SECTION 9 - STRATEGY AT THE LOCAL LEVEL > Eynsham Woodstock Sub Area > MAIN 166 | I am writing to express my deep concern about the proposed development at Hill Rise in Woodstock.  
I moved to my home three years ago, attracted by the community, the facilities and beautiful green surroundings. However, I have already discovered that Old Woodstock already has many problems such as traffic and the infrastructure for schools, doctors etc. Consequently, the increase of 120 more houses fills me with great trepidation.  
The speed and volume of traffic on the A44 is already frightening. Walking into Woodstock on the two very narrow pavements is extremely dangerous. The idea of Vermont Drive being the main entry road is totally preposterous. It is already often difficult to access with cars and the bus entering and leaving.  
We all know that the schools in Woodstock are full to capacity, so where you are planning to place the extra children from new facilities is very puzzling. The doctor's surgery already struggles to cope with the numbers and to provide us with their excellent service. I fear the strain on the staff with such an increase in patient numbers will be devastating.  
We frequently hear from our government and councillors that we need to get children away from computers and out doors exercising. Children here constantly use the park and football pitch - so how hypocritical to suggest removing it.  
We all know that it is very difficult to get the views of residents heard by committees of all kinds, but I implore you to think long and hard about the dreadful impact on the community if you go ahead with the Hill Rise development. |
| MM421         |                         | Richard Evans  | Mr              | Evans             | 935        | > SECTION 9 - STRATEGY AT THE LOCAL LEVEL > Eynsham Woodstock Sub Area > MAIN 166 | I am aware the WODC are considering the land behind Hill Rise as a potential site for new houses. I believe this area to be very unsuitable for more houses.  
The traffic this would cause on the A44 between Old Woodstock and Woodstock is already very dangerous given the volume of traffic and lack of sufficient pathways.  
My daughter walks to school sometimes, but we are already very worried about the closeness of the vehicles on the road. I myself have seen the HGVs having the mount the curb several times when there is another coming in the opposite direction. |

<td>&gt; SECTION 9 - STRATEGY AT THE LOCAL LEVEL &gt; Eynsham Woodstock Sub Area &gt; MAIN 166</td>
<td>We believe that the land north of Hill Rise is not suitable for development and should not be included in the West Oxfordshire Local Plan. There are no shops, school, or doctor in Old Woodstock and the A44 into town is too busy now so 120 new homes (240 people plus), cars travelling to places of work and taking children to school would make it even worse. Parking in Woodstock now is bad so more cars would make it much more difficult to park. A44 is a very busy road very fast and very narrow pavements. HGVs now find passing bad and many mount pavements. There are not enough places in the local school, also this proposed site is 2 miles away from Marlborough School. Buses turn in Vermont Drive and Rosamund Drive making the junction very busy at the bus visit times, so more cars turning from A44 into and out of Vermont Drive to get to the proposed site would make this road a nightmare. The children’s play area and football pitch would be lost for many months. Children already travel to school and other amenities and would then not have a play area, and it is unlikely that a new play area would be as safe and easy to access for children as the current site. The new development would remove a piece of countryside which has a public footpath running through. This is most important to local people. The footpaths along 3 sides of the fields have been used for years by locals. Development should be carefully considered an appropriate sites.</td>

<td>3) The area contains a playground which we use regularly. It will become overpopulated with 120 new houses and unusable if a construction site. I am writing to you because of something I feel passionate about and am concerned about, the plan to build 120 houses at the back of Hill Rise. Firstly the infrastructure of Woodstock isn’t built for a 50% increase in houses, there would be major traffic increasing the risk of serious accidents involving school children walking to and from school. Another very serious problem would be pollution - this would increase dramatically which would affect our health and seeing as the doctor’s surgery can’t support a lot of people would be a struggle. Pollution levels are already over what they should be on the A44. The housing would also affect wildlife and ruin children growing up with the natural world. Overall, I think it’s unrealistic and fictitious to ruin such a wonderful area in which I have grown up for the past couple of years.</td>

<td>&gt; SECTION 9 - STRATEGY AT THE LOCAL LEVEL &gt; Eynsham Woodstock Sub Area &gt; MAIN 166</td>
<td>I have heard about the plans for building more houses on the football field, and I do not think it is the right place to do it for the following reasons: We would lose a regular opportunity to meet and play with local residents, which would be prolonged for at least a year. Also, a couple of years ago, a roundabout was added, and at least it would have to be taken down to allow access to the new houses, which would be very upsetting. If a road was constructed, it would be creepy being watched by unfriendly eyes. I have also heard of several accidents on the road to old Woodstock. The extra traffic which the new houses necessitate will dramatically increase them, and the traffic will create a huge amount of noise. My sister and I</td>
</tr>
</tbody>
</table>
walk into old Woodstock for Christmas shopping, and it would be both annoying and upsetting if we could not carry on for safety reasons. Can you please consider these reasons?

Please don't build on our play park.
The entire child population of old Woodstock play football and hone their skills on the football pitch. You may well be depriving the world its next Rooney or Shearer if you go ahead with plans to build there.

A substantial amount of new housing is proposed as part of these allocations. The Council should also undertake a playing pitch strategy to determine what level of new outdoor and indoor sports provision is required to support the new housing. Please contact Sport England for assistance.

I support the general thrust of the modification to the local plan. In commenting on the SHLAA consultation in February 2016 I urged WaDC to increase its housing allocations to more closely reflect the SHLAA assessment. I am therefore delighted to see a significant increase in housing allocations for Woodstock. Woodstock desperately needs new housing and the infrastructure that it will generate. Woodstock is amongst the most sustainable of West Oxfordshire service centres as demonstrated by the WODC Settlement Sustainability report. However, I believe that the total housing numbers for Woodstock must take account of land in Cherwell District Council which may also be zoned for development. It is not realistic (it is unsound) to view the CDC and WODC proposals in isolation. Woodstock is one community and the District Council boundary does not represent a boundary of local community identity. It is one community and future planning policies must be developed in the light of this reality.

I support the allocation of 670 new homes in Woodstock over the plan period. However, the distribution and location of those homes must be jointly, agreed between WODC and CDC and in further consultation with the local community. It could mean all 670 homes being built on the Woodstock East site (part within WODC and part within CDC) or the total allocations could be split between the sites identified in both COC’s and WODC’s proposed modifications.

"9.5.41t Vehicular access can be achieved via Banbury Road and the site is within comfortable walking and cycling distance of the centre of Woodstock providing the opportunity for effective pedestrian and cycle
Whether or not vehicular access can be achieved with the site interface, this is with a local rural network that is not appropriate for additional traffic generated in this location in order access to and from the strategic network, in this case the A44.

The junction between the A44 and Hensington Road (where the additional traffic would route, as this is also the access to and from Woodstock Town Centre) is a priority junction. For approximately 100 metres leading away from this junction along Hensington Road is a shared surface arrangement capable of a single directional flow of traffic, due to the historical building constraints on either side. This is managed by a give way arrangement at the Union Street end of the scheme; however, there is often conflict as a result of this give way being ignored or misjudged given the length of the scheme. This often results in the footway area being mounted for vehicles to be able to pass, causing conflict with pedestrians. Additional traffic impact resulting from the site can only exacerbate problems with this access to the strategic network and Woodstock town centre that would not be appropriate for a new development.

In terms of the walking and cycling distance of the centre of Woodstock providing the opportunity for effective pedestrian and cycle links being comfortable, this is not the case as areas of the site are over 1km away.

**Manual for Streets** states:

"4.4.1 Walkable neighbourhoods are typically characterised by having a range of facilities within 10 minutes’ (up to about 800 m) walking distance of residential areas which residents may access comfortably on foot."

Indeed the closest bus stops at the Marlborough Arms on the A44 are also over 1km away for some of the site and 400m is generally regarded as a maximum acceptable walking distance for bus services.

Cycle facilities are also lacking in the area, connecting the site with the town centre and onward to Bladon Roundabout.

As a result, 9.5.41t is not a factual description of the proposed site allocation north of Banbury Road, Woodstock.

In terms of the statement...

"9.5.41t Importantly a residential scheme in this location would also provide the opportunity to deliver improved vehicular access to the Owen Mumford employment site allowing for a more direct connection between Green Lane and Banbury Road than currently exists."

...it is unclear why a connection through the site would be beneficial to Owen Mumford.

I object to MAIN168 for the reasons given above.

<td>unavoidably involves traffic of all kinds (including pedestrians and cycles) using Hensington Road, which is sufficiently narrow and constrained that it is designed to function as a shared surface. The egress into Oxford Road has limited sight lines, and the capacity of the junction is evidently highly constrained. An alternative route for cars to leave the site involves using Shipton Road, past the Marlborough School. This route is also particularly pressured not least with school buses at school opening and closing times. Footways are of limited width, as is the carriageway itself. Despite the statements made at para. 9.4.41 (u) it appears that transport and access arrangements will need very particular care and attention to avoid the site giving rise to significant traffic impacts. While in landscape and in terms of urban form the site appears relatively unconstrained, movement and access look as if they will need a great deal more careful consideration. The allocation could prove to be sound but Stagecoach has some reservations.</td>

<td>Similarly, the causes of climate change and reduced greenhouse gas emissions will not be addressed through the allocation of this site owing to the likely increased car journeys. Soil and water resources will not be protected or improved as a result of this allocation as it is greenfield. Moreover, the site is designated a Surface Water Safeguard Zone by the Environment Agency. WODC needs to be sure that development will not impact on water quality and resources. The site is again on the edge of a settlement, within close proximity to the Blenheim Palace World Heritage Site, a Registered Park as well as listed buildings. The full impacts have again not been assessed so it is difficult to see how the site can be allocated. This site was also considered during the preparation of the current adopted Local Plan 2011 but was again rejected over highway concerns and impacts on local amenity. Indeed the Inspector in his 2004 report stated that development of the site: “would result in an unacceptable incursion into the open wold landscape to the north of the town. In addition, unlike Housing Proposal 3 (Shipton Road - now built), most of the traffic generated would pass through the town to the detriment of the free flow of traffic and the character of the Conservation Area” Historic England has no comments on the principle of the allocation of Land north of Banbury Road, Woodstock, but we welcome and support criterion d) regarding the setting of the Blenheim Palace World Heritage Site.</td>

<td>Proposed erection of 250 new houses North of Banbury Road, Woodstock I write in connection with the above planning application. I have examined the plans and I know the site well. I wish to object strongly to the development of these houses in this location. Woodstock is where development proposals should be considered very carefully: infilling could ruin the character of the town while estate development would overwhelm it. The protection of Woodstock's visual, historic and archaeological qualities also need to be taken into consideration and the dangers that would come from increased traffic within these areas. Pressure for development in the town is considerable, mainly for affordable housing and Woodstock has seen many smaller developments over the last 10 years or so. Woodstock was successful in delaying a massive scale build upon the land East of Woodstock (still being considered) and allowing Woodstock to remain a modest town. These new planned sites will dramatically effect the visual aspect, it will clog Woodstock with more traffic, certainly where the Banbury Road site is concerned, due to the narrow roads leading in and out. Obviously the Banbury Road development concerns me the most due to the impact it will have on my surroundings and is also the one that is of most concern. The roads around Banbury Road and Green Lane are very narrow, we see these roads overly parked on and very dangerous to manoeuvre around due to the lack of parking areas within Woodstock. There are many larger vehicles that need to access Owen Mumfords, which leads them to commute through Woodstock and down Green Lane. There are also area's along Green Lane that have no pavements/footpaths for pedestrians to safely walk on and this road is used frequently by local school children on their way to and from school. We are aware that being neighbours to Blenheim Palace that surrounding areas within 5 miles of the heritage site all belong to Blenheim and that Blenheim will profit very well by giving up much of its green space for developers, however, a better and mature outlook needs to be considered when choosing sites to develop, rather than the unnecessary need to just throw houses here, there and everywhere. The council are considering a massive influx of houses in Woodstock and even though people aren't naive to the knowledge that houses need to be built and government targets need to be met, there is no excuse for ignorance in small local areas. There is no need for this kind of open market housing in the Town. Woodstock already, has enough large...</td>
<td></td>
</tr>
</tbody>
</table>
houses, it has had numerous small developments in and around Woodstock, which the town has just about coped with. These being; a big development by the Marlborough School which has seen an increase of traffic on Shipton Road, again another very narrow road which is right by the main school. This development has been extended and is still under construction, which resulted in the loss of one of our local fields. A smaller separate development of land by the swimming pool. A new close development by the Banbury Road, giving actual affordable houses to residents. The Chiropractic Clinic by the top of Bear Close developed into apartments. The area by the primary school, demolishing the old railway line, again turned into apartments. The garage in Woodstock town was turned into a new housing site, as well as many individual houses being upgraded.

Woodstock needs a better infrastructure set in place before any new developments are considered, the actual town itself is unable to cope with demand of the local people and therefore they commute to other areas. On a daily basis Woodstock is jammed packed with parked cars, buses and large vehicles trying to manoeuvre around a small market town. The main parking area for Woodstock is too small to cope with already increasing traffic, with the overspill of vehicles parking down small side streets and roads. Blenheim could consider an additional parking area within its grounds, just off of the A44 by the current bus stop outside of their main entrance, this would coincide with their current parking for the visitors, this could be “hidden” by dry stone walling, keeping the look of Woodstock intact and would hopefully scrap plans of a park and ride service like the one in Kidlington, which I can only see as killing off Woodstock, due to no visitors needing to visit the small town.

A better site for Old Woodstock Town football club could be better suited on the Hill Rise site, giving them better facilities and parking for club members and could be paired with a better recreational ground for local residents near that area of Woodstock. This wouldn’t put an over whelming stain on the already busy roads and would again give something to the town instead of repeatedly taking away for businesses to profit.

The current site for the football club, could then be better suited to a more up to date community centre, housing halls for local clubs and offices and perhaps a better space for a doctors surgery, the field adjacent to the youth club building could be planned out better, with half the field for parking and the other half a better recreational ground for children. This would free up space by the tennis club and could be a possible site for homes with traffic accessing and exiting out onto Cadagan Park. New buildings could go into the space that is currently the community centre and where the doctors surgery is currently housed.

Better parking facilities should be considered with Woodstocks main car park. Obviously the current police station is due to vacate the area once plans have been put in place.

This is another potential site for better parking facilities and again a smaller housing scheme could be considered within this area.

The housing that is proposed for the land South-East of Woodstock by the Bladon roundabout will be the big development to benefit Blenheim financially, allow the council to tick off boxes and show development within this small area and give local and new residents housing that is needed. However, this site will need to be better thought out, as parking will need to be adequate for the housing placed here and forethought to the extra people that will visit these houses. A proper recreational area for children and possible amenities need to be considered for residents. The impact of the increased traffic will have a massiveand negative effect on both Woodstock and Bladon, these roads are already over used and even the slightly increase will have a big impact on these areas.

The proposed sitings of Hill Rise and Banbury Roadis particularly ill-considered: it is on a greenfield site used
by many of the towns people, people from neighbouring areas and tourists for recreation. It is also home to a lot of wildlife that have made this area their home for many years, there are many species of birds, game and is also home to bats and their numbers are decreasing dramatically due to all of the developments being undertaken within this country. It is considered a safe and peaceful place for people to walk their dogs and one of the only places left that dogs are able to run off the lead without the restrictions of built up areas. It is also one of the few remaining areas where children can play and appreciate nature and building here would both diminish the striking view of the town from the fields, will disrupt the calming and safe surrounding for wildlife and will become another victim to development.

Future planning proposals also need to consider the risk of flooding new areas, due to over developed sites more and more areas are falling victim to flooding due to no longer having the surrounding fields around to absorb the increased rainfall.

I support the general thrust of the modification to the local plan. In commenting on the SHLAA consultation in February 2016 I urged WaDC to increase its housing allocations to more closely reflect the SHLAA assessment. I am therefore delighted to see a significant increase in housing allocations for Woodstock. Woodstock desperately needs new housing and the infrastructure that it will generate. Woodstock is amongst the most sustainable of West Oxfordshire service centres as demonstrated by the WODC Settlement Sustainability report. However, I believe that the total housing numbers for Woodstock must take account of land in Cherwell District Council which may also be zoned for development. It is not realistic (it is unsound) to view the CDC and WODC proposals in isolation. Woodstock is one community and the District Council boundary does not represent a boundary of local community identity. It is one community and future planning policies must be developed in the light of this reality.

I support the allocation of 670 new homes in Woodstock over the plan period. However, the distribution and location of those homes must be jointly, agreed between WODC and CDC and in further consultation with the local community. It could mean all 670 homes being built on the Woodstock East site (part within WODC and part within CDC) or the total allocations could be split between the sites identified in both COC’s and WODC’s proposed modifications.

5) Policy EW1e – land north of Banbury Road, Woodstock
Policy EW1e: We support the allocation of land north of Banbury Road, Woodstock for around 250 homes.

<tr>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td>Together with other sites allocated for development around Woodstock, the development of this site will make a major contribution towards the improvement and enhancement of local infrastructure and result in significant social, economic and environmental benefits.</td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td>The site is readily available and there are no significant constraints to development. Consequently, it will be delivered during the Plan period.</td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td>The site is readily accessible and appropriate investment in local highway improvements, including Hensington Road, will ensure safe and secure access and that there will be no severe residual cumulative impacts of development, having regard to Paragraph 32 of the Framework. For example, detailed design and modelling work is being undertaken to demonstrate that initial issues raised by Oxfordshire County Council in respect of the site will be appropriately addressed.</td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td>Also, as above, there is an opportunity for the sites allocated around Woodstock to be linked together, as they are all in one ownership. This presents the opportunity to deliver a joined up approach to the delivery of infrastructure and services, to further enhance the long term sustainability of the settlement.</td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td>The land around Woodstock is owned by Blenheim Estates. Blenheim is an integral part of Woodstock and has been for many Centuries. Blenheim Estates adopts a multi-generational approach to all of its land and property - as can be seen by the exceptional land management and the sensitive Blenheim Estates developments throughout the area.</td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td>This is a fundamental point. This site, together with others around Woodstock, can be brought forward in a manner which ensures associated investment into all of the things that make a place sustainable. It is in Blenheim Estates direct interest (and forms the reason for its existence) to invest into Woodstock. The success of Woodstock and that of Blenheim are intertwined.</td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td>Blenheim Estates is well placed to ensure that development will be brought forward to enhance the sustainability of Woodstock as a whole. Piecemeal development will be avoided and the combined development of the allocated sites will result in major investment into local infrastructure, facilities and services. For example, a 200 house development could only make a contribution to education, whereas, together, the delivery of say, 770 dwellings, can ensure the provision of a new primary school. This approach can be adopted to all manner of things and given that Blenheim Estates has other strategic landholdings within Woodstock, the allocations can help to release associated opportunities – for example, new community facilities in the town centre and new community facilities for the historic, but threatened, Woodstock Football Club.</td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td>Blenheim Estates has many years of experience as a progressive landlord and intends to become a significant provider of affordable housing. This, combined with the Blenheim Estates' record as a provider of developments of the highest design quality and exceptional property management, will help to ensure that the land allocations support a long term legacy, enabling people of all backgrounds to enjoy the unique characteristics of the area.</td>

</table>
| MM753         | David Wilson Homes Southern | David Wilson c/o Barton Willmore | Homes Southern | 2033 | > SECTION 9 - STRATEGY AT THE LOCAL LEVEL > Eynsham Woodstock Sub Area > MAIN 169 | Land North of Banbury Road, Woodstock (250 Homes) Objection is made to the inclusion of this site given the impact on setting (in particular important views of the Column of Victory) the Blenheim Palace World Heritage Site. As explained in Paragraphs 9.5.58-62, Blenheim Palace is set in a park designed by Capability Brown, regarded as a master piece of the highest order. In particular, the site lies within one of two areas identified in the Blenheim Heritage Management Plan as significant in terms of views to and from the World Heritage Site (shown on Figure 9.16a Key Views). Whilst the draft policy acknowledges the need for development to not have a harmful impact on the setting of the World Heritage Site, including key views, the policy and supporting text fail to acknowledge that the site lies within one of the key views. The key is that the ‘precautionary principle’ should be applied, because there are reasonable alternatives, for example at Carterton.

The Framework is clear that when considering the impact of a proposed development on the significance of the designated heritage asset, great weight should be given to the asset’s conservation. The more important the asset, the greater the weight should be. Significance can be harmed or lost through alteration or destruction of the heritage asset or development within its setting. Substantial harm to World Heritage sites should be wholly exceptional - i.e. avoided where ever possible. UNESCO’s Operational Guidelines seek protection and management of World Heritage Site (WHS) properties and suggest designation of an “adequate buffer zone” with legal and/or customary restrictions placed on its use and development, wherever this may be necessary, to protect the “the immediate setting” of a WHS and also “important views and other areas or attributes that are functionally important as a support to the Property”.

The Column of Victory, to the north of Blenheim Palace, is Grade II Listed and identified in the Blenheim Palace Heritage Management Plan as the object of an important view from locations to the east including Land North of Banbury Road, Woodstock, which largely lies within the ‘Important view into the Park from Woodstock towards the Column of Victory’ identified on Figure 8 of the Blenheim Heritage Management Plan (May 2006) with just the north-western extent lying outwith the ‘Important View’ view cone.

It is likely that the zone of theoretical visibility from the Column (approximately 41m in height) extends across the majority of Land North of Banbury Road, Woodstock. Development on Land North of Banbury Road could therefore have a harmful impact on views toward the Column of Victory from publicly accessible locations on Banbury Road. A Public Right of Way runs through Land North of Banbury Road and to the further north-east, and the Column could also be partially visible from this location. The Council needs to provide an evidential case to demonstrate that this site can either be developed without adverse impact on this heritage asset, or the proposal should be omitted from the Plan.

As a consequence, MM167 and the map (Figure 9.15e) MM168 and MM169 (Policy EWle) should all be deleted. This change is required to ensure consistency with national policy with particular regard to the impact on the World Heritage site key view.

| MM752         | Bloombridge               | Mr Cutler          | 2034 | > SECTION 9 - STRATEGY | Land North of Banbury Road, Woodstock (250 Homes) Objection is made to the inclusion of this site given the impact on setting (in particular important views of the Column of Victory) the Blenheim Palace World Heritage Site. Development on Land North of Banbury Road could therefore have a harmful impact on views toward the Column of Victory from publicly accessible locations on Banbury Road. A Public Right of Way runs through Land North of Banbury Road and to the further north-east, and the Column could also be partially visible from this location. The Council needs to provide an evidential case to demonstrate that this site can either be developed without adverse impact on this heritage asset, or the proposal should be omitted from the Plan.

As a consequence, MM167 and the map (Figure 9.15e) MM168 and MM169 (Policy EWle) should all be deleted. This change is required to ensure consistency with national policy with particular regard to the impact on the World Heritage site key view.

In all cases reference should be made to the District Council’s ecologist for specific details on each site. It is assumed that before firm proposals are brought forward for each site an appropriate ecological, landscape and visual impact assessment will be undertaken including surveys for protected and threatened species.

The permanent loss of land of existing and potential future habitat value should be recognised with a corresponding investment in biodiversity and other green infrastructure resources that provide a range of benefits including biodiversity, water management and contribute to physical and mental well-being.
Additional off-site enhancement should be provided where insufficient environmental gains cannot be secured within the development boundary.

Woodstock – Land North of Banbury Road

There may be hydrological issues relating to Glyme Valley and downstream the Queen Pool SSSI and Woodstock Water meadows.

There will be a need for additional investment in Woodstock Water meadows to ensure the site is able to meet the increased recreational access demands this development would generate.

The location of this site is removed from the primary road network and has several access constraints. Hensington Road is unable to accommodate an increase in traffic flows due to the road width constraint at the junction with A44 Oxford Street. Brook Hill and Upper Brook Hill are similarly constrained by width. The site is unlikely to be served by a direct bus service and is around 700m from the A44 bus stops, and Woodstock facilities, which is beyond desirable walking distances to access public transport.

Whilst access could be provided from Banbury Road many trips are likely to be attracted to the A44, rather than Banbury Road.

The county has severe concerns about access to the site, and objects to the site based on the current information.

b) provision of satisfactory vehicular access from Banbury Road and Green Lane and appropriate pedestrian and cycle connections including incorporation of the existing public right of way across the site.

In terms of MAIN169 (Policy EW1e – Land north Banbury Road, Woodstock – Land to the north of Banbury Road, Woodstock to accommodate around 250 dwellings as a well-integrated and logical extension of the existing built form of the town.) I do not agree that the site is a ‘well-integrated and logical extension’ for the reasons given above.

I do not believe that...

"b) provision of satisfactory vehicular access from Banbury Road and Green Lane and appropriate pedestrian and cycle connections including incorporation of the existing public right of way across the site."

...is possible given the reasons given above. Green Lane is also rural lane in nature and only allows for single directional flow in places.

The scope of the Evaluation of Transport Impacts November 2016 evidence base is to “identify locations where the committed future transport network is modelled to come under stress and cannot support additional demand associated with Local Plan growth without appropriate mitigation.” It does not assess whether access to the sites are appropriate. There is also a difference in what was modelled for the “Land north of Banbury Road” site in this document (150 dwellings) and what is proposed through the allocation (250 dwellings), as shown in 4.1. Land-use assumptions.

The Infrastructure Delivery Plan states "3.3 Traffic volumes are highest on the A40 between Witney and Oxford and the A44 south of Woodstock to Oxford. The most severe congestion is on the A44 at the Bladon roundabout and on the A40 to the east of Witney, particularly during the morning peak hours.

However, no infrastructure is proposed to mitigate this in light of the development proposed in Woodstock as a result of the modifications.

| MM306         |                         | Phillip Allen   | -                | 527        | > SECTION 9 - STRATEGY AT THE LOCAL LEVEL > Eynsham Woodstock Sub Area > MAIN 169 | It also states: "3.55 Car parking is also under pressure in popular tourist towns such as Burford and Woodstock where there is extremely limited capacity, particularly at weekends. However, as the car parking demand is mainly created by tourists, additional housing in these towns is unlikely to have a significant impact on parking demand."

I disagree with this statement in terms of additional housing being unlikely to have a significant impact and I would like to know what the evidence base for this statement is? A commitment to look at additional parking is not an appropriate measure to mitigate this, as it is a historic centre with little or no potential to increase the parking supply given the current constraints as far as I'm aware, as a Woodstock resident.

In the Sustainability Appraisal Addendum Report it states:

"4.77 Policy EW1c Land East of Woodstock; Policy EWd Land North of Hill Rise, Woodstock; Policy EW1e Land North of Banbury Road, Woodstock:

Although each nonstrategic site allocation is relatively small, there is the potential for them to contribute to cumulative negative effects for landscape and transport in this sub-area – with uncertainty in the longer-term and until further detailed project level studies have been completed."

This ‘uncertainty’ has not been investigated and so the evidence base on the appropriateness of these sites is incomplete. No mitigation measures are proposed to resolve this uncertainty or any negative effects identified through the SA.

In conclusion, Policy EW1e is not acceptable in transport terms, given the site’s current context. |
| MM378         | Woodstock Action Group | Woodstock Action Group | Dr McGurrin | 765        | > SECTION 9 - STRATEGY AT THE LOCAL LEVEL > Eynsham Woodstock Sub Area > MAIN 169 | We are writing to comment on the proposal to build 250 houses on the land north of Banbury Road, Woodstock.

We live at 22 Green Lane, so will be strongly affected by the development.

Our main concerns are:

* Green Lane is partially single track, and is heavily used by pedestrians. Parents and children use the road to walk to the two schools (Woodstock Primary and Marlborough School). There is already a safety hazard for pedestrians on Green Lane – any increase in vehicular traffic resulting from the housing development proposed would be unimaginable.

* At present, we have open views across countryside from 22 Green Lane. We understand that there are genuine housing needs locally and that the tranquility and open views cannot be maintained indefinitely. We would ask, however, that any new development is restricted in density and elevation, and that new houses are not built close to the boundary of our property. |

A Public Inquiry was held between 6 July 2004 and 6 January 2005 concerning objections made to the WODC Local Plan 2011. The Public Inspector, Mr. Mattocks, in relation to the issue: The impact of the development of land to the north of Banbury Road on the setting of the town, concluded "Development here . . . would result in an unacceptable incursion into the open wolds landscape to the north of the town. In addition, . . . most of the traffic generated would pass through the town to the detriment of the free flow of traffic and the character of the Conservation Area."
WAG concurs with the Inspector’s conclusion, as this is still be the case.

This proposed allocation, if activated, will result in the loss of open space and important agricultural land. It will cause visual encroachment on, and the loss of public views across open fields, in effect, an over domination of the landscape and skyline along the northern approach to the town.

It will erode the local historic character and attractiveness of Woodstock. Traffic and road safety problems will increase along the dangerous bend on Banbury Road. This road is already a “one-way” system due to dozens of cars parked alongside one side of the road.

The fields along this stretch drain onto the road in periods of heavy rainfall and melting snow causing surface flooding. Increased traffic means more noise levels and exhaust emissions and consequent air pollution with cumulative lung damage.

Walkers using a nearby public footpath will be put at greater risk.

In January 2003, WODC reported that the Banbury Road site should be dismissed because of constraints of access as well as the quality of the agricultural land.

More specifically, the Banbury Road allocation meets the same NPPF critical criteria as the Hill Rise one, viz, Ch. 4, paras. 29, 30, 32, 34 and 37. In addition, para 35: Potential residents would not “have access to high quality public transport facilities.” as there are no public transport services in this area.

The Hensington Road approach to the town centre and the A44 is constricted by a narrow “pinch point” at its junction with the A44.

This proposed allocation is a non-starter and as such, WAG calls for its deletion from the finalized Local Plan 2031.

2.28. The landowners object to the allocation of the site for 50 houses and seek its deletion from the Plan, as its allocation is unsound. This is because the site is not supported by the evidence base, principally that being the latest iteration of the SHLAA.

2.29. The site SHLAA Reference is 314, and it is documented that the site was dismissed through the previous Local Plan for the following reasons:
“Local Plan Inspector recommended the site not be allocated in June 2005 because not needed and because harmful to the character and setting of the village, the landscape of the river valley and the setting of the Millwood End Conservation Area.”

2.30. Furthermore, the SHLAA goes onto note that:
“Within open valley side farmland of Lower Evenlode Valley which is visually sensitive and where development would be highly prominent and exposed (WOLA). The village is historically a linear development along a ridge which still affords views from Main Road (and along Churchill Way) over the grounds of Christ Church to countryside beyond. These views are framed by the Church and buildings of Myrtle Farm (and to a lesser extent from recent development in Corn Hide). Development of the site would destroy those views. It would also be prominent on the skyline in views from the valley to the north but not in longer distant views from higher ground further north.”

2.31. And finally, provides a commentary on the site’s overall capacity “c30 if built development were limited to the eastern part to limit loss of open views,”

2.32. Clearly, the issue with this allocation is that previous assessments of the site by a Local Plan Inspector have shown that this site has considerable issues in principle. Whilst the policy context for development has changed considerably since 2005, the underlying concerns of landscape impact and conservation area impact remain broadly the same, irrespective of the need to provide housing. As drafted, the SHLAA does not support an allocation of the site, let alone an allocation of this size.

2.33. On a final point, it is understood, albeit anecdotally, that the landowner is unwilling to sell the site for development. Is there any evidence in the SHLAA or held by the Council, which confirms that there is an on-going dialogue with the owner/promoter of the site, which means that the site will be delivered over the plan period?

2.34. As a result, the allocation is not based on a robust and credible evidence base and should be deleted as a result because it is unsound. In light of these concerns, there is a need to consider an alternative site to make up the shortfall in delivery in the village.

In short, I've been struck by the speed at which building application approvals have been granted. I'm concerned about the general lack of thought given to the development of Long Hanborough and I ask that the process be slowed down in order to deter spivs from taking advantage of the council's need to build.

I stayed in Oxfordshire after completing my degrees because of the opportunities the area affords. Hence, I understand why people would like to live here and it's right that the council make preparations for this. Additionally, we've owned our property for 18months and we understand it's very difficult to find an affordable home.

While the district as a whole is expected to grow by 34% by 2031 according to your revised plans, the building works already granted or applied for at Long Hanborough amount to a 41% increase in the town's population all likely to happen within a few years. Why is this happening so fast? How is the town meant to cope unless given a chance for services, roads, shops and transport to meet demand?

Most worryingly, while I think the Oliver's Garage site makes sense, the proposed build on Dix Pit strikes me as being an example of everything planning shouldn't allow: an SSSI; hazardous waste in the back-filled pit; overlooked by many local homes; and they'd be covering an obvious source of drainage for everything that surrounds it given its lower elevation. This is a classically awful choice for new homes, but according to the developers, they have an 'expert who believes otherwise' for all of the points I mentioned above (their local

<td>MAIN 178 9.5.42g The site has no major physical or policy constraints to prevent development coming forward and comprises previously developed land (in part) in a relatively sustainable location with good access to a range of local services and facilities. The site is the subject of a current planning application. This allocation is in a village that currently does not sustain a regular bus service following the termination of services funded by Oxfordshire County Council in July 2016. Given baseline levels of demand for the hourly service previously operated were entirely insufficient to justify retaining a service on this route on a commercial basis, we would advise that it is quite unlikely that a relevant public transport service could be sustained commercially (through passenger usage) at this stage, even with 50 additional houses, unless a high</td>
</tr>
</tbody>
</table>
**MAIN 178** degree of mode shift towards bus is achievable in the wider area.

This might conceivably be possible following the completion of Eynsham Park and Ride and the improvement of bus services via the Park and Ride to Oxford, following the completion of the A40 Science Transit Phase 1; but this is far from assured.

It is not inconceivable that a feeder service might be sustainable at some point in the future from Bampton and intervening settlements to a future Eynsham Park and Ride, but we would advise that it should be assumed that site would be all but entirely car-dependent.

Stagecoach notes that a live planning application is awaiting determination for this site. We would advise that this site does not represent a development strategy that makes the fullest possible use of public transport, and that other options in the Sub-area can better meet housing need while offering a full range of credible travel choices.

---

**MM451** Historic England welcomes and supports criterion d) of Policy EW1h regarding any features of historic significance to the former role of the site as an airfield. However, the site is adjacent to the Stanton Harcourt Conservation Area and potentially within the setting of the Devil's Quoits scheduled monument and we believe that there is a strong likelihood of nationally important archaeological remains on the site.

As designated heritage assets, great weight should be given to the conservation of the Conservation Area and scheduled monument in accordance with paragraphs 126 and 132 of the National Planning Policy Framework. Any development of this site should therefore conserve or enhance the special interest, character and appearance of the Conservation Area and significance of the monument as part of the positive strategy for conserving and enjoying, and clear strategy for enhancing, the historic environment as required by the Framework. There should be a criterion to this effect in Policy EW1h and a requirement for an archaeological investigation to inform the development.

---

**MM627** The Stanton Harcourt Estate supports the Council's position that smaller 'non-strategic' allocations can help to ensure a deliverable housing supply in the short-term. Of these, the Former Stanton Harcourt Airfield has been identified as a proposed allocation for the provision of 50 dwellings with the Council's site assessment concluding that it is a suitable and deliverable development opportunity. The Estate supports the allocation of land within Stanton Harcourt which is identified as a Village and therefore, is deemed as a sustainable settlement for growth within the District.

The Estate agree that there are no major physical or policy constraints to prevent development coming forward. The Estate confirms that the site is located adjoining the village and as such accords with emerging policies OS2 and H2 which set that where there is an identified housing need, housing is permitted on undeveloped land adjoining the built up area.

---

**MM786** Oxfordshire County Council

Amada Jacobs (OCC) Mrs Jacobs

Ecology and Natural Environment

In all cases reference should be made to the District Council's ecologist for specific details on each site. It is assumed that before firm proposals are brought forward for each site an appropriate ecological, landscape

<td>and visual impact assessment will be undertaken including surveys for protected and threatened species. The permanent loss of land of existing and potential future habitat value should be recognised with a corresponding investment in biodiversity and other green infrastructure resources that provide a range of benefits including biodiversity, water management and contribute to physical and mental well-being. Additional off-site enhancement should be provided where insufficient environmental gains cannot be secured within the development boundary. Stanton Harcourt Former Airfield The development of the site should be considered in the context of the recently revised restoration proposal for Dix Pit landfill site. In particular there are potentially significant recreational links. There is the potential for bat roosts in existing buildings. Existing structural vegetation should be identified and protected. Records indicate some of the land may be of best and most valuable category though this is likely to be been modified by subsequent uses. The site lies within the Lower Windrush Valley Project area and consideration should be given to how best to support the long-term strategic aims of the LWVP.</td>

| MM374        | Carillion Capita       | Jeremy Flawn   | 749              | > SECTION 9 - STRATEGY AT THE LOCAL LEVEL > Eynsham Woodstock Sub Area > MAIN 180 | 9.5.45
- disagree with statement: ‘rail connectivity is relatively good’- it is very poor. Hanborough is our only station and it is not where the development is proposed. Services are already overloaded and the new car park cannot cope with demand. No buses link Eynsham to Hanborough and the road is unsafe for cyclists. We need an integrated transport infrastructure to be (at least part) in place before we add more houses.
- A40 cycle route is not ‘good’- it is poorly maintained and hazardous, but at least there are N and S options to avoid cycling into oncoming headlights.
- A40 and Toll bridge (B4440) are appallingly congested and work is long overdue.
- The current A40 plans will not make a ‘significant improvement to the current situation’. Needs a more radical solution to travel around Oxford, to sustain current use and enable future growth (if desirable), looking at the whole network, including the overloaded B4044 in the medium to long term.
- Buses are being cut. A solution may be better bus or community/shared transport links from the smaller villages. 9.5.46 The community needs to be involved in developing plans. Increasing road capacity is not the answer- we need to get people off the road! 1000 car spaces at Eynsham (but only 500 in the first phase) and a bus lane in one direction part of the way will not get enough people out of their cars- many are travelling from Witney and beyond. 13,000 cars a day go into Oxford along the A40. DfT data records over 26,000 vehicles AADF (Annual average daily flow) at A40/B4449 (Eynsham) and nearly 25,000 at A40/A415 (Witney) (Count points https://www.dft.gov.uk/traffic-counts/cp.php?la=Oxfordshire.) ie there is very little reduction in traffic at Witney, suggesting a Park and Ride at Eynsham is unlikely to attract many drivers. Better to plan and fundraise for an off road solution (rail/light rail) which avoids the bridge bottlenecks from Witney into Oxford, linked to other transport hubs.

9.5.48: I support improvements to Hanborough train stop and better bus and cycle access in the short term, but we really need a new link from Witney/Eynsham to Oxford as above.

9.5.49- active travel- this needs a co-ordinated approach: ‘Existing pedestrian and cycle routes will be safeguarded and opportunities for new and enhanced routes will be identified….The Council will work with the [Bikesafe] group and other relevant partners including the County Council to further consider the merits and possibility of this scheme being taken forward.’ I would like stronger statements here- the merits of the B4044 scheme have already been demonstrated, what we need is action. As one cycle route on the A40 will go under current A40 plans, suggest the Local Plan supports the replacement of one route with the B4044 route which would be more heavily used by the increasing numbers in the Eynsham area. |

<td>We fundamentally object to the proposed amendments to Policy EW2 which seek to remove reference to Long Hanborough as one of the foci for development in the Eynsham – Woodstock Sub Area. Whilst not objecting in principle to the proposed Garden Village at Eynsham, or the extension to the west of the same village, we object also to the Council’s process in identifying them as the most appropriate locations to accommodate both the increased housing needs of the District and the unmet needs of Oxford city - a process which did not give any consideration to the reasonable alternative provided on land adjacent to Hanborough Station.</td>
</tr>
</tbody>
</table>
### Long Hanborough – A Focus for Development

For the reasons set out in detail in our representations to Policy OS2, Long Hanborough should demonstrably retain its status as a 'Rural Service Centre' and, as a consequence, as one of the foci for development in the Eynsham – Woodstock Sub Area as identified by Policy EW2. Failure to retain such reference is not only contrary to all of the available evidence, but fundamentally and misleadingly results in the opportunity for development in one of the most sustainable locations for development in the District being wholly overlooked – an approach which is neither justified nor sound.

### Strategic Options for Growth – Flawed Process / Sustainability Appraisal

In response to the need to allocate materially higher levels of housing provision in the District, Policy EW2 proposes to include a series of additional strategic and non-strategic allocations. We focus initially on the approach to the strategic options for growth.

Following the Inspector’s Preliminary Conclusions issued in December 2015, which found that the Council’s initially proposed housing requirement of 10,500 homes was not justified and that this Plan should address the issue of unmet needs from Oxford City, the Council has ultimately concluded that its District requirement should accord with the Oxfordshire SHMA i.e. 13,200 dwellings. As part of the Oxfordshire Growth Board process, it was additionally agreed that West Oxfordshire’s apportionment of the unmet needs from Oxford City should be 2,750 dwellings i.e. a total of 15,950 dwellings in the District in the Plan period.

The Council’s Sustainability Appraisal Addendum Report (October 2016) confirms at paragraph 1.10 that this uplift in housing required re-consideration by the SA of the strategic options, and appraisal of new potential options for site allocations.

Paragraphs 3.8 to 3.12 of the SA Addendum summarise the process adopted by the Council in reviewing the strategic options for growth across the District. It can be seen that this only references options at Witney, Carterton, Chipping Norton and Eynsham. The identification of options at the three main towns of Witney, Carterton and Chipping Norton is a sensible and reasonable starting point.

However, given that there are six identified ‘Rural Service Centres’ in the District, of which Eynsham is just one, it is wholly unclear why the SA Addendum focusses solely on Eynsham and ignores opportunities elsewhere at any other Rural Service Centre.

Paragraph 3.11 confirms that following the decision to increase housing numbers, the Council investigated again the potential within the Eynsham – Woodstock Sub Area. This area of course includes not only Eynsham but also the Rural Service Centres of Long Hanborough and Woodstock.

However, with reference to the work of the Oxfordshire Growth Board (OGB), the SA Addendum focusses immediately and solely on Eynsham. It subsequently concludes that due to Eynsham’s proximity to Oxford, and its relatively good level of public transport accessibility, that two strategic options were identified and tested further through the SA process:

- a new Garden Village to the north of Eynsham; and
- an urban extension to the west of Eynsham.

No consideration is given at all to strategic growth options anywhere else in the Eynsham – Woodstock...
As a consequence, opportunities at the Rural Service Centre of Long Hanborough and specifically land adjacent to Hanborough Station, a location close to Oxford, adjacent to a mainline railway station and located outside of the Green Belt and AONB, was for some reason ignored.

Reference to the work of the OGB, which the SA Addendum gives as the reason why its search focussed only on Eynsham, confirms (fatally to the legitimacy, soundness and legal compliance of the process) why Long Harborough was ignored. The Oxford Spatial Growth Assessment Final Report (September 2016) (extract at Appendix 1) confirms at paragraph 3.2 that prior to the study taking place, each Oxfordshire authority was asked to identify a list of options in its District for assessment. Table 3.1 of this document confirms that West Oxfordshire District Council advanced only six potential options, all of which were either at Witney or at Eynsham.

Accordingly, as a direct consequence of the Council’s initial (wholly unexplained and unreasonable) failure to identify land adjacent to Hanborough Station as a reasonable alternative option for consideration, the OGB work did not assess the merits of this location in absolute or relative terms, and the SA Addendum similarly makes no such assessment. These fundamental flaws have resulted directly in what is clearly a reasonable alternative to the selected strategic options, land adjacent to Hanborough Station, being wholly ignored.

Non-Strategic Options for Growth

In addition to the proposed allocation of strategic sites at Eynsham, Policy EW2 now additionally proposes a series of non-strategic allocations, ranging from 300 homes to 25 homes in size. We do not take issue, as a matter of principle, with the making of such non-strategic allocations which could of course deliver housing more quickly than a strategic site of the scale and complexity of the proposed Garden Village (although we do object to the Council’s approach to housing in Policies H1 and H2 insofar as it unnecessarily and unreasonably seeks to delay housing provision and should instead make further non-strategic allocations to deliver housing in the short / medium term). However, in so doing, the Council has similarly failed to consider the potential for a non-strategic scale allocation on land adjacent to Hanborough Station, an option which is clearly a reasonable alternative to the selected options (and which in our view is, based upon the available evidence, demonstrably more sustainable and appropriate than some of the options now advanced by the Council).

The Council’s SHELAA (December 2016) identifies two sites adjacent to Hanborough station (Site Refs: 449 and 33), both of which are identified by the Council as available and achievable (Appendix 2). However, on the basis that the SHELAA ultimately concludes that these sites are unsuitable (a flawed and unsubstantiated conclusion to which we return below) they are discounted. As a consequence, it seems that the SA Addendum does not consider the merits of these sites at all.

This (flawed) approach has, amongst other things, resulted in the proposed allocation of sites within the AONB in the Burford-Charlbury Sub Area, sites very close to and with an impact on the Blenheim Palace WHS, and a site at Long Hanborough itself which is more environmentally constrained than those adjacent to Hanborough Station. The fact that such constrained sites are now proposed as allocations, when less constrained and more sustainable sites such as those adjacent to Hanborough Station are discounted in the SHELAA and not considered at all in the SA Addendum, demonstrates a clear failure in the Council’s processes.

Returning to the conclusions of the SHELAA relevant to the sites adjacent to Hanborough Station (Site Refs:
449 and 33) it can be noted that the SHELAA concludes that both sites:

i. are available;
ii. are achievable;
iii. are just 350m from Hanborough Station and employment opportunities at Hanborough Business Park;
iv. are served by existing bus services running along the A4095;
v. are within a reasonable walking and cycling distance of the existing services and facilities in Long Hanborough;
vi. are not in the AONB or Green Belt;
vii. are in Flood zone 1 i.e. suitable for housing;
viii. have ground conditions which appear to be good;
ix. are not in a conservation area and do not include any listed buildings or scheduled monuments;
x. are not subject to any biodiversity designations.

Having identified this lengthy list of positives, for wholly unexplained reasons the SHELAA then includes a section identifying what the relevant Parish Council’s view is on the merits of the identified sites. The rationale for including the views of non-technical political groups, in what is supposed to be a technical evidence base document used to identify a pool of possible housing sites, is not referenced and is in any event wholly inappropriate. This is confirmed by the fact that despite the long list of positives associated with these sites adjacent to Hanborough Station, the SHELAA identifies that Long Hanborough Parish Council objects to the sites and then concludes that the sites are not suitable for development, raising spurious points about purported landscape harm and the relationship of the sites to the village (albeit that there is existing development both to the east and west of the sites and that the Council now proposes the allocation of more constrained sites in the District and at Long Hanborough specifically).

Against this background it is evident that the conclusions of the SHELAA are not technically robust and that it does not provide a sound evidence base on which to make decisions.

The flaws in the SHELAA are further magnified as they have translated directly into fundamental flaw in the SA Addendum which has not considered the merits of the sites adjacent to Hanborough Station at all. The fact that non-strategic sites in the AONB, in very close proximity to a WHS and in more environmentally sensitive locations at Long Hanborough are proposed to be allocated, whilst unconstrained sites such as those adjacent to Hanborough Station are wholly ignored, confirms the fundamental flaws in the process.

Conclusion

In seeking to allocate land for the additional housing required as a result of the increase in the housing provision figure for the District, to include both a SHMA-compliant level of housing and the appropriate proportion of the unmet needs from Oxford City, the Council’s planning and SA process is fundamentally flawed, unsound and not legally compliant.

The consideration of possible strategic options fails completely to consider the merits of land adjacent to Hanborough Station, despite its clear merits, the Council’s recognition of its availability and merits in the SHELAA, and the fact that it is demonstrably a reasonable (and we say demonstrably better) alternative to those ultimately selected.

Similarly, the consideration of non-strategic options has failed to consider the merits of land adjacent to Hanborough Station, and has resulted not only in the omission of these sites but in the proposed allocation of more highly constrained and less appropriate sites in the District generally and at Long Hanborough specifically.

MAIN 201
Appendix 2 (Housing Trajectory)

CEG wish to retain the right to address the Council’s true housing land supply position in detail at the Examination in Public sessions. Amongst other things, CEG’s position in relation to the extent of the shortfall is reserved in relation to the derivation of the five-year requirement and whether there has been a record of persistent under delivery sufficient to justify the application of a 20% buffer; the deliverability of the identified components of supply, including the new Local Plan allocations. At this stage, we comment upon a couple of specific supply components:

North Curbridge (West Witney)

In the trajectory, the Council rely upon this site to deliver 350 units in the 5-year period, 2016 to 2021. Suitability: The site is potentially suitable for development by virtue of its allocated status in the existing Local Plan and the existing resolution to grant planning permission.

However, given the length of time that has passed since the resolution to grant planning permission in May 2013, there is a likely need for revised survey work to be carried out, not least in respect of ecological interests prior to any permission being issued. No such ecological update report is contained on the Council’s website. The need for such survey work could result in a potential delay of up to 1 year, given the need to survey over a sufficient seasonal period.

Availability: In the absence of an outline planning permission and the failure of the landowners to complete a legal agreement in the 3 and a half years since a resolution to grant planning permission was passed, the site cannot be described as available today.

Achievability: As highlighted in the committee report there is a need for the developer to provide a new junction to the A40 prior to the construction of the 200th house. These works often involve long lead in times and could constrain delivery in the early stages.

In addition, the 2013 committee report states that there is a viability gap (paragraph 5.61) to developing the site. This again casts doubt as to the achievability of development on the site and is likely to explain the 3 and a half year delay in the signing of a legal agreement.

Appendix 1 (Schedule of Future Infrastructure Requirements) (page 55) of the submission West Oxfordshire Infrastructure Delivery Plan July 2015 update refers to the ‘Downs Road/A40 junction improvements, Witney’ highway improvement project:

The IDP confirms that the ‘Downs Road/A40 junction improvements, Witney’ project was costed at a total £6.1m in 2012 and £1.25m has already been secured in S106 contributions. The ‘Anticipated Funding Mechanism’ and ‘Comments’ columns clearly state that the residual funding for this project is to come from the West Witney SDA and the project forms a prerequisite to West Witney coming forward.

The project is assessed as ‘critical’, which would suggest if the funding is not secured West Witney...
**6.0 SUMMARY AND CONCLUSIONS**

6.1 Allocating Land to the North West, Stanton Harcourt for housing would facilitate the provision of a much needed bypass around Sutton.

6.2 The site sits next to existing higher density development and is contained by the B4449. Any development would integrate naturally with existing higher density development.

6.3 The site is within the conservation area, as is the whole of Stanton Harcourt and much of Sutton. Any development on the site would use appropriate design and materials for the location. It does not however, contain any heritage assets. Or locally important buildings.

6.4 The site is in Flood Zone 1 and is not constrained by an environmental designation.

6.5 The site is available immediately for development.
LOCAL LEVEL
> Eynsham
Woodstock
Sub Area >
MAIN 183

16/03627/OUT) for development for up to 60 dwellings, a shop and a pre-school
nursery with associated infrastructure works. As a result, a number of studies have
been carried out on the site. Below is a summary of the findings.

Built Form

5.2 The site is surrounded by existing development and sits naturally next to the highest
density area of housing in the settlement (on the western edge of the site). Thus, the
development could successfully integrate with the existing built form.

Landscape Impact

5.3 A Landscape Visual Impact Assessment has been carried out to assess the impact of
the proposed development on the landscape. It concludes that a considered and
sensitive development approach including the retention and enhancement of existing
vegetation combined with new planting and ecological areas would ensure that the
development could be accommodated without detriment to the existing landscape
character, visual environment and wider landscape context. The findings relate to the
following factors:

• The site benefits from existing visual and physical containment and boundary
separation from the wider landscape context and thus the influence of the site
is highly localised. The presence of built form along the eastern edge of the
site will screen the proposed development from Eynsham within the exception
of those at close range along the boundary;

• Views from the wider landscape are already heavily restricted by the wider village setting and existing vegetation structure; and

• The implementation of the landscape buffer on the western site boundary
offers a significant opportunity to provide landscape and ecological
enhancements.

Ecology

5.4 An Extended Phase 1 Habitat Survey has been undertaken. The proposed
development complies fully with adopted Local Plan Policy NE13 and draft Local Plan Policy EH2, which seek to safeguard, maintain and enhance priority habitats
and species within the district. The development would include areas of open space
and landscape buffers such that habitats within the site could be maintained in situ.

Heritage

5.5 A Heritage Impact Assessment has been undertaken to assess the impact of the
proposed development in heritage terms, in relation to the history of the site and its
surroundings and any potential impact upon the character and appearance of the
Stanton Harcourt and Sutton Conservation Area. The report identified that ‘the
intrinsic significance of the site in built heritage terms is negligible’ and that the
contribution the site makes to the character and appearance of the Conservation
Area from the public realm is limited to the northern portion of the site (which would remain open). The report concludes that the current proposals are ‘compatible with ‘preserving’ what is significant about the character and appearance of the Stanton Harcourt and Sutton Conservation Area and the settings of nearby heritage assets and that there is no conflict with the statutory tests set by Sections 66 and 72 of the Planning (Listed Building and Conservation Areas) Act 1990.

Highways

5.6 A Transport Assessment was prepared to assess the impact of the proposed development on the local highway network.

5. 7 It concludes, that in terms of location, the site is very sustainable being within walking and cycling distance of a range of local services and facilities including employment. There is also a regular bus service from the village to Eynsham and Oxford. In conclusion, the assessment demonstrates that the level of traffic generated would not have a significant impact upon the wider highway network.

Flood Risk & Drainage

5.8 The site is situated within Flood Zone 1, however due to the size of the site, a Flood Risk Assessment (FRA) was undertaken. It provided a number measures that can be implemented to ensure that the site would be at low risk from all potential sources of flooding and suitable for development in terms of flood risk.

6.0 CONCLUSION

6.1 In light of the foregoing, our client considers Butts Piece to be a more suitable allocation than the Former Airfield, Stanton Harcourt.

| MM367 | Ascott Parish Council | - Carter | 692 | LOCAL LEVEL > Eynsham Woodstock Sub Area > MAIN 183 | ASCOTT-UNDER-WYCHWOOD PARISH COUNCIL
RESPONSE TO WODC DRAFT LOCAL PLAN 2031 CONSULTATION

Ascott-under-Wychwood Parish Council notes that our village has actually been named for the first time in the Draft Local Plan 2031 and has been moved to the ‘Villages’ category. We are very concerned that this has been done apparently arbitrarily and without any consultation at all with the Parish Council.

The consequence is that certain statements which were acceptable last year (when only 2 Wychwood villages were named) are no longer accurate with Ascott-u-W included. Ascott is a village one half and one third of the size of the other two Wychwood villages and with far fewer amenities. It is not accurate to include Ascott in the general Wychwood statements written last year. This places us in the difficult position of strongly objecting to statements which are not among the amendments but our objections do flow from the original critical amendment – that of naming Ascott-under-Wychwood in the Villages category.

In particular, we feel that the impression is given over and over again that Ascott-u-W is reasonably well served by public transport. This is blatantly not the case and the situation has got worse in the past 6 months with the cuts in bus subsidies (as indicated in our response to the WODC Planning Services Parish Survey 2016). Ascott-u-W also appears to have a Post Office (Friday afternoon in Tiddy Hall does not constitute a Post Office) – and a smart railway station with a reasonable service (when in fact it has 1 train each way on weekdays only, too late in the morning for London commuters and even Oxford schools).

We are extremely concerned that an inspector, if considering a planning application appeal, might refer to the WODC Local Plan 2031 and think that Ascott-under-Wychwood has amenities equal to Shipton and Milton and we would ask that the Draft Local Plan be amended to reflect the true picture. |
| MM374 | Carillion Capita | Jeremy Flawn | Mr Flawn | 750 | > SECTION 9 - STRATEGY AT THE LOCAL LEVEL > Eynsham Woodstock Sub Area > MAIN 183 | OCC Property & Facilities supports the amendments to policy EW2 which seek to focus new development at Eynsham, Woodstock and the West Oxfordshire Garden Village. In particular OCC P&F supports the references to the proposed Eynsham SDAs within the policy:

* a Strategic Development Area (SDA) of around 2,200 homes to the north of the A40 near Eynsham to be delivered in the form of a new Garden Village

* a Strategic Development Area (SDA) of around 1,000 homes to the west of Eynsham

OCC P&F is keen to work with the District Council, Parish Council and other key stakeholders to help deliver these important developments. |
| MM380 | Berks, Bucks and Oxon Wildlife Trust | BBOWT - Haidrun Breith | Mrs Breith | 789 | > SECTION 9 - STRATEGY AT THE LOCAL LEVEL > Eynsham Woodstock Sub Area > | Sub-Area-Strategy wording

We found that that proposed sub-area policies (eg policies WIT4 or EW2) give insufficient weight to the protection and enhancement of the natural environment and the importance of Green Infrastructure and Masterplanning.

We propose that additional bullet points are added to the policies, eg: |
Proposals for development in the sub-area should be consistent with the strategy which includes:
- maximising opportunities for enhancements within the Conservation Target Areas (CTAs)
- masterplanning of strategic development sites that takes adequate account of open space and green infrastructure networks and needs, and maximises opportunities to create and strengthen green infrastructure in accordance with the Council’s Green Infrastructure Plan (to be prepared)

Eynsham

We note that a significant westward and northward expansion of Eynsham is proposed which will result in the town to grow 2-3 times its size. We note that the northern expansion is proposed to be a separate settlement in Garden Village style but we wonder whether the creation of a separate settlement next to another is feasible or even desirable. We are concerned about the quantum of development and its impacts on resources and the natural environment. Again we could not find any evidence that ecological survey were carried out to inform this allocation and we consider it essential that ecological surveys are carried out to inform decisions on this allocation.

We welcome that the allocation is indicative only and that the area avoids designated sites or priority habitats. Having said this, the allocation comes up to the South Freeland Meadows Local Wildlife Site (LWS) and we are concerned about the impact the development will have on the nature conservation interest of this site. Meadows of similar quality have also been identified to the East and North of this LWS and these are currently considered as potential extensions to the LWS. As such a large area immediately adjacent to the northern boundary of the proposed development is sensitive in ecological terms.

In addition, it has been brought to our attention that parts of the proposed new garden village area have recently been recognised by Plantlife for its notable arable weed assemble, which might act as a constraint to development. We strongly recommend that ecological surveys are carried out at the earliest opportunity to inform the masterplan process.

If this allocation was further pursued we expect a minimum buffer of 50 m to the existing and proposed LWS to be provided.

We welcome that the new settlement is proposed to follow the garden village principles, however, these have not been defined. We believe that the proposed expansion of Eynsham and the proposed garden village should be subject to an overall masterplan and accompanied by a green infrastructure strategy that considers Eynsham’s open space and green infrastructure needs in their entirety. This way a comprehensive network of green links and open spaces could be created that maximises benefits for people and wildlife.

We expect that the proposed new garden village and the western expansion of Eynsham will generate significant amounts of traffic adding to an already existing high traffic volume. Transport improvements such as the widening of the A40 or the creation of the west Eynsham link road will need to be assessed not only in transport terms but also ecological terms.

Woodstock

In Woodstock three sites are being put forward for development. We welcome that they avoid any designated sites, however, pressure (particularly recreational pressure) on nearby designated sites such as
Blenheim Park 5551 and Woodstock Water Meadows LWS is expected to increase. Care will need to be taken in the layout and design of these sites to ensure that they include sufficient open space for people to use to alleviate pressures on designated sites.

The development areas are located adjacent to the Blenheim & Bletchley Park CTA and development we would expect development to contribute to the aims and objectives of the CTA.

I am writing on behalf of the Eynsham Society, a village amenity group of some 150 active residents, to object to the revised Draft Local Plan insofar as it affects the village of Eynsham.

The draft Plan has a disproportionate and potentially devastating effect on Eynsham, which had already doubled in size between 1970 and 2001 (Eynsham Village Design Statement: http://eynshamsociety.org.uk/VDS.pdf) and has been expanded further since then. The draft Plan provides for an additional 3,200 dwellings (including the supposed “Garden Village”, in practice a thinly-disguised extension of Eynsham), which would more than double its size again, permanently affect its setting in the landscape and almost certainly destroy its cohesion as a community by changing it from a vibrant village to an under-resourced town without a commercial centre. As the VDS says, “In the 20th century, the main influence on the village has been its nearness to Oxford, and its position on the edge of the Oxford Green Belt. Oxford needs more housing, and this puts pressure on communities just outside the Green Belt to accept development. One outcome has been that the population of the village has doubled since 1960. Nevertheless, Eynsham has not developed the kind of centre which characterises Woodstock and Chipping Norton, and it remains a village.” It is notable (and unacceptable) that of these 3,200 houses only 450 (14%) would be to meet local housing need. Even if one took at face value the assertion that the “Garden Village” would be a separate, self-sustaining village, the 1,000 additional houses proposed on the west of Eynsham could increase its population by up to 50%, and the link road from these to the A40 could cut off the existing and much-valued pedestrian access to open countryside.

Eynsham accepts that it needs a proportionate amount of new housing, and volunteers in the Eynsham Futures Group have devoted much time and effort over the last two years to preparing a draft Neighbourhood Plan detailing how this could best be delivered. Options identified include a small development either to the west of the village (caution is needed here to prevent sprawl as there is no strong boundary) or north of the A40 in a small part of the area where the “Garden Village” is now proposed. By preempting the only suitable sites, the draft Plan renders this work nugatory and destroys any pretence of “localism”. This echoes the fate of the VDS, adoption of which was delayed by WODC planning officers until the scheme was abolished, so that it never came into force. It also eliminates the future option of dualling the A40 on a new line to the north of the small extension (as envisaged in the selected Blue Route of the 1990s dualling proposal) to avoid the intolerable nuisance that dualling on-line would cause to north Eynsham.

The supposed “Garden Village” – to be inauspiciously named “Tilgarsley” after the village somewhere in the area which was wiped out by the Black Death - is presented as though it were a self-contained and bounded independent settlement, as required by the prospectus for Garden Villages at https://www.gov.uk/government/publications/locally-led-garden-villages-towns-and-cities. However, it is from the outset intended to accommodate Oxford unmet need rather than local people, and would rely on oversubscribed secondary school places and medical facilities in Eynsham, so would certainly not be self-contained. It would be at best an Oxford dormitory and at worst a ghetto.

Much is made of the close proximity of the “Garden Village” to Hanborough Station, which in principle might reduce dependency of its residents on the overloaded A40 to travel to work in Oxford. However, the major employment sites in Oxford are at the opposite side of the city from the station, in Headington and Cowley,

<td>so in practice this is unlikely to be the case. A more likely outcome is that houses on the open market would be taken up by highly-paid London commuters who would drive prices out of the reach of local people. The cynical attempt to present this over-extension of Eynsham as a &quot;Garden Village&quot; is clearly behind the decision to site all the Oxford unmet need housing in one place, for which there is otherwise no requirement. The housing does need to be within reasonable reach of Oxford, but dispersing it among several sites would considerably reduce its negative impact on any one settlement. It is worth noting that a sustainable solution to Oxford's permanent shortage of building land would be to move both the inner and outer boundaries of the Green Belt out by a modest distance (half a mile, say) which would remove the stranglehold on Oxford and actually increase the Green Belt area.</td>

<td>&gt; SECTION 9 - STRATEGY AT THE LOCAL LEVEL &gt; Eynsham Woodstock Sub Area &gt; MAIN 183</td>
<td>I wish to object to the inclusion of polices EW1c, EW1d, EW1e in the Local Plan. These policies involve the building of 670 homes on land to the north of Hill Rise, to the north of Banbury Road, and to the south east of Woodstock. As Parish Path Warden for Woodstock I am familiar with all the public footpaths around the town. I know how well-used they are and how much they are valued by the townspeople. If these developments go ahead, footpaths FP1, FP7 and FP8 would become nothing more than urban snickets of no amenity value whatsoever. Land close to the town should be left as open country for the benefit of all for exercise and recreation.</td>
</tr>
</tbody>
</table>
There are limited opportunities for larger sites, as noted in 9.6.26 & 27, due to the landscape character of Burford and Charlbury and the AONB. It is of note that Burford Town Council expressed a desire for affordable housing (through the Burford Road application), which the Land East of Burford site offers and it’s bounded by buildings on 3 sides so could be considered as infill. Nevertheless, it’s in the AONB. The landscape impact of the site from key historical locations in the town should be reviewed. Also, should a review of applications highlight an increased potential for windfall, this site may prove unnecessary. Furthermore, the Burford Road site is awaiting an appeal decision. CPRE opposed this site, but if the appeal is allowed, the supply in the sub-area would be significantly boosted. Therefore, once again the need for further allocations/sites could be reviewed thereafter.

We are aware that paragraphs 115 and 116 of the NPPF attach great weight to conserving landscape and scenic beauty in Areas of Outstanding National Beauty, where major development should be refused except in exceptional circumstances. Given the constraints imposed by the AONB, we question whether any housing allocations in the AONB settlements is possible at this late stage of the plan. We suggest that the approach to plan-led development in West Oxfordshire’s AONB settlements such as Charlbury needs to be careful and considered, perhaps following the approach taken by local planning authorities such as Winchester, Horsham and North Kesteven where a plan-wide allocation for certain, smaller scale settlements is set, with development coming forward either (a) as part of a Neighbourhood Plan or other locally supported initiatives, such as a Planning Brief, or (b) by means of a planning application that is supported at the local/Parish level. This approach has been tested at EIP/hearings recently, and held to be sound.

Scope for Further Expansion
As paragraph 9.6.18 of the draft Local Plan states, the area is particularly environmentally sensitive, being covered by the Cotswolds Area of Outstanding Natural Beauty (AONB). The area is also recognised in the draft Local Plan as being significant in terms of the historic environment. Most of Burford is in the Burford Conservation Area and is home to a number of listed buildings (paragraph 9.6.21). The area is highly constrained in terms of environmental and statutory historic designations and although it is clear that Burford is an appropriate location for growth ‘it must be recognised that opportunities for development are relatively limited and the planned scale of growth therefore needs to be appropriate.’ (paragraph 9.6.25). Proposed Main Modification 184 deletes supporting text about the limited capacity for development at Burford which previously read:

‘The development potential of land surrounding Burford is heavily constrained by the sensitivity of the landscape although there is scope for a small scale extension of the built up area’.

The proposed new supporting text which identifies capacity to the east of the town for an extension of the built up area contradicts text in the same paragraph which states that ‘whilst there is some scope to provide additional dwellings within the built up area, the setting of listed buildings and conservation is a key sensitivity, limiting large scale intensification’ (paragraph 9.6.26). The proposed modification to the plan clearly relates the new potential to the site allocation at Land East of Burford however there has been no updated evidence which details why development to the east of the town has now become appropriate when it was previously considered to be a highly constrained by heritage and landscape impact. This allocation itself is discussed in the next section of these representations.

Burford remains a highly constrained settlement, where there is an identified need for growth but little
capacity to deliver it. The AONB and Conservation Area designations cover most of the settlement, meaning that the vast majority of sites assessed in the Strategic Housing and Economic Land Availability Assessment 2016 (SHELAA) are in either the Conservation Area or the AONB, and in some cases, they are in both.

The only site that is not constrained by either the AONB or the Conservation Area designations is Land at Shilton Road (Site 146). Though the designations themselves do not preclude the principle of development of a site, sites within Conservation and the AONB have a high level of sensitivity to development and must meet statutory tests in relation to the protection of heritage assets and designated areas of landscape. Sites such as Land at Shilton Road which are not constrained and can deliver the homes needed should have been considered as part of a more robust site selection process as set out in the next section.

The Charlbury Neighbourhood Forum is a community group set up by the Charlbury Town Council. It is currently preparing both Community Led and Neighbourhood Development Plans on the Council’s behalf. While I am a member of the Forum, this representation is made in a personal capacity as an interested local resident who was a Planning Inspector from 1991-2015.

This is an objection to the revised wording of paragraph 9.6.27, in particular the inclusion of the word ‘significant’. If a proposed development is considered insignificant it would have a nil impact and would therefore almost inevitably be acceptable. The inclusion of ‘significant’ is therefore redundant and it should simply be removed altogether.

If that is not accepted, then some further explanation is needed of what is meant. I would suggest the following: “significant’ in this context is not intended as a reference to an arbitrary number of dwellings or buildings but includes any development that might have an adverse impact on the landscape and environmental setting of the town, including heritage considerations.” But it would be simpler just to remove it!

<td>Burford</td>
<td>Mr</td>
<td>Chandler</td>
<td>97</td>
<td>&gt; SECTION 9 - STRATEGY AT THE LOCAL LEVEL &gt; Burford Charlbury Sub Area &gt; MAIN 184</td>
<td>I would like to raise concern regarding the &quot;the Burford-Charlbury segment&quot; which is on pages 285-305 of the local plan. This segment had previously been deemed unsuitable and there is no mention on why it has suddenly become suitable. Some of the reasons behind its unsuitability are as follows: 1. It is in an AONB and conservation area. 2. No surveys have been carried out prior to adding it into the local plan at the last minute. This failure means that the steepness of the field has not been taken into consideration, along with natural springs running through the field, the requirement to carry out serious drainage works, risk of flooding if this field is taken up with buildings, the direction of the water run off. 3. The increase in the amount of houses will mean a 25% increase in population. No plan or mitigation has been put in place for sewage, vehicle movement, doctor surgery and schools. 4. There is an existing issue with flooding of Witney street and the meadows leading down to the wind rush. The increase in run off will mean the meadow and road will flood more often and for longer periods of time. 5. Suitable access. The previous draft plan identified this as an issue. Frethern close can take no further traffic. There has been an increase over the years of 30 houses which has left parking and passing difficulties along the close. Barns lane is narrow and two cars cannot pass. 6. There has been no consultation with the locals or town council. The town council has offered a location north of the A40, less than 800 metres from this segment. There has been a small % of opposition to this location. However it is supported by the majority of Burford residents if the number of houses proposed was reduced to a realistic amount. I would like to state that adding this segment into the local plan at this late date, shows a disregard for the environment and for the previous work that had high lighted the fact that this is not suitable. It is a lazy piece of work which I believe WODC have put forward to raise objections and move the blame for their lack of in</td>

</tr>
</tbody>
</table>
Apart from service S3 in Stonesfield and Charlbury, bus services, where they do exist, are commercially marginal. It would be rational and justifiable to seek to concentrate development in locations which are on existing bus services (tending to be the largest villages/settlements) where environmental constraints are the least pressing, to help sustain their longer-term viability. Burford appears to us to offer more such opportunities than Charlbury.

Currently 37 houses are being built on the Charity Farm site, which was in the previous Local Plan. At the same time a further 13 houses are being built on the Ridings and 8 houses were built also on the Ridings two years ago - neither of these developments were on any Plan.

These are 58 new houses built, or being built, since 2015, not including a number of individual in fill plots in the village.

The 2031 Plan shows a single development plot of 15.5 acres for 50 homes in Stonesfield north of the Woodstock Road. See extract from the Council’s exhibition panels.

* There are no employment opportunities in the village, ensuring that everyone must commute. Although there is a bus route to Oxford, if your place of work is anywhere else it inevitably means using a car. How can this be sustainable or meet emissions standards?

* Stonesfield only has narrow country lanes, no main road or access to train.

* Water and sewage treatment are already hard pressed.

* The primary school is already full, new classrooms will need to be built - where is the planning for this?

* The pre-school is already at maximum capacity.

There’s one village shop and the pub has just been closed. Together with the houses currently being built, this will see a nearly 17% increase in housing in Stonesfield, from 644 to 752. These numbers will inevitably put stress on the infrastructure and alter the character of the village. I would note the following:

There are also grounds to think the Local Plan to 2031 is not legally compliant and did not meet Community Involvement criteria. There was next to no communication from the District or Parish Councils about the scale of the development in Stonesfield via the village newsletter.

Further, the information given in the travelling exhibition (I saw it in Woodstock on 19 December) and on the web site, in both the PDFs of the panels and the Schedule of Proposed Main Modifications, clearly states that the entire site north of the Woodstock Road was for 50 homes on 15.5 acres.

However, at Stonesfield Parish Council’s meeting on 19 December Catherine Teplow West, WODC Head of Planning Development Control, confirmed that pre-planning permission had been granted to CALA Homes to build 68 houses on just 8.2 acres. Therefore the information made available to the public does not match what WODC’s Head of Planning is agreeing in private with the developer.

Not only has the number of houses increased, but the remaining 7-3 acres will be ripe for development at a later stage, no doubt for a further 50 or so houses. This makes a mockery of...

<td>Mr</td>
<td>Cutler</td>
<td></td>
<td>1684</td>
<td>&gt; SECTION 9 - STRATEGY AT THE LOCAL LEVEL &gt; Burford Charlbury Sub Area &gt; MAIN 185</td>
<td>The Local Plan now calls for 1026 units in the Charlbury and Burford sub-area, as noted in 9.6.31. It's modest, reflecting the region's rural and historic character and would be best made up of small and medium sites of up to between 50 and 100 units. There have been 207 completions to date. That leaves a balance of 819 homes to build. Permissions for 317 units on small and medium sites are granted and expected to be completed in the Plan Period. So there are 502 permissions for homes still needed over the next 15 years. WODC propose specific allocations for 219 units, leaving a balance of 283 units from windfall. 122 small windfalls have been permitted in the recent past and are in the pipeline, plus some of the completions will no doubt be small windfalls, so it's reasonable to assume that more than 283 will come forward in the next 15 years. Applications for this type of development remain buoyant, so there may not be a need for so many allocations in this sub-area. We are aware that paragraphs 115 and 116 of the NPPF attach great weight to conserving landscape and scenic beauty in Areas of Outstanding National Beauty, where major development should be refused except in exceptional circumstances. Given the constraints imposed by the AONB, we question whether any housing allocations in the AONB settlements is possible at this late stage of the plan. We suggest that the approach to plan-led development in West Oxfordshire’s AONB settlements such as Charlbury needs to be careful and considered, perhaps following the approach taken by local planning authorities such as Winchester, Horsham and North Kesteven where a plan-wide allocation for certain, smaller scale settlements is set, with development coming forward either (a) as part of a Neighbourhood Plan or other locally supported initiatives, such as a Planning Brief, or (b) by means of a planning application that is supported at the local/Parish level. This approach has been tested at EIP/hearings recently, and held to be sound.</td>

<td>1820</td>
<td>&gt; SECTION 9 - STRATEGY AT THE LOCAL LEVEL &gt; Burford Charlbury Sub Area &gt; MAIN 185</td>
<td>Non-Strategic Allocations, Land East of Burford (Main Modifications 185, 187, 191 and 193) The proposed allocation ‘Land East of Burford’ is located wholly within the Burford Conservation Area which was designated in 1970. The site also forms part of the setting of Burford High Street, the historic core of the Conservation Area which contains a high number of listed buildings. The site is also in the Cotswolds AONB which was designated in 1966 in recognition of its special landscape character. Paragraph 126 of the NPPF states that Local Plans should set out a positive strategy for the conservation and enjoyment of the historic environment and ‘recognise that heritage assets are an irreplaceable resource and conserve them in a manner appropriate for their significance’. Designated heritage assets including Conservation Areas and listed buildings are further protected by the Planning (Listed Buildings and Conservation Areas) Act 1990. Section 72 of the 1990 Act states that with respect to land in a conservation area ‘special attention shall be made to the desirability of preserving or enhancing the character or appearance of that area.’ In relation to listed buildings, the Section 66 states that when considering whether to grant planning permission for a development which affects a listed building or its setting, the decision maker must ‘have special regard to the desirability of preserving the building or its setting or any features of special architectural or historic interest which it possesses’. Whilst an allocation in a local plan is not tantamount to a permission itself, it does provide certain assurances that the principle of development of the site is accepted. Historic England have produced guidance on the process of local plan allocations affecting heritage assets in Historic England Advice Note 3: The Historic Environment and Site Allocations in Local Plans. The guidance encourages local authorities to properly</td>
</tr>
</tbody>
</table>
consider the historic environment in preparing local plans, helping them to ensure that the statutory tests are met and that the plan can be sound. In particular, the note sets out that local planning authorities should make sure that the significance of heritage assets is understood when considering allocations, ‘this involves more than identifying known heritage assets within a given distance, but rather a more holistic process which seeks to understand their significance and value’ (Historic England Advice Note pg. 4).

The suitability of the site for development has been questioned throughout in the emerging evidence base for the local plan and has been discounted as unsuitable in the 2014 Strategic Housing and Employment Land Availability Assessment (SHELAA). It is unclear, without any further heritage or landscape evidence having been produced, how this position has changed in the interim period to the 2016 SHELAA, changing the recommendation from ‘not suitable’ to ‘suitable’. The 2014 SHELAA assessed the site (143 and 144) as unsuitable for development stating that the site: ‘forms part of attractive entrance to Burford from the east and is a key element of the local character. Very poor access to site would prevent development without large scale tree felling. Site contributes to the character of the Conservation Area. ‘The impact on the setting of the Conservation Area outweighs the need for development in this part of town’

In contrast the 2016 SHELAA now states that ‘whilst views of the site can be achieved from the north-east development if designed sensitively [it] would read as part of the existing built form of the town.’ The reason for the conclusion of suitability is set out in the SHELAA that ‘the site is considered suitable for development subject to overcoming access constraints and provided development is designed to read as part of the existing settlement’.

There is no explanation in the SHELAA or the Local Plan evidence base of how such a different conclusion to that of 2014 has been reached, or for that matter why reference is now made in the Main Modifications to the acceptability of development in the east of the town with no evidence to support it.

The 2014 assessment states that the site itself contributes to the character of the Conservation Area. Although there is no Conservation Area Appraisal for the Burford Conservation Area, it is reasonable to conclude that this greenfield site has been included in the conservation area (since its extension in 1991) due to its openness, and contribution to the green setting of the built up area of the town itself.

Land to the East of Burford forms part of the overall landscape setting of the Conservation Area and is important in terms of its undeveloped character. It is not clear from the proposed Main Modifications how development of the site so that it would ‘read as part of the existing built form of the town’ would preserve the or enhance the character and appearance of the area which is important for its open and undeveloped nature. It is therefore contended that this development would cause harm to the Conservation Area.

Case Law has clarified the interpretation of the statutory duties to preserve and enhance heritage assets. In the Court of Appeal Decision R (on the application of The Forge Field Society and others) v Sevenoaks District Council (Case No [2014] EWHC 1895 (Admin)) where there was need for development but the development would cause harm to heritage assets, the need to consider alternative sites was emphasised as part of the statutory duty of preservation. In this case, the site was in the AONB, a conservation area and in the setting of grade II* and grade II listed buildings. Linblom J set out in the decision that:

The lack of an updated evidence base with regards to proposed allocations and the historic environment indicates that the plan has not been positively prepared, is not consistent with national policy and does not meet the legal requirements for protecting and conserving the historic environment.

This raises concerns about the level of research the Council have done into the impacts of the development
on the natural and historic environment. The SA Appendix 5, which assesses the proposed non-strategic allocations, states that Land to the East of Burford does not contain any designated heritage assets and considers that potential impact on Proposed Local Plan policy OS4 (High Quality Design) will provide sufficient mitigation of harm (pg 97).

The site selection process and the sustainability appraisal are clearly fundamentally flawed, it does not get close to understanding the potential harm and impact of a potential development on a nationally significant conservation area with a high proportion of listed buildings and a pristine historic core. While the SHELAA assessments refer to the conservation area, the site selection process appears to have been blind to these potential risks and has failed to properly consider viable alternatives which are less constrained and more appropriate. This is further compounded by the fact that the Cabinet Agenda Report from the 39th October 2016, when the main modifications were approved by Cabinet stated that the Land East of Burford, ‘lies outside (although adjacent to) the Burford Conservation Area’. This raises serious concerns and does not instill confidence that the Council have considered the site allocations in anywhere near enough detail, indeed the Council made a decision to progress to consultation based on false information put in front of them.

Landscape Impact

The proposed allocation at Land to the East of Burford is located within the Cotswolds AONB. Paragraph 115 of the NPPF sets out that ‘great weight should be given to conserving landscape and scenic beauty in National Parks, the Broads, and Areas of Outstanding Natural Beauty, which have the highest status of protection in relation to landscape and scenic beauty’.

Areas of Outstanding Natural Beauty are designated in accordance with the Countryside and Rights of Way Act 2000 which confirms that the purpose of designating AONBs is the conservation and enhancement of natural beauty of the area. It also requires a management plan to be produced for each AONB to formulate policies for local authorities and for carrying out their functions in managing it.

The most up to date landscape assessment for the district is the West Oxfordshire Landscape Assessment 1998 (WOLA). The WOLA identifies Burford as being part of the Upper Windrush Valley As set out in the proof of evidence of Mr. Benjamin Rosedale at the recent appeal inquiry for Land at Shilton Road, the site is widely visible from the north and east and contributes to the distinction between the northern areas of Burford and the historic core on the river terrace to the south. The WOLA identifies several characteristics of the Upper Windrush Valley Landscape Character Area which are set out in Mr. Rosedale’s proof of evidence:

• ‘moderate to high intervisibility, distant views along and across the valley;
• valleyside/urban edge very visible from Fulbrook;
• classic distant view of the church spire approaching Burford on the A40;
• urban edge harsh in places, particularly viewed from A40 entering Burford and on Witney Street;
• urban silhouette from valley floor harsh in places’.

The WOLA also identifies key sensitivities including that any further urbanisation of the A40 corridor should be resisted as change would be visible. Overall, in his proof of evidence, Mr. Rosedale concludes that:
"It is clear that the development to the east of Burford would be both prominent and harmful to the distinct character of Burford when viewed from the east and north (largely from locations within the AONB).

The allocation of the land to the east of Burford should not be allocated in the WOLP. It is not sound in terms of national policy, or justified in terms of evidence base.

Proposed Housing in Burford (Main Modifications 185)

For the reasons set out above regarding the lack of soundness of allocating the land to the east of Burford (MM193) but also regarding the need for a positive planning strategy in relation to Burford, and the failings of the provision made across the district to meet housing needs, land off Shilton Road Burford should be allocated for development (SHELA site 146).

While the site has been the subject of a recent appeal, the outcome of which is awaited, the WLOP should have included the site as an allocation in the Plan to ensure a sound approach. The SHELA itself demonstrates that the site is accessible and is supported by the Town Council. It is unconstrained in comparison with other sites in the District and in particular in the Sub-area. Not in a Conservation Area or AONB. The site is very well related to existing development, including to the south of the A40, where the secondary school and Burford Garden entre among other uses are located. As is accepted in the SHELAA the site is partially enclosed.

Development in this location would also deliver other wider benefits including improvements to sustainable transport infrastructure in the town - to include new pedestrian routes and crossings of the A40 and public transport measures.

The negative conclusions of the SHEELA as to site suitability are limited to a perception of distance from the town centre which is contradicted by the evidence in the SHEELA of the town centre being within 10-20 minutes walk of the town centre an accessible to other locations and facilities. Moreover the SHEELA does not take account of the potential enhancements to local walking routes or of the fact that a public transport service to the town centre and other destinations stops outside site 146 on the Shilton Road.

Suitable development in this location would accord with the aspirations of the Town Plan and the WOLP in respect of Burford and should be positively planned for in the WOLP. Its omission is inconsistent with the evidence base.

The NPPF
Paragraph 14 sets out the presumption in favour of sustainable development. For plan-making this means that Local Plans should meet objectively assessed needs (OANs)… UNLESS (my emphasis) … "specific policies
in this Framework indicate development should be restricted". Footnote 9 includes AONBs among the areas where such specific policies would apply to restrict development.

One interpretation of that paragraph would be that within the ‘restricted’ areas, OANs should not be met at all. At the very least it means there is no obligation to do so. Rather, the correct approach is to look next at the policies relevant to the land or area concerned. So for example, in the Green Belt, residential development for its own sake would be inappropriate in principle and ‘very special circumstances’ would be needed to justify it - or, as in some cases, land might be excluded from the GB to allow development to proceed.

Further, the case of Forest of Dean v SoSCLG & Gladman Developments Ltd [2016] EWHC 421 (Admin) was concerned with a grant of planning permission but the Court was considering precisely the same wording in both parts of paragraph 14 and in footnote 9. Just as in that case their effect was to dis-apply the presumption in favour of permission, so must that also be the case “where specific policies... etc” for plan-making purposes.

Paragraph 113 goes on to state that “Local planning authorities should set criteria based policies against which proposals for any development on or affecting protected wildlife or geodiversity sites or landscape areas will be judged.” It says nothing about meeting OANs within such areas because that is already addressed by the strongly worded provisions of paragraph 14. And as advised at paragraph 47, local plans should meet relevant OANs in full “as far as is consistent with the policies set out in this Framework.”

The WOLP
As acknowledged at WOLP 9.6.1, the vast majority of the Burford/Charlbury sub-area is within the Cotswolds AONB. To decide on the amount of housing, if any, that should be provided within it across the plan period, it follows from the above that it is necessary first to look at relevant planning policy and the purpose and objectives of the designation. Section 85 of the CROW Act 2000 effectively confirms that the purpose of designation is the conservation and enhancement of the natural beauty of the area, while NPPF para 115 advises that AONBs “have the highest status of protection in relation to landscape and scenic beauty” and that “great weight should be given to conserving (their) landscape and scenic beauty.” Regard must also be had however to the social and economic well-being of local communities within them.

Between them, WOLP Policies OS1, OS2, H1 and H2 currently refer to AONB policies for the purpose of decision-making but nowhere are the terms of NPPF para 14 acknowledged or discussed in relation to plan-making. The policies therefore start on the wrong foot by imposing a requirement to meet part of the District’s wider OANs in the AONB, directly contrary to the passages quoted above. They then compound the error by setting an ‘indicative distribution’ for the sub-area based on no more than an arbitrary mathematical division of the district-wide figure and with no justification based on the needs of local communities within the AONB.

To set requirements arbitrarily derived from the district total is immediately to impose a burden on the AONB which is expressly excluded by paragraph 14 of the NPPF and which consequently risks undermining the primary purpose of the designation. Put another way, for decision-taking it is to pre-weight the scales in a way which is neither sanctioned nor even permitted under the NPPF provisions before any assessment against AONB policies (in particular NPPF paras 115 and 116) can be made. In short, it is to put the cart before the horse.

This flaw in the WOLP approach has been amply illustrated recently by appeal decision APP/D3125/W/16/3143885 – Land south of High Street, Milton-under-Wychwood. At paragraph 39, the
Inspector stated that the emerging LP "requires the construction of 800 dwellings" (it doesn’t – but an understandable misinterpretation) in the B/C sub-area over the plan period. In the next paragraph, he noted that the Council accepted that there was no scope for meeting that requirement in the sub-area on sites outside the AONB. Which begs the question of whether that ‘requirement’ is legitimately imposed on the sub-area at all, given that virtually all of it is in the AONB.

Throughout paragraphs 39 – 43 of the decision, there is an acceptance of the need for housing in the B/C sub-area by both the Inspector and the Council – but a need based entirely on the arbitrary figure set out in the WOLP. The Inspector to some extent based his conclusion on a local need for affordable housing ‘on the coat tails’ of market housing but did not look behind the wider based target of 800. That is not a criticism as it seems no-one, least of all the Council, suggested he should consider that question (and even if they had, he might well have felt it was not for discussion in a Section 78 appeal). The point, for present purposes, is that whatever the impact of that proposal in AONB terms, the scales were unjustifiably weighted in favour of it from the outset because of the failure to follow the NPPF provisions in relation to plan-making.

It is not enough to say, as at paragraph 9.6.25, that “it is appropriate that some future growth” takes place in the B/C sub-area simply because it has good transport links and a range of infrastructure. The former in fact are deteriorating with the withdrawal of subsidies to bus services. But even if they weren’t, this again is an arbitrary approach which ignores the purpose and objectives of the AONB designation and is not justified under national policy in an area "where specific policies indicate development should be restricted." A simplistic expectation of growth – as opposed to meeting local needs – again runs contrary to NPPF para 14 and is inherently inimical to the AONB designation by pre-loading of the scales when it comes to decision making.

None of this is to say that no new housing should be provided in the AONB nor that sites cannot be allocated for it under Local or Neighbourhood Plans. In Inspector Emmerson’s report on the Bath LP for example, he cited (among other points) Natural England’s advice that 2 proposed allocations would not undermine the purpose and objectives of the designation. Having (I assume!) made his own assessment of the sites and arguments for and against, he went on to support their allocation. Any housing provided as a consequence would contribute to the district wide targets (derived from wider OANs) but the site assessments should not have been driven by those OANs – because NPPF para 14 tells us they should not.

The same would be true of any windfall sites – they should be assessed first against the AONB policies, then against local needs but with little weight being given to their contribution to district-wide targets. It might also be the case that some growth of particular settlements would be justified in order to maintain their viability (e.g. as advised at NPPF para 55, albeit in relation to rural areas generally) – but that would still be to meet the needs of the local community rather than wider OANs arising independently of the AONB.

It may be said that some districts are so heavily constrained by their location and the restrictive policies affecting it that the meeting of more than just local needs becomes inevitable. Even if a whole district is within a designated area however, the starting point remains the ‘designation’ policy, not the OANs – again because the NPPF tells us so – though plainly, if those needs cannot be met outside the designated area, that point then comes into the equation. Importantly however this is not the case in West Oxfordshire where only about a third of the district lies within the AONB. In contrast, virtually all of the B/C sub-area does so but no justification is provided for the target of 1000 (or any number of) dwellings beyond the unsupported assertions already mentioned. Put this another way - where is the evidence that demonstrates a need to provide 1000 dwellings within this part of the AONB?

**Conclusion**

<td>&gt; SECTION 9 - STRATEGY AT THE LOCAL LEVEL &gt; Burford Charlbury Sub Area &gt; MAIN 185</td>
<td>To conclude, the setting of arbitrary targets derived from district-wide OANs directly contravenes NPPF para 14 and therefore the (increase in the) target for the B/C sub-area in particular has not been justified. The correct approach, based on the NPPF, is to look at individual site allocations and proposals in the light of the purpose and objectives of the designation and policies relevant to it. Save in the rare case of national considerations affecting major developments, the question of need should also be considered in that light, which means meeting the needs of local communities not wider OANs that can and should be met outside the AONB. No-one wishes to see continuing delay to adoption of the WOLP. But this issue is of fundamental importance to its soundness. In my submission, what is needed is an acknowledgement of the effect of NPPF para 14 and a redrawing of the ‘indicative housing distributions’ [Policy H1], firstly to direct development to areas outside the AONB, secondly to reflect an assessment of the needs of local communities within it (which could be covered in Neighbourhood Plans), and thirdly, where possible, to allocate sites to meet those needs – but no more than that. That would leave windfall sites to be assessed properly, taking account of local needs, but not with the scales pre-weighted to meet an arbitrary target derived from the district wide OANs.</td>

<td>&gt; SECTION 9 - STRATEGY AT THE LOCAL LEVEL &gt; Burford Charlbury Sub Area &gt; MAIN 185</td>
<td>The Charlbury Neighbourhood Forum is a community group set up by the Charlbury Town Council. It is currently preparing both Community Led and Neighbourhood Development Plans on the Council’s behalf. While I am a member of the Forum, this representation is made in a personal capacity as an interested local resident who was a Planning Inspector from 1991-2015. This objection is made without prejudice to my major objection to the setting of housing targets within the AONB. It is made to the revised wording of paragraph 9.6.31 and specifically, the use of the term ‘indicative housing requirement’ both there and in Table 9.5. That expression is not consistent with the terms used in para 5.22 and Policy H1. Both, and especially the policy, make it clear that the figures are “an indicative distribution and should not be taken as an absolute target (and in 5.22, ‘requirements’) for each sub-area.” The importance of the language used here is amply illustrated by appeal decision APP/D3125/W/16/3143885 – Land south of High Street, Milton-under- Wychwood. At para 39 the Inspector stated that the “emerging LP … requires the construction of 800 dwellings over the plan period…” and appears to have given weight to that ‘requirement’ accordingly. Whether or not his decision might have been different is not the point for present purposes – the Plan needs to be internally consistent in its wording to ensure weight is given correctly within development control decisions. 9.6.31 and Table 9.5 should refer to an “indicative housing distribution” not to a “requirement”.</td>

While I am a member of the Forum, this representation is made in a personal capacity as an interested local resident who was a Planning Inspector from 1991-2015. This objection is made to the revised figures at Table 9.5, specifically to the number of dwellings shown as an existing commitment at Rushy Bank, Charlbury. To be consistent with the (new) para 5.21(b), the figure should include the 12 bed YDUK facility (Class C2), particularly as it is intended to be in the form of self-contained units. For the record, this has nothing to do with the planning merits of the development, only how it is counted in Table 9.5.</td>

<td>9.6.31 The term “indicative housing requirement” contradicts the allocation in H1 which is stated to be “an indicative distribution” which “should not be taken as an absolute target for each sub-area”. The use of “requirement”, indicative or otherwise, actually goes beyond “target&quot; and implies an obligation to be met and an assessment of underlying need which has not been undertaken. The setting of a requirement within an AONB is contrary to NPPF14 which disapplies the need to meet objectively assessed need in an AONB, and NPPF113, which requires a criteria led approach, rather than a requirement led approach, to planning in the AONB.</td>

<td>&gt; SECTION 9 - STRATEGY AT THE LOCAL LEVEL &gt; Burford Charlbury Sub Area &gt; MAIN 185</td>
<td>2.52 Table 9.5 sets out the anticipated housing delivery in the Burford-Charlbury Sub-Area. The Sub-Area has been set an indicative housing requirement of 1,000 new dwellings to assist in meeting the District wide requirement of 13,200 new dwellings (excluding Oxford overspill). Table 9.5 sets out that up to 1,026 homes are anticipated to be delivered in the Sub-Area over the Plan period. This is the only Sub-Area in which sufficient completions, commitments and allocations are proposed in order to meet the indicative housing requirement for the Sub-Area. In order to meet this, the Sub-Area is however reliant on the delivery of 283 windfall units, and therefore the full 1,000 dwellings are not actually allocated within the draft Plan. 2.53 Including the windfall allowance, sufficient provision is proposed in order to meet the requirements of the Sub-Area, but there is only limited flexibility allowed for within this due to the Plan not allocating the full quantum of development. As discussed above in relation to the overall housing land supply, it is important that the Plan not only makes sufficient provision to meet the objectively assessed need for the District but also, as required by the NPPF, allows sufficient flexibility to allow for changing circumstances. 2.54 Whilst additional housing could be brought forward through Neighbourhood Plans there is no guarantee of this, and no mechanism in place in the policy should they not deliver. Currently the only Neighbourhood Plan area designated in the Sub-Area is in relation to Charlbury. 2.55 As currently drafted there is therefore concern as to whether the Plan will meet the housing requirement for the District as a whole.</td>

<td></td>
<td>AT THE LOCAL LEVEL &gt; Burford Charlbury Sub Area &gt; MAIN 187</td>
<td>illustrated on the accompanying plans (pages 6 and 7 below) and is within a 400m walk to the station, which is considered by URBED, Manual for Streets and the County Council as “excellent” accessibility. This brings the prospect of Oxford-related development into the frame, including employment, but more pertinently in relation to Oxford’s unmet housing need; where accessibility to the city centre from housing next to the station at Charlbury is better than from the Oxford ring road! We are looking to deliver a new concept in housing – an 'Enterprise Village'. We have not had time to agree an approach with the landowner (the Cornbury Estate), but the area shown on our plan seems to satisfy our search criteria of: * An active and entrepreneurial community, * Accessibility, including to London and Oxford, * A high quality environment, and * Scope for combining employment and housing on the same site – ie placemaking. It is notable that it takes just 16 – 20 minutes (depending on the service) by train to get into central Oxford, and there are regular services (eg every 30 minutes) throughout the day. This is extraordinarily good accessibility and puts this part of Charlbury in contention as a location that can help satisfy a small part of the pressing unmet housing need for Oxford (estimated at 15,000 units across the four surrounding districts). The site would require an exceptional approach to design, sustainability and community engagement, but the result ought to be hugely interesting and successful, as well as prize-winning. This would not be a large scale development project, but perhaps 50 units on the front half of the site, plus work and innovation space, together with some form of community, café and/or cultural offer. This scale of development in the town has already been endorsed by the District Council with its proposal in the Proposed Modifications for 40 units north of Jefferson's Piece (MM185 et seq). We question how that proposal connects with Oxford (from a housing and employment point of view). Moreover, unlike Jefferson's Piece, and many other of the sites proposed in the AONB settlements, the land next to Charlbury Station is wholly deliverable within the first five years of the plan. Charlbury Enterprise Village Our working title is Charlbury Enterprise Village (&quot;CEV&quot;). We would aim to draw from leading historic precedents such as the Victorian Enlightenment movement that gave rise to the model villages of Bourneville (Cadbury), Port Sunlight (Unilever) and Trowse (Colman), combining decent housing and a strong community with close connections to employment. The concept has stood the test of time, most recently being successfully reinvented by the Duchy of Cornwall with projects in the South West, including Poundbury. With the demands of modern work, the digital economy and the importance of lifestyle, there is clearly an opportunity to revisit these precedents in a modern, forward-looking manner. Our idea is to use these unique circumstances to produce a groundbreaking, design-led 'Enterprise Village', combing the accessibility afforded by Charlbury Station with the pleasant lifestyle of living in a small Cotswold town, especially having regard for the abundance of creativity available within this engaged and connected local community. In particular, we believe this proposal has the ability to breathe new life into Charlbury and reinvent its raison d'etre for the Twenty First Century. The master plan would combine housing and employment, probably with some live-work units and a community space, such as a cafe, with of course excellent broadband. The design and public realm would foster community living and a sense of creativity, akin to college life, street life in Shoreditch (or Jericho), or</td>
</tr>
</tbody>
</table>
perhaps a small, rural version of Hammarby Sjöstad.

The scheme would comprise:
* Site area of 6.25 hectares gross, so plenty of room for landscape mitigation
* A net developable area of up to 3 hectares
* Approximately 2 hectares of residential
* Up to 50 residential units, possibly more as a later phase on ‘proof of concept’
* Possibly some care or sheltered accommodation
* Community benefits, to be agreed locally, but possibly improved accessibility to the station, public open space, and a financial contribution to the Parish Council to help promote the business and cultural offer in Charlbury.

It is the potential to satisfy some of Oxford’s unmet housing need that brings these ideas to the fore and makes them relevant, now, to the West Oxfordshire Local Plan. If the Proposed Modifications to this plan can propose over 2,000 houses north of the A40 at Eynsham, plus large schemes in Woodstock and Chipping Norton, then a small, innovative proposal for Charlbury is also possible. The key is integrating the employment element and making the most of the accessibility to Oxford.

There are two, mutually reinforcing approaches to the employment offer, comprising (a) R&D/technology/digital linked to Oxford and London and (b) artisan businesses rooted in the Cotswolds. Except for the live work element, the built form is likely to be the same – ie fairly simple B1 accommodation, capable of being used for offices, technology and light industrial. A good example in West Oxfordshire is Worton Park at Cassington (see: http://www.wortonpark.co.uk/content/business-park). Typical artisan businesses would include a bakery, cheesemaker (Alex James lives at Kingham, famous for ‘Blue Monday’ cheese, as well as Blur), a microbrewery (eg http://sixpennybrewery.co.uk/) or gin distillery, any one of which is likely to be able to support a café. The key is to draw out the synergies through active asset management and placemaking, two of Bloombridge’s core competences, as explained later in this document.

With the benefit of an allocation, there is no reason why 40 – 50 units at Charlbury Enterprise Village cannot start on site within two years; thereby addressing Oxford’s pressing need and the backlog of 1836 houses in the District.

<td>1707</td>
<td>&gt; SECTION 9 - STRATEGY AT THE LOCAL LEVEL &gt; Burford Charlbury Sub Area &gt; MAIN 187</td>
<td>Object MAIN 187 - In order to meet identified need four non-strategic site allocations are proposed The Burford Charlbury Sub-Area The housing allocation for the Burford-Charlbury sub-area has increased from 800 to 1,000 over the plan period. Para 9.6.34a states that “in order to help meet identified housing needs four non-strategic site allocations are proposed in the Burford - Charlbury sub-area.” In total 219 homes are envisaged on these allocated non-strategic sites, over 20% of the total for the sub-area.</td>
</tr>
</tbody>
</table>
We note that paragraph 4.38 of the Sustainability Appraisal (5A) states that "each potential non-strategic site allocation was subject to detailed SA (Appendix V) and no major significant negative effects were identified." However, the scope of this assessment is a series of high-level comments against the 15 SA objectives.

Whilst this is an entirely appropriate starting point, given the sensitivity of these sites - within the AONB and 3 within Conservation Areas - it is considered that further detailed assessment is required.

Carefully planned development in suitable locations is an appropriate means of meeting the identified housing need. The Council acknowledge this at para. 9.6.34g stating that "in terms of the scope for developing elsewhere, the Burford - Charlbury sub-area is washed over by a significant proportion of AONB designation. This in itself means that to meet future housing requirements, some development within the AONB will be necessary". We agree with this sentiment.

However, we are of the view that further examination of the sites is required. The allocated sites would benefit from the development of detailed indicative plans, capacity studies, and a consultant team assessing the impacts of the development on the CAONB, on designated heritage assets, on the highway network etc. For example, the proposed allocation of land north of Jefferson's Piece in Charlbury clearly has vehicular access issues which may affect deliverability and/or the number of units that can be achieved.

Paragraph 4.83 of the SA states acknowledges there is "uncertainty in the longer-term and until further detailed project level studies have been completed."

It is therefore far from certain whether these sites offer a realistic possibility of delivering the specified level of housing in the Plan period. For example the proposed allocation of land north of Jefferson's Piece in Charlbury clearly has vehicular access issues which may affect deliverability and/or the number of units that can be achieved.

Paragraph 4.83 of the SA states acknowledges there is "uncertainty in the longer-term and until further detailed project level studies have been completed."

It is therefore far from certain whether these sites offer a realistic possibility of delivering the specified level of housing in the Plan period. For example the proposed allocation of land north of Jefferson's Piece in Charlbury clearly has vehicular access issues which may affect deliverability and/or the number of units that can be achieved.

It is unreasonable to simply assume these sites are deliverable by virtue of their inclusion as a main modification, and to proceed to use that as a basis to develop housing policies which seek to demonstrate a 5 year housing land supply.

Noting the constraints discussed within the Plan from paragraph 9.6.1 onwards, the Plan states that 283 homes will be delivered through windfall sites within the sub-area. Taken together with the four draft non-strategic allocations, this is a total of 502 homes (or 50% of the sub area's total indicative housing requirement).

Whilst making an allowance for windfall sites is an accepted means of predicting housing delivery over the Plan period, we are of the view that to rely on speculative development and draft allocated sites (which are the subject of ongoing consultation and examination) to the degree the Council have done is unsound.

Our recommendation is that the Plan should identify additional sites in order to reduce the reliance on windfall development to meet the housing requirement for the sub-area.

Proposed change MAIN 187 & MAIN 200 - the 'land south of Grammar School Hill' site is included as a non-strategic allocated site.
Land South of Grammar School Hill, Charlbury

Vanderbilt Homes have submitted an outline application at Land South of Grammar School Hill, Charlbury. The site is identified in red on the appended plan. The outline application was submitted following detailed development of the proposals, with full assessment of the impacts of the development from heritage experts, landscape consultants, and transport consultants.

This level of detailed development of indicative proposals - including an examination of the capacity of site and the impact of the development - has not been undertaken in respect of other draft allocated sites in the Plan.

As discussed above, the proposed site allocations are at an early stage and will undergo further consultation and examination. There will be unresolved objections to these sites, and the Inspector may require further proposed modifications to be made.

Footnote 11 of paragraph 47 of the NPPF states how "to be considered deliverable, sites should be available now, offer a suitable location for development now, and be achievable with a realistic prospect that housing will be delivered on the site within five years and in particular that development of the site is viable.

The application for up to 34 homes at Land South of Grammar School Hill Charlbury represents a carefully considered, sustainable, and deliverable site that would contribute towards the housing requirement for the sub-area. It is available now, achievable within the short term, and offers a realistic prospect of housing above that which is currently being considered by the Main Modifications to the Council's Local Plan.

We consider this site should be one of these additional allocated sites. It is available, and deliverable in the short term. It will contribute towards reducing reliance on windfall development in the Burford-Charlbury sub-area, providing an element of certainty in respect of tangible, tested, and deliverable sites.

In order to assist towards making MAIN 200 is sound, we therefore recommend that the site at 'land south of Grammar School Hill, Charlbury' (as identified in red on the attached plan) is included in the emerging Plan as a non-strategic allocated site.

Section 72 of the 1990 Act states that with respect to land in a conservation area ‘special attention shall be made to the desirability of preserving or enhancing the character or appearance of that area.’ In relation to listed buildings, the Section 66 states that when considering whether to grant planning permission for a development which affects a listed building or its setting, the decision maker must ‘have special regard to the desirability of preserving the building or its setting or any features of special architectural or historic interest which it possesses’.

Whilst an allocation in a local plan is not tantamount to a permission itself, it does provide certain assurances that the principle of development of the site is accepted. Historic England have produced guidance on the process of local plan allocations affecting heritage assets in Historic England Advice Note 3: The Historic Environment and Site Allocations in Local Plans. The guidance encourages local authorities to properly consider the historic environment in preparing local plans, helping them to ensure that the statutory tests are met and that the plan can be sound. In particular, the note sets out that local planning authorities should make sure that the significance of heritage assets is understood when considering allocations, ‘this involves more than identifying known heritage assets within a given distance, but rather a more holistic process which seeks to understand their significance and value’ (Historic England Advice Note pg. 4).

The suitability of the site for development has been questioned throughout in the emerging evidence base for the local plan and has been discounted as unsuitable in the 2014 Strategic Housing and Employment Land Availability Assessment (SHELAA). It is unclear, without any further heritage or landscape evidence having been produced, how this position has changed in the interim period to the 2016 SHELAA, changing the recommendation from ‘not suitable’ to ‘suitable’. The 2014 SHELAA assessed the site (143 and 144) as unsuitable for development stating that the site: ‘forms part of attractive entrance to Burford from the east and is a key element of the local character. Very poor access to site would prevent development without large scale tree felling. Site contributes to the character of the Conservation Area. ‘The impact on the setting of the Conservation Area outweighs the need for development in this part of town’

In contrast the 2016 SHELAA now states that ‘whilst views of the site can be achieved from the north-east development if designed sensitively [it] would read as part of the existing built form of the town.’ The reason for the conclusion of suitability is set out in the SHELAA that ‘the site is considered suitable for development subject to overcoming access constraints and provided development is designed to read as part of the existing settlement’.

There is no explanation in the SHELAA or the Local Plan evidence base of how such a different conclusion to that of 2014 has been reached, or for that matter why reference is now made in the Main Modifications to the acceptability of development in the east of the town with no evidence to support it.

The 2014 assessment states that the site itself contributes to the character of the Conservation Area. Although there is no Conservation Area Appraisal for the Burford Conservation Area, it is reasonable to conclude that this greenfield site has been included in the conservation area (since its extension in 1991) due to its openness, and contribution to the green setting of the built up area of the town itself.

Land to the East of Burford forms part of the overall landscape setting of the Conservation Area and is important in terms of its undeveloped character. It is not clear from the proposed Main Modifications how development of the site so that it would ‘read as part of the existing built form of the town’ would preserve the or enhance the character and appearance of the area which is important for its open and undeveloped nature. It is therefore contended that this development would cause harm to the Conservation Area.

Case Law has clarified the interpretation of the statutory duties to preserve and enhance heritage assets. In
the Court of Appeal Decision R (on the application of The Forge Field Society and others) v Sevenoaks District Council (Case No [2014] EWHC 1895 (Admin)) where there was need for development but the development would cause harm to heritage assets, the need to consider alternative sites was emphasised as part of the statutory duty of preservation. In this case, the site was in the AONB, a conservation area and in the setting of grade II* and grade II listed buildings. Linblom J set out in the decision that:

The lack of an updated evidence base with regards to proposed allocations and the historic environment indicates that the plan has not been positively prepared, is not consistent with national policy and does not meet the legal requirements for protecting and conserving the historic environment.

This raises concerns about the level of research the Council have done into the impacts of the development on the natural and historic environment. The SA Appendix 5, which assesses the proposed non-strategic allocations, states that Land to the East of Burford does not contain any designated heritage assets and considers that potential impact on Proposed Local Plan policy OS4 (High Quality Design) will provide sufficient mitigation of harm (pg 97).

The site selection process and the sustainability appraisal are clearly fundamentally flawed, it does not get close to understanding the potential harm and impact of a potential development on a nationally significant conservation area with a high proportion of listed buildings and a pristine historic core. While the SHELAA assessments refer to the conservation area, the site selection process appears to have been blind to these potential risks and has failed to properly consider viable alternatives which are less constrained and more appropriate. This is further compounded by the fact that the Cabinet Agenda Report from the 19th October 2016, when the main modifications were approved by Cabinet stated that the Land East of Burford, ‘lies outside (although adjacent to) the Burford Conservation Area’. This raises serious concerns and does not instill confidence that the Council have considered the site allocations in anywhere near enough detail, indeed the Council made a decision to progress to consultation based on false information put in front of them.

Landscape Impact

The proposed allocation at Land to the East of Burford is located within the Cotswolds AONB. Paragraph 115 of the NPPF sets out that ‘great weight should be given to conserving landscape and scenic beauty in National Parks, the Broads, and Areas of Outstanding Natural Beauty, which have the highest status of protection in relation to landscape and scenic beauty’.

Areas of Outstanding Natural Beauty are designated in accordance with the Countryside and Rights of Way Act 2000 which confirms that the purpose of designating AONBs is the conservation and enhancement of natural beauty of the area. It also requires a management plan to be produced for each AONB to formulate policies for local authorities and for carrying out their functions in managing it.

The most up to date landscape assessment for the district is the West Oxfordshire Landscape Assessment 1998 (WOLA). The WOLA identifies Burford as being part of the Upper Windrush Valley Area as set out in the proof of evidence of Mr. Benjamin Rosedale at the recent appeal inquiry for Land at Shilton Road, the site is widely visible from the north and east and contributes to the distinction between the northern areas of Burford and the historic core on the river terrace to the south. The WOLA identifies several characteristics of the Upper Windrush Valley Landscape Character Area which are set out in Mr. Rosedale’s proof of evidence:

- ‘moderate to high intervisibility, distant views along and across the valley;

<td>&gt; SECTION 9 - STRATEGY AT THE LOCAL LEVEL &gt; Burford Charlbury Sub Area &gt; MAIN 188</td>
<td>deeply the foundations of the character of Stonesfield. We cannot withstand yet more disproportionate development to our village without it compromising the existing community and its ‘personality’ still further. It would appear that this latest proposal has had little regard to our community and appears to target a small gentle village and a ‘path of least resistance’ in order planning targets are met irrespective of the appropriateness of the decision. Larger communities such as Charlbury and Burford can withstand such developments having little or no effect on their community given the actual size of these conurbation versus Stonesfield (the undersigned recalling a population of just 1700 people - therefore another circa 100 houses would bring an influx of new people and population far beyond a sustainable / absorbable level to our tiny village). Please can we preserve our village and community and not fall prey to larger communities and their voices. Stonesfield is a gentle community with a gentle rural voice that is a national treasure to be preserved not exploited as ‘easy prey’ to national needs for target setting planning policies. These proposals are not fair and reasonable and are disproportionate and unsustainable if Stonesfield is to be allowed to keep its identity as a rural community and small thriving little Cotswold village in a conservation area of outstanding natural beauty.</td>

<td>Mr and Mrs Payne</td>
<td>Mr and Mrs</td>
<td>Payne</td>
<td>266</td>
<td>&gt; SECTION 9 - STRATEGY AT THE LOCAL LEVEL &gt; Burford Charlbury Sub Area &gt; MAIN 188</td>
<td>I strongly object to the proposed development of fifty additional houses in Stonesfield, the proposed site is located outside the village boundary, is a greenfield site, and within an “Area of Outstanding Beauty”. By granting permission for these homes directly contradicts the council’s core strategy document and sets a dangerous precedent for the future. I am writing to comment on the modified local plan for West Oxfordshire 2031 and in particular on modification 188, which I don't believe is sound. As a resident of Stonesfield I am first of all very concerned about the disproportionate actual and proposed allocations in the village, compared to the other towns and villages in the Burford/Charlbury sub-area. Taking into account existing commitments (with planning, currently being built) and proposed commitments as per the plan, the size of Stonesfield (in terms of number of houses) is set to increase by 15.06%. This compares with other villages and towns as follows: Burford = 6.72%, Charlbury = 6.71%, Shipton = 8.13%, Milton = 8.65% and Kingham = 6.55%. The proposal to increase the size of the village by 15.06 % in one fell swoop is not sustainable and will affect the amenity of the current residents. It will have a massive negative impact on the character and nature of the environment, and will put pressure on the very limited existing services. West Oxfordshire planning principles state that any new development should be of an appropriate scale and that the need to travel, particularly by car, should be minimised. The proposed scale of the development here is clearly not appropriate and will lead to a very large increase in car use. The village has very little employment, no secondary school, no doctor or dentist and only one shop. Existing residents have to use their cars to access these services in other towns (eg Charlbury and Woodstock), as will any new residents, as public transport is limited. In addition, the nature of the country roads (and distance to services) which are narrow and pot-holed means that cycling is not a safe every day option. Intolerable strain will be put on the existing services, not least the primary school, which has restricted capacity for new pupils, and limited ability to extend, as it is situated wholly within the conservation area.</td>
</tr>
</tbody>
</table>
What's more, the sustainable development objectives include the fact that any new development should conserve the landscape and scenic beauty of the Cotswolds Area of Outstanding Natural Beauty. Stonesfield sits wholly within the AONB and all of the proposed developments are on Greenfield sites. New building will negatively impact the environmental and aesthetic qualities of the village.

I consider that the proposed number of houses be revised down by at least 50% to come in line with proposals in other similar villages. At this time Cala homes have already made a presentation in the village, stating that they wish to build 67 houses on only half of the land available north of the Woodstock Road. This is already more than the consultation document proposes and it is clear that they will then apply for permission to build on the rest of the land.

I believe that residents of Stonesfield should have the opportunity to participate at the oral examination. We would be happy to if necessary.

First we are concerned about the extent to which West Oxfordshire District Council’s planning policy as expressed in the Local Plan 2031 on which the Council is consulting differs from the proposed implementation of that policy.

We have obtained information including some from members of the West Oxfordshire Planning Policy Department and we have also looked at the information that has been provided on line with the Local Plan.

The West Oxfordshire local plan to 2031 does not include all of the planned housing developments in Stonesfield that together will increase the size of Stonesfield (on greenbelt land) by about one third from the existing c 645 houses to 845 houses or more.

Consultation as well as excluding the above overall mass development only invites comment on the newly included development proposed for just north of the Woodstock Road in Stonesfield. Information provided in the draft plan for this development is both inaccurate and misleading.

The draft West Oxfordshire Local Plan to 2031 states that the whole site off the Woodstock Road recently added to the Plan is 6.25 hectares (15.5 acres) in size and the draft WODC local plan currently proposes a development of 50 houses on the whole site.

On the first of December 2016 a housing development proposal was presented by a developer CALA Homes at a Parish Council meeting informing the Councillors and public present that 68 homes (not 50) would be built on 8.2 acres of the 15.5 acres site.

This proposal for a much more dense development to build 68 houses on just over half of the site was presented as a “done deal” following meetings which CALA said was with the WODC Planning Housing Development Control Team.

CALA presented detailed site plans which they suggested had already been agreed with West Oxfordshire Development Control Planners and told us that nothing is sacrosanct about the Local Plan mentioning 50 homes. We also believe that CALA can, and very likely will, continue to build possibly another 55 houses on the remaining 7.3 acres of the field at a future time.

At a meeting on Friday 9TH December 2016 members of Stonesfield Parish Council met with West Oxfordshire District Council Head of Planning Development Control. She confirmed that permission had indeed been granted for CALA Homes to build 68 homes on just 8.2 acres of the 15.5 acres site instead of the
50 houses on the whole site as presented for consultation in the draft local plan.

The West Oxfordshire District Council Head of Planning Development Control suggested a mistake had been made in the Local Plan papers and that the 50 homes specified in the draft plan should have been presented as 50 to 70. She did not explain why only 8.2 acres of the 15.5 acres site was being used or why this much greater density of building than in the Plan had been approved. The development of 68 houses now proposed by CALA Homes on 8.2 acres of the 15.5 acres site just north of the Woodstock Road is a significant increase in density from the 50 proposed in the West Oxfordshire draft local plan now out for consultation.

The statutory Local Plan 2031 consultation process which ends on 23 December 2016 has therefore been based on inaccurate and misleading information as well as missing the details of the large overall housing development planned for Stonesfield. We do not believe the present consultation process is valid nor that it meets the requirements of such a process.

We believe that West Oxfordshire District Council should correct the Local Plan making clear the plans for the overall future development of Stonesfield and in particular how many houses are actually planned for the 15.5 acres site just north of the Woodstock Road. Is the Plan to build on the whole site in the future? If so how many houses will eventually be built on the whole site? We know 68 houses will be built on just 8.2 acres of the site. We ask that when the present inaccurate, misleading and missing information has been corrected in the West Oxfordshire Local Plan a repeat period of consultation be arranged to give members of our community a properly informed chance to respond to the correct house build figures that are planned.

Our second concern is that there is a disproportionate amount of new building planned for Stonesfield relative to the size of the village and no adequate mitigation plan has been considered before the mass housing development of Stonesfield started.

Most people in Stonesfield realise that there are national and local targets to build more houses, especially affordable units and that each development, apart from very small housing development applications, will have to incorporate an 'affordable' element. People understand that this is part of the national as well as the local policy. We welcome some new houses and new people joining the Community in Stonesfield but we have several concerns which we present below.

The size of the overall housing development planned for Stonesfield will fundamentally change the character of the village and bring with it significant problems not least for our Primary School.

The effects of the combination of different housing developments in the village indicated above need to be considered together. We are told that no actions are being considered to mitigate the problems identified.

In the recent past we have seen the 7 house Cotsway Development off the Combe Road, Blenheim developments of 13 houses, now the Charity Farm Development with its 37 houses and the Farley Lane Development with 13 homes which are currently progressing. Other planned development include proposals for 68 houses on the land off Woodstock Road, 15 homes on part of the land at North Farm and perhaps at least another 55 homes on the medium sized sloping field fronting Combe Road currently belonging to the Blenheim Estates as well as another 30 or 40 houses on Blenheim land along the Ridings as an extension to Ridings Close.

This could give us a possible 190 additional houses in Stonesfield. Perhaps well over 200 houses if CALA return to develop the rest of the site off the Woodstock Road. This overall size of development will increase the size of Stonesfield (on greenbelt land in an area of outstanding natural beauty) by about one third from...

</tbody>
</table>
would clearly have a degree of impact particularly for the people who lived on the edge of Stonesfield who will soon find they live nearer the middle even though they have not changed their residences.

This is not unexpected because the site lies in the green belt within the Cotswolds Area of Outstanding Natural Beauty.

Below left is a view from the back garden of a house in Woodstock Road and right is a view now taken from the same place in the same garden after housing development.

We were assured by the West Oxfordshire Planning Policy Team that as the site off the Woodstock Road was a sensitive site in a rural location they felt that the development of 50 homes on the whole 15.5 acres site would be the most appropriate to ensure sufficient landscape mitigation is delivered along with the new residential development.

No direct mention has been made in the Plan or by the likely developers of the opportunity to increase the extent of the open space (the village Playing Field) to the north of the site off the Woodstock Road.

West Oxfordshire Planners said that the rationale behind expanding recreation space provision is to balance the provision of housing within the village with other uses and ensure there is sufficient recreation provision to support the expanding population. CALA Homes the likely developers of the site off the Woodstock Road do not intend to do, or even consider, this.

It was also recognised by your Policy planning section that incorporating some recreation provision within the development site would help to soften the impact of the development on the wider landscape. This development off the Woodstock Road combined with the proposed North Farm development will land lock our present Playing Field and prevent future growth to meet the needs of the growing population. There is now a one off opportunity to address this.

Empire Homes would like to bring forward a mixed development of 15 houses on part of the land at North Farm. The remaining land on the site would be gifted to the Parish Council for an extension to the playing field. A public footpath would be provided through the site for access to the playing field land from this end of the village.

A site of 15 units triggers the current Affordable Housing policy and 50% affordable allocation would be sought. The developer Empire Homes, the Parish Council and the present owner of the site say that they will request that the gift to the Parish Council of the playing field land (potential development value £800k-£1m) should be allowed to mitigate the affordable housing policy in this instance.

We hope West Oxfordshire District Council Planners will accept this proposal for the development of the North Farm site for the reasons outlined above. See plans below.

I hope that you will consider the above. I am not against further house building in Stonesfield and welcome new people coming to live in the village in fact I have just written a "Welcome Pack" for them on behalf of the Parish Council which you can see on the Stonesfield website.

I do though think that more thought needs to be given to this type of mass housing development and that the community of Stonesfield should be given an opportunity to contribute to that thought after being properly and accurately informed which is not the case at the moment.

buses compete with carson these lanes. The access to the 84022 has two dangerously unsighted turns onto the road (one in the direction of Charlbury, one in the direction of Witney). Hundreds more cars make accidents more likely.

c) A tree-planted buffer zone should be provided between the bungalows to the west of the proposed development and noisy family accommodation moved away from the largely elderly existing residents.

d) How will the existing network of narrow winding village lanes be improved with the inevitable increased traffic - children taken to nursery schools, primary school etc.? There is no room for footpaths. Children already have to be accompanied to school by parents for reasons of safety. The roads to the school are narrow, single track in places, and there is no parking.

What does ‘appropriate contributions’ to infrastructure mean? Enlarged school and other amenities due to an increased population? Too vague. The villagers of Stonesfield have voted (c.2002) to have no street lights, this is a very dark village by choice.

e) The existing ‘public open space’ to the north is a playing field for football, cricket and tennis, where dogwalking is discouraged due to poor dog waste collection. An independent area on the proposed housing site of sufficient size should be provided.

- a link to the playing field to the north may not be legally possible.

We are strongly of the opinion that the people of West Oxfordshire should be properly informed about this process, and this has not happened. Stonesfield appears to be bearing a disproportionate amount of development in percentage terms, which would wholly change the character of the village.

| MM512         |                         | Sarah and David Brown | -              | Brown             | 1257      | > SECTION 9 - STRATEGY AT THE LOCAL LEVEL > Burford Charlbury Sub Area > MAIN 190 | Comments on the Local Area Plan and its effect on Stonesfield

Whilst we all recognise the need for more housing I feel this should be balanced with the impact it will have on local communities and the provision of the required infrastructure yet neither seem to be adequately addressed in this plan.

The plan is very woolly and any flexibility seems to be tilted in favour of the developers in terms of being able to maximise housing numbers for profit and to WODC in securing their housing target.

They want affordable/social housing and I expect any objectors will be labelled NIMBY’s but we recognise the need and are reasonable and fair but do not want it “at any cost” to our community i.e. the Charity Farm development backing onto the private houses.

“Not at any cost to our community”.

- It is clear Stonesfield is in the wrong sub area i.e. Burford and Charlbury. Our service centres for doctors, dentists and schools are mainly in Woodstock, Long Hanborough, Eynsham and Witney.

The plan does not recognise the impact of new houses in these areas on the services people in Stonesfield use or the impact of increased housing in Stonesfield on those areas.

- The plan has vague guesstimates for housing numbers on sites earmarked for development i.e. Cala Homes on Woodstock Road earmarked for 50 homes on the whole site yet already rubber stamped for 68 homes on half the site in a “Gentleman’s agreement” with WODC planners prior to any application or consultation with the local community. This is an increase of almost 36% even though WODC has noted that a development of 50 houses would have a degree of impact.

The other half of the site is probably for future development be that long or short term for another 55 houses making 123 in total. An increase of 146% over the original number of 50 on this site.

Policy BCla states 50 houses on the whole of the Woodstock Road site but an e-mail from Cala Homes (attached) states the site was considered for 160 dwellings. Such discrepancies in what is supposed to be a strategic plan are appalling. This is just a single example and it would be naïve to think that this isn’t repeated throughout the plan.

- Also the plan is for sites with 11 or more houses to be 50% affordable/social houses yet they are not being provided as per the mix set out in the draft plan i.e.

5.61 - Clearly sets out the housing mix but both the Charity Farm and Cala sites do not provide the mix of houses proposed in the plan as there is no,

5.72 - Provision for the elderly, sheltered housing or smaller dwellings so people can downsize from family houses thereby freeing up larger properties is covered in the plan but our experience is that it does not seem to be demanded by WaDe.

5.79 - Provision for people with disabilities is covered in the plan but our experience is that it does not seem to be demanded by WaDe.
It seems the plan is flexible in the number of houses that can be built and we have the current or planned developments at,

Charity Farm - current 37 Houses,

Farley Lane - current 13 houses,

Woodstock Road 68 houses planned

North Farm -10-30 houses planned

There are 5 other houses either just finishing or planned in the village = 153

This represents 15.3% of the target for 1000 houses in the Burford Charlbury sub-area increase in village house numbers is 23.72%

Naturally if we only build houses or flats these will rightly be let to those most in need of housing which will be families with children. This places demands on services such as education i.e. the 16 affordable/social houses in the Charity Farm development has projected population of 61, if we take 2 adults per household this gives probably 29 children and the additional pressure on school places.

If Woodstock Road34 social houses follows this pattern then there could be as many as another 60 children.

This is without the children from the 55 private houses for which no population projection can be made but probably another 20 children.

This puts into perspective the numbers envisaged by the Stonesfield School Governors of 20 children per 50 houses.

As Woodstock, Long Hanborough and Combe schools are already under pressure, Stonesfield pre-school has only 17 places. This is not taking into account the situation at Marlborough Secondary School.

The provision of any infrastructure for Education is down to Oxford County Council yet they haven't published a plan to provide the additional classrooms, halls, playgrounds, teacher’s, kitchens etc. Whilst it is acknowledged that the actual need cannot easily be assessed there doesn’t seem to be the funds or a timescale for this provision. So where will our children go to school?

Probable future developments are, Woodstock Road- 55 in phase 2 Combe Road together with Charity Farm phase 2 possibly in excess of 96 houses (surveys being completed now). Witney welding site Farley Lane possible 10 houses = 161 = a total possible increase of 314 houses.

This represents 31.4% of the target for 1000 houses in the Burford Charlbury sub-area. Increase in village house numbers is 49%.

9.6.7 - The plan acknowledges that Stonesfield has already seen considerable consolidation of housing but it
seems we can take more, yet no provision is being made for the things we need to enable our village to grow without irreversible damage to our quality of life.

- Policy BCl states the timely provision of supporting infrastructure, education, leisure, green space and other community facilities but there is no timescale for this to be provided. If these developments go ahead then our playing fields will become landlocked with no future provision.

- The plan does not state that there should be green space or a buffer between existing developments and new developments which means the quality of life for some existing residents is sacrificed to the need for more housing, but there is space for everyone and no one needs to be disadvantaged by having their houses blighted and values dropped (see above photos). So whilst the plan is flexible for the developers and WODC it is not flexible enough to meet current or future local needs for communities and individuals in this respect.

- 5.41 - Charges - WODC plan to put the Cll at £100 per sq m, an average new 3 bed semi is 93sqm so a charge of £9300 will apply, this figure will also be applied on an Affordable Housing levy on sites of between 6-10 houses so another £9300 making £18600 on a new 3 bed semi on a small site, this is on top of £11500 stamp duty for a Charity Farm 3 bed semi at £430K, making a total of £30100 in taxes on a new home. If a site has more than 11 houses 50% are to be social houses and whilst the affordable levy goes these houses are built at cost and the profit the developer makes is solely from the private houses to be sold so this increases prices. Also if the site is big enough a section 106 levy is introduced circa £10000 per house. These costs can add as much as 10% to a new house.

- 5.38a - Affordable housing, it is mentioned that any discounted housing will be limited to 80% on properties valued at £450k in London and £250k elsewhere, yet average house prices in this areas are £330980 against a national average outside London of £214000 therefore housing costs in this area are well above the national average costs but this is not recognised in the plan and it does nothing to cut the extortionate cost of housing in the area or help people onto the property ladder.

- 9.6.7 - The plan acknowledges that Stonesfield has already seen considerable consolidation of housing and indeed there has been more social housing built in the village than private housing, i.e. 8 in Combe Road and 6-87 in the Ridings.

There are wider issues such as healthcare, transport and education,

- We only have one JR yet it is expected to cope with 10000's of thousands of new houses in Oxfordshire, doctors' appointments are averaging over 4 weeks, they are also closing the surgery in Witney and the maternity services in Banbury. Provision of healthcare does not seem to be adequately covered in the plan.

- 4.7 - Mentions the A40 and A44 and the congestion they have at peak times but with the additional housing in Stonesfield, Carterton, Witney, Eynsham, Woodstock and long Hanborough there is no plan for any increase in capacity apart from a park and ride and bus lane in Eynsham which will only serve those going to Oxford and not those who have to travel beyond and it is widely known that the A34 etc are not fit for purpose now and without the increase in demand that the additional housing will bring.

- Sewerage - the system cannot cope with existing demands the pump house over flows and the stench affects adjacent houses.
A plan with infrastructure lagging years behind the demand that these new developments will bring means that the quality of life for people already resident in the areas will be greatly reduced.

If there is no flexibility in the plan to meet local needs then it is prescriptive and therefore it is a poor plan. Therefore this plan is flawed.

There are also issues with the types of properties which are being built and the materials used in their construction. This is an AONB yet we are having houses built which do not fit in with what is already in the village.

Prior to 2016 and the Charity Farm development there were only 2 red brick and blue slate roof houses in Stonesfield and they were built in 1905, since then there has been a mix of properties but these have either been rendered or finished in Cotswold stone with either Stonesfield slate roofs, Cotswold tiles or grey concrete tiles.

This is Stonesfield the home of Stonesfield slate the quintessential Cotswold roof tiles and therefore Welsh blue slate tiles are alien to the area as are red brick houses. Further all of the houses are just little boxes and have no character and resemble the mass produced housing in Bicester, Banbury, Carterton and Witney. The character of our ancient villages is being ruined, everywhere will look the same, why?

More explanation on how WODC and OCC are going to address these issues is required.

We are writing with feedback on Policy BC1a - Land north of Woodstock Road, Stonesfield, (50 homes), contained within the West Oxfordshire draft local plan.

We wish to also express our growing concern at the additional developments being proposed in Stonesfield. In addition to the Policy BC1a proposal and the development of 70 houses by Pye already approved/underway at Charity Farm, we also understand additional housing development sites are being considered within the village at: land on Woodstock Road opposite the allocated land for BC1a (i.e. east of Charity Farm development), land on the Combe Road, further land/properties along the Ridings, and land at the bottom of Laughton Hill. Stonesfield seems to be being targeted for a disproportionate volume of development/housing in comparison to other surrounding villages and towns, such as Finstock, Charlbury and Woodstock, especially when these villages and towns havethe existing infrastructure/amenities to support further development - much more so than Stonesfield at present.

We are therefore urging the Council not to approve any further development in Stonesfield (including that contained within Policy BC1a) until an over-arching (but detailed) review of Stonesfield's (and the surrounding areas) housing needs, supporting infrastructure and local amenities have been thoroughly undertaken.

We feel that only then should development site opportunities in Stonesfield be invited and reviewed (together) as a master, over-arching proposal - not pockets of piecemeal development that is reviewed/approved on a case-by-case basis without a joined-up development plan for the village, and without the overarching large-scale funding required to improve the infrastructure and amenities being released to the village.

Our specific concerns regarding Policy BC1a, and other potential Stonesfield developments, include:

- No. of homes being proposed on Policy BC1a. Proposals is 50 but at a recent Parish Council Meeting CalaHomes reps said they already had permission for 68? This, in addition to the 70 homes already being built
at the Charity Farmsite, would mean an additional 138 homes in the village within the next 6-12 months. Where is the village infrastructure and amenities development plan (with funding) to support the development of 138 houses?

- Affordability of new homes. The existing/underway development of Charity Farm (70 homes by Pye), are currently being marketed (by Breckon & Breckon) at £420,000 for a 3 bedroom property and £850,000 for a 4 bedroom property! These are not affordable, accessible homes for Stonesfield/local residents, and this price range of houses will not help with our county’s/country’s housing crisis;

- Impact of Policy BC1a on Stonesfield’s Playing Fields, and the cricket/football clubs. The Stonesfield Playing Field Committee, along with the Stonesfield Sports and Social Club Committee, were hoping that some of the land at Policy BC1a could be purchased and used to extend the village’s playing fields to include an all-weather surface (so teams can train on an appropriate surface under floodlight all year round) and additional parking (to alleviate the parking congestion experienced at the Village Hall on Greenfield Road when training/games are underway). Stonesfield Strikers and Stonesfield Cricket Club are both popular, growing and successful sporting clubs, drawing in members/players from the surrounding villages and towns.

The proposed development (Policy BC1a) will have a detrimental impact on the clubs’ opportunity to expand and develop. Please, please take this into consideration when reviewing the proposal from CalaHomes - ideally the CalaHomes development would provide a new, alternative car park (with access to the playing fields) and an all-weather pitch site;

- Impact of additional housing/population on Stonesfield Pre-School (currently at capacity) and Stonesfield Primary School (with limited capacity). What funding will be available to fund Stonesfield Pre-School moving to a more appropriate site, so as it may extend to support the influx of children these developments will generate? And what additional funding will be provided to Stonesfield Primary School to increase the number of classes and staffing required?

- Impact of additional traffic going in, through and out of the village, particularly at peak commuter times. We have limited bus service in Stonesfield with no train line - the majority of those who work commute by car. Has the consequence of this, in terms of pollution, traffic etc. been reviewed/considered? How will safety on our small village roads be maintained?

- Impact of additional traffic at the already dangerous junction/crossroad between the B4437 and A44. Traffic already builds up and queues (from the direction of Stonesfield and Charlbury on the B4437) for at least 5-10 minutes on weekday mornings between 7.30-9am. Commuters then face further traffic through Woodstock, often coming to a standstill on the A44 at Yarnton, crawling in stop-start traffic all the way to Peartree Park & Ride and beyond. With further developments of more houses and further road-based commuters, the Duke of Marlborough/Judd’s Garage junction - which already has a very poor safety record, with recent fatalities - will only get busier and may require development, with traffic lights. Have WODC and OCC considered and budgeted for this?

- Impact on surrounding NHS facilities. Woodstock Drs Surgery is at capacity in an inappropriately small (and poor condition) building. Unfortunately plans to develop a new surgery in Woodstock have recently collapsed. Where will new Stonesfield residents be able to register? Are other local surgeries (such as Charlbury and Long Hanborough) able to take on and support the proposed increase in residents? Has this been considered and what are the findings?
• Impact on the local character, wildlife and Area of Outstanding Natural Beauty. Lastly, but not least, we are very fortunate to live in an Area of Outstanding Natural Beauty with many rare and endangered (even protected) plant and animal species in our midst. We hope that all developments will be reviewed from an ecological and environmental perspective, to ensure that habitats and species (as well as the general views of/from the village, and the feel of the village) are maintained.

We hope you can tell from the tone of this letter that we are not necessarily opposed to new homes being developed in Stonesfield - we understand that there is a housing shortage. However, the quantity, positioning and design of these new homes must be in keeping with the village, its infrastructure and amenities. And therefore, we are asking you to please take the above feedback in to serious consideration.

We hope that the Parish Council and the Planning Policy/Planning Permission teams will not be unduly pressured by housing developers and that local feedback will be upheld and supported. Please just say "no" to the individual developers (such as CalaHomes) until proper, thought-through, longer-term, over-arching plans for Stonesfield are in place. If we are to develop our villages to help meet housing needs, it is worth taking the time to do it properly. Otherwise, more long-term problems will be created (with no funds to resolve issues) than short term solutions provided. We must not simply go for the get rich (for landowners/developers) / quick fix solutions - we must think about the longer term impact for each every village/town.

We look forward to receiving your response to the feedback/questions raised in this letter.

Please can I register my strongest possible objection to your planning proposal for 50 new houses to Stonesfield and the expectation of a further 30 or 40 additional houses also to our village. Stonesfield is a small close knit community that has survived the riggers of the years because of its closeness and understanding to rural life and living. Most people who live in this small village share the values and aspirations that have maintained its existence and way of life.

I do not understand why our village has come onto the radar again for such an extraordinarily large development of houses. We are a very small population that cannot withstand such a disproportionate influx of new houses and people. Charlbury and Burford are far better suited to absorb this number of houses with their improved public transport links to larger towns and cities.

The character of this little village will be irreparably damaged should these proposals be allowed to be accepted.

An influx of 'new' non rural people would see our community under threat for example of no church bells for fear of disturbing unaccustomed 'ears'; a pressing 'need' for light pollution with proposals...

| MM753        | David Wilson Homes Southern | David Wilson | c/o Barton Willmore | 2044 | 2044 | > SECTION 9 - STRATEGY AT THE LOCAL LEVEL > Burford Charlbury Sub Area > MAIN 190 | Burford - Charlbury Sub-Area  
As already stated, Policy H1 should be amended to omit reference to new housing at the rural service centres of Burford and Charlbury. As stated above, the Proposed Modifications have increased the Burford - Charlbury sub area proposed housing requirement by 25% from 800 to 1,000 homes. Paragraph 115 refers to great weight and 116 of the NPPF clearly states that exceptional circumstances must be demonstrated to justify allowing major development in the AONB. This paragraph states that consideration of such applications should include an assessment of the need for the development and its impact on the local economy, the cost of, and scope for, developing elsewhere outside the designated area, or meeting the need for it in some other way, and any detrimental effect on the environment and the landscape. The Council appears to seek to justify this by indicating that development is of necessity within the AONB given the widespread extent of the AONB encompassing almost the whole of the sub area: however, that is not a reason to increase housing within the sub area. Given the deliverable opportunities to address housing need in those parts of the district outside of the AONB, recognising that there will still be 800 homes in the sub area, there have been no exceptional circumstances given for the inclusion of additional land within the AONB for development in the draft Local Plan. As a consequence, MM184 should be deleted as it refers to allocations at Burford, Charlbury, Shipton-under-Wychwood and Stonesfield, all within the AONB. The plan is not justified when considered against the reasonable alternative to development in the AONB and inconsistent with national policy. |

<td>&gt; SECTION 9 - STRATEGY AT THE LOCAL LEVEL &gt; Burford Charlbury Sub Area &gt; MAIN 190</td>
<td>By no stretch of the imagination can Stonesfield be classified as a town! The stock phrase ‘well integrated and logical extension’ should not be applied here. The character of Stonesfield is of a typical Cotswold settlement on the edge of the Evenlode valley. Existing post-war development has already compromised the original village form on the eastern side. This proposal would further extend the developed area to the east and create a totally different character to the village. The visual impact as seen from the approach along the Woodstock Road would be very significantly detrimental. In my view it is nonsensical to suggest that a development would ‘achieve a positive improvement to this main eastern approach’ to the village. Surely the visual impact of the new housing at Charity Farm is already more than enough to swallow when approaching the village from the east? What sort of appropriate contribution to the infrastructure could the development proposals provide? A new school? The existing primary school is located in a densely built up area in the village and there are is almost no space for footpaths or parking in the vicinity. In addition the main road through the village is narrow with sharp bends and minimal forward visibility. With additional traffic these hazards would only increase the risk of accidents. Pedestrian and cycle facilities might well be easily provided within the development, but they would be of little value if links could not be extended into the village centre or towards the A44 and Woodstock. The 50 homes proposed is disproportionate to the size of Stonesfield, a village with a population of around 1500. Such an increase is not sustainable.</td>

<td></td>
<td>Ecology and Natural Environment</td>
<td>In all cases reference should be made to the District Council’s ecologist for specific details on each site. It is assumed that before firm proposals are brought forward for each site an appropriate ecological, landscape and visual impact assessment will be undertaken including surveys for protected and threatened species. The permanent loss of land of existing and potential future habitat value should be recognised with a corresponding investment in biodiversity and other green infrastructure resources that provide a range of benefits including biodiversity, water management and contribute to physical and mental well-being. Additional off-site enhancement should be provided where insufficient environmental gains cannot be secured within the development boundary. Stonesfield – Land North of Woodstock Road</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>
The site lies within the Cotswolds AONB. Development is likely to increase recreational pressures on nearby sites of high value wildlife. Further investment should be sought to help increase the resilience of these sites and the nearby North Evenlode Valleys Conservation Target Area.

If development proceeds there may be opportunities to provide a local natural green infrastructure resource to complement adjacent formal greenspace.

The consultation process is flawed as it contains inaccurate information:

Sections relating to Stonesfield indicate an intention to allow housing developments of around fifty houses on just one site to the North of Charity Farm. We understand that the developer has applied for sixty eight houses on approximately two thirds of the site and may have received an indication from the District Council that this and subsequent development of the remainder of the site would receive authorization. In total therefore, on a site identified as suitable for fifty houses in the consultation document, the District Council appears to be contemplating double that figure.

Within the village, potential total development is thought to be as high as two hundred homes, giving a range of fifty to two hundred houses. The District Council’s figures are the lowest in that range. The consultation document therefore fails to present an accurate picture of the position.

The proposals directly conflict with the Council’s strategic objectives:

The District Council has a policy in the course of development that states - Reducing the current reliance that is placed on the private car for journeys into, within and beyond the District by promoting opportunities for active travel through walking and cycling as well as encouraging the use of public transport;

There are no employment opportunities in Stonesfield that would reduce the need for travel from the existing population or any additional population. Thus additional housing of say one hundred houses has the potential to put an additional hundred cars and most likely double that figure, onto local roads.

The proposals for Stonesfield represent an unacceptable increase in housing, population and a commensurate additional pressure on the local infrastructure.

Together with the houses currently being built, we will see a 17% increase in housing in Stonesfield, from 644 to 752. I would note the following:

* There are no employment opportunities in the village, ensuring that everyone must commute. Although there is a bus route to Oxford, if your place of work is anywhere else it inevitably means using a car. How can
this be sustainable or meet emissions standards?
- Stonesfield has poorly maintained narrow country lanes, no main road or access to train.
- Water and sewage treatment facilities are already hard pressed.
- The primary school is already full, new classrooms will need to be built – where is the planning for this?
- The Oxford Times reported last week that smaller schools, like Stonesfield School face reductions in funding and Professor John Howson of Oxford University is reported as saying that a third of the counties primary schools face closure.
- The pre-school is already at maximum capacity.
- There's one village shop and the pub has just been closed.

In conclusion the proposals are not driven by local need and in fact directly work against the needs of local people. They demonstrate a failure to be concerned about the impact on local communities and a preference to prioritise what is vaguely described as ‘wider needs’.

Comment on the Proposed Modification

The Proposal is not sound because it does not meet the following:

- Positively prepared’ – i.e. based on a strategy which seeks to meet objectively assessed development and infrastructure requirements. ‘Justified’ – i.e. the Plan should be the most appropriate strategy when considered against reasonable alternatives, based on proportionate evidence.

Stonesfield currently has 2 new housing projects in construction which will add 50 new houses, an increase of about 10% in the population. The new proposal of a further 50 houses will double that figure. There are no proposals to provide supporting transport services or community infrastructure and no appropriate provision has been made to safeguard the local environment.

Stonesfield has only a basic shop, the primary school cannot cope with the extra children and the only public house has recently closed. There are few employment opportunities and most people travel to work and secondary school by car or bus. Provision for pedestrians, cyclists and users of public transport is inadequate; much of the village has no footpaths, there are no cycle tracks and there is no street lighting. Existing secondary schools, doctors’ surgeries, and community facilities, all out of the village, are strained to breaking point. The sewer system is not adequate for the existing houses and required a private system for the last development.

Further development is likely to lead to pollution of watercourses unless additional infrastructure and major sewage improvements are made. Whilst there is no risk of flooding in Stonesfield, the additional surface water run-off into the Evenlode will increase the risk of flooding in areas downstream.

The proposed development is not of a proportionate and appropriate scale to its context, having regard to the potential cumulative impact of development in the locality.

<td>&gt; SECTION 9 - STRATEGY AT THE LOCAL LEVEL &gt; Burford Charlbury Sub Area &gt; MAIN 190</td>
<td>Comment on the Proposed Modification The Proposal is not sound because it does not meet the following: 'Positively prepared' – i.e. based on a strategy which seeks to meet objectively assessed development and infrastructure requirements. 'Justified' – i.e. the Plan should be the most appropriate strategy when considered against reasonable alternatives, based on proportionate evidence. Stonesfield currently has 2 new housing projects in construction which will add 50 new houses, an increase of about 10% in the population. The new proposal of a further 50 houses will double that figure. There are no proposals to provide supporting transport services or community infrastructure and no appropriate provision has been made to safeguard the local environment. Stonesfield has only a basic shop, the primary school cannot cope with the extra children and the only public house has recently closed. There are few employment opportunities and most people travel to work and secondary school by car or bus. Provision for pedestrians, cyclists and users of public transport is inadequate; much of the village has no footpaths, there are no cycle tracks and there is no street lighting. Existing secondary schools, doctors' surgeries, and community facilities, all out of the village, are strained to breaking point. The sewer system is not adequate for the existing houses and required a private system for the last development. Further development is likely to lead to pollution of watercourses unless additional infrastructure and major sewage improvements are made. Whilst there is no risk of flooding in Stonesfield, the additional surface water run-off into the Evenlode will increase the risk of flooding in areas downstream. Stonesfield has only a basic shop, the primary school cannot cope with the extra children and the only public house has recently closed. There are few employment opportunities and most people travel to work and secondary school by car or bus. Provision for pedestrians, cyclists and users of public transport is inadequate; much of the village has no footpaths, there are no cycle tracks and there is no street lighting. Existing secondary schools, doctors' surgeries, and community facilities, all out of the village, are strained to breaking point. The sewer system is not adequate for the existing houses and required a private system for the last development. Further development is likely to lead to pollution of watercourses unless additional infrastructure and major sewage improvements are made. Whilst there is no risk of flooding in Stonesfield, the additional surface water run-off into the Evenlode will increase the risk of flooding in areas downstream. The proposed development is not of a proportionate and appropriate scale to its context, having regard to the potential cumulative impact of development in the locality.</td>

<td>We write, as residents, to express our concern regarding the nature and volume of proposed development at Stonesfield. We feel that the number of new housing units would create a disproportionate increase in size of the village - a village which would be changed irrevocably as it simply does not have the infrastructure to accommodate such development. We were informed, relatively recently, that the two sites currently being developed, Charity Farm and Farley Lane, would be sufficient to meet the 'target' for housing provision and no further building would need to take place! We trust that the council pays heed to the concerns and apprehensions of many existing residents of Stonesfield.</td>

</table>
|               |                        | I am a solicitor in professional practice in Oxford. I have been engaged in the practice of Town & Country planning law since 1975. Since 1980 I have acted for and against local planning authorities in Oxfordshire and neighbouring counties. I sit in a number of part-time judicial capacities. These representations, however, are made entirely in my personal capacity as a resident of Stonesfield. They relate to the proposed allocation within the West Oxfordshire Local Plan (“the Local Plan”) of a site for development which it is proposed will include “50 homes.” The requirement to consult generally. When the Localism Act 2011 (the “Localism Act”) was introduced by the then Secretary of State, Eric Pickles, in 2010 its purpose was said to be to devolve decision-making power from central government to individuals and communities. It was claimed that this philosophy would also permeate changes made by the government to planning legislation. The clue to what was really meant by “localism” is in the nearest thing to a requirement for consultation within the Localism Act. This is in section 81 which requires a “relevant authority,” i.e. county council, district council etc., to consider an “expression of interest” in accordance with the legislation. An “expression of interest” is defined as “an expression of interest in providing or assisting in...
providing relevant service on behalf of the authority.” The philosophy is not truly about individuals and communities but about privatisation and who gets the goodies. There are requirements for public consultation within the Local Plan preparation approval process, but there is no sign within the current implementation of that process in West Oxfordshire of any semblance of that purported philosophy, i.e. consulting individuals and communities, being carried into effect. It is rather more about the private exploitation of public good, i.e. land in an area of outstanding natural beauty.

The various stages of the plan preparation process are set out in the Planning and Compulsory Purchase Act 2004 (“the Act”), as amended by the Localism Act 2011, and purport to include provisions for so-called “community involvement.” Section 6 purports to relate to community involvement in regional spatial strategies. Section 18 requires a local planning authority to prepare a “statement of community involvement.” Section 19 (3) says that in preparing the various local development documents the local planning authority must comply with a statement of community involvement, but permits a local planning authority to sidestep this requirement in that it does not apply at any time before the authority has adopted its statement of community involvement.

Regulation 18 of the Town and Country Planning (Local Planning) (England) Regulations 2012 (“the Local Plan Regulations”) requires a local planning authority (the “LPA”) to notify specified bodies or persons and invite each of them to make representations to the LPA about what a local plan ought to contain. The specified bodies or persons include parish councils and “such residents or other persons carrying on business in the LPA’s area from which the LPA considers it appropriate to invite representations.” (My italics). It is academically interesting to note that there is no statutory duty directly to consult the general local population, whose views might be inconvenient to local planning authorities and/or to vested interests, but nonetheless there is some requirement to consult. It depends for its efficacy in the context of the allocation of land in a local plan in large part upon the good faith, energy and efficiency of the members of the parish councils. Some might say that is an optimistic, not say dangerous, dependency.

Consultation in Stonesfield in this Local Plan preparation and approval process.

I am a resident of Stonesfield. I have been so for 38 years. I might, were I naive, expect to have taken into account my views and those of other residents of Stonesfield in the derivation of those parts of the “local development scheme” under section 15 of the Act and or its constituent documents which closely affect me and my neighbours. I am not surprised however, because I am far from naive, that neither I nor my neighbours have in the slightest degree been consulted and consequently our views have not been and will not be taken into account. My lack of naivete leads me to believe that even were we to have been consulted our views would have been ignored. However, I take modest comfort in the knowledge that the lack of even the nominal, statutorily required consultation may give rise to a right to judicial review of the process pursuant to section 113 of the Act, of which I and my neighbours may be able to avail ourselves.

My understanding is that the process of independent examination of the West Oxfordshire District Council (the “WODC”) local development plan documents (“the Local Plan”) in accordance with section 20 of the Act has been suspended because the inspector was dissatisfied inter alia with the housing requirement of the WODC within the Local Plan. He said “the housing requirement in the submitted local plan of 10,500 dwellings is not justified and has not been derived from a process which complies with the requirements of the NPPF.” The NPPF is of course the National Planning Policy Framework. By virtue of section 19 of the Act in preparing a local development document the LPA must have regard to various matters including national planning policies and advice by the Secretary of State and the Regional Spatial Strategy (the “RSS”) for the region in which the LPA is situated.
In short, notwithstanding the hollow claims of those who introduced the Localism Act, the “independent” inspector has expressed the view that the WODC did not provide for enough houses to meet WODC’s share of the housing targets set out in the “superior” planning documents, largely determined by national government rather than the residents of communities which will be affected by local plans. The WODC was told to jolly well think again and has rolled over. Rather than resolutely arguing its case before the inspector as one might have expected it to do, having commissioned at public expense expert consultants’ reports which presumably it initially considered to support its stance, the WODC now supinely proposes within its revised documents to provide for 15,950 dwellings rather than the 10,500 dwellings it had previously proposed. A consequence of this massive increase in its target has been the allocation of 15 new sites.

One of those is “Land north of Woodstock Road, Stonesfield (50 homes)” (the “Stonesfield Site”). I am told however that at a meeting on Friday 9th December 2016 (the “9th December meeting”) with members of Stonesfield Parish Council, Catherine Teplow, WODC development control officer, made, if what I am told is true, the staggering acknowledgement that this was a mistake by WODC and the reference to 50 homes should have been 50-70 homes. I did not learn of the allocation proposal through any process of local “consultation” but rather by virtue of items in our community newspaper “the Stonesfield Slate.” I read items about it in the Slate in mid-December 2016. It was not until later in December 2016 that there appeared on the village website a “Press Release – Local Plan” of Stonesfield Parish Council dated December 13, 2016.

These were the first intimations most local people had of the process of consultation which the “Press Release” indicated had begun over a month earlier on Friday 11 November. The Press Release further indicated that the Parish Council was “recommending that any village organisation or individual, which has concerns over the plan, voice them through the consultation process described below.” The Press Release went on to indicate that the consultation ended on 23 December 2016. In effect local residents were given less than 10 days to inform themselves and make comments.

I do not know when the Stonesfield Parish Council was given details of the revised Local Plan proposals, but, whether or not its members failed in their duty to inform their constituents, the fact remains that their constituents were not informed before it became impossible for the overwhelming majority to make worthwhile representations. I am aware, as a resident of Stonesfield in touch with many other residents of Stonesfield, that few if any, except no doubt those landowners who stand to make a great deal of money out of the process, were aware of the proposal until the Slate items. I am told by another local resident, whom I assess as a reliable source, that a prominent member of the Parish Council when asked by my informant following the Slate items, about the proposal responded “Oh, it’s got out has it?” I treat such information with caution, but if it truly reflects the attitude of the Parish Council to its functions in a case of this sort our democratic system requires radical overhaul. Whatever the truth of it, the process of consultation has been nugatory for the residents of Stonesfield. Had it been otherwise, I have no doubt at least one public meeting attended by representatives of the huge majority of the population of the village would have taken place and robust expressions of opinion against the present proposal would have been forthcoming.

Representations on the merits.

Such representations as I shall now make are subject therefore to the qualification that, because of a lamentable lack of consultation and notice of the proposed modifications to the Local Plan which has resulted in severe pressure of time, I have been quite unable to research and consider the matter sufficiently thoroughly and therefore I reserve my right through whatever remedy is open to me, including judicial review of the process, to make further and more thorough submissions in due course. For the moment however:
The “Overall Strategy” of the Local Plan pays lip service to the statutory purpose of achieving sustainable development set out in paragraphs 6 and 7 of the NPPF. Paragraph 7 refers to the “three dimensions to sustainable development: economic, social and environmental” and says that these dimensions give rise to “the need for the planning system to perform a number of roles” including a “social role” a major element of which is “providing the supply of housing required with accessible local services that reflect the community’s needs and support its health, social and cultural well-being.” (My italics).

The Overall Strategy then recites the necessary ingredients of sustainable development, the first of which is “Locating Development in the Right Places to ensure good access to facilities, help reduce car use, protect important areas such as Green Belt and AONB, conserve and enhance the natural and historic environment…” The AONB is of course the Area of Outstanding Natural Beauty.

In accordance with the strategy of locating development in the right places to ensure good access to facilities, help reduce car use etc., the pre-modification version of the Local Plan said at 4.18: – “Outside of (sic) the three main towns of Witney, Carterton and Chipping Norton, the focus of development will be the six rural service centres of Bampton, Burford, Charlbury, Eynsham, Long Hanborough and Woodstock. These contain a good range of services and facilities and are considered to be suitable for accommodating development of an appropriate scale and type that would help to reinforce their existing service centre roles and meet their development needs and those of their immediate hinterlands.” (My italics).

In the modified version of the Local Plan this paragraph has been deleted. Its deletion is in conflict with the Overall Strategy Requirement “to ensure good access to facilities, help reduce car use etc.” It was presumably with a view to achieving this objective that the “good range of services and facilities” of the “six rural service centres” was in the pre-modification version of the Local Plan considered to be important. They had the range of services and facilities to accommodate “development of an appropriate scale and type.” Stonesfield emphatically does not. They were arguably settlements with the services and facilities to support sustainable development. Stonesfield emphatically is not such a settlement:–

The “six rural service centres” are all endowed with good transport links by frequent bus and/or railway services (Charlbury and Long Hanborough),

Stonesfield has no railway station and a comparatively poor bus service.

The “six rural service centres” all have fast-food outlets, public houses, cafes and restaurants, supermarkets and so on.

Stonesfield has a single shop, a hairdresser, no fast food outlet, a single moribund public house (the umpteenth manager has just resigned), no cafe, no restaurant, no supermarket;

Each of the “six rural service centres” has a medical practice.

Stonesfield has no medical practice.

Four of the “six rural service centres” have a secondary school.

Stonesfield has no secondary school.

Stonesfield village school is already near or at capacity and would have no scope to accommodate additional pupils. Having previously been Chair of the PTA and a Governor of that school for more than 20 years, for a large proportion of that time as Chair, I am well aware of the virtual impossibility of squeezing necessary resources out of the local education authority and the central government Department for

<tr>
<td>Education.</td>
</tr>
<tr>
<td>* Stonesfield’s pre-school is similarly over-subscribed.</td>
</tr>
<tr>
<td>* There are few employment opportunities within Stonesfield.</td>
</tr>
<tr>
<td>* Sources of employment within all the “six rural service centres” are very substantially more numerous e.g. there is a substantial business estate in Long Hanborough and many shops, restaurants, public houses, hotels, a supermarket providing employment in Woodstock, not to mention Blenheim.</td>
</tr>
<tr>
<td>* The “six rural service centres” are in the main well-equipped with recreational facilities, e.g. Woodstock’s swimming pool, football ground and tennis club; Charlbury’s cricket ground, football pitch, tennis courts &amp; bowls club.</td>
</tr>
<tr>
<td>* The single Stonesfield village recreation ground is already subject to pressure which has resulted in the recent adoption of a contentious proposal to deprive the tennis club of one of its three courts in order to accommodate demand for space for playing football.</td>
</tr>
<tr>
<td>* The central core of the village of Stonesfield is now intensively developed, large back gardens and small open spaces having become sites for small-scale housing developments. The old centre is comprised of narrow streets. What services there are, in effect the shop, hairdresser, the school, the church and the moribund public house have little or no parking. There are few pavements in the central core.</td>
</tr>
<tr>
<td>* “50 homes” will create significant additional car traffic within and outside the village. There is already a dangerous concentration of cars, parents and young children around the centre of the village at school starting and leaving time. Sooner or later a child may be killed or seriously injured. The village, unsurprisingly, simply was not built to cope with the traffic consequences of a development of the scale proposed. Outward access to each and every one of the services and facilities mentioned above which are lacking within the village will in the overwhelming majority of cases be by car traffic, given the poverty of the public service transport provision to the village. This will result in a substantial increase in car traffic between the village and neighbouring service centres.</td>
</tr>
<tr>
<td>* In short none of the facilities suitable for accommodating development of the scale of “50 homes” or, allowing for the “mistake” of WODC, 50-70 homes and perhaps in the future (see later) if the dominoes begin to fall, many more. There is no room within the village to provide such facilities and there is no likelihood of them being provided on a development site outside the village envelope, and indeed it would be inappropriate to provide them on such a site within the AONB.</td>
</tr>
<tr>
<td>* It is helpful to remind oneself of the history and significance of the concept of an Area of Outstanding Natural Beauty:-</td>
</tr>
<tr>
<td>* It has a shared history and significance with National Parks. Both were creatures of the post-war alignment of public good and private interest which gave rise to, inter alia, free education, the National Health Service etc. all of which today is anathema to the ruling regime.</td>
</tr>
<tr>
<td>* Reports to the post-war government by John Dower, a civil servant, and Sir Arthur Hobhouse, a prominent politician, made proposals to facilitate the preservation of places of natural landscape beauty for the enjoyment of the public (not just the rich and powerful). Dower proposed the designation of smaller and less wild but nonetheless especially beautiful landscapes as Areas of Outstanding Natural Beauty rather than as National Parks.</td>
</tr>
<tr>
<td>* The reports of Dower and Hobhouse gave rise to the National Parks and Access to the Countryside Act 1949 (“the 1949 Act”). The 1949 Act required the designation of both National Parks and AONBs. The legislative provisions relating to AONBs were replaced by and substantially carried forward into the Countryside and Rights of Way Act 2000 (the “2000 Act”).</td>
</tr>
</tbody>
</table>
* By section 85 of the 2000 Act a district council, i.e. including WODC, has a statutory duty to “in exercising or performing any functions in relation to, or so as to affect, land in an area of outstanding natural beauty, ….. have regard to the purpose of conserving and enhancing the natural beauty of the area of outstanding natural beauty.”

* In paragraph 115 of the NPPF the government in March 2012 accorded AONBs equal status with National Parks in making planning decisions affecting the beauty of landscapes. It said: “Great weight should be given to conserving landscape and scenic beauty in National Parks, the Broads and Areas of Outstanding Natural Beauty, which have the highest status of protection in relation to landscape and scenic beauty.”

* There are 33 AONBs in England and the Cotswolds AONB, within which Stonesfield is situated, is the largest. Its significance is reflected in the fact that it is one of only two AONB’s which has its own statutory “Conservation Board.” The Secretary of State for the Environment has a power under section 86 of the 2000 Act to create a Conservation Board for an AONB. The first Conservation Boards in England were established for the Chilterns and Cotswolds AONBs in December 2004. Government guidance is to the effect that a Conservation Board is considered to be of most potential benefit to the larger AONBs whose area crosses a number of administrative boundaries. There is no doubt this was in the fond hope that the establishment of a Conservation Board would militate against precisely the abuse of an AONB by constituent local planning authorities of the kind currently proposed by WODC in Stonesfield.

* The law, i.e. section 87 (1) of the 2000 Act, provides that a Conservation Board must have regard to two purposes in exercising its functions. One purpose is the conservation and enhancement of the natural beauty of the AONB. The other is to increase the understanding and enjoyment by the public of the AONB’s special qualities. It is interesting in the current context to note that (a) there seems to be little understanding by WODC of the first purpose and (b) section 87 (1) says that if it appears to a Board that there is a conflict between the two purposes, it is to attach greater weight to conserving and enhancing the AONB, i.e. conservation and enhancement of the natural beauty of the AONB take priority over the understanding and enjoyment of the public of the AONB’s special qualities. The natural beauty is of supreme importance.

* The government guidance goes on to repeat the government’s commitment to the principles of sustainable development and requires the Boards to work towards matching the principles of sustainable development with their purposes. Again therefore there is an emphasis, albeit this time implied, upon “Locating Development in the Right Places.” It is not conducive to the conservation and enhancement of an AONB to locate a major development site for 50-70 houses outside the village envelope of a settlement with few services or facilities and poor public transport.

* This is therefore not simply a question of a blue or grey wash on a plan with an airy fairy notion about pretty landscapes, which may be used when it suits the local planning authority and jettisoned when it does not. WODC has a legal duty to place very significant weight upon the designation. The situation of Stonesfield within the AONB is a material consideration of very great significance in the formulation of the Local Plan.

* Policy EH1 of the Local Plan sets out what will be the significance of the AONB in considering planning applications under the Local Plan. It says: –

“The quality, character and distinctiveness of West Oxfordshire’s natural environment, including the landscape, cultural and historic value, tranquillity, geology, countryside and biodiversity, will be conserved and enhanced……. When determining development proposals within or impacting upon the Cotswold Area of Outstanding Natural Beauty, great weight will be given to the conservation of the area’s landscape and scenic beauty. Special attention protection will be given to landscape and biodiversity of the…… Wychwood Project Area.”
It should be noted that Stonesfield is not only within the AONB, but also within the Wychwood Project Area.

* The text within the Local Plan supporting policy EH1 is clear. At 8.4 the stringency of the policy is emphasised: –

"In accordance with national policy, major developments within the AONB will only be permitted in exceptional circumstances and where it can be demonstrated that they are in the public interest. Importantly, there is no singular definition of major development and the Council will consider each case on its merits having regard to the relevant factors including location, scale, context and design. In some instances, even relatively small-scale developments will be classed as major development and therefore only permitted in exceptional circumstances and where they can be demonstrated to be in the public interest."

* However, whereas this policy weighs heavily against the kind of major development now suggested at the Stonesfield Site and the Overall Strategy of the Local Plan observes the ritual of acknowledging the significance of the protection of "important areas such as . . . . . AONB," the allocation of the Stonesfield Site for housing development of the scale envisaged is in stark conflict with the very notion of protection of the The Stonesfield Site is entirely within the Area of Outstanding Natural Beauty and is outside the village envelope.

* The WODC justification at 9.6.34b-i of the modified Local Plan for the allocation of the Stonesfield Site, notwithstanding the conflict with the relevant Local Plan policies is pure sophistry: –

* "whilst the development of the scale proposed (50 homes) on an edge of settlement site such as this would clearly have a degree of impact.....” This would be a massive development in proportion to the size of the existing village, would be situated on the main approach to the village and would completely alter the perspective of the village when viewed from the south and from the east. Its visual impact in and on the AONB would be catastrophic. I have dealt with its impact upon the central core of the village and upon the meagre services and facilities within the village above. That does not need to be repeated. This would be the single biggest development ever permitted at the village.

* "The site is not affected by any.... Policy constraints other than the fact that it lies within the Cotswolds Area of Outstanding Natural Beauty.” If this were not serious it would be laughable. The significance of the AONB policy has been dealt with above and again does not require repetition.

* "In terms of the need for the development, the provision of 50 new homes on this site would make a significant contribution towards meeting identified housing needs in West Oxfordshire. There would also be some benefit to the local economy during the construction phase. The NPPF requires planning permission for major developments on land within an AONB to be refused “except in exceptional circumstances and where it can be demonstrated they are in the public interest.” There are no exceptional circumstances here other than any difficulty WODC may have in meeting its housing target. To justify the allocation, not only where there are no exceptional circumstances, but where there is a stark absence of adequate services and facilities necessary for the “sustainability” of such a large-scale development, WODC would have to show that it could not meet that target otherwise than by the inclusion of the Stonesfield Site. It has produced no evidence to that effect.

* "In terms of the scope for developing elsewhere, the Burford – Charlbury sub-area is washed over by a significant proportion of AONB designation. This in itself means that to meet future housing requirements, some development within the AONB will be necessary.” The WODC has not shown that a suitable site for 50 homes cannot be found in any part of the Local Plan area outside the Burford – Charlbury sub-area, where there might be no conflict with AONB policy and/or where a suitable range of facilities and services is available and where development would not have the consequence of a major increase in car use which
would be associated with the Stonesfield Site, e.g. in particular the “rural service centres” at Woodstock, Long Hanborough, Eynsham and Bampton or indeed in or around Witney itself. Even were it to be the case that the identification of such a site was impossible, the WODC has not produced evidence that no other site of a similar size can be identified within the Burford – Charlbury sub-area where there might be no conflict with AONB policy and/or where a suitable range of facilities and services is available etc. In particular it has not produced evidence that no such site would be available in the two “rural service centres” within the sub-area, i.e. Charlbury and Burford. Both these centres are acknowledged by the WODC itself to have a range of services and facilities far more appropriate to a development of this scale than has Stonesfield.

* Until recently I have been accustomed to acting for clients refused permission for single house development on sites outside settlement envelopes on the ground that such proposals were in the AONB and would not be conducive to the conservation and enhancement of its natural beauty. The WODC would now have us accept that the allocation of a site for a large-scale development of tedious suburban houses, including no doubt the minimum proportion of truly affordable housing the developers can get away with, is appropriate. What has changed?

* The change is of course the political impetus to satisfy increased housing development targets laid down ultimately in the NPPF and the RSS. One might argue about the manner in which such targets might be achieved, i.e. predominantly through unregulated market ventures giving rise to opportunities for disproportionate profit to developers and landowners, or more significantly through local authority increases in the public housing stock, but it is more difficult to argue about the severity of housing shortage. Accepting that central government has laid down housing targets, the question is whether they should be fulfilled in gross non-compliance with long accepted planning policy or indeed non-compliance with apparent planning policy or whether they should be fulfilled in compliance with that policy.

* The WODC in publishing its pre-modification Local Plan argued that its appropriate share of the overall housing target was at a level the Inspector later considered inadequate. The WODC does not appear to have made any further argument in support of its original position but has accepted the need to provide a number of houses over 50% more than its original target, a staggering increase. The consequence appears to have been an abandonment of the need to select suitable sites in accordance with the policies remaining within the Local Plan. In short politics has taken over and planning policy has gone out with the bathwater. In panic at the inspector’s view of the implications of the politically imposed overall housing targets, the WODC has taken what it sees as the politically and practically easiest action in response. It has looked at places where landowners, unconcerned with nationally accredited planning policies of supreme significance, are prepared easily to make land available for a fast and handsome buck and indiscriminately included such land as an allocation within the modified Local Plan, without any regard to planning policy and has attempted to justify this disregard by vacuous sophistry.

* The solution to the dilemma of the WODC in meeting its target should not be a panic abandonment of both compliance with planning policy of unique national significance, i.e. AONB and sustainable development policies, and of sensible local policy that development of the scale envisaged should be situated in close proximity to an appropriate range of facilities and services, but rather the institution of a rigorous search for and examination of sites in parts of the WODC area where these policy conflicts are not inevitable or extreme to the degree that they are at the Stonesfield Site.

* An indication that much more suitable sites elsewhere are likely to be available is derived from a comparison between the percentage of existing housing stock comprised by development currently underway and development proposed within the Local Plan in other settlements within the Burford-Charlbury sub-area and that percentage in Stonesfield. The following analysis has been prepared at short
notice by a fellow resident of Stonesfield and is arrived at by taking the last census figures for the population of each settlement, dividing the population totals by 2.3, being the average number of people per house according to the 2011 census, to arrive at the approximate existing housing stock and then determining the proportion of that existing housing stock comprised by development currently underway and development proposed within the Local Plan:

- Charlbury 6.71%
- Kingham 6.55%
- Burford 6.72%
- Shipton 8.13%
- Milton 8.65%
- Stonesfield 15% + (including developments under construction currently at Charity Farm (37) and Farley Lane (13) plus the Stonesfield Site).

The figures above are based upon the following spreadsheet:

* This shows that:-
  * far from resisting development nimby fashion, Stonesfield, even without bringing into account the Stonesfield Site, will already have achieved growth of 7.53% i.e. more than three of the other five settlements;
  * Stonesfield, notwithstanding its gross unsuitability for sustainable development through lack of facilities and services, has already shouldered a disproportionate burden of housing development;
  * given what Stonesfield has already achieved, there are likely to be sites in other settlements far more suitable for sustainable development if WODC can only be bothered to do the hard work to identify them.

I have seen the report and complaint submitted to you by Mr. Lawrence and wish to add my name to it. A consultation which does not present the facts, whether by omission or by error, is not a fair and honest consultation. The residents of Stonesfield need to have the opportunity to comment on the council’s plan with the benefit of the fullest possible information available. I ask you to provide an extension to the

<td>Anders</td>
<td>455</td>
<td>&gt; Burford Charlbury Sub Area &gt; MAIN 190</td>
<td>As a villager living in Stonesfield, apologies for being unable to follow all of the legal requirements to complete this form, but I do not believe this should exclude me from objecting to the new and additional housing application for possibly 50 to even 200 new houses in Stonesfield. We live in a small village with circa 1500 residents and the new housing suggestions would completely change the character of the village. I did not object to the current building of 50 houses as we were advised if we agreed to the proposal Stonesfield would be left free of development for years to come. As we are currently having 50 houses built in our little village of Stonesfield with circa 1500 residents, and I do understand the need for housing I object to the application for a further 50 houses in our village. As I said we were advised if we did not object for the current housing, Stonesfield should be ‘safe’ for years. The reasons for this are: * We live in a village full of character and the possibility of a further 50 houses in addition to the current 50 being built would have serious impact on the nature of the village. * The amount of new housing proposed is disproportionate to the size of the village. * The school is already full and would not have space for all the extra children needed local education. * The roads in and out of Stonesfield are already busy considering the size of the village. * The plans are to build on yet more green space - there seems to be little focus on trying to use brownfield sites. * We are ruining our ‘green and pleasant’ land with endless development. * Many people use Cotswold villages as their country escape in addition to their other residence - what’s to stop these houses to be used for this purpose too? * We have few amenities in Stonesfield so the extra housing will create even more traffic going on the A44 or via Long Hanborough.</td>

| MM320         |                         | Rob Atkinson, Mr Atkinson | 589        | AT THE LOCAL LEVEL > Burford Charlbury Sub Area > MAIN 190  | AT THE LOCAL LEVEL > Burford Charlbury Sub Area > MAIN 190  
Homes, have now increased the proposal to 68 houses on a site of just over 8 acres. It would be directly opposite the new Charity Farm development (35 houses) on the other side of Woodstock Road, with resulting traffic congestion. Little account has been taken of the restricted roads in Stonesfield, on which the increased traffic will undoubtedly endanger pedestrians. Stonesfield is also being allocated, pro rata, more than its share of new building, given that 20 new houses are already being built on Farley Lane (Empire Homes) and another 15 are proposed for the North Farm site close by. |
| MM329         |                         | Ruth and Dennis Beasley, Beasley | 607        | AT THE LOCAL LEVEL > Burford Charlbury Sub Area > MAIN 190  > SECTION 9 - STRATEGY AT THE LOCAL LEVEL > Burford Charlbury Sub Area > MAIN 190  | We write to object in the strongest possible terms with regard to the proposed housing developments in Stonesfield.  
In relation to Item BC1a on page 292 of the 'Submission Draft Including Proposed Modifications' document, we wish to make the following points:  
* The failure by West Oxfordshire District Council to get a Local Plan approved has left Stonesfield vulnerable to being ruined by over-development. Maybe this was a deliberate strategy by the Council, to leave the way clear for indiscriminate development, thus helping the Council to achieve its target of new housing.  
* The absence of a local plan means that the proposed over-development would put an intolerable burden on local infrastructure including roads, drainage, sewage, schools (both primary and secondary), public transport, shops and health care. The local doctors' surgeries are already stretched beyond their natural capacity, without the means to expand.  
* Contrary to statements made in the Submission Draft concerning developments to the north of Woodstock Road, we fail to see how this development would be a 'logical extension of the existing built form of the town.' (See comment below regarding the fact that Stonesfield is not a 'town'). We are also unable to see how this development would achieve 'a positive improvement to the main eastern approach into Stonesfield'. No such development or 'improvement' is necessary.  
* The plan refers to Stonesfield as a 'town'. This it most definitely is not. It is an attractive small Cotswold village, within an Area of Outstanding Natural Beauty. The potential proposed developments would, by anyone's standards, intrinsically alter the character the village.  
* Stonesfield has already accommodated several developments in recent years (off Combe Road, Churchfields and The Ridings) and larger developments off Woodstock Road and Farley Lane are currently under way. We are not resistant to change and appreciate that people need to have somewhere to live. However, we are at a loss to understand why the village has clearly been targeted for a disproportionate level of development, which would result in the loss of an attractive and popular village in its present form. It would also result in the loss of a considerable amount of agricultural land, currently being used for food production.  
* We urge the Planning Policy Team and West Oxfordshire District Council to consider the views of Stonesfield residents and stop this un-needed and unwanted over-development of our village. |

The Plan shows a parcel of land allocated for a suggested 50 homes. (A planning application is imminent for just over half of this land for 68 homes, by Cala Homes. And the rest of the land? More houses later? What density?) Together with other houses currently under construction this would mean an increase of dwellings (currently some 700) within a small village by approximately 30% within five years. Such an increase is not sustainable. Where will it end?? |

| MM331|               | Mr & Mrs Drew | Mr & Mrs Drew | Drew   | 614 | > SECTION 9 - STRATEGY AT THE LOCAL LEVEL > Burford Charlbury Sub Area > MAIN 190 | The extension to existing built form is not 'logical', and Stonesfield is a village not 'a town'. It has one small shop, and a pub which is struggling to survive. A survey of all villagers carried out in 2010 suggested that residents were in favour of infill sites only, not large-scale development.
Building on green fields which surround the village with light, fresh air, and a multitude of wildlife is not 'logical' in the minds of the people who currently live in Stonesfield. The quality of life would be quantitatively changed by large-scale development of this type.

We would like to comment on the Local Plan 2031 especially with regard to the proposal of additional housing in Stonesfield and the Cotswold Area of Outstanding Natural Beauty. We tried to comment via the website but failed to download the form or find another way to comment as it was so complicated.

We strongly object to any large-scale developments of the type proposed for the village of Stonesfield. Our reason are shown below.

Comments relating to specific points in the plan:

9.6.34d Cotswold Area of Outstanding Natural Beauty

An AONB is supposed to be a protected area from development, however this plan seems to totally disregard this fact. Stonesfield has already had a development of 37 units placed within this AONB and within sight of the West Oxfordshire Way. The proposed new development will also be in sight of the West Oxfordshire Way, with the two developments creating a modern carbuncle on the landscape which according to the Governments "rules" for AONB should not be allowed.

9.6.34h "In terms of detrimental effect..."

Over the past 2 years WODC planning department have approved 65+ new houses to be built within the village of Stonesfield.

There is a Primary School in the village but it only has 5 classrooms. There is also a Pre-school which is housed in a tiny building and already at full capacity.

The Secondary School in Woodstock is almost at capacity, and within the Local Plan there is the proposal for many more homes in Woodstock too.

The Doctors surgeries in Woodstock and Long Hanborough are already stretched and again there is proposals for additional housing in Woodstock and Long Hanborough in addition to that in Stonesfield.

Stonesfield is an old village and the infrastructure and roads can only just cope with the current village population, even before the completion of the current developments at Charity Farm and Farley Close.

The combined sewer along the Woodstock Road is already at capacity and regularly blocks causing issues for current residents. This was noted by Thames Water for the new development at Charity Farm, and an additional 50+ houses on top of the 37 from that development will surely cripple the sewerage system.

MAIN190 Policy BC1a

"...around 50 dwellings as a well-integrated and logical extension of the built form of the town."

| MM339         |                         | Simon and Jenny | Haviland         | -                 | 640        | > SECTION 9 - STRATEGY AT THE LOCAL LEVEL > Burford Charlbury Sub Area > MAIN 190 | I am concerned about the planned housing developments in Stonesfield. We have heard differing numbers of proposed houses and also the amount of land given over to development. The draft plan is not thought-out or sound. 

There has been no time to allow the village to digest the enormous number of houses proposed, and no opportunity to consult.

The fact that Stonesfield lies in an area of outstanding beauty seems to have been disregarded. The infrastructure of Stonesfield, with its small primary school and narrow roads, is not up to the very large increase in housing development. The character of the village will be entirely lost.

I trust you will reconsider the plan, as it is entirely unsuitable for Stonesfield.

(Jenny Haviland)

On the exhibition panels it states that 50 homes are to be built on land north of Woodstock Road in Stonesfield. Yet I have been given to understand that Cala Homes have already been given permission to put up 68 houses on only part of that parcel of land. |

Stonesfield is a VILLAGE not a town (definition of a town is a settlement with a market), however within this Policy it is regularly compared with Burford and Charlbury which are both towns with many more services and better infrastructure than the VILLAGE of Stonesfield. 

"...positive improvement to main eastern approach..."

The proposed site is open fields and as such fully exposed on approach to the village. The sight of a modern housing estate as the first view of what is an ancient village with many important historical references, is not what one can call a “positive improvement”

Additional comments:

The village of Stonesfield had a population of 1500 at the 2011 census. In the last 2 years WODC planners have already approved 65+ new dwellings within the village. As mentioned above it is an old village with small roads which are badly maintained, few pavements and old sewerage systems which are prone to blockages. It has 1 small shop which includes a post office counter, 1 hairdressers and 1 pub. There is limited public transport and the roads surrounding the village are narrow and again, badly maintained.

We have heard that there is a threat of additional housing on top of that mentioned within this Local Plan, of around 40 dwellings along The Ridings.

The village has already had more than its share of new housing in recent years, and the village cannot sustain further growth on this type of scale.

The village currently has a very good community spirit with many of the local facilities being run by volunteers. There is a great fear that this type of growth will not only kill the local infrastructure but will kill the village as a whole.

We hope that you will take note of our comments as we feel that our village is being used as an easy target for development and we are very worried that the proposed developments will create a massive detrimental effect. |

<td>&gt; SECTION 9 - STRATEGY AT THE LOCAL LEVEL &gt; Burford Charlbury Sub Area &gt; MAIN 190</td>
<td>Allocations in the Burford/Charlbury Sub Area (Land North of Woodstock Road Stonesfield, Land East of Burford, North of Jefferson Place Charlbury and South of Milton Road Shipton Under Wychwood). All these sites fall within the Cotswold AONB. For all four sites the Sustainability Appraisal states that there has been no landscape assessment and a major negative long term effect is anticipated. A landscape assessment needs to be undertaken to inform the selection of site allocations before these sites can be considered for inclusion in the Local Plan.</td>

<td>English Heritage</td>
<td>Historic England</td>
<td>Mr</td>
<td>Small</td>
<td>1096</td>
<td>&gt; SECTION 9 - STRATEGY AT THE LOCAL LEVEL &gt; Burford Charlbury Sub Area &gt; MAIN 191</td>
<td>This site is within the Burford Conservation Area. Nevertheless, Historic England considers that the development of the majority of this site to the west is acceptable but is concerned about the triangle of allocated land to the north-east. The approach to Burford from the east is particularly rural, which makes a valuable contribution to the special interest, character and appearance of the conservation area. As a designated heritage asset, great weight should be given to the conservation of the Conservation Area in accordance with paragraphs 126 and 132 of the National Planning Policy Framework. Any development of this site should therefore conserve or enhance the special interest, character and appearance of the Conservation Area. It is noted that it is proposed to have the principal vehicle access to the site in this north-east corner and that the development of this site is considered to present an opportunity to provide a “gateway” entrance to Burford from the east. However, as noted above, the existing rural approach to Burford is an attractive feature that contributes to the conservation area. We therefore consider that a “gateway” feature is both unnecessary and damaging to the character and appearance of the Conservation Area and object to this.</td>

Is this true? If so why are we being asked to comment on a plan that is already out of date?

(Simon Haviland)

Stonesfield and West Oxfordshire need more affordable housing. The proposal to build 50 houses to the north of Woodstock Road will help this. The village would need to adapt to this number of houses. However, there is a major concern that the numbers in the local plan will not be the true extent of the development. At the Parish Council meeting of 1 December 2016 CALA homes reported that they have purchased half of this proposed site - 8.2 of the 15.5 acres - and they propose to build 68 houses on it. Clearly the density of housing involved will be much greater than would be envisaged if 50 houses were built on the 15 acre site. It is a great concern that if this development was allowed in future the rest of the site could be purchased and another 68 houses built on it. Such an increase in houses would be totally unacceptable for a village such as Stonesfield. It would ruin the character of the community and services such as school and roads would be swamped. 50 houses for Stonesfield on this site must stay at 50 houses and not provide a back door for unacceptable developments. Further houses are already being built on Charity Farm (37) and planned east of Farley Lane (13). The 50 must be the limit or the village will be lost as a village. There is also a major concern which applies no matter what the numbers of new houses, namely the dangerous junction from the village road onto the A44 at the Duke of Marlborough. Despite modification this remains a killer junction and increased traffic will increase this risk significantly. Greater traffic will also be using this route from increases in Chipping Norton.

| MM492        |                         | A. J. T. Bond  | Mrs             | Bond              | 1228       | > SECTION 9 - STRATEGY AT THE LOCAL LEVEL > Burford Charlbury Sub Area > MAIN 191 | element of the proposals.  
If it is not possible to access the site entirely from Frethern Close/Wysdom Way we would prefer to see this allocation dropped from the Plan. If, however, the Council considers that the public benefits of the development of the site could outweigh the harm to the Conservation Area, the proposed access should be kept as low-key as possible with no development either side in this corner of the site.  
I am writing to object to the Local Plan to develop Cole's Field east of Burford by building 85 houses thereon.  
There are a number of key inaccuracies and poorly informed assumptions in the plan which need to be addressed.  
In particular:  
1. The Burford Town Council and local councillors appear not to have been consulted or even made aware of the plan. This cannot be right.  
A detailed site survey and feasibility study has not been carried out, a fact confirmed in para. 9.6.34p in the plan.  
Paragraph 9.6.340 in the plan states that “Any development within or on the edge of the town will therefore fall within the AONB and the scope for avoiding it does not exist other than south of the A40 where the Council’s assessment of land availability has been unable to find any suitable sites.” In fact, there is an ongoing planning application appeal pending for a similarly sized development on the west of the B4020 opposite the Burford Garden Centre. How does this impact the plan?  
Plan specific points  
Burford was quite recently named as one of the most sought after places to live in the world, based on its charm and heritage and so makes it a desirable place to visit and live. This reputation would be in danger and popularity potentially reduced by such a significant extension (built on an earlier stealth extension), as the development would dramatically change the panoramic vista and the balance of heritage to new.  
Contrary to the statement in para. 9.6.34j the site is steep and development of it will result in a significant increase in water run off down towards Orchard Close, Swan Lane, Witney Street and beyond, areas which already suffer in cases of heavy rain where the existing drainage systems are unable to adequately cope.  
Para. 9.6.34k is correct in saying that the site is not within a designated area of flood risk; it is half way up a steep hill! However, the proposed primary vehicular access to it is from a road which crosses the flood plain of the River Windrush which is subject to flooding and indeed has been totally impassable in recent times after heavy rain. This road also has a point where it freezes and there is typically at least one overturned car or accident each year.  
Para 9.6.34k also states that Cole’s Field “is also in close proximity to the centre of Burford with a range of services and facilities within comfortable walking distance.” The proposed route of not walking down Barns Lane to the local shops goes against what happens now and there is no proper footpath. This route is used daily by school children and other locals. Also, the number of cars using this as a rat-run when the high street is busy is increasing, particularly at school times and rush hour. As a single lane, it is dangerous even now and particularly so when the hedges on the properties either side of the road are being cut. |

| MM506        | GB                      | Mr Bond        | Bond            | 1247       | > SECTION 9 - STRATEGY AT THE LOCAL LEVEL > Burford Charlbury Sub Area > MAIN 191 | I write to object to what appears to be a hasty and ill-considered addition to the Local Plan to develop Cole’s Field east of Burford by building 85 houses thereon.

My objections are as follows:

Procedural

The Burford Town Council and local councillors appear not to have been consulted or even made aware of the plan. This cannot be right.

In winter this road becomes icy and has caused cars and other larger vehicles to slide, damaging the dry stone wall, hitting the cottage on the corner or the house on the corner at the cross roads with Swan Lane. Fortunately, I do not believe a pedestrian has been injured yet.

Paras. 9.6.34k, 9.6.34l and 9.6.34p refer to Burford being within the Cotswold AONB and Conservation Area but considers that “development of this site would not have a detrimental effect on the environment, landscape or any recreational opportunities.” I do not agree and would suggest that any development of Cole’s Field would further destroy the iconic views of Burford and the Church from the A40 coming from Oxford, a view, which it is suggested, attracts tourist into the town to the benefit of the local economy.

Par 9.6.4m states that there are a number of options in terms of access to the site. Each of those detailed are either impractical or dangerous, in some cases both.

The primary vehicular access proposed in the plan is via Witney Street (not the Witney Road as stated in para. 9.6.34m of the plan) and appears to be on a blind bend of the road which has an adverse camber around which cars already travel at excessive speed coming into Burford from the A40 down White Hill. Any entrance to or exit from the site here would be extremely dangerous.

Secondly and as recognised in the plan, both Frethern Close and Barns Lane are narrow with significant on street parking given that most houses do not have off road parking available. The proposed development of 85 houses will undoubtedly mean in excess of 100 additional cars using these already congested roads.

Para. 9.6.34n also suggest that there is an opportunity to provide a gateway entrance to Burford from the east via White Hill and Witney Street. As has been previously mentioned this route is prone to flooding, a risk which would be exacerbated by water runoff from any development. It is muddled thinking, as well as being dangerous, to propose additional vehicular access to the town via this route. Access to the High Street would inevitably be more of a problem as it is already difficult to make a right turn out of Witney Street at most times of the day. Witney Street, like almost every other street in Burford is narrow, especially at the High-Street end where it is one way. As with Frethern Close and Barns Lane, most houses do not have off street parking with the result that cars are parked on one side of the road, from the white gates signifying the entrance to the town, right up to the High Street. White Hill itself is north facing and suffers from severe icing in cold weather, specifically at the junction of the road to Widford where, to my knowledge, at least two cars have overturned in recent cold winters. Any additional traffic on the White Hill and Witney Street route would be dangerous.

Para. 9.6.34n suggests that there would be a beneficial effect in terms of the local economy during the construction phase. It is difficult to imagine how this would be the case and, given the inevitable disruption such construction phases create, it is suggested that it is more likely that there will be a detrimental effect on the local economy, particularly that relating to tourism.
A detailed site survey and feasibility study has not been carried out, a fact confirmed in para. 9.6.34p in the plan.

Paragraph 9.6.340 in the plan states that "Any development within or on the edge of the town will therefore fall within the AONB and the scope for avoiding it does not exist other than south of the A40 where the Council's assessment of land availability has been unable to find any suitable sites." In fact there is an ongoing planning application appeal pending for a similarly sized development on the west of the B4020 opposite the Burford Garden Centre. How does this impact the plan?

Plan specific points

Contrary to the statement in para. 9.6.34j the site is steep and development of it will inevitably result in significant water run off down towards Orchard Close, Swan Lane, Witney Street and beyond, areas which already suffer in cases of heavy rain where the existing drainage systems are unable to adequately cope.

Para. 9.6.34k is correct in saying that the site is not within a designated area of flood risk; it is half way up a steep hill! However, the proposed primary vehicular access to it is from a road which crosses the flood plain of the River Windrush which is subject to flooding and indeed has been totally impassable in recent times after heavy rain.

Para 9.6.34k also states that Cole's Field" ... is also in close proximity to the centre of Burford with a range of services and facilities within comfortable walking distance." It appears to be assumed that residents of new houses on Cole's File would walk into town to do their shopping and therefore bring further business to the town's shops. Experience shows that this will not be the case. The proposed access point on Witney Street will involve a walk of approximately ½ mile each way to and from the High Street. Pedestrian access to the High Street from Frethern Close and Barns Lane will either be through the footpath behind the Catholic church or down Barns Lane and out on to the High Street via Swan Lane. The latter is a route with no footpath at any point. Experience suggests that neither route will be attractive to pedestrians as both routes require a steep climb back up from the town which will not happen if any amount of shopping is to be carried. The alternative options are to drive into town where there will be nowhere to park or, as is usually the case, drive to the supermarkets and shops in Carterton and Witney or beyond.

Paras. 9.6.34k, 9.6.341and 9.6.34p refer to Burford being within the Cotswold AONB and Conservation Area but considers that "development of this site would not have a detrimental effect on the environment, landscape or any recreational opportunities." I do not agree and would suggest that any development of Cole's Field would further destroy the iconic views of Burford and the Church from the A40 coming from Oxford, a view, which it is suggested, attracts tourist into the town to the benefit of the local economy.

Par 9.6.4m states that there are a number of options in terms of access to the site. Each of those detailed are either impractical or dangerous, in some cases both.

It is difficult to imagine how this would be the case and, given the inevitable disruption such construction phases create, it is suggested that it is more likely that there will be a detrimental effect on the local economy, particularly that relating to tourism. Firstly, as a layperson, I feel it is unreasonable to be asked to make a judgement on the legality or soundness of any of the Proposed Modifications to the Submission Draft West Oxfordshire Local Plan 2031. One respects the professionalism of those who drafted the Plan, working to satisfy the demands made of them from Whitehall and central Government. Broad strategy is their business, but as always, the devil is in the detail. My concern is for the detail affecting Burford, and therefore refer to paragraphs 9.6 34j - 9.634q, in particular. Having lived in or near Burford for more than sixty years, one has the gut feeling that the ‘provision of around 85 new homes’ in one large development is merely to fill a space on a map, without regard for the impact this would have upon the ancient Market Town (or Rural Service Centre in modern jargon) of Burford. The site identified as a ‘sustainable development opportunity’ as seen on a map would appear logical, but as stated in Paragraph 9.6 34j it is a greenfield site, and is prominently visible as such from afar. A dense housing development of 85 dwellings would therefore detrimentally affect the visual setting of the town, as viewed from the North-East, North-West and the East, even with tree-planting and landscaping. Does AONB status count for nothing? Other major concerns are access and drainage. Barns Lane is already at capacity, as is Frethern Close/Wysdom Way. Witney Road is already dangerously narrow, liable to being flooded and has a permanent ice warning, being North facing. Whilst surface water drainage may be managed by installation of Swales and gulleys, the foul drainage in parts of Burford is already at capacity. I have made additional comments on the various paragraphs on the enclosed two sheets, as adapted from the published Proposed Modifications.</td>

<td>A J Hodgkinson</td>
<td>-</td>
<td>Hodgkinson 1276</td>
<td>&gt; SECTION 9 - STRATEGY AT THE LOCAL LEVEL &gt; Burford Charlbury Sub Area &gt; MAIN 191</td>
<td>I trust that common sense will prevail, and that local opinion carries some weight in your deliberations. Can the town of Burford, in an ordered society, be regarded as a special case regarding further development? It still 'Just About Manages' with more than its fair share of rapidly increasing volume of traffic using the A40 &amp; A361 and regularly gridlocking routes North, South, East &amp; West of the town. Imposing another main route into the town beggars belief! This compact town has two unique aspects. • The famous view down The Hill with the buildings and shops, bridge etc. • The exceptional east - west rural lanes into the town nestling along the peaceful and attractive Windrush Valley. Regarding Ref 9.6.34p Contrary to this paragraph there will be a massive detrimental impact on the environment, landscape and recreational opportunities, by the imposition of a ‘gateway’ in Witney Street, into a housing estate. This, no doubt, littered with attendant signs and speed bumps. The eastern and western approaches to the town provide rural, precious and fragile tranquility for exploration and enjoyment by visitors, walking groups, dog walkers, cyclists and even a few horse riders, as these lanes only carry light traffic. The Eastern Approach • This is a very popular cycle route • It is also a walkers route with the recent addition of a narrow roadside footpath. However this area is often very wet and the walkers tend to walk along the road. . • Further along this path leads into the fields and the only access to the banks of the River Windrush, for some miles again, making it a very special and popular walk. Visitors approaching the town from the east are entranced by the magical leafy lane, moss covered stone walls and river running deep down in the valley through the trees and are then enticed into a treelined Witney Street and the illusion of a ‘forgotten’ town beyond. The Phillips 'Essential Britain' Road Map shows the road from Asthall to Burford marked with a green line indicating a 'scenic route'. THIS is 'the gateway' to Burford it has been here for hundreds of years! The impact of hundreds of extra cars,delivery vans, and lorries along this narrow, winding, flood and frost-prone lane will lead to accident and injuries, which already happens with the present light traffic. If the lane is widened and 'improved' then even more visitors will use this route and enter the very narrow mediaeval streets creating chaos for all. It would create a 'rat-run' for traffic trying to avoid the frequent gridlock in the town from the north as well as the east.</td>

<td></td>
<td>Michael Blesovsky</td>
<td>Mr</td>
<td>Blesovsky</td>
<td>15</td>
<td>&gt; SECTION 9 - STRATEGY AT THE LOCAL LEVEL &gt; Burford Charlbury Sub Area &gt; MAIN 191</td>
<td>The consideration of building 85 homes on the land east of Burford is unsound on a number of fronts: - a) The AONB. Consider that &quot;The primary purpose of the AONB designation is to conserve and enhance the natural beauty of the landscape, with two secondary aims: meeting the need for quiet enjoyment of the countryside and having regard for the interests of those who live and work there.&quot; This potential development shows disregard for the interests of the people who live and work in Burford, nor can it in any way either conserve or enhance the landscape b) traffic and access. Any consideration of Witney Street, Barns Lane or Fret kern Close being capable of supporting the additional traffic is logistic blindness. Furthermore this only addresses those coming from the Witney direction. Those from Cheltenham would quite likely turn down The Hill and into Swan Lane, which is totally incapable of supporting additional traffic - it would be dangerous. Those coming from Stow or Fulbrook would come over the bridge and go where? The only options would be Church Lane or Swan Lane again, neither are suitable c) need. Surely development should respond to need? As was written in a recent issue of the The Bridge the Burford community only needs a handful of new homes, and since we have minimal or zero unemployment in the town most of the people moving to this development would be commuting. We don't need more traffic on the A40 and moving it into the smaller White Hill, Witney Street etc roads is not an answer c) the community simply cannot support the additional numbers, whether the transport and services infrastructure, employment or the Burford surgery d) flood risk. It is a well proven fact that developing on farmland significantly increases rainwater run-off and therefore flood risk. Where will the run-off from Coles Field go? Straight down to Orchard Rise and Witney Street I believe any plan to build on this scale on Cole's Field is totally unsustainable and should not be allowed to proceed.</td>

<td>Marshall</td>
<td>1583</td>
<td>&gt; SECTION 9 - STRATEGY AT THE LOCAL LEVEL &gt; Burford Charlbury Sub Area &gt; MAIN 191</td>
<td>There are traffic issues at Burford, with the A361 becoming ever busier and the junction between the Shilton Road and the A40 being dangerous. It's almost impossible to turn right from Shilton Road onto the A40 and it's also difficult to turn into Shilton Road, coming from the west on the A40. Extra traffic will exacerbate the danger. The North Carterton development will be additive, not least because it connects up to the rear of Shilton Park and allows the associated residents of approximately 1,700 houses easy access to Shilton Road and to the dangerous junction in question. Therefore, opportunities for growth are limited. Burford also has limited public transport to main employment centres.</td>

<td>Non-Strategic Allocations, Land East of Burford (Main Modifications 185, 187, 191 and 193) The proposed allocation 'Land East of Burford' is located wholly within the Burford Conservation Area which was designated in 1970. The site also forms part of the setting of Burford High Street, the historic core of the Conservation Area which contains a high number of listed buildings. The site is also in the Cotswolds AONB</td>
</tr>
</tbody>
</table>
Paragraph 126 of the NPPF states that Local Plans should set out a positive strategy for the conservation and enjoyment of the historic environment and ‘recognise that heritage assets are an irreplaceable resource and conserve them in a manner appropriate for their significance’. Designated heritage assets including Conservation Areas and listed buildings are further protected by the Planning (Listed Buildings and Conservation Areas) Act 1990.

Section 72 of the 1990 Act states that with respect to land in a conservation area ‘special attention shall be made to the desirability of preserving or enhancing the character or appearance of that area.’ In relation to listed buildings, the Section 66 states that when considering whether to grant planning permission for a development which affects a listed building or its setting, the decision maker must ‘have special regard to the desirability of preserving the building or its setting or any features of special architectural or historic interest which it possesses’.

While an allocation in a local plan is not tantamount to a permission itself, it does provide certain assurances that the principle of development of the site is accepted. Historic England have produced guidance on the process of local plan allocations affecting heritage assets in Historic England Advice Note 3: The Historic Environment and Site Allocations in Local Plans. The guidance encourages local authorities to properly consider the historic environment in preparing local plans, helping them to ensure that the statutory tests are met and that the plan can be sound. In particular, the note sets out that local planning authorities should make sure that the significance of heritage assets is understood when considering allocations. ‘This involves more than identifying known heritage assets within a given distance, but rather a more holistic process which seeks to understand their significance and value’ (Historic England Advice Note pg. 4).

The suitability of the site for development has been questioned throughout in the emerging evidence base for the local plan and has been discounted as unsuitable in the 2014 Strategic Housing and Employment Land Availability Assessment (SHELAA). It is unclear, without any further heritage or landscape evidence having been produced, how this position has changed in the interim period to the 2016 SHELAA, changing the recommendation from ‘not suitable’ to ‘suitable’. The 2014 SHELAA assessed the site (143 and 144) as unsuitable for development stating that the site: ‘forms part of attractive entrance to Burford from the east and is a key element of the local character. Very poor access to site would prevent development without large scale tree felling. Site contributes to the character of the Conservation Area. ‘The impact on the setting of the Conservation Area outweighs the need for development in this part of town’

In contrast the 2016 SHELAA now states that ‘whilst views of the site can be achieved from the north-east development if designed sensitively [it] would read as part of the existing built form of the town.’ The reason for the conclusion of suitability is set out in the SHELAA that ‘the site is considered suitable for development subject to overcoming access constraints and provided development is designed to read as part of the existing settlement’.

There is no explanation in the SHELAA or the Local Plan evidence base of how such a different conclusion to that of 2014 has been reached, or for that matter why reference is now made in the Main Modifications to the acceptability of development in the east of the town with no evidence to support it.

The 2014 assessment states that the site itself contributes to the character of the Conservation Area. Although there is no Conservation Area Appraisal for the Burford Conservation Area, it is reasonable to conclude that this greenfield site has been included in the conservation area (since its extension in 1991) due to its openness, and contribution to the green setting of the built up area of the town itself.
Land to the East of Burford forms part of the overall landscape setting of the Conservation Area and is important in terms of its undeveloped character. It is not clear from the proposed Main Modifications how development of the site so that it would 'read as part of the existing built form of the town' would preserve the or enhance the character and appearance of the area which is important for its open and undeveloped nature. It is therefore contended that this development would cause harm to the Conservation Area.

Case Law has clarified the interpretation of the statutory duties to preserve and enhance heritage assets. In the Court of Appeal Decision R (on the application of The Forge Field Society and others) v Sevenoaks District Council [Case No [2014] EWHC 1895 (Admin)] where there was need for development but the development would cause harm to heritage assets, the need to consider alternative sites was emphasised as part of the statutory duty of preservation. In this case, the site was in the AONB, a conservation area and in the setting of grade II* and grade II listed buildings. Linblom J set out in the decision that:

The lack of an updated evidence base with regards to proposed allocations and the historic environment indicates that the plan has not been positively prepared, is not consistent with national policy and does not meet the legal requirements for protecting and conserving the historic environment.

This raises concerns about the level of research the Council have done into the impacts of the development on the natural and historic environment. The SA Appendix 5, which assesses the proposed non-strategic allocations, states that Land to the East of Burford does not contain any designated heritage assets and considers that potential impact on Proposed Local Plan policy OS4 (High Quality Design) will provide sufficient mitigation of harm (pg 97).

The site selection process and the sustainability appraisal are clearly fundamentally flawed, it does not get close to understanding the potential harm and impact of a potential development on a nationally significant conservation area with a high proportion of listed buildings and a pristine historic core. While the SHELAA assessments refer to the conservation area, the site selection process appears to have been blind to these potential risks and has failed to properly consider viable alternatives which are less constrained and more appropriate. This is further compounded by the fact that the Cabinet Agenda Report from the 19th October 2016, when the main modifications were approved by Cabinet stated that the Land East of Burford, ‘lies outside (although adjacent to) the Burford Conservation Area’. This raises serious concerns and does not instill confidence that the Council have considered the site allocations in anywhere near enough detail, indeed the Council made a decision to progress to consultation based on false information put in front of them.

Landscape Impact

The proposed allocation at Land to the East of Burford is located within the Cotswolds AONB. Paragraph 115 of the NPPF sets out that 'great weight should be given to conserving landscape and scenic beauty in National Parks, the Broads, and Areas of Outstanding Natural Beauty, which have the highest status of protection in relation to landscape and scenic beauty'.

Areas of Outstanding Natural Beauty are designated in accordance with the Countryside and Rights of Way Act 2000 which confirms that the purpose of designating AONBs is the conservation and enhancement of natural beauty of the area. It also requires a management plan to be produced for each AONB to formulate policies for local authorities and for carrying out their functions in managing it.

The most up to date landscape assessment for the district is the West Oxfordshire Landscape Assessment

| 1998 (WOLA). The WOLA identifies Burford as being part of the Upper Windrush Valley As set out in the proof of evidence of Mr. Benjamin Rosedale at the recent appeal inquiry for Land at Shilton Road, the site is widely visible from the north and east and contributes to the distinction between the northern areas of Burford and the historic core on the river terrace to the south. The WOLA identifies several characteristics of the Upper Windrush Valley Landscape Character Area which are set out in Mr. Rosedale’s proof of evidence:

- moderate to high intervisibility, distant views along and across the valley;
- valleyside/ urban edge very visible from Fulbrook;
- classic distant view of the church spire approaching Burford on the A40;
- urban edge harsh in places, particularly viewed from A40 entering Burford and on Witney Street;
- urban silhouette from valley floor harsh in places’.

The WOLA also identifies key sensitivities including that any further urbanisation of the A40 corridor should be resisted as change would be visible. Overall, in his proof of evidence, Mr. Rosedale concludes that:

‘It is clear that the development to the east of Burford would be both prominent and harmful to the distinct character of Burford when viewed from the east and north (largely from locations within the AONB)’.

The allocation of the land to the east of Burford should not be allocated in the WOLP. It is not sound in terms of national policy, or justified in terms of evidence base.

<td></td>
<td>I would like to object to the proposal for the possible development of 85 new houses, making the following points:</td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td>* There is a flooding risk. Orchard Rise is positioned directly below the field in which the new development is proposed. Additional build will affect the capacity of the field to absorb water. There is a high water table on the land due to natural springs. There have been occasions in my own back garden where the grass has risen up during heavy run off due to the extent of the water flowing down the slope beneath the ground. There can be no doubt that the development will affect the water table. Indeed this is also likely to affect locations further down the slope such as Windrush Close and Swan Lane. It is clear to all that during heavy rain even Witney Street floods due to the volume of water running down the slope. Concreting over the field will make all this significantly worse.</td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td>* Burford is a highly attractive, unspoilt town with rural character and is within the Area of Outstanding Natural Beauty and the Conservation Area. Many of the buildings are listed. Development on this scale will just turn it from a popular tourist attraction into one large housing estate. The whole idea of the ANOB should be to prevent major development in order to maintain our heritage. It is noteworthy that previous SHELAA Settlement Summaries concluded that constraints imposed by the overall environmental quality of the town and landscape setting within the ANOB means that large scale housing development is not appropriate in Burford. So what has changed.</td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td>* Facilities in Burford are insufficient to support development on this scale. The schools are full as is the doctors surgery. It is a small town and significant development will just overwhelm these facilities.</td>
</tr>
</tbody>
</table>
* Access to the proposed site is undoubtedly problematic. It is not really viable to have the primary vehicular access from the East, with the proposal to make this a gateway. Witney Road, as it is referred to, is a narrow winding road which is in poor condition and quite dangerous around the entrance to it from the A40 when it freezes. It is hard to see a point where vehicles could safely come off it to access the potential new development due to the blind turns. Further along towards the High Street it becomes narrow with tightly packed historic buildings. Encouraging traffic down this route is a bad option. Naturally not everybody will access from the East. From other directions there are many issues which have been well documented over the years. Barns Lane is narrow and without footpaths in places, Frethern Close and Wysdom Way are narrow roads with significant on street parking. The general width of all the residential streets in this area has always been flagged as a concern by the County Highway Authority who have clearly stated that access is not suitable for significant development.

* The plan generally seems to suggest there will be little impact to the views around the Burford area. This is inaccurate as a major development in this location will be noticeable from most directions of travel both by car or on foot. From the A40 to the east the views are quite stunning down to the church, equally there are views from the Stow Road and Fulbrook. It is just not right to say the site is reactively well screened from wider views. The site does sit high on the ridge line overlooking the Windrush Valley and thus the field is an important open gap.

* The British Geological Survey has assessed this site as having low potential for natural ground instability. Whilst this is precautionary it does state that it is dependent on local conditions such as proximity of trees or areas where trees have been removed. Clearly construction may well impact this also. Our wall is actually close to collapse, perhaps caused by the water run off, perhaps by the instability but either way major development on the field is going to have a negative impact on this.

* The wedge shape land in the North East corner is made up of trees and vegetation immediately adjacent to no. 12 and no. 14 Orchard Rise. To suggest this land and a bit further to the East could be used for access is hard to understand. Previously the County Highway Authority has said that satisfactory access could not be achieved due to the road realignment, vegetation and the gradient of the land. The land containing the trees and vegetation is part of the rural approach into the town, it is not part of the field and indeed it is not clear who actually owns it. It should be maintained to offer a contrast to the housing and fields around it.

* Many of the properties surrounding the proposed development will be The field in places is at the same height as the roofs of houses on Orchard Rise as an example so this is inevitable.

In summary to allow a development of this nature would stand sensible planning on its head.

I would like to add additional comments regarding Access Witney Street from one end to the other is quite unsuitable. Traffic from the A40 will be problematical whether it is turning right, where tailbacks will be created or left where traffic slowing down will cause hazards. The road is narrow and winding and hardly wide enough for two vehicles especially if one of those is a truck. There is no feasible places where traffic could come off it and enter the potential new housing development. At the far end, entering the High Street, traffic will be tailing back attempting to get onto the already clogged High Street.

Consideration should be given to construction traffic. There is no way these vehicles could safely access the proposed site from either Witney Street or Barns Lane.
I write with regard to the above and the flooding risk I have previously highlighted. Such is my concern that I have taken advice from an expert hydrologist.

I live in Orchard Rise, the proposed development borders this to the south. The land in question slopes quite significantly down to Orchard Rise and indeed down to Witney Street. This is a hillside in all reality.

With regard to my own property, No. 12, during periods of heavy rain a section of the grass in the back garden actually rises up due to the volume of water flowing beneath it. I am also aware from my neighbours that surface water is visible within the gardens of their own properties. This is undoubtedly due to the fact that Orchard Rise is built on land dug from the hillside.

I have been advised that risk of flooding is likely to increase due to water draining from the new development via the infiltration method. This applies particularly to Orchard Rise where the gardens are steep and both the soil and rock from the hillside have been moved during the original construction. In addition to this during periods of exceptional rainfall the water will only move down hill and without the land to absorb it the flood risk will increase. The same scenario would also apply to Witney Street which already floods.

It is also worth considering that any access from Witney Street will be a sloping road where the water will just run down the slope causing significant flooding.

Apart from the visual impact from the Windrush Valley, as pointed out in para 9.6.18, we would raise the following points.

* Traffic management: It is clear from the proposals for the main access routes to be from Barns Lane, Frethern Close and Witney Street that there has been no study of these roads to assess the impact such access would have. Barns Lane is extremely steep and in some points only single lane, with the remainder subject to on road parking down one side at all times. Frethren Close leads directly into Barns Lane at the top of the hill with a narrow corner joining Barns Lane to the roundabout on the A40.

* The suggestion in 9.6.34m that "provision of satisfactory vehicular access and appropriate pedestrian and cycle connections from the Witney Road will be required to contribute positively to the eastern approach into Burford providing a 'gateway' entrance to the town's simply not feasible. Witney Street while wider to the Eastern end (from the Fire Station to the white gate boundary of the town) also has on-road parking 24/7 such that two cars cannot pass. To the West of the Fire Station, where the older buildings are, there is on-road parking on both sides of the road, across the Pytts Lane/Guildford crossroads, up to the entrance to Sylvester Close. After this, to the High Street the road narrows and is only just wide enough for one vehicle – and already delivery lorries are causing holdups and potential damage as they try to turn from Witney Street into the High Street.

* This access – presumably beyond the white gates – does not take into account the slope of the field, nor the blind corner 100 yards beyond the presumed junction. Traffic already comes round that corner at speed (a recent survey carried out, presumably by Highways, will confirm this). In addition this stretch of Witney Street, the start of a popular walk along the Windrush Valley, has no pavement, is lined by a dry stone wall and magnificent beech trees on the continuing slope. At the far end of Witney Street the road becomes White Hill, a steep, narrow (two cars have trouble in passing on this) and in the winter icy north facing slope. The new access proposed will also be north facing and since it will be the natural route for any surface water to escape, a real hazard in winter.

* The draft plan already notes that Burford already has problems with HGV traffic flow in para 9.6.11 which can only at the moment come down the hill from the A40 roundabout. The suggestion that White Hill/Witney Street should become the main gateway to Burford is unrealistic. Witney Street leads into the High Street through a very narrow gap between two buildings including the alternative routes from Witney Street to the High Street, via Pytts Lane/Swan Lane or via Guildford/Church Lane all are narrow at the junction with the...

| MM26         |                         | Gordon Jolly    | Mr Jolly         | 43         | > SECTION 9 - STRATEGY AT THE LOCAL LEVEL > Burford Charlbury Sub Area > MAIN 191 | High Street, and with on-street parking 24/7. At the moment thanks in part to the lack of signage to Burford at the top of White Hill the traffic flow down into the town is just about acceptable – but any large vehicle chancing it causes immediate problems and hold ups.

* 85 houses in the modern era usually would mean that provision of parking for at least 150 cars would be required. Parking in Burford is already at bursting point, hence the on-street parking everywhere in the town – there is only the one car park at the bottom of Guildeford, and that floods in the winter. It is more likely that any residents of this development would use the shopping facilities in Witney and Carterton where there are superstores and plenty of parking

* Flood risk In recent years we have seen on our televisions all too often the flash flooding around the country which is aggravated in many areas by the asphalting/building over of fields that have historically absorbed the rainfall as and when required. There are many houses directly below the proposed development of Cole’s Field that would be at risk – particularly the houses in Orchard Rise, Windrush Close and Swan Lane Close and then on down into Witney Street/Chapman’s Piece by/below the Fire Station, as well as at the East end of Witney Street.

I would question the suitability of any additional housing in Burford given the historic and scenic nature of the town and the need to preserve its unique character. This unique character is what attracts the very many visitors who ensure the continued economic viability of the town. In the absence of any other major employment opportunities, it is tourism which sustains the town and a modern housing development on the eastern side of the town would do nothing but detract from the town’s attractiveness. Burford would risk people approaching from the east, simply continuing along the A40 when they see a new housing development and conclude that they are just passing another commuter satellite of Oxford or Witney. If new housing capacity is proposed then it should be located away and out of sight from the major approaches to the town (A40 / A361), preferably on a small scale utilising infill sites.

I would reiterate the issues raised previously by many others as regards to Burford’s continuing lack of infrastructure capacity e.g. drainage or schooling and medical availability for additional inhabitants. These would of course apply to this development proposal.

I note with great concern the comments in paragraph 9.6.34m which suggest that there might be an “... opportunity to provide a gateway entrance to Burford from the east.” I can only assume that this would envisage Witney Street becoming a major approach road into the town. I do not believe that this is a sensible course of action for the following reasons –

1) Witney Street is a residential street which comprises a large number of listed buildings. These buildings are very close to the roadway with no pavement on the southern side. Many properties at the western end near the junction with the High Street, front directly onto the roadway with related safety risks for additional inhabitants. These would of course apply to this development proposal.

2) Witney Street is very narrow particularly at its western end near the High Street where it is only one lane wide (with no access from the High Street) and one-way. This narrowness is exacerbated by the unavoidable need for residents to park their vehicles on both sides of the roadway, which can again reduce the roadway’s width to one lane, especially to the west of the junction with Guildeford.

3) Over recent years, Witney Street has become a convenient short-cut or “rat run” for motorists seeking to avoid congestion along the High Street and up and down The Hill. This short cut via Church Lane and Guildeford is particularly busy at peak rush hour times of the early mornings and evenings when traffic volumes and related safety risks (including speeding) increase significantly.

4) I believe that the safety concerns highlighted in 1) - 3) above are what prompted Burford Town Council’s
5) Burford fire station is located on Witney Street and the fire engine has encountered problems on occasions when attempting to urgently travel towards the High Street due to the narrowness of the roadway or the volume of queuing traffic at certain times.

6) The buildings in Witney Street (the majority of which are listed) are highly susceptible to vibration from passing vehicles. Increased traffic volumes and perhaps heavier vehicles can only serve to increase the risk of structural damage to these protected, heritage buildings.

7) At the eastern end of Witney Street, outside of Burford town itself where it climbs/descends White Hill near the Widford junction, the road is narrow and it is highly susceptible to prolonged icing in the winter months. The road is not suitable for high traffic volumes travelling in both directions. The current signage pointing to Widford is highlighted as "Single Track Road" for this very reason. Signage pointing to Burford from the A40 would not be appropriate.

As per paragraph b) of Policy BC1b within the Local Plan document, there is discussion of potential vehicular access to the proposed housing development from "the Witney Road". The eastern "gateway" is again mentioned, but I would suggest that my comments above would argue against both of these scenarios. The potential site of any vehicular access would be on a blind bend in the narrow road and it would likely be on a steep slope. Water run off would also be encouraged in an area of the road where flooding has occurred in the recent past.

I would like to object to the proposal for allocating land to the east of Burford for a possible development of 85 new houses (para 9.6.1 and following of the draft local plan). In support of this I wish to make the following points.

* Burford is a unique and historic town with a special character and an exceptional collection of listed buildings. It is a major attraction helping to bring many tourists to West Oxfordshire. It missed out on being developed in the 19th century as the railway line was built along the Evenlode valley and not along the Windrush valley. More recently it was protected by enlightened planning policies which prevented a housing estate being built in the town and only allowed small amounts of building around the edges. The proposed development would completely change the character of the town.

* Burford falls within the Cotswold AONB and previously it has been understood that this was sacrosanct and that major development in the AONB would not be permitted.

* The draft plan says that the proposed site is "relatively well-screened from wider views. Whilst views of the site can be achieved from the north east when travelling along the A361 these are relatively fleeting..." (9.6.34l). It is difficult to make sense of this. Is it only the view from a car while travelling along the A361 which is considered relevant? If anyone had walked along Westhall Lane in Fulbrook or up the path from Burford Bridge (popular walking routes) they would found that the site is in plain view. (It should be noted that land to the south of the A40 is outside the AONB is not part of the view from the north).

* The site slopes gently down to the north and at the bottom of the field the land drops steeply down to Orchard Rise. If houses are built in the field, there is an obvious risk of flooding in Orchard Rise, Windrush Close and the eastern end of Swan Lane. These areas only narrowly escaped flooding in 2007 because the field was able to absorb rainwater. (It does not help that WODC has already given planning permission for a new house in Swan Lane which will involve a number of trees being removed.)

* The draft plan contemplates that the main access to the site for vehicles would be from what it referred to as the Witney Road and further that this road would become a main gateway to Burford from the east (9.6.34m). This is in fact a narrow, unclassified lane. It eventually leads to a narrow section which in turn...

| MM287        |                         | Michael Tancock | Mr               | Tancock           | 502        | > SECTION 9 - STRATEGY AT THE LOCAL LEVEL > Burford Charlbury Sub Area > MAIN 191 | Dear Sirs,  
I am writing to register my objection to certain developments included in the West Oxfordshire 2031 Local Plan, in particular those concerned with "Land east of Burford", paragraphs 9.6.34j through 9.6.34q.  
Considering first of all the visual impact as covered by 9.6.34l, the statement that the site is well shielded from wider views is wholly unsupported. No mention is made of the view from the approach via the A424 where any development would appear as an obvious scar in an otherwise pastoral landscape. Similarly no consideration is given to the impact on the overall character of the surrounding environment as currently enjoyed by residents to the south of the proposed development.  
When the question of access is considered as per paragraph 9.6.34m then the viability of the proposed development as a whole must be tenuous in the extreme. Taking the proposals in order, that from the Witney Road does, simply when viewed on a map, appear to be a reasonable option. The question however is what does the traffic do once it is on the Witney Road, and how might it access that? Witney Road is accessible from the A40, however this is a difficult junction only really suitable for access from the east. Even then the volume of traffic on the A40 makes exiting or joining the A40 a difficult and frequently hazardous operation.  
Considering westbound access there is none for traffic approaching from the west. Witney Street is closed to... |
traffic from High Street leaving the alternatives of Church Lane, Swan Lane and Barns Lane. Church Lane is narrow and has a number of sharp bends and also carries significant traffic using the main car park. Swan Lane is narrow and does not allow two vehicles to pass. Furthermore the crossroads with Barns Lane and Pytts Lane is also narrow and has poor visibility.

Access via Frethern Close and Wysdom Way is also highly questionable. Few properties in Frethern Close have driveways and the resulting parked vehicles (see illustration below) render it effectively single line only for much of its length. A key element of many of these routes is Barns Lane itself. This also has stretches of single line traffic, particularly in the lower section which also has a significant gradient. Barns Lane is not only difficult to exit from at the A40 roundabout but frequently difficult to enter safely owing to the inability of traffic leaving The Hill to recognise the existence of the Barns Lane exit.

Whilst paragraph 9.6.34n makes reference to the AONB designation it ignores the fact that the proposed site is also within the Conservation Area, something that should surely raise further doubts as to the viability of such a development. Given the lack of any major contractors in the area it is difficult to envisage how the “beneficial effect in terms of the local economy during the construction phase” is likely to be realised. More significant is the potential detriment to the local economy in the future. 9.6.34o reinforces the issue of the AONB and in some respects appears to contradict the reason for the development set out in the previous paragraph. The statement that “the scope for avoiding it does not exist other than south of the A40 where the Council’s assessment of land availability has been unable to find any suitable sites” does not stand up given that a development south of the A40 (Shilton Road) is currently awaiting appeal.

The statement in 9.6.34p to the effect that “it is considered that development of this site would not have a detrimental effect on the environment, landscape or any recreational opportunities” can only have been written by someone who has either never visited Burford or who has no empathy for the vision of the Cotswolds as perceived by the majority.

Finally I should also like to raise some other points which do not appear to have been considered in the plan. Given that the proposal is for 85 homes it is not unrealistic to assume that a reasonable proportion will be occupied by families, many of whom will have children of primary school age. This would place additional demands for local schooling, something that is unlikely to be met by Burford Primary School in its present form. Another point concerns the increase in local traffic that is likely to arise and the associated demand for parking space in the town. In spite of its relative proximity to the town centre there will inevitably be residents who will insist on driving to the town, potentially reducing the availability of parking space for those genuine visitors on whom the commercial wellbeing of Burford depends.

I also feel strongly that there has been no prior consultation with members of Burford Town Council who would almost certainly have been able to provide constructive and reasoned feedback on the current proposal. The fact that the proposal is even mentioned at all without any form of survey, or diligent research into the impact of significant rainfall on the site suggests an inadequate level of research.

<td>&gt; SECTION 9 - STRATEGY AT THE LOCAL LEVEL &gt; Burford Charbury Sub Area &gt; MAIN 191</td>
<td>It is not Legally Compliant as there was no community involvement concerning the proposed development of land east of Burford - the first we knew of it was when the draft Local Plan was issued. It is Unsound as this development is not the most appropriate strategy to develop extra housing in Burford - there is a much less environmentally damaging and easily accessed site available on the west side of Shilton Road opposite Burford Garden Company. The land east of Burford is unsuitable as (a) it will have damaging effects on views approaching the town from both the north and the east and (b) access to the site would be poor.</td>

Policy BC1b justification is flawed on the following grounds.
Paragraph 9.6.34k
This states “Key considerations for this site are the landscape and visual impact of development, vehicular access arrangements and the fact that the site is located within the Cotswolds AONB and Conservation Area.” As these are key, I believe they are contrary to the overall strategy given in Paragraphs 4.2 and 4.7 Paragraph 9.6.34l
The proposed development of 85 houses east of the town would not only impact the setting of historic Burford, where there are over 250 listed buildings, “fleetingly” when viewed from the A361 to the North as this paragraph states, it would also impact the view far more from the A424 as you approach the town from the north. There is a wonderful view of the historic layout nestling in the Windrush valley from over a mile away, which would be overshadowed by the sight of the new development high up overshadowing it. In addition, the view from the east on the A40 would also be impacted, where the view of the Grade 1 listed St John the Baptist Church spire would be significantly affected, as would the view from the minor road from Whitehill that enters Witney Street, Burford from the east. Finally, the views of historic Burford enjoyed by the many walkers who use the footpath beside the Windrush to the east of Burford would also be adversely affected.
For this reason this policy does not comply with policy EH7, as the harm would be significant to the Conservation Area and Cotswold Area of Outstanding Natural Beauty.
Paragraph 9.6.34m
This states that the proposed primary access would be from Witney Road. This is known locally as Witney Street. If this were to be the primary access, then any vehicle approaching from the north would have to either negotiate the narrow Church Lane and Guildenford, with the three 90 degree turns, and then turn out of the narrow and blind junction from Guildenford onto Witney Street, or to travel right through Burford town, adding to the congestion, up to the A40 roundabout, and then enter through Barns Lane, Frethern |
Close, and then Wysdom Way or through the narrow access directly from Barns Lane. Traffic from the south and west would also have to use the same routes in.

Only traffic from the east would use the route in down Whitehill and onto Witney Street. Just at the point where the new access is proposed is a “frost hollow”, made more dangerous in winter by the flooding across Witney Street from the hill to the south. This is evidenced by the “Ice” road traffic sign as one leaves Burford on Witney Street, and as you enter Whitehill.

There is also some access proposed through Barns Lane. This would probably be the route chosen by pedestrians to reach Burford Town Centre, the Primary School, and the Doctors Surgery in Sheep Street, as this would be by far the shortest route.

To use this route, pedestrians would have to walk down the single-track narrow steep north-facing hill of Barns Lane, which has high Cotswold stone walls on either side. There is no pavement, and pedestrians need to stop to allow vehicles to pass. This road also frequently freezes over in the winter as it is north facing and steep.

Finally this location is on the opposite side of the busy A361 from the main local services of the Primary School, the Pre-school, the Secondary School, the Doctors Surgery and the local Pharmacy, the Library, the supermarket, and the recreation ground. There is only one controlled crossing on the A361 in the lower centre of the town.

For these reasons, Policy BC1b does not comply with Policy OS2 - Locating Development in the Right Places, Paragraph 9.6.34o

Whilst this points out that development elsewhere is nearly all “washed over by the Cotswold AONB”, it does not consider development outside the Conservation area. The proposed site is in both these areas, but there are possible sites to the west of Burford which are outside the conservation area, and these have not been considered. In addition, these sites would have no visual impact on the Historic Town or listed buildings.

I take issue with the following statements made in the proposal:

"Good transport links" - The A40 approach, particularly from the East and the A361 through the town centre are constantly busy roads with major congestion regularly experienced during peak times with traffic sometimes queuing back to the Windmill Carvery roundabout at the end of the A40 dual carriageway.

"The area is gently sloping" - The land in question has a slope of around 10% which causes severe water run off

"The site is not within a designated area of flood risk" Despite the agricultural nature of the land at present, there is still a degree of flooding. Housing on this land would increase the amount of run off and exacerbate the problem of flooding on Witney Street.

"Primary vehicular access would be taken from the NE corner" & "Secondary vehicular access may also be achieved from FrethernClose/Wysdom Way & Barns Lane". These roads, and the roads that lead to them are narrow roads, often with vehicles parked on one side meaning transit along them is difficult at present. A proper traffic survey would show these options to be unfeasible.

<td>MM30</td>
<td></td>
<td>Ivan Hall</td>
<td>Mr</td>
<td>Hall</td>
<td>62</td>
<td>&gt; SECTION 9 - STRATEGY AT THE LOCAL LEVEL &gt; Burford Charlbury Sub Area &gt; MAIN 191</td>
<td>&quot;the site is relatively well-screened from wider views&quot; - this site is clearly visible from both approach roads from the North (A424 &amp; A361) and also from the West bound A40. I object to the proposal within the draft Local Plan to allocate land to the east of Burford for a potential development of 85 new houses. My key objection is on the grounds of the robustness of the plan; practicality of its delivery; and safety of residents and visitors. The following comments are in support my objection: * Burford is a major attraction in West Oxfordshire with residents and with an increasing number of visitors. The town responds to people's need to experience historical buildings and other facilities in a pleasing rural environment. Previous planning policies have prevented significant housing developments that would substantially change the town's character. This proposal appears to reverse previous policies and puts at risk the town's continued attractiveness. * Burford is within the Cotswold AONB. This status has previously been deemed to be sacrosanct and major development in the AONB has not previously been permitted. Again the proposal reverses previous policies. * The draft plan (9.6.34l) states that the proposed site is 'relatively well-screened from wider views' and that it is only drivers travelling along the A361 from the north east that would have a &quot;relatively fleeting&quot; view of the development. This is incorrect as the site is also clearly visible to drivers on the A429 and A40 and to the many (circular) walkers along Westhall Hill to the north and on the road between Fulbrook and Swinbrook to the east. * The draft plan also incorrect when it states that the site slopes &quot;gently down towards the north east corner and the Witney Road&quot;. In fact the slope is very steep both to the proposed northern access point and down to the houses on Orchard Rise. Any development would bring a clear risk of flooding to dwellings in Orchard Rise, Windrush Close, Swan Lane and down as far as Witney Street. All such premises to the north of the site narrowly escaped serious flooding in 2007 because the field was able to absorb the significant rainfall that year. * The draft plan contemplates that the main vehicular access to the site would be from Witney Street (aka the Witney Road in the draft plan) and this road would become a main gateway to Burford from the A40 and the east (9.6.34m). I believe that there are a number of serious flaws in such a plan: (i) Leaving the A40 from the east into the so called Witney Road (White Hill) is a major safety hazard for drivers, particularly at night and in poor visibility. The junction is difficult to see and nerves of steel are needed when waiting in the middle of the carriageway with vehicles passing closely on both sides at 50+ mph. One nudge from behind could easily take turning vehicles into the west bound traffic. (ii) The Witney Road is a narrow, unclassified lane that experiences flooding, severe icing and fog pockets in the winter. This results, in particular, from surface water running down the hill from the field to the south. (iii) The Witney Road is also part of the National Cycle route (57) with a large and increasing number of cyclists, both individuals and groups. These (and walkers taking the popular circular walk from Burford around to Widford, Swinbrook and Fulbrook) already provide a safety hazard (and are at risk) along the narrow road. (iv) When continuing along into town from the east, the narrow road continues with many single passing places around parked vehicles. In turn, this leads to the junction with Burford High Street - a busy junction that is regularly congested by vehicles (some heavy) trying to make a right turn into the High Street. Safety is also compromised for the many pedestrians trying to cross Witney Street at that point. (v) Vehicular access to the site from the north, south or west would also be complicated. Options appear to be either manoeuvring through the centre of Burford with several turns, narrow roads and busy traffic (particularly in the summer months): using the narrow and steep Barns Lane with its many parked cars and a</td>
</tr>
</tbody>
</table>
6. The previous draft local plan said that "the development potential of land surrounding Burford is heavily constrained by the sensitivity of the landscape although there may be some scope for a small-scale extension of the built-up area" (9.6.26). This has been struck through in the new draft with no explanation as to why this is so. Clearly Burford should take its proper share of new dwellings to meet local needs and some of these have already been met with smaller-scale developments in Falkland Close and within the Frethern Close estate. In addition, the previous draft also identified further possible sites as follows:

- Tanners Lane, Burford
- Burford Cottage Hospital
- Land south of Sheep street, Burford
- South of Milton Road, Shipton under Wychwood.

It is not clear why these have been struck out. It is also unclear whether serious thought has been given to land on the south side of the A40 (outside the AONB and not in sight from the north) – see 3. above.

7. Fortunately Burford has minimal unemployment and the plan appears therefore to seek to deliver housing, in particular, for Oxford commuters and their families. This would simply add to a badly congested A40. Such needs could be facilitated from elsewhere in West Oxfordshire where there is a better road network and frequent rail and bus services.

8. Finally, housing should be accompanied by infrastructure. There seems to be no plan in place to deal with how the residents of new development will get around, where their children will go to school (Burford Primary School is, I understand, already over-subscribed) or where they will find medical facilities.

In conclusion, I believe that the draft proposal to allocate land to the east of Burford for potential development of 85 new houses is not robust in its reasoning, is not practical in its design and is unsafe for residents, drivers, cyclists and other visitors.

What changes do you consider should be made to address your comment?

<td>* Paragraph 9.6.34o of the Plan states that WODC has been unable to find any suitable sites South of the A40 i.e. outside the AONB and the Conservation Area. This completely ignores the recently concluded public enquiry into a proposal to develop a substantial site in Shilton Road opposite the Garden Centre and appears to be an attempt to pre-empt the decision of the Government Inspector which is expected early in 2017. If that development is permitted it will more than fulfil Burford's obligation to contribute to the increased housing requirement in the Burford-Charlbury segment. * No consideration has been given to the possibility of a development within the AONB but which avoids the intrusive and damaging effect of a development on the Site. There is land to the West of Tanners Lane (numbered 145 on the SHLAA Stage 2 map) which would afford a possible alternative. It has the advantage of being on the same side of the A361 (a trunk road plagued by HGVs) as all three of the Town's schools, the Recreation Ground and the doctors' surgery. It is flat! Access would be very much easier given a certain amount of upgrade to Tanners Lane. It is a much better proposition than the Site.</td>

Principle of the Allocation

2.56 Land east of Burford is proposed for allocation for “around 85 dwellings as a wellintegrated and logical extension of the existing built form of the town.” As discussed above in respect of main modifications 15-16, Burford is classified by the Council as a rural service centre, the second tier of settlements in the District after the three main service centres.

2.57 Within the Burford-Charlbury Sub-Area there are no main service centres, and Burford represents one of only two rural service centres in the Sub-Area, serving the wider villages and sub area. The Plan recognises that rural service centres are sustainable locations to accommodate development.

2.58 Paragraph 9.6.4 of the Plan highlights that there have been no sites allocated for residential development in Burford since the late 1980s, although it is acknowledged that some limited windfall development has occurred over this period. The Plan highlights that this, together with the desirability of Burford as a location to live, has significantly increased house prices in the town.

2.59 We support the proposed allocation of the site which will help in addressing the lack of recent supply of new housing in the locality over the Plan period through the delivery of much needed housing.

2.60 Clearly given the site's location in the AONB, due consideration must be given to the tests set out in the NPPF in this regard. The Council have clearly set out their justification in relation to the tests in proposing to allocate the site. We consider each of the tests in turn below and provide our own assessment against which supports the conclusion ultimately reached by WODC in proposing the allocation.
The need for the development, including in terms of any national considerations, and the impact of permitting it, or refusing it, upon the local economy.

2.61 As has been clearly established the Council has a high level of housing need and there is a need for the Council to also seek to accommodate a proportion of the unmet needs of Oxford City. We do not repeat these considerations here but clearly regard should be had to this level.

2.62 Burford is classified as a rural service centre, the second tier of settlements in the District and is ranked as the 6th most sustainable settlement in the Council’s Settlement Sustainability Report. Significant allocations are proposed at the Council’s three main service centres, and the Proposed Modifications to the Plan have sought to enhance the capacity of these locations where possible. Given the scale of development necessary to be met in the District it is plainly impossible for the full quantum of development to be met at the main service centres and this is reflected in the proposed allocations at the rural service centres and indeed other settlements further down the settlement hierarchy.

2.63 The Local Plan highlights that no allocations have been made at Burford since the late 1980s. A limited number of dwellings have been delivered through windfall development in Burford Parish however as shown by the material at Appendix One this totals only 79 new dwellings over the period 2001 to 2016. Of the total completions in Burford Parish only 28 affordable homes have been completed. As of 1st April 2016 there were 1,443 people on the Council’s Housing Register and of these 28 applications have registered Burford as their first choice of area.

2.64 Clearly therefore there is a level of need for both market and affordable housing at both a District and Parish level which necessitates the allocation of the site within the AONB. Paragraph 9.2.26 of the Plan highlights that: “the Town Council is keen to see an increase in the housing stock to provide some affordable housing to enable younger families to live in the town, secure the future of the primary school and increase the supply of key workers.”

2.65 The Plan also highlights that the development would have a beneficial effect in terms of the local economy during the construction phase. In addition we would highlight the beneficial effect the proposals would have once occupied through the support of local services and facilities. The development is well located to provide access to the services and facilities on offer within the town and the proposals will seek to link into the existing connections. Whilst Burford does benefit from a good range of services and facilities, these are somewhat reliant on the tourist trade which the town attracts, and the proposed development will help to supplement this income through the increase in resident population.

2.66 As such it is considered that the proposed allocation clearly meets this criterion. The cost of, and scope for, developing elsewhere outside the designated area, or meeting the need for it in some other way

2.67 As discussed above the need for development to be accommodated at Burford has been clearly demonstrated. In considering potential locations for development around
"In terms of the scope for developing elsewhere or meeting the need in another way, the majority of Burford (except land south of the A40) is washed over by the Cotswolds AONB designation. Any development within or on the edge of the town will therefore fall within the AONB and the scope for avoiding it does not exist other than south of the A40 where the Council's assessment of land availability has been unable to find any suitable sites."

2.68 The Plan below (ATTACHED) is taken from the SHLAA (June 2014) and clearly demonstrates that the majority of potential development locations are within the AONB. Whilst one site (SHLAA reference 146) is promoted which is located outside of the AONB, proposals for development of the site have recently been refused under application reference 15/00166/OUT with the Council noting in its reasons for refusal that:

"By reason of its location, remote from the Town Centre facilities and with difficulty of access, the development would be isolated and heavily reliant on the use of private vehicles."

2.69 The refusal has been appealed and the decision is currently awaited.

Suitable alternative sites outside the AONB do not therefore exist, and the proposed allocation site is considered to be the most appropriate opportunity of those sites within the AONB, as confirmed by the Council through its draft allocation. It is considered that development of our client’s site would integrate well into the historical pattern or character of the settlement, noting the landscape character of the area. Any detrimental effect on the environment, the landscape and recreational opportunities, and the extent to which that could be moderated.

2.70 In proposing the allocation of the site the Council have assessed the site and concluded that "development of this site would not have a detrimental effect on the environment, landscape or any recreational opportunities." In response to the proposed allocation a planning application is in the process of being prepared for the development of the site and will be submitted in early 2017. To inform the proposals detailed technical work is underway and this informed the draft proposals which were the subject of public consultation in December 2016. A copy of the exhibition boards are provided at Appendix Two.

2.71 In summary the technical work undertaken to date has demonstrated that:

- Flooding – All new homes are on land classified as Flood Zone 1, which carries the lowest risk of flooding. New foul and surface water networks will be constructed to collect flows generated by the development. A Sustainable Drainage System will ensure that there would be no increase in flood risk to the surrounding local area.

- Heritage and Archaeology – the majority of the site is located within the Burford Conservation Area. There are a number of listed buildings located within the Conservation Area boundary. These buildings have been considered as part of.
### Detailed Allocation Requirements

2.75 As discussed above we support the principle of the allocation of land east of Burford. Notwithstanding this, we do have some comments on the detailed requirements of the policy as discussed below.

2.76 The proposed allocation seeks the delivery of around 85 dwellings. Whilst we support the recognition that the site represents an appropriate location to accommodate residential development we do consider that the site also the potential to deliver a 60 bed extra care facility within the allocation site. The care home would help to meet the local needs for such a facility in an appropriate location which is well integrated with the existing services and facilities on offer within the town. The site is capable of accommodating this alongside the 85 dwellings proposed.

2.77 As such we consider the policy wording should be amended to the following: "Land to the east of Burford to accommodate 85 dwellings and up to 60 bed extra care..."
2.78 Criterion B of the policy requires: "provision of satisfactory vehicular access and appropriate pedestrian and cycle connections. Any vehicular access provided from the Witney Road will be required to contribute positively to the eastern approach into Burford providing a ‘gateway’ entrance to the town."

2.79 The supporting text to the policy notes that there are a number of options in terms of access and that in addition to the potential for access to be taken from Witney Street (incorrectly called Witney Road in the draft policy text), secondary access could be taken from Frethern Close/Wysdom Way and Barns Lane. The emerging proposals shown on the exhibition boards at Appendix Two take primary access from Witney Street with a limited number of units served from a secondary access off Barns Lane. The application will in due course be accompanied by a detailed Transport Statement demonstrating the suitability of these access options.

2.80 Whilst the proposed access from Witney Street has paid due regard to the proposed allocation site boundary as a result of the additional technical work that has been undertaken by the consultant team it has been determined that it is not possible for the access to be achieved within the allocation boundary as currently proposed. The proposed access arrangement is shown at Appendix Three. In light of this it is considered that the allocation site boundary should be amended to reflect that shown in red below (the existing proposed allocation boundary is shown via the dashed black line).

2.81 Subject to the above suggested amendments it is considered that the proposed allocation is sound.

2.82 Our consideration of the wider opportunities presented by our client’s land interests to the east of Burford are discussed in relation to Main Modification 200 and as such are not repeated here.

Sustainability Appraisal

2.83 The proposed allocation has been subject to detailed assessment in the Sustainability Appraisal Addendum Report (October 2016) prepared by Enfusion on behalf of the Council. In relation to the four proposed new non-strategic allocations in the Burford-Charlbury Sub-Area the Report confirms that no major significant effects were identified.

2.84 The conclusions of the Report in respect of the East of Burford allocation are shown below together with our comments and updated conclusions. (Attached)

<td>MAIN 192</td>
<td>I strongly object to this planning application on “Coles Field”. The Town Council have and our district councillor have made their opinions very clear in the past and their position is unchanged. This is a green field site in an AONB area and in the Burford Conservation area in no way can it be considered as anything else having been ploughed, drilled and harvested for decades. The small development known as Falkland Close could only be built on under The Rural Exception Scheme, and the proposed development falls far short of that scheme. The entrance roads to the site are totally unsuitable, Barn Lane is a single track road with no passing places or room to create them. It is dangerous to drive on let alone walk. Frethern Close is congested at off peak times and impossible to negotiate during busy times. The road proposed to connect with Witney Street is nothing short of laughable for reasons that must have been obvious if looked at sensibly. It IS visible from approaches to Burford and would spoil an iconic view of Burford. so loved by the tens of thousands of visitors who visit Burford annually. This must be removed from the Draft Local Plan and not just used to meet government quotas without due regard to the ruination of the Town. Yours David Cohen</td>

locations to accommodate development.

2.58 Paragraph 9.6.4 of the Plan highlights that there have been no sites allocated for residential development in Burford since the late 1980s, although it is acknowledged that some limited windfall development has occurred over this period. The Plan highlights that this, together with the desirability of Burford as a location to live, has significantly increased house prices in the town.

2.59 We support the proposed allocation of the site which will help in addressing the lack of recent supply of new housing in the locality over the Plan period through the delivery of much needed housing.

2.60 Clearly given the site's location in the AONB, due consideration must be given to the tests set out in the NPPF in this regard. The Council have clearly set out their justification in relation to the tests in proposing to allocate the site. We consider each of the tests in turn below and provide our own assessment against which supports the conclusion ultimately reached by WODC in proposing the allocation.

The need for the development, including in terms of any national considerations, and the impact of permitting it, or refusing it, upon the local economy

2.61 As has been clearly established the Council has a high level of housing need and there is a need for the Council to also seek to accommodate a proportion of the unmet needs of Oxford City. We do not repeat these considerations here but clearly regard should be had to this level.

2.62 Burford is classified as a rural service centre, the second tier of settlements in the District and is ranked as the 6th most sustainable settlement in the Council's Settlement Sustainability Report. Significant allocations are proposed at the Council's three main service centres, and the Proposed Modifications to the Plan have sought to enhance the capacity of these locations where possible. Given the scale of development necessary to be met in the District it is plainly impossible for the full quantum of development to be met at the main service centres and this is reflected in the proposed allocations at the rural service centres and indeed other settlements further down the settlement hierarchy.

2.63 The Local Plan highlights that no allocations have been made at Burford since the late 1980s. A limited number of dwellings have been delivered through windfall development in Burford Parish however as shown by the material at Appendix One this totals only 79 new dwellings over the period 2001 to 2016. Of the total completions in Burford Parish only 28 affordable homes have been completed. As of 1st April 2016 there were 1,443 people on the Council's Housing Register and of these 28 applications have registered Burford as their first choice of area.

2.64 Clearly therefore there is a level of need for both market and affordable housing at both a District and Parish level which necessitates the allocation of the site within the AONB. Paragraph 9.2.26 of the Plan highlights that:

"the Town Council is keen to see an increase in the housing stock to provide some affordable housing to enable younger families to live in the town, secure the future of the primary school and increase the supply of key workers."
2.65 The Plan also highlights that the development would have a beneficial effect in terms of the local economy during the construction phase. In addition we would highlight the beneficial effect the proposals would have once occupied through the support of local services and facilities. The development is well located to provide access to the services and facilities on offer within the town and the proposals will seek to link into the existing connections. Whilst Burford does benefit from a good range of services and facilities, these are somewhat reliant on the tourist trade which the town attracts, and the proposed development will help to supplement this income through the increase in resident population.

2.66 As such it is considered that the proposed allocation clearly meets this criterion.

The cost of, and scope for, developing elsewhere outside the designated area, or meeting the need for it in some other way

2.67 As discussed above the need for development to be accommodated at Burford has been clearly demonstrated. In considering potential locations for development around Burford the draft Plan highlights that:

"In terms of the scope for developing elsewhere or meeting the need in another way, the majority of Burford (except land south of the A40) is washed over by the Cotswolds AONB designation. Any development within or on the edge of the town will therefore fall within the AONB and the scope for avoiding it does not exist other than south of the A40 where the Council's assessment of land availability has been unable to find any suitable sites."

2.68 The Plan below (ATTACHED) is taken from the SHLAA (June 2014) and clearly demonstrates that the majority of potential development locations are within the AONB. Whilst one site (SHLAA reference 146) is promoted which is located outside of the AONB, proposals for development of the site have recently been refused under application reference 15/00166/OUT with the Council noting in its reasons for refusal that:

"By reason of its location, remote from the Town Centre facilities and with difficulty of access, the development would be isolated and heavily reliant on the use of private vehicles."

2.69 The refusal has been appealed and the decision is currently awaited.

Suitable alternative sites outside the AONB do not therefore exist, and the proposed allocation site is considered to be the most appropriate opportunity of those sites within the AONB, as confirmed by the Council through its draft allocation. It is considered that development of our client's site would integrate well into the historical pattern or character of the settlement, noting the landscape character of the area. Any detrimental effect on the environment, the landscape and recreational opportunities, and the extent to which that could be moderated

2.70 In proposing the allocation of the site the Council have assessed the site and concluded that "development of this site would not have a detrimental effect on the environment, landscape or any recreational opportunities." In response to the proposed allocation a
Planning application is in the process of being prepared for the development of the site and will be submitted in early 2017. To inform the proposals detailed technical work is underway and this informed the draft proposals which were the subject of public consultation in December 2016. A copy of the exhibition boards are provided at Appendix Two.

2.71 In summary the technical work undertaken to date has demonstrated that:

- **Flooding** – All new homes are on land classified as Flood Zone 1, which carries the lowest risk of flooding. New foul and surface water networks will be constructed to collect flows generated by the development. A Sustainable Drainage System will ensure that there would be no increase in flood risk to the surrounding local area.

- **Heritage and Archaeology** – the majority of the site is located within the Burford Conservation Area. There are a number of listed buildings located within the Conservation Area boundary. These buildings have been considered as part of the design process, in particular the views from the site to the surrounding Conservation Area. An archaeological assessment has been carried out to identify the presence of heritage assets. This assessment has identified that there are no designated archaeological heritage assets on the site and none within 1km of the site boundary.

- **Ecology** – a number of ecological investigations have been undertaken and are ongoing in order to assess the biodiversity value of the site. The habitats within the study area assessed are considered to be of a ‘lower’ value at the local scale. Further environmental studies are taking place and the emerging proposals include strengthening the existing boundary habitat, retaining the mature trees and reducing the impacts on the development upon habitats and species present.

- **Landscape** – as has already been discussed the site falls within the Cotswold AONB and any development will therefore need to respect the qualities and character of the AONB. The site benefits from existing trees and vegetation running along the site boundaries, which would be retained and added to as part of any future proposals. A landscape scheme for the site will include public open space, green infrastructure and additional planting and screening to integrate the development to the wider area.

2.72 The proposed allocation site is currently comprised of agricultural land and will not therefore impact on any existing recreational facilities. The proposed development will deliver a new area of children's play space and wider public open space for the enjoyment of both new and existing residents.

2.73 It is considered that the development would respect and conserve, and not obstruct, public views to higher slopes or skylines or sweeping views across the landscape. The building style will respect the local tradition and be to a high standard of design as befits a nationally designated landscape.

2.74 Given the above it is considered that the proposed allocation is sound and will make an important
<table>

<th>Comment (plain text)</th>
</tr>
</thead>
</table>

contribution to meeting local needs as well as those of the wider District.

**Detailed Allocation Requirements**

2.75 As discussed above we support the principle of the allocation of land east of Burford. Notwithstanding this, we do have some comments on the detailed requirements of the policy as discussed below.

2.76 The proposed allocation seeks the delivery of around 85 dwellings. Whilst we support the recognition that the site represents an appropriate location to accommodate residential development we do consider that the site also has the potential to deliver a 60 bed extra care facility within the allocation site. The care home would help to meet the local needs for such a facility in an appropriate location which is well integrated with the existing services and facilities on offer within the town. The site is capable of accommodating this alongside the 85 dwellings proposed.

2.77 As such we consider the policy wording should be amended to the following: "Land to the east of Burford to accommodate 85 dwellings and up to 60 bed extra care facility as a well-integrated and logical extension of the existing built form of the town."

2.78 Criterion B of the policy requires: "provision of satisfactory vehicular access and appropriate pedestrian and cycle connections. Any vehicular access provided from the Witney Road will be required to contribute positively to the eastern approach into Burford providing a 'gateway' entrance to the town."

2.79 The supporting text to the policy notes that there are a number of options in terms of access and that in addition to the potential for access to be taken from Witney Street (incorrectly called Witney Road in the draft policy text), secondary access could be taken from Frethern Close/Wysdom Way and Barns Lane. The emerging proposals shown on the exhibition boards at Appendix Two take primary access from Witney Street with a limited number of units served from a secondary access off Barns Lane. The application will in due course be accompanied by a detailed Transport Statement demonstrating the suitability of these access options.

2.80 Whilst the proposed access from Witney Street has paid due regard to the proposed allocation site boundary as a result of the additional technical work that has been undertaken by the consultant team it has been determined that it is not possible for the access to be achieved within the allocation boundary as currently proposed. The proposed access arrangement is shown at Appendix Three. In light of this it is considered that the allocation site boundary should be amended to reflect that shown in red below (the existing proposed allocation boundary is shown via the dashed black line).

2.81 Subject to the above suggested amendments it is considered that the proposed allocation is sound.

2.82 Our consideration of the wider opportunities presented by our client’s land interests to the east of Burford are discussed in relation to Main Modification 200 and as such are not repeated here.

| MM451        | English Heritage         | Historic England| Mr               | Small             | 1098       | > SECTION 9 - STRATEGY AT THE LOCAL LEVEL > Burford Charlbury Sub Area > MAIN 193 | Sustainability Appraisal

2.83 The proposed allocation has been subject to detailed assessment in the Sustainability Appraisal Addendum Report (October 2016) prepared by Enfusion on behalf of the Council. In relation to the four proposed new non-strategic allocations in the Burford-Charlbury Sub-Area the Report confirms that no major significant effects were identified.

2.84 The conclusions of the Report in respect of the East of Burford allocation are shown below together with our comments and updated conclusions. (Attached)

This site is within the Burford Conservation Area. Nevertheless, Historic England considers that the development of the majority of this site to the west is acceptable but is concerned about the triangle of allocated land to the north-east. The approach to Burford from the east is particularly rural, which makes a valuable contribution to the special interest, character and appearance of the conservation area.

As a designated heritage asset, great weight should be given to the conservation of the Conservation Area in accordance with paragraphs 126 and 132 of the National Planning Policy Framework. Any development of this site should therefore conserve or enhance the special interest, character and appearance of the Conservation Area.

It is noted that it is proposed to have the principal vehicle access to the site in this north-east corner and that the development of this site is considered to present an opportunity to provide a “gateway” entrance to Burford from the east. However, as noted above, the existing rural approach to Burford is an attractive feature that contributes to the conservation area. We therefore consider that a “gateway” feature is both unnecessary and damaging to the character and appearance of the Conservation Area and object to this element of the proposals.

If it is not possible to access the site entirely from Frethern Close/Wysdom Way we would prefer to see this allocation dropped from the Plan. If, however, the Council considers that the public benefits of the development of the site could outweigh the harm to the Conservation Area, the proposed access should be kept as low-key as possible with no development either side in this corner of the site.

If it is not possible to access the site entirely from Frethern Close/Wysdom Way we would prefer to see this allocation dropped from the Plan. If, however, the Council considers that the public benefits of the development of the site could outweigh the harm to the Conservation Area, the proposed access should be kept as low-key as possible with no development either side in this corner of the site.

MM461 | John H Bayliss | Mr | Bayliss | 1138 | > SECTION 9 - STRATEGY AT THE LOCAL LEVEL > Burford Charlbury Sub Area > MAIN 193 | As a native of the Cotswolds, and having had a home in Burford for many years, I wish to comment on the recent Planning Application for 85 family homes, as referred to in a recent paper issued by the Burford Town Council, a copy of which I assume you have received.

From a professional background, I feel it would be an excellent addition to the property requirements of Burford Town centre and the site occupies a logical extension to the existing residential development. Therefore, I strongly disagree with the Town Council’s view that, “it will propose to object strenuously to this proposal” on 6 counts, as set out in its paper. Although not referred to in its paper, I have been advised that at the Town Council Meeting on the 8th December, it was felt that a more appropriate site for 85 dwellings was on land at the beginning of Tanners Lane, immediately adjoining the main A40, which carries a high volume of fast traffic between Cheltenham and Oxford. In my opinion, such a proposal is totally inappropriate. Also, the entrance to such a development would be almost facing the entrance to the very active Burford School, which has an increasing number of pupils.

Moreover, 85 dwellings would produce approximately 130 - 170 additional vehicles, turning the very narrow Tanners Lane into a "rat-run" down the steep hill into Sheep Street, thus producing a further hazard to people using the recreation ground and the recently proposed additional facilities at the top of Tanners Lane.

| MM464         |                         | Laura Morris          | Ms               | Morris            | 1153       | > SECTION 9 - STRATEGY AT THE LOCAL LEVEL > Burford Charlbury Sub Area > MAIN 193                     | As a Fellow of the Chartered Institute of Building, I am perplexed by the actions of the Town Council in putting extreme pressure on your department by supporting the massive planning application for the proposed development fronting Shilton Road, which would be fraught with problems, particularly by very serious traffic congestion onto the A40. This argument was so ably demonstrated by the sincere and caring objections raised by the Shilton Road Residents' Association. Therefore, it is not logical for a responsible Town Council to support the Shilton Road site with its massive ramifications and yet object to the proposed development of Cole's Field and suggesting, as an alternative, the Tanners Lane Site. In my consultancy work, I expect to experience respect, common sense and logical thought. The Town Council would appear to be driven by a "hidden agenda".  

We understand the need for houses but such a huge development would now endanger the hundreds of years of effort by so many to keep this unique medieval town a very special place. Tourists flood into Burford from all over the world to see our town and the traffic problem with the huge lorries is really out of control and strain on the bridge is too terrible to think of what could happen there.  

85 more houses added onto an area that has REALLY Outstanding Natural beauty and surely in this terrible current world everyone should always be able to admire the views of the Church Spire and Windrush Valley from the A40. Anyone who loves Burford, lives there, visits etc., approach and see those views it is one of the rare sights of Old England. We always feel a sense of pride as we see those special unique views. You must have received hundreds of letters such as mine but there is no other town like Burford and surely there must be another area close by where a developer can make his profit without taking away this piece of history from a mad and disturbed world!!  

In all the towns in all the world, we chose Burford to buy our second home. We stopped for a coffee when visiting The Cotswolds, on returning we found a cottage for sale on the internet and paid our deposit before even seeing the home inside, as we knew what a special place it was. If these fields are used for anything, should a road to by pass Burford for all the heavy traffic not be considered. This way our bridge could be rescued and the dangerous traffic loads reduced. 85 houses could potentially create another 160 cars using this main road if everyone home had two cars. We think this is a very unique decision for the planners when there just are not towns like Burford and surely our future generations and worldwide visitors deserve to keep this Jewel in the Crown without building on its beautiful surroundings countryside, causing more conjestion and spoling what can never ever ever be reproduced.  

We love to see the Chinese, Japanese, Americans, Europeans coming to our town from so far. Surely they must be excited as they approach Burford, see the valley with the river and the Church Spire. How could anyone wish to replace this with a housing estate? So many fields elsewhere. Surely a similar building project could be built close by where it won't take away this rare scenery or choke the heart of an already busy little town (that just about seems to work now but so many more homes could 'rock the boat' and endanger the livelihood of so many businesses in Burford should the tourists stop coming).  

Thank you for your time to read my thoughts. Just hope, when I am sure you read letters of objections every day, that Burford, its beauty and history will be given special considation as it must be one of the most special places left, anywhere.                                                                                                                                  |
| MM465         |                         | Laurence adn Penny Maddock | Mr and Mrs | Maddock          | 1157       | > SECTION 9 - STRATEGY AT THE LOCAL LEVEL > Burford Charlbury                                      | Proposed development of 85 house sat Cole's Field on the eastern boundary of Burford, bordered by the houses of Orchard Riseto the north, Frethern Close to the south and Barns Lane to the West.  

We are writing to expressour concern about the proposed development on the land to the east of Burford, being Cole's Field, between Witney Street, Frethern Close and Barns Lane. This site has previously been investigated for affordable housing and was rejected by WODC planners and County Highways, and so we...
When we bought our property in Frethern Close approximately 10 years ago, our searches confirmed that Cole’s Field lies within not only an Area of Outstanding Natural Beauty but also a conservation Area. As such, it was considered virtually sacrosanct from a development point of view. This information played a very important part in our decision to buy our property. We are therefore not only distressed, but exceptionally disappointed to find that the conservation and AONB designations appear capable of being swept aside by WODC.

From a purely aesthetic perspective there is an iconic view down to the church and the Windrush Valley from the top of this field, able to be viewed from the A40 coming from the west, the A361 driving from Chipping Norton and from the A424 driving from Stow on the Wold. We have many walkers around Burford and this particular view would be ruined to those using the Westhall Hill footpaths and the circular route through Fulbrook, Widford or Swinbrook back to Burford car park. It is views such as this that bring the thousands of visitors we have in Burford year after year. Any development on this site is bound to have an effect on tourism, which is the lifeblood of the town. In addition, you have made no mention of the Grade I listed St John the Baptist Church and the Grade II Great House, both of which are set against the sight line of this field, together with listed buildings in the High Street. We have over 250 listed buildings in Burford and a development of this size is bound to have a detrimental effect on the view of Burford from several directions.

There is also a lot of wildlife to be seen regularly in the field, including roe deer, muntjac deer, foxes, rabbits, pheasants, peacocks and hedgehogs. Hedgehogs in particular are now a highly endangered species and yet they proliferate in this Field, along with frogs and newts. Clearly, any development will have an extremely deleterious effect on the habitat of these animals. In addition to which, there are a number of cats from surrounding houses which roam freely around the field. We dread to think how many animals will die as a result of development of this land.

It does not appear to us that a proper survey of the field can have been carried out since your plan says that the land slopes gently down to Witney Street, whereas it is clear to see that in fact the slope is very steep. In addition, your plan states that there is no flood risk, whereas anyone in Burford will tell you that Witney Street regularly floods from rainwater pouring down the slope from the field and also from the natural springs on the site. Orchard Rise will also be endangered by flooding since it is cut into the hillside such that roof levels are even with the lower edge of the proposed site. Flooding already occurs in Barns Lane and from Barns Lane into The Lodge in Pitts Lane and Swan Lane Close during periods of heavy rainfall.

Your plan also states that there are three suitable access points to the site - Frethern Close/Wysdom Way, Barns Lane and Witney Road (sic - this should of course be Witney Street). The purported access in Frethern Close/Wysdom Way is tiny and totally unsuitable for such an accessway. We have already seen a highly increased volume of vehicular and foot traffic on these two roads since the development of the land on the A40 and this has resulted in people driving at excessive speeds, increased litter and dog excrement on the pavements and roads, which had not been noticed previously. As to Barns Lane, the proposed access has very little visibility and will be exceedingly dangerous. Barns Lane is already used as a rat run by people trying to avoid the general gridlock that occurs in the High Street as the traffic backs up from the bottleneck of the bridge over the Windrush. If anyone from the WODC has ever driven along Witney Street to Burford, they will know that it is narrow and made dangerous by cars speeding along it. It is generally considered a death trap and we are shocked that you would consider it a suitable access. Your plan does not state how the estate would be sign posted from Oxford, but presumably down the Widford turn from the A40, which would be an undeniably dangerous route.
Your plan states that the building work will create construction jobs, but this is a short term effect only. With 85 houses, where are these people going to work? There are few job opportunities in the local area, so are we going to end up with people in these houses increasingly depending on benefits to sustain them?

We understand that the infrastructure in Burford is already straining to support the population and worry that it will be forced to breaking point, which will mean more expense. You have also mentioned in the plan that more housing will mean more children attending the local schools, thus making their continued existence safer. Burford School already relies heavily on fund raising to provide fundamental requirements such as classroom chairs, new toilet facilities and refurbishment of the kitchen equipment. We cannot understand how more children attending will not exacerbate these problems. Burford Library has fended off closure by rallying volunteers and is continually fund raising to avoid closure. Burford residents are always extremely generous, even when they may have no connection with the subject of the fund raising. However, we wonder whether WODC should be putting right the needs of Burford currently rather than increasing the number of residents who will be affected by these problems.

Finally, we are disappointed at the lack of consultation WODC has had with Burford Town Council. We have been advised that no prior consultation was undertaken with the local councillor or the town council before writing to the affected owners and occupiers in Burford. This does not lead us to trust the system that we believed to be in place, and thus to not trust that our views regarding this proposed development will count for anything. We sincerely hope that is not the case. For all the reasons above we cannot object strongly enough to this proposed development.

We are writing to you to express our objections and concerns to the draft plan to allocate land to the east of Burford for a potential development of 85 new houses. My key objections are on the grounds of the errors of the plan; the impractical sightings of access points; and the safety of residents and visitors.

1. Errors.
   • There was no prior consultation on the plan with our local WODC councillor (Derek Cotterill); with the Town Council; or with Cotswold Conservation Board or Historic England.
   • The site is in the Cotswold AONB where previously no major development has been allowed.
   • Contrary to statements within the draft plan, the site is clearly visible from the town and its surrounds
   • The previous draft local plan said that “the development potential of land surrounding Burford is heavily constrained by the sensitivity of the landscape although there may be some scope for a small-scale extension of the built-up area”. This has been struck through in the new draft with no explanation as to why this is so.

2. Impractical.

The draft plan is not correct when it states that the site slopes “gently down towards the north-east corner and the Witney Road”. In fact, the slope is very steep down( at least 5 metres) to the proposed access point on Witney Street and would require an enormous excavation of earthworks

• The site also falls steeply down to the houses to the north. Any development would bring the serious risk of flooding to dwellings in Orchard Rise, Windrush Close, Swan Lane and down as far as Witney Street. All such premises narrowly escaped serious flooding in 2007 because the (arable field) site was able to absorb most of the significant rainfall in that year. Our own experience from when Orchard Rise was built, both of our garden walls were pushed by the properties above and at a huge expense to ourselves to repair. More properties put
above Witney St may exacerbate the problem:

- The draft plan indicates that the main vehicle access to the site would be from Witney Street (aka the Witney Road in the draft plan) and this road would become a main gateway to Burford from the A40 and to the east.

- Leaving the A40 from the east into the so-called Witney Road (White Hill) is a major safety hazard for drivers, particularly at night and in poor visibility. The junction is difficult to see and at peak times and any vehicle can wait up to 10 minutes in the middle of the carriageway with vehicles passing closely on both sides at 50+ mph. We have experienced on many occasions, if a lorry is passing, vibration does occur and will rock our car to left and right.

- The Witney Road is a very narrow, unclassified road that experiences flooding, severe icing and fog pockets in the winter as it’s close to the River Windrush. Numerous accidents have occurred along this road and particularly through the winter.

- It is very popular with walkers and cyclists. It is part of the popular circular walk around Burford and on the National Cycle route (57)

- Vehicle access to the site from the north, south or west would also be complicated. The options appear to be:

  i. maneuvering through the centre of Burford with several turns, narrow roads and busy traffic (particularly in the summer months)

  ii. using Barns Lane which is narrow and steep and has no footpaths at its lower end. It also has many parked cars and is a twice-daily route for children and parents walking to the local primary and secondary schools

  iii. passing Burford on the A40 and doing a difficult 270 degree turn into the east end of the Witney Road near the Ramping Cat Nursing Home.

  iv. The bend coming into Burford from White Hill is very sharp (the map indicates it’s a gentle curve) and the 2 proposed access points onto Witney St will not allow enough time for vehicles to exit these junctions.

  v. At peak times cars have sped in excess of 60” miles per hour coming down from White Hill into Burford.

  vi. On busy weekends and in the summer, the cars are parked both sides of the road along Witney St up to the very sharp bend leading its share of new houses to meet local needs. It should not bring more Oxford commuters that would add further traffic at peak times to the busy A40.

  vii.

The previous draft plan also identified further possible sites in Burford at Tanners Lane, Burford Cottage Hospital and on the land to the south of Sheep Street. It is not clear why these have been deleted from the Plan. It is also unclear whether serious thought has been given to flat land on the south side of the A40 (which is outside the AONB and not in sight from the north).

<td></td>
<td></td>
<td>Access</td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td>The concept of making access to the proposed development from Witney Street is both dangerous and impractical. Not only are there weight restrictions on this road but more importantly, it is well recognised and acknowledged by all who know the area, that the layout of this stretch of road is dangerous, causing numerous accidents in all weathers at all times of year. Indeed, in the past there has been a fatal accident. The road is too narrow, with many bends and tricky gradients. In adverse icy conditions many locals will take a detour travelling towards the A40, rather than tackle the Eastern end of Witney Street known as White Hill.</td>

<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td>1. The site is within the Cotswold Area of Outstanding Natural Beauty (AONB) and the Burford Conservation Area. Burford is a historic town with 252 listed buildings and is entirely unsuitable for a development of this size and character.</td>
<td></td>
</tr>
</tbody>
</table>
We wish to object to the proposal to allocate 85 new homes and an extra care facility on the site to the east of Burford, known as Cole’s Field.

Our objection is on the following grounds:

1. The site access proposals are not acceptable and would lead to potential safety hazards. The draft plan says that primary vehicular access would be through Witney Street. Witney Street is a narrow country lane which already suffers from congestion and speeding vehicles. The main entrance to the proposed site would be right next to the double bend which is particularly hazardous. The road frequently floods and freezes during winter.

   The plan goes on to state that secondary vehicular access may be achieved from Frethern Close/Wysdom Way to the south and Barns Lane to the East, both of these options are entirely unsuitable. The roads are already full of parked cars; Frethern Close in particular is extremely difficult to negotiate in a car if there is another vehicle travelling in the opposite direction. This already causes difficulties for emergency services, refuse lorries and delivery vans. Barns Lane also has its own traffic issues. There have been a number of occasions recently where lorries have become stuck, occasionally causing damage to walls. This highlights the unsuitability of this road as an access point.

   Extra traffic through any of these routes is not acceptable. A development of 85 new homes would bring at least double that number of cars, plus more cars working at and visiting the proposed care facility. The town simply cannot cope with this level of traffic; it would create road safety problems and cause difficulties for the emergency services.

2. Cole’s Field, and its access through Barnes Lane, is used as a right of way and should be recorded as such under section 31 of the Highways Act 1980. People use the Barns Lane entrance and the edge of the field to access the rear of the properties in Barns Lane, Frethern Close and Wysdom Way; they walk along this route with their families and they walk their dogs. We have used this route since moving to Burford in 1969 and it is still regularly used, by ourselves and others, today.

3. Cole’s Field is a vibrant living landscape which underpins the health and wellbeing of the surrounding residents. Its value is immeasurable. It is where children play, families walk, pets and wildlife run free. It

Oxford and the A424 coming from Stow; the views which fully justify the area's inclusion in the AONB classification.

4. There was no prior consultation with Burford Town Council, our District Councillor or the body which manages the AONB.

5. The site slopes steeply to the North and there is a clear risk of flooding.

6. There is no suitable access. Witney Street is a narrow country lane which is unsuitable for widening. It is also prone to icing up at the top, flooding at the bottom and it bends sharply at the proposed access point. Frettern Close and Barns Lane are also narrow and impossible to widen. These roads are choked by parked cars, and making it hazardous for people to walk to the shops from the existing developments on the Eastern side of Burford.

We sincerely hope that you will take serious note of the objections above and exclude the proposed allocation.
1. WODC state in the draft Local Plan, para 9.340, that the Council’s assessment of land availability has been unable to find any suitable sites south of the A40 for building the necessary houses to meet the housing needs laid down. The Plan cannot ignore what is happening in the real world. It would be an error to not mention the public enquiry on a housing site in Burford south of the A40. If WaDe do not include it in the plan I may call for a Judicial Review. As WODC are fully aware there has been a lengthy public inquiry about a planning proposal on the Shilton Road site with a proposed 169 dwellings. A decision from the Government Inspector is expected early in 2017. If this is approved then it is no need for house building on the Cole’s Field to meet externally imposed housing demands. Allowing both sites to be approved would be an absolute disaster for Burford and should be rejected out of hand.

2. We are totally against the inclusion of the Cole’s Field as a site for house building in the Plan (para BC1b) which would increase the number of houses in Burford by almost 20%:

- The site is in an AONB and a Conservation Area should be protected from housing demand if it distracts from its tourist attraction, which the 85 Cole’s Field houses will do
- The site is unsuitable for housebuilding, being on a steep slope to the north
- There is no suitable access. Barns Lane is very narrow, Witney Street is a country road and both are choked with parked cars to have a single lane of traffic.
- With 85 homes they will overload the infrastructure; schools, doctors’ surgery, sewers, roads along with the proposed additional care home
- The Coles Field site would savagely damage the views of Burford, of the church and medieval buildings from the A40, similarly across the Windrush Valley from the A324 from Stow and from Fulbrook, radically changing the views character. The Tourism business (0.5million pa) of Burford generates about £15m per annum and is its lifeblood. They come for the views, the medieval buildings etc and the Cole’s Field development will ruin these. The arguments in PC1b of the Plan as regarding landscaping are specious
- Burford’s businesses presently finds its workforce from the existing population and does not need more housing
- Changes to para 9:26 should be
  - The development potential of land surrounding Burford is heavily constrained by the sensitivity of the landscape
  - Paragraphs 9.6.34j-q should be removed from Draft Plan

I am writing to outline my objections to the inclusion in the draft local plan of the proposal to construct 85 new houses on the site of Cole’s Field east of Burford. Burford is a small settlement of considerable historic interest. The construction of 85 new properties adjacent to the medieval town, which comprises some 250 listed buildings, would constitute a serious desecration of our heritage.

Views of the old town, a conservation area within an AONB would be ruined from the north and east. The view from Fulbrook hill, a popular walk, would be horrendous. Burford’s appeal as a tourist “Honey Pot” would inevitably be reduced. The architectural context of the grade 1 listed church of St John the Baptist, a

I wish to object to the inclusion in the draft local plan of the proposal to allocate 85 new homes to the site to the east of Burford known as Cole’s Field.

My objection is on the following grounds:

1. The site is within the Cotswold Area of Outstanding Natural Beauty (AONB) and the Burford Conservation Area. Burford is a historic town with 252 listed buildings and is entirely unsuitable for a development of this size and character.
   * It will destroy the views across the Windrush Valley and the parish church from the A40 coming from Oxford and the A424 coming from Stow
   * There was no prior consultation with Burford Town Council, our district councillor or the body which manages the AONB
   * The site slopes steeply to the north and there is a clear risk of flooding.
   * There is no suitable access. Witney Street is a narrow country lane which is prone to icing up at the top and flooding at the bottom and bends sharply at the proposed access point. Frethern Close and Barns Lane are also narrow and are choked by parked cars.
   * My cottage has one spring for domestic water supply and another supplying my heat pump. This development may affect the quality and volume of my spring water, how will my water supply be safeguarded?
   * This road is hugely popular for dog walkers, groups of walkers, and families heading down to the path alongside the Windrush. Many of us have witnessed near misses along this stretch of the road. We do not need more traffic using this back road. When the fields are very muddy tourists often walk in the road from Widford back into Burford. The footpath ends at the first stile as you leave Burford.
   * This is also a very popular cycle route, the road is not wide enough for a cyclist and two cars passing. Pods of cycles are now a frequent feature with the squeal of brakes often heard from my property when cars approach too quickly.
   * Looking from my drive towards Burford there is a bend obscuring my view of the road. I have to enter and exit my property with great caution.

The site entrance would have similar visual problems, potentially a hazard for all of us.

| MM483         |                         | Stven Elvidge  | -                | Elvidge           | 1208       | West Oxfordshire Draft Local Plan - Policy No. BC1b - land east of Burford | Adding a junction close to this bend when cars will be trying to exit or waiting to enter will end up with accidents. This rural road is narrow with a high bank

2 Adding more cars and delivery vehicles down White Hill will increase the potential for a serious accident on what is a rural back road into Burford.

The new residents working west and north of Burford will add to the congestion on the High Street junction and have to negotiate their way through the narrow streets of Church Lane and Guildenford before entering Witney Street.

3 Have the Highways Department been consulted on the feasibility of increased traffic to and from the A40? At times it is extremely hazardous when trying to negotiate turning off and joining traffic at this junction.

Farming access

Currently the Coles Field and the fields beyond are accessed via Barns Lane. Will Witney Street be opened up to farm machinery? Associated mud on the road surface is also a hazard.

I hope as a responsible authority you will take on board my concerns and reconsider the proposed plan to allow 85 houses on Cole’s Field east of Burford.

Burford is an important medieval town visited by tourists from all parts of the world and in an area of outstanding beauty which would be greatly affected if a gateway from the east were opened up, with the inevitable pressure to build even more houses to the east.

Cole’s Field is vital for absorbing rainwater and in stopping more flooding in Swans Lane, Windrush Close and Witney St. This site is not “gently sloping” but is in fact very steep and, during heavy rain, water pours down Barns Lane and into Swans Lane, Windrush Close and Witney St. The storm drains do not cope with all this rainwater now so if Cole’s Field is developed this situation will get much, much worse.

Witney Street coming from the A40 is already a death trap. Its madness to propose that Witney St. becomes the “main gateway” into Burford from Oxford. White Hill is notoriously icy with a bad bend at the bottom, a length of the road always floods in winter and the proposed access to this suggested development is on a blind bend! My children walk to school along Witney St. and have to cross this road to keep on pavements and this is a huge safety issue.

This is not a suitable site for development and I request that it is not included in the Draft Local Plan.

West Oxfordshire draft local plan - policy no. BC1b - land east of Burford

I wish to object to the inclusion in the draft local plan of the proposal to allocate 85 new homes to the site to the east of Burford known as Cole's Field.

My objection is on the following grounds (being a resident of Witney Street for 33 years and Burford for over 40 years):

Access to this development is unrealistic

Approaching Cole’s Field via Witney Road White Hill is a well known accident area and one fatality in my time on Witney Street. Every year cars come to grief on this hill and it is a frequent event for cars to end up in the field at the bottom of the hill. In icy conditions I do not use this road to my home on Witney Street (or the route down Pytts Lane, a continuation of Barns Lane) as it becomes so treacherous.

The only route for me to use is up Guildenford (passed the church and up the hill to Witney Street) which is choked by parked cars.

Flooding along Witney Road

This road floods after heavy rain and when the water meadows fill up, exacerbated by numerous springs and the runoff from the hill below the A40.

Drainage

Turley Consultation Team informed us that drains would be put in to take surplus water away, where would these drains go to? Where the intended entrance to this site is the land drops away from the road down to the river very steeply and the land is always waterlogged. These drains would have to be taken a long way from this very wet area. The houses on Orchard Rise already complain about having very wet gardens, the prospect of this development must be of great concern to these residents and the homes below them.

Bends in the road

Close to the entrance of the new development there are a series of bad bends, this is also a dangerous area with cars coming to grief here, Ken Sparrowhawk’s wall bears witness to this!

During the winter months when the sun is low in the sky one is blinded by the sun when driving out of Burford round the first bend, this is also a time when the road could be icy.

There are always pot holes to be avoided.

Entrances from Roebuck Cottage, Spring Cottage and Springfield House are at these bends which adds extra danger to these residents pulling out from their properties as cars drive too fast along this road.

The footpath along this stretch gets very muddy as it is no longer maintained and it is often easier to walk along the road in these conditions 85 new homes and a care home, how many extra cars will be using this...

| MM485         | Roy and Wendy Hill       | -               | Hill             |                   | 1210       | > SECTION 9 - STRATEGY AT THE LOCAL LEVEL > Burford Charlbury Sub Area > MAIN 193 | LOCAL PLAN - Proposed inclusion of Cole's Field  
We write to object strongly to the above proposal. There are many reasons for this, not least being the lack of suitable access; the risk of exacerbating the existing flooding of Witney Road; and the likely complete breakdown of the existing sewage system (which is barely capable of coping with the existing demand).  
However our main concern is that:  
We have lived in this area for many years and have come to love Burford in particular. You will be aware that it is a small medieval town with many local businesses which provide excellent services to residents and visitors. This proposal would mean further erosion of this charming Cotswold town and the increased demand is likely to put unreasonable pressure on local traders and services. This will almost certainly result in the incursion of multi-national companies to meet the increased demand. In our view it would not be long before the whole character of Burford is changed beyond recognition. We should not do anything which will ultimately destroy this important heritage site. We recognise that additional housing is required but we feel this should be in more appropriate areas which can provide local jobs; cater for the increased demand on services; and hasthe necessary infrastructure to reduce the transport impact on local roads and the overloaded A40.  
This is not a case of NIMBYism but a plea to the Council to rethink their proposal and recognise that we need to preserve this historic town as it is. |
| MM488         | June Hall                | -               | Hall             |                   | 1216       | > SECTION 9 - STRATEGY AT THE LOCAL LEVEL > Burford Charlbury Sub Area > MAIN 193 | West Oxfordshire draft local plan - policy no.BClb -land east of Burford  
I am writing to object to the proposal within the draft local plan to allocate land to the east of Burford (Cole's Field) for the proposed development of 85 houses. My key objections are as follows:-  
1. It is within an Area of Outstanding Natural Beauty and the Burford Conservation Area yet no prior consultation has been made with the body that manages the AONB. Burford's economy is based on it being a major tourist attraction within west Oxfordshire and I believe this proposal would significantly alter the town’s character and is a reversal of previous policies.  
2. The draft plan (9.6.341) states that the proposed site is 'relatively well-screened from wider views'. This is not the case. Any development of Cole's Field would clearly be seen when travelling south down the A361 and A429, and west down the A40 and from there down Witney Street towards Burford, where the view of the Parish Church is prominent. This area is an attraction for walkers, particularly those taking the circular route |
3. The draft plan contemplates that the main vehicular access to the site would be from Witney Street. There are serious problems with such a plan, namely:– It is an unclassified road that experiences flooding, severe icing and fog pockets in the winter months.

Leaving the A40 westbound down Witney Street is a major hazard for drivers, particularly when it is dark and there is poor visibility. Having spent some years travelling down the A40 on my way home from working in Oxford, I always avoided turning right at that intersection when it was dark, preferring to continue on the A40 into Burford. At such times, the junction is difficult to see, the road is relatively narrow and there is a risk of being nudged by cars from behind into oncoming traffic travelling east at speeds of 50 mph.

Witney Street is part of the National Cycle Route (57) with a large and increasing number of cyclists, riding individually or in groups. Any increase in traffic along this road would prove hazardous not only to cyclists but to walkers (and dog walkers) as there is no footpath on a long stretch of this road.

The residential area of Witney Street is congested with vehicles parked on the road.

4. The northern end of Barns Lane is a narrow lane with no footpath and only enough room for vehicles travelling in one direction. The junction between Barns Lane and Swan Lane can be very icy in winter months. Further along, southwards, this lane is choked with cars parked on the road and there is a sharp bend leading up to the A40.

5. The draft plan states that the site slopes 'gently down towards the north-east corner and the Witney Road'. This is not the case; it is very steep towards the proposed access to Witney Street and also down to the houses on Orchard Rise where the level of the field is the same height as the rooftops. There are many natural springs on the site and any development of the field would increase the probability of flooding down the slope into both the gardens of these houses and further down into Windrush Close and Witney Street. In the past, problems caused by heavy rainfall have been limited only because the field has been able to absorb a significant amount of water. This, no doubt, would have been highlighted if the Council had seen fit to carry out a proper survey.

6. A letter, received from Burford Town Council, states that there was 'no prior consultation with Burford Town Council' regarding the proposed development. I find this statement incomprehensible. Why does WODC see fit not to involve locally elected members of the Town Council?

7. Apparently, the previous draft proposal identified further possible sites, including Tanners lane, Burford Cottage Hospital, land south of Sheep Street and land south of Milton Road, Shipton under-Wychwood. Are these no longer seen as viable options? If so, why not?

8. It would appear that the main reason that Cole’s Field is being proposed for redevelopment is to cater for commuters, working in Oxford, and their families. Such needs could be facilitated from elsewhere in West Oxfordshire where road/rail networks are far better, rather than by adding to the congestion on the A40.

<td>Bond</td>
<td>1229</td>
<td>Charlbury Sub Area &gt; MAIN 193</td>
<td>We wish to voice our objection to the inclusion in the draft Local Plan of the proposal to include 85 new homes on Cole’s Field, Burford for the following reasons:</td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td>* Burford is in an Area of Outstanding Natural Beauty and this site is also within the Burford Conservation Area. 85 new houses will have a huge impact on the town, visually and also to its infrastructure - schools, doctors and roads. 85 new houses could mean 170 more cars! As we all know, Burford’s roads are a nightmare already! 85 new houses could mean 170 more children - how can our much-loved schools cope with that influx? We already have to wait for weeks for a non-urgent appointment at the Doctors and this will only get worse with 85 more houses. Burford is a medieval town - how will its sewage system cope?</td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td>* The visual impact of Burford as you approach from both the East and the North will be destroyed. Burford attracts many tourists and money into the area and we change the look of this historic town at our peril. Once the views across the Windrush Valley are changed they are changed forever!</td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td>* There was no prior consultation with Burford Town Council who are vehemently opposed to this inclusion in the Draft Plan. There was also no proper survey carried out. We are led to believe that the only survey was a “drive through”, and this is emphasised by the fact that they say the site “slopes gently”. We all know that this is totally untrue as it is in fact a very steep site. Building on Cole’s Field is a definite flood risk. We have lived in Orchard Rise for 23 years and during heavy rain water pours into our back garden and gathers behind our house. Witney Street, Swan Lane and Windrush Close regularly flood from rainwater pouring down Barns Lane and this situation would be much, much worse if Cole’s Field did not absorb rainwater. Who do we sue if our houses flood or our foundations are compromised? The Developers or WODC who allowed this site to be built on?</td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td>* There is no suitable access. Witney Street is already a death trap as it is a rat run for people coming from Oxford who wish to avoid queuing at Burford roundabout. The right turn off the A40 into White Hill is precarious to say the least and yet the Planners envisage Witney Street becoming a “main gateway” to Burford from the east! !! White Hill is notoriously icy in winter and several cars each year plough into the ditch/stone wall at the bottom as they take the bend too fast. Further on it floods and is inaccessible on foot for quite a majority of the winter. And Witney Street also bends sharply at the proposed access point - a blind bend. This is an accident waiting to happen.</td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td>* We have heard that there are other more suitable sites in Burford which would provide more houses than 85, namely land in Shilton Road opposite Burford Garden Centre. Burford Town Council supports the application to build on this site. This has good access, is not a flood risk and will not impact visually on the AONB. Surely this is a much more suitable site for development.</td>
</tr>
</tbody>
</table>

Access to Cole’s Field by car from the north would have to be up the High Street to the roundabout and then down Barns Lane to Frethern Close. Alternatively, a left turn into Church Lane could be taken followed by a left turn onto Witney Street. Another alternative would be to turn left from the High Street into Swan Lane and proceed up Barns Lane. Both Church Lane and Swan Lane are extremely narrow with, once again, cars parked 24/7 as a result of no off-street parking for the residents. The right turn from Swan Lane onto Barns Lane is totally blind and dangerous.

If this development were to proceed how would the many large construction vehicles access the site without causing enormous disruption to the town and its residents for a considerable period? Large vehicles currently cause considerable damage to the verges and often find themselves stuck due to the reduced road width.

Burford is currently at saturation point with regard to traffic with the High Street often blocked from the...

<td>1231</td>
<td></td>
<td>Bridge at the bottom of the hill to the roundabout on the A40 at the top and on the 361 to beyond the golf club in afternoon rush hour as I frequently find on my way home from work. The proposal to build a further 85 houses on Cole's Field thereby introducing probably a hundred more cars to the town will only add to this problem. There appears to be no plans to develop the infrastructure to support further housing in Burford as are typically excluded at the outset then added in later. If a consequence of building these houses then demands the need for new schools etc., how much is the character of Burford changed overall with these considerations? There is little public transport through Burford with only infrequent buses to some surrounding villages and Witney thereby necessitating most travel being carried out by car. I submit that the proposal to develop the Cole’s Field site is flawed and should be removed from the plan.</td>
<td></td>
</tr>
<tr>
<td>MM495</td>
<td></td>
<td>T D Ward</td>
<td>-</td>
<td>1233</td>
<td></td>
<td>The proposed development of this land may be the “least bad” option if new houses have to be built in Burford. It is in some ways better than the Shilton Road scheme, which has a difficult access on to the A40, unless a new roundabout is built. If Coles Field is to be built on I think there need to be two non-negotiable conditions; (a) the only vehicular access should be on to Witney Street as far west as possible and access on to Barns lane for bikes and pedestrians only; (b) the field to the east has to be secured as permanent green-belt because building there would ruin the view of Burford form the north and from the A40. The only way I can see of securing this would be for that land to be handed to the Woodland Trust for tree planting or even the Wychwood Project, although it is outside their boundary. Without those two conditions I think this proposal is unacceptable; (i) because vehicle access to Barnslane would exacerbate the present risks, indeed the narrow lower section is already hazardous for pedestrians and cars; (ii) because although this development could be regarded as infilling any development to the east would have a devastating effect on the AONB. I wish to object to the inclusion in the draft local plan of the proposal to allocate 85 new homes to the site east of Burford known as Cole’s Field. My objection is on the following grounds. The site is within the Cotswold Area of Outstanding Natural Beauty and the Burford Conservation Area. Burford is an historic town with 252 listed buildings and is totally unsuitable for a development of this size and character. Assuming that 85 houses will accommodate approximately 200 persons, this will increase the population of Burford by about 10%. Also assuming about 2 cars per household, there will be 170 extra cars plus delivery vehicles trying to negotiate the narrow roads of this area. We have already had, just recently a lorry stuck in Swan Lane, and two stuck on The Hill and High Street. It will destroy the views across the Windrush Valley and the parish church from the A40 coming from Oxford and the A424 coming from Stow.</td>

<td>&gt; SECTION 9 - STRATEGY AT THE LOCAL LEVEL &gt; Burford Charlbury Sub Area &gt; MAIN 193</td>
<td>There was no prior consultation with Burford Town Council, our district councillor, or the body which manages the AONB. The site slopes steeply to the north, despite the developers claiming it is a gentle slope, which will almost certainly cause flooding if not to the houses in Orchard Rise but to somewhere below. There is no suitable access. Witney Street is a narrow country lane, barely two cars wide, and prone to icing up and flooding (only last winter I narrowly avoided a car coming towards me sideways). It bends sharply at the proposed access point, with limited visibility from both directions. The proposed access point in Barns Lane is barely one car wide, a pedestrian using the lane has to press themselves against the wall to allow a car to pass, any increase in traffic will surely result in injury or worse. It seems to me a totally ludicrous place to build a house let alone 85.</td>

| MM501        |                        | Judy Cumming    | Mrs Cumming      | 1239             | I am writing to object to the proposed building of some 85 houses on Cole's Field in Burford on the following grounds:  
1 It is within the Area of Outstanding Natural Beauty and the Burford Conservation Area.  
2 There was no prior consultation with Burford Town Council, our District Councillor, Cotswold Conservation Board (re AONB) or Historic England (re Listed Buildings).  
3 No proper survey was carried out as it is stated in the plan that the site 'slopes gently' down to Witney Street, whereas there is a drop of at least 3 metres at the proposed junction to the road.  
4 There is no suitable safe access.  
Re 3 After heavy rain, water flooding down Witney Street from the fields and adjoining roads already flows through my front door and driveway as there are no drains along the road. This rainwater collects to the extent that the wash from cars hits my front windows. Where would all the ground water go? Additionally, the spring water to my well comes from the upland south of Witney Street and is my only source of water as I am not on the mains grid. The suggested earthworks necessary to create a sunken access road would inevitably disturb the natural springs.  
Also, there are no sewers in this part of Witney Street as nearby houses, including mine, all rely on their own private cesspits. The sewerage system in Burford is already at bursting point. Where would all the grey water and sewage go to?  
Re 4 I have lived here for 25 years and, during that time there have been numerous accidents on White Hill (including a fatality) and Witney Street (cars skidded into my field twice last year) which is a narrow country lane, one wayin places, and most unsuitable for increased traffic accessing Burford across the eastbound A40.  
One proposed access road to Witney Street, facing north, would enter just after a bend obscuring the sightline. Like White Hill, this would become very icy, as this area is the last to lose ice and snow during a cold winter. There are permanent frost signs at both ends of the road. |

<td>This site is unsuitable for the above reasons, and I hope that you will reconsider and reject the proposed plan to build up to 85 houses on Cole's Field. RE: West Oxfordshire draft local plan.. LAND EAST OF BURFORD.. known as COLE'S FIELD I wish to object to the inclusion within the draft local plan of the, proposal to allocate 85 new homes to the above area. My objection to the proposal: Location Within the Cotswold area of outstanding Natural beauty and Burford Conservation area a development of this scale and location in a prominent open countryside position cannot enhance the beauty of the landscape or quality of the historic character of Burford. Character The change from rural to urban development would affect not just the land visually, increase light and air pollution, but have traffic flow impact on the relatively tranquil lanes into Burford from Witney Street and Barns Lane. Out of scale and tagged onto the perimeter of Barns lane it would form, mass isolated town housing with no relationship or easy pedestrian access to Burford. Access No suitable access for the amount of traffic this development would create. 85 properties generate at least 85 vehicles on small country lanes to access, or via busy A40 through Frethern Close and Barns Lane. Sustainability Lack of amenities, small surgery, over- subscribed primary school, failing sewerage, limited public transport indicate the proposal for additional large scale housing would have a detrimental effect on the town.</td>

<td>&gt; SECTION 9 - STRATEGY AT THE LOCAL LEVEL &gt; Burford Charlbury Sub Area &gt; MAIN 193</td>
<td>Access to Cole's Field by car from the north would have to be up the High Street to the roundabout and then down Barns Lane to Frethern Close. Alternatively a left turn into Church Lane could be taken followed by a left turn onto Witney Street. Another alternative would be to turn left from the High Street into Swan Lane and proceed up Barns Lane. Both Church Lane and Swan Lane are extremely narrow with, once again, cars parked 24/7 as a result of no off-street parking for the residents. The right turn from Swan Lane onto Barns Lane is totally blind and dangerous. The hill on Barns Lane at this point is single carriageway, extremely steep and being north facing and in total shade, more akin to the Cresta Run during cold weather. The wall of The Lodge at the bottom of this hill is regularly demolished by out of control vehicles coming down the hill at speed and failing to negotiate the slight chicane at the junction. Given that there is no footpath on this lane, even if not icy any additional traffic would be a danger to existing pedestrians let alone the, in my view erroneously, anticipated additional ones from Cole’s Field. If this development were to proceed how would the many large construction vehicles access the site without causing enormous disruption to the town and its residents for a considerable period? Burford is currently at saturation point with regard to traffic with the High Street often blocked from the</td>

| MM508         |                         | Michael Bradley | Mr               | Bradley           | 1253       | > SECTION 9
> STRATEGY
AT THE LOCAL LEVEL
> Burford Charlbury Sub Area > MAIN 193 | bridge at the bottom of the hill to the roundabout on the A40 at the top. The proposal to build a further 85 houses on Cole's Field thereby introducing probably a hundred more cars to the town is unsustainable. There appears to be no plans to develop the infrastructure to support further housing in Burford. Services in Burford are at saturation point with, as I understand it, Burford Primary School oversubscribed, a failing sewerage system, a doctors' surgery where it is currently often necessary to wait up to a month for an appointment and inadequate parking facilities in the town. There is little public transport through Burford with only infrequent buses to some surrounding villages and Witney thereby necessitating most travel being carried out by car. It is difficult to understand what criteria are used to determine housing need. For example, has the effect of the EU referendum vote been factored in to arrive at these figures? What is meant by affordable housing: all housing by definition is affordable. Is this just a wheeze by developers to get planning permission? I submit that the proposal to develop the Cole's Field site is flawed and should be removed from the plan. |
| MM511         |                         | Susan Ashton    | Ms               | Ashton            | 1256       | > SECTION 9
> STRATEGY
AT THE LOCAL LEVEL
> Burford Charlbury Sub Area > MAIN 193 | Consultation Response to WODC Local Plan - Policy BC1b: Land east of Burford I am writing to object to the inclusion of the development of 85 houses on the land east of Burford (¶9.6.34) within the Local Plan. My reasons for objection are as follows: • The site is within the designated Area of Outstanding Natural Beauty. This designation has a purpose which includes the preservation of the beauty of the area for current and future generations. The expansion of housing on this site will have a major visual impact from the east and north and spoil the natural setting of Burford within the Windrush Valley. |
The scale of the increase in housing is disproportionate. The 85 houses would increase the population of Burford by around 20%. If approval is given on appeal for the development of the Shilton Road site just south of the A40 (around 170 houses), the combination would increase Burford's population by 50%. Burford is the tourist attraction it is today because it escaped the ravages of Victorian development, but its ambiance would be destroyed by the impact of this combined development.

The development will add traffic to the surrounding roads. Whether 20% or 50%, the growth in housing will significantly outweigh the growth in jobs, thus increasing outbound commuting, adding to traffic pressure on the A40 in particular.

Burford's local roads are inappropriate for serving the site. Apart from its High Street, all Burford's roads are narrow, and on-street parking reduces them to a single lane with passing places. This particularly applies to Barns Lane and Frethern Close/Wysdom Way. The third entry point to the site, Witney Street is also congested with parking to the west and narrow along the water meadow to the east.

Development of the site is highly likely to increase local flooding. During rain showers, surface water down Barns Lane is not picked up by the drains and enters our property on the corner of Swan Lane and Pytts Lane as well as properties in Swan Lane Close. This is likely to increase with any site access from Barns Lane.

Please take these points into account and remove this site from the Local Plan.

| MM515         |                         | Hugh Ashton     | Mr               | Ashton            | 1260       | > SECTION 9 - STRATEGY AT THE LOCAL LEVEL > Burford Charlbury Sub Area > MAIN 193 | Consultation Response to WODC Local Plan - Policy BC1b: Land east of Burford
I am writing to object to the inclusion of the development of 85 houses on the land east of Burford (#9.6.34) within the Local Plan. I endorse the views of my wife in her objection letter of the same date and wish to expand on a particular area of objection relating the traffic impact as this is an area of personal expertise.

The site east of Burford is totally unsuited to development of any kind because of the safety impact of additional traffic on the surrounding roads. Access to/from the site is entirely dependent on private transport because the public transport services in the area are practically non-existent. The three access points to the site, are all unsuitable, individually or in combination.

Access to/from Witney Street is unsuitable because:

- The junction at Witney Street would be on a curve with very poor visibility towards the east (the source of fast-moving traffic) exacerbated by the need to have the site access in a cutting in the bank
- The junction between Witney Street and the A40 is safe for the left turn onto the A40, but dangerous for all other movements:
  o Right turn from A40 east to Witney Street: Although Witney Street offers a direct connection between Burford and the east, it is signposted 'Wildford' not 'Burford' for the very good reason that the right turn from the Oxford direction is in the face of fast-moving and heavy traffic.
  o Left turn from A40 west to Witney Street: Vehicles making this very sharp (approx. 150 degrees) turn have to slow down to around 5mph in the A40 to make this turn, risking rear-end collisions in a stream of fast-moving traffic. In fact, vehicles longer than cars cannot make the turn in a single manoeuvre.
  o Right turn from Witney Street to A40 west: In the reverse direction this turn is almost as dangerous, as it requires a hill start and crosses both lanes of heavy, fast-moving traffic on the A40.
**In winter conditions, Witney Street often floods east of the site entrance, and becomes impassable as a result of frozen flood water or ice on White Hill.**

Access to/from Barnes lane is unsuitable because it is very narrow with single lane sections above (south) and below (north) the potential access point. The road descends steeply to the north down to a blind junction with Swan Lane. In the winter, Barnes Lane freezes and vehicles have lost control, skidding across the junction - on at least four occasions into our gate on the north side of Swan Lane.

Access to/from Frethern Close/Wysdom Way is unsuitable because it is through a residential area where most of Burford's younger children live, through narrow streets with necessary on-street parking. Frethern Close leads to Barnes Lane from where traffic to/from the north would experience the problems described above. Traffic to the south must navigate around a blind bend on effectively a single lane width road with on-street parking to access the A40 roundabout. Access to the roundabout is difficult in the face of giving priority to the queue of traffic entering the roundabout from Burford's High Street.

The problems I describe relate to the site in use. During construction, the only feasible access would be via Witney Street since the access to Barnes Lane from the A40 already has an 'Unsuitable for Heavy Vehicles' highway restriction. Moreover, the Witney Street entrance could not be accessed from the west since it has a 7.5t restriction and no direct access from the High Street. Access to the site would therefore be via the unsafe junction with the A40, and then only to/from the east. HGVs to/from the west would have to travel the extra 2.6 miles to make a U-turn at the Windmill roundabout at the western end of the Witney bypass.

This site has been included in the Local Plan without local consultation and with the most cursory consideration of the practical issues of its access and development. It should be removed from the final Plan.

Thank you for your consideration of these points.

---

**We wish to object to the inclusion in the draft local plan of the proposal to allocate 85 new homes to the site to the east of Burford known as Cole's Field.**

Our objection is on the following grounds:

1. The site is within the Cotswold Area of Outstanding Natural Beauty and the Burford Conservation Area. Burford is a historic town with 252 listed buildings and is entirely unsuitable for a development of this size and character.

2. It will destroy the views across the Windrush Valley and the parish church from the A40 coming from Oxford and the A424 coming from Stow.

3. There was no prior consultation with Burford Town Council, our district councillor or the body which manages the AONB.

4. The site slopes steeply to the north and there is a clear risk of flooding.

5. There is no suitable access. Witney Street is a narrow country lane which is prone to icing up at the top and flooding at the bottom and bends sharply at the proposed access point. Frethern Close and Barns Lane are also narrow and choked with parked cars.

| MM522         |                         | Trevor and Margaret Yates | - | Yates | 1271 | > SECTION 9 - STRATEGY AT THE LOCAL LEVEL > Burford Charlbury Sub Area > MAIN 193 | We have viewed the above proposal relating to the proposed increase in housing in Burford and wish to raise our objection based upon the following: 

1) Burford is designated an area of Outstanding Natural Beauty and within a Conservation Area. Either the council upholds these designations or they become meaningless. These are the reasons why Burford is referred to as the Gateway to the Cotswolds. 

2) The letter of the 16 November 2016 informing us about the proposal arrived on the 18 November, a day after the first opportunity to view the proposal in Witney. 

3) No prior consultation between WODC and Burford Town Council has been undertaken. 

4) After viewing the proposal we very much doubt if any proper survey has been undertaken to take into consideration traffic access and increase in pollution. Access to the site would be unsuitable from Barnes Lane, Frethern Close/Wysdom Way as both are narrow lanes. The access onto the A40 is already very difficult at times and will only increase with traffic growth leading to accidents. 

5) As the proposed site is on top of the hill, the increase in water runoff from the site would impact on Barnes Lane, Swan Lane, Windrush Close, Orchard Rise and Witney Street. The roads already pool during and after heavy rain. Any increase in water runoff will ultimately have an impact on Witney through increased water levels, leading to flooding. A significant increase in hard surfaces combined with clay subsoil would only compound the situation. The risk of flooding would increase and therefore unless the council carried out significant measures to negate the problem it would be liable for costs of damage caused by water. 

6) Burford is located on a steep hill descending to the valley bottom and the river. To say it "slopes gently" is

5a As residents of Barns Lane we have witnessed, on numerous occasions, HGVs coming down Barns Lane by mistake and then having to reverse back up to the roundabout when they realise it is too narrow, and at least two residents' walls have been knocked down as a result. The bottom end of Barns Lane where secondary access to the site is proposed, is very narrow with only room for one car, and there is no pedestrian footpath or room to build one. Pedestrians are already forced to walk in the road (plus an increasing number of mobility scooters) and this danger would be considerably increased if there was additional traffic in this area. 

5b Having previously been a firefighter in Burford for 20 years, I have witnessed a number of accidents, including fatalities, on the road leading from the A40 to Witney Street, which is our proposed main access route to the new development. The road is very narrow, extremely icy in the cold weather and totally unsuitable for the additional traffic which would be created. Also the increase in traffic turning off the extremely fast and busy A40 will no doubt lead to further accidents and fatalities. 

5c An increase in traffic could also lead to delays in firefighters responding to fire calls as many of them travel from Frethern Close and down Barns Lane. Also increased traffic and cars parked on narrow roads may make access for emergency vehicles more difficult. 

6. The current infrastructure in Burford is already struggling - parking is already a nightmare. The impact on the primary school, GP surgery and other facilities would be considerable with an increase of 85 new dwellings. If a care home facility with up to 60 beds is included, as in the current proposal, that will also have significant workload implications for the GP surgery, as well as the increased traffic to Barns Lane. 

We strongly urge you to remove this proposal from the local plan. |

<td>Jennifer Smith</td>
<td>Mrs</td>
<td>Smith</td>
<td>1294</td>
<td>&gt; SECTION 9 &gt; STRATEGY AT THE LOCAL LEVEL &gt; Burford Charlbury Sub Area &gt; MAIN 193</td>
<td>an understatement. 7) The infrastructure of Burford cannot accommodate this increase as the schools have insufficient capacity to absorb the extra children. Parents have already had to pay for improved toilets for a building owned by WODC. Letter: I enclose my representation about the draft local plan. Unfortunately I was unable to write directly on the e-form, as when I clicked on the link it came up with a form I could not write on! I don’t know if this is caused by a problem at your end but it is unfortunate if it stops people from completing the form. While I appreciate the considerable difficulties you no doubt have in finding suitable sites to develop, I would like you to look more carefully at the suggestion of putting houses along Witney St in Burford. The site is unsuitable, being wet with springs and small watercourses, and very steep. The town is congested with inadequate parking. There is little employment in the area so people will be driving alone the A40 adding to the congestion. The site is in a conservation area and more housing will affect the lovely views of the valley as you drive along the A40. However the main issue I have with the proposal is the idea of making White Hill the access to the development, and Witney St a main entrance to the town! White Hill is a narrow country lane, steep, with dangerous bends. It gets frosty and slippery at the top and bottom in cold weather. Local people know not use it in wintry conditions. It floods. People regularly crash along there - cars end up in the fields after sliding down the hill. The access off the A40 is difficult and sometimes feels very unsafe when lorries thunder past on both sides. There is no footpath for most of the road, yet it is a very popular road for walkers, dog walkers, cyclists and horse riders. If a housing development were to be built here, on Coles Field, there would be a massive increase in vehicles using White Hill with the attendant dangers to all road users. If the road were to be widened, and made into a busy thoroughfare, it would ruin one of the main attractions of the town - very many tourists walk or cycle along there as it is a popular route to a very well used public footpath leading to Widford and Swinbrook. Witney St is also narrow. Residents parking makes it effectively a single lane road, but there is nowhere else for residents to put their cars. The fire engine is housed half way along and can not get out if the road is blocked. And at the end of the road, where it joins the High St, the road becomes even narrower as it passes the Burford House Hotel and Walkers Stoves. Is this intention really to encourage more people to use this road to get into Burford? The alternative seems to be Barns Lane, which is also steep and narrow without a footpath, and with ancient walls so no footpath can be built. I do not think enough careful thought has gone into this proposal. I urge you to reconsider and spend more time looking at alternative sites where access is more realistic. Comments on form: 1) Did not inform District Councillor or Town Council or discuss proposals with them. 2) Did not consult Historic England, Cotswold Conservation Board 3) No local consultation with the community. Therefore, not legally compliant and did not comply with the duty to co-operate.</td>

| MM594        |                         | Ian & Margaret Wright | Mr and Mrs | Wright  | 1370 | > SECTION 9 - STRATEGY AT THE LOCAL LEVEL > Burford Charlbury Sub Area > MAIN 193 | Bc1b Cole's Field housing proposal unsound because:  
- Access road unsuitable (i.e. down White Hill or along Barns Lane)  
- Field very steep  
- Field full of springs and watercourses which cause road to flood  
- Clause 9.6.34l - visual impact will be problematic, affecting a lovely view down the hill  
- Increased demand for parking inevitable in town and already the car park is too small and floods. |
| MM599        |                         | Mary Hannah | Mrs | Hannah | 1375 | > SECTION 9 - STRATEGY AT THE LOCAL LEVEL > Burford Charlbury Sub Area > MAIN 193 | We have no problem with the local plan proposed for new housing on the eastern boundary on Burford, as in our opinion it will be “in filling” between what has already been allowed to be built!  
As to the Area of Outstanding Natural Beauty and Conservation Area - this has already been marred by the other developments being allowed.  
With regards to the view across The Windrush Valley being destroyed, how many cars travelling along the route slow enough to observe this?  
As to the flooding in Witney Street, I am sure if there is to be an increased problem through climate change and Burford nestling on a hillside with gentle slopes, that the developers will consider underground water retraining tanks that will allow the rain water to then be slowly released through underground pipes in to the river Windrush.  
Regarding no suitable access - perhaps the previous planners who agreed to the housing being built beforehand, should have given more thought to the congestion “they” were causing on Wysoon Way, Barns Lane and Witney Street, as these roads are regularly used as rat runs to avoid the joys of the congested A40!!  
In our opinion this proposal still seems to be the better option, as Sheep Street, Priory Lane and Tanners Lane would not be able to cope ‘if’ plans were submitted for development on this side of Burford. |

I refer to the proposal to build 85 houses in the area known as Cole’s Field in Burford. While I understand the need to build more houses, this is the wrong plan in the wrong place, for the following reasons.  
The proposed access point in Barns Lane would be a disaster. The Lane is very steep and narrow, already much used by traffic going in both directions, and there is no footpath, so pedestrians are in danger. Nor is there any possibility of widening the Lane, or making a footpath, since the adjacent properties are built right up to the edge of the lane on both sides. The proposal happily included the idea of easy access to the centre of Burford and increased profits for the shops. This is not true; it is too steep and tiring to carry heavy parcels and most of the potential house owners would probably choose to shop elsewhere, using their cars and adding to the unwelcome additional traffic.  
The proposed access from Witney Street (not ‘Road!’) joins Witney Street very close to the access to a footpath much used by walkers with children and dogs. Anyone who knows the area would also be well aware that in precisely that area, water always accumulates and floods in winter, so that cars need to avoid it. Hardly an ideal access point! Any idea of flats or a care home in the area would also be an unwise development, attracting yet more traffic from residents and the staff and visitors to any patients.  
The proposed development is most unpopular in Burford, and the idea of attracting employment to the town... |

<td>&gt; SECTION 9 - STRATEGY AT THE LOCAL LEVEL &gt; Burford Charlbury Sub Area &gt; MAIN 193</td>
<td>I wish to object strongly to the inclusion in the draft local plan of the proposal to allocate 85 new homes to the site to the east of Burford known as Cole’s Field. My objection is on the following grounds: 1) The site is within the Cotswold Area of Outstanding Natural Beauty (AONB) and the Burford Conservation Area. Burford is a historic town with 252 listed buildings and is entirely unsuitable for a development of this size and character. 2) It will destroy the views across the Windrush Valley and the parish church from the A40 coming from Oxford and the A424 coming from Stow. 3) There was no prior consultation with Burford Town Council, our district councillor or the body which manages the AONB. 4) The site slopes steeply to the north and there is a clear risk of flooding. 5) There is no suitable access. Witney Street is a narrow country lane which is prone to icing up at the top and flooding at the bottom and bends sharply at the proposed access point. Frethern Close and Barns Lane are also narrow and are choked by parked cars.</td>
</tr>
</tbody>
</table>

I have looked at ‘Local Plan 2013 Examination’ ‘The Burford-Charlbury Segment’ and in particular the proposed Cole’s Field development. This development concerns me because I live in Burford and in particular because I live in Barns Lane adjacent to one of the proposed entrances. I enclose a map that shows the proposed development and my property (Barns Lane House). I recently attended an exhibition arranged by the developer for the benefit of Burford residents. My main concern is with access. The developer tacitly acknowledges this problem because there are three entrances. The estate itself is not so large as to need three entrances (and it is of absolutely no benefit to the surrounding houses, quite the opposite) so the developer is clearly acknowledging and trying to address this problem. As I understand it, the main access will be via Witney Street. This will increase traffic along what is a fairly rural road leading to problems at its junction with the A40. In the other direction, there is of course always the problem of accessing the High Street from any of its side roads. Frethern Close is the second entrance. I’m sure the residents affected will speak for themselves but the Close strikes me as a quiet residential road and not a thoroughfare to what would be a relatively large estate. As for Barns Lane, it divides into two sections. The lower section, running along the boundary of my property, is a single lane bound by retaining walls on either side: cars have to squeeze past pedestrians making their way from the upper section of Barns Lane to the High Street. This causes me two problems: 1. at the top of the lower section cars have to stop if another car is already ascending. They pull into my drive to allow passage. This problem will be made worse in proportion to any increase in traffic, of course. 2. the constant passage of vehicles over time destabilises my retaining wall (and the retaining wall on the other side). I have had to have this wall repaired a couple of times in the last few years. I know traffic is not the only factor but it is a factor and, again, can only get worse if the traffic is allowed to increase. Also, the |

main sewer runs down the middle of Barns Lane and I have had to have a repair carried out, necessitating the closure of Barns Lane, and I think traffic must have been a major factor in this case.

All this is quite apart from an HGV that was sent down Barns Lane by its sat-nav and in attempting to reverse out of the cul-de-sac, smashed a piece off my wall ... but that is another story, I'm sure you are aware of multiple events of this type along Barns Lane.

The developer plans for about 5 houses (+ some kind of old people's home) to be accessed by car from the bottom of upper Barns Lane. In addition he seems to be proposing to make the spur road into the development a kind of extension of upper Barns Lane, lower Barns Lane becoming 'no entry except for access' (I guess this would mean a 'no through road - access only' sign at the A40/A361 roundabout). This certainly reflects the difference between 'upper' and 'lower' Barns Lane (i.e. a road a single lane bound by retaining walls). That the developer feels it necessary to reduce by 5 the number of properties to be accessed from Witney Road indicates to me how serious he considers the access problem to be. I would like to object to this proposed development on the grounds that it has no suitable access.

I understand that an alternative development site has been considered, along Shilton Road. I am not familiar with the arguments for and against but would simply point out that this proposed site has no access problems.

David Mr  
-  
1384  
> SECTION 9  
- STRATEGY  
AT THE LOCAL LEVEL  
> Burford  
Charlbury  
Sub Area  
MAIN 193  
We have read with concern the proposed plans to build 85 dwellings on Coles Field in Burford. Whilst we understand the need to build more housing we are not convinced this is the best place to put houses. Traffic congestion on the A40 and the Burford High Street is already a problem and 85 houses x 2 cars per household will add another 170 cars to the picture. Witney Street where we live already gets very busy especially when there are problems with the A40 and the town rightly attracts many visitors all year round. It is our opinion that Shilton road might be better suited to any new developments if Burford has to take its share of new housing.

I am writing in reference to the proposed development of some 85 houses on Cole’s Field in Burford. While acknowledging the need in Oxfordshire for new housing I must express serious opposition to this proposal. My criticism of the proposal are for the following reasons:

1) The A40 is already suffering from major traffic problems between Burford and Oxford. Yet demand is related to Oxford’s needs.

2. There has been no proper survey carried out.

3. There has been no proper consultation with Burford Town Council.

4. Cole’s Field is on a hill and there is a water run-off down to Witney Street which is running alongside the flooding area beside the Windrush.

5. It will if badly designed detract from the economy and style of Burford "the gateway to the Cotswolds." The views and countryside walks along the Windrush are celebrated as one of the county's most attractive walks - an area of beauty and true historic interest.

6. It is indeed within the Area of Outstanding Natural Beauty and a Conservation Area. The congestion on the A40 and extra traffic caused by the scheme will inevitably create disruptive traffic on the quiet and narrow country road.

| MM609         |                         | John R Histon  | -                | Histon            | 1385       | > SECTION 9 - STRATEGY AT THE LOCAL LEVEL > Burford Charlbury Sub Area > MAIN 193 | For the above reasons and since I find it hard to understand why a flat plain region along the A40 near Oxford is eschewed rather than a steep sloping field with flooding risk - I must deplore such a proposal.
I also feel that a responsible developer would not seek the approval and support of existing residents by discussing the size and design of the scheme in advance. An excellent illustration along Witney Street is Chapman's Piece. Let the developers scale this scheme and design to fit the area, its history and its depth. |
| MM30          |                         | Ivan Hall      | Mr               | Hall              | 1386       | > SECTION 9 - STRATEGY AT THE LOCAL LEVEL > Burford Charlbury Sub Area > MAIN 193 | I am writing to you to express my objections to the draft plan to allocate land to the east of Burford for a potential development of 85 new houses. My key objections are on the grounds of the robustness of the plan; the practicality of its delivery; and the safety of residents and visitors. In support of these objections, I contend that:
1. Robustness
   - There was no prior consultation on the plan with our local WODC councillor (Derek Cotterill); with the Town Council; or with Cotswold Conservation Board or Historic England
   - The site is in the Cotswold AONB where previously no major development has been allowed
   - Contrary to statements within the draft plan, the site is clearly visible from the town and its surrounds
   - The previous draft local plan said that “the development potential of land surrounding Burford is heavily constrained by the sensitivity of the landscape although there may be some scope for a small-scale extension of the built-up area”. This has been struck through in the new draft with no explanation as to why this is so.
2. Practicality |

With reference to the proposal to include the site locally as Coles field in to the Revised Draft Local Plan. This proposal is ill thought out by your team. It would seem that you have drawn on a plan without deep thought as to the implications on the environmental effects on Burford Town.
The location is in an area of outstanding natural beauty as you should well know. There has been a local developers proposal exhibited in the Town.
Apart from the site contours are quite extreme for residential development, the access points for the site are totally inadequate for a development of this size. Witney Street and Barns Lane are totally inadequate to service such a site, both narrow lanes heavily used to avoid the constant traffic jams on Burford High Street.
The Burford sewage system as existing is at this time inadequate for the Town. As you will know the is still the problem of raw sewage flowing down the gutters on the High Street at times relating to the weather conditions. The site is therefore totally inappropriate on the terms of Infrastructure alone, access, sewage and surface drainage. We then come on to the location of the consideration of Burford being a overflow to Oxfords housing demands. The A40 is at almost total capacity at present, Highways attempt to improve the traffic flow at the two roundabouts just completed will be as of nothing due to the vast housing development now under construction close to the Pear Tree Roundabout.
There is a large site close to Carterton and Shilton under construction at this time and there is vacant MOD land in Carterton that has infrastructure in place, that could be developed The WODC is wrong in looking at sites as far away from Oxford as Burford where the impact on a small town, currently inadequately serviced by creaking infrastructure, that will bring chaos to the current environment, and also detrimentally change the character of this small town. |
• The draft plan is incorrect when it states that the site slopes “gently down towards the north east corner and the Witney Road”. In fact the slope is very steep down to the proposed access point on Witney Street and would require a massive excavation of earthworks

• The site also falls steeply down to the houses to the north. Any development would bring the serious risk of flooding to dwellings in Orchard Rise, Windrush Close, Swan Lane and down as far as Witney Street. All such premises narrowly escaped serious flooding in 2007 because the (arable field) site was able to absorb most of the significant rainfall in that year.

3. Safety

• The draft plan contemplates that the main vehicular access to the site would be from Witney Street (aka the Witney Road in the draft plan) and this road would become a main gateway to Burford from the A40 and the east

• Leaving the A40 from the east into the so called Witney Road (White Hill) is a major safety hazard for drivers, particularly at night and in poor visibility. The junction is difficult to see and nerves of steel are needed when waiting in the middle of the carriageway with vehicles passing closely on both sides at 50+ mph. One nudge from behind could easily take waiting vehicles into the west bound traffic

• The Witney Road is a narrow, unclassified lane that experiences flooding, severe icing and fog pockets in the winter

• It is also widely used by walkers and cyclists. It is part of the popular circular walk around Burford and on the national Cycle route (57)

• Vehicular access to the site from the north, south or west would also be complicated. Options appear to be:

  i. manoeuvring through the centre of Burford with several turns, narrow roads and busy traffic (particularly in the summer months)

  ii. using Barns Lane which is narrow and steep and has no footpaths at its lower end. It also has many parked cars and is a twice-daily route for children and parents walking to the local primary and secondary schools

  iii. passing Burford on the A40 and doing a difficult 270 degree turn into the east end of the Witney Road near the Ramping Cat House.

Clearly Burford should take its proper share of new dwellings to meet local needs. It should not be responsible, however, for housing more Oxford commuters that would add further traffic at peak times to the busy A40. Some smaller scale developments have already occurred within Burford e.g.in Falkland Close and the Frethren Close estate. In addition, the previous draft plan also identified further possible sites in Burford at Tanners Lane, Burford Cottage Hospital and on the land to the south of Sheep Street. It is not clear why these have been deleted from the Plan. It is also unclear whether serious thought has been given to flat land on the south side of the A40 (outside the AONB and not in sight from the north).

Please take account of these objections as part of your further drafting of the Plan. I look forward to seeing the next version which I hope will be more robust and practical, and will enable the continued safety of Burford residents and visitors.

<td></td>
<td>Cecil Balmond</td>
<td>-</td>
<td>Balmond</td>
<td>1387</td>
<td>&gt; SECTION 9 - STRATEGY AT THE LOCAL LEVEL &gt; Burford Charlbury Sub Area &gt; MAIN 193</td>
<td>I wish to object to the inclusion in the draft local plan of the proposal to allocate 85 new homes to the site to the east of Burford known as Cole’s Field. My objection is on the following grounds: 1. The site is within the Cotswold Area of Outstanding Natural Beauty (AONB) and the Burford Conservation Area. Burford is a historic town with 252 listed buildings and is entirely unsuitable for a development of this size and character. An addition of 85 homes is a high proportion of the existing urbanisation and impacts fundamentally on shifting the town East and Southwards affecting the centric charm of the main spine fed by the minor roads Witney and Swan Close etc. The special feeling to the town is due to its close knit spread and a new sprawling 5 Hectare plus new development destroys this charm. The narrow Witney Street will be seriously blocked with traffic creating nuisance to the old homes near to the main North South road in the town. The other particular charm of Burford is the open around the landscape, open fields with spectacular views as one approaches from the A40. This will be totally compromised by the proposed development. 2. It will destroy the views across the Windrush Valley and the parish church from the A40 coming from Oxford and the A424 coming from Stow. 3. There was no prior consultation with Burford Town Council, our district councillor or the body which manages the AONB. 4. The site slopes steeply to the north and there is a clear risk of flooding 5. There is no suitable access. Witney Street is a narrow country lane which is prone to icing up at the top and flooding at the bottom and bends sharply at the proposed access point. Frethern Close and Barns Lane are also narrow and are choked by parked cars. 6. We are the owners of Bull cottage at 12 Witney Street, the oldest property in town from 1390. The extra traffic will add vibration to the street, add toxic fumes from cars and service lorries and damage the original fabric. 7. Therefore on the above grounds we object strongly to the development by Carterton Construction at Burford.</td>

<td>M Ruth Handley</td>
<td>-</td>
<td>Handley</td>
<td>1390</td>
<td>&gt; SECTION 9 - STRATEGY AT THE LOCAL LEVEL &gt; Burford Charlbury Sub Area &gt; MAIN 193</td>
<td>I wish to strongly OBJECT to the inclusion in the draft local plan of the proposal to build 85 new homes and a 60-bed extra-care facility on the agricultural land to the east of Barns Lane in Burford known as Cole’s Field. My principal objections are as follows: Flood Risk - Clause 9.6.34j states the site slopes &quot;gently down towards the north east corner&quot;. In fact, the site slopes steeply down towards the north and thus any development on the land would create a flood risk for the houses and land below in Swan Lane, Orchard Rise, Windrush Close and beyond, especially as the river Windrush on the north side of Witney Street has a tendency to flood. Views of Burford - this development would be seen for miles around - not just &quot;fleetingly&quot; from the A361 north of Burford - such as the A40 coming from Oxford, the A424 from Stow, the Swinbrook area. The lovely view of Burford has already started to be eroded by the houses built on Oxford Road, Frethern Close, Wysdom Way, Barns Lane (to the north &amp; west of the site).</td>
</tr>
</tbody>
</table>
"Protected" area - the site is within the Cotswold Area of Outstanding Natural Beauty (AONB) as well as the Burford Conservation Area - Burford being a very small historic town (population less than 1500) with 252 listed buildings. It is built on a steep hill with the busy A40 at the top and the river Windrush at the bottom - the only access north is via the High Street (A361) over a narrow one-width bridge controlled by traffic lights. The town has narrow roads with buildings either side and is entirely unsuitable for a development of this size and character, especially given the severe access difficulties. I would also question the point of designating areas as being in an AONB and a Conservation Area when planners then decide to completely ignore any planning restrictions.

Access from the east - Clause 9.6.34m refers to Witney Road (sic) - it is actually called Witney Street. The draft suggests that Witney Street could "also provide a gateway entrance to Burford from the east". This would be a disaster for Burford and traffic in general - some issues being as follows:

* the road off the A40 (known as White Hill) falls quite steeply before Witney Street (the draft refers to "gradient issues") and is frequently icy in the winter and prone to flooding. It is also used by many walkers (heading to 'the meadows' and further beyond to Swinbrook and Asthall. It would definitely not be suitable for regular use by large vans or HGVs - or indeed a multitude of cars heading north and wishing to 'cut off the A40 roundabout corner'.
* most houses on Witney Street in Burford have no off-street parking available and thus cars are parked 24/7 along the road. Where would they go? There is already a parking shortage in Burford.
  * Witney Street becomes one-way and one-car width only as it reaches the High Street (A361) - with buildings tight on either side. Access onto the High Street is often difficult.
  * There are two roads leading off Witney Street before the High Street: to the left, a tight turn into Pytt’s Lane which is a narrow road going uphill to Barns Lane, even narrower and steeper; to the right is Guildenford where again houses have no off-street parking. The only town car park is at the bottom of Guildenford to the right (entry & exit being over a narrow one-lane bridge) - to the left, the road becomes Church Lane which winds its narrow way to the High Street (A361). Not suitable for regular use by large vans - or a multitude of cars.

Access from other directions - Clause 9.6.34m mentions "secondary vehicular accesses may also be achieved from Frethern Close/Wysdome Way to the south and Barns Lane to the west". This is not correct.

* access to both Frethern Close and Wysdome Way is only via Barns Lane so the above statement is incomplete
* Barns Lane itself is a small exit road off the Burford Roundabout (A40/A361 junction) with an immediate very sharp dangerous bend - houses on the right have no off-street parking available. Barns Lane is not suitable for regular use by large vans (eg daily deliveries to the proposed care centre) or a multitude of cars, especially as it becomes one-car width down a steep hill with stone walls either side before the Swan Lane junction - Barns Lane then becomes Pytt’s Lane which, as previously mentioned, is narrow - stone walls either side.
* no mention of access from the north - traffic would have to come up the already very congested High Street (very steep hill) to get access to the site via Barns Lane.

I would urge you to delete this site from consideration for the draft local plan.

We write to comment on the draft Local Plan 2031:

<td>1392</td>
<td>&gt; SECTION 9 - STRATEGY AT THE LOCAL LEVEL</td>
<td>We write to comment on the draft Local Plan 2031: There are a number of principles that we support.</td>
</tr>
</tbody>
</table>
1. The draft plan says that the Cotswold AONB Management Plan has been a key influence (page 12).

2. Furthermore, the plan says that there is 'an acknowledged need to further enhance and extend habitats' (p20) and that even relatively small scale developments on land in the AONB would only be permitted where demonstrably in the public interest (p120).

3. The overall strategy is to 'locate development in the right places' specifically mentioning the need to 'protect important areas such as Green Belt and AONB (p30).

Much is made elsewhere in the report on the importance of the tourist industry in and around Burford; the AONB, the listed buildings, the scale and ambience of the town all being recognised as important contributory factors. It is because of this that we object to the specific proposal to develop 85 homes on land to the east of Burford (p54).

Paragraph 9.6.34g on page 290 which recommends the development of this land is inconsistent with the overriding principles. No justification is given for needing to build on this land. Where is the real effort to explore alternative options even though WODC is aware that there are other proposals for housing in and near Burford currently under consideration.

Paragraph 9.6.34j says that the land in question 'slopes gently'. It does not. Whilst it is relatively level at its southern section, it slopes steeply to the north - as steeply as Burford High Street! It is also subject to water run off.

Contrary to paragraph 9.6.34k, vehicular access is not easy, either from Witney Street or from Barns Lane which is on a particularly steep and narrow part of the road. Even now there is no room on the steep stretch of Barns Lane between the proposed entrance to the Cole's Field site and Swan Lane for a footpath.

Paragraph 9.6.34q does not summarise cogent arguments. Rather it is dismissive of the importance of the AONB and of the topography of the land and of vehicle access issues.

With regards to the proposed development of 85 homes we would like to point out that there is no account taken of the current infrastructure problem the existing Burford residents face. These include:

- limited school places
- a medical practice that is oversubscribed
- limited parking facilities
- very limited public transport, consequently over reliance on private cars
- traffic grid lock, a regular feature on The Hill with a recent serious accident between a car and a pedestrian highlighting the consistent traffic problems and dangers.

The infrastructure is currently struggling to cope with supporting Burford residents and the numerous tourists and coach parties that visit on a daily basis. This proposal does not take into consideration the further infrastructure that would be needed to support the proposed 85 homes.

The questions we would like to ask is where within the proposal plans for Burford do you plan to increase the
**Comment (plain text)**

**existing infrastructure? For example, how do you propose to deal with added burden of such a significant population increase for such a small community?**

It seems to us that there is a deliberate disregard for an area of AONB/Green Belt and the nature of its outstanding heritage. We would therefore like to object in the strongest possible terms.

---

**Jeremy Burnett**

> Cole's Field, Burford

We would like to give the WODC our views on the proposed development of the above. We would object for the following reasons:

* It is within the Area of Outstanding Natural Beauty and the Conservation Area.
* There is no "gentle" slope onto Witney Street.
* The water table on the land road side of the Wind rush river is regularly very high causing flooding of the large area including the public footpath leading to Widford.
* We would like to ask where the run off water will be directed, what drainage proposals are in place, are they viable? We have experienced living in the Madley Park development in Witney where we were advised the measures taken to contain the obvious extra rain water run off was adequately provided for. It was not, causing a large flooding problem both on Madley Park and further down in Witney town.
* The Burford sewage system is not able to accept any more domestic sewage as is well documented.
* The work prospects for future owner occupiers in the immediate area is extremely low as is obvious, therefore a journey into Witney/Oxford or beyond will be necessary along an already overloaded A40.
* The public transport services from Burford are much reduced and not conducive with hours of work.
* However Charlbury has a good train service to Oxford/ London but the proposed development there is for 40 houses not 85!
* There is no proof of the necessity for a development of this size in Burford although there is need for a small amount of Affordable/Social housing for the families needing housing at a lower purchase price/lower rent.

We feel that the Local Plan desperately needs to take a long term view of the housing needs in the Witney/Oxford/Bicester areas where access to employment is more readily available via public transport/ cycling etc., not long car journeys, otherwise we will be creating a massive problem in future years regarding the road systems which are already heavily overloaded.

We live at the top of the Hill in Burford and can confirm the traffic is daily at a standstill from the roundabout (A40).

We would appreciate your planning officers taking a long term view of this area of Oxfordshire please, it is extremely worrying to be constantly wondering if anyone really cares or listens to the voices of the people affected by their decisions. We are writing to you in anticipation of, maybe, our voices being heard.

---

**Mr & Mrs Tighe**

> My wife and I wish to object to the proposal for the following reasons:

**Flooding risk - the site falls away sharply at its northern boundary into the gardens of Orchard Rise.**

These gardens are formed in a series of terraces and flooding already occurs to some degree in times of heavy rain. If the field becomes predominantly tarmac and concrete we fear a significant subsidence risk will arise. This issue will also affect Windrush Close, parts of Swan Lane and Witney Street.

**Access - We note the change of site plan which may or may not mean access from Witney Street. In any event, access to this site would involve circa 125 extra vehicles using Barns Lane, Frethern Close and possibly**

| MM616         |                         | CG Sparkes      | Dr Sparkes       | 1396       | > SECTION 9 - STRATEGY AT THE LOCAL LEVEL > Burford Charlbury Sub Area > MAIN 193 | Witney Street. The first two roads are narrow, occupied by parked cars and fast becoming a "rat-run" used by drivers to avoid the congested High Street. The use of Witney Street, presumably on the blind bend as you exit Burford, also means regaining the A40 at the Ramping Cat Nursing Home. This junction is already dangerous and heavier congestion may have serious and unintended consequences. If the egress from the proposed development is into Burford itself, the single lane exit from Witney Street onto High Street will become even more of a traffic problem.

Additional infrastructure - 85 houses brings with it circa 300 people who will require a surgery, schooling and public transport facilities. Are there any plans in place to accommodate this extra demand when the waiting time for a doctor's appointment is already over 7 days, the schools are oversubscribed and the local bus service is struggling.

Area of Natural Beauty - Burford lies within the Cotswold AONB and attracts many tourists from all over the world, helping to keep the town vibrant 2nd to help the local economy. Not only were we led to believe that large development would not be permitted within the AONB but also any such development could have a very negative effect on the attractiveness of the town to visitors.

The proposed site is not, in our opinion, well screened from any direction. It is highly visible from all roads and, of equal importance, is also highly visible from the many walking routes which are used throughout the year by locals and visitors alike.

For the above reasons we feel strongly that the proposed development, which has suddenly appeared without local consultation, would be bad for Burford and bad for WODC. |
| MM716         |                         | Oonagh Barber    | Mrs Barber       | 1397       | > SECTION 9 - STRATEGY AT THE LOCAL LEVEL > Burford Charlbury Sub Area > MAIN 193 | We would like to submit my strongest objections to the proposal for 85 new houses to be built on Cole's Field on the Eastern boundary of Burford. Burford is a unique town in terms of its history, its remarkable buildings and natural beauty. Its economy is maintained by tourism.

The proposed development can only have a detrimental effect on this conservation area in an AONB. The views across the Windrush Valley would inevitably be destroyed for visitors, walkers and international tourists.

In addition the current drainage systems could not support additional housing down the steep slope into the town. New access roads to the proposed houses would cause significant problems to the town - the roads in and around Burford get quickly jammed by the already heavy traffic that flows through. HGVs cause already unacceptable problems to traffic flow as they try to find alternative routes to the Bridge via side roads.

I understand that there is an alternative site in Shilton Road which is currently under review - this has not been mentioned in this proposal - it would be a much more suitable site. |

| MM617         |                         | Dr S G Barber  | Dr               | Barber            | 1398       | > SECTION 9 <STRATEGY AT THE LOCAL LEVEL > Burford Charlbury Sub Area > MAIN 193 | 4. There is no opportunity to widen the road access along Bames Lane or Swan Lane. I urge the WODC to reject these plans.  
1. The site is within an Area of Outstanding Natural Beauty and Conservation Area.  
2. The site does NOT "slope gently" but is steep.  
3. The access to the site from Bames Lane is narrow and winding, with trucks already getting stuck in it after inadvertently entering it from the A40/A361 roundabout.  
4. Access via Swan Lane from The Hill (Burford main street) is similarly narrow and difficult with existing traffic levels. Drivers currently avoid this route as a result of these problems.  
5. Access to the Burford main street from the proposed site is already congested, narrow and frequently dangerous. Pedestrians and drivers therefore avoid this route where practicable.  
6. Pedestrian access along each of these three routes is already dangerous, with narrow pavements in Witney Street and none in Swan Lane or the steep parts of Barnes Lane.  
7. Sites to the South of the A40 should be explored again, since these would avoid the congestion and dangers that the proposed site would generate.  
Please recommend the WODC to reconsider and reject the current November 2016 proposal |
| MM13          |                         | dp             | mr               | price             | 14         | > SECTION 9 <STRATEGY AT THE LOCAL LEVEL > Burford Charlbury Sub Area > MAIN 193 | As a resident who has suffered from excess traffic, rain water and parking within Burford, I struggle to see how a further 85 houses within the most densely populated area within Burford will help these issues.  
The use of Barns lane for any further traffic seems unsafe and unwise in my view. It has to manage single file traffic, on a lane which also has to allow foot traffic which at times can prove unsafe even with the current levels of traffic and housing. I cannot see how this is a feasible access point (be it primary or secondary) for a potential further 200 cars potentially to be moving through the lane each day.  
The reference to water drainage seems to go without true consultation with local residents, many of whom already suffer with rainwater run off and problems which would only be exacerbated by development of such a crucial first line of defence to the town.  
Finally, the AOB designation put significant constraints on all residents and is understood and accepted as it maintains the integrity of this crucial element of English history and a significant tourist trap - helping the local economy and employment. The impact of such a development with its visual impact and fundamental shift from the current layout of the town will in my opinion ride roughshod over all elements of the principals of AOB. |
| MM717         |                         | Nora Thomas    | -                | Thomas            | 1400       | > SECTION 9 <STRATEGY AT THE LOCAL LEVEL > Burford Charlbury Sub Area > MAIN 193 | No one in their right mind could consider the proposed potential development of Cole's Field.  
If you live in the area as I have since 1962 you are very aware of the increase in traffic over the years. The conditions in the High Street are often appalling. Are you seriously considering spreading this to White Hill and Witney Street where the road widths are considerably narrower.  
With road traffic increasing by 5% per annum a nightmarish picture arises. And that’s just considering getting |
My husband and I write to express our extreme concern that the above land is being considered for a development of 85 houses. Our two fundamental objections are on the grounds of traffic and of potential flooding, though there are many other reasons why this plan would not, in our opinion, be acceptable.

1. TRAFFIC AND THE PROPOSED ACCESS TO THE DEVELOPMENT VIA WITNEY STREET

Witney Street is used extensively for parking by both residents and visitors, which effectively makes the road too narrow for two cars to pass along it in opposite directions without constant deferring. To add a busy access road would exacerbate an already difficult situation. We live on Sylvester Close and frequently we cannot enter Witney Street (our only egress from the Close) to go either left or right because of stand-still traffic queuing to the intersection with the High Street. This is equally true of sometimes not being able to get back into Sylvester Close, because of queuing traffic, to get to our home. To add even more traffic would make this situation untenable for local residents, and potentially dangerous as access to Sylvester Close and the High Street end of Witney Street would be hampered for emergency vehicles. Also, the efficiency of the Fire Station on Witney Street, would undoubtedly be adversely affected by the additional traffic.

Additionally, Guildenford and Church Lane, which serve the only car park in the town, are already dangerously narrowed by parking and cannot tolerate more traffic. The High Street is already at gridlock for significant parts of every day and to add such a large housing development will only make it worse. Until there is a bypass for Burford Hill - or at least a lorry ban -we cannot understand how adding so many houses to the town, and therefore more traffic, can possibly be considered a good thing.

2. POTENTIAL FLOODING RISK

The local plan makes reference to the proposed plot of land as being "gently sloping". This is a vast underestimate of the reality - it is a steep slope. The plan also says that the land is not in a flood zone: As the land is at the top of the hill this is undoubtedly true - but surely to build such a large development on arable land can only cause the rain to run off that concreted and tarmaced area and potentially cause real flooding into Burford from the East.

To even consider traffic from the opposite direction aiming for a Cole’s Field building estate is even more ludicrous.

Another serious effect would be that of the obvious increased likelihood of flooding in the Swan Lane and Swan Lane Close area. With the disappearance of the field which is able to absorb much of the heavy rain which is one of the effects of climate change this must surely happen. Anyone who has been walking from Swan Lane Close to the High Street will have experienced the rain rivers rushing down Barns Lane across Swan Lane, turning left into Swan Lane Close. And that’s with Cole’s Field acting as an absorbent. The result would be horrifying.

I don’t quite understand the point of acknowledging particular areas such as Burford as needing protection both for now and future generations if lust for money takes precedence. These places are irreplaceable and future generations would quite rightly curse us for being foolish and feeble enough to allow Burford to be completely ruined.

No one in their right mind could agree to such destruction of Burford that the building of a housing estate such as this would cause.

Perhaps you need to live in such a special place to be fully aware of this potential threat.

<td>&gt; SECTION 9 - STRATEGY AT THE LOCAL LEVEL &gt; Burford Charlbury Sub Area &gt; MAIN 193</td>
<td>problems for people further down the hill. This must be particularly true for those residents of Orchard Rise and of Witney Street, but for many others as well. 3. DESTRUCTION OF GREEN BELT LAND AND AN HISTORIC TOWN A development of this size, in our opinion, is tantamount to vandalism of the countryside. Once built the land is destroyed forever. This is particularly true when it affects an important historic town like Burford. The plan suggests that the development would be good for the economy of the community. We would argue quite the opposite. Ancient towns like Burford are largely reliant on tourism and to damage the integrity of the town with this proposed development would most certainly NOT serve the community and nor would it benefit posterity. Thank you for giving us the opportunity to air our very real concern about this proposal.</td>

<td>I wish to object to the inclusion in the draft local plan of the proposal to allocate 85 new homes to the site east of Burford known as Coles field. My objection is on the following grounds: 1. The site is within the Cotswold area of outstanding natural beauty, Burford conservation area. Burford is a historic town with 252 buildings and is entirely unsuitable for development of this size and character. 2. It will destroy the views across the Windrush Valley and the parish church from the A40 coming from Oxford and the A424 coming from Stow. 3. There was no prior consultation with the Burford town Council, our district councillor or the body which manages the area of outstanding natural beauty. 4. The site slopes steeply to the north and there is a clear risk of flooding 5. There is no suitable access road, Whitney Street is a narrow country lane which is prone to icing up at the top, and flooding at the bottom and bends sharply at the proposed access point. Frethern close and Barnes Lane are also narrow and are choked by part cars, Barnes Lane has a very dangerous blind bend before access to the A40 roundabout, with potential for accidents to occur. 6. A more suitable location would be near to Carterton, which has the advantages of good access to supermarket grocery shopping, and also gas supplies for home heating, both of these are not available in Burford,</td>

| MM620        |                        | Susan Judge    | -                | Judge             | 1408       | > SECTION 9 - STRATEGY AT THE LOCAL LEVEL > Burford Charlbury Sub Area > MAIN 193 | I recently received a letter from you proposing to include the building of 85 houses on land to the rear of my property, known as Coles Field.

I am writing to put forward my opposition to the building of houses on this site for the following reasons:

1 - The site is within the Conservation Area and is classified as an Area of Outstanding Natural Beauty

2 - Burford is the second most visited tourist destination in West Oxfordshire, famous for its ancient buildings and layout of the Town. Our ancient buildings and pristine surrounding countryside is an irreplaceable asset that will serve the economy of this town well beyond my generation. This development would be extremely prominent and would irreparably damage the landscape and views of the Town from both the A429 and A361, both important vantage points. I am fearful of the adverse effect this will cause on the natural landscape and in turn, on tourism.

3 - There is no viable access to the site. The proposed access from Witney Street would be dangerous and cause major traffic problems in Witney Street and the junction with the High Street. Barns Lane is a single-track road at the lower end with no footpath, so the extra 'limited access' proposed would again cause major problems.

4 - There is a current planning application for housing in Shilton Road, and Burford Town Council have suggested alternative sites which would provide the number of houses required without the impact on the Old Town. I believe these to be much better options to serve the growing housing needs of the Town.

I contacted my local District Councillor, Derek Cotterill and Burford Town Council for more information and was staggered that neither has been advised or consulted on this proposal. This doesn't give me much confidence in your consultation process and I have concerns this application is being steamrollered in, without the proper dialogue and due diligence.

As a lifetime resident of Burford and an active community member, I must reiterate that I am deeply concerned about the potential ecological and economic impact of this development for our ancient town. I fully intend to join community efforts to make sure that this planning process is conducted properly and the right outcome achieved. |

I wish to object to the inclusion in the draft local plan of the proposal to allocate 85 new homes to the site to the east of Burford known as Cole’s Field. My objection is on the following grounds:

1. The site is within the Cotswold Area of Outstanding Natural Beauty (AONB) and the Burford Conservation Area. Burford is a historic town with 252 listed buildings and is entirely unsuitable for a development of this size and character.

2. It will destroy the views across the Windrush Valley and the parish church from the A40 coming from Oxford and the A424 coming from Stow |

<td>&gt; SECTION 9 - STRATEGY AT THE LOCAL LEVEL &gt; Burford Charlbury Sub Area &gt; MAIN 193</td>
<td>We had the opportunity to see the Carterton Construction proposed scheme for new homes in Burford this afternoon, and wish to state our very real objection to any development in Cole's Field. Our first complaint is the arbitrary manner in which this project is being pursued, contrary to the wishes of the Burford Town Council, and the district councillor. Secondly the siting militates against the concept of the Cotswold Area of Outstanding Natural Beauty, and would put a blight on the views of the parish church and beyond, and thirdly the access roads are already congested, and such a development would only exacerbate the situation. Doubtless there are many other reasons for faulting the proposal, but the manner in which the project has been imposed on the local council without consultation, justifies its failure. We would be grateful if you would lodge our objections.</td>

<td>&gt; SECTION 9 - STRATEGY AT THE LOCAL LEVEL &gt; Burford Charlbury Sub Area &gt; MAIN 193</td>
<td>I am writing to object to the inclusion in the draft local plan of Cole’s Field as a suitable place to build 85 houses or any similar project. The steep slope of the land and risk of flooding are clearly against it as is the fact that it will destroy the views which are part of the heritage of a Cotswold town such as Burford. Surely there should have been consultation with AONB, and our own Town Council. But by far the greatest objection must be that the proposed access in Witney Street and Barns Lane to such a new development is just not viable. Witney Street is narrow and winding, a country road subject to flooding and used to capacity already. Barns Lane is dangerous because of the junction to Swan Lane and too narrow to take extra traffic. I realise that homes must be built somewhere but this site should be dropped from the draft local plan as not feasible on many counts.</td>

<td>&gt; SECTION 9 - STRATEGY AT THE LOCAL LEVEL &gt; Burford Charlbury Sub Area &gt; MAIN 193</td>
<td>Can it be possible that there is to be consideration for this ridiculously sized development for a Cotswold town in an AONB area? The volume of traffic using the A40 &amp; A361 regularly creates gridlock around Burford town. Ref 9.6.34p There will be massive detrimental impact on the environment and surrounding landscape by the imposition of a so-called ‘gateway’ to Burford in Witney Street and the building of this estate of houses. These lanes currently mostly carry light traffic and due to the nature of the flooding risk, icing over in winter and narrow approaches should remain so. It is a walkers route with the recent addition of a narrow roadside footpath and when this path becomes very wet - regularly - walkers tend to walk along the road. This path leads into the fields and the only access to walks along the River Windrush.</td>

<td>&gt; SECTION 9 - STRATEGY AT THE LOCAL LEVEL &gt; Burford Charlbury Sub Area &gt; MAIN 193</td>
<td>The road from Asthall to Burford is indicated on maps as 'a scenic route'. THIS is 'the gateway' to Burford and will not be enhanced by the view of tens of new houses on an 'estate development'. There will inevitably be many extra cars, delivery vans, and lorries along this narrow, winding, flood and ice prone lane. Will users of the proposed properties choose walking as a means to visiting the town centre - if indeed they were to use the town's facilities? More likely to fill the town with their parked cars or block up the currently heavily used and impossibly frustrating A40 routes to access other shopping areas. Additionally a 'rat-run' would be created for traffic trying to avoid the frequent grid lock in the town from the north or east. Access to and from the A40 from this road, particularly from the east, can already cause frustration and delay, a situation which will be made worse. It has generally been accepted that the traffic situation on the A40 is unsustainable and to introduce the possibility of further problems for access to the East, in particular, smacks of some 'dumb thinking' on behalf of those who are appointed to serve our town and county's interests. A commonly used phrase for some of us when growing up was USE YOUR NOUS. I urge all those involved in this decision to do so.</td>

<td>&gt; SECTION 9 - STRATEGY AT THE LOCAL LEVEL &gt; Burford Charlbury Sub Area &gt; MAIN 193</td>
<td>The proposal to build 85 new homes on the land East of Burford on site 144 (Cole's field) should be rejected for the following reasons: a. The steepness of the slope will be unsuitable for motor vehicle access during ice or snow conditions. Also, the area is liable to flooding. b. Due to the steep gradient, access using Bames Lane at the junction with Swan Lane would be dangerous in icy conditions. c. To use Witney Street as a main access to Burford High Street would deprive Witney Street residents of car parking spaces. Witney Street is too narrow and is in a conservation area. d. The site is in the Cotswold Area of Outstanding Beauty. Many visitors to the area enjoy the walk from Burford to Swinbrook. The proposed housing estate would spoil magnificent scenery. e. Views from the A424 Stow Road towards Burford would be spoilt. Please reject the proposal to build houses on site 144.</td>

<td>167</td>
<td>&gt; SECTION 9 - STRATEGY AT THE LOCAL LEVEL &gt; Burford Charlbury Sub Area &gt; MAIN 193</td>
<td>I wish to object to the proposal in policy BC1b concerning land east of Burford (&quot;the site&quot;). My objections are that this conflicts with policy set out in the draft local plan (&quot;DLP&quot;), is impractical and has not been the subject of proper process and consultation. Numbers in the text below refer to paragraphs in the DLP. ROADS AND TRAFFIC The policy in the DLP includes the following: CO1 Enable new development, services and facilities of an appropriate scale and type in locations which will help improve the quality of life of local communities and where THE NEED TO TRAVEL, PARTICULARLY BY CAR, CAN BE MINIMISED. [Emphasis added] It is very unlikely that more than a tiny proportion of occupants in a new development on the site would work locally. It is probable that the great majority would work in larger centres such as Oxford, Cheltenham or Swindon. This almost certainly means travelling by car. Burford has a roughly hourly bus service to Witney and Woodstock and three buses per day to Oxford or Cheltenham. The nearest station, Charlbury, is eight miles away and is only accessible by car although its car park is regularly full. The local roads are not adequate to cope with the extra load. It is contemplated that the main access to the site would be the road (incorrectly called Witney Road) connecting Burford to the A40 and that this road would also become a &quot;main gateway&quot; to Burford from the east (9.6.34m). This is a narrow country lane. It has a difficult turn from the A40 across heavy traffic going east, the hill below is prone to icing in winter (as the road sign there points out) and it is regularly flooded on the lower parts (which can also be icy when wet). Numerous accidents have taken place along this stretch. The proposed access point is on a blind bend and below a steep bank. Further on, any cars using the road to reach Burford town centre have to go along a road with cars parked on both sides where it is frequently necessary to give way to traffic coming in the other direction. It ends at a narrow one way junction with the High Street which is regularly choked with traffic and from which a right turn is difficult. The DLP gives no explanation of how traffic to the site from the north, south or west would reach the site but there would be little choice but to go via the congested High Street and then narrow roads such as Swan Lane, Barns Lane, Pytts Lane and Guildenford. These are also occupied by parked cars and often have no pavement. It should be noted that the only public car park is frequently full and that parking is a serious problem. The only other access possible access points are from Barns Lane (see above) or via Barns Lane into Frethern</td>
</tr>
</tbody>
</table>
Close (another road full of parked cars).

ENVIRONMENT AND LANDSCAPE

The DLP includes these policies

CO2 Ensure that new developments are suitably located and well designed to protect and enhance the individual form, character and identity of our towns and villages as well as contributing to the quality of life in West Oxfordshire

CO14 Conserve and enhance the high environmental quality of West Oxfordshire with protection and promotion of its diverse landscape, biodiversity and geological conservation interests, and its local cultural, heritage and environmental assets.

E4 Proposals in the Cotswolds AONB should conserve the landscape quality and biodiversity of the area and support the objectives of the Cotswolds AONB Management Plan and Sustainable Tourism Strategy.

EH1 When determining development proposals within or impacting upon the Cotswolds Area of Outstanding Natural Beauty, great weight will be given to the conservation of the area's landscape and scenic beauty.

Despite these several statements, the DLP has proposed building in a prominent site in the AONB. The previous version of the DLP said that "the development potential of land surrounding Burford is heavily constrained by the sensitivity of the landscape although there may be some scope for a small scale extension of the built up area". This has been struck through in the latest draft although nothing has happened to change that judgement. In my submission WODC is wrong in changing this section which is clearly inconsistent with the policy stated. This decision is unreasonable and outside the proper exercise of WODC's powers.

Burford is a medieval town with a unique collection of buildings. The grade 1 listed church was awarded five stars in England's Thousand Best Churches by Simon Jenkins, arguably the most authoritative book on the subject. The town has 252 listed buildings, one of the highest concentrations of such buildings anywhere in the country. It attracts visitors from all over the world, not just to Burford but to West Oxfordshire, and I am told that this is worth £15m per year to the local economy. This supports the previous judgment that Burford is a sensitive location.

The best place from which to view Burford as a whole is from across the Windrush valley using the popular walk via Westhall Manor towards Fulbrook or other footpaths around Fulbrook. It can also be seen from the A424 from Stow on the Wold. The statement in the DLP that views of the site are "relatively fleeting" (9.6.34l) are demonstrably incorrect. I understand that our district councillor, Derek Cotterill, has provided photographs showing how the site is in clear view from across the valley.

ALTERNATIVE SITES

The DLP states:

5.21b The rural service centres of Bampton, Burford and Charlbury will also be required to make provision for new housing with existing commitments being complemented by a number of site allocations.

I doubt if anyone objects to Burford taking its share of housing provided that this is handled sensitively and in...
accordance with the policies in the DLP set out above. It should therefore be aimed at meeting local need rather than providing homes for commuters travelling to work by car on congested roads. In considering what is appropriate the following points are relevant.

Burford and Charlbury are identified as service centres (9.6.2), defined as places with shops and transport. Burford has shops but only four (Co-op, newsagents, butchers and pharmacy) primarily serve the local community. The others derive a greater or lesser part of their income from visitors. Most residents do their major shopping in Witney, Carterton or elsewhere. As noted above, transport by bus is limited and Charlbury is the nearest station eight miles away.

Charlbury has buses hourly to Oxford, Woodstock and Chipping Norton (9.6.12). It has regular trains to Oxford, London, Worcester and points in between and these may be hourly from 2018 (9.6.12).

Charlbury has a population of nearly 3000 and Burford has a population of 1300 (9.6.2).

Despite all the above Charlbury has been allocated 40 homes and Burford 85 (9.6.31). No further comment seems necessary.

In any event alternative and less sensitive sites are available at Burford. Firstly there is a site on the west side of Burford where Tanner's Lane joins the A40. This has easier access, is not within view from the distance and poses no risk of flooding (as to which see below).

Secondly the DLP states that the only alternative would be to build south of the A40 where "the Council's assessment of land availability has been unable to find any suitable sites" (9.6.34o). It is extraordinary that no mention is made of the site on the west side of Shilton Road opposite the Burford Garden Company. This is currently subject to an appeal to a planning inspector against WODC's refusal of planning permission for the construction of 169 homes on that site. The result of the appeal will not be known until January 2017 but it is impossible to consider the area's housing need without taking that site into account.

If the appeal is allowed, the provision of these houses would more than meet Burford's share of local housing needs and the land covered by BC1b would not be needed.

Even if the appeal is dismissed, that would not be a sufficient reason to omit that site from further consideration for development. The decision would be to refuse permission for that particular planning application. It would not mean that the site was unsuitable for development at all. It would be a much more suitable site than the land covered by BC1b because (i) it has better access, (ii) it is outside the AONB (iii) it is not visible from a distance and (iv) it poses no risk of flooding. Clearly it should be on the table in any discussion of housing allocation for the area. The omission of such an obvious site in the DLP is a major flaw in its methodology.

FLOODING

The DLP includes the following policy:

CO15 Contribute to reducing the causes and adverse impacts of climate change, especially flood risk.

The DLP describes the site as "sloping gently down towards the north east corner and the Witney Road." This is incorrect since the site falls quite steeply and towards the north west rather than the north east corner. Immediately below on the northern edge is Orchard Rise. The houses here are cut into the hillside and the
drop is so steep that the roofs are almost level with the edge of the field. If the site is built upon, there is a clear risk that run off water would cause flooding in Orchard Rise and possibly other roads lower down.

Because of climate change this country is subject to periods of rain much heavier than used to be the case. (See, for example, A Changing Climate: Should Britain Worry Now" by Rachel White, research associate in atmospheric physics, Imperial College London to be found at https://www.iop.org/activity/groups/subject/env/prize/winners/file_63297.pdf. Provision of a swale at the lower end of the site would not be sufficient. If water soaks into the ground it would have to go somewhere and its natural escape would be downwards.

This is also relevant to the proposed access from Witney Street. At that end the ground also drops towards houses at the eastern extremity of Burford. These houses sit on ground that is frequently wet and close to the river (one of them is called Springfield for good reason) and are already very exposed to run off water during heavy rain. Building on the site would increase the risk of flooding, especially if the access road were to join the lane near these houses since it would act as an obvious conduit for water.

CONSULTATION

Finally I would like to point out that the DLP was drawn up without any consultation with the Cotswold Conservation Board (responsible for the AONB), Historic England (responsible for designating the listed buildings), our district councillor or Burford Twon Council, any of whom could have pointed out serious defects in the DLP as regards Burford. As a result the DLP is flawed, has not been the subject of proper process and should not be proceeded upon in its present form.
make sure that the significance of heritage assets is understood when considering allocations, 'this involves more than identifying known heritage assets within a given distance, but rather a more holistic process which seeks to understand their significance and value' (Historic England Advice Note pg. 4).

The suitability of the site for development has been questioned throughout in the emerging evidence base for the local plan and has been discounted as unsuitable in the 2014 Strategic Housing and Employment Land Availability Assessment (SHELAA). It is unclear, without any further heritage or landscape evidence having been produced, how this position has changed in the interim period to the 2016 SHELAA, changing the recommendation from 'not suitable' to 'suitable'. The 2014 SHELAA assessed the site (143 and 144) as unsuitable for development stating that the site: 'forms part of attractive entrance to Burford from the east and is a key element of the local character. Very poor access to site would prevent development without large scale tree felling. Site contributes to the character of the Conservation Area. 'The impact on the setting of the Conservation Area outweighs the need for development in this part of town'

In contrast the 2016 SHELAA now states that 'whilst views of the site can be achieved from the north-east development if designed sensitively [it] would read as part of the existing built form of the town.' The reason for the conclusion of suitability is set out in the SHELAA that 'the site is considered suitable for development subject to overcoming access constraints and provided development is designed to read as part of the existing settlement'.

There is no explanation in the SHELAA or the Local Plan evidence base of how such a different conclusion to that of 2014 has been reached, or for that matter why reference is now made in the Main Modifications to the acceptability of development in the east of the town with no evidence to support it.

The 2014 assessment states that the site itself contributes to the character of the Conservation Area. Although there is no Conservation Area Appraisal for the Burford Conservation Area, it is reasonable to conclude that this greenfield site has been included in the conservation area (since its extension in 1991) due to its openness, and contribution to the green setting of the built up area of the town itself.

Land to the East of Burford forms part of the overall landscape setting of the Conservation Area and is important in terms of its undeveloped character. It is not clear from the proposed Main Modifications how development of the site so that it would 'read as part of the existing built form of the town' would preserve the or enhance the character and appearance of the area which is important for its open and undeveloped nature. It is therefore contended that this development would cause harm to the Conservation Area.

Case Law has clarified the interpretation of the statutory duties to preserve and enhance heritage assets. In the Court of Appeal Decision R (on the application of The Forge Field Society and others) v Sevenoaks District Council [Case No [2014] EWHC 1895 (Admin)] where there was need for development but the development would cause harm to heritage assets, the need to consider alternative sites was emphasised as part of the statutory duty of preservation. In this case, the site was in the AONB, a conservation area and in the setting of grade II* and grade II listed buildings. Linblom J set out in the decision that:

The lack of an updated evidence base with regards to proposed allocations and the historic environment indicates that the plan has not been positively prepared, is not consistent with national policy and does not meet the legal requirements for protecting and conserving the historic environment.

This raises concerns about the level of research the Council have done into the impacts of the development on the natural and historic environment. The SA Appendix 5, which assesses the proposed non-strategic allocations, states that Land to the East of Burford does not contain any designated heritage assets and
considers that potential impact on Proposed Local Plan policy OS4 (High Quality Design) will provide sufficient mitigation of harm (pg 97).

The site selection process and the sustainability appraisal are clearly fundamentally flawed, it does not get close to understanding the potential harm and impact of a potential development on a nationally significant conservation area with a high proportion of listed buildings and a pristine historic core. While the SHELAA assessments refer to the conservation area, the site selection process appears to have been blind to these potential risks and has failed to properly consider viable alternatives which are less constrained and more appropriate. This is further compounded by the fact that the Cabinet Agenda Report from the 19th October 2016, when the main modifications were approved by Cabinet stated that the Land East of Burford, ‘lies outside (although adjacent to) the Burford Conservation Area’. This raises serious concerns and does not instill confidence that the Council have considered the site allocations in anywhere near enough detail, indeed the Council made a decision to progress to consultation based on false information put in front of them.

Landscape Impact

The proposed allocation at Land to the East of Burford is located within the Cotswolds AONB. Paragraph 115 of the NPPF sets out that ‘great weight should be given to conserving landscape and scenic beauty in National Parks, the Broads, and Areas of Outstanding Natural Beauty, which have the highest status of protection in relation to landscape and scenic beauty’.

Areas of Outstanding Natural Beauty are designated in accordance with the Countryside and Rights of Way Act 2000 which confirms that the purpose of designating AONBs is the conservation and enhancement of natural beauty of the area. It also requires a management plan to be produced for each AONB to formulate policies for local authorities and for carrying out their functions in managing it.

The most up to date landscape assessment for the district is the West Oxfordshire Landscape Assessment 1998 (WOLA). The WOLA identifies Burford as being part of the Upper Windrush Valley As set out in the proof of evidence of Mr. Benjamin Rosedale at the recent appeal inquiry for Land at Shilton Road, the site is widely visible from the north and east and contributes to the distinction between the northern areas of Burford and the historic core on the river terrace to the south. The WOLA identifies several characteristics of the Upper Windrush Valley Landscape Character Area which are set out in Mr. Rosedale’s proof of evidence:

• ‘moderate to high intervisibility, distant views along and across the valley;
• valleyside/urban edge very visible from Fulbrook;
• classic distant view of the church spire approaching Burford on the A40;
• urban edge harsh in places, particularly viewed from A40 entering Burford and on Witney Street;
• urban silhouette from valley floor harsh in places’.

The WOLA also identifies key sensitivities including that any further urbanisation of the A40 corridor should be resisted as change would be visible. Overall, in his proof of evidence, Mr. Rosedale concludes that:

‘It is clear that the development to the east of Burford would be both prominent and harmful to the distinct character of Burford when viewed from the east and north (largely from locations within the AONB)’. 
### Burford - Charlbury Sub-Area

As already stated, Policy H1 should be amended to omit reference to new housing at the rural service centres of Burford and Charlbury. As stated above, the Proposed Modifications have increased the Burford - Charlbury sub area proposed housing requirement by 25% from 800 to 1,000 homes. Paragraph 115 refers to great weight and 116 of the NPPF clearly states that exceptional circumstances must be demonstrated to justify allowing major development in the AONB. This paragraph states that consideration of such applications should include an assessment of the need for the development and its impact on the local economy, the cost of, and scope for, developing elsewhere outside the designated area, or meeting the need for it in some other way, and any detrimental effect on the environment and the landscape. The Council appears to seek to justify this by indicating that development is of necessity within the AONB given the widespread extent of the AONB encompassing almost the whole of the sub area: however, that is not a reason to increase housing within the sub area.

Given the deliverable opportunities to address housing need in those parts of the district outside of the AONB, recognising that there will still be 800 homes in the sub area, there have been no exceptional circumstances given for the inclusion of additional land within the AONB for development in the draft Local Plan. As a consequence, MM184 should be deleted as it refers to allocations at Burford, Charlbury, Shipton-under-Wychwood and Stonesfield, all within the AONB. The plan is not justified when considered against the reasonable alternative to development in the AONB and inconsistent with national policy.
exceptional circumstances given for the inclusion of additional land within the AONB for development in the draft Local Plan. As a consequence, MM184 should be deleted as it refers to allocations at Burford, Charlbury, Shipton-under-Wychwood and Stonesfield, all within the AONB. The plan is not justified when considered against the reasonable alternative to development in the AONB and inconsistent with national policy.

Ecology and Natural Environment

In all cases reference should be made to the District Council’s ecologist for specific details on each site. It is assumed that before firm proposals are brought forward for each site an appropriate ecological, landscape and visual impact assessment will be undertaken including surveys for protected and threatened species.

The permanent loss of land of existing and potential future habitat value should be recognised with a corresponding investment in biodiversity and other green infrastructure resources that provide a range of benefits including biodiversity, water management and contribute to physical and mental well-being. Additional off-site enhancement should be provided where insufficient environmental gains cannot be secured within the development boundary.

Burford East

The site is within Cotswolds AONB. It may be particularly noticeable in views from well-used public rights of way along the Windrush Valley.

The Upper Windrush Conservation Target Area lies nearby to the north.

The site could provide an opportunity to provide additional publicly accessible green space close to the town centre.

There may be hydrological impacts on water quality and quantity, in this context the fisheries value of the upper Windrush is noted.

There are potential opportunities for new local rights of way links.

Policy BC1b - Burford

b) provision of satisfactory vehicular access and appropriate pedestrian and cycle connections. Any vehicular access provided from the Witney Road will be required to contribute positively to the eastern approach into Burford providing a ‘gateway’ entrance to the town.

Two of the aims of the Burford & District Society ("the Society"), as set out in its constitution, are:-

1. "To promote high standards of planning and architecture in Burford and the surrounding parishes."

2. "To secure the preservation, protection, development and improvement of features of historic or public interest in Burford and the surrounding parishes".

In furtherance of those objectives, the Society roundly condemns Policy BC1b as set out in the Plan namely the building of about 85 dwellings on Cole's Field on the following grounds:-

| MM88 |                         | Dianne Taylor  | Mrs Taylor       | MM88              | 232        | > SECTION 9 - STRATEGY AT THE LOCAL LEVEL > Burford Charlbury Sub Area > MAIN 193 | 1. It is within the Area of Outstanding Natural Beauty and the Conservation Area.
2. It will destroy the views across the Windrush Valley and the Parish Church from the A40 coming from Oxford, the A424 coming from Stow, the A361 coming from Chipping Norton and from Westhall Hill, Fulbrook.
3. There was no prior consultation with Burford Town Council.
4. There was no proper survey carried out.
5. The lack of a proper survey is evidenced first by the statement in the plan that the site “slopes gently” down to Witney Street whereas it is actually very steep and secondly by the suggestion that there is no flood risk whereas Witney Street regularly floods from rainwater pouring down the “gentle slope” and the many natural springs on the site.
6. The houses in Orchard Rise are below the level of the site and will also flood.
7. There is no suitable access. The plan’s recommendations are Frethern Close/Wysdom Way and Barns Lane both narrow country lanes already choked by parking and traffic and Witney Street (referred to in the Plan as “Witney Road”) a country lane with blind corners and ice traps which has no speed restrictions until it reaches the built up area.
For all these reasons the Society requests that Policy BC1b be removed from the Plan. |
With respect, I believe this conflicts with Locating Development in the Right Places Point 4.10

"Putting development in the right places can also help to reduce development pressures on sensitive locations, including the AONB and Green Belt."

Indeed, a developer this month proposed a plan to the local community which takes in more of that adjoining field than is shown in the revised local plan. This is evidence of the pressures put on sensitive locations.

3 More specifically, Policy BC1b point 9.6.34m states

"this also presents the opportunity to provide a gateway entrance to Burford from the East. Secondary vehicular accesses may also be achieved from Frethern Close, Wysdom Way to the south and Barns Lane to the west (although the narrow nature of this route would mean a very limited number of dwellings could be served from here)."

With respect, apart from the fact that the site has had to break into a further field to provide a main access point, the proposed access from the east is unsuitable as Whitehill freezes in the winter, as does Witney Street where the proposed access will be. There are Ice Road Traffic Signs at both ends of this minor road. The signpost on the A40 does not mention Burford at all as it is not suitable for heavy traffic use. It only directs motorists to Widford along this route. To create a "new gateway" to Burford along Witney Street, which forms a funnel by becoming one way at the Burford end, seems completely illogical. Also, Burford already has its Gateway at the top of the Hill on the roundabout at the A40.

The Wysdom Way access is also unsuitable due to parked vehicles in Frethern Close and along this route. It has already suffered extra traffic from what was originally intended by the creation of the Affordable Housing on its perimeters.

It has been stated that the Barns Lane access should serve a limited number of dwellings due to the narrow nature of the route. Driving from the A40 down Barnes Lane there are two SLOW signs painted in the road with 40M distance between them. These are just before the proposed access. The Government Publication 'Traffic Signs Manual 2003' Point 22.4 states that

"discretion should be exercised in the use of the marking to ensure that its impact is not reduced through proliferation. At particularly hazardous sites the marking may be repeated to give added emphasis".

This confirms the unsuitability of this area as an access point. The plan does not recognise it as the hazardous site it is which is a narrow, steep north facing hill which freezes in winter and has no footpath.

As a corollary to this, this month a developer exhibited a proposal to the community for this site. They proposed a 60 bed care home and 5 houses be served from this access point. A 60 bed care home would have at least 20 parking spaces and would be accessed day and night by staff and service vehicles and, of course, visitors.

One wonders whether the developer read point 9.6.34m or, indeed, this could be another example of already 'pushing the boundaries' to a sensitive location. It does seem inappropriate to present a scheme to the local community when it conflicts in two ways with the Revised Local Plan.

4 There are flatter sites with better road access. I would recommend a development either on the Shilton

| MM114     |                         | SB Richards     | Mr             | Richards        | 283        | > SECTION 9 - STRATEGY AT THE LOCAL LEVEL > Burford Charlbury Sub Area > MAIN 193 | As a resident of Barns Lane, Burford I object for reasons listed below to the inclusion in the draft local plan of Cole’s Field, Burford, and the proposal to erect 85 houses.  
1. 9.6.34p It is considered that development of this site would not have a detrimental effect on the environment, landscape or any recreational opportunities. The site is within both the Cotswold Area of Outstanding Natural Beauty and also the Burford Conservation Area. Burford is a quite exceptional historic town containing over 250 listed buildings on a beautiful site ranking amongst the most famous in the country. It is in the national interest to preserve and safeguard its distinct character and natural beauty. As such a development of this size and character would be quite out of place.  
2. 9.6.34l In terms of landscape and visual impact, whilst the site comprises relatively high ground, it is relatively well-screened from wider views. Whilst views of the site can be achieved from the north east when travelling along the A361 these are relatively fleeting.  
A development of 85 houses and a care home on this site would profoundly affect the views across the Windrush Valley and the parish church from virtually all the land on the North side of the valley whether roads, residences, public access land or farmland, and also from the East. The proposal seems to envisage that a view is material only if it is seen from a passing car. It is of far greater import that the permanent views of those who live, work and walk will be irrevocably damaged. The proposal violates policy EH7.  
3. There was no prior consultation with the relevant local bodies, namely the Burford Town Council, our district councillor, Natural England or the Cotswolds Conservation Board. The Council will therefore be unable to submit an adequate updated statement of Community Involvement.  
4. 9.6.34k The site is not within a designated area of flood risk. The site slopes steeply to the north and there is a clear risk of flooding. It is understood that it is proposed that surface water be disposed of by infiltration, leaving an artificial swale at the lower end of the site to absorb the water. This would be inadequate to absorb the amount of water at present falling on the whole field. In addition, no provision is made for disposal of the accumulated water with a resultant flooding risk below the field. The current drainage system in Burford is overloaded and unable to accommodate any further demands.  
5. 9.6.34m In terms of access there are a number of options etc etc. There is no suitable vehicular access  
It is envisaged that the primary vehicular access would be taken from the north east corner onto the Witney Road, south of Burford or on the A40 west of Burford near Tanners Lane. |

| MM115        |                         | Linda Richards | Mrs Richards   | 284        | > SECTION 9 - STRATEGY AT THE LOCAL LEVEL > Burford Charlbury Sub Area > MAIN 193 | Road

The proposed main access, Witney Street, is a narrow country lane which is prone to icing up at the top and flooding at the bottom and bends sharply at the proposed access point. There is a road sign warning of ice at the entrance to Whitehill. More importantly, most of the traffic entering the site would not use this access. Traffic from the northern side would have to cross Burford bridge and up the A361, the main town thoroughfare, which is already overloaded to bursting point. It would then have to turn left along Church Lane (Witney Street being one way and with no entrance) along narrow streets with sharp bends, often congested by parked cars and vehicular and pedestrian traffic from the public car park. The only alternative would be to proceed up The Hill, adding to the existing congestion and turn left along Swan Lane with the same problems as for the lower access point or go up the top of the Hill and approach via the roundabout via Frethern Close or Barns Lane which are also narrow and choked by parked cars and vehicular traffic, often Heavy Goods Vehicles, attempting to avoid the congestion on the A361. All the accesses to the A361 are narrow, congested and dangerous. Traffic from the West and South would similarly require access through Frethern Close or Barns Lane. Pedestrian access to the town, to the West of the site, would be down Barns Lane which is narrow, steep and unsafe for walkers.

6. The Burford Primary School is already oversubscribed and unable to cope with any further demands.

As a resident of Barns Lane, Burford I object for reasons listed below to the inclusion in the draft local plan of Cole’s Field, Burford, and the proposal to erect 85 houses.

* 9.6.34p It is considered that development of this site would not have a detrimental effect on the environment, landscape or any recreational opportunities.

The site is within both the Cotswold Area of Outstanding Natural Beauty and also the Burford Conservation Area. Burford is a quite exceptional historic town containing over 250 listed buildings on a beautiful site ranking amongst the most famous in the country. It is in the national interest to preserve and safeguard its distinct character and natural beauty. As such a development of this size and character would be quite out of place.

* 9.6.34l In terms of landscape and visual impact, whilst the site comprises relatively high ground, it is relatively well-screened from wider views. Whilst views of the site can be achieved from the north east when travelling along the A361 these are relatively fleeting.

A development of 85 houses and a care home on this site would profoundly affect the views across the Windrush Valley and the parish church from virtually all the land on the North side of the valley whether roads, residences, public access land or farmland, and also from the East. The proposal seems to envisage that a view is material only if it is seen from a passing car. It is of far greater import that the permanent views of those who live, work and walk will be irrevocably damaged. The proposal violates policy EH7.

* There was no prior consultation with the relevant local bodies, namely the Burford Town Council, our district councillor, Natural England or the Cotswolds Conservation Board. The Council will therefore be unable to submit an adequate updated statement of Community Involvement.

* 9.6.34k The site is not within a designated area of flood risk.

The site slopes steeply to the north and there is a clear risk of flooding. It is understood that it is proposed that surface water be disposed of by infiltration, leaving an artificial swale at the lower end of the site to

<td>&gt; SECTION 9 - STRATEGY AT THE LOCAL LEVEL</td>
<td>I live at number 11 Frethern Close Burford. I have just read the letter sent to me on the 16th November 2016, telling me you plan to build 85 houses in the field belonging to Mr. Cole, which is directly North of my home. I am in the process of buying this house from my Mother. I have had two valuations, both show that the fantastic view adds considerable value to the dwelling. Are there any plans to compensate residents for the loss of value to their homes if this development goes ahead? I am also keen to learn if you are aware that most people on the North side of Frethern Close have a legitimate right of access to the field due to uncontested common access over many decades. I personally have consent from the Land Owner Andy Cole, and would hope that if any houses are built on the field, I will still have practical access to the rear of my property, without having to resort to legal representation in the case of myself and many of my neighbours.</td>

<td>&gt; SECTION 9 - STRATEGY AT THE LOCAL LEVEL</td>
<td>I would like to question the plan and would respectfully suggest that it is bordering madness for very many reasons including the following: 1/: There is no suitable access for the volume of traffic that a development of 85 homes would generate. Has anybody from the department looked at Barns Lane recently? Whether access is proposed direct from Cole’s field onto Barns Lane or via Frethern Close/Wysdom Way onto Barns Lane it simply would not work. Barns Lane is already chocked by parking and traffic which generally makes it so narrow that driver’s have to wait for any vehicle coming in the opposite direction and at peak times is almost ‘grid locked’. I dread to think what would happen if the Fire and Rescue Service needed rapid access to any of the properties. Access onto Witney Street is also unthinkable. The proposed plan refers to the site sloping gently down to absorb the water. This would be inadequate to absorb the amount of water at present falling on the whole field. In addition, no provision is made for disposal of the accumulated water with a resultant flooding risk below the field. The current drainage system in Burford is overloaded and unable to accommodate any further demands.</td>

* 9.6.34m In terms of access there are a number of options etc etc.

There is no suitable vehicular access

It is envisaged that the primary vehicular access would be taken from the north east corner onto the Witney Road

The proposed main access, Witney Street, is a narrow country lane which is prone to icing up at the top and flooding at the bottom and bends sharply at the proposed access point. There is a road sign warning of ice at the entrance to Whitehill. More importantly, most of the traffic entering the site would not use this access. Traffic from the northern side would have to cross Burford bridge and up the A361, the main town thoroughfare, which is already overloaded to bursting point. It would then have to turn left along Church Lane (Witney Street being one way and with no entrance) along narrow streets with sharp bends, often congested by parked cars and vehicular and pedestrian traffic from the public car park. The only alternative would be to proceed up The Hill, adding to the existing congestion and turn left along Swan Lane with the same problems as for the lower access point or go up the top of the Hill and approach via the roundabout via Frethern Close or Barns Lane which are also narrow and choked by parked cars and vehicular traffic, often Heavy Goods Vehicles, attempting to avoid the congestion on the A361. All the accesses to the A361 are narrow, congested and dangerous. Traffic from the West and South would similarly require access through Frethern Close or Barns Lane. Pedestrian access to the town, to the West of the site, would be down Barns Lane which is narrow, steep and unsafe for walkers. In addition, the town centre is extremely congested and additional traffic will put an unacceptable strain on the existing parking facilities

* The Burford Primary School is already oversubscribed and unable to cope with any further demands.

<td>&gt; SECTION 9 - STRATEGY AT THE LOCAL LEVEL &gt; Burford Charlbury Sub Area &gt; MAIN 193</td>
<td>I am writing to oppose the building of 85 houses on the field between the A40 and Witney Street in Burford. Coles field is a totally unsuitable area for the building of houses due to the fact that the roads cannot support more traffic and the field is essential for the absorption of rainfall which runs down into the river Windrush. Having lived in Witney St for 38 years I have experienced first hand the problems of car ownership and flooding in this valley. The turning off the A40 single carriageway into White's Hill is notoriously treacherous. Whites Hill becomes icy in winter and there have been many fatal car accidents in this area. Access to the public footpath along the Watermeadows is hazardous. There is insufficient room for cars to park or even people to walk and so there is a constant danger of collisions. As a walker I have experienced many close encounters with speeding cars. There is nowhere for cars to park. Burford houses are built close to the road and few have driveways. I often cannot park near my own home. Unloading shopping, babies or elderly people can often mean double parking and blocking the road. Witney St has the fire station, a church and two pubs so is busy with cars at all times. Flooding is always a problem especially as the area is the run off into the river Windrush. Covering the open land with houses can only divert more water onto the road and existing homes down the valley. While it may be socially responsible to accommodate more people here I believe the geographical problems are insurmountable.</td>

| MM125         |                         | Andrew Butcher  | Mr               | Butcher           | 298        | CHARLbury Sub Area > MAIN 193 | 1. The site is within the Cotswold Area of Outstanding Natural Beauty (AONB) and the Burford Conservation Area. Burford is a historic town with 252 listed buildings and is entirely unsuitable for a development of this size and character.  
2. It will destroy the views across the Windrush Valley and the parish church from the A40 coming from Oxford and the A424 coming from Stowand from the A361 from Charlbury and Shipton  
3. There was no prior consultation with Burford Town Council, our district councillor or the body which manages the AONB  
4. The site slopes steeply to the north and there is a clear risk of flooding  
5. There is no suitable access. Witney Street is a narrow country lane which is prone to icing up at the top and flooding at the bottom and bends sharply at the proposed access point. Frethern Close and Barns Lane are also narrow and are choked by parked cars.  
6. There is not enough capacity in Burford for primary/secondary school requirements.  
7. The surgery be will be overloaded, particularly as one of the surgeries in Witney is closing down.  
8. The proposed revision of the original plan is as a result of the need for additional housing for Oxford City and also suggests 40 houses in Charlbury which has just under 3000 population, with 1298 households, and with a fast, efficient rail connection to Oxford. This proposal would increase the households in Charlbury by about 3% whereas Burford is a town of just over 1000 population, with 665 households, and which already has an oversubscribed Primary School, a failing sewerage system, and a lack of parking, and siting these houses where there is no public transport does not appear sustainable. This is over 4 times the percentage increase in households that is planned for Charlbury, and would increase the households in Burford by about 13% |
|               |                         |                 |                  |                   |            | SECTION 9 - STRATEGY AT THE LOCAL LEVEL > Burford Charlbury Sub Area > MAIN 193 | We write to comment on the draft Local Plan 2031 which is being consulted on currently.  
There are several over-riding principles that we support. Specifically, we strongly support the four following points:  
The draft plan says that the Cotswold AONB Management Plan has been a key influence (page 12).  
* Furthermore, the plan says that there is 'an acknowledged need to further enhance and extend habitats' (p20) and that even relatively small scale developments on land in the AONB would only be permitted where demonstrably in the public interest (p120).  
* The overall strategy is to 'locate development in the right places' specifically mentioning the need to 'protect important areas such as Green Belt and AONB' (p30).  
* Much is made elsewhere in the report on the importance of the tourist industry in and around Burford; the AONB, the listed buildings, the scale and ambience of the town all being recognised as important contributory factors.  
The plan's vision includes a desire to reduce reliance on the private car (p24). In this respect, we note that public transport links to Burford are limited.  
There is one regular bus service connecting Burford with Woodstock via a circuitous route taking in Carterton and Witney. |

| MM135         |                         | Ben Richards    | Mr               | Richards          | 310        | *SECTION 9 - STRATEGY AT THE LOCAL LEVEL > Burford Charlbury Sub Area > MAIN 193 | * There is an infrequent bus service between Oxford and Cheltenham which stops on the A40 at Burford.
* The nearest train station is at Charlbury some 10 miles away but not linked to Burford by public transport. It has limited parking.
Places in the local schools are limited.
Therefore and in this context, we object to the specific proposal to develop 85 homes on land to the east of Burford (p54). This land is part of the AONB!
Paragraph 9.6.34g on page 290 which recommends the development of this land is inconsistent with the overriding principles. No justification is given for needing to build on this land. There does not appear to have been any exploration of alternative options even though WODC is aware that other specific proposals for housing in and near to Burford are under consideration.
Paragraph 9.6.34j says that the land in question ‘slopes gently’. It does not. Whilst it is relatively level at its southern section, it slopes steeply to the north – as steeply as Burford High Street!
Contrary to paragraph 9.6.34k, vehicular access is not easy, either from Witney Street or from Barns Lane which is on a particularly steep and narrow part of the road. Even now there is no room for a footpath on the steep stretch of Barns Lane between the proposed entrance to the Cole’s Field site and Swan Lane
Paragraph 9.6.34q does not summarise cogent arguments. Rather it is dismissive of the importance of the AONB and of the topography of the land and of vehicle access issues.
We trust you will recognise the importance of the stated principles in respect of the AONB and the need to reduce reliance on the private car, and so withdraw the proposal to develop housing on land to the east of Burford. |
|               | West Oxfordshire draft local plan – policy no. BC1b – land east of Burford | We wish to object to the inclusion in the draft local plan of the proposal to allocate 85 new homes to the site to the east of Burford known as Cole’s Field | Our objection is on the following grounds:
1. The site is within the Cotswold Area of Outstanding Natural Beauty (AONB) and the Burford Conservation Area. Burford is a historic town with 252 listed buildings and is entirely unsuitable for a development of this size and character.
2. It will destroy the views across the Windrush Valley and the parish church from the A40 coming from Oxford and the A424 coming from Stow and from the A361 from Charlbury and Shipton
3. There was no prior consultation with Burford Town Council, our district councillor or the body which manages the AONB
4. The site slopes steeply to the north and there is a clear risk of flooding
5. There is no suitable access. Witney Street is a narrow country lane which is prone to icing up at the top and flooding at the bottom and bends sharply at the proposed access point. Frethern Close and Barns Lane are |

<td>&gt; SECTION 9</td>
<td>I write to object in the strongest possible terms to elements of the revised local plan currently out for public consultation. Notwithstanding the requirement of WODC to redraft its plan following the Government’s insistence on additional housing, the site to the east of Burford to accommodate 85 houses introduced into the revised draft without consultation with that Town’s Council (which may in itself be a breach of the Town and Country Planning regulations) is wholly inappropriate and importantly contradicts many of the principles on which the District Council’s plan is and has always been based.</td>
</tr>
</tbody>
</table>

Most Significant Shortcomings

* No credible case. The draft Local Plan 2031 injects new proposed developments into the rejected plan to satisfy the requirement for more new houses set by central government. Nowhere in the revised draft is a credible case made for the addition of 85 houses in Burford. On the contrary the Town Council is opposed to the development.
* The disregard and defilement of the Area of Outstanding Natural Beauty and with it the destruction of the views across the Windrush Valley and of Burford’s famous parish church from the A40 which tour guides use as an introduction to this important tourist destination. Policy EH1 stands for the protection of the local landscape. ...’Proposals which result in the loss of features important for their visual value... will not be permitted’... yet, given the location of the 85 house site to the east of Burford, this policy is simply ignored.
* The proposed site is unsuitable. The site to the east of Burford is steep, there is no access from the A40 and the remaining access roads are already identified choke points within the Town. Witney Street, a country lane proposed as the principle access, floods frequently as the result of overflow from the water meadows, run-off and winter springs from the proposed development site.

Factors Ignored by the Proposal

The draft Local Plan 2031 ignores a string of important principles which otherwise form the basis of this and past plans.

Paragraphs 2.26 - 2.49 The Plan fails to substantiate the need for 85 additional houses in Burford. There is no identifiable local employment to support the increase in population and the demand for housing in the area is already met by the existing supply so that houses are taking up to a year to sell and, within a mile of the Town, Bradwell Village has empty houses on the market. Paragraph2.26 shows Carterton, the only nearby major employment centre in the area, as having ...‘low employment opportunities’...
travel to Oxford City. Without a suitable bus service, commuting from Burford to Oxford either involves a 25
minute car journey to Charlbury where there is insufficient parking, a 35 minute car journey along the A40 to
Oxford Parkway or a car journey also along the A40, a road well recognised as a major bottleneck. The route
to Oxford City from Burford, a distance of only 14 miles, can frequently take over 1 ½ hours in the morning
traffic.

Paragraph 2.33 concedes that there are no dedicated cycle routes out of Burford either to Carterton, Witney
or the west.

Paragraph 2.40 identifies ‘...high rates of fatalities and serious injury’... on the district’s roads. All this despite
the Plan’s aim (paragraph 4.7) to reduce current levels of out-commuting and increase ‘self-containment’;

Paragraph 2.43 points to pressure on primary schools. Burford’s Primary School is full and serves families as
far afield as Carterton. An additional 80+ families in Burford will add to this problem. Contrary to the draft
plan’s suggestion of multiple retail outlets in Burford, the Town is served by a single small food/household
provision shop and the nearest supermarket is in Carterton.

Paragraph 2.49 applauds the contribution the ‘...rich and varied historical environment’... makes to ‘...the
distinctive character and identity of the area’... Concentrated enclaves of 85 houses on such a small green-
field site in an AONB will severely diminish this character.

Paragraph 3.3 The District’s Core Objectives include: ‘...sustaining communities with access to services and
facilities’... but these services and facilities do not exist in Burford and: ‘...protecting and enhancing our
environment’... which this proposed development defies.

Paragraph 3.12 states that one of the Plan’s core principles (C10) is to ‘...Ensure that land is not released for
new development until the supporting infrastructure and facilities are secured’. The Plan fails to identify any
improvement to the local infrastructure to support the addition of 85 houses in Burford.

Paragraph 4.14 How has Burford been designated a Rural Service Centre? It has a population of only 1,300,
very poor transport provision and is served by a single small retail food shop which despite paragraph 9.6.15
cannot meet the needs of local residents. Main family shopping has to be done in Carterton or Witney.
Bladon on the other hand has a similar population and much better infrastructure but is classed as a village.

Paragraphs 7.23 and 7.24 highlight the congestion on the A40 between Witney and Oxford caused by a
combination of volume of traffic on a single carriageway road and the pinch points at the Eynsham and
Cassington traffic lights. A further 85 houses lying along the A40 will exacerbate that situation. The proposed
new eastbound bus lane on the narrow A40 without any increase in the width of the road will slow traffic still
further.

Paragraph 9.6.18 recognises that Burford lies in a particularly environmentally sensitive area and falls within
a landscape character area which has been described as ‘...highly attractive, remarkably unspoilt and with a
rural character’. This development threatens the distinct nature of this landscape.

Paragraph 9.6.24 identifies pressure on school capacity and shows the need for improvement in the provision
of primary education. This development only serves to add to these inadequacies.

**Respondent ID** | **Respondent Organisation** | **Respondent Name** | **Respondent Title** | **Respondent Surname** | **Comment ID** | **Document Full Path** | **Comment (plain text)** |
--- | --- | --- | --- | --- | --- | --- | --- |
MM145 |  | Colin Shubert | Mr | Shubert | 321 | > SECTION 9 - STRATEGY AT THE LOCAL LEVEL > Burford Charlbury Sub Area > MAIN 193 | Without prior notice the District’s revised Local Plan 2031 introduces an ill-conceived development of 85 houses in Burford within an Area of Outstanding Natural Beauty (AONB). The proposal rides roughshod over the constraints inherent in this designation. The Plan makes no credible case for the need for additional housing in the Town whose infrastructure is already inadequate to accommodate the existing population. Public transport serving Burford is all but non-existent; the bus service is woefully inadequate, the A40 eastwards is heavily congested and the nearest rail link is 10 miles away. There are few employment opportunities in the Town so that young families have moved away. Afford able housing in these circumstances is inappropriate. The supply of existing homes more than meets the demand so that in the area there are already vacant houses on the market.

For the reasons outlined above I strongly object to the introduction into the District’s Draft Local Plan 2031 of the development of 85 house on land east of Burford.

I wish to object most strongly to the inclusion in the draft local plan of the proposal to develop Cole’s Field on the east side of Burford. While I recognise the pressure on the council to make more housing land available, I feel I must challenge the flawed premise of the plan at this early stage.

Overall the plan appears guided by a desire to spread new housing development evenly across the region. This is a ‘scattergun’ and uninformed approach that fails to take into account the need to protect towns such as Burford, one of Oxfordshire’s and England’s greatest historical and tourist assets.

The proposed location of this prosed development clearly indicates the developers customary desire to ‘infill’ any available land space without sufficient consideration of the drastic effects this would have on the town and its community.

As a relatively new resident of Leaze House, Barns Lane, I object to the planned development on the following specific grounds.

**Local Impact**

The plan proposes unrealistic and unsustainable large increases in the population of a historic small town. A development of this size would increase the population by a realistic estimate of 20% for which the town of Burford does not have the ability to cope, specifically in relation to primary and secondary schools and community services.

**Traffic volume**

The traffic volume through Burford is already excessive for existing needs and the West Oxfordshire plan would exacerbate this to an unsupportable extent. Morning, evening and weekend traffic routinely gridlock the High Street, together with knock-on congestion at the A40/A361 roundabout.

**Traffic Access**

There is no suitable access to Cole’s field Barns Lane, Frethern Close and Swan Lane are very narrow and choked with parked cars. Barns Lane and Swan Lane are particularly narrow and without pedestrian footpaths. Witney Street is a narrow country lane, prone to icing and flooding and unsuitable for likely volumes of traffic movement.

**ANOB impact**

</table>

We wish to object most strongly to the inclusion in the draft local plan of the proposal to develop Cole’s Field, on the east side of Burford. While we recognize the pressure on the Council to make more housing land available, we feel we must challenge the flawed premise of the plan at this early stage. Overall, the plan appears guided by a desire to spread new housing development evenly across the region. This is a lazy and unformed approach that fails to take into account the need to protect towns such as Burford, one of Oxfordshire's and England’s greatest historical and tourist assets. As residents in Windrush Close for five years, we know the town and the proposed development site very well indeed and object to planned development on the following specific grounds:

**Local impact**
- The West Oxfordshire plan proposes unrealistic and unsustainably large increases in the population of a historic small town.
- A development of 85 homes would permanently bring 250+ new residents and 100+ new vehicles to Burford, a small town with a current population of approximately 1400. This is a proposed expansion of at least 18% to the population – this is a colossal figure and it is impossible to argue that any town would have the infrastructure to cope with such expansion, never mind a historic small town such as Burford.
- The impact on traffic will be severe and outlined below, but many local services would also be insufficient for such an expansion (for example, the primary and secondary schools are already oversubscribed). The proposed development would create a tipping point of increased commercial services, community services, infrastructure and social need that will completely change the town’s character.

**Traffic volume**
- Traffic volume in Burford is already excessive for the existing roads and the West Oxfordshire plan would increase traffic to an unsupportable and dangerous extent.
- Burford High Street is routinely gridlocked during morning and evening rush hours and weekends, and additionally when there is any local event that directs additional traffic along the A40, A424 or A361 (for example, the Cheltenham Festival, Cornbury Music Festival, the Feastival etc). This leads to dangerous, noisy and polluting knock-on congestion at the A40/A361 roundabout and the A40/B4020 junction. The overwhelming majority of new residents created by the proposed development will need to drive outside of Burford to their place of work and will own at least one vehicle, dramatically increasing traffic burden on the town.

<th>Comment (plain text)</th>
</tr>
</thead>
</table>

**Traffic access**

- There is no suitable access to a proposed development of Cole's Field.

- Barns Lane, Swan Lane, Frethern Close and Windrush Close are very narrow and choked by parked cars already.

Barns Lane and Swan Lane contain historic and protected buildings, and at points are single-track with no pavement either side, and with a sharp, blind turn at their intersection where there have been several minor (but likely unreported) accidents. Traffic volume and speed is already excessive for these small roads and further increases to traffic volume would be extremely hazardous.

- Witney Street is a narrow country lane prone to icing at the top and flooding at the bottom - the flooding is routine and runs into Windrush Close every time it rains heavily, overloading the drains, and has been significant during every year that I have lived in Burford, and helps to swell the flood on Witney Street. This would inevitably lead future residents to access any development through other unsuitable routes (e.g. Barns Lane, Swan Lane and Frethern Close).

**Flood risk**

- Cole's field slopes steeply to the north and the risk of flooding is obvious. Indeed, as noted previously, Witney Street has flooded significantly during every year that I have lived in Burford.

- Given that the risk of flooding of Witney Street and the properties and roads to the north is currently mitigated by the absorptive capacity of the field, flooding of Witney Street and lower-lying land to the north would be almost inevitable given the loss of absorption and run-off that would be created by a development on Cole's Field.

**AONB impact**

- The proposed development goes against our generational responsibility to protect Oxfordshire’s and the country’s greatest historical and tourist assets.

- The proposed development would fundamentally and irrevocably change Burford, not least destroying the views across the Windrush Valley and the historic Parish Church from the A40 coming from Oxford, and the A424 coming from Stow.

- The proposed development site is within the Cotswold Area of Outstanding Natural Beauty (AONB) and the Burford Conservation Area. Burford is an historic town with 252 listed buildings and entirely unsuitable for a development of anywhere near the proposed size and character. It should be a fundamental premise that we should not degrade Burford Conservation area or any area of Outstanding Natural Beauty – it is everyone’s responsibility to protect our most treasured heritage.

**Lack of consultation**

- There was no prior consultation with Burford Town Council, our District Councillor or the body that manages the AONB. Indeed, the original schedule for display of the development plans included exhibits at Chipping Norton, Carterton, Witney – but not Burford!

<td></td>
<td>Bill Risebero</td>
<td>Mr</td>
<td>Risebero</td>
<td>335</td>
<td>&gt; SECTION 9 - STRATEGY AT THE LOCAL LEVEL &gt; Burford Charlbury Sub Area &gt; MAIN 193</td>
<td>I am writing to comment on your proposal to zone the land to the east of Burford (known I believe as Cole's Field) for housing. To my mind there can be no objection to increasing housing provision in West Oxfordshire, especially if it is genuinely low-cost and affordable. It also seems right that this can and should be done in different ways, including making additions to small settlements. Building on the land in question, however, raises at least four problems which I don– think your Local Plan proposals adequately consider. 1. Conservation. It has been established that development affecting a Conservation Area needs to meet the criterion of ‘enhancement’ as well as that of ‘preservation’. It is by no means clear how this development will enhance either the character or the appearance of the Conservation Area. Indeed, the Local Plan seems to deal only with the question of how its negative effects might possibly be mitigated. 2. Neighbourliness. The site is bordered on three sides by existing housing, and will have a big impact on its neighbours. Houses which at present have a direct relationship with the open landscape will lose it. They will also decline in value. Surely the aim should be to extend the Town on a site or sites which do not diminish the amenities of existing properties. 3. Water table. I have only anecdotal evidence of the existence of springs on the site, and their present use. On the other hand, the Windrush flood plain immediately to the north is well documented. It seems to me that, before the site is designated, a lot of work has to be done to ensure that issues of water supply, of the water table and of flooding are properly investigated. 4. Vehicle access. This seems to me a very difficult issue. As the Plan rightly says, Wysdom Way and Barns Lane are inadequate for anything but the lightest of traffic. But even if most vehicle movement is taken by Witney Street, problems still occur. To get in or out of the area, traffic will still need to use Barns Lane, or the congested junctions with Burford High Street, or the narrow junction connecting the eastbound Witney Street with the A40. Already, developers are coming forward with proposals for the site. In my view, before the site is designated, still less developed, much more investigation needs to take place. This investigation should include looking for alternative sites which meet the housing objectives but don't downgrade the conservation area, nor have an adverse impact on neighbours, nor disrupt the water table, nor overload the surrounding narrow lanes and junctions with traffic.</td>

| MM156         |                         | David and Sarah Palmer | Mr | Palmer | 338 | > SECTION 9 - STRATEGY AT THE LOCAL LEVEL > Burford Charlbury Sub Area > MAIN 193 | I wish to object to the inclusion in the draft local plan of the proposal to allocate 85 new homes to the site to the east of Burford known as Cole’s Field. 

My objection is on the following grounds:

- The site is within the Cotswold Area of Outstanding Natural Beauty (AONB) and the Burford Conservation Area. Burford is a very historic town with 252 listed buildings and is entirely unsuitable for a development of this size and character.
- It will destroy the views across the Windrush Valley and the parish church from both the A40 coming from Oxford and the A424 coming from Stow-on-the-Wold.
- There was no prior consultation with Burford Town Council, or district councillor or the body which manages the AONB.
- The site slopes steeply to the north and there is a clear risk of flooding being caused in the vicinity of Orchard Rise.
- This proposal affects the setting of listed buildings and does not meet the policy requirements for WODC’s protection of heritage assets.
- There is no suitable access.

- Witney Street is a narrow country lane which is prone to icing up at the top and flooding at the bottom and bends sharply at the proposed access point.
- Frethern Close, the road is narrow with cars parked all along it, any vehicle larger than a family car has to kerb ride to get through, this is an accident waiting to happen as there are many children and senior members of our community using these pavements. When the Falkland Road Rural Exception development was build, Highways were opposed to increasing vehicular access though Frethern Close.
- Barns Lane, the access via Barns Lane is very narrow (single vehicle) where the access to the development would be sited. There is no way any provision for pedestrians could be incorporated around this access due to high dry stone walling on both sides. This would have the effect of forcing pedestrians and vehicles into the same space on a steep hill.

- The proposed site is the back drop to the St John the Baptist Church when viewed from the north and the framing of the iconic high street from the same direction.

In conclusion, the government states that “Localism” is an objective of theirs, but the District Council has failed to either consult or even inform the local District Councillor or the Burford Town Council that policy BC1b for 85 houses east of Burford would be a proposal in the Local Plan 2031. My Understanding is that this was at best a drive by planning assessment, which given the massive effect this decision could have on a whole community seems a little lazy and disrespectful. The parcel of land in question has been assessed in the recent past to be wholly unsuitable for development (see SHLAA). I am fully aware that the planners are under pressure to find and identify land for future development and that all communities are expected to shoulder their share, but that does not excuse this sort of “Google Maps” town and county planning! With a small amount of investigation (see SHLAA) and a little imagination there are other areas of Burford that are considerably more suitable for future development, some of which contrary to your draft plan are outside the AONB boundary and most of which will not put the future and character of a historic and precious jewel in the crown of the Cotswolds. |

</tbody>
</table>
|               |                         |                 |                  |            |                   | With respect, apart from the fact that the site has had to break into a further field to provide a main access point, the proposed access from the east is unsuitable as Whitehill freezes in the winter, as does Witney Street where the proposed access will be. There are Ice Road Traffic Signs at both ends of this minor road. The signpost on the A40 does not mention Burford at all as it is not suitable for heavy traffic use. It only directs motorists to Widford along this route. To create a “new gateway” to Burford along Witney Street, which forms a funnel by becoming one way at the Burford end, seems completely illogical. Also, Burford
already has its Gateway at the top of the Hill on the roundabout at the A40. The Wysdom Way access is also unsuitable due to parked vehicles in Frethern Close and along this route. It has already suffered extra traffic from what was originally intended by the creation of the Affordable Housing on its perimeters.

It has been stated that the Barns Lane access should serve a limited number of dwellings due to the narrow nature of the route. Driving from the A40 down Barnes Lane there are two SLOW signs painted in the road with 40M distance between them. These are just before the proposed access. The Government Publication ‘Traffic Signs Manual 2003’ Point 22.4 states that

“discretion should be exercised in the use of the marking to ensure that its impact is not reduced through proliferation. At particularly hazardous sites the marking may be repeated to give added emphasis”.

This confirms the unsuitability of this area as an access point. The plan does not recognise it as the hazardous site it is which is a narrow, steep north facing hill which freezes in winter and has no footpath.

As a corollary to this, this month a developer exhibited a proposal to the community for this site. They proposed a 60 bed care home and 5 houses be served from this access point. A 60 bed care home would have at least 20 parking spaces and would be accessed day and night by staff and service vehicles and, of course, visitors.

One wonders whether the developer read point 9.6.34m or, indeed, this could be another example of already ‘pushing the boundaries’ to a sensitive location. It does seem inappropriate to present a scheme to the local community when it conflicts in two ways with the Revised Local Plan.

4

There are flatter sites with better road access. I would recommend a development either on the Shilton Road, south of Burford or on the A40 west of Burford near Tanners Lane.

I attended the exhibition on Thursday, 15 December in the Warwick Hall, Burford and would like to make the following comments.

Whilst I do accept that some new housing is required in the Burford area, I do have certain reservations. At present, young people are unable to purchase homes in the town because of the high values – I would therefore like to see affordably priced homes within this development and not executive type, top of the market homes. I feel that there should be a mix of properties – some for older and single people, some for couples (all these with two bedrooms), some for small families, eg 3 bedrooms and some 4 bedrooms but not too large that would put them outside the affordability of local working people.

My main concern regarding the development is the possibility of it causing more flooding problems. I was told at the exhibition that there would be areas within the curtilage to collect water but this must be a top priority in view of the current problems in the town. I live at the bottom of the High Street and the drains are very old and have caused me many problems over the years. In 2007 there was serious flooding at the bottom of the town.

The access onto Barns Lane is very worrying because of the narrowness and the exceptionally steep gradient of the road. I feel that, if it is used, it should be for a maximum of five houses and definitely not for the proposed care home which would involve large service vehicles, staff and visitors accessing the site.

| MM162        |                        | Richard White  | Dr White         | 351               |            | > SECTION 9 - STRATEGY AT THE LOCAL LEVEL > Burford Charlbury Sub Area > MAIN 193 | However, it would be good if a pedestrian access could be made through from the majority of houses to enable residents to walk to the High Street more easily. I am not sure whether the developers are really aware of the gradient as it is referred to as a gentle slope. There is no way this accurately describes it. Similarly, the access via Wysdom Way and Frethren Close would be far from ideal as Wysdom Way is particularly narrow and there are always a good deal of residents’ cars parked in these roads.

The access onto Witney Street, while being the best of the three, seems to be proposed near a bend. Witney Street again is quite narrow with many potholes and the access onto the A40 at the Ramping Cat turn is very difficult, particularly if one wishes to turn Right. It has been said that most people would wish to go East but there is no possible reason to think this must be the case. I know of many people who work in Swindon, Cheltenham, Chipping Norton and Banbury so they would either wish to turn R onto the A40 or go West through the town itself which is already choked with traffic.

Regarding the proposed care home, I do not feel that this site is at all suitable for such a development. Having worked in health and social care for many years, I am very aware of the importance for older people to be able to mobilise as much as possible and access their local facilities. The very steep gradient of the hill would preclude this for most elderly people.

Lastly, I understand that the local primary school is up to or near capacity. Hopefully this development would bring in young families who would wish their children to be educated in the town. I feel it should be a condition, if the development does go ahead, that a substantial contribution is made towards the primary school.

I trust my comments will be taken into account in the decision making. |
infrastructure and social need that will completely change the town's character.

Traffic volume

* Traffic volume in Burford is already excessive for the existing roads and the West Oxfordshire plan would increase traffic to an unsupportable and dangerous extent.
* Burford High Street is routinely gridlocked during morning and evening rush hours and weekends, and additionally when there is any local event that directs additional traffic along the A40, A424 or A361 (for example, the Cheltenham Festival, Cornbury Music Festival, the Feastival etc). This leads to dangerous, noisy and polluting knock-on congestion at the A40/A361 roundabout and the A40/B4020 junction. The overwhelming majority of new residents created by the proposed development will need to drive outside of Burford to their place of work and will own at least one vehicle, dramatically increasing traffic burden on the town.

Traffic access

* There is no suitable access to a proposed development of Cole’s Field.
* Barns Lane, Swan Lane and Frethern Close are very narrow and choked by parked cars. Barns Lane and Swan Lane contain historic and protected buildings, and at points are single-track with no pavement either side, and with a sharp, blind turn at their intersection where there have been several minor (but likely unreported) accidents. Traffic volume and speed is already excessive for these small roads and further increases to traffic volume would be extremely hazardous.
* Witney Street is a narrow country lane prone to icing at the top and flooding at the bottom – the flooding is routine and has been significant during every year that I have lived in Burford, and would prevent access to any new development. This would inevitably lead future residents to access any development through other unsuitable routes (e.g. Barns Lane, Swan Lane and Frethern Close).

Flood risk

* Cole’s field slopes steeply to the north and the risk of flooding is obvious. Indeed, as noted previously, Witney Street has flooded significantly during every year that I have lived in Burford.
* Given that the risk of flooding of Witney Street and the properties and roads to the north is currently mitigated by the absorptive capacity of the field, flooding of Witney Street and lower-lying land to the north would be almost inevitable given the loss of absorption and run-off that would be created by a development on Cole’s Field.

AONB impact

* The proposed development goes against our generational responsibility to protect Oxfordshire’s and the country’s greatest historical and tourist assets.
* The proposed development would fundamentally and irrevocably change Burford, not least destroying the views across the Windrush Valley and the historic Parish Church from the A40 coming from Oxford, and the A424 coming from Stow.
* The proposed development site is within the Cotswold Area of Outstanding Natural Beauty (AONB) and the Burford Conservation Area. Burford is an historic town with 252 listed buildings and entirely unsuitable for a development of anywhere near the proposed size and character. It should be a fundamental premise that we should not degrade Burford Conservation area or any area of Outstanding Natural Beauty – it is everyone’s responsibility to protect our most treasured heritage.

| MM4  |              | Gordon Elliot | Mr    | Elliot  | 352        | > SECTION 9 - STRATEGY AT THE LOCAL LEVEL > Burford Charlbury Sub Area > MAIN 193 | Lack of consultation

* There was no prior consultation with Burford Town Council, our District Councillor or the body that manages the AONB. Indeed, the original schedule for display of the development plans included exhibits at Chipping Norton, Carterton, Witney – but not Burford!

Overall, the current simplistic and unconsidered plan should be replaced by a proper planning strategy that targets developments in a way that has the minimum impact upon what are some of our county’s most valuable assets.

I hope that you will consider these points and reconsider the proposed Burford development, and in so doing prevent irreversible damage being imposed on our most prized heritage. I look forward to your reply.

| MM164 |              | Elizabeth Deverson | -     | Deveron  | 358        | > SECTION 9 - STRATEGY AT THE LOCAL LEVEL > Burford Charlbury Sub Area > WEST OXFORDSHIRE DRAFT LOCAL PLAN – POLICY NO. BC1B – LAND EAST OF BURFORD | Re Consultation on Draft Local BC1b

I am wondering if some sort of bias (deliberate or subliminal) has crept into planning considerations for providing extra housing in West Oxfordshire.

I live in Burford and, with other Burfordians, do not understand the apparent support for 85 houses in Cole’s Field, yet not for a similar development off Shilton Road. My reasons are:

Cole’s Field is on a steep slope which gives rise to difficulties with land subsidence/soil erosion and drainage problems.

Shilton Road is on a flat field without these problems.

Cole’s Field has no proper road access. The two narrow lanes earmarked by the developers are known accident spots, subject to flooding and without pavements.

Shilton Road is a classified road with a pavement.

Cole’s Field (as mentioned above) does not provide easy access for those intending to walk into town and disabled or elderly people could be involved.

Shilton Road now has a bus stop very close to the proposed development which would take people right into Burford or Carterton for shopping.

Please do consider these factors carefully before a dreadful planning mistake is made.

I am a resident of Witney Street Burford and have very strong objections to both the proposed development of the field known as Cole’s Field to the east of Barns Lane and the proposal by WODC to make a new “gateway” into the town from the eastern A40 via White Hill into Witney Street.

Development of Cole’s Field

<td>MAIN 193</td>
<td></td>
<td>WODC referred to the inclusion of this land in the Local Plan when defending its case against the proposed Shilton Road development, but presumably did not think this site suitable when its original Plan was submitted and most of the reasons that make the former unsuitable also apply to this land. Furthermore, there is a very real danger of run-off causing flooding to the properties downhill from the site and the proposed entrance onto Witney Street would act as a conduit for runoff into a road that already suffers from flooding. The site is currently a cultivated field within the AONB, and an area that has already seen development encroaching on the eastern side. A further development of this size would be vastly out of proportion to the rest of the town and put huge strain on all of its resources. The entrance from the A40 roundabout into Barns Lane is difficult with the current level of traffic, cars frequently come nose to nose on the blind bend, and it is effectively single file traffic, even before it reaches Pytts Lane, which is too narrow for 2 cars to pass in opposite directions. Barns lane does not have pavements past number 6 northwards and descending the hill into Pytts Lane to the junction with Witney Street. There is no room to widen either lane for pavements and the increase in traffic to access the proposed nursing home would be far more than the developer's planning consultants imply, as, in addition to the residents of the houses, there would be staff vehicles, delivery vans, ambulances, medical professionals and family visitors, all increasing the dangers for pedestrian and mobility scooter users, and of course increasing the numbers of those users. Any suggestion to alleviate traffic problems by painting in more yellow lines would lead to an already difficult parking situation for residents of the town. Presumably the difficulties posed by Barns Lane and Pytts Lane is the reason for WODC's proposal to make a new &quot;gateway&quot; into Burford by encouraging traffic along Witney Street. New gateway into Burford White Hill and Witney Street are little more than country lanes. White Hill is a frost pocket which frequently causes accidents: At least 4 cars have skidded off the road in the last 4 years and ended up either in the water meadow (3) or in the bushes (1). Several other vehicles have skidded at the foot of the hill and had to be towed away. People who know this road avoid it when temperatures are low because they know it is very dangerous to descend White Hill when icy, and that Witney Street remains frozen over, becoming a skid hazard during cold spells. The footpath from the water meadows into Witney Street is already dangerous, with cars speeding past very close to walkers. There has been at least one incident where a car has been unable to stay on the road and caused damage to the garage of Roebuck Cottage. If a walker had been passing by at the time, they would have been gravely injured. If traffic was to be increased along this road, the footpath as well as the road would have to be widened in order to protect pedestrians. This would destroy established hedgerows, trees and walls within the AONB. The road appears to be designated as part of the national cycle route. It is regularly used, ie on a weekly if not daily basis, by several groups of cyclists and further traffic would enhance the dangers for this group of users. When traffic is diverted from the A40 it cannot easily pass through the exit of Witney Street onto the High Street, so it backs up and both it and Guildenford become gridlocked within minutes.</td>

| MM165        |                         | Elizabeth and Edward Mortimer | - | Mortimer 359 | > SECTION 9 - STRATEGY AT THE LOCAL LEVEL > Burford Charlbury Sub Area > MAIN 193 | Land to the East of Burford known as Coles Field: a proposal to build 85 houses
As long-time residents of Burford we object most strongly to this planning proposal, which adversely affects our home and neighbourhood.
Access
The proposed access to the development from Witney Street is both dangerous and impracticable. Witney Street (not Witney Road as described in the draft plan) begins at Burford High Street and ends at the junction of White Hill and the road to Swinbrook along the Windrush valley. It is subject throughout to a 7.5 tonne weight limit. White Hill is the steep continuation of the road uphill to the A40, and although it leads directly from there to Burford, it is signposted to Witford to deter traffic precisely because the lane is narrow and unsuited to large vehicles. The junction with the Swinbrook Road is a notorious accident spot, especially in icy conditions because of water run-off from the high ground above.

The proposal to make a “gateway” to the east of Burford is misleading. Witney Street is already the main access to the town from the east, and the site of the slip road leading from it to the proposed development is extremely steep and on a dangerous bend. The west end of Witney Street where it joins the High Street is “No Entry” because the road is too narrow to allow two vehicles to pass each other. The High Street is already clogged with heavy traffic, including HGVs, and is often difficult to enter from Witney Street. More
traffic would lead to tailbacks waiting to emerge. Furthermore, if the main access to the proposed development were from Witney Street, how would the increased traffic from the Chipping Norton and Stow roads get to it? Presumably it would come via Church Lane, already congested where people are going to the car park. These small medieval village streets cannot support the volume of traffic that would be generated by 85 new houses. Other roads which might be used, Swan Lane and Barns Lane, are both narrow and steep, and the lower (northern) end of Barns Lane can only accommodate one car at a time. Frethern Close and Wydrom Way are also small residential streets, not designed for busy through traffic.

The nature of the site

The plan describes the site as "sloping gently" towards the valley, but this is far from the case. It is part of an undulating landscape which falls very steeply down towards the River Windrush, where it runs parallel to Witney Street. If you walk along its northern boundary you are on the level of the roofs of the houses in Orchard Rise, and far above the roof of our house (listed Grade 2) and the Mill off Witney Street. When it rains the water gushes down Swan Lane, across the road, and in spite of a storm drain, down our drive towards the river, washing away the gravel as soon as it is spread. The land, even as close to the river as The Mill House, where we live, is so steep that the back of our house is one floor higher than the front. The river runs along the bottom of our back garden, as with many other houses in the street. If Coles Field were built over there would be no land to absorb the rainfall, and a precarious flooding situation would become impossible to contain. Further along Witney Street towards White Hill there have been months when the water on the road has been 8 or 10 inches deep over fifty or sixty yards. The houses are called Springfield and Spring Cottage because of the abundance of natural springs nearby.

The Area of Outstanding Natural Beauty

Burford is admired for the beauty of its buildings in their lovely setting, where each enhances the other. Views of the town with its fine church spire can be had from high ground in every direction, from the A40 along the ridge, from the road to Stow to the North West and from the road to Chipping Norton above Fulbrook. The proposed development would be visible from all around, destroying the character of the countryside. The proposed access road onto Witney Street would have to be in a deep cutting and would be an ugly scar on the landscape. Such an intrusion into a sensitive, well known and much appreciated area is against government policy for the protection of the AONB.

In short, Coles Field is an unacceptable site for development. The town cannot accommodate the traffic it would generate. Flooding has already caused serious problems to houses beside the bridge, and rendered the car park unusable on several recent occasions. The risk of flooding to many houses in Witney Street would be seriously increased by building over the land above it. The development would damage the AONB, spoiling the famous view of Burford in its setting. Witney Street is already acknowledged to be in need of careful traffic management both by a weight limit and restricted access, and a new road leading steeply down to it on a dangerous bend is out of the question. The amenity of the town will already be diminished by ever greater congestion on the High Street caused by new housing to be built in Shipton and Milton, making access from Witney Street even more difficult.

The idea that such a development would relieve pressure on housing in Oxford city is misguided. Burford is twenty miles away, and congestion on the A40 into Oxford is so bad that it wastes an incalculable number of man hours every day, both at peak times and in between. The alternative route over Swinford Bridge is just as bad, and will be even worse with new housing planned at Eynsham. Burford, on the edge of the Cotswolds

| MM167         |                         | F. R. Williamson      | -                | Williamson        | 363        | > SECTION 9 - STRATEGY AT THE LOCAL LEVEL > Burford Charlbury Sub Area > MAIN 193 | West Oxfordshire draft Local Plan - Policy no. BC1b

Land east of Burford

I have over thirty years experience of planning matters in Oxfordshire having dealt with such proposals as the Oxford Relief Road through Christchurch Meadow and the route of the M.4 motorway through Otmoor. Both these plans were described at the time as having no alternatives.

I consider this proposal to be just as damaging to the landscape and environment of the County as the above plans were. I draw your attention to the following:-

1. The proposal to include Cole's Field as a site for 85 new houses demonstrates the failure of the authorities to balance the housing need against the well-established policies of preserving the outstanding landscape of this area enshrined in the Cotswold Area of Outstanding Beauty and the Burford Conservation Area. Within these policies, the valleys of the Evenlode and Windrush are fundamental. The part of the Windrush valley affected by this proposal is of outstanding landscape and ecological value which will be severely damaged by any development of this site. Views will be obstructed or changed and the transition from town to country along gentle routes used by walkers, cyclists and motorists will be turned into a sharp divide between town, suburban sprawl and countryside. This part of a valuable piece of our heritage will be urbanised for ever.

2. The infrastructure needed to support such a development is totally inadequate. Barns Lane and Witney Street cannot take additional traffic and would lose their rural quality if enlarged. The stated intention of providing for the 'unmet' housing need in Oxford means that additional traffic will be brought onto the A.40 which is already congested between Witney and Oxford in spite of recent improvements to the Woodstock Road roundabout. There are no agreed proposals to improve this situation and the effect will be to increase the congestion and spread it further west.

3. There are very obvious flooding and drainage implications and the sewerage system is already under pressure.

This site should not be included for housing in the Local Plan. The authorities should be looking at areas to the east of Oxford where such development would be far less harmful to the landscape and where the infrastructure is better suited to cope with the above problems. |
| MM213         |                         | Frances Harding       | Mrs              | Harding           | 366        | > SECTION 9 - STRATEGY AT THE LOCAL LEVEL > Burford Charlbury Sub Area > MAIN 193 | From Frances Harding

Re: Objection to West Oxfordshire draft local plan 2031 – Policy no. BC1b – land on east side of Burford

I wish to object most strongly to the inclusion in the draft local plan of the proposal to develop Cole's Field, on the east side of Burford. While I recognize the pressure on the Council to make more housing land available, I feel I must challenge the flawed premise of the plan at this early stage.

Overall, the plan appears guided by a desire to spread new housing development evenly across the region. This is a lazy and uninformed approach that fails to take into account the need to protect towns such as Burford, one of Oxfordshire’s and England’s greatest historical and tourist assets.
As a resident in Windrush Close for ten years, I know the town and the proposed development site very well indeed and object to planned development on the following specific grounds:

**Local impact**

- The West Oxfordshire plan proposes unrealistic and unsustainably large increases in the population of a historic small town.

- A development of 85 homes would permanently bring 250+ new residents and 100+ new vehicles to Burford, a small town with a current population of approximately 1400. This is a proposed expansion of at least 18% to the population – this is a colossal figure and it is impossible to argue that any town would have the infrastructure to cope with such expansion, never mind a historic small town such as Burford.

- The impact on traffic will be severe and outlined below, but many local services would also be insufficient for such an expansion (for example, the primary and secondary schools are already oversubscribed). The proposed development would create a tipping point of increased commercial services, community services, infrastructure and social need that will completely change the town’s character.

**Traffic volume**

- Traffic volume in Burford is already excessive for the existing roads and the West Oxfordshire plan would increase traffic to an unsupportable and dangerous extent.

- Burford High Street is routinely gridlocked during morning and evening rush hours and weekends, and additionally when there is any local event that directs additional traffic along the A40, A424 or A361 (for example, the Cheltenham Festival, Cornbury Music Festival, the Feastival etc). This leads to dangerous, noisy and polluting knock-on congestion at the A40/A361 roundabout and the A40/B4020 junction. The overwhelming majority of new residents created by the proposed development will need to drive outside of Burford to their place of work and will own at least one vehicle, dramatically increasing traffic burden on the town.

**Traffic access**

- Barns Lane, Swan Lane, Frethern Close and Windrush Close are very narrow and choked by parked cars already.

I am disabled with MS and will not use my car during the weekends. Fear of having to walk more than 20 yards from my gate in Windrush Close, as I am in terrible pain, has already curtailed my enjoyment in leaving my house, because parking spaces are already filled within minutes by the influx of visitors to Burford.

Barns Lane and Swan Lane contain historic and protected buildings, and at points are single-track with no pavement either side, and with a sharp, blind turn at their intersection where there have been several minor (but likely unreported) accidents (I count myself as one of those accident statistics, within the last few months, where a person was looking for an address, and hit the side of my car from Frethern Close as I travelled past it). Traffic volume and speed is already excessive for these small roads and the police have clocked drivers doing 40 miles an hour along Windrush Close. Further increases to traffic volume would be

</tr>
</tbody>
</table>

- Witney Street is a narrow country lane prone to icing at the top and flooding at the bottom – the flooding is routine and runs into Windrush Close, from Orchard Close, every time it rains heavily, overloading the drains which runs into our gardens, and has been significant during every year that I have lived in Burford, and as it flows down, it all helps to swell the flood on Witney Street. This would inevitably lead future residents to access any development through other unsuitable routes (e.g. Barns Lane, Swan Lane and Frethern Close).

Flood risk

- Cole’s field slopes steeply to the north and the risk of flooding is obvious. Indeed, as noted previously, Witney Street has flooded significantly during every year that I have lived in Burford.

- Given that the risk of flooding of Witney Street and the properties and roads to the north is currently mitigated by the absorptive capacity of the field, flooding of Witney Street and lower-lying land to the north would be almost inevitable given the loss of absorption and run-off that would be created by a development on Cole’s Field.

AONB impact

- The proposed development goes against our generational responsibility to protect Oxfordshire’s and the country’s greatest historical and tourist assets.

- The proposed development would fundamentally and irrevocably change Burford, not least destroying the views across the Windrush Valley and the historic Parish Church from the A40 coming from Oxford, and the A424 coming from Stow.

- The proposed development site is within the Cotswold Area of Outstanding Natural Beauty (AONB) and the Burford Conservation Area. Burford is an historic town with 252 listed buildings and entirely unsuitable for a development of anywhere near the proposed size and character. It should be a fundamental premise that we should not degrade Burford Conservation area or any area of Outstanding Natural Beauty – it is everyone’s responsibility to protect our most treasured heritage.

Lack of consultation

- There was no prior consultation with Burford Town Council, our District Councillor or the body that manages the AONB. Indeed, the original schedule for display of the development plans included exhibits at Chipping Norton, Carterton, Witney – but not Burford!

Overall, the current simplistic and unconsidered plan should be replaced by a proper planning strategy that targets developments in a way that has the minimum impact upon what are some of our county’s most valuable assets.

I hope that you will consider these points and reconsider the proposed Burford development, and in so doing prevent irreversible damage being imposed on our most prized heritage. I look forward to your reply.

</tbody>
</table>

West Oxfordshire draft local plan – policy no. BC1b – land east of Burford

My objection is on the following grounds:

* The site is within the Cotswold Area of Outstanding Natural Beauty (AONB) and the Burford Conservation Area. Burford is a historic town with 252 listed buildings and is entirely unsuitable for a development of this size and character.
* It will destroy the views across the Windrush Valley and the parish church from the A40 coming from Oxford and the A424 coming from Stow and from the A361 from Charlbury and Chipping
* There was no prior consultation with Burford Town Council, our district councillor or the body which manages the AONB
* The site slopes steeply to the north and there is a clear risk of flooding
* There is no suitable access. Witney Street is a narrow country lane which is prone to icing up at the top and flooding at the bottom and bends sharply at the proposed access point. Frethern Close and Barns Lane are also narrow and are choked by parked cars. 6. There is not enough capacity in Burford for primary/secondary school requirements. 7. The surgery be will be overloaded, particularly as one of the surgeries in Witney is closing down. 8. The proposed revision of the original plan is as a result of the need for additional housing for Oxford City and also suggests 40 houses in Charlbury which has just under 3000 population, with 1298 households, and with a fast, efficient rail connection to Oxford. This proposal would increase the households in Charlbury by about 3% whereas Burford is a town of just over 1000 population, with 665 houses a day to Oxford. Adding 85 houses to Burford, with 665 households, and which already has an oversubscribed Primary School, a failing sewerage system, and a lack of parking, and siting these houses where there is no public transport does not appear sustainable. This is over 4 times the percentage increase in households that is planned for Charlbury, and would increase the households in Burford by about 13%. |

| MM214         |                         | Gerard Mcphillips | -                | Mcphillips        | 417        | > SECTION 9 - STRATEGY AT THE LOCAL LEVEL > Burford Charlbury Sub Area > MAIN 193 | West Oxfordshire draft local plan – policy no. BC1b – land east of Burford  
I wish to object to the inclusion in the draft local plan of the proposal to allocate 85 new homes to the site to the east of Burford known as Cole's Field  
My objection is on the following grounds:  
1. The site is within the Cotswold Area of Outstanding Natural Beauty (AONB) and the Burford Conservation Area. Burford is a historic town with 252 listed buildings and is entirely unsuitable for a development of this size and character.  
2. It will destroy the views across the Windrush Valley and the parish church from the A40 coming from Oxford and the A424 coming from Stow and from the A361 from Charlbury and Shipton  
3. There was no prior consultation with Burford Town Council, our district councillor or the body which manages the AONB  
4. The site slopes steeply to the north and there is a clear risk of flooding  
5. Access is unsuitable for such a development. Witney Street is a narrow country lane which is prone to ice up at the top and flood at the bottom. There's a sharp bend at the proposed access point. Frethern Close and Barns Lane are very narrow and are choked by parked cars.  
6. There is not enough capacity in Burford for primary/secondary school requirements.  
7. The surgery be will be overloaded, now that one of the surgeries in Witney is closing down.  
8. The proposed revision of the original plan is as a result of the need for additional housing for Oxford City and also suggests 40 houses in Charlbury which has just under 3000 population, with 1298 households, and with a fast, efficient rail connection to Oxford. This proposal would increase the households in Charlbury by about 3% whereas Burford is a town of just over 1000 population, with 3 buses a day to Oxford. Adding 85 houses to Burford, with 665 households, and which already has an oversubscribed Primary School, a failing sewerage system, and a lack of parking, and sitting these houses where there is no public transport does not appear sustainable. This is over 4 times the percentage increase in households that is planned for Charlbury, and would increase the households in Burford by about 15%. |
| MM26          |                         | Gordon Jolly     | Mr               | Jolly             | 418        | > SECTION 9 - STRATEGY AT THE LOCAL LEVEL > Burford Charlbury Sub Area > MAIN 193 | West Oxfordshire Local Plan 2031 – Land East of Burford (85 Homes)  
I am writing with reference to paragraphs 9.6.34j to 9.6.34q of the above document as I wish to highlight a number of issues which I believe should be considered when any decisions about this proposed development are being made.  
As a general comment I would question the suitability of any additional housing in Burford given the historic and scenic nature of the town and the need to preserve its unique character. This unique character is what attracts the very many visitors who ensure the continued economic viability of the town. In the absence of any other major employment opportunities, it is tourism which sustains the town and a modern housing development on the eastern side of the town would do nothing but detract from the town’s attractiveness. Burford would risk people approaching from the east, simply continuing along the A40 when they see a new housing development and conclude that they are just passing another commuter satellite of Oxford or Witney. If new housing capacity is proposed then it should be located away and out of sight from the major |
approaches to the town (A40 / A361), preferably on a small scale utilising infill sites.

I do not intend to specifically discuss the issues raised previously by many others as regards to Burford’s continuing lack of infrastructure capacity e.g. drainage or schooling and medical availability for additional inhabitants, but these would of course apply to this development proposal.

I note with great concern the comments in paragraph 9.6.34m which suggest that there might be an “… opportunity to provide a gateway entrance to Burford from the east.” I can only assume that this would envisage Witney Street becoming a major approach road into the town. I do not believe that this is a sensible course of action for the following reasons :-

* Witney Street is a residential street which comprises a large number of listed buildings. These buildings are very close to the roadway with no pavement on the southern side. Many properties at the western end near the junction with the High Street, front directly onto the roadway with related safety risks from passing traffic even at current levels.
* Witney Street is very narrow particularly at its western end near the High Street where it is only one lane wide (with no access from the High Street) and one-way. This narrowness is exacerbated by the unavoidable need for residents to park their vehicles on both sides of the roadway, which can again reduce the roadway’s width to one lane, especially to the west of the junction with Guildenford.
* Over recent years, Witney Street has become a convenient short-cut or “rat run” for motorists seeking to avoid congestion along the High Street and up and down The Hill. This short cut via Church Lane and Guildenford is particularly busy at peak rush hour times of the early mornings and evenings when traffic volumes and related safety risks (including speeding) increase significantly.
* I believe that the safety concerns highlighted in 1) - 3) above are what prompted Burford Town Council’s (BTC) request to Oxfordshire County Council for a 20mph restriction along Witney Street (refer BTC meeting minutes of 2 November 2016).
* Burford fire station is located on Witney Street and the fire engine has encountered problems on occasions when attempting to urgently travel towards the High Street due to the narrowness of the roadway or the volume of queuing traffic at certain times.
* The buildings in Witney Street (the majority of which are listed) are highly susceptible to vibration from passing vehicles. Increased traffic volumes and perhaps heavier vehicles can only serve to increase the risk of structural damage to these protected, heritage buildings.
* At the eastern end of Witney Street, outside of Burford town itself where it climbs/descends White Hill near the Widford junction, the road is narrow and it is highly susceptible to prolonged icing in the winter months. The road is not suitable for high traffic volumes travelling in both directions. The current signage pointing to Widford is highlighted as “Single Track Road” for this very reason. Signage pointing to Burford from the A40 would not be appropriate.

As per paragraph b) of Policy BC1b within the Local Plan document, there is discussion of potential vehicular access to the proposed housing development from “the Witney Road”. The eastern “gateway” is again mentioned, but I would suggest that my comments above would argue against both of these scenarios. The potential site of any vehicular access would be on a blind bend in the narrow road and it would likely be on a steep slope. Water run off would also be encouraged in an area of the road where flooding has occurred in the recent past.

As a resident of Witney Street I believe that my comments above are highly relevant given that they are based on actual experience. The town of Burford is a unique environment which should be protected, but if new housing development is to be considered then it should only be located where it will have the minimum impact on the town itself and its related traffic management. I urge you to give serious consideration to my

| MM220         |                         | Hilary Jolly    | -                | Jolly             | 424        | > SECTION 9 - STRATEGY AT THE LOCAL LEVEL > Burford Charlbury Sub Area > MAIN 193 | West Oxfordshire Local Plan 2031 – Land East of Burford (85 Homes)  
I am writing with reference to paragraphs 9.6.34j to 9.6.34q of the West Oxfordshire Local Plan 2031 – Land East of Burford (85 Homes.) I am strongly opposed to this proposal and believe this is the wrong site for development. My main reasons for objecting are set out below.  
* The proposed development is situated within an Area of Outstanding Natural Beauty. This designation has a specific purpose and has, to date, protected against development. This objective should not be abandoned to meet housing targets. The area should be preserved as intended for current and future residents and visitors alike.  
* The proposed access points and the suggestion that Witney Street (Road) becomes a gateway entrance to Burford are inappropriate. Witney Street is a narrow, quiet, residential lane and is home to many listed buildings. Promoting it to a major thoroughfare will severally detract from its character through the increased traffic, pollution and noise and will do nothing to preserve the integrity of the listed buildings and their setting. |
| MM221         |                         | Hilary Palmer Lewis | Mrs | Palmer Lewis | 425        | > SECTION 9 - STRATEGY AT THE LOCAL LEVEL > Burford Charlbury Sub Area > MAIN 193 | I wish to object to the inclusion in the draft local plan to allocate 85 new homes on the site East of Burford known as Cole's Field.  
I consider that the proposal will be detrimental to the infrastructure of Burford, namely lack of places in the school, risk of flooding from the run off, overload on the sewerage system, parking and road congestion and there are not sufficient buses.  
Burford has no large housing developments like the one proposed and it is an AONB area and the approach to Burford would be spoiled by a new housing estate which is not in keeping with the beautiful listed buildings. The town is a very popular tourist attraction and the local economy would suffer if people were unable to park. The loss of prime agricultural land would be gone forever. |
| MM223         |                         | Hugh Ellis Rees  | -                | Ellis Rees        | 427        | > SECTION 9 - STRATEGY AT THE LOCAL LEVEL > Burford Charlbury Sub Area > MAIN 193 | We object to the proposal to allow the construction of 85 new houses on Cole’s Field. It would be a major incursion into the eastern boundary of the town. It is clear from the proposal that no proper survey has been made: the top of the site may be ‘gently sloping’, but it rapidly steepens as it runs down to Witney Street.  
Nor has adequate attention been paid to the risk of flooding: the whole area is riddled with springs - hence the name ‘Springfield’ which has been given to the property below.  
Witney Street, the eastern access to Burford, is a winding country lane, liable to flood ing; Frethern Close, above the site, is already choked with residents’ cars; while Barns Lane, which forms the western boundary of the site, could not safely be used for access, since it is very steep and narrow: vehicles have to wait to pass each other, and there is no pedestrian walkway.  
What demand exists in Burford for new housing on this scale? The growth points locally for new housing are Witney and Carterton: Burford’s needs are inconsiderable. It seems as if this would just form another community for commuters, like Bradwell Village, looking mainly towards Oxford, with few links to the local area, and adding to the insatiable daily load on the A40. |
| MM225         |                         | Ian Duncan       | -                | Duncan            | 429        | > SECTION 9 - STRATEGY AT THE LOCAL LEVEL > Burford Charlbury | Subject : West Oxfordshire draft local plan – policy no. BC1b – land east of Burford  
I write from my address in France. As the years advance, we rationalise our UK “life components” for the future. As we look back on early memories of Kent, “Garden of England”, and more recent joys in Hampshire, our focus for the future in “England’s green and pleasant land” now returns to areas, well known to us since the late 1950’s, taking us to Oxford and into the Cotswolds, notably on a swathe embracing Witney, Burford, |
<table>
<thead>
<tr>
<th>Sub Area &gt; MAIN 193</th>
</tr>
</thead>
</table>

Stow-on-the-Wold, Bicester, Chipping Norton and Rollright.

Though not a “green” lobbyist, I do, however, wish, to object officially to the inclusion in the draft local plan of the proposal to allocate 85 new homes to the site to the east of Burford known as Cole’s Field.

My objection is rooted in the following points.

- General Historical and Environmental Considerations.
  - a) Without exaggerating, the site and views are on a par with many in Europe, such as the Canal du Midi et la Voie Verte in France, or the mountain village of Rosia Montana in Romania, which have received International and European recognition and protection, including those of the UNESCO World Heritage, i.e. far beyond those of the national Central and Local Governments.
  - b) The Cole’s Field site is within the Cotswold Area of Outstanding Natural Beauty (AONB) and the Burford Conservation Area. Burford is a historic town with 252 listed buildings and is entirely unsuitable for a development of this size and character.
  - c) The proposed development will destroy the views across the Windrush Valley and the parish church, from the A40 coming from Oxford, the A424 coming from Stow, and from the A361 from Charlbury and Shipton.
  - d) Of course, those who may come to live in the houses may well have the pleasure of wonderful surrounding scenery, and picturesque views, while destroying those of to-day’s inhabitants. But there would be major drawbacks for the occupants of those proposed 85 additional Burford households, too.

- Fundamental Regulatory Aspect: Infringement of Rules and Normal “Best Practice”.

There was no prior consultation with:

- Burford Town Council,
- the district councillor
- or the body tasked with the management of the above-mentioned AONB.

- Geographical & Logistical Inconveniences and Natural Climatic Risks.
  - a) The site slopes steeply to the north and there is a self-evident risk of flooding.
  - b) Access is poor:

  - Witney Street is a narrow country lane which is prone to icing up at the top;
  - and flooding at the bottom,
  - and bends sharply at the proposed point of access.
  - Frethern Close and Barns Lane are also narrow, and are always blocked by parked cars.

- Social and Infrastructural Issues.
  - a) Schooling: there is insufficient capacity in Burford for primary & / or secondary school needs.
  - b) Medical:

  - the local surgery, already stretched, be will soon be highly overburdened, owing to the inevitable repercussions of the imminent closure of one of the surgeries in Witney.

- Perverse, Inequitable Effects on Burford owing to:

  - Related Planning & Social Issues, with Upheaval and High Knock-On Costs.
The proposed revision of the original plan:
- which is a clear result of the need for additional housing for the city of Oxford,
- envisages / suggests 40 houses in Charlbury, a town with a population of just under 3000 (1298 households), and already equipped with a fast, efficient rail connection to Oxford.
- This proposal would modestly increase the number of households in Charlbury by about only 3%....
- In contrast, Burford, a far smaller town, with a population of just over 1000 (665 households), is equipped with only 3 buses per day to Oxford.
- On the basis of this clear, factual and objective comparison, an addition of 85 houses to the 665 households in Burford, would represent an increase of some 13% to Burford.
- Burford already suffers from an oversubscribed Primary School, a failing sewerage system, and a notorious lack of parking facilities.
- In both local and outside eyes, the situating of these proposed 85 houses, proportionally a large number, for Burford, already severely lacking in Public Transport facilities, seems out of proportion, and neither reasonable nor sustainable.
- In truly comparative terms, the above increase of 13% in the number of households for Burford represents 4 times the percentage increase in households that is planned for Charlbury.

On the basis of the foregoing, it is arguable that this objection, and any others like it, are understandable, reasonable, fully founded, and sustainable.

Re: Proposed development on Cole's Field, southeast of Burford

Dear Sir/Madam,

As a resident of Burford, as well as a tentative and amateur historian of this place, I am writing to express my profound opposition to the proposal of development on Cole's Field in the southeast of the town.

I know that a number of my fellow Burfordians have written to you to express their opinions on this matter. I understand that my friend Mr R Simmons of Frethern Close has provided detailed specific objections on the grounds of the physical geography of the site, not least the very significant issues with the proposed access points. I believe that he has also drawn attention to the presence of bats in the field which obviously raises critical conservation issues, but more of that later. I fully support and echo Mr Simmons' points, so I don't feel that there is need for repetition here.

My argument against the proposed development also encompasses the unique nature of the town of Burford and the landscape in which it nestles. Burford is no 'ordinary' small market town. It is not only an almost unique survival of an unspoilt mediaeval town, but it occupies a pivotal place in the deep history of our nation. It only survived in its present form because its location prevented it receiving a railway station, and so during the nineteenth century, Industrial Revolution modernisation completely passed it by. After the Great War, visitors in their new motor cars suddenly discovered this unspoilt time capsule, a medieval town that had been pickled in aspic, an architectural and cultural gem sitting in an Oxfordshire valley of quite breathtaking natural beauty.

I quote from 'Burford, the Official Guide', William J Monk - 1923:

"It is at once obvious to the visitor to Burford that it is no ordinary town. One expects to find unspoilt beauty in the Cotswolds if anywhere in England, but Burford has a character quite its own, quiet and unspoilt with a mellow atmosphere of other days. Where can one match the steep main street, lined by ancient stone-built houses of different periods, each carefully designed by some forgotten architect-builder? Or where can a more interesting church be found, even in the Cotswolds, an area well known to every ecclesiologist? This..."
Building has been well called the "Westminster Abbey of the Cotswolds" (even as Cirencester Church is often known as the "Cathedral of the Cotswolds") for its architecture - ranging from Norman to Perpendicular, mediaeval fittings and historical associations.

But what of Burford as a place in which to sojourn awhile? It can be summed up in one word - ideal! There is up-to-date hotel accommodation, where every modern comfort is provided amid charming surroundings, good and pure water supply, efficient public services, and the local shopping facilities are surprisingly up to date to meet all reasonable requirements. As a residential centre Burford is unsurpassed and there are delightful properties to be had from time to time. Finally, Burford is an excellent centre from which to explore the delightful country hereabouts."

And since Monk was writing, nothing has changed. By the 1920s Burford made its living mainly from tourism, as it still does. From my study window I can see small armies of visitors in coaches coming here from the USA, Japan, China, and so endlessly on. But they come here not just for the town itself, but for the achingly beautiful vistas into the valley, both from the southern ridge where the A40 runs and from the northern approaches from Stow and Chipping Norton. The size and location of this development, high on the southeast face of the valley, would make it a ruinous carbuncle on this perfect landscape.

Which brings me to what is possibly Burford's biggest issue: traffic. In 'The Burford Records: A Study in Minor Town Government', written in 1920, R. H. Gretton tells us that the street layout that we see today is almost precisely as it was soon after the town received its Charter (1088 or 1100 depending upon which chronicler one chooses to believe, but either way exceptionally early). These mediaeval streets are choking in traffic. Indeed, in the 1930s there actually was a serious proposal to demolish the 16th Century building that is now Burford House Hotel and Tea Rooms (edge of Witney St) and Reavley's Pharmacy (edge of Sheep St), to alleviate the traffic congestion that they had then. The limits of Burford's capacity to take traffic was reached and breached eighty years ago. The effect of any further population addition defies decent consideration.

Which brings me on to the proposed access points to this development. Witney St is simply the Anglo-Saxon drovers' road to Witney, with the addition of tarmac. Barns Lane, leading onto Pytt's Lane, was originally a trackway from the southern ridge to allow shepherds to drive their flocks down to the Guildenford to water them. So the access points are a Saxon drovers' path that is on the flood plain and a mediaeval sheep track. Genius!

I’ll now like to offer a conjecture on the aforementioned bat colony that feeds in Cole’s Field and presumably roosts nearby. According to Gretton, in the Burford Survey of 1552. Pytt’s Lane was originally called Batts Lane. I cannot prove the etymology of the name, but it was very common to name lanes and byways after animals associated with them, or which the paths lead to; Swan Lane once lead to the river, Sheep Street was so named for the sheep pens outside the tenements and messuages there. It is, I feel, not too fanciful to think that it was named for a large bat colony that persists to this day. If that is the case, that is a very ancient, ancestral colony that the developers propose to cover in concrete.

In summary, this development is unworkable, untenable and unwanted. If there were an award for the most absurd building proposal of 2016, I will freely admit that Mr Trump’s southern border wall would win easily, but this more proximate nonsense would be a clear second. The difference is that Mexico is supposed to pay for Trump’s wall; this development will be paid for by the people of Burford, and its cost will be dear indeed. I understand the need for more housing, that is a given, and I know that a mindset of ‘not in my back yard’ is prevalent almost everywhere. But this is not just any backyard. This town, its landscape and its community is nothing short of a national treasure. In his book ‘England's Thousand Best Churches’, Simon Jenkins put Burford church in his top 20, calling it "The Queen of Oxfordshire; a paragon and museum of the English..."
parish church. Well, Burford is a paragon and museum of the English rural market town.

If approved, this development would be a betrayal not only of the present people of Burford, but of its deep past and possible future. Whether one is a visitor from overseas, a tourist from another part of the UK or a lifelong resident descended from generations of Burford townsfolk, we are all of us just passing through this wonderful place. It is all our responsibilities to nurture, cherish and protect Burford and the Windrush valley, and pass it on unspoilt in perpetuity for the generations to come to enjoy and wonder at.

I urge the Planning Policy Team to unequivocally reject this proposal.

Many thanks for your time and consideration in reading this essay. If you wish to discuss further any of the issues that I have raised, or even discuss the astonishing heritage of Burford and its landscape, please feel free to call me on 07773 444236.

I wish to object to the inclusion in the draft local plan of the proposal to allocate 85 new homes to the site to the east of Burford known as Cole’s Field

My objection is on the following grounds:

* The site is within the Cotswold Area of Outstanding Natural Beauty (AONB) and the Burford Conservation Area. Burford is a historic town with 252 listed buildings and is entirely unsuitable for a development of this size and character.
* It will destroy the views across the Windrush Valley and the parish church from the A40 coming from Oxford and the A424 coming from Stow and from the A361 from Charlbury and Shipton
* There was no prior consultation with Burford Town Council, our district councillor or the body which manages the AONB
* The site slopes steeply to the north and there is a clear risk of flooding
* There is no suitable access. Witney Street is a narrow country lane which is prone to icing up at the top and flooding at the bottom and bends sharply at the proposed access point. Frethren Close and Barns Lane are also narrow and are choked by parked cars. 6. There is not enough capacity in Burford for primary/secondary school requirements. 7. The surgery will be overloaded, particularly as one of the surgeries in Witney is closing down. 8. The proposed revision of the original plan is as a result of the need for additional housing for Oxford City and also suggests 40 houses in Charlbury which has just under 3000 population, with 1298 households, and with a fast, efficient rail connection to Oxford. This proposal would increase the households in Charlbury by about 3% whereas Burford is a town of just over 1000 population, with 3 buses a day to Oxford. Adding 85 houses to Burford, with 665 households, and which already has an oversubscribed Primary School, a failing sewerage system, and a lack of parking, and siting these houses where there is no public transport does not appear sustainable. This is over 4 times the percentage increase in households that is planned for Charlbury, and would increase the households in Burford by about 13%.

Yesterday I went to a presentation of a proposal to put houses in Burford, with the main access along White Hill which comes off the A40 into Burford. I understand that the developers plan to make this lane a main entry into Burford, and that this has found its way into the draft local plan for WODC.

I am not sure if you are aware of this suggestion and am writing now to bring it to your attention.

I would like to make the following observations about making this lane into a main access road.

White Hill is basically a steep, narrow country lane, with a very narrow egress into the High St, between two...
medieval buildings, one of them Walkers Stoves and the other the Burford House Hotel. It can quickly become blocked, as for example now, when the dustbin lorry comes down. With more traffic this would of course be a constant problem.

Driving down off the A40 can be awkward, sometimes with lorries dashing past on both sides as you wait in the middle of the road. It would present problems if there were a longer queue to drive down the road, for example the centre lane would need to be a lot longer. Is this possible? Safe?

The lane is used a lot for recreation. Walkers, often in groups, dog walkers, cyclists singly or in groups, horses, all have to keep in to the verge. It feels very unsafe when cars come along fast, as the verges are narrow. Many cars drive fast as there is no speed restriction, and many locals have had a near miss going along the lane. It is very important to the town to have this recreational use, and in fact the walking route which goes from the town round to Widford and Swinbrook along the road is extremely well used and popular, with people walking on it every day.

White Hill is steep. Cars regularly come off the road, on their way down from the A40, crashing through the stone wall and ending up in the field. On one occasion a car crashed into the garage of one of the houses (Roebuck Cottage). This is worse in winter as it is often frosty at the top of the road which adds to the danger. Locals do not use this road in bad weather. There is also a nasty frost hollow at the bottom of the hill, close to the white gates, and many of us have slithered there on a cold morning.

The lane is subject to flooding and there are a lot of springs along it on both sides. Also, in the event of more houses appearing on the slopes above the road, where would all the ground water go? If it trickled or cascaded down onto the road it would create a hazard.

House owners along Witney St park on the road. This means that Witney St is effectively a single lane road on occasion. If drivers decided to go along Gueldenford to get to the High St they would also find it narrow, with parking on both sides, as there is no other parking place for residents. It is already a chicane on many occasions. In addition, the car park, at the end of Gueldenford, has no easy walking route into town. People walk along the road past the church where there is no pavement. Therefore, any extra cars would add to the hazard.

If more cars came down Witney St with the inevitable queue to get on to the High St, the Fire Engine would be unable to get out in an emergency.

The other proposed access is along Barns Rd. This is also narrow and steep, with no pavement. Coming down this road on foot is hazardous where the road narrows with a wall on both sides. It does not make sense to me to suggest this as a pedestrian access, or an access road for cars.

I assume that you will have a view of this proposal and I urge you to contact WODC to discuss the implications of making Witney St a main entrance to the town, and using Barns Lane as a throughfare.

I would like to make a strong objection to the proposal for the development of 85 new houses on the land east of Burford for the following reasons:

Flooding risk.

Orchard Rise is located right below the field in which the new development is proposed. Extra housing and a

| MM237        |                         | John Collingwood | -               | Collingwood       | 443       | > SECTION 9 - STRATEGY AT THE LOCAL LEVEL > Burford Charlbury Sub Area > MAIN 193 | As a graduate of Oxford University in 1963 and with a father-in-law still resident in North Oxford, I was horrified to learn of the proposed draft plan for a housing development in Burford.

My wife and I have occasion to visit Oxford on a very regular basis and have friends in the surrounding villages which are of both historic value and situated in an area of natural beauty.

This is a classic example of ill thought out planning and I felt I had to add my voice in support of the local residents in their quest to ask you think again and reject the current proposal.

Specifically, my objection is to the inclusion in the draft local plan of the proposal to allocate 85 new homes to the site to the east of Burford known as Cole’s Field.

My objection is made on the following grounds:

* The site is within the Cotswold Area of Outstanding Natural Beauty (AONB) and the Burford Conservation Area of Outstanding Natural Beauty and the Conservation.

Burford is an extremely attractive, unspoilt Medieval town with huge rural character and a big magnet for tourists, both international and British, as many of the buildings are listed with deep historical significance. Development on the proposed scale will ruin the views into the town and just turn it from what is currently a very popular tourist attraction into yet another modern housing estate.

I urge you to reject this proposal.

Access.

Access to the proposed site down White Hill and along Witney Street is a huge concern for the safety of local residents.

It would actually be incredibly dangerous to have the primary vehicular access from the East, with the suggestion that this way will become the new gateway into Burford.

Witney Street is a very narrow winding road which is in poor condition and is already quite dangerous around the entrance to it from the A40, especially at night and in the Winter when it freezes.

The proposed new access road off Witney Street onto the new housing development is right on a bend and also up a very steep slope (not a gentle slope as indicated in the proposal). All the additional traffic created from the proposed 85 new homes will only make Witney Street even more dangerous than it already is, especially for the numerous cyclists and rambler who use it regularly, in addition to all the motor traffic.

Furthermore, further along the road, closer to the High Street, it becomes narrow and is actually only one way and there are a number of beautiful historic buildings alongside it. Encouraging more and more traffic along this road is just not sensible.

* The site is within the Cotswold Area of Outstanding Natural Beauty (AONB) and the Burford Conservation Area of Outstanding Natural Beauty and the Conservation.

Burford is an extremely attractive, unspoilt Medieval town with huge rural character and a big magnet for tourists, both international and British, as many of the buildings are listed with deep historical significance. Development on the proposed scale will ruin the views into the town and just turn it from what is currently a very popular tourist attraction into yet another modern housing estate.

I urge you to reject this proposal.

Road will affect the ability of the field to absorb water as there is already a high water table on the land due to natural springs. Also, during periods of heavy rain even Witney Street floods due to the volume of water running down the very steep slope. Concreting over a lot of Cole’s field will only make this worse as the water will just run off down the steep hill and onto Witney Street which has already been flooded several times in the last few years.

Area of Outstanding Natural Beauty and the Conservation.

| MM245 | Co-owner Maple Barn Barns Rd Burford OX18 4NE | Joshua Kuperard | - | Kuperard 451 | Area. Burford is a historic town with 252 listed buildings and is entirely unsuitable for a development of this size and character.  
* It will destroy the views across the Windrush Valley and the parish church from the A40 coming from Oxford and the A424 coming from Stow and from the A361 from Charlbury and Shipton  
* There has apparently been no prior consultation with Burford Town Council, the district councillor or the body which manages the AONB  
* The site slopes steeply to the north and there is a clear risk of flooding  
* There is no suitable access. Witney Street is a narrow country lane which is prone to icing up at the top and flooding at the bottom and bends sharply at the proposed access point. Frethern Close and Barns Lane are also narrow and are choked by parked cars. 6. There is not enough capacity in Burford for the extra primary/secondary school requirements that would arise. 7. The surgery be will be overloaded, particularly as one of the surgeries in Witney is closing down. 8. The proposed revision of the original plan is as a result of the need for additional housing for Oxford City and also suggests 40 houses in Charlbury which has just under 3000 population, with 1298 households, and with a fast, efficient rail connection to Oxford. This proposal would increase the households in Charlbury by about 3% whereas Burford is a town of just over 1000 population, with 3 buses a day to Oxford. Adding 85 houses to Burford, with 665 households, and which already has an oversubscribed Primary School, a failing sewerage system, and a lack of parking, and siting these houses where there is no public transport does not appear sustainable. This is over 4 times the percentage increase in households that is planned for Charlbury, and would increase the households in Burford by about 13%. |

Re: Objection to West Oxfordshire draft local plan 2031 – Policy no. BC1b – land on east side of Burford

I wish to object most strongly to the inclusion in the draft local plan of the proposal to develop Cole’s Field, on the east side of Burford. While I recognize the pressure on the Council to make more housing land available, I feel I must challenge the flawed premise of the plan at this early stage.

Overall, the plan appears guided by a desire to spread new housing development evenly across the region. This is a lazy and uninformed approach that fails to take into account the need to protect towns such as Burford, one of Oxfordshire’s and England’s greatest historical and tourist assets.

As a co-owner of Maple Barn, Barns Lane, I know the town and the proposed development site very well indeed and object to planned development on the following specific grounds:

### Local impact

* The West Oxfordshire plan proposes unrealistic and unsustainably large increases in the population of a historic small town.
* A development of 85 homes would permanently bring 250+ new residents and 100+ new vehicles to Burford, a small town with a current population of approximately 1400. This is a proposed expansion of at least 18% to the population – this is a colossal figure and it is impossible to argue that any town would have the infrastructure to cope with such expansion, never mind a historic small town such as Burford.
* The impact on traffic will be severe and outlined below, but many local services would also be insufficient for such an expansion (for example, the primary and secondary schools are already oversubscribed). The proposed development would create a tipping point of increased commercial services, community services, infrastructure and social need that will completely change the town’s character.

### Traffic volume

* Traffic volume in Burford is already excessive for the existing roads and the West Oxfordshire plan would...
Increase traffic to an unsupportable and dangerous extent.

* Burford High Street is routinely gridlocked during morning and evening rush hours and weekends, and additionally when there is any local event that directs additional traffic along the A40, A424 or A361 (for example, the Cheltenham Festival, Cornbury Music Festival, the Feastival etc). This leads to dangerous, noisy and polluting knock-on congestion at the A40/A361 roundabout and the A40/B4020 junction. The overwhelming majority of new residents created by the proposed development will need to drive outside of Burford to their place of work and will own at least one vehicle, dramatically increasing traffic burden on the town.

Traffic access

* There is no suitable access to a proposed development of Cole's Field.
* Barns Lane, Swan Lane and Frethern Close are very narrow and choked by parked cars. Barns Lane and Swan Lane contain historic and protected buildings, and at points are single-track with no pavement either side, and with a sharp, blind turn at their intersection where there have been several minor (but likely unreported) accidents. Traffic volume and speed is already excessive for these small roads and further increases to traffic volume would be extremely hazardous.
* Witney Street is a narrow country lane prone to icing at the top and flooding at the bottom – the flooding is routine and has been significant during every year that I have lived in Burford, and would prevent access to any new development. This would inevitably lead future residents to access any development through other unsuitable routes (e.g. Barns Lane, Swan Lane and Frethern Close).

Flood risk

* Cole's field slopes steeply to the north and the risk of flooding is obvious. Indeed, as noted previously, Witney Street has flooded significantly during every year that I have lived in Burford.
* Given that the risk of flooding of Witney Street and the properties and roads to the north is currently mitigated by the absorptive capacity of the field, flooding of Witney Street and lower-lying land to the north would be almost inevitable given the loss of absorption and run-off that would be created by a development on Cole's Field.

AONB impact

* The proposed development goes against our generational responsibility to protect Oxfordshire's and the country's greatest historical and tourist assets.
* The proposed development would fundamentally and irrevocably change Burford, not least destroying the views across the Windrush Valley and the historic Parish Church from the A40 coming from Oxford, and the A424 coming from Stow.
* The proposed development site is within the Cotswold Area of Outstanding Natural Beauty (AONB) and the Burford Conservation Area. Burford is an historic town with 252 listed buildings and entirely unsuitable for a development of anywhere near the proposed size and character. It should be a fundamental premise that we should not degrade Burford Conservation area or any area of Outstanding Natural Beauty – it is everyone's responsibility to protect our most treasured heritage.

Lack of consultation

* There was no prior consultation with Burford Town Council, our District Councillor or the body that manages the AONB. Indeed, the original schedule for display of the development plans included exhibits at Chipping Norton, Carterton, Witney – but not Burford!

* c) It will completely change and destroy the views across the the Windrush Valley, church from the A40 and A424.  
* d) No suitable access for the proposed site as Witney street is a very narrow lane and floods in winter time, and very icy.  
* e) Drainage issues for the proposed dwellings, Orchard rise residents could face issues with flooding or subsidence, also no consultation with a Hydrologist on the direct impact it will have on the area.  
* f) No extra amenities provided for, as Burford primary school is full, where will the kids go, Carterton?  
g) The local doctors surgery is full, again where will the people find a local doctor?  
I would also like to comment that the proposed dwellings for this area which covers Carterton, where vast amounts of homes have already been built? why would you need extra property in Burford to fulfil the local need, the proposed houses will be priced at local market value and out of reach of first time buyers. Again another ploy by the developer to maximise return with not care of the local environment/community impact. |
| MM257        | Ken and Jenny Sparrowhawk | - Sparrowhawk       |                  | 469               | Charlbury Sub Area > MAIN 193 | I am writing to you following my discussions with an expert Hydrologist concerning the runoff water from the proposed development of Cole’s field in the draft housing plan issued this month. The access road from the site onto Witney Street is on a steep slope and will have to be drained. There is no drainage along Witney street and it could not cope with extra water from the new road. I would strongly object if it is proposed by a developer to divert the water across or under the road onto my land and down to the river.  
The expert had real concerns about the suitability of the site to deal with the water drainage issue.  
I hope you will take this email into consideration when looking at where to allocate housing in Burford. |
<p>| MM258        | Lady Morse              | Lady Morse          |                  | 471               | Charlbury Sub Area &gt; MAIN 193 | I am writing to object to your local plan to build 85 houses on Cole’s Field, on the eastern boundary of Burford. This will completely overweight our beautiful medieval town and destroy our treasured view across the Windrush valley coming from Oxford. Very importantly there is no suitable access to the site, which is vulnerable to flooding. I beg you to reconsider your proposal and find a more suitable site for your houses, and not to destroy an area that is precious to us all. |

As a long term resident of Burford I object entirely to this proposal on the following grounds. Coles Field is essentially an embodiment of the country life associated with living in this beautiful medieval town. I am a frequent walker and this area is used by myself and my family, as well as many other local and visiting people. It is essential for the local community to protect and preserve the area and all the wildlife that lives there. The proposed site is within the Cotswold Area of Outstanding Natural Beauty and also within the Burford Conservation Area. It is imperative that that the historical significance and cherished, unique landscape is safeguarded. To allow this building work would be fully intrusive and destroy the countryside views from all directions and furthermore would have a very negative impact on the beautiful character of the land surrounding us. Needless to say the impact on the local community would be devastating. The proposed development would require access in and out, which would involve using the narrow country lanes at the bottom of the field which lead into Burford via Witney Street. This is already a dangerous road that floods and can be very treacherous in winter when it freezes. There is a double bend in both directions which, with increased traffic, would prove even more hazardous. Witney Street has many residents’ parked cars and, as a tourist destination, is always congested. This has an impact on the Burford Fire Service who are regularly called out during the daytime from their station and have to navigate around parked cars to get out and attend the requested emergency. There is also permanent congestion in Frethern Close with resident’s parked cars, and using this as an additional access area is totally unsuitable. Barnes Lane is also narrow, congested and unsuitable for use. The development would bring at least another 85 cars, if not double that, and it is impossible for the infrastructure, which is already overstretched, to cope. I have lived on The Hill for almost 20 years and can see, on a daily basis, how the level of traffic impacts on our town, the community and the already stretched services. Introducing a large number of new residents would make it impossible for the town services to cope. The Burford Surgery, for one example, is already too busy to deal with the current residents. I can see no positive aspects to this development and wish for my views to be formally known and considered. Dear Sir/ Madam Burford-Chalbury sub area. I’m making an initial response to your proposed plan concerning the development of 85 houses to the east of Burford. I’m particularly concerned by the track changes set out in the revised plan. Clearly these changes have softened your initial impact analysis in order to crudely reduce the obstacles to the plan’s implementation. Whilst recognising the huge pressure on WODC to make more housing land available, it is imperative to challenge the plan’s flawed premise at these early stages. Overall, the plan appears guided by a ‘let’s spread the load equitably across the region’ rather than ‘let’s...

BC1b – land on east side of Burford
I wish to object most strongly to the inclusion in the draft local plan of the proposal to develop Cole’s Field, on the east side of Burford. While I recognize the pressure on the Council to make more housing land available, I feel I must challenge the flawed premise of the plan at this early stage.

Overall, the plan appears guided by a desire to spread new housing development evenly across the region. This is a lazy and uninformed approach that fails to take into account the need to protect towns such as Burford, one of Oxfordshire’s and England’s greatest historical and tourist assets.

As a co-owner of Maple Barn, Barns Lane, I know the town and the proposed development site very well indeed and object to planned development on the following specific grounds:

Local impact
- The West Oxfordshire plan proposes unrealistic and unsustainably large increases in the population of a historic small town.
- A development of 85 homes would permanently bring 250+ new residents and 100+ new vehicles to Burford, a small town with a current population of approximately 1400. This is a proposed expansion of at least 18% to the population – this is a colossal figure and it is impossible to argue that any town would have the infrastructure to cope with such expansion, never mind a historic small town such as Burford.
- The impact on traffic will be severe and outlined below, but many local services would also be insufficient for such an expansion (for example, the primary and secondary schools are already oversubscribed). The

target our needs in a way that makes the minimum of impact upon our county’s most valuable assets'.

My key arguments for not going further with the proposal to the east of Burford comprise:
* The fundamental premise of do not be responsible for degrading Burford Conservation area or any area of Outstanding Natural Beauty - it is everyone’s responsibility to protect our most treasured heritage.
* Our generational responsibility to protect Oxfordshire’s and the country’s greatest historical and tourist assets.
* Avoiding 1 and 2 above by not imposing the profound impact of increasing the population of Burford by some 20%.
* Creating a tipping point of increased commercial services, community services, infrastructure and social need that will completely change the town’s character.
* Compound the already damaging traffic, parking and associated noise and air pollution problems associated with this area of the A40 and Burford High Street.
* Create traffic mayhem in already difficult roads (such as Witney Street, Barns Lane, Swan Lane, Frethern Close and Orchard Rise) - many of these streets with historic buildings are only one carriageway with no pavements.

I do hope that just modest reflection will cause you to change the simplistic basis of this plan and prevent irreversible damage being imposed on our most prized heritage.

Regards
Martin Cash

proposed development would create a tipping point of increased commercial services, community services, infrastructure and social need that will completely change the town's character.

Traffic volume

- Traffic volume in Burford is already excessive for the existing roads and the West Oxfordshire plan would increase traffic to an unsupportable and dangerous extent.

- Burford High Street is routinely gridlocked during morning and evening rush hours and weekends, and additionally when there is any local event that directs additional traffic along the A40, A424 or A361 (for example, the Cheltenham Festival, Cornbury Music Festival, the Feastival etc). This leads to dangerous, noisy and polluting knock-on congestion at the A40/A361 roundabout and the A40/B4020 junction. The overwhelming majority of new residents created by the proposed development will need to drive outside of Burford to their place of work and will own at least one vehicle, dramatically increasing traffic burden on the town.

Traffic access

- There is no suitable access to a proposed development of Cole's Field.

- Barns Lane, Swan Lane and Frethern Close are very narrow and choked by parked cars. Barns Lane and Swan Lane contain historic and protected buildings, and at points are single-track with no pavement either side, and with a sharp, blind turn at their intersection where there have been several minor (but likely unreported) accidents. Traffic volume and speed is already excessive for these small roads and further increases to traffic volume would be extremely hazardous.

- Witney Street is a narrow country lane prone to icing at the top and flooding at the bottom – the flooding is routine and has been significant during every year that I have lived in Burford, and would prevent access to any new development. This would inevitably lead future residents to access any development through other unsuitable routes (e.g. Barns Lane, Swan Lane and Frethern Close).

Flood risk

- Cole's field slopes steeply to the north and the risk of flooding is obvious. Indeed, as noted previously, Witney Street has flooded significantly during every year that I have lived in Burford.

- Given that the risk of flooding of Witney Street and the properties and roads to the north is currently mitigated by the absorptive capacity of the field, flooding of Witney Street and lower-lying land to the north would be almost inevitable given the loss of absorption and run-off that would be created by a development on Cole's Field.

AONB impact

- The proposed development goes against our generational responsibility to protect Oxfordshire's and the country's greatest historical and tourist assets.

- The proposed development would fundamentally and irrevocably change Burford, not least destroying the views across the Windrush Valley and the historic Parish Church from the A40 coming from Oxford, and the A424 coming from Stow.

| MM282         |                         | Michael Simmie  | Mr Simmie        | 496        | > SECTION 9 - STRATEGY AT THE LOCAL LEVEL > Burford Charlbury Sub Area > MAIN 193 | - The proposed development site is within the Cotswold Area of Outstanding Natural Beauty (AONB) and the Burford Conservation Area. Burford is an historic town with 252 listed buildings and entirely unsuitable for a development of anywhere near the proposed size and character. It should be a fundamental premise that we should not degrade Burford Conservation area or any area of Outstanding Natural Beauty – it is everyone’s responsibility to protect our most treasured heritage.

Lack of consultation

- There was no prior consultation with Burford Town Council, our District Councillor or the body that manages the AONB. Indeed, the original schedule for display of the development plans included exhibits at Chipping Norton, Carterton, Witney – but not Burford!

Overall, the current simplistic and unconsidered plan should be replaced by a proper planning strategy that targets developments in a way that has the minimum impact upon what are some of our county’s most valuable assets.

I hope that you will consider these points and reconsider the proposed Burford development, and in so doing prevent irreversible damage being imposed on our most prized heritage. I look forward to your reply. |
| MM286         |                         | Michael Graham  | Mr Graham         | 501        | > SECTION 9 - STRATEGY AT THE LOCAL LEVEL > Burford Charlbury Sub Area > MAIN 193 | I would like to object to the allocation of 85 houses to Cole’s Field.
Burford is a medieval historic town in an area of outstanding beauty.
The character should be preserved as far as possible because it is unique.
The infrastructure is inadequate to sustain any further big development particularly as it is a tourist centre and the traffic problems are already obvious.
Please retain the present character of the town as once enlarged it will become another outsized housing estate like Eynsham Witney and Charlbury and preserve it as a gem of the Cotswolds.

Yours faithfully, |

The sections relating to Burford area provoke the following comments:

Proposed 85 houses fails to “conserve or enhance heritage or assets”

Fails to guarantee sufficient infrastructure investment - wording says “seek to ensure” that such investment is made which is completely meaningless and makes no-one accountable for delivery

Refers to need for school capacity already in the town - but needs to be a condition that no development work is completed before such capacity is available, resourced with staff and funded

Fails to meet requirement of “enhancing public transport provision to reduce car usage” - does the opposite by drawing major traffic flow across A40 and down Whitehill by Ramping Cat - dangerous anyway as I know from crossing the carriageway due to speed and volume of traffic on A40, and onto and exiting minor road that is already overused as rat-run. Burford has only one bus service and so if there is no provision of new service from new developments direct to Witney and Cheltenham, then this aspiration will just disappear into the ether.

<td>&gt; SECTION 9 - STRATEGY AT THE LOCAL LEVEL &gt; Burford Charlbury Sub Area &gt; MAIN 193</td>
<td>The proposed delivery of 85 houses to the east of Burford (on Cole's Field) is within the Cotswold AONB and the Burford Conservation Area. It is important that these are respected. If we start building on green field sites within the AONB then it will be difficult to see where it would end. The view of Burford from the A361 heading South will be compromised. I have spent time looking at Burford from this road and it is clear that a patch of new housing in this particular location would not be in keeping with the town and surroundings and will stand out like a sore thumb. In addition, the road / infrastructure proposed I believe would be inadequate. Witney Street is already narrow with parking on both sides of the road. If additional cars are going to use it then it will become more dangerous. The road east, out of Burford, which is proposed to be a new gateway to Burford is also narrow and twisty. It is also used by ramblers who like to walk between Burford and Swinbrook. As there is no footpath along the entire length, this will mean pedestrians coming in close contact with more traffic than at present. This road is also prone to flooding. I am also concerned about other vehicular access to Burford / proposed site. Frethern Close is a narrow set of roads, as is Barn's Lane. Any proposed road from the A40 would disrupt the traffic on the A40 and could lead to a dangerous situation. I am not against expansion of the housing stock in Burford, I just feel that this is not the best option.</td>

</tr>
</tbody>
</table>

Fails to meet requirement of development being of "appropriate scale" - 85 homes when only 400 people live in Burford now is actually swamping the character and feel of the town. In combination with proposed Shilton Road development which has many of the same failings the town will be drastically scarred by these proposals.

No mention whatsoever of health provision being a requirement of any development in Burford area - already limited GP service sometimes requiring travel to Carterton, and I suspect that maternity and elderly care would also be particularly overstretched by new families and retirees. Existing GP surgery resource problem in Witney so unlikely to be funding available for enhanced capacity in Burford unless part of fully funded Local plan.

Plan says will work with OCC to mitigate HGV traffic in Burford - impact will be on more people if large development were to go ahead. There is zero evidence of such supposed co-operation producing any impact on HGV traffic in the 18 years I have been living here.

Fails to make any reference as to how building on sloping land where flooding already happens below the proposed site meets this requirement, with extra runoff and overflowing drains in the absence of major sewerage and drainage investment, neither of which is referenced as part of the proposed plan. Burford already suffers from insufficient drainage in the High Street so further flows into just the existing system will cause further damage and misery.

Merely adding up numbers and allocating them to sub areas to meet Government targets as a consequence of prior failure to seek out proper planning solutions in the WODC zone is not an appropriate basis to be called a Local Plan.
unsuitable for cars to use in large numbers. Money seems to be talking rather too loudly, accidents will happen and persons will be liable.

> 

> Flooding

> As mentioned above the risk of flooding along this valley to the north of the A40 is considerable not to just the road but also the houses to the north of Cole Field. After heavy downfalls my garden is flooded. The geology of the area is such that there are many springs along this scarp and without serious investment and agreed measures this will only get worse. Again money seems to be talking.

> 

> Views

> Burford is an old market town and it now depends on many visitors for its trade. People come here to spend money and are attracted by the beauty of the setting. To destroy a heritage landscape with the views across the river and is sinuous bow lakes would be a travesty and its impact would be more serious than money talkers can imagine.

Although I live in Sydney, Australia, I have spent a deal of time in the UK in general and the Cotswolds in particular. I am also aware that the Cotswolds Area, and in particular villages such as Burford, are the subject of mass tourism. People visiting the UK regard Burford and other villages in the Cotswolds as some of the most beautiful parts of Britain. No doubt that is why they are in the Cotswold Area of Outstanding Natural Beauty and the Burford Conservation Area. Burford is an historical town and includes, so I am informed, some 252 listed buildings.

It is in the context of the above that I learned that it is proposed to allocate in a draft local plan 85 new homes on a site to the east of Burford known as Cole’s Field. As a regular visitor from abroad to the Cotswolds and to Burford in particular, I respectfully record my objection to this proposal. Although there are, no doubt, many objections to the proposal on matters of detail, I confine my objection to the negative impact on the immediate environment such as the destruction of views across the Windrush Valley and the parish church from a number of approaches. I appreciate the desire to provide more land for housing in Oxfordshire[we have the same problem here] but not at the expense of one of England’s prime tourist areas which contributes so much to the local economy. This is an area of great beauty and must be preserved for future generations including visitors to your fair country. The building of 85 houses will detract unacceptably from the aesthetic and economic aspects of Burford and should be rejected.

We live in Swan Lane, just below Cole’s Field and would like to make the following comments regarding the draft local plan for 85 homes. We would first like to say that we are not opposed to more housing in Burford environs......as long as the plan has been properly thought through and everything fully considered.

* It is within the Area of Outstanding Natural Beauty and the Conservation Area. 2. There is no “gentle” slope onto Witney Street. 3. The water table on the land road side of the Windrush river is regularly very high causing flooding of the large area including the public footpath leading to Willford. 4. We would like to ask where the run off water will be directed, what drainage proposals are in place, are they viable? We have experienced a dwelling being built above us on Swan Lane in recent years (still not complete) where adequate water drainage has not been applied and now our garage with classic vehicles in it is constantly flooding! We are currently in correspondence with the planning department to TRY to sort this out - a long drawn out process whilst our cars rust.....This experience does not fill us with confidence re further building

| MM299         |                        | Pamela Wilson   | -                | Wilson            | 514        | Burford-Charlbury sub area | works and there supervision.... 5. The Burford sewage system is not able to accept any more domestic sewage as is well documented. We call the Thames Water engineers out at least twice a year to sort out our inadequate shared sewer in Swan Lane. 6. The work prospects for future owner occupiers in the immediate area is extremely low as is obvious, therefore a journey into Witney/Oxford or beyond will be necessary along an already overloaded A40. 7. The public transport services from Burford are much reduced and not conducive with hours of work. Presumably an already clogged up A40 will be more unbearable to use to get to work. 8. However Charlbury has a good train service to Oxford/London but the proposed development there is for 40 houses not 85! 9. There is no proof of the necessity for a development of this size in Burford although there is need for a small amount of Affordable/Social housing for the families needing housing at a lower purchase price/lower rent. * There is provision for a 60 bed retirement home which is unnecessary in the area, with already adequate provision within the environment of Burford. 
We feel that the Local Plan desperately needs to take a long term view of the housing needs in the Witney/Oxford/Bicester areas where access to employment is more readily available via public transport/cycling etc...not long car journeys, otherwise we will be creating a massive problem in future years regarding the road systems which are already heavily overloaded. We live on Swan Lane and convenience parking on here makes emergency vehicle access very poor at times and cars park and block access to our garage....these small lanes are not meant for heavy traffic!
We are writing to you in anticipation of, maybe, our voices been heard. We also hope that adequate checks are made of any effects on local housing to prevent another situation like the one we find ourselves in with the house recently built on Swan Lane. |
| MM302         |                        | Paul Maguire    | Mr               | Maguire           | 523        | > SECTION 9 - STRATEGY AT THE LOCAL LEVEL > Burford | Burford-Charlbury sub area |
|               |                        |                 |                  |                   |            | > SECTION 9 - STRATEGY AT THE LOCAL LEVEL > Burford | re: WODC’s Draft Local Plan which includes a proposal to build 85 houses on Coles Field, Burford. 
I wish to object to this proposal on the following grounds:
This is a designated Area of Outstanding Natural Beauty and within the Conservation Area which should continue to be protected, not eroded.
Burford already has tremendous problems with traffic flow and parking. On the basis that most households have two cars, this development could easily add another 160 cars to an already burgeoning problem.
The named access roads into the town, are already overcrowded with parked vehicles. Barns Lane and Swan Lane are single carriageway in parts. Witney Street is extremely busy with traffic constantly exceeding the speed limit. It also becomes a single carriageway in parts. None of the named access routes are suitable for increased traffic and could adversely affect highway safety.
The proposed development could have an adverse effect on the neighbourhood by way of noise and disturbance.
I hope you will take these points into consideration. |
|               |                        |                 |                  |                   |            | > SECTION 9 - STRATEGY AT THE LOCAL LEVEL > Burford | We wish to object to the proposal for 85 new houses as per the draft local plan for the site known as Cole’s Field east of Burford. 
* It is an AONB and Burford a town unsuitable for “sustainable development” of a site this size. 
* It is a site at risk of flooding. |

| MM303         |                         | Peter Brookhouse Richards | - | Richards | 524 | Charlbury Sub Area > MAIN 193 | I wish to object to the inclusion in the draft local plan of the proposal to allocate 85 new homes to the site to the east of Burford known as Cole’s Field. My objection is on the following grounds:

* The site is within the Cotswold Area of Outstanding Natural Beauty (AONB) and the Burford Conservation Area. Burford is a historic town with 252 listed buildings and is entirely unsuitable for a development of this size and character.

* It will destroy the views across the Windrush Valley and the parish church from the A40 coming from Oxford and the A424 coming from Stow and from the A361 from Charlbury and Shipton.

* There was no prior consultation with Burford Town Council, our district councillor or the body which manages the AONB.

* The site slopes steeply to the north and there is a clear risk of flooding.

* There is no suitable access. Witney Street is a narrow country lane which is prone to icing up at the top and flooding at the bottom and bends sharply at the proposed access point. Frethern Close and Barns Lane are also narrow and are choked by parked cars. 6. There is not enough capacity in Burford for primary/secondary school requirements. 7. The surgery will be overloaded, particularly as one of the surgeries in Witney is closing down. 8. The proposed revision of the original plan is as a result of the need for additional housing for Oxford City and also suggests 40 houses in Charlbury which has just under 3000 population, with 1298 households, and with a fast, efficient rail connection to Oxford. This proposal would increase the households in Charlbury by about 3% whereas Burford is a town of just over 1000 population, with 665 households, and which already has an oversubscribed Primary School, a failing sewerage system, and a lack of parking, and siting these houses where there is no public transport does not appear sustainable. This is over 4 times the percentage increase in households that is planned for Charlbury, and would increase the households in Burford by about 13%.

| MM322         |                         | Robert Simmons | -               | Simmons           | 591        | > SECTION 9 - STRATEGY AT THE LOCAL LEVEL > Burford Charlbury Sub Area > MAIN 193 | I am writing to object to the local plan land east of Burford known locally as Coles field.
Any development of this site would destroy the character of the local area. The proposed site sits in an area of outstanding natural beauty and would be clearly visible from many vantage points. The A40 approaching from Oxford, the A424 from Stow on the wold and the A361 from Chipping Norton.
Any development of this site would lead to severe traffic problems least of these being the added congestion in an already congested town. There is no clear access point to the site without building a new road. Barnes lane Pytts lane are totally unacceptable as this is a single-track road with few passing places it also has two blind crossroads. These two lanes are used by parents taking children to school as well as the elderly accessing Burford town centre. To access the site from Witney street would bring traffic out onto a blind bend and into an area that regularly floods as Witney street Hill view cuts through the natural flood plain.
Any development of this site would have a negative impact on the local environment it would greatly increase the risk of flooding in an area prone to flooding already. WODC carried out flood repair work to a car park it owns in Burford in 2013 and carried out some preventative flood alleviation work clearing two culverts and dredging part of the river Windrush next to the car park. By tarmacking and concreting over this field it would lead to considerable run off overwhelming the flood plain. The water is held in the field and allowed to seep naturally into the water table. Apart from the flooding it is an area used by a wide variety of local wild life. At dusk bats, can be seen hunting at the top end of the field they overspill into the back gardens on Frethern close as well as Barnes lane Pytts lane. Owls can be observed sitting on posts especially in the early morning. The proposed site now is very dark with no artificial light. Any development would greatly alter this natural environment affecting the local wild life. |
| MM326         |                         | Rosemary Pritchard | -           | Pritchard         | 598        | > SECTION 9 - STRATEGY AT THE LOCAL LEVEL > Burford Charlbury Sub Area > MAIN 193 | West Oxfordshire draft local plan – policy no. BC1b – land east of Burford

As a frequent visitor to Burford I wish to object to the inclusion in the draft local plan of the proposal to allocate 85 new homes to the site to the east of Burford known as Cole’s Field

My objection is on the following grounds:
* The site is within the Cotswold Area of Outstanding Natural Beauty (AONB) and the Burford Conservation Area. Burford is a historic town with 252 listed buildings and is entirely unsuitable for a development of this size and character.
* It will destroy the views across the Windrush Valley and the parish church from the A40 coming from Oxford and the A424 coming from Stow and from the A361 from Charlbury and Shipton

| MM330        |                        | Sally N Squires | Ms               | Squires           | 609        | > SECTION 9 - STRATEGY AT THE LOCAL LEVEL > Burford Charlbury Sub Area > MAIN 193 | * There is no suitable access as Witney Street is a narrow country lane which is prone to icing up at the top and flooding at the bottom and bends sharply at the proposed access point. Frethern Close and Barns Lane are also narrow and are choked by legally parked cars.
5. The surgery be will be overloaded, particularly as one of the surgeries in Witney is closing down.
6. The proposed revision of the original plan is as a result of the need for additional housing for Oxford City and also suggests 40 houses in Charlbury which has just under 3000 population, with 1298 households, and with a fast, efficient rail connection to Oxford. This proposal would increase the households in Charlbury by about 3% whereas Burford is a town of just over 1000 population, with 3 buses a day to Oxford. Adding 85 houses to Burford, with 665 households, and which already has an oversubscribed Primary School, a failing sewerage system, and a lack of parking, and siting these houses where there is no public transport does not appear sustainable. This is over 4 times the percentage increase in households that is planned for Charlbury, and would increase the households in Burford by about 13%.
I would like to make a strong complaint against the above proposal.
Beautiful, small, countryside towns such as Burford should have their environs kept for posterity as well as for the present population and its many visitors.
There is a toll already on facilities such as Doctors, School places and roads which would put a strain on both the new houses and Burfordians.
Traffic is bad on Burford High Street and there are long hold ups starting as far back as Fulbrook and up through our town to the A40 roundabout in rush hours. This puts a greater strain on Barns Lane, which is very steep and narrow in places and would be highly inappropriate for any further traffic.
There are times of the year when Witney Street, going out of Burford, floods, both from the hills above and from the river, again making access and egress difficult.
Present residents surrounding Cole's Field will have their views ruined, as well as the rest of us looking down over it and towards it from Stowe and the Chipping Norton Roads.
It seems to me very sad that such an important proposal is allowed to be reviewed over such a short time span, during the onset of Christmas, when all are extremely busy and lends a warningly furtive air to such an ill considered scheme.
With great hopes for a reconsideration.

| MM333        |                        | Sarah Eggington | -                | Eggington         | 616        | > SECTION 9 - STRATEGY AT THE LOCAL LEVEL > Burford Charlbury Sub Area > MAIN 193 | Re: West Oxfordshire draft local plan 2031 – policy no. BC1b (land east of Burford)
I am writing to object to the above policy in the draft local plan for 2031 for land east of Burford(Cole’s Field) to be allocated for 85 new homes. The grounds for my objection are detailed below:
1) Proposed vehicular access to the site:
I have safety concerns regarding the increased traffic that would be generated by any development on this side of Burford because of the A40/Whitehill junction. Whitehill leads in to Witney Street. When approaching this junction from the east the land falls away steeply and traffic coming up is hidden and cars repeatedly cut the corner. The immediate sharp angle of the road also makes it unsuitable for traffic approaching this junction from the west. For this reason this junction would be unsuitable and inappropriate as “A gateway to Burford”.
 |
Traffic leaving the proposed site to head North, South or West would travel westerly along Witney Street which is single track before it meets the A361. The alternative options are Barns Lane which in part is single track or Church Lane/Guildenford (three right angle bends) which is already busy (pedestrians and traffic) as it is leads to the only car park in Burford. Vehicles travelling from the West, South and North to the proposed site would also use these routes as they are significantly shorter options than the A40/Whitehill/Witney Street option and would lead to an increase in traffic in these areas.

There are frost signs as you enter Whitehill from the A40 and also as you leave the residential area of Burford heading east. The hill and parts of the road are north facing and there have regular accidents on this section of road in icy weather. I live on Witney Street and when the temperatures fall below zero I avoid this route. The proposed access point of the development is also in a northerly frost hollow.

Barns Lane is narrow, partly single track and has a sharp blind bend at the top so this would also be unsuitable as access to the site as would Wysdom Way/Frethren Close which is accessed via Barns Lane.

2) Safety concerns for pedestrians walking to Burford from the site.

Although there is pedestrian access to Burford Town via a footpath/cut through, pedestrians would use the shorter route via Barns Lane which would increase foot fall on the single track section of the road where there is no footpath. It would not be possible to add a footpath as there are high cotswold stone walls on either side. This route would be used by people accessing the town for shopping, the primary school, the surgery and St John the Baptist Church and would be used by adults and children alike. It would also be used by residents of the proposed care facility who may have mobility scooters. Barns Lane is also north facing and freezes during the winter months.

3) AONB and conservation area. A development of this size is unsuitable and not in keeping with the historic character of Burford and the appearance of its landscape. It is a pretty town and is defined by it’s photogenic quality, historic nature and views of its ancient buildings and the spire of St John the Baptist Church. The proposed development of this site would detrimentally affect the views from the north and east for visitors on foot, bicycle or car. The circular walk from Burford along the river windrush is greatly advertised and walked and the route is popular with cyclists. Tourism is crucial to the existence and sustainability of Burford.

4) Concerns relating to safety of pedestrians on Witney Street

The footpath along Witney Street is narrow and pedestrians including those with pushchairs are often seen walking in the road and make no attempt to step back on to the path. The additional traffic generated by this proposed site and the blind, narrow, windy nature of this section of Witney Street would magnify this problem.

I hope that West Oxfordshire District Council will withdraw policy BC1b from the local plan and instead investigate the possibility of more suitable sites to the west of Burford that fall outside the conservation area. The majority of the services (doctors, pharmacy, supermarket, library) are on the west side of the town which would improve the safety of pedestrians who would have no need to cross the busy A361 and reduce congestion from vehicles.

| MM348        |                         | Steve Turner    | Mr               | Turner            | 649        | > SECTION 9 - STRATEGY AT THE LOCAL LEVEL > Burford Charlbury Sub Area > MAIN 193 | I am writing to oppose the plan to build houses on Coles Field, an area between the A40 and Witney Street in Burford.  
Traffic on Witney Street is already impossible -- it’s easy to see why there have been so many accidents on this road -- this development will be responsible for intolerable congestion, many additional accidents and an inevitable number of injuries or deaths, both among speeding motorists and the walkers and cyclists brave enough to try to share what is a narrow country lane forced into becoming an A-road.  
And of course, for any vehicles which survive the journey, there’s already nowhere for them to park once they reach the town.  
West Oxfordshire DC has acknowledged that Burford parking is hopeless, as there has already been an unsuccessful initiative to manage it -- so it’s ludicrous to consider adding another 100 cars to the immediate area.  
To say the least, Burford’s infrastructure can’t support this development. Besides the traffic and the parking, there aren’t the school places for these additional families.  
And as for the flooding in the valley -- paving a large new estate within sight of a river is simply irresponsible - - even if the proposed development area doesn’t flood, the un-absorbed water will certainly be shipped downstream to flood the next village.  
Death, injury, flooding -- sounds like something from the Bible, doesn’t it?  
Please reject this badly-conceived plan. |

| MM351         |                         | Mrs S Haywood  | Mrs              | Haywood           | 655        | > SECTION 9 - STRATEGY AT THE LOCAL LEVEL > Burford Charlbury Sub Area > MAIN 193 | They are as follows:-  
1) The proposal in particular the location of the old peoples accommodation fly in the face of your planning guidelines regarding the ‘overlooking and loss of privacy’. It also removes the amenities of the adjacent properties by removing any views they currently enjoy.  
2) The whole design brief, materials proposed and density of the plans is so far from being reasonable as to be willfully incongruous. The scale of the design is more in keeping with an inner city development and would not be out of place being called ‘Carbuncle Gardens’ Hardly fitting for an area of outstanding beauty. These houses are only needed because Oxford city is not able to fill its Quota because of its refusal to re designate its green belt line. Why because of their obstinance and intransigence should we as a community have to yield to such a poor design product?  
3) It is to my understanding incumbent upon planning departments to ensure developments are sustainable. No mention of a new primary school (the current one is full to bursting) no extra doctors surgery and primarily no employment for the proposed occupants ergo no sustainability!  
4) The community is in law reasonably allowed to expect planning departments to consider the public safety with regard to any plans put before you. Currently today the Barns lane would not pass muster and would be turned down on the grounds of no footpaths, effectively in several places where it narrows it is a single track road. Lorries and vans unloading currently hold up the traffic on a regular basis sometimes for considerable lengths of time. To condemn the current neighbours to an added 300 plus vehicle movements a day would be remiss in your duty of care and due diligence to all concerned. Any Layman can see the proposed traffic proposals are wholly inadequate and would not stand any scrutiny, allied to this Achilles Heel the complete disregard for the historic flood/water problems and you inspire in us nothing but contempt for your systems and processes....  
Please prove me wrong! |

Please consider this letter as my formal response to the consultation on the Proposed Modifications to the Submission Draft West Oxfordshire Local Plan 2031.  
My letter sets out significant concerns regarding an increased risk of flooding to existing community members, with expert advice supporting this, and also important traffic and pedestrian safety issues that would arise from a development on “Land East of Burford”. Further, I propose that the prescriptive inclusion of this site has not been subject to due process and is directly contradictory to a number of the stated vision, values and policies of the Draft Plan. I have not used the standard representation form as my response applies to the whole of section 9.6 (pp281-298 of the tracked changes document), with particular reference to all modifications applicable to developments in Burford – specifically MAIN 184 (para 9.6.25 – 9.6.47), MAIN 185 (para 9.6.31), MAIN 186 (para 9.6.32-9.6.34), MAIN 187 (para 9.6.34a), MAIN 191 (para 9.6.34j-9.6.34q), MAIN 192 (fig 9.17b), & MAIN 193 (fig BC1b), MAIN 200 (policy BC1).  
Comment on Submission Draft Modifications  
I believe the proposed modifications applicable to Burford (cited above), and in particular the inclusion of a named specific site (“Land East of Burford”) for the allocated housing in Burford, are not consistent with, and in cases are in direct conflict with, various values and policy statements in the WODC Local Plan. There has
also been insufficient regard/timely consultation with appropriate key agencies prior to the inclusion of definitive sites for development.

For these reasons, I do not believe the submission draft, including the cited proposed modifications, is sound, legally compliant nor meets the duty to co-operate as it stands.

Specific Concerns regarding the Inclusion of the Land East of Burford in the Draft Plan

The inclusion of a named site ("land east of Burford") in the draft plan for 85 allocated houses is deeply concerning both in

a) the implications of using this particular site (particularly with regard to increased flood risk to existing residents and pedestrian and traffic safety and other considerations), and

b) the process undertaken that has resulted in the removal of small scale, locally defined solutions and the imposition of a prescriptive site that potentially would extend to larger scale, inappropriate and unsustainable development.

I address these in turn below.

Implications of the Land East of Burford Site I – Increased Flood Risk to Other Residents

There are a number of stated relevant commitments which I believe to be in breach by inclusion of this site in the Draft Local Plan, including:

- Policy OS2 – Locating Development in the Right Places (MAIN 16, Policy OS2): - all development should...not have a harmful impact on the amenity of the existing occupants - not be at risk of flooding or likely to increase the risk of flooding elsewhere

- Various commitments in para 4.7, including: - reducing the current risk of flooding where possible and ensuring that new development does not increase that risk

- Inappropriate development will not be allocated or permitted in...reas at risk of surface water flooding or area with a history of groundwater flooding, or where it would increase flood risk elsewhere, unless there is over-riding need (that cannot be met in any other way), an absence of suitable alternatives and flood risk can be satisfactorily addressed (Para 8.50)

I should note that immediately following the publication of the draft local plan, a developer (Carterton Construction/Turley Associates, referred to below as "the developer") announced that they were intending to go ahead with development on the "Land east of Burford" site. Examination of their proposals has helped to provide further evidence to support my assertion that the site in question is unsuitable for development, as described below.

Over a dozen neighbours and I engaged a registered consultant hydrologist to assess the risk of the use of Coles Field (the site East of Burford, as defined in the draft Local Plan), with additional (but not sole) reference to the proposed site plans as presented by the developer (and available on their website) and presumvably in initial consultation with yourselves. The initial findings (full report available in the New Year)
suggest some significant risks to our property and road safety associated with surface and ground water considerations. I replicate these below for your information:

Potential flood risks of the proposed housing site

➢ The proposed housing site is on the hillside which continues above Orchard Rise.

➢ Orchard Rise has been built on land excavated into the hillside, immediately below the proposed housing site.

➢ In very wet weather water appears to arise within the rear garden in at least one location (12 Orchard Rise) within the excavated hillside and surface water collects against buildings at several other locations along Orchard Rise.

➢ It is clear that the houses in Orchard Rise are already vulnerable to flooding by soil and surface water coming from up the slope behind them.

➢ Orchard Rise could therefore be placed at further risk from surface water draining from the proposed housing site.

➢ Orchard Rise is particularly vulnerable to drainage of the proposed housing site by infiltration. Both national and local policy states infiltration to be the preferred method of drainage for new housing, and the current proposal is for drainage via infiltration swales.

➢ Water percolating into the soil immediately above the Orchard Rise excavation will be in the superficial deposits at the top of the excavated area. As both the soil and the superficial layers of underlying rock have been removed behind the houses in Orchard Rise this water will appear within the steep rear gardens and lead to further flooding of the existing property.

➢ A further concern is the provision of a safe route for exceedance flow - flow that results from rainfall in excess of that the drainage scheme is designed for. Such water can only move downhill, and the only downhill direction available is into the properties along Orchard Rise.*

➢ Witney Street runs along the foot of the hillside, below both Orchard Rise and the proposed housing area. There is already a flood problem along Witney Street, and the road can be dangerous due to surface water, exacerbated by freezing in winter.

➢ At the foot of the hillside, along Witney Street, are a number of active springs fed from water draining the hillside above. Some of these springs are used for water supply.

➢ The preferred access route into the proposed housing site is for a steep road down to Witney Street. Drainage of this access road has not been considered and there is no obvious route for its disposal.

➢ In addition, surface water from this road will introduce more water onto Witney Street, increasing both the volume of surface water on the road and the current flood and icing problems.

* I should also note that we are aware of further complications with the gradient of the site that means that not only does it slope down towards Orchard Rise, but also the proposed location of the swale(s) by the developer have additional gradients that result in a potential lowest point just behind my particular house.
exacerbating any issue and further complicating the construction of the swales to mitigate impact on my
property.

My neighbours on Orchard Rise, and also on Witney Street (erroneously referred to as Witney Road in the
Draft Local Plan) are understandably very concerned about these findings and I submit that the evidence
above means that the inclusion of this site in the Local Plan is contrary to your stated policies noted above
about flood risk and the inclusion of this site should therefore be removed from the Local Plan, and indeed
blocked from planning permission, on this basis.

Implications of the Land East of Burford Site II - Pedestrian & Traffic Safety and other relevant Considerations

I also submit that there are a number of traffic related relevant vision and value and policy commitments
which I believe to be in breach by inclusion of this site in the Draft Local Plan, including:

• “Reducing dependence upon travel by private car including long distance travel to urban centres” (see para
2.50 SWOT)

• Various commitments in para 4.7, including: - reducing the current reliance that is placed on the private car
for journeys into, within and beyond the District - reducing levels of out-commuting and increasing "self-
containment”

• Also Policy OS2 – Locating Development in the Right Places (MAIN 16, Policy OS2): - all development should
be proportionate and appropriate scale to its context -....not have a harmful impact on the amenity of the
existing occupants - be provided with safe vehicular access and safe and convenient pedestrian access to
supporting services and facilities - not be at risk of flooding or likely to increase the risk of flooding elsewhere

• Enable new development...of a scale and type in locations which will help improve the quality of life of local
communities and where the need to travel, particularly by car, can be minimized (MAIN 11, CO1); also “locate
new residential development where it will best help to meet housing needs (I note the removal of local from
this statement) and reduce the need to travel”(para 3.7 CO4)

At their recent presentation to local residents, on being challenged regarding the restricted access to Witney
Street from the north, south or west, the developer noted that their analysis had identified that the majority
of new homeowners would be working and therefore travelling towards Oxford. This seems to be echoed in
the draft local plan, which identifies “Witney Road” as the main access point to the site and contains no
reference to how it would be reached from other directions (see below). This appears not only contrary to
your key stated policies but also does not address the practicalities that residents, delivery vehicles and other
would need in practice to access via these routes.

I admit to being confused by the diagram included in the modified draft local plan under consultation, as it
includes some land known locally to be in some dispute. Notwithstanding this complication, at their
presentation on the proposed development on the suggested site of Coles Field (Land East of Burford), the
developer presented three alternative access points, one which would require access at a known local
accident “hotspot”, one at a location known locally to often be flooded by both surface water or river
overflow, and one via Barn’s Lane and Frethern Close, both of which are unsuitable due to restricted (single
width) access.

All of these access points raise safety concerns (I have also raised these concerns directly to Highways for
their attention); specifically:

<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td>➢Witney Street (erroneously referred to as Witney Road in the draft Local Plan) has extremely limited accessibility to the west. Thus any traffic from the development heading west, or accessing from the south (A361), west (A40) or north (A361), or indeed Burford town centre, or heading south, north or west (or into Burford town centre) would have to narrow roads with sections of single width and no pedestrian pavement. These roads additionally: - have limited passing places, some of which (such as the Swan Lane turn) invariably require cars to back into/sit on blind corners - are used by (unaccompanied) primary school children to walk to school - are used by elderly and disabled residents on mobility scooters - have dangerous access in their own right, most notably Barns Lane from the A40 roundabout whereby traffic does not anticipate access to/from Barns Lane and local residents are fearful of many experienced near misses (and actual &quot;prangs&quot;); further, cars turning into Swan Lane or Church Lane frequently have to back onto the High Street due to oncoming vehicles from those roads. - have parked cars that further narrow passage and which cannot be mitigated due to lack of off-road parking for many houses - currently experience significant issues with larger vehicles getting stuck/unable to access, including delivery lorries, removal vans etc. ➢Witney Street also has access issues for traffic going to/approaching from the east (A40 Oxford)* - access onto the A40 has a sharp angle, causing traffic to swing out and/or have limited visibility - is a known ice hazard (you have erected Ice Hazard signs) - is a locally known fog hazard - floods from surface water from fields above and overflow from the Windrush below - has two dangerous corners which are the site of several accidents (the walls along this stretch have been rebuilt in several locations, at a cost of over £15k to one resident alone in less than 6 years, such is the scale of accidents) - is subject to expensive tourist parking up the street, restricting visibility and further narrowing the road. ➢There is some confusion in the developer's proposals as to whether any access would be possible onto Witney Street, in which case alternative access is proposed via Barns Lane and Frethren Close (which exits onto Barns Lane anyway). The above points therefore continue to apply * It is locally well known and practiced that residents do not use Witney Street by choice in poor weather, instead using the High Street to access the A40. For WODC and the developer to be promoting Witney Street as a &quot;Gateway from the East&quot; to Burford, is being met with local incredulity and deep concern, for our own, and the new residents' safety. I suggest further that safe pedestrian access, and existing pedestrian safety, would be compromised by the use of this site. The increased pedestrian and traffic use of Swan Lane, Church Lane, and Barns Lane, all of which have no pavement, would by definition create a significant safety issue. Inappropriate Due Process Lastly, I am concerned about the process undertaken such that this one site is included, and others in the previous draft discarded. There has been little or no consultation about this site with some key agencies. For example that AONB have not been approached prior to inclusion of this site in the Plan, despite a stated commitment that “advice from the Cotswolds Conservation Board, including the Cotswolds AONB Management Plan...is invaluable.” And... “In accordance with national policy, major developments within the AONB will only be permitted in exceptional circumstances and where it can be demonstrated that they are in the public interest...In some instances even relatively small scale developments will be classed as major development... (paras 8.3 &amp; 8.4). It would seem more appropriate that AONB and the Town Council are</td>

| MM352        |                         | Sue Riley      | Ms Riley          | 656               | > SECTION 9 - STRATEGY AT THE LOCAL LEVEL > Burford Charlbury Sub Area > MAIN 193 | involved in the identification and allocation of appropriate sites, enabling a cohesive sustainable strategy that utilizes local knowledge and is designed to meet local and Cotswold tourism and other community needs, without having a prescriptive site dictated in the Local Plan.  

I note the dropping of a commitment to restricting development in Burford to being “small scale” in the proposed modifications in the draft Local Plan under consultation, despite a commitment that “The distinctive qualities of the District’s other towns and villages will be protected” and “larger towns and villages will accommodate growth of an appropriate scale and type...without compromising their intrinsic character, appearance and setting” (Vision statement MAIN 9, Para 3.2).  

Given also your Policy on Locating Development in the Right Places “where development takes place can help to ensure housing and jobs are provided where they are most needed...help reduce car use, protect important areas such as AONB, conserve and enhance the natural and historic environment and avoid other sensitive areas such as those prone to natural flooding” (para 4.2) , the local employment rates and opportunities, and that even the developer acknowledges that he anticipates the majority of homeowners on the development “working in Oxford”, an argument for the location of anything more than small scale, sympathetic developments in Burford seems incongruous at best.  

Further, I understand that Highways have not yet even undertaken a site visit to assess the proposal (this is not scheduled until next week, after the consultation has ended). Given the stated difficulties and dangers noted above about this site, I hope you would agree that this makes the inclusion of this particular site as the only prescriptive solution in Burford in the Local Plan as inappropriate.  

I wish to strongly object to the inclusion in the draft local plan of the proposal to allocate land to the east of Burford, Cole's Field, for a potential development of 85 new houses.  

My key objections are traffic volume, traffic access, flooding and the impact on the area of natural beauty.  

Traffic Volume  

Traffic volume is already an issue in Burford within the existing road network. Increasing the population by 20% will substantially increase the volume of traffic on Burford’s roads, particularly as the lack of public transport will mean the new residents will have one or more cars per household.  

Traffic Access  

There is no suitable access to Cole's Field.  

Barns Lane and Frethern Close are very narrow and full of parked cars. Barns Lane and Swan Lane are single track in places, with no pavements. Increasing the traffic on these roads will ultimately cause traffic jams, minor accidents and could lead to injury to pedestrians.  

Witney Street is narrow, prone to flooding and icing. The proposals for access from Witney Street to the development are on a narrow bend. Drivers getting to Witney Street from the North, South and West will use the narrow roads in Burford, clogging up the road network.  

Flooding  

The site is claimed by WODC to have a "gentle slope". This is untrue and Cole’s field slopes steeply to the north. In periods of heavy rain water currently runs past our house, down Barns Lane. Cole's field absorbs the

<td>&gt; SECTION 9 - STRATEGY AT THE LOCAL LEVEL &gt; Burford Charlbury Sub Area &gt; MAIN 193</td>
<td>I wish to object most strongly to the inclusion in the draft local plan of the proposal to develop Cole's Field, on the east side of Burford. While I recognize the pressure on the Council to make more housing land available, I feel I must challenge the flawed premise of the plan at this early stage. Overall, the plan appears guided by a desire to spread new housing development evenly across the region. This is a lazy and uninformed approach that fails to take into account the need to protect towns such as Burford, one of Oxfordshire’s and England’s greatest historical and tourist assets. As a co-owner of Maple Barn, Barns Lane, I know the town and the proposed development site very well indeed and object to planned development on the following specific grounds: Local impact * The West Oxfordshire plan proposes unrealistic and unsustainably large increases in the population of a historic small town. * A development of 85 homes would permanently bring 250+ new residents and 100+ new vehicles to Burford, a small town with a current population of approximately 1400. This is a proposed expansion of at least 18% to the population – this is a colossal figure and it is impossible to argue that any town would have the infrastructure to cope with such expansion, never mind a historic small town such as Burford. * The impact on traffic will be severe and outlined below, but many local services would also be insufficient for such an expansion (for example, the primary and secondary schools are already oversubscribed). The proposed development would create a tipping point of increased commercial services, community services, infrastructure and social need that will completely change the town’s character. Traffic volume * Traffic volume in Burford is already excessive for the existing roads and the West Oxfordshire plan would increase traffic to an unsupportable and dangerous extent. * Burford High Street is routinely gridlocked during morning and evening rush hours and weekends, and additionally when there is any local event that directs additional traffic along the A40, A424 or A361 (for example, the Cheltenham Festival, Cornbury Music Festival, the Feastival etc). This leads to dangerous, noisy and polluting knock-on congestion at the A40/A361 roundabout and the A40/B4020 junction. The overwhelming majority of new residents created by the proposed development will need to drive outside of Burford to their place of work and will own at least one vehicle, dramatically increasing traffic burden on the town.</td>
</tr>
</tbody>
</table>
Traffic access

* There is no suitable access to a proposed development of Cole's Field.
* Barns Lane, Swan Lane and Frethern Close are very narrow and choked by parked cars. Barns Lane and Swan Lane contain historic and protected buildings, and at points are single-track with no pavement either side, and with a sharp, blind turn at their intersection where there have been several minor (but likely unreported) accidents. Traffic volume and speed is already excessive for these small roads and further increases to traffic volume would be extremely hazardous.
* Witney Street is a narrow country lane prone to icing at the top and flooding at the bottom – the flooding is routine and has been significant during every year that I have owned a property in Burford, and would prevent access to any new development. This would inevitably lead future residents to access any development through other unsuitable routes (e.g. Barns Lane, Swan Lane and Frethern Close).

Flood risk

* Cole's field slopes steeply to the north and the risk of flooding is obvious. Indeed, as noted previously, Witney Street has flooded significantly during every year that I have owned a property in Burford.
* Given that the risk of flooding of Witney Street and the properties and roads to the north is currently mitigated by the absorptive capacity of the field, flooding of Witney Street and lower-lying land to the north would be almost inevitable given the loss of absorption and run-off that would be created by a development on Cole's Field.

AONB impact

* The proposed development goes against our generational responsibility to protect Oxfordshire's and the country's greatest historical and tourist assets.
* The proposed development would fundamentally and irrevocably change Burford, not least destroying the views across the Windrush Valley and the historic Parish Church from the A40 coming from Oxford, and the A424 coming from Stow.
* The proposed development site is within the Cotswold Area of Outstanding Natural Beauty (AONB) and the Burford Conservation Area. Burford is an historic town with 252 listed buildings and entirely unsuitable for a development of anywhere near the proposed size and character. It should be a fundamental premise that we should not degrade Burford Conservation area or any area of Outstanding Natural Beauty – it is everyone's responsibility to protect our most treasured heritage.

Lack of consultation

* There was no prior consultation with Burford Town Council, our District Councillor or the body that manages the AONB. Indeed, the original schedule for display of the development plans included exhibits at Chipping Norton, Carterton, Witney – but not Burford!

Overall, the current simplistic and unconsidered plan should be replaced by a proper planning strategy that targets developments in a way that has the minimum impact upon what are some of our county's most valuable assets.

I hope that you will consider these points and reconsider the proposed Burford development, and in so doing prevent irreversible damage being imposed on our most prized heritage. I look forward to your reply.

<td>relocate the John Radcliffe Infirmary from the City centre to Marston - so he knows a thing or two about town planning! Now resident in North Oxford and 96 years old, I know he would be heart broken to think that the beautiful village of Burford was being treated in such a cavalier fashion. As my husband has also pointed out, this is a classic example of ill thought out planning and I too want to add my voice in support of the local residents in their quest to persuade you think again and reject the current proposal. Specifically, my objection is to the inclusion in the draft local plan of the proposal to allocate 85 new homes to the site to the east of Burford known as Cole’s Field. My objection is made on the following grounds: * The site is within the Cotswold Area of Outstanding Natural Beauty (AONB) and the Burford Conservation Area. Burford is a historic town with 252 listed buildings and is entirely unsuitable for a development of this size and character. * It will destroy the views across the Windrush Valley and the parish church from the A40 coming from Oxford and the A424 coming from Stow and from the A361 from Charlbury and Shipton. * There has apparently been no prior consultation with Burford Town Council, the district councillor or the body which manages the AONB. * The site slopes steeply to the north and there is a clear risk of flooding * There is no suitable access. Witney Street is a narrow country lane which is prone to icing up at the top and flooding at the bottom and bends sharply at the proposed access point. Frethern Close and Barns Lane are also narrow and are choked by parked cars. 6. There is not enough capacity in Burford for the extra primary/secondary school requirements that would arise. 7. The surgery be will be overloaded, particularly as one of the surgeries in Witney is closing down. 8. The proposed revision of the original plan is as a result of the need for additional housing for Oxford City and also suggests 40 houses in Charlbury which has just under 3000 population, with 1298 households, and with a fast, efficient rail connection to Oxford. This proposal would increase the households in Charlbury by about 3% whereas Burford is a town of just over 1000 population, which already has an oversubscribed Primary School, a failing sewerage system, and a lack of parking, and siting these houses where there is no public transport does not appear sustainable. This is over 4 times the percentage increase in households that is planned for Charlbury, and would increase the households in Burford by about 13%.</td>

I hope that you will consider these points and reconsider the proposed Burford development, and in so doing prevent irreversible damage being imposed on our most prized heritage. I look forward to your reply. |
This is the Council’s response to WODC’s consultation on the Plan.

The Council is unanimously and strongly opposed to Policy BC1b which recommends that “around” 85 dwellings should be built on a site (the “Site”) on Burford’s Eastern boundary on the following grounds:

1. Such development would represent gross incursions into both the AONB and the Conservation Area. Such Areas are still afforded the highest degree of protection by the NPPF despite recent attempts to water it down. Burford has over 250 listed buildings and the Site constitutes an important part of the setting for those heritage buildings.

2. The Plan suggests access could be obtained from Witney Street (wrongly called Witney Road in the Plan), Barns Lane and Wysdom Way. Witney Street has two carriage ways, reduced to one by parking when entering Burford, two blind bends and is substantially below the level of the site. For a quarter of its length, Barns Lane is a single carriageway bounded on both sides by dry stone walls without passing places. The remainder is two carriageway reduced to one by parking – there is insufficient off street parking for the residents. Wysdom Way is a cul-de-sac also heavily parked. There is no suitable access for such a large scale development.

3. Paragraph 9.6.34j of the Plan states that the Site slopes “gently down towards” Witney Street. The gradient is 20/25%! Paragraph 9.6.34k states that the Site is not within a “designated area of flood risk”. That may be the case but it does not stop Witney Street flooding every year after heavy rain due to the absence of any drainage system under Witney Street, the run-off down the “gentle” slope and the natural springs in the area. A large scale development would exacerbate flooding due to the reduction in the amount of farm land acting as a natural soakaway. Furthermore, Orchard Rise on the Northern boundary of the Site, and its houses are below the level of the Site and would take the full force of the flooding.

4. Burford has no industry, very few offices and a little agriculture. It lives and thrives on visitor income i.e. tourism which generates about £15 million per annum for the benefit of the Town, the District and the County. Large scale development of the Site will be a serious disincentive to tourists, specially first time visitors, as they will lose the wonderful views over the Windrush Valley, framing the famous Parish Church of St. John the Baptist, from the A40 approaching from the East and the A361 and A424 approaching from Chipping Norton and Stow-on-the-Wold respectively.

5. 85 homes on the site would increase the density of dwellings on the area comprising the Site and the Frethern Close estate by more than 70%. This is excessive for a rural community.

For the above reasons, the Council requests that Policy BC1b be withdrawn from the Plan.

The Council had no knowledge of Policy BC1b prior to the issue of the Plan to the public for consultation. It was the original bolt from the blue. If the proposal had been discussed with the Council some of the more egregious errors in the Plan would have been avoided. The failure by WODC to engage in pre-publication consultation would appear to be a clear breach of Regulation 18 of the Town and Country Planning (Local Planning) (England) Regulations 2012.

My objection to the inclusion in the draft local plan of the proposal to allocate 85 new homes to the site to the east of Burford known as Cole’s Field

My objection is on the following grounds:

| MM383         | Charbury Sub Area > MAIN 193 | Madeline and Michael Baggaley | - | Baggaley | 825 | We wish to put forward our objections to the proposed plan for the building of 85 new homes on the site in Burford known as Coles Field. Our objections are on the following grounds:  
1) Burford is in an area of Outstanding Natural Beauty (AONB) and the impact of this quantity of building would have a drastic impact on the appearance and character of this historic town.  
2) The effect of the extra traffic this development would entail - the Barns Lane area is very narrow with limited footpaths and already under pressure on busy days with local traffic going from the A40 roundabout down the High Street to cross the bridge - that is when you eventually get to the roundabout with the queues along A40/A361. The other option of Witney Street - also narrowed High Street end with parked cars and the |

| MM386        | Cotswolds Conservation Board | Ms Rood 837 | Cotswolds Conservation Board | Rood | 837 | > SECTION 9 - STRATEGY AT THE LOCAL LEVEL > Burford Charlbury Sub Area > MAIN 193 | A40/White Hill junction is very prone to ice in the winter, and the speed some traffic users, I have seen numerous accidents over the years. The exit/entrance is along the road area called Springfield that is so called because of the natural springs that run down from your proposed site to the river, the road being inclined to flood.
3) The impact of this quantity of housing/traffic/people on existing schools and doctors surgery that are already filled to capacity.
This is from a 72 year-old resident who has lived here all of her life, please don't ruin this delightful old town - already under pressure from too many heavy lorries and traffic quantity. |
| MM387        | Angela Tancock 839 | Mrs Tancock | Angela Tancock | Tancock | 839 | > SECTION 9 - STRATEGY AT THE LOCAL LEVEL > Burford Charlbury Sub Area > MAIN 193 | I am writing concerning the policy of BC1b - land east of Burford. I strongly object to the draft local plan with regard to the proposal of use of Cole's Field. The abhorrent thought of 85 houses being built on the site is sickening.
Firstly, but not overwhelmingly, the site is within the Cotswold Area of Outstanding Natural Beauty. Just think what this means, planners; - could not a brown site be found somewhere instead of spoiling this obvious jewel of a site for the Cotswolds?
Secondly, it is within the Burford Conservation Area. The meaning of 'CONSERVE,' quoting from the Oxford English Dictionary, means "KEEP FROM DECAY, OR CHANGE, OR DESTRUCTION." Burford brings in thousands of visitors from home and abroad; they come because the area has been preserved by our fore-fathers and is a small town bursting with listed buildings, a great many less than a kilometer from the proposed building site. Examples of historic houses are: Wisdom House (Grade II listed building), The Highway Hotel (Grade II listed building), St. John the Baptist Church, begun 1175, and The Great House, built in about 1690. All these buildings are less than 1 kilometer from the proposed site. I came to your Carterton construction plans on Tuesday evening and part of the writing stated "will respect the qualities and character of the AONB." This is a total contradiction in terms . If anyone builds on this site by the very nature they "will" NOT "respect the qualities and character of the AONB." In conclusion to this particular paragraph this field is entirely UNSUITABLE for a development such as this.
Has anyone from the planning committee ever walked down Witney Street, Barns Lane or Frethem Close, NO NOT on a Monday morning when everybody is at work? But in the evening, or a weekend? You will find that all three areas are crammed with cars (on some properties there are no garages or parking spaces on the actual properties themselves). Certainly Barns Lane and Frethem Close are ONE-WAY cars only. You cannot get two cars alone Barns Lane - absolutely not, and Frethem Close is the same when cars are parked along the edge of the street. In Witney Street you cannot turn into it from the High Street. Just how are cars going to access the further end of this street? Again planners, walk along the circuitous route which cars would have to take. These streets are medieval - narrow. You cannot expand ring roads which have stone buildings |

1) Witney Street is a “rat-run” with all the compass points onto the A40. I have lived and worked here since 1960.

2) Access point of White Hill, with its entrance and exit points on to the blind bends of Witney Street is astounding. Access point of Barnes Lane is unsustainable: narrow, steep, one-way section, parked vehicles with little widening capabilities.

3) Witney Street floods from heavy rain (increasingly) ’run off’ from Cole’s Field with its natural springs.

4) Parked vehicles on Witney Street impede movement; additional traffic movements....? A neighbour’s parked, stationary car was written off.

5) Is there a conflict of interest with Cotsway’s second and third social housing? How many dwellings will there be for first-time buyers, and, will the rents be affordable?

6) Burford is grid-locked daily; strangled from seasonal events, accidents, holiday traffic, in every compass point Witney Street becomes the A40 from those mentioned aspects.

7) Sewage: current system does not function properly...

8) Extra light pollution

9) Schools, capacity...?

10) Doctor’s surgery...?

11) Burial ground...?

| MM394         |                         | C R Dadge       | Mr              | Dadge            | 855| > SECTION 9 - STRATEGY AT THE LOCAL LEVEL > Burford Charlbury Sub Area > MAIN 193 | I wish to object to the inclusion in the draft local plan of the proposal to allocate 85 new homes to the site east of Burford, known as Cole’s Field. My objection is on the following grounds:  
1) This site is within the Cotswold Area of Outstanding Beauty and the Burford Conservation Area. Burford is a historical medieval/Saxon town with 252 listed buildings and is entirely unsuitable for a development of this size and character.  
2) It will also destroy the views across the Windrush Valley (a view I add has been there for many hundreds of years) from the A40 coming from Oxford and the A424 coming from Stow.  
3) There was also no prior consultation with Burford Town Council, our District Councillor or the body which manages the AONB.  
4) The site slopes steeply to the north and there is a clear risk of flooding, e.g. last year, 2016, a car park was shut for many weeks, and in 2007 the flooding was horrendous. These are just two examples.  
5) There is no suitable access: Witney St is a narrow country lane prone to icing up and flooding at the bottom, and bends sharply at the proposed access point (obviously nobody has been to see this this year). Frethern Close and Barns Lane (an area I know so well) are very narrow and always choked up with parked cars. It has also become a rat run because of the influx of new people in the new developments on Frethern Close (it is an accident waiting to happen). |
| MM396         | Mr Michael Taubenheim   | Mr              | Taubenheim      | 859             | > SECTION 9 - STRATEGY AT THE LOCAL LEVEL > Burford Charlbury Sub Area > MAIN 193 | I find the sight totally impractical for so many houses. Talking to the developers at their 'open' meeting in the Warwick Hall last Tuesday they said 85 houses and 60 flats...  
The town of Burford is choked with traffic as it is, so another 145 dwellings will mean another 200 plus cars and service vehicles each day.  
Also the town's infrastructure would not really take the strain (sewage/waste, water etc.)  
Also the W.O.D area is an added interest for visitors, with an income calculated by WODC as £15,000,000 per year from tourism. The visitors would be greatly 'put-off' if the town was choked by extra traffic.  
I really believe Burford's infrastructure cannot take the strain of this development at that location. |
| MM41          | Ashford                 | Mrs             | Twelves         | 86              | > SECTION 9 - STRATEGY AT THE LOCAL LEVEL > Burford Charlbury Sub Area > MAIN 193 | I object most strongly to your planned development in Burford. Why spoil a lovely village which is so famous for being unspoilt. Big mistake, I am sure there are other ways round this and other places to build. Yours sincerely K Twelves. |
| MM118         | Neil Treloar            | Mr              | Treloar         | 872             | > SECTION 9 - STRATEGY AT THE LOCAL LEVEL > Burford | I am writing to you to express my upset over the planned development of 85 new homes near Frethern Close Burford. My house overlooks the proposed site. I have seen the proposed plans showing where the houses are likely to be built. These houses will ruin my view of the Windrush Valley. I am in the process of buying this house, my home for nearly 41 years, my entire life. |
Charlbury Sub Area > MAIN 193

My mother who owns the house currently moved away after the death of my father left her with memories of this house she found too upsetting to be able to continue living here.

I had the property valued. One main factor in making this property desirable was the outstanding views quoted as being "Ex-local authority located on the outskirts of Burford, in a popular location with far-reaching views from the rear over open countryside."

Well, the plans will certainly ruin that if allowed to go ahead. I see no need for the houses to be built in full view from all directions around the entire perimeter, when the houses could go towards the bottom of the steep valley, closer to the shops, away from the houses on Frethern Close, who’s residents have already suffered greatly since the two most recent developments on the estate, most recently of the new Falkland Close development.

I suspect there is an underhand reason for the houses being proposed all around the perimeter, not admitted by Carterton Construction Ltd, and most specifically by director Harry Watts. They boast of new exciting green areas within the development site. I think they plan to get straight in and build around the edge with a view to then infill with more houses.

Burford can’t cope with so many properties being built. The high street is so busy, many commuters having already taken to rat-running down the single track Barns Lane, as the High Street is often gridlocked. And in an attempt to avoid the also gridlocked A40/A361 roundabout, people coming along to A40 eastbound, take the short-cut down White Hill, into Witney Street, passing the North entry/exit to the proposed new site. Traffic in Frethern Close has now reached an unsafe level since the addition of the new homes on Falkland Close, not simply due only to the amount of new residents, but also their frequent visitors, many of whom seem to be unable to drive at a safe speed. With the amount of parked cars, it seems only a matter of time before somebody is run over and seriously hurt. Any traffic calming measures would be hard to implement, they often involve single-file traffic areas and speed humps, which would take away the availability of much-needed and scarcely available parking spaces on Frethern Close.

Since the new houses were built, we have seen an immediate increase in the following areas:

- dog fouling
- litter, most notably disregarded kebab packaging and drinks cans and crisp packets/sweet wrappers
- brawling, resulting in police action

I don’t relish seeing all this again to the rear of my property.

Other liberties I see under threat would be my access to the rear of my property, as I and many other residents have always enjoyed unquestioned access to Cole’s Field. I actually have permission to use the field for pigeon shooting any time there are no crops planted, so I would loose, not gain, green space, and my dog would loose her freedom to walk around the edge of the field.

I wonder if anybody has asked Burford County Primary School, could they cater for any more children? If the answer is no, we would see an increase in traffic for the daily school run, on already congested roads. I am not aware either if any environmental impact on the wildlife has been explored. There are frogs, newts, foxes and dear who are regular inhabitants of the field. I am sure they too will suffer.

| MM401         |                         | John Middleton  | -                | Middleton         | 884        | > SECTION 9 - STRATEGY AT THE LOCAL LEVEL > Burford Charlbury Sub Area > MAIN 193 | I understand the need for new homes, but why do people constantly insist in dividing communities. Surely a whole new town could be built, for example on the land around Bradwell Grove/Shilton, where the solar farm is an old Airfield site, not much use for farming, with no impact on an established town in a Conservation Area. 

P.S. Is the sewage works able to cope with the increased capacity? |
| MM44          |                         | C J Rushton     | Mr and Mrs       | Rushton           | 89         | > SECTION 9 - STRATEGY AT THE LOCAL LEVEL > Burford Charlbury Sub Area > MAIN 193 | We cannot believe the news that there is a proposal to do develop Cole’s Field. Burford is basically an overgrown village and any large-scale development will spoil the charm and ruin the unique feeling of a close-knit community: 

1) The site is not a gentle slope and is very steep at the Witney Street end. 

2) Because of the slope, storm water will be a major headache and must not be allowed into stormwater drains in Witney Street...it would cause major flooding (also sewage). 

3) It would be an eyesore from A36 and footpaths around Swinbrook and Widford. 

4) Access to the proposal is totally inadequate - Barns Lane already busy and too narrow for additional traffic - Witney Street connection to existing bend from a very steep road is madness. It is a north facing slope towards Witney street which is bound to get icy in the winter, making this entry/exit point extremely hazardous. 

5) Witney Street as a fareway to Burford is a joke. It is effectively single track from the fire station to the white railings on the outskirts. 

6) There are very few jobs available with Burford, so surely extra housing should go closer to industry and not force more people to commute on the already overloaded local roads. 

There are so many examples of sprawling development of towns in the vicinity, e.g. Brackley, where the road structure is awful; because of piecemeal overdevelopment; don't let lovely Burford go the same way please. |

| MM408         | Mr R Horsley    | Mr Horsley       | 899        | > SECTION 9 - STRATEGY AT THE LOCAL LEVEL > Burford Charlbury Sub Area > MAIN 193 | "Cole's Field is rich in wildlife and provides a valuable habitat for a number of farmland specialist birds. These include partridge, turtle doves and tree sparrows, which we regularly see in the field, and which are known to be in severe national decline. Destroying the habitat would not only affect these species, but would also have consequences for other animals including hedgehogs, foxes and adders, all of which we have seen in the field.

"Cole's Field, and its access through Barnes Lane, is used as a right of way and should be recorded as such under section 31 of the Highways Act 1980. People use the Barnes Lane entrance and the edge of the field to access the rear of the properties in Barnes Lane, Frethern Close and Wysdom Way, they walk along this route with their families and they walk their dogs. I have memories of using this route as a child in the 1970s and it is still regularly used today.

"The site access proposals are not acceptable and would lead to potential safety hazards. Witney Street is a narrow country Lane which already suffers from congestion and speeding vehicles. It frequently floods and freezes during winter. A development of 85 new homes would bring at least double that number of cars, plus there would be more cars working at and visiting the proposed care facility. The town simply cannot cope with this level of traffic; it would create road safely problems and cause difficulties for the emergency services.

The draft plan says that primary vehicular access would be through Witney Street. Witney Street is a narrow country lane which already suffers from congestion and speeding vehicles. The main entrance to the proposed site would be right next to the double bend which is particularly hazardous. The road frequently floods and freezes during winter.

The plan goes on to state that secondary vehicular access may be achieved from Frethern Close/Wysdom Way to the south and Barns Lane to the East, both of these options are entirely unsuitable. The roads are already full of parked cars; Frethern Close in particular is extremely difficult to negotiate in a car if there is another vehicle travelling in the opposite direction. This already causes difficulties for emergency services, refuse lorries and delivery vans. Barns Lane also has its own traffic issues. There have been a number of occasions recently where lorries have become stuck, occasionally causing damage to walls. This highlights the unsuitability of this road as an access point.

Extra traffic through any of these routes is not acceptable. A development of 85 new homes would bring at least double that number of cars, plus more cars working at and visiting the proposed care facility. The town simply cannot cope with this level of traffic; it would create road safely problems and cause difficulties for the emergency services.

We have already written about the proposal but would like to add further points.

1) Although we appreciate that WODC have to find sites for additional houses - we question that 85 houses in Cole's Field Burford is the right move. Burford is a small town of 1500 people and 85 houses and their cars will make a huge difference. The narrow steep roads of Barns Lane, Pytt Lane, Guildenford and Witney Street are all heavily congested with traffic and parked cars - and the A361 (The Hill) is always busy, and often at a stand still. We note that Charlbury, with 3000 residents, has planning for only 40 house. Charlbury has a mainline station to London, while Burford has very poor transport links.

2) We also note that there has been no consultation with Burford Council, the Cotswold Conservation Board or Historic England. If Burford has to have more houses there are more suitable sites, for example, flat ground in Tanners Lane which comes out straight onto the A40, and has the advantage of being on the same side of the A361 as the primary school, the pre-school, the doctor's surgery, chemist, and supermarket. There is also land available opposite the Garden Centre on Shilton Road, which also has the advantage of being a..."

What residents and visitors are also aware of is the level of traffic that uses 'The Hill' and the number of side streets that are used for parking. It is not uncommon to see a queue of traffic stretching from the bridge back up to the A40. 
The scale and position of the proposed 85 houses will further impact the narrow side streets unsuited to cope with this level of development let alone the lorries etc. needed for the building works. 
As for the 'gentle' slope down to Witney Street, clearly someone needs to survey the area as it is far from gentle and not surprisingly does flood from time to time. 
I can only assume that the proposal was submitted without due care for the surroundings and impact on the town, its residents, visitors and character. |
|               |                         |                    |                  |                   |            |                     |                     |
| MM423         | Brad Allan              | Mr Allan           | Allan            |                   | 937        | > SECTION 9 - STRATEGY AT THE LOCAL LEVEL > Burford Charlbury Sub Area > Planning application for 85 houses on Cole's Field Local Plan 2031 - Burford-Charlbury Segment | I am writing to lodge my objection to the development stated above. Baring the obvious spoiling of the medieval village by surrounding it with 21st century housing there are various further points I would like to make. 

Firstly, access. I regularly walk up or down Barns Lane and there is hardly enough room for a pedestrian and a |

<td>car, never mind two cars, so access from here would be impossible. Witney Street is extremely dangerous due to sharp bends, so giving limited vision, so access from here would be very dangerous. Secondly, with close proximity to Oxford, Burford is one of the Cotswold’s most visited villages. When arriving along the A40 the first view would be of the new houses, what a shame! The first view now is when one goes down The Hill and it is breath-taking! Thirdly, the famous BRIDGE. I already worry about the traffic and trucks that go over the bridge, which at some stage will just collapse. 85 more houses would exacerbate this problem. Finally, with no survey being carried out will local services, doctors, schools, fire station etc. be able to cope? I am sure not! I understand their is a massive demand for housing across the whole UK. BUT cannot in anyway justify that to build in Burford makes any sense besides probably higher profit for the developer!</td>

| MM430 | | Janet Roberts | Mrs Roberts | 975 | Sub Area > MAIN 193 | 2) Burford houses suffer from inadequate/poor drainage as it is, resulting in what is known as "The Burford Stink."
3) The land on the proposal site is steep and will cause further misery and flooding.
4) Drain's cannot cope.
5) There is no suitable access - Barns Lane is already impossible at times, Witney Street is unsuitable and often blocked.
6) I understand there was no prior consultation with Burford Town Council. Is this not lack of 'good practice'? 
7) This is an area of Outstanding Natural Beauty.
8) I believe affordable housing is very necessary in West Oxfordshire. Surely it would make more sense for each village to have a few new houses built rather than 85 all in one place?
To sum up, I am totally against such an inappropriate development - it would be an expensive mistake for West Oxfordshire, for the current home holders and businesses in Burford, for the council and for the taxpayers. |
| MM431 | | J S Agnew | Mrs Agnew | 976 | Sub Area > MAIN 193 | Proposal to build on Cole Field (Local Plan 2031)
I want to register my objection to the above:
1) Witney Street floods every winter, sometimes between the college and White Hill. It is choked by traffic.
2) Barnes Lane could not be used as access, since it is one way. In winter this road cannot be de-iced.
3) I object because the new development could not be accommodated in the present sewage system without disruption to existing facilities.
4) The Burford sewage system is antiquated and inadequate. Last month (November) Church Lane was closed for 3 weeks for repair to the system. |

| MM433         |                         | E. Auu Kenny    | Ms               | Kenny             | 978        | > SECTION 9 - STRATEGY AT THE LOCAL LEVEL > Burford Charlbury Sub Area > MAIN 193 | I should like to make a comment about the possible development of land in Burford between Orchard Rise and Frethern Close. Access and egress from that sight is going to be a nightmare. If the entrance and egress is on the west side where the slope of the land on a map or diagram looks as though it might be easy, it is not. It leads into a narrow lane, at the bottom of which is a very old cottage. That road is really old. For pedestrians it might be suitable but most vehicles find it very narrow and steep.
I am not making any comment on the north side of the development. I am not clear what has been proposed. |
| MM434         |                         | L. A. Bradshaw  | Mr               | Bradshaw          | 979        | > SECTION 9 - STRATEGY AT THE LOCAL LEVEL > Burford Charlbury Sub Area > MAIN 193 | I am deeply concerned at the inclusion in the draft local plan of the proposal to allocate 85 new homes to the site to the east of Burford, known as Cole's Field. Accordingly, I wish to object for the reasons stated below:
1) Access to the site is very difficult. Witney Street, Barnes Lane and Frethern Close are all narrow, choked by parked cars and, in the case of the first two, are prone to icing in winter. Witney Street access is particularly difficult as it is on a sharp bend and the site slopes steeply in the north, contrary to the 'gentle slope' quoted. Furthermore, Witney Street already suffers from regular floods from rains after pouring down from the fields.
2) Congestion in Witney Street in particular, is already very bad. It is effectively a one-way street, within the Burford limits, because of parked cars. The access onto the High Street is single car width and there is often a multiple car queue. As yet the impact from the new Warwick Hall, adjacent to the church, has not yet been fully felt. When major events are held, this will lead to further serious congestion as Church Lane feeds into Witney Street. The result of extra cars from the 85 new homes in Cole's Field would exacerbate an already very congested street.
3) Prior consultation with the Burford Town Council, our district councillor, or the body which manages the Area of Outstanding Natural Beauty does not seem to have taken place - surely a serious omission?
4) Burford is a very beautiful, historic town with many listed buildings and is totally unsuitable for development of this size and character. Cole's Field lies within the Cotswold AONB and the Burford Conservation Area. There is no doubt in my mind that the proposal in question of 85 new homes which would result in a population increase of an estimated 195 people (based on Carterton Construction's figure of an average of 2.3 people per house) is not practical or realistic. I do not believe that the existing infrastructure of the town can cope with this influx, including an additional estimated number of cars in excess of 100.
5) Tourism and the economy of Burford are strangely excluded. Indeed the tourist trade is vital to the vast majority of Burford businesses, and anything which impacts negatively on tourism would be bad for Burford. If congestion on the Burford streets becomes worse and the beauty of the town is affected, this will affect Burford adversely. The proposal of 85 new homes on Cole’s Field would destroy the views across the Windrush Valley and the Parish Church when approaching Burford from the A424 from Stow-on-the-Wold and on the A40 from Oxford. |
<p>| MM436         |                         | I R W Moore     | -                | Moore             | 981        | &gt; SECTION 9 - STRATEGY AT THE LOCAL LEVEL &gt; Burford Charlbury Sub Area &gt; MAIN 193 | It is a very good idea for local people, the only worry I have is whether there will be affordable homes, not the silly house prices we have in Burford! As the A40 is a very busy road, so the local roads would have to be changed for an exit on to the A40. |

</table>

**2.56** Land east of Burford is proposed for allocation for “around 85 dwellings as a well-integrated and logical extension of the existing built form of the town.” As discussed above in respect of main modifications 15-16, Burford is classified by the Council as a rural service centre, the second tier of settlements in the District after the three main service centres.

**2.57** Within the Burford-Charlbury Sub-Area there are no main service centres, and Burford represents one of only two rural service centres in the Sub-Area, serving the wider villages and sub area. The Plan recognises that rural service centres are sustainable locations to accommodate development.

**2.58** Paragraph 9.6.4 of the Plan highlights that there have been no sites allocated for residential development in Burford since the late 1980s, although it is acknowledged that some limited windfall development has occurred over this period. The Plan highlights that this, together with the desirability of Burford as a location to live, has significantly increased house prices in the town.

**2.59** We support the proposed allocation of the site which will help in addressing the lack of recent supply of new housing in the locality over the Plan period through the delivery of much needed housing.

**2.60** Clearly given the site’s location in the AONB, due consideration must be given to the tests set out in the NPPF in this regard. The Council have clearly set out their justification in relation to the tests in proposing to allocate the site. We consider each of the tests in turn below and provide our own assessment against which supports the conclusion ultimately reached by WODC in proposing the allocation.

**2.61** As has been clearly established the Council has a high level of housing need and there is a need for the Council to also seek to accommodate a proportion of the unmet needs of Oxford City. We do not repeat these considerations here but clearly regard should be had to this level.

**2.62** Burford is classified as a rural service centre, the second tier of settlements in the District and is ranked as the 6th most sustainable settlement in the Council’s Settlement Sustainability Report. Significant allocations are proposed at the Council’s three main service centres, and the Proposed Modifications to the Plan have sought to enhance the capacity of these locations where possible. Given the scale of development necessary to be met in the District it is plainly impossible for the full quantum of development to be met at the main service centres and this is reflected in the proposed allocations at the rural service centres and indeed other settlements further down the settlement hierarchy.

**2.63** The Local Plan highlights that no allocations have been made at Burford since the late 1980s. A limited number of dwellings have been delivered through windfall development in Burford Parish however as shown by the material at Appendix One this totals only 79 new dwellings over the period 2001 to 2016. Of the total completions in Burford Parish
only 28 affordable homes have been completed. As of 1st April 2016 there were 1,443 people on the Council’s Housing Register and of these 28 applications have registered Burford as their first choice of area.

2.64 Clearly therefore there is a level of need for both market and affordable housing at both a District and Parish level which necessitates the allocation of the site within the AONB. Paragraph 9.2.26 of the Plan highlights that: “the Town Council is keen to see an increase in the housing stock to provide some affordable housing to enable younger families to live in the town, secure the future of the primary school and increase the supply of key workers.”

2.65 The Plan also highlights that the development would have a beneficial effect in terms of the local economy during the construction phase. In addition we would highlight the beneficial effect the proposals would have once occupied through the support of local services and facilities. The development is well located to provide access to the services and facilities on offer within the town and the proposals will seek to link into the existing connections. Whilst Burford does benefit from a good range of services and facilities, these are somewhat reliant on the tourist trade which the town attracts, and the proposed development will help to supplement this income through the increase in resident population.

2.66 As such it is considered that the proposed allocation clearly meets this criterion. The cost of, and scope for, developing elsewhere outside the designated area, or meeting the need for it in some other way

2.67 As discussed above the need for development to be accommodated at Burford has been clearly demonstrated. In considering potential locations for development around Burford the draft Plan highlights that:

“In terms of the scope for developing elsewhere or meeting the need in another way, the majority of Burford (except land south of the A40) is washed over by the Cotswolds AONB designation. Any development within or on the edge of the town will therefore fall within the AONB and the scope for avoiding it does not exist other than south of the A40 where the Council’s assessment of land availability has been unable to find any suitable sites.”

2.68 The Plan below (ATTACHED) is taken from the SHLAA (June 2014) and clearly demonstrates that the majority of potential development locations are within the AONB. Whilst one site (SHLAA reference 146) is promoted which is located outside of the AONB, proposals for development of the site have recently been refused under application reference 15/00166/OUT with the Council noting in its reasons for refusal that:

“By reason of its location, remote from the Town Centre facilities and with difficulty of access, the development would be isolated and heavily reliant on the use of private vehicles.”

2.69 The refusal has been appealed and the decision is currently awaited.

Suitable alternative sites outside the AONB do not therefore exist, and the
2.70 In proposing the allocation of the site the Council have assessed the site and concluded that "development of this site would not have a detrimental effect on the environment, landscape or any recreational opportunities." In response to the proposed allocation a planning application is in the process of being prepared for the development of the site and will be submitted in early 2017. To inform the proposals detailed technical work is underway and this informed the draft proposals which were the subject of public consultation in December 2016. A copy of the exhibition boards are provided at Appendix Two.

2.71 In summary the technical work undertaken to date has demonstrated that:

- Flooding – All new homes are on land classified as Flood Zone 1, which carries the lowest risk of flooding. New foul and surface water networks will be constructed to collect flows generated by the development. A Sustainable Drainage System will ensure that there would be no increase in flood risk to the surrounding local area.

- Heritage and Archaeology - the majority of the site is located within the Burford Conservation Area. There are a number of listed buildings located within the Conservation Area boundary. These buildings have been considered as part of the design process, in particular the views from the site to the surrounding Conservation Area. An archaeological assessment has been carried out to identify the presence of heritage assets. This assessment has identified that there are no designated archaeological heritage assets on the site and none within 1km of the site boundary.

- Ecology – a number of ecological investigations have been undertaken and are ongoing in order to assess the biodiversity value of the site. The habitats within the study area assessed are considered to be of a ‘lower’ value at the local scale. Further environmental studies are taking place and the emerging proposals include strengthening the existing boundary habitat, retaining the mature trees and reducing the impacts on the development upon habitats and species present.

- Landscape – as has already been discussed the site falls within the Cotswold AONB and any development will therefore need to respect the qualities and character of the AONB. The site benefits from existing trees and vegetation running along the site boundaries, which would be retained and added to as part of any future proposals. A landscape scheme for the site will include public open space, green infrastructure and additional planting and screening to integrate the development to the wider area.

2.72 The proposed allocation site is currently comprised of agricultural land and will not...

proposed allocation site is considered to be the most appropriate opportunity of those sites within the AONB, as confirmed by the Council through its draft allocation. It is considered that development of our client’s site would integrate well into the historical pattern or character of the settlement, noting the landscape character of the area. Any detrimental effect on the environment, the landscape and recreational opportunities, and the extent to which that could be moderated...
therefore impact on any existing recreational facilities. The proposed development will deliver a new area of children's play space and wider public open space for the enjoyment of both new and existing residents.

2.73 It is considered that the development would respect and conserve, and not obstruct, public views to higher slopes or skylines or sweeping views across the landscape. The building style will respect the local tradition and be to a high standard of design as befits a nationally designated landscape.

2.74 Given the above it is considered that the proposed allocation is sound and will make an important contribution to meeting local needs as well as those of the wider District.

Detailed Allocation Requirements

2.75 As discussed above we support the principle of the allocation of land east of Burford. Notwithstanding this, we do have some comments on the detailed requirements of the policy as discussed below.

2.76 The proposed allocation seeks the delivery of around 85 dwellings. Whilst we support the recognition that the site represents an appropriate location to accommodate residential development we do consider that the site also the potential to deliver a 60 bed extra care facility within the allocation site. The care home would help to meet the local needs for such a facility in an appropriate location which is well integrated with the existing services and facilities on offer within the town. The site is capable of accommodating this alongside the 85 dwellings proposed.

2.77 As such we consider the policy wording should be amended to the following: "Land to the east of Burford to accommodate 85 dwellings and up to 60 bed extra care facility as a well-integrated and logical extension of the existing built form of the town."

2.78 Criterion B of the policy requires: "provision of satisfactory vehicular access and appropriate pedestrian and cycle connections. Any vehicular access provided from the Witney Road will be required to contribute positively to the eastern approach into Burford providing a 'gateway' entrance to the town."

2.79 The supporting text to the policy notes that there are a number of options in terms of access and that in addition to the potential for access to be taken from Witney Street (incorrectly called Witney Road in the draft policy text), secondary access could be taken from Frethern Close/Wysdom Way and Barns Lane. The emerging proposals shown on the exhibition boards at Appendix Two take primary access from Witney Street with a limited number of units served from a secondary access off Barns Lane. The application will in due course will be accompanied by a detailed Transport Statement demonstrating the suitability of these access options.

2.80 Whilst the proposed access from Witney Street has paid due regard to the proposed allocation site boundary as a result of the additional technical work that has been undertaken by the consultant team it has been determined that it is not possible for the access to be achieved within the allocation boundary as currently proposed. The proposed access arrangement is shown at Appendix Three. In light of this it is
considered that the allocation site boundary should be amended to reflect that shown in red below (the existing proposed allocation boundary is shown via the dashed black line).

2.81 Subject to the above suggested amendments it is considered that the proposed allocation is sound.

2.82 Our consideration of the wider opportunities presented by our client’s land interests to the east of Burford are discussed in relation to Main Modification 200 and as such are not repeated here.

Sustainability Appraisal

2.83 The proposed allocation has been subject to detailed assessment in the Sustainability Appraisal Addendum Report (October 2016) prepared by Enfusion on behalf of the Council. In relation to the four proposed new non-strategic allocations in the Burford-Charlbury Sub-Area the Report confirms that no major significant effects were identified.

2.84 The conclusions of the Report in respect of the East of Burford allocation are shown below together with our comments and updated conclusions. (Attached)

I wish to object to the inclusion in the draft local plan of the proposal to allocate 85 new houses to the site to the east of Burford known as Cole's Field. My objection is on the following grounds:

1) The site is within the Cotswold Area of Outstanding Natural Beauty (AONB) and the Burford Conservation Area. Burford is a historic town with 252 listed buildings, economically supported by visitors, and is entirely unsuitable for a development of this size and character. Compared with a few decades ago, which I remember, it has only one general food shop; one Co-op. Most residents travel to Witney or Carterton for food shopping. The primary school is full and the surgery is always extremely busy.

2) It will affect detrimentally the wonderful views of the Windrush Valley with its renowned church and spire from the A40 coming from Stow-on-the-Wold and from the much frequented viewpoint Westhall Hill.

3) There was no prior consultation with Burford Town Council, our district councillor or the body which manages the AONB.

4) The site slopes steeply and there is a clear risk of flooding.

5) There is no suitable access. Witney Street is a narrow country lane which is prone to icing on Whitehill and flooding lower down. It has bends and was the site of a fatal car accident some years ago; it is already used as a rat-run. Frethern Close and Barns Lane are also narrow, made more dangerous by parked cars and vans.

On a personal level I am concerned at the general lack of housing in this country those in need. I have spent most of my professional life working on such housing projects but the site has to be appropriate.

I refer to the No 6 of the Council’s objections to 85 buildings to be erected on Cole’s Field.

Weekly recycling - personal responsibility of the individual householder - two bins - domestic and green - large plastic container on wheels - health and safety - to straddle the allotted houses - traffic vying for passing space on the road - future requested bus route for school children/older residents - “slopes gently” site flooded in unfavourable weather conditions - walkers intimidated - future residents also subject to these

<td>Robertson</td>
<td>134</td>
<td>Sub Area &gt; MAIN 193</td>
<td>Strenuous No 3 and 4 clause - for a proper survey of this popular area of Outstanding Natural Beauty and Conservation. Access is a huge issue. Access via Ditchley road from the Slade is currently dangerous as there is a blind corner from the Enstone crossroads. Ditchley road is not suitable for additional traffic as with parked cars it effectively is often a single carriageway. It is in poor repair in parts and there is no footpath on large parts. Extra traffic on the Junction with the Slade would cause additional risk to school children travelling to and from the local primary school. The local primary is over subscribed so families moving to this estate might have to travel to Enstone or other primary schools. Better to build nearer to a primary that is not oversubscribed. Access via Ditchley road and Chartwell Drive should not be allowed because this is a quiet estate with a large number of young children that play out on the estate. The site traffic alone would constitute an unnecessary additional risk to these families. The proposal to remove existing garages mean more parking on the road making this even worse. Hundley Way is not suitable for any further vehicular access at all, the turning is very dangerous already with speeding traffic and the road is private and narrow. The additional site traffic for the extension at Hundley House is already causing problems for other residents and the way is neither wide enough or in good enough condition to support any additional traffic. It’s hard for vehicles to pass each other currently. 40 houses is far in excess of what is required by local people. This is overdevelopment of a small rural town. This development serves only the land owner who is no longer resident in Charlbury and the developer. The recent development at the top of Elms Crescent had to be dug in. Will 40 houses be dug in on the highest part of this hill? If so that is a horrendously environmentally unfriendly way to develop. If they don’t dig them in then what were the reasons for digging the other houses in? The plot is adjacent to a bridleway from where any development would be highly visible due to the elevation of the plot. A recent request for a dormer window on a house on Hundley Way was declined because of the impact on the roof line of Hundley Way. Putting 40 houses on this field would destroy the feel of Hundley Way. The plot is green field and supports a lot of wildlife including Barn Owls, Bats, Grass Snakes, Slow Worms, Hedgehogs. The environmental impact would be huge on these species. The ground is rock hard with a thin topsoil so earth movements would be noisy and substantial and very intrusive to surrounding properties during the build. Run off from the field is a problem already with Hundley Way already getting extremely wet whenever there is rain. I believe there would be an impact on flooding of adjacent properties and paths if this beautiful field is paved, tarmacked etc. Development in an AONB should not be next to a bridleway used by locals and tourists. The views from the bridleway should be specially protected. The development of 40 houses on this highly elevated plot will have a massive visual impact from the bridle way. The existing tree line would not provide screening because of the elevation.</td>

<td>Charlbury is already growing beyond what the local infrastructure, in particular the school, but also for example roads and parking, can deal with. The primary school is already over-subscribed, with Charlbury children being forced to attend schools in neighbouring villages. Adding further housing stock (on top of the two developments mentioned that have already been granted planning permission for a total of 47 houses!) will exacerbate this problem. The school has no scope for expansion. Vehicular access to the proposed location is very difficult and could not be realised without severe impact on existing houses and roads, affecting both safety and living quality. While the proposal somewhat acknowledges the difficulties, it underplays both what it would take to realise the necessary road infrastructure and the impact of the changes on the existing roads and residents.</td>

<td></td>
<td>&gt; SECTION 9 - STRATEGY AT THE LOCAL LEVEL &gt; Burford Charlbury Sub Area &gt; MAIN 196</td>
<td>With regard to the legality of the proposals, it is stated that to ensure that third parties are not prejudiced by changes to matters on which they would usually expect an opportunity to comment, any “main modifications” will normally be subject to consultation. It is furthermore stated that when a Plan is submitted to be examined, it marks the end of a long preparation process and that the process should have fully involved everyone who has an interest in the document, and provided them with the chance to comment where appropriate. The consultation period allowed for this modification with respect to land north of Jefferson’s Piece has been insufficient to allow all interested parties to be consulted—or, indeed, even hear about it. Thus, this was not an option that showed up in the recent consultation on the Neighbourhood Plan.</td>
</tr>
</tbody>
</table>
Development Plan for Charlbury (survey completed April 2016), and I saw no trace of this proposal in reading through earlier versions of the plan. Neither was there a display of the proposals anywhere in Charlbury during the short period of November 11 2016 and December 23 2016 when the consultation took place. As such, I feel that the lack of an adequate consultation period renders the modification invalid from a legal point of view.

The proposal is also unsound in relation to the proposed access to the site. It is recognised (9.6.34r) that there is, at present, no satisfactory vehicular access, but it is proposed that access be provided via the demolition of some garages in Jefferson's Piece. That, however, would entail routing all cars through an existing housing estate with narrow roads, sharp bends and already congested parking. The element of social and relatively low-cost housing on the estate means that in this area there are many school-age and young children and also bungalows for elderly people. Young children play out in the street, and the extra traffic would be dangerous to existing residents, and would detract from their enjoyment of their properties.

Even if a route could be found for the site that linked it to Ditchley Road without diverting through the estate, there would remain traffic problems. The bottom part of Ditchley Road is a road that is already much used by children walking to school as well as by traffic entering the estate, travelling up to Ditchley Park for conferences and the like, as well as to the various farms and houses along the upper, and more rural, section of this road. The lower part of Ditchley Road will shortly become even busier as the new housing estates along Ditchley Road, already under construction, are completed and occupied. The junction between Ditchley Road and The Slade is already dangerous, and the proposed development will only increase the dangers.

It is stated (9.6.34s and 9.6.34u) that the site is well screened, despite its high elevation. I can find no evidence in the documentation that this would be the case, and think it highly likely that the site would be visible on the horizon when approaching Charlbury from Enstone. If so, the distinctiveness of Charlbury as a cohesive and rural community which nestles within the landscape of the North Cotswolds AONB is likely to be threatened by further erosion of its visual boundaries. This is an additional reason to consider that there has been insufficient time for consultation, and to regard the proposal as unsound. As for the claim (9.6.34v) that there would be benefits from the removal of the existing garages, this is also not substantiated. Charlbury has at present a severe parking crisis in the town centre, and these are some of the very few garages available to rent in the town (mistakenly referred to as a village in the documentation).

Re: Planning Reference Numbers: Main 194 & 195

Although I did not receive a Copy of your letter dated 16th November, I am responding to it for as a resident of Ditchley Road, I will be massively affected by the proposed development. I urgently request that the following be taken into account when considering the proposed development.

1. The junction of Ditchley Road and The Slade is very dangerous at the moment without any increase in the volume of traffic.

2. Access to the site via Ditchley Road, Chartwell Drive, Elm Crescent and Jeffersons Piece is unsuitable for construction traffic. The small development currently taking place further up Ditchley Road has been a nightmare combined with the massive agricultural vehicles wishing to access Model Farm. The estate roads in The Paddocks are equally unsuitable and it would be a massive disruption for th residents. Ditchley Road is already showing hazardous signs of damage, both to the road and the verge.

3 The local primary school is already over subscribed with families having to convey children to Chadlington.

A development of this size would inevitably result in an increase in the number of pupils.  
4 The local services, i.e. bus and Post Office are already under threat of closure. The facilities available in the town are not adequate enough to accommodate a development of this size.  
For all of the above reasons I would request that you seriously consider rejecting this proposal. |
| MM533         |                         | Stuart Galer   | Mr              | Galer             | 1282       | > SECTION 9 - STRATEGY AT THE LOCAL LEVEL | LETTER OF PROTEST AND OBJECTION TO THE PROPOSAL OF BUILDING FORTY DWELLINGS IN JEFFERSONS PIECE FIELD.  
If this proposal goes ahead it will TOTALLY AND COMPLETELY ERASE the way of life which is enjoyed at the present by the residence of the whole estate.  
From the meeting which I attended in Chipping Norton on the 23rd of November 2016, It was hinted by the representative that I spoke to that the possible access to the site could be the removal of some of the garages at the end of the road as these back onto the field.  
As you do not live here you cannot imagine what impact this will have on all of the residence in the whole estate.  
• Heavy plant machinery, building material lorries and all the other equipment vehicles all using a road which is inadequate due to the fact of parked cars outside of people's homes so it is virtually a single traffic road.  
• If this proposal goes ahead the traffic which on average is 2 to 3 cars per each household, all the vehicles used for people going to work both day and night not only cars but also vans and small lorries also. There will be no peace day or night because of the volume of increased traffic.  
• For many, many years the children of Jeffersons Piece and Kendal Piece have played safely on the square and on the little green outside the end of Kendal Piece BUT with the heavy influx of traffic this will remove the safe environment which they enjoy at present.  
• The impact on our local infrastructure. Shops, doctors and district nurses which are already under severe pressure is huge and as the school will see an increase of pupils from next June, if this proposal goes ahead, IT WILL NOT BE ABLE TO COPE nor will the surrounding villages as they too are also full to capacity.  
THE TRANQUILTY OF NATURAL LIFE  
• Within the field deer gracing in early morning and just before dusk foxes scurrying and slinking across the field. Sometimes in January vixen being pursued by dog foxes. Buzzards skimming across the grass before they rise for their aerial display. The bird life coming into the gardens will be lost.  
• Not only the residents of Jefferson Piece and Kendal Piece but also the residents in Chartwell Drive, Elm Crescent and The Green will be affected by the POLLUTION AND NOISE LEVEL WHICH WILL INCREASE DRAMATICALLY DUE TO ALL TYPES OF VEHICLES TO SERVICE A NEW ESTATE.  
The proposed site, north of Jeffersons Piece, has woefully inadequate access for the proposed 40 houses as stated in the Plan. The 2 possible access points are via Hundley Way or via the current garages in Jeffersons Piece. Firstly, it must be considered that 40 houses would result in at least 100 vehicles entering and leaving the site on a daily basis, given the ever-increasing popularity of home deliveries. Neither entry/exit route |

<tr>
<td>MM63</td>
<td></td>
<td>Lucy Robertson</td>
<td>Mrs Robertson</td>
<td>159</td>
<td>Burford Charlbury Sub Area &gt; MAIN 196</td>
<td>This location is not suitable for development for the following reasons: access/highways - proposed access is through a very quiet housing estate which would not be able to cope with the extra volume of traffic. It could potentially be another 80 cars driving in and out of the site daily, as well as deliveries, postmen and refuse collections. The top turning round Jefferson’s Piece is very narrow. It is single carriageway as soon as you turn onto Ditchley Road and all the way through Chartwell Drive, the Green and Jefferson’s Piece with cars parked on the road. The Ditchley Road turning off the Slade is already dangerous and could not cope with the extra volume of traffic during construction and thereafter. It would back up to the Enstone crossroads and cause congestion. Vehicles often approach Charlbury from Enstone very fast and there have already been accidents at the crossroads. It is also very difficult for pedestrians to cross the road at times. The Slade is also very busy with vehicles often speeding when people are walking their children to school during the morning rush hour. Many young school children play in Jefferson’s Piece and the Green and walk to school so this would also make it more dangerous for them. The roads are currently in poor condition. Hundley Way is a blind turning and already dangerous. It is a single track bridleway that cannot cope with any extra volume of traffic. Infrastructure - the local primary school is already oversubscribed and I believe has been for the past 4 years. Families already living in Charlbury are unable to get places at the local school. New families would have to drive their children to school in surrounding villages which would cause extra traffic on the roads during the morning rush hour, or they could potentially take up places that people already living in Charlbury would have. Flooding - when it rains Hundley Way very quickly turns into a stream as it runs off the field and any more water may result in flooding. The site is currently an Area of Outstanding Natural Beauty in a Conservation Area which should be protected. It is an elevated site so would be visible from Hundley Way and further afield. It would destroy the beautiful ancient views towards Charlbury and along Hundley Way. There is an abundance of wildlife in the field including slow worms, bats, owls, hedgehogs and butterflies, it would be a shame for this natural habitat to be lost.</td>

<td>Mr Cutler</td>
<td>1692</td>
<td>&gt; SECTION 9 - STRATEGY AT THE LOCAL LEVEL &gt; Burford Charlbury Sub Area &gt; MAIN 196</td>
<td>BUT - and it is a very big but - when regarded in real terms at ground level the plot becomes less than suitable for development. It lacks practical access. 1 - Hundley Way which runs along the western edge is a bridle path which is too narrow to form even a minimum width estate road. 2 - Another potential entry point to the site from Jeffersons Piece on the southern boundary would require demolition of at least one house as well as some garages to achieve the requisite junction radii. Elm Crescent would become the feeder road to the new development and would be turned from a quiet residential street into a major thoroughfare with more than double the present traffic and its junction with Ditchley Road, which is already difficult, would be become dangerous. 3 - Ditchley Road at the eastern side of the site is also too narrow to be used as access on that side. In fact Planning Inspectors have previously turned down a proposed development of the quarry which lies along the south of Ditchley Road because of the road's unsuitability. It would be a visual intrusion into the Cotswold AONB The site is well elevated above Charlbury so its development would be far from 'hidden' and would be obvious from not only the town but from a large sector of countryside around. I would therefore object strongly to any proposed development of this site. David Anderton White Oxpens, Hundley Way Charlbury OX7 3QE</td>

We are aware that paragraphs 115 and 116 of the NPPF attach great weight to conserving landscape and scenic beauty in Areas of Outstanding National Beauty, where major development should be refused except in exceptional circumstances. Given the constraints imposed by the AONB, we question whether any housing allocations in the AONB settlements is possible at this late stage of the plan.  

We suggest that the approach to plan-led development in West Oxfordshire's AONB settlements such as Charlbury needs to be careful and considered, perhaps following the approach taken by local planning authorities such as Winchester, Horsham and North Kesteven where a plan-wide allocation for certain, smaller scale settlements is set, with development coming forward either (a) as part of a Neighbourhood Plan or other locally supported initiatives, such as a Planning Brief, or (b) by means of a planning application that is supported at the local/Parish level. This approach has been tested at EIP/hearings recently, and held to be sound.

<td>&gt; SECTION 9 - STRATEGY AT THE LOCAL LEVEL &gt; Burford Charlbury Sub Area &gt; MAIN 196</td>
<td>As already stated, Policy HI should be amended to omit reference to new housing at the rural service centres of Burford and Charlbury. As stated above, the Proposed Modifications have increased the Burford - Charlbury sub area proposed housing requirement by 25% from 800 to 1,000 homes. Paragraph 115 refers to great weight and 116 of the NPPF clearly states that exceptional circumstances must be demonstrated to justify allowing major development in the AONB. This paragraph states that consideration of such applications should include an assessment of the need for the development and its impact on the local economy, the cost of, and scope for, developing elsewhere outside the designated area, or meeting the need for it in some other way, and any detrimental effect on the environment and the landscape. The Council appears to seek to justify this by indicating that development is of necessity within the AONB given the widespread extent of the AONB encompassing almost the whole of the sub area: however, that is not a reason to increase housing within the sub area. Given the deliverable opportunities to address housing need in those parts of the district outside of the AONB, recognising that there will still be 800 homes in the sub area, there have been no exceptional circumstances given for the inclusion of additional land within the AONB for development in the draft Local Plan. As a consequence, MM184 should be deleted as it refers to allocations at Burford, Charlbury, Shipton-under-Wychwood and Stonesfield, all within the AONB. The plan is not justified when considered against the reasonable alternative to development in the AONB and inconsistent with national policy.</td>

<td>&gt; SECTION 9 - STRATEGY AT THE LOCAL LEVEL &gt; Burford Charlbury Sub Area &gt; MAIN 196</td>
<td>I do not consider the Proposed modification sound as I do not think that this Greenfield site is suitable for housing. Extending the existing housing by infilling beyond The Green and Jefferson’s Piece will alter the edge of village character of the area, and impact the surrounding rural area and its amenity value. Hundley Way, beyond Tara, has mature trees and hedges and is enjoyed by many regular walkers, including those residing at the Cotswold View Caravan and Camping Park. It provides access to the Wychwood Way and many other popular walks. The further population will create additional pressure on Schools, Public Transport and other local amenities, that are already under very considerable pressure. The Proposed site is also one of the furthest parts of the village from the railway station, which seems illogical. The proposed site is on a steep gradient and this would most likely impact the drainage towards “Clark’s Bottom”, which is an important and ancient SSSI. Hundley Way is not suitable for further traffic, it is a private, unmade up road with a dangerous junction onto Enstone Road; it eventually becomes a bridlepath and so attracts a number of riders, mountain bikers and runners. Access from Jefferson’s Piece via Ditchley Road towards The Slade is similarly entirely unsuitable for any further traffic. Please kindly acknowledge these objections by email. Many thanks.</td>

<td>&gt; SECTION 9 - STRATEGY AT THE LOCAL LEVEL &gt; Burford Charlbury Sub Area &gt; MAIN 196</td>
<td>I would like to comment on recent modifications to the WODC local plan that are available for consultation, re section 9. In response to government pressure to identify additional land suitable for housing, district planners have proposed land to the north of Jefferson’s Piece in Charlbury as suitable for development of up to 40 houses. In the absence of a neighbourhood plan which would give a greater local say on planning matters, I would like to object to this proposed site being identified in the local plan on the following grounds: Green field - this is a green field site on the edge of a village, currently used as a paddock, and is within the conservation area and AONB. The bridleway adjacent to the field is used by a large number of Charlbury people and many others for walking, cycling and riding seeking to get to open countryside. The environment and its diverse wildlife will be lost forever. Don’t these designated protected areas count for anything? Further, any new housing on this site will be much more conspicuous than currently acknowledged, since the site is at a high point in the village sloping to the west. Access – with the number of potential new houses, up to 80 additional cars could be accessing the site, toing and froing daily. Neither of the proposed options are viable for further vehicular access. One option to remove garages and thus enable access through an established, built-up housing estate is a poor idea. Related to this, the Ditchley road turning has previously been acknowledged by the council as particularly difficult, given the speed of cars approaching around a blind bend on The Slade and parked cars on Ditchley Road restricting access. The other option, via Hundley Way, is a non-starter. This is a quiet, narrow, rural bridleway with access to the paddock unlikely and any increase in vehicle numbers highly undesirable. Ingress and egress from Enstone Road is particularly hazardous. For either option, construction traffic accessing the site during the building phase would be extremely disruptive and would be intolerable for local residents. Road Infrastructure – roads around the site have already become extremely busy in recent years and cannot...</td>
</tr>
</tbody>
</table>
cope as it is. Sturt Road, Enstone Road and the junction between them, have seen a large increase in the volume of cars as it has become a more popular through route to and from Witney and Banbury. Without adequate traffic calming measures they have, as a consequence, become increasingly dangerous as witnessed by recent accidents at the junction. Our children have to access the school along the pavements of both these roads.

Schooling – the Charlbury Primary school is already over-subscribed, so given the distance of the proposed plot from the school, under the county council allocation rules, any new residents are unlikely to find a place for their children in Charlbury. This will increase road traffic further as they are forced to drive to other villages. Schools in neighbouring villages have spaces, yet don't have the numbers of children living locally to fill them. Perhaps, planners should be looking to add houses to these places first, so that there is joined up thinking and a coherent plan.

There are many other aspects I could mention, but I focus on the major areas of objection. In summary, I believe this site to be unsuitable for any significant housing development for the aforementioned reasons. Any future development in Charlbury requires a holistic solution to the existing issues, and if housing is to be permitted, developers should be required to make a significant contribution to address these first.

I would like to object to the proposal to build 40 houses on land north of Jeffersons Piece for the following reasons.

1. There is no suitable access to the site, either through The Green or via Hundley Way.
2. It is a conservation area and designated an AONB.
3. The infrastructure cannot cope, the school already has to turn Charlbury children away as it is, without more houses being built.

I have two main objections to the inclusion of the field by Jefferson's Piece as a site for housing in the draft local plan. Before I list them I should say that the site is otherwise ideal for a smaller development. BUT:

1 HIGHWAYS It is impossible to safely access the site for construction purposes as well as for cars to access the site afterwards. The suggested access would be gained by demolishing some garages and accessing the site via the Green estate. This is a ludicrous suggestion. The volume of car traffic post-hoc would make life for residents on the Green an enduring misery, parking blocks already makes the accesses suggested unviable, and it would put an end to the current children's habit of street play. Access via Hundley Way is impossible: this unadopted bridleway is too narrow for any volume of traffic and its junction with Enstone Rd is already a danger spot which should not be exacerbated. Access via Ditchley Rd is presumably not possible.

2 LOCAL SERVICES A significant housing estate would put an intolerable strain on local services, most notably the Primary school. It is not acceptable to build housing where children are already unable to go to their local school. You need to build a school before you build an estate. Local roads would be unable to cope with hundreds of additional car movements every day. The estate is the wrong side of town for easy train access.

Another point I would make, if 1) and 2) above did not pertain and override it, is that the site is too small for 40 homes. The stingy house and gardens sizes offered by greedy developers are in my view unacceptable. Affordable family homes should have decent front gardens (that are not just a parking space), decent back gardens (I mean at least 200m2) and room around the home for extension as families grow. The cheek by jowl development that greedy developers love is stingy and wrong. I oppose Charlbury Town Council's policy on this regard. WODC should do everyone (apart from the developers) a favour and oppose stingy proportions.
You should remove this suggestion for Charlbury until such a time as Charlbury Town Council has formed its own local plan, which as you will be aware is in the pipeline.

There are other sites around town that do not have the same access problem - e.g. west of the forthcoming Rushy Bank development there is a large field with direct access to the Burford Rd and to the train station, with easier access to the town's facilities than developments on the northern and eastern edges. If a development went ahead on this site, a tall and mature line of trees would permanently screen the site from Charlbury itself. Have sites like this been looked at? Should locations where the schools struggle for spaces not be prioritised above Charlbury where the school is already oversubscribed? E.g. Enstone with good bus connections and Finstock with its own station?

I wish to object most strongly to the inclusion in this Plan of a development of 40 houses on land north of Jefferson's Piece. The access would be through the estate where I have lived since the estate was built and the roads do not lend themselves to such a development. There was great disruption when the small development was built at the top of Elm Crescent. The garages are largely used for storage as they are too narrow for modern cars and when families have 2 or more they have to park on the street. The development would add hugely to the traffic using these narrow roads. At present children can play outside especially in the cul de sac which is proposed as access to the estate.

The site is greenfield and in an AONB and Conservation area. It would damage the environment and detract from the lives of the present residents of the estate unless some alternative access is provided but there would remain the issues concerning the damage to the AONB etc. Please see below for my initial email re the above. I would like to raise formal objection to the planned

<td>&gt; SECTION 9 - STRATEGY AT THE LOCAL LEVEL &gt; Burford Charlbury Sub Area &gt; MAIN 196</td>
<td>I am writing to object to the plans to build 40 houses on the land behind Jeffersons piece, Charlbury. * Entrance: the entrance you propose is unsustainable. The gap is too narrow, there are too many cars parked around the roads already. Getting rid of the garages just encourages people to park their cars wherever they can. * Traffic: 40 houses will bring at least that many cars if not double, along the already crowded streets, causing extra pollution and extra noise, in what is supposed to be an ‘area of outstanding natural beauty’. Not very beautiful if you turn it into a housing estate! * Education: More houses will bring more children to the village and the school is already full. Your argument that they can go to surrounding schools is not sustainable because the surrounding schools are also full. If there was spaces in surrounding schools you are expecting the county council to transport these children to the nearest available school. At a time when the county council has to cut their budget by millions this strategy is untenable. Not only are you expecting the county council to pick up a bill for your lack of foresight, you will again be introducing more cars and more pollution to the area in the form of the taxis that will be employed to take these children to school. There is obviously no joined up strategical thinking here. Having one school for the village encourages social cohesion and harmony. Building these houses with no further infrastructure, will split the community and encourage crime and social unease. * Wildlife: What is the point of designating an area to be protected if you are going to build all over it? What will happen to the bats and the lizards and the red kites who all use this land to build their homes? In conclusion, I am sure this email won’t make any difference to your plans. You don’t live here so why would it? You obviously don’t care about the wildlife or the people living here, or a way of life that is slowly being disintegrated by your greed. The only thing I can do is to let you know that I object!</td>

<td>&gt; SECTION 9 - STRATEGY AT THE LOCAL LEVEL &gt; Burford Charlbury Sub Area &gt; MAIN 196</td>
<td>We are responding to the revised West Oxfordshire Local Plan primarily as it relates to Charlbury, where we live. 1) Please note that bus services are no longer as stated in 9.6.13: &quot;...Services through Charlbury are good, with hourly direct services to Woodstock, Oxford, Witney and Chipping Norton.&quot; Since the withdrawal of the OCC subsidy there is no longer an hourly service from Charlbury to Witney and Chipping Norton. In order to continue the service at all the operator has had to reduce the timetable so that there are now some long &quot;gaps&quot; in the service during the day. 2) Whilst I concur with the strategic objective of planning for “Sustainable communities with access to services and facilities” (3.3), it should be noted that in Charlbury the trend has been the other way and continues to be so. In addition to the reduction in bus services noted above (the existing service is by no means secure), several retail outlets in Charlbury have closed in recent years, including the newsagents/café. The Post Office is currently under notice of closure, with no alternative in prospect. This would be a major blow to Charlbury and force those seeking Post Office services to travel out of the town, at a time when the...</td>
</tr>
</tbody>
</table>
reduction of car travel is an objective of the plan (3.5). Action will need to be taken to halt the gradual attrition of the local infrastructure and where necessary to enhance it, if the strategic objectives of the Plan are to be met – see below.

3) What follows are specific comments on the impact of the proposed development of 40 houses adjacent to Jefferson's Piece, Charlbury: (9.6.34 and following):

* a) Throughout the Plan there are references to the importance of ensuring that local infrastructure keeps pace with housing development. (e.g 3.3, 3.11, 3.12 - "Ensure that land is not released for new development until the supporting infrastructure and facilities are secured."). etc. It is vital to ensure that proper plans are in place, either by WODC or other responsible bodies, to ensure that the additional housing now in the pipeline and proposed in the plan for Charlbury is matched by infrastructure developments. Without these the stated objective of "Ensuring that new development is supported by appropriate investment in new and/or enhanced infrastructure including education...etc" (4.7) will not be met. Specifically:

* i) Primary School provision. The plan states that "pressure on school capacity is expected to continue in most schools in this area." (9.6.24) Even at the present time Charlbury school is full, and a catchment area has had to be determined which excludes parts of Charlbury. This means that very young children have to attend school in Finstock: for parents without access to a car, journeys to and from school daily are extraordinarily difficult. The proposed new housing should include a good proportion of affordable homes – noted (9.6.5) as being especially important in Charlbury. The occupants of such homes will likely include a good number of school-age children. It is essential that no further housing be approved in Charlbury unless or until adequate Primary School provision is guaranteed.

* ii) Medical services. Is the Council satisfied that the existing Charlbury Medical Practice can cope with the additional demand of the extra population? As noted above, it is to be expected that affordable housing will lead to inward movement of families with children. Those who put the most pressure on medical and nursing services are overwhelmingly the very young and the old. These are the groups who are least likely to have access to a car to travel to the nearest alternative medical practice in Chipping Norton or Witney.

* iii) Transport. As noted above, the bus service between Charlbury, Witney, and Chipping Norton is currently dependent on its continuing to be a commercially profitable enterprise. It is used as a vital service by those without cars who need to shop and/or access services not available in Charlbury (e.g. opticians, solicitors, etc). This service is a vital part of the public transport infrastructure for those in Charlbury without a car, and no new housing development should be approved unless its sustainability is assured.

* b) Pedestrians and vehicles. Section 7.14 of the Plan includes the following design criteria:

"- giving priority to pedestrian and cycle movements;
- providing access to high quality public transport facilities;
- creating safe and secure layouts which minimise conflict between traffic and cyclists or pedestrians".

The existing housing area accessed from Chartwell Drive (i.e. Elm Crescent, Jeffersons' Piece, The Green, etc) has light traffic. Children are used to walking or cycling in this area. As a condition of any development on the Jefferson's Piece site, the Council should require traffic calming measures in the whole of the existing and proposed new housing area in order to give pedestrians and cyclists priority and reduce vehicle speeds to a minimum.
Pedestrians are currently not well served in Charlbury. Footways are often on one side of the road only, or come to an end at a "pinch point". There are examples of this on Hixet Wood, Pullens Lane, Dyers Hill, Dancer's Hill, Nine Acres Lane, and on each of the four roads approaching the Enstone Crossroads. The latter is especially hazardous, and has to be negotiated by pedestrians walking from the area of The Green/Jefferson's Piece into the Town centre or towards the bus stops or Railway Station. The Enstone Crossroads is busy at most times of day and there is very limited visibility for pedestrians trying to negotiate it. Following a recent serious accident here there has been much local discussion on the need to improve safety at this point. Improved pedestrian safety here is vital if the proposed housing is to be approved as part of the Plan.

I am writing from property 4, Hundley Way in Charlbury in connection with the following:

Land north of Jeffersons Piece, Charlbury to accommodate around 40 dwellings as a well-integrated and logical extension of the existing built form of the village

I am writing to oppose this, as we feel that it is not a logical place to build 40 houses with access via Hundley Way.

9.6.34r This is a greenfield site of around 1.7 ha on the northern edge of Charlbury. It sits on relatively high ground (135m AOD) sloping down to the north towards a small valley. It abuts an area of existing residential development at Jeffersons Piece with open countryside to the north and two detached properties to the north east. To the east of the site are several large residential curtilages. The site is currently in use as a paddock with access achievable via a private road (Hundley Way) although this may not be suitable for a significant increase in vehicle movements. There is however the potential to achieve vehicular access into Jeffersons Piece subject to the redevelopment/relocation of an existing set of single storey garag

Access via Hundley Way would be totally inappropriate and we believe that the proposed development is a direct contravention of 9.6.34r. It does not respect local context and street pattern or, in particular, the scale and proportions of surrounding buildings, and would be entirely out of the character of the area, to the detriment of the local environment. Access via Hundley Way is already problematic, as a single lane carriageway with no passing places. Extension or improvement of this carriageway would totally infringe upon the street pattern and farmland. There is already far too much pressure on this road with access from HGVs. There are a number of villagers, dog walkers, children and family who walk up the Bridleway daily to access the country footpaths and therefore it would cause a risk to the well-being and safety of the children/families/dogs. As an un-adopted bridleway it could not cope with the extra volume of traffic.

Furthermore, the turning from the Slade into Hundley Way is extremely dangerous on a blind corner. There would be a huge risk to the safety of drivers on this highway if the volume of traffic turning from Hundley Way were to increase.

9.6.34t In terms of policy constraints, the site is within the Cotswold AONB and is also within the Charlbury Conservation Area. These are important considerations but not preclude the possibility of development. In terms of the AONB, as major development a scheme of 40 new homes in this location would need to satisfy the tests set out in national policy. In this regard the development would make a useful contribution towards meeting identified housing needs in a sustainable location with access by rail. There would also be some modest economic benefits as a result of the construction of the new housing.

We consider the proposed development to be a direct contravention of the following objective from the same chapter: "To protect or enhance the local environment, including wildlife habitats, trees and woodland

<td>parks and gardens'. Where you would have to remove a significant number of hedges and trees along Hundley Way infringing on the views for all of those who access Hundley Way to the footpaths towards Ditchley. The outlook of these houses from the Slade would totally contravene with the Conservation Area. Furthermore it would be reasonable to ascertain whether the properties on Hundley Way would be overlooked? Furthermore, what about the pressures on the local schools? Any development in this area will make this worse. Also the housing and access via the garages to the rear of Hundley way would be put under significant pressure, volume of traffic would be too high. I believe there are better served locations on the outside of the village. Where highways and access would not be put under pressure. This is not an area of waste land, the land and access is used frequently. Access is not achievable, not only due to the dangerous turn from the Slade but Hundley Way could not cope with more than the current residents accessing it by car/bicycle. We are responding to the revised West Oxfordshire Local Plan primarily as it relates to Charlbury, where we live. 1) Please note that bus services are no longer as stated in 9.6.13: &quot;...Services through Charlbury are good, with hourly direct services to Woodstock, Oxford, Witney and Chipping Norton.&quot; Since the withdrawal of the OCC subsidy there is no longer an hourly service from Charlbury to Witney and Chipping Norton. In order to continue the service at all the operator has had to reduce the timetable so that there are now some long &quot;gaps&quot; in the service during the day. 2) Whilst I concur with the strategic objective of planning for “Sustainable communities with access to services and facilities” (3.3), it should be noted that in Charlbury the trend has been the other way and continues to be so. In addition to the reduction in bus services noted above (the existing service is by no means secure), several retail outlets in Charlbury have closed in recent years, including the newsagents/café. The Post Office is currently under notice of closure, with no alternative in prospect. This would be a major blow to Charlbury and force those seeking Post Office services to travel out of the town, at a time when the reduction of car travel is an objective of the plan (3.5). Action will need to be taken to halt the gradual attrition of the local infrastructure and where necessary to enhance it, if the strategic objectives of the Plan are to be met – see below. 3) What follows are specific comments on the impact of the proposed development of 40 houses adjacent to Jefferson’s Piece, Charlbury: (9.6.34 and following): * a) Throughout the Plan there are references to the importance of ensuring that local infrastructure keeps pace with housing development. existing Charlbury Medical Practice can cope with the additional demand of the extra population? As noted above, it is to be expected that affordable housing will lead to inward movement of families with children. Those who put the most pressure on medical and nursing services are overwhelmingly the very young and the old. These are the groups who are least likely to have access to a car to travel to the nearest alternative medical practice in Chipping Norton or Witney.

iii) Transport. As noted above, the bus service between Charlbury, Witney, and Chipping Norton is currently dependent on its continuing to be a commercially profitable enterprise. It is used as a vital service by those without cars who need to shop and/or access services not available in Charlbury (eg opticians, solicitors, etc). This service is a vital part of the public transport infrastructure for those in Charlbury without a car, and no new housing development should be approved unless its sustainability is assured.

* b) Pedestrians and vehicles. Section 7.14 of the Plan includes the following design criteria:

- giving priority to pedestrian and cycle movements;
- providing access to high quality public transport facilities;
- creating safe and secure layouts which minimise conflict between traffic and cyclists or pedestrians”.

The existing housing area accessed from Chartwell Drive (i.e. Elm Crescent, Jeffersons’ Piece, The Green, etc) has light traffic. Children are used to walking or cycling in this area. As a condition of any development on the Jeffersons’ Piece site, the Council should require traffic calming measures in the whole of the existing and proposed new housing area in order to give pedestrians and cyclists priority and reduce vehicle speeds to a minimum.

Pedestrians are currently not well served in Charlbury. Footways are often on one side of the road only, or come to an end at a “pinch point”. There are examples of this on Hixet Wood, Pullens Lane, Dyers Hill, Dancer’s Hill, Nine Acres Lane, and on each of the four roads approaching the Enstone Crossroads. The latter is especially hazardous, and has to be negotiated by pedestrians walking from the area of The Green/Jeffersons’ Piece into the Town centre or towards the bus stops or Railway Station. The Enstone Crossroads is busy at most times of day and there is very limited visibility for pedestrians trying to negotiate it. Following a recent serious accident here there has been much local discussion on the need to improve safety at this point. Improved pedestrian safety here is vital if the proposed housing is to be approved as part of the Plan.

<td>I was unable to find the link on your website to complain about the extra housing proposed as were other residents who will be affected by this development. My last two email bounced back. In view of these problems I hope you accept this email as a resident who will be badly affected by the proposed housing development. Charlbury cannot sustain a development for the following reasons. It is AONB. There are bats living in trees in the field off Hundley Way. I believe it would only be fair to the residents to have an independent person visit this site. The roads of Jeffersons Piece, Kendal Piece, The Green could not cope with extra traffic as they are narrow roads.</td>

| MM264 M Scarsbrook Mr Scarsbrook 477 | > SECTION 9 - STRATEGY AT THE LOCAL LEVEL > Burford Charlbury Sub Area > MAIN 196 | I am writing in reference to the above Planning application regarding the proposed development of 40 houses at Jeffersons Piece, Charlbury.

I live in Elm Crescent, Charlbury, which is the road proposed for the access to the site, and am writing to register my objections to the proposed development of 40 homes on the land off Jeffersons Piece, Charlbury.

This is a greenfield site within the Cotswold Area of Outstanding Natural Beauty and in the conservation area. The field is also home to a large number of wildlife. 40 new homes on such a small site would have a huge impact on the environment and the surrounding estate. 40 new homes could easily generate up to 80 vehicles travelling through the estate of Chartwell Drive, Elm Cresent and Jeffersons Piece, causing a great deal of noise and disruption to our quiet estate.

Charlbury Primary School is already full, and currently even new-comers to Charlbury are unable to gain admission to to Charlbury Primary School and are are having to travel to nearby schools, namely Chadlington and Finstock. To build 40 new homes would inevitably attract families with young children and with no room to educate them locally would mean that families would be forced to travel outside the village to other schools. I would ask the question- what about encouraging children to walk to their local school?

I appreciate the Local Authority’s requirement to build new homes, but the Jefferson Piece site is definitely not the right site to develop. There are other sites in Charlbury that have already been identified to develop, namely the land at the end of Ticknell Piece Road. If it is necessary to build more houses is Charlbury, this site would be more appropriate, however, the question of the availability of school places is still an issue?

In conclusion, on behalf of all the residents of Elm Crescent, Chartwell Drive and Jeffersons Piece, I would ask your Planning Committee to reject this proposal. |
| MM270 Maria Campbell Ms Campbell 483 | > SECTION 9 - STRATEGY AT THE LOCAL LEVEL > Burford Charlbury Sub Area > | Dear Sir/Madam,

We have become aware of the proposed development of the land north of Jefferson’s Piece, Charlbury and are writing with our comments and concerns.

We live at 1 Chartwell Drive and believe the following issues arise:
<table>

| MM276         |                         | Maureen Walker  | Mrs Walker       | Walker              | 490        | MAIN 196          | 1. Access - the proposed access via Chartwell Drive is problematic and would necessitate a large, additional volume of vehicles negotiating a residential area and a tricky access point into the development. 

We live on the corner of Ditchley Road and Chartwell Drive and see many vehicles taking the junction far too quickly. As they whiz round the corner, other road users are endangered. It is already a very busy junction.

In our opinion, it would be better to site any access into the development further up the Ditchley Road.

2. Special character of area - Chartwell Drive, Elm Crescent and The Green are very lucky to house a mixture of residents, notably older people who walk a lot and young families. The area offers that rare thing these days and that is the freedom for children to play safely in front of their houses with their friends and neighbours.

It seems this aspect in particular would be endangered by the proposed development and the area would become a busy suburban area rather than the safe community it currently is.

A lower density of houses - maximum half the number - could perhaps blend into the existing setting, but not the large-scale proposal.

3. Local infrastructure - you are doubtless aware that many local families are not able to access Charlbury Primary School due to over-subscription and therefore have to take their children to other local schools such as Chadlington and Enstone. This situation would not improve with such a high-density development.

4. Conservation area - we are often reminded that the whole of Charlbury is a conservation area and therefore certain rules and regulations apply. Please let us know how the new development would meet the obligations under the conservation area.

5. Site safety - we would also have concerns over safety during any building process. As you are aware, the small development further up the Ditchley Road has been on-going for some time and the heavy lorries, diggers, flat beds, service trucks etc. have resulted in some disruption and damage to verges, pavements etc.

We would have grave concerns about such vehicles accessing the proposed site through the residential area.

We look forward to hearing from you in response to these comments.

Please confirm safe receipt of this e-mail and do not hesitate to contact us if we can provide further details or be of any assistance.

With regards

Maria and John Campbell

<td>MM298</td>
<td>P &amp; S Chisman</td>
<td>-</td>
<td>Chisman</td>
<td>513</td>
<td>Sub Area &gt; MAIN 196</td>
<td>roads on the Paddocks estate (Chartwell Drive, Elm Crescent and Jefferson’s Piece). None of these roads were built with this amount of traffic in mind. A recent development in the Ditchley Road has caused a lot of disruption and decay of the road surface and boarders and on completion will already add to the traffic using this access. The Ditchley Road is also used by heavy farm vehicles and haulage contractors from the Ditchley Estate. At the beginning of the Ditchley Road from The Slade, there is a row of original cottages which have no parking space and therefor have to park on the road, this means that most of the time there is a row of cars parked making the entrance to the road single file, which can cause tail backs on to The Slade and a dangerous corner. Obviously more traffic will exacerbate this problem. If for some reason it is thought that the Ditchley Road can be widened in some way it needs to be borne in mind that the verges on the southern side of the road are not part of the public highway. They are in the ownership of the occupants of the individual houses. I would be grateful if you would acknowledge receipt of this email and in the future keep me informed of the progress of this application</td>

<td>Frost</td>
<td>555</td>
<td>&gt; SECTION 9 - STRATEGY AT THE LOCAL LEVEL &gt; Burford Charlbury Sub Area &gt; MAIN 196</td>
<td>We are contacting you in reference to the above proposal as concerned residents of Chartwell Drive, Charlbury. From the plan accompanying your letter it would appear that access to site would be via Dichley Road and Chartwell Drive then either Elm Crescent or The Green to Jeffersons Piece. This is a totally residential area and the inevitable increase in traffic is the immediate cause for concern. Chartwell Drive and Ditchley Road are the “neck of the funnel” for all traffic, especially schoolchildren attending schools at Charlbury, Chipping Norton and beyond. They then enter and cross The Slade which is already a very busy road. Parked vehicles in these roads are already at a dangerous level at times and further development will make things worse. On the subject of schools, Charlbury Primary is already having to turn away local children due to capacity levels. Environmentally, the site is greenfield within the Cotswold AONB. It has been fallow for many years and has become a haven to many species of wildlife. We appreciate the requirement for housing but we are sure that this end of the town is not the place for this scale of development. We respectfully ask the Planning Committee to reject this Proposal.</td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td>I have looked through the documentation under Main 194 and Main 195 to see the proposals which have been put forward under the new structure plan for Oxfordshire up to 2031. I would like to make the following comments: * Charlbury, as you know, is well served by the Great Western Railway – and this has been one of the items flagged up by the proposal. However, as I believe the proposed development of 40 houses will be low cost – there is little likelihood that owners/part owners would use the railway. * The local bus service has now been curtailed due to county cutbacks. * The result will be, of course, mean that travel to and from work/school/shopping will, of necessity be by car</td>
</tr>
</tbody>
</table>
* The increased traffic – allowing for at least 2 cars per household – of c. 80 cars (and over 100 car movements per day) will impede on the already crowded streets surrounding and abutting Jefferson’s Piece.
* Elm Crescent/The Green/Chartwell Drive and the Ditchley Road are choked with cars parking on these roads and the impact of yet more traffic is not welcome.
* Construction vehicles will not – I suggest – be able to deliver housing materials through these narrow streets. We have seen more than enough of large lorries and construction vehicles using the Ditchley Road for the construction of the new development of ten houses which are currently being constructed.
* Incidentally planning permission was granted for 8 houses and I now believe that there are 10 – an underhand move which developers seem so capable of getting through the planning committees.
* The infrastructure of Charlbury’s local facilities have not, it appears, been taken into account.
* The primary school has not been able to take all the children who live within Charlbury itself for the past 5 years. Children from some areas of the town are having to be taken to Finstock Primary school.
* The impact of yet more children (of which there are bound to be some) living in the 40 proposed new houses will mean that they too will have to be schooled elsewhere.
* There is no secondary school here as you know – therefore more transport will be required for taking children to the schools at Chipping Norton/Woodstock/Witney etc.
* There are fewer teachers today, making classes larger, and thereby education less constructive throughout the county.
* The surgeries: doctors and dentists are already up to capacity and appointments are difficult to come by. This does necessitate people having to go to Chipping Norton, whose facilities are also over-stretched.
* The town centre lacks shops – apart from the Co-op, the Londis Store, the Post Office and one or two other private shops, to encourage people to stay in the town and keep them open.
* The area has been designated an AONB and yet here you are suggesting that this ‘green belt’ should be built upon! Serious consideration should be taken before allowing further development in Charlbury. Although you say in your planning proposals – under Main 240 that ‘no current application – but the site has been promoted for development and is considered likely to come forward by 2021’ in reality it is likely to be earlier than this date, is it not?
* Charlbury is under huge pressure to be swamped by further housing – and with an infrastructure that is bursting at the seams already – how can this proposal be allowed?

The Charlbury Neighbourhood Forum is a community group set up by the Charlbury Town Council. It is currently preparing both Community Led and Neighbourhood Development Plans on the Council’s behalf. While I am a member of the Forum, this representation is made in a personal capacity as an interested local resident who was a Planning Inspector from 1991-2015.

This objection is made to the proposed allocation of land to the north of Jefferson’s Piece for housing development, at paragraphs 9.6.34r-w and Policy BC1c. At the time of writing, so far as I am aware, the Town Council has not reached any conclusion on the appropriateness of the proposed allocation. I wish to stress this is a personal objection, primarily on the grounds of prematurity.

The supporting text at 9.6.34t & u illustrates the flaw at the heart of the Plan which I have set out in my major objection to the setting of housing targets within the AONB. Even if that is not accepted, the AONB is not just an ‘important consideration’, it attracts the “highest status of protection in relation to landscape and scenic beauty” (NPPF 115). Charlbury is not “washed over” by the AONB. That is an expression lifted from former Green Belt guidance where it had a particular implication. Its continued use elsewhere is clearly designed to water down a designation’s importance in the mind of the reader. This is a simple question of...
fact. The whole town is within the AONB, forms part of it and the policies applicable to it apply with equal force whether within or adjoining the built up area.

Forty dwellings might well make a ‘useful contribution’ to the District’s needs but as in my major objection, that begs the question of why those, as opposed just to the local community’s needs, should be met in the AONB. There is no evidence – as yet – that this number of dwellings is needed to meet local needs.

Which brings me to the Neighbourhood Plan – if first by way of the Local Plan. Even if it is accepted that an ‘indicative distribution’ of 1000 dwellings should be imposed on the B/C sub-area, para 9.6.27 of the plan, even in its revised form, says: “At Charlbury, capacity for further housing within the town is also limited. There are no large previously developed sites and the historic core forms a tight settlement with little potential for new housing, even on small sites. Even within the post-war housing estates, there are few possibilities for intensification of development. The sensitivity of Charlbury’s strong landscape and environmental setting mean that significant development on the fringes of the town is unlikely to be acceptable although there is some scope for additional development at Charlbury as well as the Wychwoods and Stonesfield of an appropriate scale and type.”

Leaving aside the unanswered question of what is ‘the appropriate scale and type’, but having walked extensively around the town while looking at it from a planning perspective, I agree almost entirely with this paragraph. Where it all but inexorably leads is to a conclusion that the scope for housing development in and around Charlbury is so limited that between them, the Local and Neighbourhood Plans should only seek to meet genuinely local needs (and even if my major objection on targets within the AONB is not accepted).

Yet despite those constraints, a number of windfall sites have come forward in the last 2 years alone, including some with affordable housing. On my estimate (from locally announced applications), some 24 dwellings have been or are expected to be approved on smaller sites within that period. A further 25, including elements of affordable and self-build housing, have been approved beyond the built up area, together with a 12 bed care home in the form of self-contained units (though permission yet to be issued). Permission is also anticipated for 2 further sites, one for 13 affordable units, the other for 22 dwellings, including 11 affordable units. A further proposal for 34 dwellings is expected to be refused but if so, may well be taken to appeal given the present lack of a 5 year supply etc. Even if only the rest proceed however, that gives a total of 84 dwellings, excluding the care home, of which about 30 will be in the affordable category plus a few self-build homes.

At the time of writing, we are still gathering evidence in support of the Neighbourhood Plan. We have carried out a ‘town survey’ including one on local housing needs. There is still work to do to assess the extent of it, not just in terms of numbers but of mix, type and affordability. Preliminary results however suggest we may already have sufficient provision to meet local needs. For example, as at November 2015, of the 153 people (but only 99 ‘with points’) on the Council’s waiting list who expressed a wish to live in Charlbury, only 20 were assessed as already having local connections.

That said, as a group, we recognise that if local needs justify it, then it would far better for the community to agree (through the NP referendum) on the allocation of land and type of housing to meet them than to have constant arguments over speculative windfall applications, many of which are designed simply to maximise the developer’s profit. No-one involved sees the NP process just as a means to prevent development.

But we are not yet at the stage of determining how much land will be needed or where new housing development would be best placed. It may be that the ‘Jefferson’s Piece’ land will not be needed – or at least not yet. There may also be other sites that would have less impact in landscape terms which for whatever

- access to the building site and development is via an effectively single lane road - ditchley road, it is narrow, with parked cars down one side and on the corner where it joins to the slade. This makes the junction risky currently and even more so with an increase in traffic volume  
- the green and Jefferson place is currently a busy housing estate, children play out on the estate and cycle, there are many parked cars which makes access for large vehicles impossible at times and very unsafe  
- the impact on the AOB and wildlife of such a development is considerable  
- the are better sites in Charlbury that could be accessed directly from a main road, such as rusty bank |
| MM337        |                         | Sharon Harris  | Mrs             | Harris            | 623        | > SECTION 9 - STRATEGY AT THE LOCAL LEVEL > Burford Charlbury Sub Area > MAIN 196 | Subject; land off Jefferson Piece, Charlbury, proposed development of 40 homes  
planning ref main 194 and main 195  
I am writing in reference to the planning application regarding the proposed development .  
I live in 20 Jefferson piece across from the garages that is proposed to be the entrance to the site. Which I find is crazy to be used for what is proposed. This will take away the safety of our estate for our children that walk, run and bike around the estate that feel safe doing this but if we have traffic of 40 or more cars from home owners and visitors this will be gone. when you drive around the estate you will notice a problem already with the parking of cars, this is an issue as most homes have more then one car and cars are parked on the roads, some days cars from two streets away park cars out side my house due to parking issues. The dustcart even struggles most mornings and end up taking kirb stones out to driving on paths to turn. so what happens to our parking if the entrance ends up here. I have lived in the estate all my life and I know this will have a big impact on our estate. we do need to come up with a better solution to connect the field to a road that does not affect the areas struggling with problems to start allowing or children to stroll freely and happy in the estate made safe by the community of my neighbours. |

<td>&gt; SECTION 9 - STRATEGY AT THE LOCAL LEVEL &gt; Burford Charlbury Sub Area &gt; MAIN 196</td>
<td>I am writing in reference to the above planning application regarding the proposed development of 40 houses at Jeffersons Piece Charlbury. I live on the Ditchley Road which is next to Elm Crescent and the proposed access to the site, I am writing to register my objection to the proposed development. This is a greenfield site within the Cotswold area of outstanding beauty and a conservation area. The field is home to a large number of wildlife. 40 more new homes on such a small site would have a huge impact on the environment and surrounding estate. This cold easily generate at least another 80 Vehicles travelling past my road which is already busy with Cars on the side of Ditchley Road let along the additional noise created. The primary school is already full and even current new comers are not able to gain admission and having to travel out of the town. – we already encourage walking to School. I appreciate the requirement to build new homes but this site is not appropriate in my opinion. I would ask that this proposal is rejected.</td>
</tr>
</tbody>
</table>

I moved to Charlbury and bought a house here over 8 years ago, I worked full time until I was 66 and retired two years ago. I live in Elm Crescent at No 8. I moved here for my work at Kidlington Airport and bought my house because it is an the Area of Outstanding Natural Beauty and in a conservation area. While I accept the need for additional housing everywhere not just in Charlbury, I object to the plans for the 40 house development in a green field site adjacent to Elm Crescent. My objection is two fold, first access to the site for future residents and construction traffic. Elm Crescent, Chartwell Drive and Ditchley Road all have parked cars on the street and the junction with the Slade is already difficult as things are, especially at school times. A covenant that came with my house states that the front gardens are not to be fenced in, that is open plan. Presently there are few children (that I know of) in Elm Crescent but that will change over time, with children... |

<td>playing in a future feeder road with no fenced gardens. Already traffic speeds past my house, additional traffic in a road not designed to be a feeder road is not acceptable. I mean delivery and trade and emergency vehicles not just the additional 80 or so vehicles belonging to the new residents. Secondly as I understand it, local services, NHS and schools are already strained and any development plan must address these issues. Assuming that the schools and services issue was to be addressed and that access to the new site is not via the three roads I mentioned above it may be acceptable. Unfortunately looking at the map supplied it seems that there may be no other practical access route. So my objection to this development stands.</td>

<td>&gt; SECTION 9 - STRATEGY AT THE LOCAL LEVEL &gt; Burford Charlbury Sub Area &gt; MAIN 197</td>
<td>I support the development of additional housing in this location, and for the school car parking, however I believe that 44 homes are far too many for the space, and for the village. The required level of density would be more like a town centre, than a rural village location. The nearby estate is at a lower density and the other housing nearby is mostly large detached houses. In addition, the village facilities are limited, with one small shop and an already busy primary school and very limited public transport. The plan does not seem to say how the needs of the additional residents will be met, particularly in the light of the large development planned in Milton-Under-Wychwood. There is also a concern that the western part of the proposed site almost reaches the buildings around Milton Service Station and development of that part of the site would have the effect of joining the two villages (Shipton and Milton) into a single developed area. The two villages have different characters and there would be very substantial impact on both if they were to become perceived as a single developed area. That would then result in much development pressure on the current gap between the villages creating a very large and very different style of village and completely losing the current rural character of both.</td>

Mrs Stevenson agrees with the Council that the site’s location within the AONB and Conservation Area does not preclude the development of the site. This is in part due to the recognition that as the Burford – Charlbury sub area is washed over by the AONB, there is no scope to develop sites outside of the AONB.

This indeed was the established position in a recent appeal allowed on land south of High Street, Milton under Wychwood (Appeal Ref APP/D3125/W/16/3143885) where the Inspector concluded that major development in the AONB was in the public interest to address the housing needs of the area and there was no scope to meet these needs outside of the AONB

As at December 2016, the planning application as due to be reported to the Council’s Planning Committee with an officer recommendation of approval. It is hoped that the Council will have resolved to approve the application in advance of the recommencement of the WOLP 2031 Examination in 2017. Mrs Stevenson, however, wishes to reserve her position to be represented at the examination, if required, in relation to Main Modifications 197 to 199, Policy BC1d and the proposed allocation Land South of Milton Road, Shipton under Wychwood.

Ecology and Natural Environment

In all cases reference should be made to the District Council’s ecologist for specific details on each site. It is assumed that before firm proposals are brought forward for each site an appropriate ecological, landscape and visual impact assessment will be undertaken including surveys for protected and threatened species.

The permanent loss of land of existing and potential future habitat value should be recognised with a corresponding investment in biodiversity and other green infrastructure resources that provide a range of benefits including biodiversity, water management and contribute to physical and mental well-being. Additional off-site enhancement should be provided where insufficient environmental gains cannot be secured within the development boundary.

Shipton under Wychwood – Land South of Milton Road

The site lies within the Cotswolds AONB.

The adjacent streams are of biodiversity value and provide opportunities for natural water management.

There will be increased demand on the local green infrastructure resources – pocket parks etc, and further investment in such facilities may be required. Wychwood Wild Garden, a locally owned woodland garden, lies to the south. Further investment in this site will be required to improve its future resilience.

There may be opportunities to contribute to the aims of Cotswolds Valleys Nature Improvement Area within which the site lies.

b) provision of satisfactory vehicular access and appropriate pedestrian and cycle connections.

<td>2.85 The proposed strategy for the sub-area has been updated to reflect the allocations of the non-strategic sites now proposed in the sub-area. We do not repeat our comments regarding the Council’s proposed housing target and supply here, but as discussed it is considered that further allocations are required in order to meet the Council’s housing target and to ensure the flexibility required by the NPPF is allowed for. 2.86 In addition to the delivery of housing, the sub-area strategy sets out aspirations in respect of protecting the natural environment, in particular the AONB, enhancing transport opportunities, supporting employment opportunities including sustainable tourism and retaining and enhancing local services and community facilities. 2.87 It is considered by our client that the allocation of its wider land interests would provide a range of benefits to meet the aspirations for the Sub-Area and the District as a whole.</td>
</tr>
</tbody>
</table>
2.88 Whilst it is acknowledged that development of the wider site would encroach further into the AONB, the accompanying Vision Document summarises the technical assessments of the proposals which have been undertaken to date which demonstrate that the site represents a suitable and appropriate location to accommodate future growth. The analysis of the site and subsequent development framework in the Vision Document clearly illustrate how a sensitive, high quality development which responds to the attributes of the site can be achieved. In summary, the development framework has concluded the following:

- **Policy Context** – The western field parcel of the site is proposed for allocation in the Proposed Modifications to the Local Plan under Policy BC1b for 85 homes. Allocation of the wider site will enable a number of wider benefits to be delivered including a new community medical centre and coach and car park. Development of the site will also support the five year supply and contribute towards the delivery of the Council’s wider economic growth strategy and the creation of sustainable communities.

- **Towcape and context** – The site represents a development opportunity close to both the historic core of the town but also in close proximity to a range of services and amenities. It is well contained and represents a very suitable and sensitive opportunity for new housing in line with sustainable growth patterns.

- **Access** – The site benefits from good local and regional road links, benefits from regular bus connections to local centres and is in walking distance of a host of local services which helps promote sustainable movement patterns.

- **The site** – The future development of the site can be delivered whilst retaining and enhancing its specific landscape and ecological attributes. New areas of public open space can also be delivered through the release of the land for residential development.

2.89 It is considered that development of the wider site would result in range of benefits and we assess the proposals against the Sustainability Appraisal Objectives below. (ATTACHED)
2.90 In light of the above, it is considered that the proposed site to the east of Burford should be extended to reflect our client’s wider land interests in order to deliver the increased benefits outlined above. This would also help in addressing our earlier concerns in respect of meeting the District’s housing target and result in further improvements to the function and role of Burford in the sub-area.

MM376  
Stagecoach in Oxfordshire/Stagecoach West  
Nick Small, Stagecoach Bus  
Dr Small  
1027  
> SECTION 9 - STRATEGY AT THE LOCAL LEVEL > Burford Charlbury Sub Area > MAIN 200  
MAIN 200 Policy BC1 Burford-Charlbury Sub-area Strategy

Stagecoach broadly supports the Sub-area Strategy and Policy, recognising the high level of environmental constraint and the relatively limited opportunities available to meet local travel demands by sustainable modes in a very rural area.

Stagecoach notes that some draft allocations are proposed in settlements where regular bus services are not provided, though some such as Shipton- and Milton-under-Wychwood can take advantage of rail services for some longer journeys. Most such allocations in fact represent development already committed. Stagecoach is concerned that larger-scale development in these settlements is strongly resisted, as being inherently car-dependent; and this is most likely to be achieved through the adoption of the Plan.

Land north of Jefferson’s Piece, Charlbury (40 homes)

Stagecoach recognises and supports the need to make suitable allocations to meet locally-arising housing need in the Charlbury area. Among other services and facilities, Charlbury benefits from existing hourly commercial bus services offered by Stagecoach service S3, as well as a nearby rail station with regular stopping services. Thus, this settlement represents by far one of the best locations to seek to make such an allocation within the Sub-area.

> SECTION 9 - STRATEGY AT THE LOCAL LEVEL > Burford Charlbury Sub Area > MAIN 200  
We are aware that paragraphs 115 and 116 of the NPPF attach great weight to conserving landscape and scenic beauty in Areas of Outstanding National Beauty, where major development should be refused except in exceptional circumstances. Given the constraints imposed by the AONB, we question whether any housing allocations in the AONB settlements is possible at this late stage of the plan.

We suggest that the approach to plan-led development in West Oxfordshire’s AONB settlements such as Charlbury needs to be careful and considered, perhaps following the approach taken by local planning authorities such as Winchester, Horsham and North Kesteven where a plan-wide allocation for certain, smaller scale settlements is set, with development coming forward either (a) as part of a Neighbourhood Plan or other locally supported initiatives, such as a Planning Brief, or (b) by means of a planning application that is supported at the local/Parish level. This approach has been tested at EIP/hearings recently, and held to be sound.

> SECTION 9 - STRATEGY AT THE LOCAL LEVEL > Burford Charlbury Sub Area > MAIN 200  
Object MAIN 200 - Policy BC1 - the 4 non-strategic allocations

The Burford Charlbury Sub-Area

The housing allocation for the Burford-Charlbury sub-area has increased from 800 to 1,000 over the plan period.

Para 9.6.34a states that “in order to help meet identified housing needs four non-strategic site allocations are proposed in the Burford - Charlbury sub-area.” In total 219 homes are envisaged on these allocated non-strategic sites, over 20% of the total for the sub-area.

We note that paragraph 4.38 of the Sustainability Appraisal (SA) states that “each potential non-strategic site allocation was subject to detailed SA (Appendix V) and no major significant
negative effects were identified." However, the scope of this assessment is a series of high-level comments against the 15 SA objectives.

Whilst this is an entirely appropriate starting point, given the sensitivity of these sites - within the AONB and 3 within Conservation Areas - it is considered that further detailed assessment is required.

Carefully planned development in suitable locations is an appropriate means of meeting the identified housing need. The Council acknowledge this at para. 9.6.34g stating that "in terms of the scope for developing elsewhere, the Burford - Charlbury sub-area is washed over by a significant proportion of AONB designation. This in itself means that to meet future housing requirements, some development within the AONB will be necessary". We agree with this sentiment.

However, we are of the view that further examination of the sites is required. The allocated sites would benefit from the development of detailed indicative plans, capacity studies, and a consultant team assessing the impacts of the development on the CAONB, on designated heritage assets, on the highway network etc. For example, the proposed allocation of land north of Jefferson's Piece in Charlbury clearly has vehicular access issues which may affect deliverability and/or the number of units that can be achieved.

Paragraph 4.83 of the SA states acknowledges there is "uncertainty in the longer-term and until further detailed project level studies have been completed."

It is therefore far from certain whether these sites offer a realistic possibility of delivering the specified level of housing in the Plan period. For example the proposed allocation of land north of Woodstock Road, Stonesfield simply may not materialise as there is no developer interest, while the proposed allocation at Milton Road, Shipton-under-Wychwood is the subject of significant local objections to its planning application.

It is unreasonable to simply assume these sites are deliverable by virtue of their inclusion as a main modification, and to proceed to use that as a basis to develop housing policies which seek to demonstrate a 5 year housing land supply.

Noting the constraints discussed within the Plan from paragraph 9.6.1 onwards, the Plan states that 283 homes will be delivered through windfall sites within the sub-area. Taken together with the four draft non-strategic allocations, this is a total of 502 homes (or 50% of the sub area's total indicative housing requirement).

Whilst making an allowance for windfall sites is an accepted means of predicting housing delivery over the Plan period, we are of the view that to rely on speculative development and draft allocated sites (which are the subject of ongoing consultation and examination) to the degree the Council have done is unsound.

Our recommendation is that the Plan should identify additional sites in order to reduce the reliance on windfall development to meet the housing requirement for the sub-area.

Proposed change MAIN 187 & MAIN 200 - the 'land south of Grammar School Hill' site is included as a non-
Vanderbilt Homes have submitted an outline application at Land South of Grammar School Hill, Charlbury. The site is identified in red on the appended plan.

The outline application was submitted following detailed development of the proposals, with full assessment of the impacts of the development from heritage experts, landscape consultants, and transport consultants.

This level of detailed development of indicative proposals - including an examination of the capacity of site and the impact of the development - has not been undertaken in respect of other draft allocated sites in the Plan.

As discussed above, the proposed site allocations are at an early stage and will undergo further consultation and examination. There will be unresolved objections to these sites, and the Inspector may require further proposed modifications to be made.

Footnote 11 of paragraph 47 of the NPPF states how "to be considered deliverable, sites should be available now, offer a suitable location for development now, and be achievable with a realistic prospect that housing will be delivered on the site within five years and in particular that development of the site is viable."

The application for up to 34 homes at Land South of Grammar School Hill Charlbury represents a carefully considered, sustainable, and deliverable site that would contribute towards the housing requirement for the sub-area. It is available now, achievable within the short term, and offers a realistic prospect of housing above that which is currently being considered by the Main Modifications to the Council's Local Plan.

We consider this site should be one of these additional allocated sites. It is available, and deliverable in the short term. It will contribute towards reducing reliance on windfall development in the Burford-Charlbury sub-area, providing an element of certainty in respect of tangible, tested, and deliverable sites.

In order to assist towards making MAIN 200 is sound, we therefore recommend that the site at 'land south of Grammar School Hill, Charlbury' (as identified in red on the attached plan) is included in the emerging Plan as a non-strategic allocated site.

---

Policy BCI (MM200) should be amended to refer to the delivery of 800 homes in the plan period and to reflect the deletion of the proposed allocations within the AONB at Stonesfield, Burford, Charlbury and Shipton-under-Wychwood.

Policy BCI (MM200) should be amended to refer to the delivery of 800 homes in the plan period and to reflect the deletion of the proposed allocations within the AONB at Stonesfield, Burford, Charlbury and Shipton-under-Wychwood.

<td>LOCAL LEVEL &gt; Burford Charlbury Sub Area &gt; MAIN 200</td>
<td>The plan for 85 houses to be built in the local plan 2031 in Burford, within the Town, within the Cotswold Area of Outstanding Natural Beauty, and within the Conservation area is not legally compliant as it conflicts with West Oxfordshire Statement of Community Involvement (July 2014) Section 2.4 Preparation of a local plan (Regulation 18), Stakeholder Involvement “to involve stakeholders in the plan during preparation”. This plan BC1b for 85 houses in east Burford has been added during the revision to the original plan submitted in 2015. There has been adequate time allowed during the amendment stage to consult as required in WODC’s Statement of Community Involvement, especially as the inspector has allowed West Oxfordshire District Council additional time over and above the prescribed 6 months to submit their revised plan. Burford Town Council is a stakeholder in Burford: they were not consulted during the plan preparation.</td>

<td>&gt; SECTION 9 - STRATEGY AT THE LOCAL LEVEL &gt; Burford Charlbury Sub Area &gt; MAIN 200</td>
<td>The revision of the original plan is being carried out to support the need for additional housing for Oxford City, and to increase the housing need from 525 a year to 660, as the inspector has pointed out, to meet the SMHA requirement. It seems logical to ensure the some of the extra housing added in the revision will help serve the requirement for Oxford City sustainably, with good transport links to the city. Plan BC1c is for the addition of 40 houses in Charlbury. Charlbury is a town of just under 3000 population, with 1298 households in the 2011 census, and with a fast, efficient rail connection to Oxford City taking 18 minutes and planned to run roughly every hour from December 2018. This proposal would increase the households in Charlbury by about 3%. Plan BC1b is for the addition of 85 houses in Burford. Burford is a town of just about 1300 population. There are no local bus services from Burford direct to Oxford. This is pointed out in the revised plan in paragraphs 9.6.12 and 9.6.13 as follows</td>

<td></td>
<td>&gt; SECTION 9 - STRATEGY AT THE LOCAL LEVEL &gt; Burford Charlbury Sub Area &gt; MAIN 200</td>
<td>9.6.12 This sub-area is the best served in terms of rail services with the Cotswold line running along the Evenlode Valley and passenger stations at Kingham, Shipton under Wychwood, Ascott under Wychwood, Charlbury and Finstock. In their Local Transport Plan (LTP4) Oxfordshire County Council identify the Cotswold line as a strategic priority including further capacity and service enhancements, Charlbury is identified as the busiest station on the line with passenger numbers up 30% since 2002. The strategy identifies the potential for further growth with the introduction of an hourly service in December 2018. It identifies a number of specific improvements to Hanborough Station and more general improvements along the rest of the line include further redoubling at the eastern and western ends of the line, ensuring appropriate levels of car</td>
</tr>
</tbody>
</table>
parking are available and improving bus and cycle links to encourage multi-modal travel.

*9.6.13 The availability and frequency of bus services is variable. Services through Charlbury are good, with hourly direct services to Woodstock, Oxford, Witney and Chipping Norton. Bus services in Burford are less well developed, although there is a service to Woodstock via Witney and Long Hanborough Station.

By adding 85 houses to Burford, which in the 2011 census had 665 households, and which already has an oversubscribed Primary School, a failing sewerage system, and a lack of parking, and siting these houses where there is no public transport does not appear sustainable. This is over 4 times the percentage increase in households that is planned for Charlbury, and would increase the households in Burford by about 13%.

Whilst I support the inspectors requirement for an additional 660 houses per year in West Oxfordshire in the plan period, I believe they should be allocated proportionally within the Charlbury - Burford sub area. Looking at the allocation to Charlbury, Shipton-under-Wychwood, and Stonesfield all of which have populations equal or greater than Burford, and all of which have an additional 40-50 houses, I question why West Oxfordshire have proposed 85 houses in Burford.

Plan BC1b does not serve the need identified by the inspector to provide sustainable housing. If built, many will just become second homes.

<td>&gt; APPENDIX 2 &gt; MAIN 201</td>
<td>Appendix 2 to the Local Plan sets out the Council's proposed housing trajectory. We question whether the forecast housing trajectory, which predicts a significant increase in delivery from an average of 293 dwellings per annum between 2011/12 and 2015/16, to an average of 903 units per annum between 2016/17 and 2020/21 is realistic and deliverable, with the sites put forward in the Submission Draft Local Plan (including the Proposed Main Modifications). The Council's strategy, which continues to place significant emphasis on strategic sites, is considered to be 'high risk'. The strategic sites have lead-in delivery time of many years, taking account of preparation of S106 agreements, discharge of conditions, and provision of appropriate infrastructure. The progress made with West Witney is a case in point. As above, we would strongly encourage West Oxfordshire District Council to propose the allocation of additional sites at the villages within the Districts, to support delivery of the housing trajectory. We would further suggest that the Council needs to monitor its housing delivery regularly, and publish its findings on its five year housing land supply, so that planning applications can be made on those sites adjoining villages that have not been allocated, to assist in meeting identified housing need.</td>

</table>

This modification increases significantly the number of properties to be built in the Chipping Norton SDA. This is backed up by unsound evidence and is not appropriate to the existing community. In particular:

a) Part of the Vision in section 3.2 is to “play a role in helping to meet wider needs, without significant change to the intrinsic character of the District.” Increasing the population of the town by 50% will inevitably change its character. Especially as the driver for the increase is the need to house those working in Oxford, so turning a working town into a dormitory town.

b) Core Objective CO2 is to “Ensure that new developments are suitably located and well designed to protect and enhance the individual form, character and identity of our towns and villages as well as contributing to the quality of life in West Oxfordshire.” This fails for the same reasons as the Vision statement.

c) Core Objective CO3 is to “Promote safe, vibrant and prosperous town and village centres and resist proposals that would damage their vitality and viability or adversely affect measures to improve those centres.” Whilst a modest increase in population will help the town, this huge increase, aimed at commuters into Oxford, will be detrimental. The plan mentions that the proposed development is within walking and cycling distance of the town centre, although it offers no evidence to support this. I visit the town centre most days and have never seen more than one bicycle in the cycle parking there. The area around the town is too hilly for most of the population to cycle. A straw poll of people living in the Parkers Circus estate (which is closer to the town centre than is the SDA) indicates that none walk when going into town to do their shopping. These were all fit, active people. The town centre is also not safe. In the last few years, people have been killed by passing traffic while on the pavement at Horsefair. The proposed link road appears to be a “road to nowhere” as the majority of traffic (especially commercial traffic) enters or leaves the town on the A44 Moreton-in-Marsh road. This will become even more the case if a weight restriction is put on the ancient bridge in Burford, as has been suggested. In that event, no heavy vehicles will use this relief road. This increase in traffic will also affect air quality, which is already at illegal levels.

d) Core Objective CO4 is to “Locate new residential development where it will best help to meet local housing needs and reduce the need to travel.” Policy T1 – Sustainable Transport says that “Priority will be given to locating new development in areas with convenient access to a good range of services and facilities and where

| MM779         |                         | Sarah Franks    | Ms Franks        | 2118               | > APPENDIX 3 | > MAIN 232        | the need to travel by private car can be minimised, due to opportunities for walking, cycling and the use of public transport, particularly where this would help to reduce traffic congestion on the routes around Oxford and the Air Quality Management Areas at Witney and Chipping Norton. The need for severely reduced transport impact, particularly on the Air Quality Management Area of Chipping Norton and Witney. The increase proposed in the modification is mainly to serve Oxford. There is no train link to Oxford. The bus to Oxford takes over an hour and is infrequent. The bus service from Kingham Station does not wait if a train is delayed, resulting in a possible two-hour wait for the bus that meets the next train. I see no solution to this problem as buses have to keep to timetables. Everyone I know has stopped using this bus, resulting in more car journeys and a station car park that can't cope. The alternative is to travel to the station by driving through country lanes and the village of Churchill in contravention of Policy T1. The increased local traffic will make air quality worse. There is nothing in the proposed plan to solve these problems.

e) The proposed plan states in para 7.74 that "In Chipping Norton public car parking spaces in the town centre are insufficient to meet current needs." There is nothing in the proposed plan to solve this problem. |

Introduction

This site is one of three medium to large housing development sites around Woodstock that are being put forward as main modifications to the draft submission of the West Oxfordshire Local Plan 2031 (the Plan). These changes are proposed in response to issues raised by the Local Plan Inspector, Simon Emerson, who suspended the Local Plan Examination on 25th January 2016. He had expressed concerns about the robustness of the Plan to meet housing demand partly in terms of the overall number of new housing units proposed to be provided during the Plan period to meet the needs of the area covered by West Oxfordshire District Council (WODC) and partly in terms of the failure of the Plan to make provision for the unmet needs of Oxford City. Consequently a range of new housing sites across the District are now proposed to supplement those sites that were already allocated for new housing in the Plan.

The Soundness of the Plan

The consultation invites comments on the legality and soundness of the Plan. The comments provided within this consultation response deal solely with the soundness of the Plan in terms of the inclusion of the MAIN 232 site for housing.

The soundness of a Local Plan has been the subject of research by the Planning Advisory Service and others and a number of criteria have been used to assess soundness. These are whether the Plan is positively prepared, justified, effective and consistent with national policy. The comments provided within this consultation response relate mainly to the justification for choosing to allocate this potential housing site and whether the allocation is consistent with national policy. In terms of assessing justification and compliance with national policy, regard has been had to whether the decision to allocate this site is backed up by research and conclusions that indicate the appropriateness of the site in terms of issues that are of material planning importance, whether the site is one that is favourable in terms of proportionate evidence compared to available alternatives and how the allocation can be concluded as being a sustainable proposal when considered against the sustainability criteria set out in the National Planning Policy Framework (NPPF).

Comments in relation to the whole site (MAIN 232)

This large site is referred to as MAIN 232 and comprises land to the north of Banbury Road, Woodstock upon which it is anticipated that 250 houses could be provided by 2031. It is a combined site of three separate sites:

- The "Oxford" site
- The "Woodstock" site
- The "Kingham" site

The development of this site would require significant improvements to the existing infrastructure, including road and public transport connections. The developer would also need to address the likely increase in traffic and air pollution, which could have a negative impact on the local environment and quality of life in the surrounding areas. The Plan should ensure that sufficient provision is made for traffic management and environmental mitigation measures to address these concerns. Additionally, the Plan should consider the potential for social and economic benefits from the development, such as job creation and increased property values, as well as any potential adverse impacts on local businesses and residents.

The Plan should also address the issue of public access to the site, ensuring that the development does not result in a loss of open space or access to local amenities. The Plan should promote sustainable development practices, such as the provision of green spaces, energy-efficient buildings, and the use of renewable energy sources, to minimize the environmental impact of the development.

In conclusion, the Plan should provide a balanced approach to the development of this site, taking into account the potential benefits and concerns associated with the proposed development. The Plan should ensure that the development is carried out in a manner that is consistent with national policy and guidelines, and that it contributes positively to the local community.
parcels of land that are themselves individually referenced in the WODC document 'Strategic Housing and Economic Land Availability Assessment' (SHEEAL) as sites 360 (land north of Banbury Road), 361 (Green Lane, Woodstock) and 366 (Land East of Owen Mumford). These sites have areas of 6.37ha, 3.17ha and 7.38ha respectively, totaling 16.92ha for the whole of the MAIN 232 site. Sites 360 and 366 are essentially the two southerly portions of a much larger arable field, whereas site 361 is a much smaller and separate pasture, forming only 18.7% of the total MAIN 232 site. The site is believed to be within a single ownership of Blenheim Estates and has come forward as a potential site as a result of the land owner's intention to include the land as an allocated development site within the draft WODC Local Plan 2031.

In terms of the wider MAIN 232 site, as detailed above, it would be remote from the historic core of Woodstock. Although a minor access point could be achieved through a gap in buildings along Green Lane, this could only be a secondary access and the main access would be off Banbury Road towards the edge of the built up area. This is some distance from the centre of Woodstock and the distance to the locations of dwellings within the new development would probably be at least twice the distance from the centre of Woodstock to the access road. Given the degree to which people are able to use walking or cycling as a means of travel is wholly in proportion to the distance covered, it follows that the ability of any new residents to access the goods and services provided within the town of Woodstock would therefore be severely hampered due to the overall distance involved. The bus service along Banbury Road is limited and an extension of the service into a development of 250 houses would be unviable and extremely unlikely.

The inevitable conclusion is that the overwhelming number of households would be effectively limited to the private car, certainly as a means of accessing the goods and services within Woodstock and most likely for trips to destinations further afield as well. Given the dependence upon the private car, the development would effectively be a remote satellite to Woodstock, adding to congestion on Banbury Rod, reducing air quality and road safety, leaving non-drivers less able to access goods services, employment and other opportunities and therefore failing to adhere to the principles of sustainable development and would not result in the creation of sustainable communities in line with government policy. The NPPF seeks to encourage solutions which support reductions in greenhouse gas emissions and congestion (paragraph 29) including supporting a pattern of development which, where reasonable to do so, facilitates the use of sustainable modes of transport (paragraph 30). The inclusion of this site would run counter to those fundamental guiding principles.

The wider MAIN 232 site also lies in the middle of an important view cone for Blenheim Palace, a World Heritage Site across Woodstock and there is no argument for allowing any impact upon the landscape setting of this nationally important Heritage Asset. The open and rolling nature of the landscape is described in WODC’s own Landscape Character Assessment as an area characterised as ‘semi-enclosed limestone wolds’. This type of landscape is particularly sensitive to new development and in the absence of significant existing natural vegetation or landscape or other topographical features, the land is simply not capable of absorbing new development in a way that preserves it landscape qualities. Therefore, given the open undulating character of the land and its contribution to the setting of such an important heritage asset it would seem difficult, if not impossible, to justify the level of harm that would occur in order to provide this number of houses that could equally be provided elsewhere around the town, or not at all. That planning balance is further swayed towards the deletion of MAIN 232 having regard to the conclusions on transport and sustainability set out above.

Those landscape qualities and the appreciation of the setting of Blenheim Palace are available to the public from a number of vantage points within the area and the open wold landscape qualities particularly from footpath 413/7 that crosses the site. It is those views from that footpath that would be most affected. It is a public right of way in constant use by locals and tourists alike and the attractiveness of the views of the open...
limestone wolds would be entirely eliminated with the addition of a 250 dwelling housing estate surrounding the footpath.

The wider implications for infrastructure are already acknowledged in the draft Plan and the ability of the town to provide sufficient school places has been highlighted. In the absence of sufficient school places to warrant and provide for a new school, the traffic and air quality issues identified above will be exacerbated as parents struggle with car based school runs on an inadequate road network, particularly where those journeys involve the use of Hensington Road and its junction with Oxford Street.

Specific comments relating to plot 361 – Green Lane Woodstock

This is a green pasture lying between Green Lane and Banbury Road to the south of the MAIN 232 allocation site. It directly borders properties in Green Lane to the west and Kerwood Close, Banbury Road, The Quadrangle and Ramillies Close to the south. There are a number of significant constraints associated with this site including residential amenity, impact upon the setting of a listed building, trees and ecology and the ability to achieve a comprehensive development. These are examined below.

Residential amenity

The unusual aspect of plot 361 is the number of adjoining residential properties that have very shallow back gardens or no back garden at all. The properties along the eastern side of Green Lane have their gardens to the side and the rear façade of the properties are nearly up against the boundary of the field with the housing plot boundary being drawn along the field boundary. The properties at the northern end of Kerwood Close and those adjacent on the eastern side have extremely short rear gardens that are shallower than the depth of the houses themselves. The building at the northern end of The Quadrangle has recently changed use to form a residential dwelling and a portion of the paddock the rear has now been fenced off to provide a private garden for the occupants. However the boundary of the housing allocation is drawn tightly up against the rear boundary of the building and would divorce the private garden from the house leaving it with no private amenity space at all. The row of cottages along the Banbury Road immediately to the east of Hensington Farmhouse have extremely small rear gardens as do all of the properties in Ramillies Close.

The windows from the backs of all of these houses, over 25 dwellings in total, have a variety of standard rear windows that look out directly over the wider plot 361 area and the two parcels of land either side of the rear garden of Hensington Farmhouse. This will mean that the areas immediately adjacent to the boundaries are entirely unsuitable for new residential development either because new dwellings will be unacceptably overlooked or the existing houses will suffer the same impact from the new dwellings. In addition, the recently converted residential property in The Quadrangle will lose its garden entirely.

Heritage

In addition to the concerns over the impact of the housing allocation for the whole MAIN 232 suite, the smaller 361 plot abuts the garden of the Grade II listed Hensington Farmhouse on all three sides as currently drawn. Moreover the property includes a curtilage listed building used as an annexe that abuts the boundary of plot 361. Surrounding this property with new development on three sides and directly abutting a curtilage listed building will have a significant and detrimental impact upon its setting that will be harmful to its historical interest.

Trees
Two mature walnut trees one lying on the boundary of the rear garden of Hensington Farmhouse and the other immediately to the rear of the row of cottages to the east of the farmhouse would both fall within category A of table 1 of the British Standards document 'BS5837:2012 Trees in Relation to Design, Demolition and Construction - Recommendations'.

Those trees are ones that are of high quality with an estimated life expectancy of at least 40 years and that are particularly good examples of their species so that they make a significant contribution towards visual amenity and local landscape quality. In addition to those two category 'A' trees there are a number of other mature specimens of high quality (category 'B') including the Crack Willow tree on the western boundary of Hensington Farmhouse. The combination of the presence of these trees, either within the site allocation or on its boundary, is that there will be implications for the proposed housing allocation. Root Protection Areas (RPAs) are the areas that extend to a distance from the base of the tree of twelve times its diameter (at a point 1 metre above ground level). Following the 'recommendations' in the above British Standards document in respect of RPAs would severely compromise the ability of development to occur in the two small paddocks that form the southern portion of site 361 and lie either side of the garden of Hensington Farmhouse both in terms of the need to avoid development within the RPAs and the shadowing effect that would occur for a dwelling in the vicinity of the trees. Given the characteristics of the site and with particular regard to the established mature trees that define the site boundaries the ability of new development to adequately utilise the two paddocks in a way that avoids the harm to high quality trees that is identified above is highly questionable.

Ecology

The site contains two existing ponds to the north of plot 361 close to its boundaries with plots 360 and 366. There is likely to be a variety of ecological interest within these ponds as well as a harmful impact upon a number of species that would utilise these ponds for feeding, shelter or breeding. The site is bordered to the north by a stone wall and mature hedging surrounds the site on other boundaries. These feature are also likely to make a valuable contribution towards local ecology. The land is rough pasture that is underused for grazing and likely to be significantly more diverse ecologically than the arable land to the north forming the remainder of MAIN 232.

Inability to achieve comprehensive development

Having regard to all of the constraints that exist within the two small paddock areas that lie either side of the rear garden of Hensington Farmhouse, their inclusion will make it difficult to achieve a comprehensive development over the entirety of plot 361. These areas are traditionally part of the gardens and not the field and the inclusion of these two areas would alter the character as well as be very unneighbourly. Given the difficulty in achieving housing in these two paddocks due to the constraints within the paddocks and on their boundaries, they may be used as public open space. Utilising these peripheral areas may leave the rest of the development with less public open which will not result in a comprehensive scheme or one that focusses on a public open space of sufficient quality.

Conclusion

The list of additional housing sites forming the proposed modifications to the Plan has been prepared in response to the Inspector's concerns about the soundness of the plan. They have been identified quickly and the reasons why they were selected in preference to other sites has not been published raising questions over the effectiveness of the public consultation exercise. The allocation appears to reflect local land ownership...
The reasons why the additional housing sites were selected in preference to other sites has not been published. This would lead me to believe the public consultation was not adequate or effective. The allocation seems to be based on who owns the land rather than looking at objective reasons. There are other sites in Woodstock that would not have the same impact from a transport, sustainability point of view. The Plan can only be deemed as sound with its removal as the harmful effects cannot be mitigated.

Introduction

This site is one of three medium to large housing development sites around Woodstock that are being put forward as main modifications to the draft submission of the West Oxfordshire Local Plan 2031 (the Plan). These changes are proposed in response to issues raised by the Local Plan Inspector, Simon Emerson, who suspended the Local Plan Examination on 25th January 2016. He had expressed concerns about the robustness of the Plan to meet housing demand partly in terms of the overall number of new housing units proposed to be provided during the Plan period to meet the needs of the area covered by West Oxfordshire District Council (WODC) and partly in terms of the failure of the Plan to make provision for the unmet needs of Oxford City. Consequently a range of new housing sites across the District are now proposed to supplement those sites that were already allocated for new housing in the Plan.

rather than forming a conclusion based upon any objectively assessed examination of the site specific details of the allocation boundary.

The issues that have been identified in the preceding sections are critical to the soundness of the Plan in terms of its justification and its consistency with national policy.

Given that other locations around Woodstock would not have the same impact in terms of transport, sustainability and harm to a nationally important heritage assets, it would seem that, in the absence of an overriding public need to have housing on this site, then the site should be deleted from the draft WOLP at this stage as these three planning concerns should indicate that the site is not suitable because the harmful impacts cannot be mitigated and the Plan can only be found to be sound with the removal of MAIN 232.

Notwithstanding the above conclusions relating to the whole of MAIN 232 and without prejudice to the comments advocating its deletion from the Plan, if it is nevertheless decided to include an allocation of housing on MAIN 232, then it is also contended that the planning harm identified in the sections above indicates that plot 361, as stated comprising about 18.7% of the total area of MAIN 232, should be removed from the Plan as this portion of the wider allocation is the area that causes the majority of the planning harm identified. Retaining the land as pasture along with its ecological features will provide a ‘green lung’ for this part of Woodstock and will make a significant contribution to the local network of green infrastructure. Removing it would eliminate this harm and provide a buffer to the development area and will enable the Plan to be better justified and achieve greater compliance with national policy.

Finally, even if MAIN 232 is included within the Plan along with its plot 361, it is also advocated that the two small paddocks lying either side of the rear garden of Hensington Farmhouse are deleted from the boundary of the allocation. It is the inclusion of these two paddocks that will result in the greatest harm in terms of the impact on the setting of the listed building and the trees of highest quality along with some of the greatest harm to residential amenity. The soundness of the Plan in terms of its justification and consistency with national policy will be significantly improved with these two small areas removed and the impact upon the ability of the site to be comprehensively developed will be improved whilst there will be little or no loss of overall housing numbers as a result of this small modification.
The ‘Soundness’ of the Local Plan

The consultation invites comments on the legality and soundness of the Plan. The comments provided within this consultation response deal solely with the soundness of the Plan in terms of the inclusion of the MAIN 232 site for housing.

The soundness of a Local Plan has been the subject of research by the Planning Advisory Service and others and a number of criteria have been used to assess soundness. These are whether the Plan is positively prepared, justified, effective and consistent with national policy. The comments provided within this consultation response relate mainly to the justification for choosing to allocate this potential housing site and whether the allocation is consistent with national policy. In terms of assessing justification and compliance with national policy, regard has been had to whether the decision to allocate this site is backed up by research and conclusions that indicate the appropriateness of the site in terms of issues that are of material planning importance, whether the site is one that is favourable in terms of proportionate evidence compared to available alternatives and how the allocation can be concluded as being a sustainable proposal when considered against the sustainability criteria set out in the National Planning Policy Framework (NPPF).

Comments in relation to the whole site (MAIN 232)

This large site is referred to as MAIN 232 and comprises land to the north of Banbury Road, Woodstock upon which it is anticipated that 250 houses could be provided by 2031. It is a combined site of three separate parcels of land that are themselves individually referenced in the WODC document ‘Strategic Housing and Economic Land Availability Assessment’ (SHEELA) as sites 360 (land north of Banbury Road), 361 (Green Lane, Woodstock) and 366 (Land East of Owen Mumford). These sites have areas of 6.37ha, 3.17ha and 7.38ha respectively, totalling 16.92ha for the whole of the MAIN 232 site. Sites 360 and 366 are essentially the two southerly portions of a much larger arable field, whereas site 361 is a much smaller and separate pasture, forming only 18.7% of the total MAIN 232 site. The site is believed to be within a single ownership of Blenheim Estates and has come forward as a potential site as a result of the land owner’s intention to include the land as an allocated development site within the draft WODC Local Plan 2031.

In terms of the wider MAIN 232 site, as detailed above, it would be remote from the historic core of Woodstock. Although a minor access point could be achieved through a gap in buildings along Green Lane, this could only be a secondary access and the main access would be off Banbury Road towards the edge of the built up area. This is some distance from the centre of Woodstock and the distance to the locations of dwellings within the new development would probably be at least twice the distance from the centre of Woodstock to the access road. Given the degree to which people are able to use walking or cycling as a means of travel is wholly in proportion to the distance covered, it follows that the ability of any new residents to access the goods and services provided within the town of Woodstock would therefore be severely hampered due to the overall distance involved. The bus service along Banbury Road is limited and an extension of the service into a development of 250 houses would be unviable and extremely unlikely.

The inevitable conclusion is that the overwhelming number of households would be effectively limited to the private car, certainly as a means of accessing the goods and services within Woodstock and most likely for trips to destinations further afield as well. Given the dependence upon the private car, the development would effectively be a remote satellite to Woodstock, adding to congestion on Banbury Rod, reducing air quality and road safety, leaving non-drivers less able to access goods services, employment and other opportunities and therefore failing to adhere to the principles of sustainable development and would not result in the creation of sustainable communities in line with government policy. The NPPF seeks to encourage solutions which support
reductions in greenhouse gas emissions and congestion (paragraph 29) including supporting a pattern of
development which, where reasonable to do so, facilitates the use of sustainable modes of transport
(paragraph 30). The inclusion of this site would run counter to those fundamental guiding principles.

The wider MAIN 232 site also lies in the middle of an important view cone for Blenheim Palace, a World
Heritage Site across Woodstock and there is no argument for allowing any impact upon the landscape setting
of this nationally important Heritage Asset. The open and rolling nature of the landscape is described in
WODC’s own Landscape Character Assessment as an area characterised as ‘semi-enclosed limestone wolds’.
This type of landscape is particularly sensitive to new development and in the absence of significant existing
natural vegetation or landscape or other topographical features, the land is simply not capable of absorbing
new development in a way that preserves it landscape qualities. Therefore, given the open undulating
character of the land and its contribution to the setting of such an important heritage asset it would seem
difficult, if not impossible, to justify the level of harm that would occur in order to provide this number of
houses that could equally be provided elsewhere around the town, or not at all. That planning balance is
further swayed towards the deletion of MAIN 232 having regard to the conclusions on transport and
sustainability set out above.

Those landscape qualities and the appreciation of the setting of Blenheim Palace are available to the public
from a number of vantage points within the area and the open wold landscape qualities particularly from
footpath 413/7 that crosses the site. It is those views from that footpath that would be most affected. It is a
public right of way in constant use by locals and tourists alike and the attractiveness of the views of the open
limestone wolds would be entirely eliminated with the addition of a 250 dwelling housing estate surrounding
the footpath.

The wider implications for infrastructure are already acknowledged in the draft Plan and the ability of the town
to provide sufficient school places has been highlighted. In the absence of sufficient school places to warrant
and provide for a new school, the traffic and air quality issues identified above will be exacerbated as parents
struggle with car based school runs on an inadequate road network, particularly where those journeys involve
the use of Hensington Road and its junction with Oxford Street.

Specific comments relating to plot 361 – Green Lane Woodstock

This is a green pasture lying between Green Lane and Banbury Road to the south of the MAIN 232 allocation
site. It directly borders properties in Green Lane to the west and Kerwood Close, Banbury Road, The
Quadrangle and Ramillies Close to the south. There are a number of significant constraints associated with this
site including residential amenity, impact upon the setting of a listed building, trees and ecology and the ability
to achieve a comprehensive development. These are examined below.

Residential amenity

The unusual aspect of plot 361 is the number of adjoining residential properties that have very shallow back
gardens or no back garden at all. The properties along the eastern side of Green Lane have their gardens to the
side and the rear façade of the properties are nearly up against the boundary of the field with the housing plot
boundary being drawn along the field boundary. The properties at the northern end of Kerwood Close and
those adjacent on the eastern side have extremely short rear gardens that are shallower than the depth of the
houses themselves. The building at the northern end of The Quadrangle has recently changed use to form a
residential dwelling and a portion of the paddock the rear has now been fenced off to provide a private garden
for the occupants. However the boundary of the housing allocation is drawn tightly up against the rear

boundary of the building and would divorce the private garden from the house leaving it with no private amenity space at all. The row of cottages along the Banbury Road immediately to the east of Hensington Farmhouse have extremely small rear gardens as do all of the properties in Ramillies Close.

The windows from the backs of all of these houses, over 25 dwellings in total, have a variety of standard rear windows that look out directly over the wider plot 361 area and the two parcels of land either side of the rear garden of Hensington Farmhouse. This will mean that the areas immediately adjacent to the boundaries are entirely unsuitable for new residential development either because new dwellings will be unacceptably overlooked or the existing houses will suffer the same impact from the new dwellings. In addition, the recently converted residential property in The Quadrangle will lose its garden entirely.

Heritage

In addition to the concerns over the impact of the housing allocation for the whole MAIN 232 suite, the smaller 361 plot abuts the garden of the Grade II listed Hensington Farmhouse on all three sides as currently drawn. Moreover the property includes a curtilage listed building used an annexe that abuts the boundary of plot 361. Surrounding this property with new development on three sides and directly abutting a curtilage listed building will have a significant and detrimental impact upon its setting that will be harmful to its historical interest.

Trees

Two mature walnut trees one lying on the boundary of the rear garden of Hensington Farmhouse and the other immediately to the rear of the row of cottages to the east of the farmhouse would both fall within category A of table 1 of the British Standards document 'BS5837:2012 Trees in Relation to Design, Demolition and Construction - Recommendations'. Those trees are ones that are of high quality with an estimated life expectancy of at least 40 years and that are particularly good examples of their species so that they make a significant contribution towards visual amenity and local landscape quality. In addition to those two category ‘A’ trees there are a number of other mature specimens of high quality (category ‘B’) including the Crack Willow tree on the western boundary of Hensington Farmhouse. The combination of the presence of these trees, either within the site allocation or on its boundary, is that there will be implications for the proposed housing allocation. Root Protection Areas (RPAs) are the areas that extend to a distance from the base of the tree of twelve times its diameter (at a point 1 metre above ground level). Following the ‘recommendations’ in the above British Standards document in respect of RPAs would severely compromise the ability of development to occur in the two small paddocks that form the southern portion of site 361 and lie either side of the garden of Hensington Farmhouse both in terms of the need to avoid development within the RPAs and the shadowing effect that would occur for a dwelling in the vicinity of the trees. Given the characteristics of the site and with particular regard to the established mature trees that define the site boundaries the ability of new development to adequately utilise the two paddocks in a way that avoids the harm to high quality trees that is identified above is highly questionable.

Ecology

The site contains two existing ponds to the north of plot 361 close to its boundaries with plots 360 and 366. There is likely to be a variety of ecological interest within these ponds as well as a harmful impact upon a number of species that would utilise these ponds for feeding, shelter or breeding. The site is bordered to the north by a stone wall and mature hedging surrounds the site on other boundaries. These feature are also likely to make a valuable contribution towards local ecology. The land is rough pasture that is underused for grazing and likely to be significantly more diverse ecologically than the arable land to the north forming the remainder
of MAIN 232.

Inability to achieve comprehensive development

Having regard to all of the constraints that exist within the two small paddock areas that lie either side of the rear garden of Hensington Farmhouse, their inclusion will make it difficult to achieve a comprehensive development over the entirety of plot 361. These areas are traditionally part of the gardens and not the field and the inclusion of these two areas would alter the character as well as be very unneighbourly. Given the difficulty in achieving housing on these two paddocks the spaces may be used as part of open space which would leave the rest of the development with less space so try and argue that the space will not easily be incorporated into a comprehensive scheme.

Conclusion

The list of additional housing sites forming the proposed modifications to the Plan has been prepared in response to the Inspector’s concerns about the soundness of the plan. They have been identified quickly and the reasons why they were selected in preference to other sites has not been published raising questions over the effectiveness of the public consultation exercise. The allocation appears to reflect local land ownership rather than forming a conclusion based upon any objectively assessed examination of the site specific details of the allocation boundary.

The issues that have been identified in the preceding sections are critical to the soundness of the Plan in terms of its justification and its consistency with national policy.

Given that other locations around Woodstock would not have the same impact in terms of transport, sustainability and harm to a nationally important heritage assets, it would seem that, in the absence of an overriding public need to have housing on this site, then the site should be deleted from the draft WOLP at this stage as these three planning concerns should indicate that the site is not suitable because the harmful impacts cannot be mitigated and the Plan can only be found to be sound with the removal of MAIN 232.

Notwithstanding the above conclusions relating to the whole of MAIN 232 and without prejudice to the comments advocating its deletion from the Plan, if it is nevertheless decided to include an allocation of housing on MAIN 232, then it is also contended that the planning harm identified in the sections above indicates that plot 361, as stated comprising about 18.7% of the total area of MAIN 232, should be removed from the Plan as this portion of the wider allocation is the area that causes the majority of the planning harm identified. Retaining the land as pasture along with its ecological features will provide a ‘green lung’ for this part of Woodstock and will make a significant contribution to the local network of green infrastructure. Removing it would eliminate this harm and provide a buffer to the development area and will enable the Plan to be better justified and achieve greater compliance with national policy.

Finally, even if MAIN 232 is included within the Plan along with its plot 361, it is also advocated that the two small paddocks lying either side of the rear garden of Hensington Farmhouse are deleted from the boundary of the allocation. It is the inclusion of these two paddocks that will result in the greatest harm in terms of the impact on the setting of the listed building and the trees of highest quality along with some of the greatest harm to residential amenity. The soundness of the Plan in terms of its justification and consistency with national policy will be significantly improved with these two small areas removed and the impact upon the ability of the site to be comprehensively developed will be improved whilst there will be little or no loss of overall housing numbers as a result of this small modification.

<td>&gt; APPENDIX 3 &gt; MAIN 240</td>
<td>In the documentation, p. 87 of 98 pp. in <a href="http://www.westoxon.gov.uk/media/1504775/SA-Addendum-Appendices-I-VI.pdf">www.westoxon.gov.uk/media/1504775/SA-Addendum-Appendices-I-VI.pdf</a> [<a href="http://www.westoxon.gov.uk/media/1504775/SA-Addendum-Appendices-I-VI.pdf">http://www.westoxon.gov.uk/media/1504775/SA-Addendum-Appendices-I-VI.pdf</a>], it is stated that the site north of Jefferson’s Piece is around 650m from Charlbury Primary School, and has excellent access to existing educational facilities. It is further stated that in terms of the objective of improving education and training, it will have positive effects. It is, however, unclear that this is the case, given that there is no obvious way for the school to expand on its existing site and Charlbury Primary School cannot handle all existing families living in the town. In recent years families living on, for example, Nine Acres and Hixet Wood have missed out on entrance to Charlbury Primary School, due to proximity rules. This development is indeed fairly close to the school, but it is likely to push out even more applicants from properties that already exist within the town. Thus, parents who already live within the Charlbury, but with children currently below school age, will be disadvantaged by this proposed development. As such, this claim is unfounded and is unsound.</td>
