<td>General Comments</td>
<td>The Stop Carterton West campaign group, which as you know represents the views of a substantial proportion of residents in Alvescot and surrounding villages, continues to support the District Council’s draft Local Plan including, broadly, the changes now proposed. We remain unconvinced of the arguments for increasing the housing development target for the District, but understand why WODC has to adopt it.</td>

<td>General Comments</td>
<td>Comments on the West Oxfordshire Local Plan 2031 Submission Draft including proposed modifications. These modifications are needed because the Planning Inspector rejected West Oxfordshire District Council’s original future housing proposals. We were told that those were put forward despite being less than government figures for future housing proposals and that West Oxfordshire District Council was satisfied its proposals would stand up to scrutiny - which turned out not to be the case, hence these modifications. The concern now must be that the new figures are &quot;robust&quot; enough to ensure there is no further delay, since the delay is allowing speculative applications to go to Appeal and, as we all know, in the absence of a confirmed and adopted Plan, many are being granted on Appeal. As overall comments more, clearer and better maps would have been appreciated, so that it is actually possible to see where the sites are and how surrounding areas are affected. Population Figures and House Prices and Sizes The document states that West Oxfordshire District’s population is slightly less young people (aged 0 -15) at 19% than the national and regional averages, but slightly more older people (aged 65 and over), and these trends are expected to continue. At present the working age population (aged 16 - 64) in the District is 62% against the national average of 63%. In 2011 there were 43,200 households in the District, an increase of 4,800 since 2001. House prices in the District are above the national averages but below those in South Oxfordshire District and Oxford City; 69.7% of dwellings are in owner occupation, but since 2001 there has been an increase in those renting privately, taking that figure to 16% - a figure, however, that is still below county, regional and national averages. The concern must be that despite this the majority of houses being built tend to be 4 and 5 bedrooms in size whereas what is needed is dwellings of 2 - 3 bedrooms and consents granted at outline planning stage for dwellings of this size should be constructed at that size and not amended at the detailed stage to dwellings of 4 or 5 bedrooms.</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>
Our understanding is that the Government wishes to encourage, support and help older people stay in their own homes, perhaps with suitable modifications to the building, as long as possible. There did not seem to be anything in the Plan specifically about that. There seems to be a typing error in paragraph 2.32, in the penultimate line, which reads, “although some some services”.

Sustainable development particularly in small towns and larger villages

Where mention is made of local shopping, public Libraries do not seem to be included. Why this is so is not explained. To become communities and not just dormitories, middle and larger sized developments also need community buildings, which should not be the last thing to be built, or any kind of an after-thought.

Mineral Extraction Sites

Paragraph 2.48 stresses the opportunities for nature reserves, leisure and tourism when mineral extraction ceases, which are all worthy ideals, however the first priority must be that there must be monitoring and proper management to protect the environment and prevent flood risk to land and property. Although the Plan mentioned Light Pollution, Noise Pollution is just as devastating when sites are suddenly no longer needed for their original purpose and noisy leisure activities are permitted in what were previously quiet areas.

Reliance on the private motor car and reference to use of public transport

The documents make many references about the very desirable use of public transport - although it does not mention that this is the year in which many rural villages in West Oxfordshire have lost all commercial services - and of “encouraging” its use, without actually explaining how this is to be done when it does not exist. The corollary of this is that new developments in areas without any public transport i.e. almost all those in rural areas, will automatically ensure above average increased use of the private motor car in the rural areas, clogging up unsuitable rural roads, and creating “rat runs” as commuters seek to avoid traffic jams. There is another concern, which is the question of adequate parking spaceson all new developments wherever they are, but particularly in villages, where the road system, such as it is, was never designed for motor traffic (most were never designed for anything beyond pedestrians and horses), and where there are already serious problems with roads and lanes clogged up with parked vehicles. Serious problems also arise where developers “over-estimated” (to put it as nicely as possible) the space available for parking, and neither the District nor the County Council checks - which actually means Land Registry Plans are then incorrect and there is endless potential for friction between neighbours. It is therefore essential that this matter is properly checked at both planning stages and that houses will have an adequate amount of parking in direct proportion to the number of bedrooms being constructed.

Furthermore applications which remove present off-street parking, or seek to turn small cottages into large houses without providing any space for motor vehicles, should be rejected. The Modified Plan references to public transport are for that which remains - that which has already been lost seems to be ignored. Huge concern remains about the A.40 to Oxford and the delays so often experienced. Those of us who remember when the road was first “improved” in the 1950s remain unable to understand how the problems have not been solved even after all these years.

Respecting the landscape and character of the area and vernacular buildings
This is laudable, although how the West Oxfordshire District Council will control the big housebuilding companies who have, more or less, one set of designs regardless of where the dwellings are to be built, remains to be seen. Hopes are not excessively high. As a side issue why has the area shown south of the Upper and Lower Evenlode Valleys and the Upper Windrush Valley described as,

The Wychwoods “Uplands? Would local inhabitants recognise this description? It is to be hoped that the statements that infrastructure must be provided for new developments will ensure that infrastructure is provided before the new development is commenced, not after the last dwelling is completed, sold and inhabited. This includes community buildings aforementioned.

Supporting Infrastructure

Broadband and Mobile Telephones.

Some parts of West Oxfordshire are still waiting for “superfast” broadband, but many of us would quite simply settle for a completely reliable service for broadband and mobile telephones particularly in the “blackspot” Areas.

Farm Diversity and re-use of non-residential buildings.

Farm buildings which are no longer suitable for their original purposes have long been converted to other uses, usually, but not always, dwellings. It is important that the new uses are sympathetic to the original style of the building and the area. This will be watched with particular interest by those living in the rural areas.

Town Centers

It is good to have the support of the District Council for Witney as a Town Centre for trade, particularly in the year in which the Villager Bus service (that acknowledged lifeline to so many rural villages in the District) was refused access to the Waitrose Car Park by Woolgate Centre staff – who found various reasons for this, ranging from: danger; the car park being no place for a commercial vehicle; annoyance caused to other users; and finally to High Street Traders not wanting the bus to come to the Town anyway. The District Council and Witney Town Council have spent many hours on this problem and everyone is very pleased that a temporary solution has been found, but the disabled passengers on the bus are now in no doubt that while all disabled people and their Blue Badges are equal, some, in the eyes of the Woolgate Centre, are more equal than others.

Noise Pollution

Considerable annoyance is caused by unsuitable sporting re-use of sites which are no longer for their original purpose. Go-Karting at the Little Rissington airfield is one of these, in a very rural area and one in which sound carries over the nearby hilltop to be heard all too clearly by dwellings on the slopes of the Evenlode Valley. The District Council must act much more quickly to complaints from parishes, to prevent consent by default.

Solar and Wind Power and Bio-mass fuel

These sources of energy are here to stay, and it can only be hoped that both solar and wind power are sited as tactfully as possible and that they are productive. Interestingly with the increased use of, wood-fuel, and the

| MM502         |                         | M J Axtell      | Mr Axtell        | 1240       | General Comments   | These concerning possible changes to the W0 Local Plan are likely to dramatically worsen the potential harm caused by yet more excessive house building in this part of rural Oxfordshire: I feel there should be a total rethink on the whole proposal. Our natural countryside is such a precious asset, with its varied wild plant and animal life which has survived for generations, and once concreted over it is lost forever.

Furthermore, I do not see a need to build high numbers of houses to take Oxford city overflow, particularly as much of this is not intended for local people but newcomers.

Our whole county is now close to capacity, with public services, road systems, schools, hospitals, water needs etc. already hard-pressed.

The delivery rate is completely beyond what has ever been delivered in the past and CPRE believes that it is not realistically achievable. If the District were to fall behind on these targets, it would be vulnerable to much more of the speculative and inappropriate development which we have seen in the area over the last year or so. It seems the system is being set up to fail.

Surely it is not too late to reconsider at least this undesirable escalation of the Local Plan in the interests of... |

<td>General Comments</td>
<td>The District Council should not have agreed to increase the number of houses to be built in the district. The Council’s original figure of 10,500(7),Whilst still being a big increase, was a more realistic figure for the communities in the District based on independent expert advice. However, I suspect that battle has been lost. The Plan currently assumes that about 50% of the nearly 16,000 homes would be built in the main towns of the District - Witney, Carterton, Eynsham, Chipping Norton and Woodstock. The remaining 8,000 houses appear to be spread rather unequally across many of the villages. West Oxfordshire is the second least populated District in the southeast. More than a third of the District is an Area of Outstanding Natural Beauty, having high landscape value with small Cotswold villages. These villages mostly have poor road connections and service infrastructure. Only a handful of villages are close to the Cotswold rail line. The area was originally agricultural, now there are few employment opportunities. Tourism is a major employer, directly related to its AONB status. Increasing the size of the villages in the AONB will potentially destroy the very quality that makes them important, consigning residents to commute longer distances by car to work thereby putting increasing pressure on an already crumbling road infrastructure.</td>

<td>General Comments</td>
<td>The District Council should reconsider its allocation of growth, away from the villages an increasing the size of the key towns. The five towns have significantly better communication network and employment opportunities. Having local places to work would reduce the reliance on a car to get to work - something that must be central to the Plan if it is to be sustainable and meet reduced emissions standards. I'm not opposed to all development in villages, but I believe the scale in the Plan is disproportionate. Taking this point further, I wish to comment on the proposed development in my own village, Stonesfield, which I believe illustrates the above points.</td>

<tr>
<td>MM721</td>
<td>The Blenheim Palace Estate Neilson 1633</td>
<td>General Comments</td>
<td>8) Numbering of Policies As a minor point, the proposed numbering of the Policies in the Local Plan makes little sense and results in a confusing document. Policy EW1 refers to heritage matters, but Policies EW1a through to EW1d relate to completely different things. They are not, as implied, sub-categories of Policy EW1. This results in the Local Plan appearing unclear and imprecise.</td>

<td>Rectory Homes Limited -</td>
<td>General Comments</td>
<td>INTRODUCTION AND SUMMARY Homes Limited (Rectory) who have land under their control at Junction Road, Churchill. The land extends to 1.2ha and is identified on the plan attached as Appendix 1 to these</td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>
ii. Rectory Homes Limited object to the modified WOLP 2021 Policies H1 (MM24), H2 (MM29 and 30) and BC1 (MM200) on the basis that insufficient sites for housing have been identified to provide for a five year supply of housing in accordance with national policy.

iii. Edgars Limited have prepared representations on behalf of a number of clients including Rectory Homes which demonstrates that a five year land supply cannot be demonstrated when appropriate assumptions are used in accordance with national planning policy and guidance. These representations conclude that only a 2.7 year supply can be demonstrated. Edgars consider that additional non-strategic sites are required to be allocated to ensure sufficient housing land supply.

iv. Land at Junction Road Churchill is under the control of Rectory Homes Limited, is available now and capable of delivering 10 homes in a sustainable location to help boost housing supply, ensure a 5 year supply of housing and provide robustness to ensure that the housing requirement of the modified WOLP 2031 is delivered.

v. The following representations provide further information on the Land at Junction Road, Churchill and should be read in conjunction with Edgars Limited’s representations regarding housing supply which are not repeated in detail in these representations.

vi. These representations demonstrate that the Council’s reasons for rejecting the site in the SHELAA are unjustified. Rectory consider that the site should be allocated in the WOLP 2031 to help address the housing supply deficiencies in the period 2016-2021.

1.0 LAND AT JUNCTION ROAD, CHURCHILL

1.1 Rectory Homes Limited object to Policies H1 (MM24), H2 (MM29 and 30) and BC1 (MM200) on the basis that the modified plan has not identified sufficient housing land to provide for a 5 year supply of housing and that Land at Junction Road, Churchill should be allocated for 10 homes to help address this deficiency.

Churchill

1.2 The site lies on the south-eastern edge of the village of Churchill which is located in the north-western part of West Oxfordshire 3 miles south of Chipping Norton, the nearest town and service centre.

1.3 The Parish has approximately 270 households and 600 residents (based on 2011 Census Parish statistics). The village has some facilities including a public house, business units at Mount Farm, a community building, recreation ground and church. Hourly bus services connect the village to Chipping Norton and Kingham Station. Less frequent services connect to Witney.

1.4 The village lies within the Cotswolds Area of Outstanding Natural Beauty (CAONB) and is identified in the West Oxfordshire Design Guide as a nucleated settlement in the limestone wolds area and described as: Village located in the north-west of the District, on a hill spur, mainly between the 155m and 165m contours. Topographical containment has led to a compact hillside settlement, with historic parkland to the southeast also constraining growth.

1.5 The settlement historically developed along Junction Road (B4450) becoming the Chipping Norton Road with other historic streets including Hastings Hill, Kingham Road and Sarsden Road. The whole village is...
1.6 The architecture of the village is of a typical Cotswold vernacular including Cotswold stone, steep roof pitches, slate or stone slate roofs, with features such as dormer windows.

1.7 Many buildings front the principal streets but there are several examples of development in depth, extending into the backland area - such as the farm complex at Mount Farm, Hackers Lane and William Smith Court north west of Junction Road. A historic track runs to the rear of Junction Road and Haughton House enclosing areas of historic backland development.

1.8 To the east of the village the land drops down toward the Sars Brook beyond which, on the opposite side of the valley, is the Sarsden Estate and Registered Park and Garden (Grade II*).

1.9 All Saints Church is a prominent landmark within the village and wider landscape. Its prominent tower was rebuilt for James Langston of Sarsden House in 1826 to resemble Magdalen College tower in Oxford and is a viewpoint for the Sarsden north park and Glebe parkland. A former view toward the church from the north front of Sarsden House has now been blocked by mature woodland.

The site

1.10 The site itself comprises 1.2ha principally comprising semi improved grassland and a large modern agricultural building with a block and steel construction.

The site is separated from the road by an overgrown verge/hedge. The eastern and southern boundaries are marked by tree line hedgerows.

1.11 To the north, the site lies adjacent to Greystone a listed dwelling (Grade II) and is separated by a stone wall.

1.12 There is an open fronted vernacular cart shed in the northern corner of the site with a self-contained yard. The building forms part of a range attached to South Mount (listed Grade II).

1.13 On leaving the village there are attractive views beyond Greystone across the wider Cotswold landscape. The site frontage is prominent but the lower eastern parts of the site are screened by the boundary vegetation and topography.

1.14 The site slopes down towards the Sars Brook to the east with long views south and east across the Sars Brook valley towards the Sarsden Estate and Historic Park and Garden (Grade II*).

1.15 The existing modern agricultural building is prominent in views from the Sarsden Estate with the rest of the village also sitting on higher ground and forming a built-up backdrop to the site.

1.16 The site lies within Flood Zone 1 Low Risk according to Environment Agency Flood Maps (applicable to planning).

1.17 A site location plan is attached as Appendix 1.

2.0 STRATEGIC HOUSING AND ECONOMIC LAND AVAILABILITY
ASSESSMENT (SHELAA)

2.1 The site has been considered by the Council in the SHELAA as Site 400. The site is identified as Available and Achievable but is not considered suitable by the Council for the following reasons: Harm to the character and setting of the village and landscape character of the AONB. Would also create a potential precedent for further development to the south. Development of this site for housing or employment would not represent a logical complement to the existing built form of the village extending it southwards into open countryside.

2.2 Rectory Homes Limited object to the SHELAA and consider the site to be Suitable, Available and Achievable. The reasons given by the Council for concluding that the site is not suitable are considered and responded to below and in the attached technical documents. Rectory Homes Limited is preparing a planning application and has undertaken a significant amount of technical work which demonstrates that the site is suitable, available and achievable. This planning application and associated documentation is expected to be available to the Local Plan Inspector when the examination resumes. Particularly relevant technical work, including a development layout and Landscape and Visual Appraisal is referred to below and in the Appendices.

INTRODUCTION AND SUMMARY

* i. These representations are submitted in response to the West Oxfordshire Local Plan 2031 – Proposed Modifications Consultation, December 2016 (WOLP 2031 Modifications). They are made by Edgars Limited (Edgars) on behalf of Rectory Homes Limited (Rectory) who have land under their control at Witney Road, North Leigh. The land extends to 8ha and is identified on the plan attached as Appendix 1 to these representations.

* ii. Rectory object to the modified WOLP 2031 Policies H1 (MM24), H2 (MM29 and 30) and EW2 (MM183) on the basis that insufficient sites for housing have been identified to provide for a five year supply of housing in accordance with national policy.

* iii. Edgars Limited have prepared representations on behalf of a number of clients including Rectory which demonstrates that a five year land supply cannot be demonstrated when appropriate assumptions are used in accordance with national planning policy and guidance. These representations conclude that only a 2.7 year supply can be demonstrated. Edgars consider that additional non-strategic sites are required to be allocated to ensure sufficient housing land supply.

* iv. Land at Witney Road, North Leigh is under the control of Rectory Homes Limited, is available now and capable of delivering 100 homes in a sustainable location to help boost housing supply, ensure a 5 year supply of housing and provide robustness to ensure that the housing requirement of the modified WOLP 2031 is delivered.

* v. The land was previously recommended for allocation by the 1997 Local Plan Inspector.

* vi. The following representations provide further information on the Land at Witney Road, North Leigh and should be read in conjunction with Edgars representations regarding housing supply which are not repeated in detail in these representations.

* vii. The representations acknowledge that the Council accepts the site is suitable for development in the SHELAA but also respond to the Council's assessment that only part of the site is suitable for 20-30 homes. Rectory has undertaken significant technical work and has submitted a planning application which

* 1.19 An overview of the relevant site constraints is presented in the Site Constraints Plan (Appendix 2) and in summary identifies the following key site considerations: 1. Potential to provide a substantive new village green accessible to the wider village and improve access to the existing recreation ground; 2. The undulating topography of the site with higher ground to the north adjacent Windmill Road; 3. On site landscape and ecological features including boundary and internal hedgerows and trees; 4. Although contained and separated visually from the wider landscape, there are existing views from adjoining dwellings and roads; 5. Access opportunities to Windmill Road to the north, the existing recreation area to the west and the A4095 to the south and associated sustainable transport opportunities; 6. The setting of Eynsham Hall Park although itself contained and separated from the site by the A4095 and dense woodland belts; and

**Context**

Witney is identified as one of the three Main Service Centres within the West Oxfordshire Local Plan 2031 Settlement Hierarchy (Table 4.1) and to which the greatest proportion of future housing development is proposed to be steered through Policy HI of the Local Plan. Paragraph 9.2.1 of the Local Plan states that:

"Witney is the District’s largest town, acting as the main service centre and offering a broad range of housing and employment opportunities as well as key services and facilities including retailing, health care, leisure and culture." (our underlining)

As we set out in detail below, whilst we are generally supportive of the proposed increases in housing provision, for the District as a whole and for the Witney sub-area, we consider that a further increase to address the full Objectively Assessed Housing Need (OAN) in the District is justified. Furthermore, even without any further increase in the level of housing now proposed by the Council in the Local Plan, additional land is required in order to ensure the requirements are met.

**South Witney**

Abbey Developments own freehold the northern part of the site and DWH control the remainder of the site. The land which totals approximately 106.86 hectares of land at South Witney is being promoted jointly by Abbey Developments and DWH as a strategic development area (SDA) for a residential-led scheme with capacity for up to 1,200 homes, supporting retail/community uses and public open space.

The site is located immediately to the south of the MO, west of Ducklington Lane, east of Bampton Road and north of Curbridge Lane. A Site Location Plan is provided at Appendix 1.

**Duty to Cooperate**

With respect to cooperation with other authorities in the Housing Market Area (HMA), whilst West Oxfordshire District Council appears to have addressed the agreed apportionment of Oxford City’s unmet housing need by accepting an additional 2,750 homes at Eynsham, the Council will need to publish evidence in response to the Proposed Modifications to demonstrate that WODC has engaged with its neighbours to consider the implications for the continuing validity of the SHMA’s recommendations for the other authorities and whether the 660 homes per annum is accepted as an effective response by neighbouring authorities.

Whilst the 2,750 homes proposed at Eynsham are derived from the deliberations of the Oxfordshire Growth Board and how the 15,000 assessed un-met housing needs of Oxford City would be split between the Oxfordshire districts, it is recognised that South Oxfordshire did not agree. Therefore, West Oxfordshire will need to demonstrate that there is agreement with the other authorities in Oxfordshire that 2,750 homes is their contribution towards addressing the City’s un-met housing needs.

The Council’s latest Annual Monitoring Report confirms that in his preliminary findings on the Local Plan the Inspector was able to conclude that the Council had fulfilled the duty to co-operate. Further consideration will

</tbody>
</table>

Conclusion

The Council's strategy for development within West Oxfordshire as set out within the Local Plan Main Modifications is fundamentally flawed and unsound. Housing delivery is reliant on proposed allocations of undeliverable or unsuitable sites. In order to deliver a sound plan, additional deliverable site allocations are required which must be available to bring forward housing development in the short to medium term.

Whilst the increase in housing numbers is acknowledged, it must be highlighted that full OANIs 688dpa which would meet affordable housing need in full. Accordingly, we object to MM422 in that whilst it represents an uplift to the previous draft Local Plan figure, it still fails to address affordable housing need. A supplementary Barton Willmore Report is appended to this representation which critiques PBA’s methodology for housing need. It is concluded that 688dpa should be an absolute minimum requirement for addressing housing need. Changes should therefore be made to Policy H1 to reflect the need to plan for 688dpa.

The Council’s Housing Land Supply Position Statement October 2016 indicates that Eynsham will ‘kick in’ from 2021 onwards as ‘agreed’ through the joint work at the Growth Board: such a view is not supported by the statement from the September 2016 OGB report which emphasises the sovereign nature of Local Plans in identifying land to address unmet need. Rather than the response to delivery new homes to meet unmet needs ‘kicking in’ in 2021, this should be seen as ‘kicking the can’ down the road. Unmet need, is, by definition, unmet.

It is counter intuitive for the Council to hold the view that the present day need for housing should be addressed in 5 years’ time or beyond. The Inspector’s Preliminary Findings (IN015) confirmed that if the Council failed to consider the implications of unmet housing needs the plan would be out of date before it can be adopted. The inescapable conclusion to this is that unmet housing needs should begin to be addressed at the time of adoption of this plan: arguably now. Were that not the case, logically an early review which gives time to consider and then respond to unmet needs would be appropriate, which it is evidently not.

West Oxfordshire’s approach to this issue is therefore wholly contradictory: the timing of its plan enables the Council to seize the opportunity to deliver new homes to meet unmet housing needs from the City of Oxford, yet to put this off until after 2021 will simply fail those who are presently in need of a new home. One cannot meet today’s needs tomorrow.

Furthermore, it is considered a key concern that there is too high a reliance on development which will deliver after 2021 within the plan as a whole. The Council’s Housing Land Supply Position Statement October 2016 indicates only 1,035 homes out of B,169 dwellings on proposed allocation sites in the draft Plan will occur prior to 2021: that is a paltry 12.6% or 207dpa. This will only address a little over half of the current backlog let alone what is needed going forward. This extreme low delivery for the first 10 years of the plan risks exacerbating affordability challenges district wide and places further stress on housing need.

Given our representations made in respect of:

1. The inadequacy of the overall housing requirement - which should be 6BBdpa (560 more homes in the plan period);

2. The unrealistic prospect that Eynsham Garden Village will deliver entirely within the plan period at a rate of

<td>170</td>
<td>&gt; General Comments</td>
<td>I would like to object to the proposed local plan for a number of reasons, and will go into further detail about my specific objections in line with the relevant sections of the consultation. However, there are some basic assumptions, contained in the introduction, that I would like to challenge:</td>
<td></td>
</tr>
</tbody>
</table>

1. You suggest that this level of development is required to support economic growth, and yet in section 2.20 you note that “West Oxfordshire has a strong and resilient local economy” already! |

2. The plan takes account of the inability of Oxford city to deliver sufficient housing to meet its own requirements. The proposal is to place the housing 15 or more miles from Oxford, in towns and villages that are not linked via remotely reasonable public transport services to Oxford. Furthermore, the roads linking the proposed areas of development to Oxford are already unacceptably congested at peak times of the day. It is my suggestion that Oxford city should be compelled to reconsider its proposed housing levels. |

3. The introduction states that “A key challenge for the Local Plan is to deliver the new development that is needed to support economic growth in a way that does not compromise the quality of life and the environment enjoyed by those who live and work in the District”. I would respectfully counter that roughly doubling the size of towns such as Chipping Norton, which already suffer from poor air quality and congestion, will significantly compromise the quality of life and environment of those who already live there. |
4. I do not consider that the proposed modification complies with the duty to co-operate, as it is being imposed upon local areas that have previously sought to co-operate with the provision of housing in a constructive manner - without taking their reservations about the increased scale of the proposed schemes into account.

Summary and Conclusion

We support and welcome the need to deliver new homes, and that housing will have to be delivered within the CAONB, (including the Burford-Charlbury sub-area which ‘it washes over’).

However, we question the basis on which the Council have set out how the new higher indicative housing total will be delivered.

We are of the view there is a need to fully consider the impact of development (including the effects on the CAONB where applicable), in order to understand what can realistically be expected to be delivered on all strategic and non-strategic allocated sites upon which the Council are relying.

A full, detailed examination of the suitability, capacity, and impact of these allocated sites is essential to understand their ability to come forward to deliver the levels of housing stated by the Council. The Council are relying on untested capacity of draft allocated sites to be deliverable and at the stated levels which, combined with windfall development, make up a significant proportion of their stated delivery.

The Council have made a series of assumptions and are relying on matters which are the subject of current consultation and future examination for the purposes of seeking to demonstrate a 5 year housing land supply.

The advice set out at paragraph 216 of the NPPF is, therefore, that very limited weight can be given to the District Council’s statement on their 5-year housing land supply set out within the proposed modification MAIN 29.

The housing figures are likely to change. The means to which the Council will meet their increased targets is uncertain, and untested.

The stated figures cannot be reasonably relied upon to deliver the levels of housing demanded by the new increased requirements for the District.

There are a series of proposed changes to West Oxfordshire Local Plan 2031 Submission Draft Including Proposed Modifications which are therefore UNSOUND.

MAIN 187 and MAIN 200 should be amended to include the ‘land south of Grammar School Hill, Charlbury’ site as a non-strategic allocation.

1.1 This submission is in response to the above consultation and provides Gladman Developments Ltd’s (Gladman) representations on the Main Modifications to the West Oxfordshire Local Plan 2031 (WOLP). This follows our previous submissions in our statements to the Local Plan Examination in Public (EiP) held in November 2015.

1.2 Through our previous representations to the Council and the EiP, Gladman has submitted that the Plan fails to meet the full objectively assessed needs for housing within the District, that the proposed housing target is founded on a deficient evidence base, that the Plan will fail to deliver the required level of homes and affordable homes and that in a number of aspects the Plan is not in accordance with the National Planning...
Policy Framework (NPPF).

1.3 The Council has now prepared a significant list of main modifications which seek to make the plan 'sound'. Whilst welcoming the preparation of this work and in support of some of the changes made by the Council, Gladman still has serious concerns about the plan. Even with the proposed main modifications, it is not considered that the plan is fundamentally sound in respect to a number of points.

1.4 The NPPF sets out four tests that must be met for Local Plans to be considered sound. In this regard Gladman reiterates that the WOLP is not:

* Positively Prepared – The Council proposes to use the Liverpool methodology in calculating its 5 year supply of housing land as opposed to the Sedgefield approach advocated by National Planning Practice Guidance (despite the Council’s position and the outcome of a number of recent appeal decisions that the Sedgefield method is most appropriate and would accord with the NPPF). As a consequence, the Plan will not deliver a significant boost in housing supply and recover the significant unmet needs since 2011 in the years immediately following adoption.

* Justified – The selection of new strategic housing sites in the Eynsham/Woodstock Sub-Area has not been subject to a robust Sustainability Appraisal considering all reasonable alternatives

* Effective – There is no evidence that the Plan has identified sufficient available and developable housing land to produce a 5 year supply of housing land upon adoption; and

* Consistent with National Policy – In a number of instances the Local Plan is inconsistent with the requirements of the NPPF and Planning Practice Guidance.

---

**Duty to cooperate and Strategic Planning**

We are most encouraged by the provision that is being made through the Modified West Oxfordshire Local Plan for the Council to accommodate an element of Oxford City’s unmet housing need. The Council’s cooperation with the other authorities on this matter is to be commended. The HBF strongly supports this aspect of the modified plan. As the other Oxfordshire local councils follow suit with similar commitments in their emerging or revised plans (e.g. Vale of White Horse - to bring forward provision via a Part 2 Plan; Cherwell to review its Plan; South Oxfordshire – a commitment hopefully in its emerging local plan) we are hopeful that the long-standing problem of Oxford City’s housing problems might begin to be solved over the next decade.

We note through the Proposed Main Modifications that the West Oxfordshire Local Plan will make provision for 2,750 homes to meet an element of the Oxford City’s unmet need. We note in paragraph 5.13 that the Oxfordshire authorities are cooperating on the basis of an agreed working assumption that Oxford City’s unmet need housing need will amount to about 15,000 homes. We agree that it is sensible to plan on the basis of this as a provisional figure. It will be impossible to anticipate what the precise unmet need figure is for Oxford City, but any uncertainty over the precise number should not be used as an excuse to delay proper cross-boundary planning.

While we strongly support the Council’s commitment to plan for an element of Oxford City’s unmet need it is unclear how the Council has arrived at the figure of 2,750 homes.

It is unclear from the Proposed Mods how the Oxfordshire authorities have agreed this apportionment, or whether this was a judgement made by West Oxfordshire Council. We think it may be an agreement by the Oxfordshire Growth Board but it isn’t clear. The Proposed Mods consultation is unsupported by a study explaining how the unmet housing need has been divided up, and what the other authorities are committed to take. If all four satellite Oxfordshire authorities (Vale of White Horse, Cherwell, South Oxfordshire, West
Oxfordshire) took broadly the same number (2,750 homes each) that would amount to 11,000 homes, and it would leave 4,000 still to be accommodated.

We are also aware from the Vale of White Horse inspector’s main modifications to the local plan (30 November 2016) that a precise figure is not included for Oxford City’s unmet need that the Vale is committed to accommodate (Main Modification Number 2). We assume that the precise number of homes to be apportioned to the Vale of White Horse area will be the subject to further discussion with the Oxfordshire Growth Board. It is therefore still unclear at this juncture whether adequate provision will be made for all of Oxford City’s unmet needs. We think the West Oxon local plan should provide a clearer indication of what the collective provision for Oxford City’s unmet need will be and what the residual shortfall, if any, will be.

We are pleased to submit representations to the proposed modifications to the Local Plan. These representations relate specifically to the Derrymerrye Farm, Old Witney Road, Eynsham, OX29 4PU (the “Site”), a plan of which is attached.

Goldfield Estates Ltd, which is a joint venture between Jansons Property and the William Pears Family Trust has recently acquired an interest in the above noted site, located to the immediate south of the A40 to the west of Eynsham. Goldfield Estates are seeking to promote the Site for residential development, in conjunction with the land owner. It is anticipated that a pre-application submission will be made in early 2017 with a view to submitting a planning application during 2017.

The Site comprises 7.2 ha of land. It is anticipated that the Site could accommodate in circa 200 new dwellings. To date we believe that representations have been submitted by Berkley Homes to promote this Site. The Site represents a very real opportunity to bring forward residential development to meet the identified housing need within the Borough and also the wider district. The Site also represents an opportunity to maximise the delivery of the proposed Park & Ride facility and could part fund the highways infrastructure (via CIL and S106 contributions) required to create a new junction to the A40 that has been identified to the immediate north of the Site. For these reasons we strongly support the allocation of the Site for residential development which is set out through the proposed modification to the Local Plan.

The Local Plan, as previously submitted for Examination in public did not propose to allocate the Site for development but it identified Eynsham as being a focus for growth with housing to be delivered through completions, existing commitments, SHLAA sites and windfall development. The submitted Plan also identified that there was some scope for further expansion on the fringe of the village, specifically on land to the west.

The key consideration of relevance to these representations is the proposed increase in proposed housing delivery from 10,500 in the plan period (to 2031) to 15,950 new dwellings. The proposed increase in dwellings accounts for the revised calculation for the Oxfordshire Strategic Housing Market Assessment (13,200) plus an element of ‘unmet’ housing need from Oxford City (2,750).

A significant proportion of the proposed new dwellings will be accommodated at Eynsham with 2,200 new homes at the proposed Garden Village and 1,000 new homes located to the West of Eynsham.

We are instructed on behalf of our clients, David Wilson Homes Southern (DWH) and Bloombridge Development Partners, to submit representations to the West Oxfordshire District Council ("WODC") consultation on the Proposed Main Modifications for the submission Local Plan 2031. In summary, we consider:

1. WODC still has not addressed the full OAN - 688 dpa. Unmet need to date (shortfall) is a
particular problem - 1,836 homes. It is counter intuitive for the Council to hold the view that the present day need for housing should be addressed in 5 years' time or beyond.

2. The sites proposed by the Main Modifications are not justified by the evidence and they are not reasonable or deliverable alternatives in comparison to the housing and economic potential of Carterton, West Oxfordshire's second largest settlement and home to RAF Brize Norton, the so called 'Superbase'.

3. Carterton is relatively unconstrained and, as set out in the Carterton Town Master Plan, it is a settlement in West Oxfordshire where further development will be particularly and plainly beneficial - to help regenerate the town centre and make the most of RAF Brize Norton as an economic asset. The town is not subject to any specific policies that would indicate that development should be restricted (NPPF, paragraph 14, Footnote 9) and, helpfully, Carterton is one of the most affordable housing markets in the County, thereby widening the accessibility of home ownership.

It is odd that WODC has not addressed the potential of Carterton. Even with the adjournment of th EIP in November 2015, there has been no engagement with our clients to understand the potential of a 'North Carterton' strategic allocation, despite representations and the submission of a series of master plan proposals over the last five years.

The Town Council published the Carterton Town Master Plan in April 2015 and, responding to that, David Wilson Homes and Bloombridge have now joined forces to deliver development in a series of phases which, crucially, also addresses the needs of the town (regeneration) and surrounding parishes (green buffers and an extended country park) in a sustainable way.

Two sites are being promoted as detailed below, and which have been subject to previous representations to the Submission Draft Local Plan made separately on behalf of each client:

Land North of Swinbrook Park, Carterton

David Wilson Homes Southern are promoting land for 115 homes with public open space and affordable units provided onsite. The scheme, master planned and assessed in detail, also provides a significant area of land to form an extension to the Kilkenny Country Park as well as significant landscape enhancements particularly adjacent to Shilton Road. DWH own and control the land in its entirety and are able to deliver housing now, subject to the grant of planning permission, and complete prior to 2021.

Land North of Carterton, Kilkenny Farm

Bloombridge Development Partners are jointly promoting land at Kilkenny Farm with David Wilson Homes Southern, having recently entered into a formal joint venture. The land comprises 250 acres (100 Hectares), it is held under a long term option, and runs contiguous with the proposals for Swinbrook Park. The Kirkham Landscape Appraisal (2012), the Council's own evidence, identified this land as being capable of accommodating up to 750 homes below the 110m contour. No further land assembly is required.

We support the promotion of a sustainable master plan for up to 750 homes at Kilkenny Farm. As part of this proposal an initial phase of 300 homes is capable of being delivered in the first five years of the plan, subject to allocation and the grant of planning permission, to meet unmet housing need without harm to the character of its context. This is consistent with the Carterton Town Master Plan.

In terms of effectiveness of this proposal, David Wilson Homes have delivered more houses in
Carterton than any other housebuilder (in excess of 1,200) and, as a company, delivered 17,319 across the country last financial year.

These representations are made in response to the West Oxfordshire Local Plan 2031 SUBMISSION DRAFT INCLUDING PROPOSED MODIFICATIONS November 2016 and should be read in addition to the previous representations made as part of the Local Plan process.

**Duty to Cooperate**

With respect to cooperation with other authorities in the HMA, whilst West Oxfordshire appears to have addressed the attribution of unmet need by accepting an additional 2,750 homes at Eynsham, the Council will need to publish evidence in response to the Proposed Modifications to demonstrate that WODC has engaged with its neighbours to consider the implications for the continuing validity of the SHMA’s recommendations for the other authorities and whether the 660 homes per annum is accepted as an effective response by neighbouring authorities. The latest Annual Monitoring Report confirms that in his preliminary findings on the Local Plan the Inspector was able to conclude that the Council had fulfilled the duty to co-operate. Further consideration will be given to cross-boundary matters of strategic importance when the Local Plan examination resumes in December 2016 and the Council’s duty to co-operate statement will be updated accordingly.

Whilst the 2,750 homes proposed at Eynsham are derived from the deliberations of the Oxfordshire Growth Board and how the 15,000 assessed un-met housing needs of Oxford City would be split between the Oxfordshire districts, it is recognised that South Oxfordshire did not agree. Therefore West Oxfordshire will need to demonstrate that there is agreement with the other authorities in Oxfordshire that 2,750 homes is their contribution towards addressing the City’s un-met housing needs.

**Context**

Carterton has been identified as a Main Service Centre (MSC) within West Oxfordshire’s Local Plan 2031 Settlement Hierarchy (Table 4.1) of which a significant proportion of future development should be steered. The vision for Carterton is very much to strengthen its role as this MSC proportionately and seeks both housing, business developments and associated infrastructure alike.

**Spatial Strategy**

The Council's Spatial Strategy as envisaged through the Main Modification is fundamentally flawed as it fails to spatially recognise the importance of supporting the role of Carterton through not only the under provision of housing, but also the proposed allocation of what is considered to represent a reliance on undeliverable sites. We argue that not enough consideration has been given to the role and prominence of Carterton as a Main Service Centre and in general within the District the proposed allocations have been distributed widely and without sufficient regard to the spatial strategy which had been assessed through the Sustainability Appraisal.

We are also concerned that the potential job growth associated with the relocation of services from RAF Lyneham to RAF Brize Norton has not been captured in the baseline economic forecasting, and this significant above trend job increase may lead to a further increase in housing requirement in West Oxfordshire or as a minimum require a refocussed distribution of housing to Carterton. The 2,500 jobs from RAF Lyneham, given the move commenced in July 2011, clearly were not captured in the Census, given the Census Date is March 2011. It is considered that Carterton has a vital role within the District and is capable of accommodating significant growth to the north of the town without changing its intrinsic character.
There has not been sufficient regard to Carterton Town Council's Masterplan and their Spatial Strategy which seeks development to the north of Carterton, providing significant employment provision, new facilities, infrastructure and a Country Park extension. Fundamentally, the Plan should not be putting forward sites which are questionable in terms of delivery, especially when these sites are not consistent with the Council's spatial strategy (i.e. Carterton before the smaller, more constrained settlements).

Housing Need and Affordability

The plan is considered not to suitably address housing need despite the uplift in numbers. There has been insufficient development in the first five years (up to 2016) which is further increasing unmet need. The Council assert that the residual Liverpool method is most appropriate to address the 1,836-dwelling backlog (excluding Oxford City unmet need) from 2011-2016 rather than Sedgefield which is recognised in Planning Practice Guidance (PPG).

However, in an appeal decision dated 25th July, 2016 at Milton-under-Wychwood1, the Inspector concluded that "Housing land supply in the District is less than 2 years. Such a shortfall must be regarded to be severe." Furthermore, in an appeal decision on 15th May, 2016 at Eynsham2, the Inspector acknowledged (paragraph 56) that whilst a 5% buffer was appropriate at that time, "if delivery continues to be below that which is required, future decision makers may take a different view as regards the appropriate buffer to apply". Since the Main modifications have amended the target, it would be appropriate to reassess if a 20% buffer should now be applied.

Alongside this context of a severe shortfall in housing delivery, the report of the Oxfordshire Growth Board Post SHMA Strategic Work Programme report3 states that:

"133) The Programme is not seeking to allocate or release sites, but has at a high level and using a common basis, through the work streams; identify the evidence of each district's ability to absorb additional growth to meet a share of Oxford's unmet need. It will be for each of the districts through their normal Local Plan processes to allocate sites sufficient to meet their proposed share of Oxford's unmet need under the requirements of the Duty to Co-operate.

134) It is also important to note that the yield figures for each area of search represent estimated housing numbers to be delivered by 2031 - total capacities at a number of these sites may change through local assessment as part of the more detailed Local Plan process, taking a wider range of planning factors into account, including the potential to deliver further housing beyond 2031."

MM22 Paragraph 5.17 asserts that the delivery of unmet Oxford City housing need at North Eynsham will be delivered in the period 2021 to 2031 - which would require delivery of 220 dwellings per annum from a standing start in 2022: itself highly optimistic - rather than address unmet needs also within the first 5 years of the plan period. Whilst it is not disputed that Eynsham will not deliver prior to 2021, this underlines the need for the Council to augment its housing land supply to identify and allocate additional land for housing in the short term to meet housing needs in the first half of the plan period. This is especially important given the significant shortfall of 1,836 homes, the serious affordability concerns in the district (house prices 10 times lowest incomes) and in light of the Inspector’s preliminary findings that it was his initial view that unmet need would need to be taken into account in calculating the 5-year land supply (Paragraph 7.6 (IN015)).

Instead the Council's Housing Land Supply Position Statement October 2016 simply indicates that
Eynsham will ‘kick in’ from 2021 onwards as ‘agreed’ through the joint work at the Growth Board: such a view is not supported by the statement above from the September 2016 OGB report which emphasises the sovereign nature of Local Plans in identifying land to address unmet need. Rather than the response to delivery of new homes to meet unmet needs ‘kicking in’ in 2021, this should be seen as ‘kicking the can’ down the road. Unmet need, is, by definition, unmet. It is counter intuitive for the Council to hold the view that the present day need for housing should be addressed in 5 years’ time or beyond. The Inspector’s Preliminary Findings (IN015) confirmed that if the Council failed to consider the implications of unmet housing needs the plan would be out of date before it can be adopted. The inescapable conclusion to this is that unmet housing needs should begin to be addressed at the time of adoption of this plan: arguably now. Were that not the case, logically an early review which gives time to consider and then respond to unmet needs would be appropriate, which it is evidently not.

The Vale of White Horse Local Plan, recently adopted, commits to allocating sites to contribute towards Oxford’s unmet housing need within the Local Plan 2031: Part 2, to be submitted to the Secretary of State, within two years of adoption of the Local Plan 2031: Part 1 - i.e. by December 2018: otherwise the unmet housing needs from Oxford City will become part of its housing land supply requirement. West Oxfordshire’s approach to this issue is therefore wholly contradictory: the timing of its plan enables the Vale of White Horse Council to seize the opportunity to deliver new homes to meet unmet housing needs from the City of Oxford, yet to put this off until after 2021 as envisaged by West Oxfordshire will simply fail those who are presently in need of a new home. One cannot meet today’s needs tomorrow. It is essential that homes are delivered to meet Oxford City’s unmet needs at the earliest opportunity as the City's own housing monitoring indicates that between 2011 and 2016, they have only delivered 1,371 dwellings compared to the SHMA mid-point requirement of 7,000 for this period. Consequently there is significant un-met need already arising from the city and therefore West Oxfordshire must include an appropriate response through their Local Plan to address this. Furthermore, it is considered a key concern that there is too high a reliance on development which will deliver after 2021 within the plan as a whole. The Council’s Housing Land Supply Position Statement October 2016 indicates only 1,035 homes out of 8,169 dwellings on proposed allocation sites in the draft Plan will occur prior to 2021: that is a paltry 12.6% or 207dpa. This will only address a little over half of the current backlog let alone what is needed going forward and consequently this will impact upon whether the 20% buffer should be applied within the district. This extreme low delivery for the first 10 years of the plan further risks exacerbating affordability challenges district wide and places further stress on housing need. In Carterton, the proposed Local Plan allocations will deliver only 81 homes in the period to 2021.

Carterton provides a unique opportunity within the District to provide housing in the only Low Value Zone in one of three Main Service Centres and in the second largest town in the District. The Sustainability Appraisal accompanying the original submitted plan emphasises the suitability of the strategy of concentrating growth around the three main towns - this approach is being undermined by the Main Modifications through the limited additional allocations around Carterton. As outlined within this response we object to the revised distribution of development in Policy Hl (MM24) in that although Carterton is recognised through the Council's evidence as one of the most sustainable locations for growth, a higher proportion of the district's growth is proposed within the more constrained Eynsham - Woodstock sub-area, irrespective of the additional growth envisaged in the Garden Village.

Affordability within the county as a whole is a significant problem as identified in the SHMA 2014, however, it is considered an opportunity for the plan to allocate additional housing with an early delivery to Carterton and address the problem as soon as possible. The WODC Sustainability Addendum Report (October 2016) recognises the benefits of a focus on the three main service centres:
Economy

"With a focus on Witney, Carterton & Chipping Norton (and limited dispersal across the District), major positive effects remain for meeting the housing and employment needs across the District. Minor positive effects also continue to be likely for communities and accessibility since the focus is on the main service centres; minor negative effects for road transport, although the focus on the 3 towns can encourage improvements in sustainable transport modes within the towns. Negative effects on landscape are likely to be minor, compared with a focus at Witney, as the effects are spread across the 3 main service centres."

We have sought an independent economic view from SQW, and their views have informed this section of our representations. SQW's letter is submitted with these representations (Appendix 6). Our clients instructed SQW owing to their leading role as economists advising on the Oxfordshire market, having worked with Bloombridge on Oxford's Northern Gateway (2006), Oxford Technology Park (consented in 2016) and Silverstone (2012), and being the authors of the Oxfordshire Innovation Engine Report (October 2013).

SQW make the trite point that Oxfordshire is crucially important in relation to the UK's future economic prospects. Oxfordshire's pedigree is well known. Its assets include the University of Oxford (one of the top five universities in the world on every "league table"); the centres of "big science" at Harwell and Culham (which have attracted substantial scientific investment); and the growing number of outstanding science-based businesses, some of which are genuinely leading edge and attracting significant investor interest (e.g. Adaptimmune and Immunocore; Oxford Nanopore Technologies; Sophos, etc.). These assets are world class. They are all the more important when they are understood as part of the UK's Golden Triangle - one of the biggest concentrations of knowledge-based assets in the world.

Following the outcomes of both the referendum on the UK's membership of the European Union and the American presidential election, major geopolitical changes are on the horizon. This is leading to much economic uncertainty. It is affecting growth prospects and national growth forecasts have been scaled back significantly. The Office for Budgetary Responsibility published very cautious forecasts t accompany the Chancellor’s Autumn Statement in November 2016, and the Bank of England has been similarly circumspect. Against this backdrop, the importance of Oxfordshire as a driver of the UK economy has grown. The County needs to outperform in order to cover for lagging and underperforming regions elsewhere in the UK.

Within this context, the National Infrastructure Commission (NIC) recently published its Interim Report on the Cambridge-Milton Keynes-Oxford corridor (essentially the northern "axis" of the Golden Triangle referenced above). Its central finding was that a lack of sufficient and suitable housing presents a fundamental risk to the success of this area. Further, it suggested that "without a joined-up plan for housing, jobs and infrastructure across the corridor, it will be left behind its international competitors". The importance of these findings became apparent in the Autumn Statement. Against this backdrop of continuing fiscal constraint, it prioritised investment in some of the key infrastructure requirements identified by NIC - notably east-west rail and the Oxford-Cambridge Expressway. Throughout, the rationale was the need to "maximise the potential of the Cambridge-Milton Keynes-Oxford corridor as a single, knowledge-intensive cluster that competes on a global stage".

There are then both assets and imperatives relating to Oxfordshire's knowledge economy, and these have become even more significant nationally as forecasts for the growth of the UK economy have been scaled back.

The potential significance of land at Carterton - a settlement in West Oxfordshire with around 16,000 residents
RAF Brize Norton is located on the southern edge of Carterton. In 2010, the government published the Strategic Defence and Security Review (SDSR) which set out a broad route map for military policy.

In a report written by SQW in 2011, the likelihood of growth at RAF Brize Norton (and closures elsewhere) was anticipated. Subsequently, this expectation has been (and is being) realised – including through the relocation of the Hercules Force from RAF Lyneham. Currently, RAF Brize Norton is the largest station in the Royal Air Force, referred to as a ‘Superbase’ (and probably West Oxfordshire’s largest, single economic asset).

The process of integrating previously separate activities has been a major undertaking. This is being advanced through “Programme Gateway”, which is intended to design the future operating model by which RAF Brize Norton will deliver effective, efficient and safe air mobility to meet the UK’s future Rapid Global Air Mobility requirement. It is being delivered over several years and the details are complex. It involves a close engagement with prospective private sector contractors and partners, including through an evolving contracting model (i.e. there will be increasingly more indirect, contractor jobs at the base).

This is important in relation to land at Carterton because:

- this economic growth post-dates the 2011 Census - which is the source of data that West Oxfordshire District Council has used to estimate the number of jobs at RAF Brize Norton and the consequences for housing allocations;
- it suggests that future jobs growth - some of it in sophisticated defence-related activities - is very probable on site; and
- it infers that defence-related activities - some of which are highly sophisticated and knowledge intensive - could be a growing feature of West Oxfordshire’s economy, an observation that was also made by West Oxfordshire District Council in its recent comments on the consultation draft of the revised Strategic Economic Plan for Oxfordshire.

Oxfordshire is an economic driver which is of national significance, particularly given wider geopolitical and macroeconomic uncertainties. To realise this potential, central government is investing in infrastructure but it recognises that there are major issues that need to be addressed locally, notably in relation to housing supply.

In the vicinity of Carterton, local jobs growth is probable given the expansion of RAF Brize Norton and the implementation of Programme Gateway. Some of these jobs are likely to be “knowledge rich” with a high engineering content and consistent with wider local ambitions surrounding the quality of economic growth.

Recent jobs growth (since the 2011 Census) linked to changes at RAF Brize Norton has not been taken into account by West Oxfordshire District Council in determining housing land allocations in the vicinity of Carterton. Since 2011 there have been an additional 2,500 jobs created at RAF Brize Norton with Carterton being identified as a main area for service men and women to live. Economic activity is high within Carterton and the town has a vital role within the District as a whole. Whilst there has been provision for additional employment within Carterton in the Proposed Modifications, it is noteworthy that the WODC Economic Snapshot report January 2015 states that:

"One area that needs further investigation is the potential impact of increased activity at Brize Norton. The likelihood and quantum of this are not known at this stage, but there is the potential for a significant impact on the Carterton and Witney markets."
We are surprised that this further investigation into economic benefits was not undertaken during the adjournment of the EIP.

Oxfordshire County Council (OCC) have aspirations to improve the access to and from Carterton to the A40 which would enhance the attractiveness as an employment destination and further enhance Carterton’s MSC status. This is also reflected in the vision from Oxfordshire Local Enterprise Partnership (Oxfordshire LEP) that such improvements would attract inward investment and support economic regeneration and environmental enhancements to Carterton which will strengthen the longer term role of the town.

It is considered that the Council has overlooked the economic potential of Carterton and the importance of additional housing allocations to the north of the town which would enable the delivery of wider infrastructure improvements as well as enabling the proportionate growth within Carterton in accordance with the Council’s spatial strategy. The WODC Economic Snapshot report January 2015 concludes that:

"The Local Plan may also apply a more specific spatial focus along the lines set out in this report directing activity to a growth funnel running from Carterton to the Oxford City fringe."

And

"We recommend that Carterton is made a priority area for economic regeneration and that infrastructure provision is focussed on the A40 Corridor."

The WODC Economic Snapshot Addendum report (April 2015) confirms that:

"Figure 2.15 from the West Oxfordshire Economic Snapshot report shows the share of Employment and Economically Active Workers in the District by Sub Area. This graph shows a significant excess of economically active workers over jobs for Carterton. The data for jobs and workers are taken from different data sources and as noted in subsequent paragraphs the employment figures for Carterton 'may not reflect the full extent of MoD activity in the sub area'. Using workplace employment data from the Census we are able to provide a comparison which does include HM Forces employment at Carterton as recorded by the Census.

Reproducing Figure 2.15 using Census Workplace data for employment instead of the BRES data used in the original report shows a larger share of the district’s jobs as being located in Carterton at 21.3/o compared to 24.0/o of the district’s economically active residents who live in the Carterton sub area."

We strongly contest the conclusions drawn from Figure 2.15 because, whilst they now update BRES data (which excludes military personnel) by using Census data, the Census Date (March 2011 precedes the 2,500 Lyneham jobs that began to move to RAF Brize Norton from July 2011 onwards.

Our client, Bloombridge, set this out for WODC in the agreed Statement of Common Ground, where this omission was accepted, yet the Main Modifications have not sought to address the spatial consequences; in particular, a proportionate increase in housing numbers for Carterton.

Sub-Areas
We question the rationale behind the overall allocations as there has been a reduction in percentage overall for the MSC’s that are Witney, Carterton and Chipping Norton (77% reduced to 71%) whilst there have been sizeable increases to highly constrained areas namely Burford and Charlbury which is an Area of Outstanding Natural Beauty (AONB) and Woodstock which impacts on the setting of a World Heritage Site. In the Milton-under-Wychwood appeal decision the Inspector’s report summarised that:

“Almost all of the Burford-Charlbury Sub Area is within the CAONB [Cotswold AONB] and the Council accepts that there is no scope for meeting the emerging LP requirement for the construction 800 dwellings in the sub-area on sites outside the CAONB. In this regard it is worth noting that in a recent 'call for 'sites” process only one in the sub-area is outside the CAONB.”

Yet the Proposed Modifications have increased the Burford - Charlbury sub area proposed housing requirement by 25% from 800 to 1,000 homes. Paragraphs 115 and 116 of the NPPF clearly states that great weight should be given to conserving landscape and scenic beauty in AONBs and exceptional circumstances must be demonstrated to justify allowing major development. Paragraph 116 states that consideration of such applications should include an assessment of the need for the development and its impact on the local economy, the cost of, and scope for, developing elsewhere outside the designated area (e.g. in the Carterton Sub-Area), or meeting the need for it in some other way, and any detrimental effect on the environment and the landscape. The Council appears to seek to justify this by indicating that development is of necessity within the AONB given the widespread extent of the AONB encompassing almost the whole of the sub area: however, that is not a reason to increase housing within the sub area, especially when Carterton is unconstrained and where there is a clear ‘needs’ case for development.

We are instructed on behalf of our clients, David Wilson Homes Southern (DWH) and Bloombridge Development Partners, to submit representations to the West Oxfordshire District Council (“WODC”) consultation on the Proposed Main Modifications for the submission Local Plan 2031. In summary, we consider:

1. WODC still has not addressed the full OAN - 688 dpa. Unmet need to date (shortfall) is a particular problem - 1,836 homes. It is counter intuitive for the Council to hold the view that the present day need for housing should be addressed in 5 years’ time or beyond.

2. The sites proposed by the Main Modifications are not justified by the evidence and they are not reasonable or deliverable alternatives in comparison to the housing and economic potential of Carterton, West Oxfordshire’s second largest settlement and home to RAF Brize Norton, the so called ‘Superbase’.

3. Carterton is relatively unconstrained and, as set out in the Carterton Town Master Plan, it is a settlement in West Oxfordshire where further development will be particularly and plainly beneficial - to help regenerate the town centre and make the most of RAF Brize Norton as an economic asset. The town is not subject to any specific policies that would indicate that development should be restricted (NPPF, paragraph 14, Footnote 9) and, helpfully, Carterton is one of the most affordable housing markets in the County, thereby widening the accessibility of home ownership.

It is odd that WODC has not addressed the potential of Carterton. Even with the adjournment of the EIP in November 2015, there has been no engagement with our clients to understand the potential of a ‘North

Carterton’ strategic allocation, despite representations and the submission of a series of master plan proposals over the last five years.

The Town Council published the Carterton Town Master Plan in April 2015 and, responding to that, David Wilson Homes and Bloombridge have now joined forces to deliver development in a series of phases which, crucially, also addresses the needs of the town (regeneration) and surrounding parishes (green buffers and an extended country park) in a sustainable way.

Two sites are being promoted as detailed below, and which have been subject to previous representations to the Submission Draft Local Plan made separately on behalf of each client:

Land North of Swinbrook Park, Carterton

David Wilson Homes Southern are promoting land for 115 homes with public open space and affordable units provided onsite. The scheme, master planned and assessed in detail, also provides a significant area of land to form an extension to the Kilkenny Country Park as well as significant landscape enhancements particularly adjacent to Shilton Road. DWH own and control the land in its entirety and are able to deliver housing now, subject to the grant of planning permission, and complete prior to 2021.

Land North of Carterton, Kilkenny Farm

Bloombridge Development Partners are jointly promoting land at Kilkenny Farm with David Wilson Homes Southern, having recently entered into a formal joint venture. The land comprises 250 acres (100 Hectares), it is held under a long term option, and runs contiguous with the proposals for Swinbrook Park. The Kirkham Landscape Appraisal (2012), the Council’s own evidence, identified this land as being capable of accommodating up to 750 homes below the 110m contour. No further land assembly is required.

We support the promotion of a sustainable master plan for up to 750 homes at Kilkenny Farm. As part of this proposal an initial phase of 300 homes is capable of being delivered in the first five years of the plan, subject to allocation and the grant of planning permission, to meet unmet housing need without harm to the character of its context. This is consistent with the Carterton Town Master Plan.

In terms of effectiveness of this proposal, David Wilson Homes have delivered more houses in Carterton than any other housebuilder (in excess of 1,200) and, as a company, delivered 17,319 across the country last financial year.

These representations are made in response to the West Oxfordshire Local Plan 2031 SUBMISSION DRAFT INCLUDING PROPOSED MODIFICATIONS November 2016 and should be read in addition to the previous representations made as part of the Local Plan process.

Duty to Cooperate

With respect to cooperation with other authorities in the HMA, whilst West Oxfordshire appears to have addressed the attribution of unmet need by accepting an additional 2,750 homes at Eynsham, the Council will need to publish evidence in response to the Proposed Modifications to demonstrate that WODC has engaged with its neighbours to consider the implications for the continuing validity of the SHMA’s recommendations for the other authorities and whether the 660 homes per annum is accepted as an effective response by neighbouring authorities. The latest Annual Monitoring Report confirms that in his preliminary findings on the Local Plan the Inspector was able to conclude that the Council had fulfilled the duty to co-operate. Further consideration will be given to cross-boundary matters of strategic importance when the Local Plan examination resumes in December 2016 and the Council’s duty to co-operate statement will be updated accordingly.
Whilst the 2,750 homes proposed at Eynsham are derived from the deliberations of the Oxfordshire Growth Board and how the 15,000 assessed un-met housing needs of Oxford City would be split between the Oxfordshire districts, it is recognised that South Oxfordshire did not agree. Therefore West Oxfordshire will need to demonstrate that there is agreement with the other authorities in Oxfordshire that 2,750 homes is their contribution towards addressing the City’s un-met housing needs.

Context

Carterton has been identified as a Main Service Centre (MSC) within West Oxfordshire’s Local Plan 2031 Settlement Hierarchy (Table 4.1) of which a significant proportion of future development should be steered. The vision for Carterton is very much to strengthen its role as this MSC proportionately and seeks both housing, business developments and associated infrastructure alike.

Spatial Strategy

The Council’s Spatial Strategy as envisaged through the Main Modification is fundamentally flawed as it fails to spatially recognise the importance of supporting the role of Carterton through not only the under provision of housing, but also the proposed allocation of what is considered to represent a reliance on undeliverable sites. We argue that not enough consideration has been given to the role and prominence of Carterton as a Main Service Centre and in general within the District the proposed allocations have been distributed widely and without sufficient regard to the spatial strategy which had been assessed through the Sustainability Appraisal.

We are also concerned that the potential job growth associated with the relocation of services from RAF Lyneham to RAF Brize Norton has not been captured in the baseline economic forecasting, and this significant above trend job increase may lead to a further increase in housing requirement in West Oxfordshire or as a minimum require a refocussed distribution of housing to Carterton. The 2,500 jobs from RAF Lyneham, given the move commenced in July 2011, clearly were not captured in the Census, given the Census Date is March 2011. It is considered that Carterton has a vital role within the District and is capable of accommodating significant growth to the north of the town without changing its intrinsic character.

There has not been sufficient regard to Carterton Town Council’s Masterplan and their Spatial Strategy which seeks development to the north of Carterton, providing significant employment provision, new facilities, infrastructure and a Country Park extension. Fundamentally, the Plan should not be putting forward sites which are questionable in terms of delivery, especially when these sites are not consistent with the Council’s spatial strategy (i.e. Carterton before the smaller, more constrained settlements).

Housing Need and Affordability

The plan is considered not to suitably address housing need despite the uplift in numbers. There has been insufficient development in the first five years (up to 2016) which is further increasing unmet need. The Council assert that the residual Liverpool method is most appropriate to address the 1,836- dwelling backlog (excluding Oxford City unmet need) from 2011-2016 rather than Sedgefield which is recognised in Planning Practice Guidance (PPG).

However, in an appeal decision dated 25th July, 2016 at Milton-under-Wychwood1, the Inspector concluded that “Housing land supply in the District is less than 2 years. Such a shortfall must be regarded to be severe.” Furthermore, in an appeal decision on 15th May, 2016 at Eynsham2, the
Inspector acknowledged (paragraph 56) that whilst a 5% buffer was appropriate at that time, "if delivery continues to be below that which is required, future decision makers may take a different view as regards the appropriate buffer to apply". Since the Main modifications have amended the target, it would be appropriate to reassess if a 20% buffer should now be applied.

Alongside this context of a severe shortfall in housing delivery, the report of the Oxfordshire Growth Board Post SHMA Strategic Work Programme report3 states that:

"133) The Programme is not seeking to allocate or release sites, but has at a high level and using a common basis, through the work streams; identify the evidence of each district’s ability to absorb additional growth to meet a share of Oxford’s unmet need. It will be for each of the districts through their normal Local Plan processes to allocate sites sufficient to meet their proposed share of Oxford’s unmet need under the requirements of the Duty to Co-operate.

134) It is also important to note that the yield figures for each area of search represent estimated housing numbers to be delivered by 2031 - total capacities at a number of these sites may change through local assessment as part of the more detailed Local Plan process, taking a wider range of planning factors into account, including the potential to deliver further housing beyond 2031."

MM22 Paragraph 5.17 asserts that the delivery of unmet Oxford City housing need at North Eynsham will be delivered in the period 2021 to 2031 - which would require delivery of 220 dwellings per annum from a standing start in 2021: itself highly optimistic - rather than address unmet needs also within the first 5 years of the plan period. Whilst it is not disputed that Eynsham will not deliver prior to 2021, this underlines the need for the Council to augment its housing land supply to identify and allocate additional land for housing in the short term to meet housing needs in the first half of the plan period. This is especially important given the significant shortfall of 1,836 homes, the serious affordability concerns in the district (house prices 10 times lowest incomes) and in light of the Inspector’s preliminary findings that it was his initial view that unmet need would need to be taken into account in calculating the 5-year land supply (Paragraph 7.6 (IN015)).

Instead the Council’s Housing Land Supply Position Statement October 2016 simply indicates that Eynsham will 'kick in' from 2021 onwards as ‘agreed’ through the joint work at the Growth Board: such a view is not supported by the statement above from the September 2016 OGB report which emphasises the sovereign nature of Local Plans in identifying land to address unmet need. Rather than the response to delivery of new homes to meet unmet needs 'kicking in' in 2021, this should be seen as 'kicking the can' down the road. Unmet need, is, by definition, unmet.

It is counter intuitive for the Council to hold the view that the present day need for housing should be addressed in 5 years’ time or beyond. The Inspector’s Preliminary Findings (IN015) confirmed that if the Council failed to consider the implications of unmet housing needs the plan would be out of date before it can be adopted. The inescapable conclusion to this is that unmet housing needs should begin to be addressed at the time of adoption of this plan: arguably now. Were that not the case, logically an early review which gives time to consider and then respond to unmet needs would be appropriate, which it is evidently not.

The Vale of White Horse Local Plan, recently adopted, commits to allocating sites to contribute towards Oxford’s unmet housing need within the Local Plan 2031: Part 2, to be submitted to the Secretary of State, within two years of adoption of the Local Plan 2031: Part 1 - i.e. by December 2018: otherwise the unmet housing needs from Oxford City will become part of its housing land supply requirement. West Oxfordshire’s approach to this issue is therefore wholly contradictory: the timing of its plan enables the Vale of White Horse
Council to seize the opportunity to deliver new homes to meet unmet housing needs from the City of Oxford, yet to put this off until after 2021 as envisaged by West Oxfordshire will simply fail those who are presently in need of a new home. One cannot meet today’s needs tomorrow. It is essential that homes are delivered to meet Oxford City’s unmet needs at the earliest opportunity as the City’s own housing monitoring indicates that between 2011 and 2016, they have only delivered 1,371 dwellings compared to the SHMA mid-point requirement of 7,000 for this period. Consequently there is significant un-met need already arising from the city and therefore West Oxfordshire must include an appropriate response through their Local Plan to address this. Furthermore, it is considered a key concern that there is too high a reliance on development which will deliver after 2021 within the plan as a whole. The Council’s Housing Land Supply Position Statement October 2016 indicates only 1,035 homes out of 8,169 dwellings on proposed allocation sites in the draft Plan will occur prior to 2021: that is a paltry 12.6% or 207dpa. This will only address a little over half of the current backlog let alone what is needed going forward and consequently this will impact upon whether the 20% buffer should be applied within the district. This extreme low delivery for the first 10 years of the plan further risks exacerbating affordability challenges district wide and places further stress on housing need. In Carterton, the proposed Local Plan allocations will deliver only 81 homes in the period to 2021.

Carterton provides a unique opportunity within the District to provide housing in the only Low Value Zone in one of three Main Service Centres and in the second largest town in the District. The Sustainability Appraisal accompanying the original submitted plan emphasises the suitability of the strategy of concentrating growth around the three main towns - this approach is being undermined by the Main Modifications through the limited additional allocations around Carterton. As outlined within this response we object to the revised distribution of development in Policy H1 (MM24) in that although Carterton is recognised through the Council’s evidence as one of the most sustainable locations for growth, a higher proportion of the district’s growth is proposed within the more constrained Eynsham - Woodstock sub-area, irrespective of the additional growth envisaged in the Garden Village.

Affordability within the county as a whole is a significant problem as identified in the SHMA 2014, however, it is considered an opportunity for the plan to allocate additional housing with an early delivery to Carterton and address the problem as soon as possible. The WODC Sustainability Addendum Report (October 2016) recognises the benefits of a focus on the three main service centres:

Economy

“With a focus on Witney, Carterton & Chipping Norton (and limited dispersal across the District), major positive effects remain for meeting the housing and employment needs across the District. Minor positive effects also continue to be likely for communities and accessibility since the focus is on the main service centres; minor negative effects for road transport, although the focus on the 3 towns can encourage improvements in sustainable transport modes within the towns. Negative effects on landscape are likely to be minor, compared with a focus at Witney, as the effects are spread across the 3 main service centres.”

We have sought an independent economic view from SQW, and their views have informed this section of our representations. SQW’s letter is submitted with these representations (Appendix 6). Our clients instructed SQW owing to their leading role as economists advising on the Oxfordshire market, having worked with Bloombridge on Oxford’s Northern Gateway (2006), Oxford Technology Park (consented in 2016) and Silverstone (2012), and being the authors of the Oxfordshire Innovation Engine Report (October 2013). SQW make the trite point that Oxfordshire is crucially important in relation to the UK’s future economic...
prospects. Oxfordshire's pedigree is well known. Its assets include the University of Oxford (one of the top five universities in the world on every “league table”); the centres of “big science” at Harwell and Culham (which have attracted substantial scientific investment); and the growing number of outstanding science-based businesses, some of which are genuinely leading edge and attracting significant investor interest (e.g. Adaptimmune and Immunocore; Oxford Nanopore Technologies; Sophos, etc.). These assets are world class. They are all the more important when they are understood as part of the UK’s Golden Triangle - one of the biggest concentrations of knowledge-based assets in the world.

Following the outcomes of both the referendum on the UK’s membership of the European Union and the American presidential election, major geopolitical changes are on the horizon. This is leading to much economic uncertainty. It is affecting growth prospects and national growth forecasts have been scaled back significantly. The Office for Budgetary Responsibility published very cautious forecasts to accompany the Chancellor’s Autumn Statement in November 2016, and the Bank of England has been similarly circumspect. Against this backdrop, the importance of Oxfordshire as a driver of the UK economy has grown. The County needs to outperform in order to cover for lagging and underperforming regions elsewhere in the UK.

Within this context, the National Infrastructure Commission (NIC) recently published its Interim Report on the Cambridge-Milton Keynes-Oxford corridor (essentially the northern “axis” of the Golden Triangle referenced above). Its central finding was that a lack of sufficient and suitable housing presents a fundamental risk to the success of this area. Further, it suggested that “without a joined-up plan for housing, jobs and infrastructure across the corridor, it will be left behind its international competitors.” The importance of these findings became apparent in the Autumn Statement. Against a backdrop of continuing fiscal constraint, it prioritised investment in some of the key infrastructure requirements identified by NIC - notably east-west rail and the Oxford-Cambridge Expressway. Throughout, the rationale was the need to “maximise the potential of the Cambridge-Milton Keynes-Oxford corridor as a single, knowledge-intensive cluster that competes on a global stage”.

There are then both assets and imperatives relating to Oxfordshire’s knowledge economy, and these have become even more significant nationally as forecasts for the growth of the UK economy have been scaled back.

The potential significance of land at Carterton - a settlement in West Oxfordshire with around 16,000 residents - needs to be understood in this context, and from two perspectives.

RAF Brize Norton is located on the southern edge of Carterton. In 2010, the government published the Strategic Defence and Security Review (SDSR) which set out a broad route map for military policy. In a report written by SQW in 2011, the likelihood of growth at RAF Brize Norton (and closures elsewhere) was anticipated. Subsequently, this expectation has been (and is being) realised - including through the relocation of the Hercules Force from RAF Lyneham. Currently, RAF Brize Norton is the largest station in the Royal Air Force, referred to as a ‘Superbase’ (and probably West Oxfordshire’s largest, single economic asset).

The process of integrating previously separate activities has been a major undertaking. This is being advanced through “Programme Gateway”, which is intended to design the future operating model by which RAF Brize Norton will deliver effective, efficient and safe air mobility to meet the UK’s future Rapid Global Air Mobility requirement. It is being delivered over several years and the details are complex. It involves a close engagement with prospective private sector contractors and partners, including through an evolving contracting model (i.e. there will be increasingly more indirect, contractor jobs at the base).

This is important in relation to land at Carterton because:
• this economic growth post-dates the 2011 Census - which is the source of data that West Oxfordshire District Council has used to estimate the number of jobs at RAF Brize Norton and the consequences for housing allocations;

• it suggests that future jobs growth - some of it in sophisticated defence-related activities - is very probable on site; and

• it infers that defence-related activities - some of which are highly sophisticated and knowledge intensive - could be a growing feature of West Oxfordshire’s economy, an observation that was also made by West Oxfordshire District Council in its recent comments on the consultation draft of the revised Strategic Economic Plan for Oxfordshire.

Oxfordshire is an economic driver which is of national significance, particularly given wider geopolitical and macroeconomic uncertainties. To realise this potential, central government is investing in infrastructure but it recognises that there are major issues that need to be addressed locally, notably in relation to housing supply.

In the vicinity of Carterton, local jobs growth is probable given the expansion of RAF Brize Norton and the implementation of Programme Gateway. Some of these jobs are likely to be "knowledge rich" with a high engineering content and consistent with wider local ambitions surrounding the quality of economic growth.

Recent jobs growth (since the 2011 Census) linked to changes at RAF Brize Norton has not been taken into account by West Oxfordshire District Council in determining housing land allocations in the vicinity of Carterton. Since 2011 there have been an additional 2,500 jobs created at RAF Brize Norton with Carterton being identified as a main area for service men and women to live. Economic activity is high within Carterton and the town has a vital role within the District as a whole. Whilst there has been provision for additional employment within Carterton in the Proposed Modifications, it is noteworthy that the WODC Economic Snapshot report January 2015 states that:

"One area that needs further investigation is the potential impact of increased activity at Brize Norton. The likelihood and quantum of this are not known at this stage, but there is the potential for a significant impact on the Carterton and Witney markets."

We are surprised that this further investigation into economic benefits was not undertaken during the adjournment of the EIP.

Oxfordshire County Council (OCC) have aspirations to improve the access to and from Carterton to the A40 which would enhance the attractiveness as an employment destination and further enhance Carterton’s MSC status. This is also reflected in the vision from Oxfordshire Local Enterprise Partnership (Oxfordshire LEP) that such improvements would attract inward investment and support economic regeneration and environmental enhancements to Carterton which will strengthen the long term role of the town.

It is considered that the Council has overlooked the economic potential of Carterton and the importance of additional housing allocations to the north of the town which would enable the delivery of wider infrastructure improvements as well as enabling the proportionate growth within Carterton in accordance with the Council’s spatial strategy. The WODC Economic Snapshot report January 2015 concludes that:

"The Local Plan may also apply a more specific spatial focus along the lines set out in this report directing activity to a growth funnel running from Carterton to the Oxford City fringe."
And

"We recommend that Carterton is made a priority area for economic regeneration and that infrastructure provision is focused on the A40 Corridor."

The WODC Economic Snapshot Addendum report (April 2015) confirms that:

"Figure 2.15 from the West Oxfordshire Economic Snapshot report shows the share of Employment and Economically Active Workers in the District by Sub Area. This graph shows significant excess of economically active workers over jobs for Carterton. The data for jobs and workers are taken from different data sources and as noted in subsequent paragraphs the employment figures for Carterton 'may not reflect the full extent of MoD activity in the sub area'.

Using workplace employment data from the Census we are able to provide a comparison which does include HM Forces employment at Carterton as recorded by the Census.

Reproducing Figure 2.15 using Census Workplace data for employment instead of the BRES data used in the original report shows a larger share of the district’s jobs as being located in Carterton at 21.3% compared to 24.0% of the district’s economically active residents who live in the Carterton sub area."

We strongly contest the conclusions drawn from Figure 2.15 because, whilst they now update BRES data (which excludes military personnel) by using Census data, the Census Date (March 2011) precedes the 2,500 Lyneham jobs that began to move to RAF Brize Norton from July 2011 onwards. Our client, Bloombridge, set this out for WODC in the agreed Statement of Common Ground, where this omission was accepted, yet the Main Modifications have not sought to address the spatial consequences; in particular, a proportionate increase in housing numbers for Carterton.

Sub-Areas

We question the rationale behind the overall allocations as there has been a reduction in percentage overall for the MSC’s that are Witney, Carterton and Chipping Norton (77% reduced to 71%) whilst there have been sizeable increases to highly constrained areas namely Burford and Charlbury which is an Area of Outstanding Natural Beauty (AONB) and Woodstock which impacts on the setting of a World Heritage Site. In the Milton-under-Wychwood appeal decision the Inspector’s report summarised that:

"Almost all of the Burford-Charlbury Sub Area is within the CAONB [Cotswold AONB] and the Council accepts that there is no scope for meeting the emerging LP requirement for the construction 800 dwellings in the sub-area on sites outside the CAONB. In this regard it is worth noting that in a recent ‘call for sites’ process only one in the sub-area is outside the CAONB."

Yet the Proposed Modifications have increased the Burford - Charlbury sub area proposed housing requirement by 25% from 800 to 1,000 homes. Paragraphs 115 and 116 of the NPPF clearly states that great weight should be given to conserving landscape and scenic beauty in AONBs and exceptional circumstances must be demonstrated to justify allowing major development. Paragraph 116 states that consideration of such applications should include an assessment of the need for the development and its impact on the local economy, the cost of, and scope for, developing elsewhere outside the designated area (e.g. in the Carterton Sub-Area), or meeting the need for it in some other way, and any detrimental effect on the environment and

<td>the landscape. The Council appears to seek to justify this by indicating that development is of necessity within the AONB given the widespread extent of the AONB encompassing almost the whole of the sub area; however, that is not a reason to increase housing within the sub area, especially when Carterton is unconstrained and where there is a clear 'needs' case for development.</td>

<td>This submission is in response to the Main Modifications to the West Oxfordshire Local Plan 2031. Through previous representations to the Council the Consortium has questioned the plan's ability to adequately demonstrate a five year housing land supply and the ability of the plan to deliver the Council's Objectively Assessed Housing Need over the plan period.</td>
</tr>
</tbody>
</table>

Since the draft West Oxfordshire Local Plan 2031 was submitted to Government in July 2015 and considered at examination in November 2015. In the Inspector’s preliminary findings published in December 2015 he raised a number of concerns primarily regarding the proposed housing requirement which he felt was too low and not justified. He also expressed concerns that the plan took no account of any additional ‘unmet’ housing need arising from Oxford City. The examination was suspended in January 2016. The Council has now prepared a list of modifications which seek to make the plan sound. We recognise that the Council has undertaken a large amount of work in order to address the Inspector’s concerns and whilst we support some of the changes we still have concerns regarding the soundness of the plan. 

The National Planning Policy framework sets out how a Local Plan should be developed in order to be justified, effective, consistent with national policy and positively prepared to deliver sustainable development that meets local needs and national priorities (NPPG, Paragraph: 001 Reference ID: 12-001-20140306).

In our view, we believe that the plan is not effective and not consistent with National Policy. It is evident that the Local Plan will not provide a sufficient supply of deliverable and developable housing land supply to produce a five year supply of housing. It is also noteworthy that in a number of instances the Local Plan is inconsistent with Government Policy, the requirements of National Planning Policy Framework and Planning Practice Guidance. |

We consider the Local Plan as proposed to be modified to be unsound. The plan proposed now includes new strategic areas which were previously only considered suitable for limited development; other settlements previously considered important in supporting the rural district have their status downgraded. 

The proposed changes are so fundamental that the modified document amounts to a new planning strategy, not a mere modification of the submitted plan. The fundamentally different approach must be informed by proper consultation, informed by a robust evidence base and compliant with the National Planning Policy Framework. We do not consider the proposed modifications to fulfil any of these criteria. 

The new plan should have been built from the 'issues and options' stage in order to allow communities and stakeholders proper input to the plan making process. Even the limited consultation undertaken at this stage is inadequate as fundamental supporting documents were not available for inspection for much of its duration. 

The proposed modifications cannot be sound as they are not justified by robust evidence. The submitted Sustainability Appraisal did not previously take account of the development options now proposed as they were considered unreasonable. 

The inclusion of housing to serve an area not previously considered and substantially increased levels of proposed housing mean a fresh SA is required, not merely an addendum to the previous appraisal. The |
addendum itself is also deficient as it only considers the impacts of the proposed modifications against the SA objectives, no reasonable alternatives are included for comparative assessment.

The absence of a robust justification also undermines the deliverability of the proposed strategic development areas at Eynsham. There is a good deal of uncertainty with fundamental development decisions deferred to an Area Action Plan.

The absence of a clear strategy for such a significant development means the plan cannot be considered effective.

Proposed modifications also indicate the new strategic developments require the downgrading of Long Hanborough from a service centre, seemingly as the Council seeks to avoid an 'oversupply' of services and facilities in the area. We consider the stifling of an existing rural community is contrary to the aims of the NPPF and the overall principles of the emerging plan, including aspirations to enhance sustainable transport links.

1. The Sustainability Appraisal: The Submission Local Plan made provision for the development of 10,500 new homes between 2011 and 2031, amounting to 525 units per year. The plan sought to address only the housing need arising in the district of West Oxfordshire, no housing was proposed to meet Oxford’s unmet housing needs with this issue being deferred to a later, following plan.

2. Modifications now proposed to the plan increase the proposed housing provision to 15,950. This requirement consists of 13,200 homes, equating to 660 per annum, to address the district’s own need; a further 2,750 homes are introduced to serve Oxford’s unmet need.

3. It is relevant to note there has been a significant under supply of homes in the initial part of the plan period. As a result an additional 1,836 homes are required to be delivered on top of the 660 per annum rate to address this in the remaining plan period.

4. The revised housing provision is some 5,450 higher but remains to be delivered over the same plan period. In order to address the significant increased housing provision and accommodate the housing needs of an area not previously considered (Oxford City) the proposed modifications introduce ‘Strategic Development Areas’; this represents a fundamental deviation from the spatial strategy previously proposed.

5. This is the first time a development strategy involving a new settlement has been subject to SA as the option was ‘scoped out’ in the preliminary stages of the submitted appraisal as it was not considered to represent a ‘reasonable option’. As a result the development plan as submitted did not take any account of potential impacts (positive or negative) of a strategic development area.

6. At the same time modifications now proposed suggest downgrading existing settlements from their roles as ‘service centres’; a change in stance which seeks to restrict development. This change in approach is a fundamental change from the submission plan which sought to stimulate sustainable growth to maintain and enhance these settlements as vibrant communities and facility hubs for surrounding areas.

7. The proposed modifications amount to a significant change to the proposed plan both in the overall quantum of proposed development and the spatial approach. Despite this the changes are dealt with in the SA as an “addendum” rather than consideration being given to the most appropriate spatial distribution of housing. The modifications are merely additions to a predetermined strategy, rather than an informed choice for the most sustainable development following examination of all reasonable alternatives. We believe the SA
<table>

<th>Comment (plain text)</th>
</tr>
</thead>
</table>

8. Even if it were appropriate to consider the modifications through an SA addendum we believe the addendum itself to be deficient. The Inspector confirmed in his Interim Findings (INO16) that any new site allocation must be informed by Sustainability Appraisal including assessment against reasonable alternatives.

9. With regard to new strategic development areas the published SA addendum solely considers two sites adjoining Eynsham, rather than seeking to compare any reasonable alternatives. Those sites closer to Oxford were dismissed out of hand due to Green Belt constraints, while those to the west were dismissed as being too distant from the city.

10. The purpose of the SA is to enable a transparent and balanced assessment of alternative options against sustainability criteria, allowing a judgement to be made. For example a site closer to Oxford would benefit from physical proximity, but present challenges with regard to green belt impacts; a proper SA allows a balanced judgement to be made on the various impacts to allow transparency in decision making.

Similarly the SA addendum is restricted in its assessment of non-strategic allocations as it solely considers the impacts of the sites proposed for allocation rather than their relative performance against reasonable alternative unallocated sites. Without alternatives being considered the SA is flawed and the main modifications to the draft Local Plan based on the SA should not proceed without further SA analysis.

12. The SA addendum suggests alternative sites have not been assessed as the proposed submissions are the only suitable development sites identified in the SHELAA. We have identified shortcomings in the SHELAA (discussion follows), however even if this were to be a robust document it only forms part of the evidence base. The SA allows assessment of the relative performance of sites to identify particular benefits as well as harm. It should therefore include all reasonable sites to ensure the best are selected.

13. The SA does not consider all reasonable alternative options, merely the impacts of the Council’s pre-selected options. This approach pre-judges the outcomes of the SA, removes the robustness and transparency of the plan making process and results in an unsound Plan.

14. Evidence base for proposed modifications: The proposed modifications must be informed by a robust and comprehensive evidence base.

15. The proposed modifications to the plan claim to be informed by an updated SHELAA; however this document was not published until 9th December 2016 four weeks into the six week consultation period. The sequence of publication suggests the evidence has been tailored to fit the plan, rather than informing the Council’s selection of the most sustainable options.

16. It is clearly not acceptable that this consultation has allowed only a fortnight for inspection of the modifications and evidence base. The SHELAA is fundamental to understanding the soundness of the proposed changes, particularly as the document which accompanied the submitted plan was identified as deficient by the Inspector in his interim findings (INO16).

17. Failure to undertake proper consultation at this stage leaves any decision upon the plan vulnerable to legal challenge as the plan making process, including consultations have not adhered to proper process.

18. The limited assessment which it has been possible to undertake of the SHELAA suggests it has been treated

<td>2179</td>
<td>&gt; General Comments</td>
<td>The County Council welcomes the opportunity to comment on West Oxfordshire District Council's Submission Local Plan Proposed Modifications. The County Council overall supports the preparation of the Plan which addresses the need for increased housing growth to meet the objectively assessed housing need for West Oxfordshire as well as a proportion of Oxford's unmet housing need. The County is pleased to see proposed growth in the larger towns within the district such as at Witney and Chipping Norton and is supportive of housing allocations in Eynsham all of which will assist in delivering a step change in infrastructure in key locations. However, it is noted that there is no significant new housing growth allocated at Carterton which is one of the 3 largest towns within the district. As the Plan includes a significant proportion of unallocated housing sites, the County anticipates working closely with West Oxfordshire to identify housing and employment locations, especially in the Carterton sub area, through the Local Plan Part 2 process. This will not only bring certainty in the deliverability of housing over the Plan period but also assist in overcoming the infrastructure challenges that Carterton faces. The main issue for the County Council is the identification, provision, funding and overall deliverability of the infrastructure and services needed to support the level of growth within the Plan, in particular with regard to transport and education infrastructure. It is therefore imperative that both councils work together to identify the infrastructure requirements of the large strategic housing allocations and also the small, cumulative apportionments within the plan. Oxfordshire County Council supports in principle the main modifications to the plan which increase the overall housing provision to meet in full the district's objectively assessed housing need as identified in the Oxfordshire SHMA 2014 and which is based on supporting economic growth. This is in line with government objectives to substantially boost the supply of housing and local objectives of the Strategic Economic Plan and the City Deal. Overall Housing Number in the Plan</td>

<td>Oxfordshire County Council</td>
<td>Amada Jacobs (OCC)</td>
<td>Mrs</td>
<td>Jacobs</td>
<td>2285</td>
<td>&gt; General Comments</td>
<td>Oxfordshire County Council (OCC) supports the Proposed Modifications and the provision of at least 15,950 homes in the period 2011-31, which includes 13,200 to meet the district’s needs and 2,750 homes as West Oxfordshire’s contribution to providing for Oxford’s unmet housing need. The inclusion of 2,750 homes for Oxford’s unmet need is in line with the Growth Board’s apportionment of unmet need and reflects the terms of the Growth Board Memorandum of Cooperation signed by five of the Oxfordshire councils including West Oxfordshire and the County Council. The figure has been tested at a high level through the post SHMA process and shown to be deliverable. Timely provision of infrastructure OCC supports the emphasis on the importance of timely delivery of supporting infrastructure. The local plan should give confidence that infrastructure, particularly critical strategic infrastructure, will be provided when needed. The County Council will work with WODC to ensure that the CL 123 list and IDP list identifies necessary infrastructure and its phasing. The County Council has experienced significant difficulties in securing appropriate mitigation measures for the impact of strategic development areas where portions of the site have come forward as separate planning applications. To help reduce the occurrence of this issue we suggest the inclusion of a policy within the Plan for proposals for sites to be brought forward by means of a single planning application. This will help to achieve comprehensive developments and ensure the timely provision of infrastructure, services, open space and other facilities in a properly coordinated fashion. Education 31. The proposed scale of development at Burford would be expected to exceed the current primary school’s capacity, and this school may be challenging to expand due to site constraints. The proposed scale of development at Charlbury would be expected to exceed the current primary school’s capacity, and expansion of the school will be needed to meet this and other developments already permitted. Despite an increase in the overall housing requirement to 15,950 homes entailing the increase in size of a number of existing strategic sites and the allocation of 15 new sites the 2031 Local Plan does not require/encourage developers to carry out any Health Impact Assessments. To understand and take account of the health status and needs of the local population including expected future changes, and any information about relevant barriers to improving health and well-being it is strongly recommended that a provision is included within the 2031 Local Plan requiring developers to carry out a Health Impact Assessment as part of the master planning process for all strategic sites.</td>

<tr>
<td>MM791</td>
<td>Greenwich Lane Owners</td>
<td>Greenwich Lane Owners</td>
<td>-</td>
<td>Greenwich Lane Owners</td>
<td>2315</td>
<td>&gt; General Comments</td>
<td>1. The Sustainability Appraisal: The appraisal makes clear that the Submission Local Plan only included a proposed housing requirement of 10,500 homes between 2011 and 2031, amounting to 525 new units per year. The plan sought to address only the housing need arising in the district of West Oxfordshire, whilst acknowledged as a likely requirement the document sought to defer any portion of Oxford City’s unmet need to a following Local Plan part 2. 2. In issuing his initial findings the Inspector confirmed that the plan as submitted was unsound as it failed to address the objectively assessed housing need; the Council now seeks to address this. Modifications now proposed to the Plan increase housing provision to 15,950 units across the plan period. This consists of 13,200 homes (660 per annum) to address the district’s own need with a further 2,750 homes to serve Oxford’s unmet need.</td>
</tr>
</tbody>
</table>
3. The revised housing provision is some 5,450 units higher and remains to be delivered over the same plan period. In order to meet the significant increased figure, including homes to serve an area not previously considered, 'Strategic Development Areas' are now proposed. The introduction of these substantial new sites in an area previously proposed for only limited development is a considerable deviation from the spatial strategy of the submission plan proposed.

4. This is the first time a development strategy involving a new settlement has been subject to SA; the option was 'scoped out' of the previous assessment as it was not considered to represent a reasonable option. As a result the development Plan originally submitted for examination did not take account of potential impacts of a strategic development area.

5. The proposed modifications amount to a distinctly different plan to that submitted for examination both in the level of development and the spatial approach. Despite this the changes are dealt with in the SA as an "addendum", rather than fresh consideration being given to the most appropriate spatial distribution of housing. The modifications are merely 'bolts-on' to a predetermined strategy, rather than an informed choice for the most sustainable development following examination of all reasonable alternatives. We believe the SA to be deficient, therefore the Plan which follows from it cannot be sound.

6. Even if it were appropriate to consider the modifications through an SA addendum we believe the addendum itself to be deficient. The Inspector confirmed in his Interim Findings (INO16) that any new site allocation must be informed by Sustainability Appraisal including assessment against reasonable alternatives.

7. The published SA addendum solely considers two new strategic development sites adjoining Eynsham, rather than seeking to compare any reasonable alternatives. Those sites closer to Oxford were dismissed out of hand due to Green Belt constraints, while those to the west were dismissed as being too distant from the city.

8. The purpose of the SA is to enable a transparent and balanced assessment of alternative options against sustainability criteria, allowing a judgement to be made. For example a site closer to Oxford would benefit from physical proximity, but present challenges with regard to green belt impacts; a proper SA allows a balanced judgement to be made on the various impacts to allow a transparency in decisions.

9. The SA does not consider all reasonable alternative options, merely the impacts of the Council's pre-selected options. This approach pre-judges the outcomes of the SA, removes the robustness and transparency of the plan making process and results in an unsound Plan.

10. Evidence base for proposed modifications: The proposed modifications must be informed by a robust and comprehensive evidence base.

11. The proposed modifications to the plan claim to be informed by an updated SHELAA; however this document was not published until 9th December 2016 four weeks into the six week consultation period. The sequence of publication suggests the evidence has been tailored to fit the plan, rather than informing the Council's selection of the most sustainable options.
12. It is clearly unacceptable that this consultation has allowed only a fortnight for inspection of the modifications and evidence base. The SHELAA is fundamental to understanding the soundness of the proposed changes, particularly as the document which accompanied the submitted plan was identified as deficient by the Inspector in his interim findings (INO16).

13. Failure to undertake proper consultation at this stage leaves any decision upon the plan vulnerable to legal challenge as the plan making process, including consultations have not adhered to proper process.

14. The limited assessment which it has been possible to undertake of the SHELAA suggests it has been treated as a means to limit development in the district, rather than explore the theoretical capacity of suitable development sites.

15. Numerous sites, including our client’s land in Leafield (ref 409) are incorrectly classed as unsuitable for development as surmountable constraints are treated as barriers to development.

16. For example site 409 (Land off Greenwich Lane, Leafield) is considered unsuitable for development owing to landscape impacts, this conclusion does not align with the detailed comments which suggest a scheme can be accommodated, subject to suitable landscaping. The site is also discounted on the basis of vehicular access issues; this is despite no exploration of highway upgrades or mitigations to ‘unlock’ the site.

17. The restrictive approach applied through the SHELAA means it does not fulfil the purpose of the evidence document. It fails to provide the ‘menu of sites’ for assessment to ensure the most appropriate are chosen. This issue was identified by the Inspector in his initial findings (INO16) and does not appear to have been satisfactorily addressed; as a consequence the foundations do not exist upon which the Council can build a sound development plan.

MM152

Amy Jackson
Miss Jackson 334

- I am very supportive of new housing developments when appropriately designed and located, and contain significant provision for ongoing affordable housing. The proposal for the Garden Village at Eynsham appears at face value to provide this so in principle it would have my support.

- However, I am concerned that the affordable housing element must include houses available for both purchase and rent, and that those sold must have part ownership sustained so that they continue to provide support for those starting out on the housing ladder rather than getting exploited by those looking to push the housing from affordable to mainstream.

- The transport provision in the local plan is all focused on the Garden Village and how people will get from there to Oxford and the station at Hanborough. However, the existing transport provision in Freeland and the Hanboroughs is woeful, especially since bus services were more than halved recently. I had to give an elderly disabled man a lift to Woodstock the other day because I couldn’t bear watching him standing with his two sticks for almost 25 minutes at a bus stop in Hanborough waiting for a bus. These significant housing developments should be used as an opportunity to address the serious transportation needs across villages in the immediate area that would help make sure young and elderly people can continue living in our villages.

- I also have concerns about how far the Garden Village will spread – in the West Oxon expression of interest chapter 4.2, clear reference is made to the Garden village being developed further past the initial 2,200 houses. The villages in W Oxon need to retain their village character so meaningful green space is needed between each settlement. The Garden Village is currently proposed over 166ha and 2,200 houses, yet an area of nearer 320ha has been alluded to in the expression of interest, and nearer 3,500 houses, which takes the

<td>Owing to lack of time and the complexity of the development proposals regarding Chipping Norton I cannot attach a completed Local Plan 2031 response form. But I wish to register in the strongest terms my dismay and indignation at the way this process is being conducted 1) &quot;Please Return to West Oxfordshire District Council by 5pm, Friday 23 December 2016&quot; - in other words, before most tax-paying residents will have a decent period of respite from their working lives to consider the proposals/amendments. Which in itself strikes me as undemocratic. 2) The relevant section of the West Oxfordshire District Council website is at least five sections removed from the home-page; meaning only those completely conversant with the way that website works will be likely able to persevere and locate the form. Which in itself strikes me as undemocratic. 3) The wording/formulation of the response form requires the sort of expertise in council planning matters from those objecting that most people don't have. Which in itself strikes me as undemocratic. 4) It is unclear how residents of Chipping Norton can, in simple layman's terms, register their alarm or concern about the scale of house-building proposed for their town. Which in itself strikes me as undemocratic. 5) I can't find no mechanism by which members of the public can query why other options have not been considered or explored before house-building takes place on a character-altering scale to small towns outside Oxford - let alone make proposals of their own. For instance, why is the prime land occupied by Oxford Airport not being considered as an alternative development site for housing, given its proximity to the city and the airport’s relative lack of civic usefulness to the county? Just one example you’d expect to see explored in a debate/consultation. In short, in my view, not only are the proposals for Chipping Norton that I have seen aired at public meetings ill-suited to the town and poorly thought-through but the very approach by which the public is being consulted and offered the chance to input its views is itself ill-suited to the subject and poorly thought-through.</td>

</tbody>
</table>
It’s this kind of democratic deficit that gives politics, and planning, a bad name.

I recognise that as a team you have some very difficult decisions to make with regards to the pressure that Central Government are putting on local councils concerning the number of new homes that they are requesting to be built.

My view is Central Government should be challenged concerning the number of new homes that are required in West Oxfordshire, on a number of factors.

* The way people are now working, with faster broadband, and with access to Skype, fewer people now need to travel to work to sit at a “desk”.
* I have been in HR for 20 plus years, and I have seen a change with how people work. Given this factor it makes more sense to use Brown field sites rather than green field sites, as location will not be so key, and therefore less of a need for housing in the Thames Valley.
* With an aging population, limited pensions and with one in three over eighty years of age having dementia /Alzheimer’s housing needs to reflect this issue. So I feel that the planning strategy should be for smaller and more community based housing.
* Oxfordshire attracts many tourists, so more urban sprawl will damage the feel of the county, and will impact many businesses if the county does not remain an attractive destination for tourists.
* Coming out of the EU many also impact demand for housing, so I feel that the pace of building more houses should slow down, until we see how this impacts the UK.
* With regards to my local area of Stonesfield I support the comments that have been shared by the Parish Council, with the scale of the proposed housing, and the impact this will have to the village. The drainage infrastructure is a massive concern, also much of the village sits within the AONB and Wychwood project.

I took hope that you consider the points I have raised above.

I am writing both as a local resident and as the Rector of the 12 churches that make up the Shill Valley and Broadshire Benefice [www.12churches.org.uk [http://www.12churches.org.uk/]]. I support the Local Plan as now submitted to the inspector, and in particular I support its rejection of development on Alvescot Downs known as ‘Carterton West’ and on the area known as ‘North Carterton’ in Brize Norton.

Unless these considerations are taken into account, I propose that the proposed New Local Plan should not be accepted.

I object to the modified Local Plan primarily because, like the previous plan, it has to be assumed that a large part of the new population taking up the proposed housing stock will have employment outside the district or, at best, in the West Oxfordshire district and most people will travel to and from their places of employment by car. This can only mean that most people will use either the A40 or the A4095 as their main routes to facilitate their journeys. Although the Plan mentions that some access routes to the A40 will be built (from Witney North) or into Witney (West End Relief Road), the construction of both is entirely dependent on the relevant developers. While extra housing has been granted at Witney North (400 units) to pay for the West End Relief thus increasing traffic flow, there is no guarantee that either of these relief roads will be constructed without permission being given for additional extra units. It would appear that no consultation has been carried out with Oxfordshire County Council (OCC) to determine how they propose to provide adequate improvements to access to and from both roads along all their respective lengths. Taking into account permissions already given for extra housing in Long Hanborough and Church Hanborough and other villages in West Oxfordshire, both these roads will be already subject to extra traffic in the near future. Both roads already show signs of not being able to handle existing traffic loads, how they will handle already known extra traffic, let alone the

<td>Unless these considerations are taken into account, I propose that the proposed New Local Plan should not be accepted. I object to the modified Local Plan primarily because, like the previous plan, it has to be assumed that a large part of the new population taking up the proposed housing stock will have employment outside the district or, at best, in the West Oxfordshire district and most people will travel to and from their places of employment by car. This can only mean that most people will use either the A40 or the A4095 as their main routes to facilitate their journeys. Although the Plan mentions that some access routes to the A40 will be built (from Witney North) or into Witney (West End Relief Road), the construction of both is entirely dependent on the relevant developers. While extra housing has been granted at Witney North (400 units) to pay for the West End Relief thus increasing traffic flow, there is no guarantee that either of these relief roads will be constructed without permission being given for additional extra units. It would appear that no consultation has been carried out with Oxfordshire County Council (OCC) to determine how they propose to provide adequate improvements to access to and from both roads along all their respective lengths. Taking into account permissions already given for extra housing in Long Hanborough and Church Hanborough and other villages in West Oxfordshire, both these roads will be already subject to extra traffic in the near future. Both roads already show signs of not being able to handle existing traffic loads, how they will handle already known extra traffic, let alone the</td>

<td>additional proposed traffic resulting from the proposed Local Plan, appears not to bother either local authority. OCC seems to think that rail travel into and from Oxford from Hanborough Station will be part of the solution, ignoring that it is a “short” station only allowing rail travellers access to only 3 carriages, land is short to provide any extra facilities (ticket machines, bike parking) and travel to the station along the A4095 will be subject to delays and hold ups making travellers late and likely to miss their train. Access to the A40 from Witney is inadequate. Only the central junction allows both east/west access, so any traffic from west Witney wanting to travel east has to gain access via central Witney; a similar problem faces those in east Witney wanting to travel west. Central Witney is very old, with narrow streets and a meandering street layout. Access to the A40 or the A4095 is difficult at any time of day, at peak times it is a nightmare. The Local Plan proposes to pour additional traffic into it. Stupid. When OCC had its proposals for an internal relief road rejected, it promised to do it all it can to secure an east/west junction at the east Witney junction (Shores Green). It has not mentioned this new junction for many months, presumably it has been dropped this new junction from its future road plans. At the moment it has proposed plans out for consultation for a Park and Ride Scheme at Eynsham for access to and from Oxford. Without going into great detail, such a plan has inbuilt problems, namely for car users west or north of the site to access it they would have to use the A40 or the A4095 and would be subject to the problems already outlined. Unless these considerations are taken into account, I propose that the proposed New Local Plan should not be accepted.</td>

<td>Thank you for providing NO Links on your web site to comment on this plan. If I was cynical I would suspect this was deliberate. Housing in the City of Oxford could at least be partially provided by developing some of the College sports fields in the City. Most would enable residents to walk, cycle or use existing public transport. New sports facilities could be provided outside the City and bus students out to them. This works for example at Newcastle University. Students are only up for 24 weeks per year whereas households are occupied for at least double this. The new facilities could be considerably landscaped, with new pons and woodland for wildlife. These would reduce the traffic impact this plan will have. Oxford has developed like a doughnut with much employment outside the centre so even if this plan included improved access to the centre this would not help many workers. Half a bus lane, one way only will not solve any access problems. A whole new road access to Oxford from Witney &amp; Carterton is required before any more large development is allowed, probably onto the ring road before Botley. The Toll Bridge at Eynsham must be purchased and a new bridge built as this is another major block to traffic flow. Any accident on a Witney-Oxford road causes complete grid lock as do any events at Blenheim. More traffic generated by more housing will increase the frequency of accidents. Development along the A40 should only be permitted AFTER the road has been upgraded properly not before as has happened previously. New developments provide funds for community benefit, in addition to this money, if the City is happy to dump its obligations onto the surrounding districts maybe they should pay an additional equivalent amount to each district. Until car use declines this problem has to be addressed.</td>

<td>Dear Sirs, thank you for the opportunity to feedback. A) At the micro level assuming compliance with the inspectors finding is mandatory: 1. The planned improvement to the transport infrastructure is insufficient to serve the increase housing and industrial plans at Witney / Eynsham, also to provide access to Oxford hospitals etc. The A40 needs to be dual carriage way inc Sunderland Avenue through to Cheltenham, Gloucester / M5, Headington roundabout will need an underpass (required to support Oxford new housing alone). The A34 needs to be a Motorway (connection to the docks / M40). A rail link from Witney to Oxford needs to be reinstated. 2. More car parking will be required in Witney. Building 50 houses on the existing car park is absolutely ridiculous. 3. Leisure facilities in Witney and Woodstock lido will need investment to maintain living standards / health of the community. 4. Local Community health centres may need further investment. B) At the Macro level the long term happiness, well being and sustainability of the country will require courageous leadership both from Central and local Govt. Ultimately we cannot build our way out of this growing crisis. Yes we do need more housing etc now but I see no sustainable long term vision. The unacceptable truth is that we need a highly educated population delivering innovative technological industry and solutions to support our World standing, economic well being, pensions etc but with a population level that our land mass can feed whilst also maintaining a balance of open/wild spaces. Given that we nearly starved as a Nation during previous conflicts that might suggest a sustainable population today of c 40m - 50m ?? Not the c 70m we probably have (who knows?). Apologies for making this point B) but I think its about time it was discussed and debated, even if this is not an ideal opportunity. Your faithfully Mark Tonks</td>

<td>I have considered the WODC draft Local Plan, which is currently being consulted on, containing the proposals for a total of 15,950 homes to be built by 2031. I have a number of concerns which I outline below. Firstly, I support the need to develop further housing to deal with the housing demand we face in England and recognise the revised proposals are to deal with overflow development from Oxford under the Council’s duty to collaborate. Whilst supporting the general need for housing, building must ensure communities are sustainable. There are elements of the plan which have not effectively demonstrated they meet this criteria. To allow housing to develop, matching infrastructure and community facilities must be in place to cope with it. Currently, Oxfordshire’s roads are congested and in poor condition, bus services are reducing, social/childrens care facilities are threatened with closure, waiting times for NHS appointments are growing and access to services challenging even before implementing measures to save almost £500m in the Berks, Oxon, Bucks Sustainability and Transformation Plan over the next 4 years, water and sewage systems barely cope with current demands and there is there are insufficient school places etc. I would have expected consultation to have referenced other local plans, such as the Berks, Oxon and Bucks Sustainability and Transformation Plan, rather than the almost expired Health &amp; Well-being Strategy; The STP requires costs to be cut by almost £500m to ensure sustainability of health services. This already looks unsustainable, clearly there is no room for investment given the scale of deficit, which no developer will be able to afford to bridge. The Horton General Hospital services are under threat, as is Chipping Norton Hospital and the plan proposes ‘primary care at scale’, which I presume will mean GP surgeries closing so patients have to travel to larger ones elsewhere. Given a number of options are being proposed to be added to the plan, to meet unmet demand from Oxford, it...</td>
</tr>
</tbody>
</table>

practice is failing to cope adequately with the existing work load. The John Radcliffe Hospital is saturated by the needs of patients. Furthermore, the flow of traffic to that hospital is often at a standstill for substantial periods of time and car parking is totally inadequate.

We realise that you are in a "catch 22" situation since without an approved local plan, developers can essentially build wherever they like since the Government has thrown out much planning law. Nonetheless, sanity must surely prevail!

One last point. As we view the many developments already in progress in West Oxfordshire and elsewhere, we see little sign that adequate attention is being focussed on the needs of young first time buyers. Rather, developers are concentrating on making the maximum amount of money that they can (as, sadly, is now to be expected from our selfish, greedy society). The only bright point is that much current building is aesthetically much more attractive than that in the recent past.
is a reasonable assumption that the main employment opportunity will be Oxford as will accessing a number of services and facilities. For the proposed development in Stonesfield, coming on top of current developments in the village, the consultation document has not adequately considered the transport impact. Routes to Oxford are very congested and will worsen given the proposed Woodstock development; the road to the village has seen fatalities and collisions and the junction at the Duke of Marlborough to the A44 is known to be a serious accident black spot. There is no pedestrian or cycling facility beyond the village boundaries.

The plan to develop on greenfield land in an Area of Outstanding Natural Beauty in Stonesfield, runs counter to the Stonesfield Community Plan produced in 2012/13 following grants from Stonesfield Parish Council and Oxfordshire Rural Community Council. This Plan, which reflects public consultation, appears not to have been considered by WODC in preparing its draft Plan, which would suggest it has been inadequately considered in the Local Plan preparation and consequently may not have met the Council’s legal duty to consider the result of consultation.

The Stonesfield Community Plan was prepared following consultation with local interest groups, the community (via events) and a survey of every household. In the survey, residents were asked about new housing developments. 75% said they were happy with no more than 12 houses in a development. The Charity Farm development has already exceeded this, as have combined total new developments in The Ridings/Farley Lane. Further development in the Local Plan will establish sites which exceed the wishes of local residents already consulted on.

In the Community Plan, 40% of respondents walked in the village most days and 71% at least once per week. There are many areas of the village without pavements and the village, through overwhelming choice, has no street lights. The proposed increase in traffic within the village and the dangers posed to pedestrians, cyclists and children has been inadequately represented in the plan.

To create the necessary infrastructure (road, health, social care, education, sanitation) to develop on the scale proposed in Stonesfield on top of current developments, does not appear to be covered in any local plans by statutory bodies and there is no evidence presented in the plan to suggest its creation and ongoing revenue cost would be sustainable, even with developer contributions; without it, the community will be unsustainable and will suffer significant detriment.

We would like to make a few points about some of the proposals in the latest iteration of the local plan. The original proposal included planning for 600 homes on the Tank Farm area of the town. Though we might not welcome it wholeheartedly, we felt this was achievable and could be sustained by the town. However the new proposal suggests up to 1400 homes on the same site. We do not feel this is a realistic goal.

There are other sites in the town which would help towards achieving the government-imposed quotas, notably the ‘Archstone’ proposal for homes on the Western edge of the town. Although this is within the AONB, a visit to the site reveals that this area is not particularly endowed with natural beauty, and we suspect that only diehard environmentalists would raise objections.

Whatever the size of proposed developments in the town, an important principle is that the supporting services, roads, parking, water supply, electricity, gas and drainage must be provided at the same time, it often seems as if these essentials are forgotten until some crisis forces a belated reconsideration.

We are aware that industry and commerce cannot be forced to establish themselves in Chipping Norton. However, if they are not encouraged to do so, the town will simply become home to numbers of commuters,
who must travel daily to their workplaces. This goes against the principles we have been told to adopt on environmental grounds, of minimising travel and transport costs generally.

Part of the proposal includes the provision of a link road from the London Road to the Burford road. This would clearly have some benefit; but because the bulk of heavy goods traffic is travelling to and from the Evesham-Worcester area, it is unlikely to significantly mitigate the present problems we experience daily with air pollution and traffic density in the town centre.

Finally a couple of points which may not be grounds for comment on the local plan, but which we hope could be directed towards policy makers for consideration.

First, the demand for new housing might be more sensibly met by creating new population areas closer to existing industrial and commercial centres. These are likely to have better road and rail links, and may attract more employers because of this.

Second, is the demand which has been expressed realistic? Chipping Norton would expand by about 50% as a result of the local plan proposals. If this is reflected over the whole country, it would imply an increase in population by the same amount. Even allowing for the need to house people currently inadequately homed, this would imply a much larger increase in the UK population than recent trends would predict. Possibly the Government should be encouraged to re-examine the proposals.

[Table]

I would like to respond to the proposed changes to the West Oxfordshire Local Plan 2031, but firstly I’d like to complain about the difficulties I encountered with the official response forms. I found the form and guidelines almost impossible to understand and complete. It was obviously designed to make it as difficult as possible to raise objections and deter any possible objections from anyone with only a basic level of education. I hope this discrimination will not continue and my comments here will carry as much weight as any given on an official form?

I have several objections as follows:

- Access to the plot by potential residents and distance to local amenities
- Additional pressure on inadequate community services
- The danger in the lack of facilities for young adults in a quite village

Access

Most new residents are most likely going to want to get to and from Oxford during the week so any development should be on the Oxford side of Woodstock. The main access to the Banbury Road development will increase traffic on the Hensington Road where the narrowing of the road will make additional traffic unacceptable and dangerous for pedestrians.

The other option is the Shipton road past the two schools where during peak time the road is already reduced to one lane and can’t cope with the current level of traffic. In addition, it will drastically increase the likelihood of further accidents and endangerment of young children on their way to school. Cars are parked on the side of the roads from the corner of Shipton road by the Marlborough school, past the primary school and even on the mini roundabout. Cars also park down the Banbury road for people attending the Wootton Drama school. Just the other day a young lad jumped out from between two parked cars on that road and if it weren’t for the fact I

<td>The current waiting time for a doctors appointment is 3-4 weeks last time I phoned. The Woodstock surgery is already woefully inadequate for the current population and I’m told the schools are already over-subscribed. I couldn’t find anywhere in the plans where the proposed new schools and doctors will be built. Surely you’re not going to leave it to chance that there will be additional land available after the houses have been built to create these services? Also leaving it up to the discretion of the development company to fund and create these services is a joke. These need to be made clear at the planning stage before the first brick is laid.</td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td>Parking. The new sites on the Banbury Road and Old Woodstock are so far away from amenities that most of the new residents will need to drive to the town centre. Where will they park? Also, the Banbury road development is a considerable distance from the nearest bus stop. Is this housing only aimed at the young or commuters? What about the elderly? How will they access the town centre? How will they catch the busses? These sites really haven’t been thought through.</td>

<tr>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td>I know it’s a subject that no one likes to talk about and I’ve found that a lot of people in Woodstock won’t even hear about it but what about the drug problem? Without adequate facilities for young adults who can’t drive, or aren’t interested in football, it’s very easy to fall into the drug scene in this village. There are parts of the village you can’t drive through without the stench of weed overpowering you. Young teenagers rack up debts and develop smoking habits out of boredom. These plans need to include entertainment e.g. a cinema, fast food (McDonalds or KFC) places where they can congregate and socialise openly not hiding at the back of the football pitch smoking drugs! Unfortunately, a KFC would ruin the rural aesthetic of the village but that’s just the price we as a community are going to have to pay if we are to double the size of the village.</td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td>Thank you for taking the time to read my objections. I hope they will make it obvious that any development needs to be made on the Oxford side of Woodstock to protect the lives of our children and that the Banbury Road site is wholly unsuitable. In addition, more consideration needs to be given to the infrastructure if we are to double the size of the village. The changes to the plan do not work. Please reconsider.</td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td>A principal thrust of the amended Local Plan is increased housing numbers. I rather doubt they can be justified except in the context of convoluted and somewhat imaginative planning arithmetic, but accept that WODC had little option but to comply with direction to include them.</td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td>Most people in Filkins and surrounding villages wish to see Carterton vibrant and prosperous for it is our local town and we rely upon its facilities for our daily needs. But there seems to be no new evidence that another strategic site in the Carterton Sub-region would encourage sustainable economic growth in the town.</td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td>I therefore continue to support the Local Plan as amended and re-submitted to the inspector and, in particular, I support the Local Plan’s continued rejection of development on Alvescot Downs (known as ‘Carterton West’.)</td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td>Lastly, I thank WODC and its officers for the careful way in which they have brought the Plan to this point: a process much longer than most of us would have anticipated.</td>

greenbelt, near to existing employment and schools? Or is it realistic to assume people housed in the new developments will work locally? The reality is likely to be large increase in commuting along the A40. Increasing road capacity is not the answer- we need more ambition and better co-operation between all councils and government to provide a long term solution. Schools, nurseries, medical centres and drainage around Eynsham are also at capacity.

Answering these challenges could be an opportunity to make use of unrivalled local expertise to develop innovative solutions to work, travel and low carbon living. We should aspire for the best- using local knowledge but also attracting leading designers through design competitions.

There is a real need for truly affordable housing for locals and the allocation of new housing is far from clear. There is a major concern that new housing will become Oxford commuter overspill next to a near stationery A40, rather than a real local community, serving local need and local business. What evidence is there of demand for a science park in a new village? Eynsham already has an underused industrial site which could be upgraded to accommodate science facilities and related housing. On housing, we have little information on the evidence base and the examination of alternatives. Are housing needs and growth targets achievable, desirable and up to date? Is the assessment of alternatives rigorous and is the study available?

People choose to live here because it has access to the attractive countryside, but this access would be reduced. Eynsham is already very dense with little public greenspace and little tree planting; therefore any new development will need to protect areas of greenspace and give residents ready access on foot to the countryside, as set out in Eynsham Neighbourhood Plan and Policy EH3.

It is also unclear whether air quality in the area has been tested, whether it is within legal limits and whether these limits will be breached, or further breached, due to increasing congestion and development.

Consultation

I am appalled that neither the Eynsham Neighbourhood Plan group nor Eynsham PC were involved in the major revision to the Local Plan during their open consultation with WODC, as part of the very through neighbourhood planning process. It seems we are being penalised for being too co-operative.

This is not an example of local democracy. There are terrific skills in the community- please use them rather than ignore them!

<td>MM368</td>
<td>Aston, Cote, Shifford &amp; Chimney Parish Council</td>
<td>Mrs Sandhu</td>
<td>695</td>
<td>&gt; General Comments</td>
<td></td>
<td>Consultation on Proposed Modifications to the Local Plan 2031</td>
</tr>
</tbody>
</table>

The members of Aston, Cote, Shifford & Chimney Parish Council discussed the above consultation at their meeting on 1 December 2016.

We are concerned about the significant increase in the volume of new housing proposed for the district which...
would put significant pressure on the existing infrastructure, including the road and public transport network, schools, medical services, the fresh water supply and the waste water system. We would remind the District Council that concerns about the inability of the infrastructure to cope with significant growth was why the previous version of the plan contained a lower housing target. Whilst we understand that the Inspector has put pressure on the District Council to increase the planned housing growth included in the Plan so that it meets the levels identified in the SHMA and West Oxfordshire’s share of Oxford’s “unmet need”, the level of housing growth proposed can only be delivered if there is significant investment in the infrastructure to support that housing, otherwise the quality of life and the vitality of the economy of the district upon which we all depend will be significantly adversely affected. We can only assume that the District Council has identified the infrastructure improvements which will be required to support the planned housing growth, but given the national pressures on public funding, has the District Council identified with confidence where the funding will come from for the required infrastructure improvements?

On the positive side, we are supportive of the intention for the housing growth contained within the Plan to be focused on the towns and larger settlements in the District which do already benefit from significantly more infrastructure than the villages and smaller settlements.

Given that the Plan will continue to put the entire district under ongoing pressure to provide housing growth and the infrastructure concerns raised above, we think that it would be appropriate for the District Council to put some protections in place for the smaller settlements. We would like there to be consideration to the principle of putting a “cap” in place on growth within the smaller villages and settlements such as Aston and Cote so that existing and potentially new residents can be confident that their settlements will not grow beyond what the existing infrastructure can accommodate. We would also like the District Council to consider what measures it can put in place to refuse new planning applications when there are already existing applications (outline or full) for development within the same settlement that the applicant/developer hasn’t yet built. In Aston we are seeing new applications being submitted for significant developments (for the size of our settlement) despite there already being permissions in place for earlier applications which would deliver growth which could be accommodated. The cumulative impact of applications which have received approval but have not yet been built need to be taken into account when new applications are being considered.

| MM372         | Vale Council            | Planning Policy | Vale of White Horse District Council | 705 | > General Comments | Thank you for the opportunity to comment on the proposed modifications to the West Oxfordshire Local Plan 2031. We have reviewed the key changes made to the local plan, and updated supporting evidence, and have no objections to the new proposals made, which principally seek to meet the district’s objectively assessed needs in full as well as delivering an agreed portion of un-met housing need from Oxford City.

We look forward to future engagement with you and the other Oxfordshire authorities as part of the Duty to Co-operate on matters of strategic importance. |
| MM36          | Richard Munro          | Mr              | Munro           | 74               | > General Comments | WODC is to be commended on continuing to try to base its Local Plan on evidence and a strong commitment to community engagement in the spirit of localism, while doing its best to respond to external pressures from government and developers. |
| MM380         | Berks, Bucks and Oxon Wildlife Trust | BBOWT - Haidrun Breith | Mrs | Breith | 772 | > General Comments | On a general note we are concerned about the proposed quantum of development proposed in the district, which is mostly rural in character and rich in habitats and wildlife. Development on the proposed scale will inevitably impact on wildlife even if the most ecologically-rich areas are avoided.

Having said this we recognise that latest modifications are the Council’s response to address the requirements for more housing put forward by the planning inspector in spring this year. If development on the proposed scale has to happen we consider it essential that it is located in places where it causes least environmental |
Impacts and is of a layout and design that allows for green infrastructure and biodiversity to be integrated into the development creating diverse and high quality environments.

The following comments aim to assist with this process. Where applicable we have added the modification numbers (Main XX) and (Minor XX) for ease of reference.

Existing policy wording is shown in italics with new wording being added in italics and underlined.

**Public Realm and Green Infrastructure**

We welcome the inclusion of a public realm and green infrastructure policy. Para 8.24 outlines components of Green Infrastructure (GI) but it does not provide a succinct definition. We feel that this section would benefit from such a definition.

It is my understanding that there is no overall Green Infrastructure strategy for the District to inform and compliment development proposals and we consider it important that a district-wide Green Infrastructure Strategy is developed to inform the growth agenda.

Such a strategy should provide an overview of the existing GI assets within the district, consider opportunities for enhancement and creation of new assets, outline a series of potential projects and provide advice on delivering green infrastructure proposals. This should recognise the role street trees, gardens, waterways, public parks and open space can play as part of urban green infrastructure. Whilst such a strategy should be district-wide it is important to remember that habitats and landscapes are part of a wider network of GI that pays no heed to local authority boundaries.

Development should therefore be planned to avoid habitat loss and fragmentation, and opportunities should be sought to improve ecological connectivity, including through the creation, restoration and enhancement of linking habitats and ‘stepping stones’ through the landscape.

**Delivery**

We could find little information on Local Plan delivery. We are concerned that there seems to be no mechanism to deliver green infrastructure (including open space) and to provide long-term management. We recommend that green infrastructure and environmental projects are included in any CIL or S106 agreements.

This smacks of a panic modification to a plan that has not previously been agreed by WODC taxpayers! It is merely allowing central government (and Oxford County Council) to impose totally unrealistic housing/building targets on the District! I have no disagreement with a requirement for extra housing, but the scale being asked for here is totally unrealistic in this essentially rural environment, and is set to completely destroy one of England’s most attractive areas! Please stand up to the "panic" from "on-high" and let us have a sensible and well thought through response to this ridiculous plan! A few months now may well prove beneficial to everyone!

We do not need new so called “Garden Villages” and rural hamlets built over!!

We note that the LP makes reference to the Oxford Local Nature Partnership in places (e.g. para 8.19, appendix
3. Unfortunately this group no longer exists and relevant sections should be reworded to reflect this change.

MM381  Eynsham Society  Jolyon Cox (Hon. Sec., Eynsham Society)  Dr  Cox  804  > General Comments
We appreciate the unreasonable pressure placed on the District Council by the unrealistic estimate of housing need, both for West Oxfordshire and for Oxford City, plucked apparently out of thin air by a Local Enterprise Partnership with a vested interest in uncontrolled growth. Nevertheless we consider the Plan as it affects Eynsham to be unsustainable, grossly unfair and unsound, and we cannot support it.

MM384  Clanfield Parish Council  Clanfield Parish Council  Mr  James  827  > General Comments
Clanfield Parish Council support the Local Plan as now submitted to the inspector and in particular we support its rejection of development on Alvescot Downs known as 'Carterton West' and that the proposed site at Mill Lane Clanfield when considered through SHELAA was found not acceptable.

MM386  Cotswolds Conservation Board  Cotswolds Conservation Board  Ms  Rood  829  > General Comments
Overall the Cotswolds Conservation Board is concerned about the level of development that is now proposed within the nationally designated protected landscape of the Cotswolds AONB. It is the Board's view that this is contrary to the National Planning Policy Framework (NPPF) and Section 85 of the Countryside and Rights of Way (CRoW) Act.

The Chipping Norton and the Burford-Charlbury Sub-Areas are used to illustrate our concerns, but these concerns apply across the whole AONB.

MM386  Cotswolds Conservation Board  Cotswolds Conservation Board  Ms  Rood  838  > General Comments
The Cotswolds Conservation Board understands the requirement to meet housing needs. However West Oxfordshire District Council is required in law to 'conserve and enhance the natural beauty of an AONB' (Section 85 CRoW Act 2000). In addition, national planning policy, specifically Paragraphs 14 (and its associated Footnote 9), 115 and 116 of the NPPF all detail further requirements regarding development in AONBs. It is the Board's view that currently these proposed modifications do not afford the AONB a suitable level of protection.

In particular the Board recommends that the Overall Strategy includes greater consideration of the additional protection afforded to AONBs. Doing this will enable development proposals to be considered in a consistent manner which conserves and enhances the AONB.

2. PROCESS ISSUES
Introduction
2.1 Within this section we question if the Local Plan is able to satisfy the necessary legal tests associated with the preparation and examination of a Local Plan.

2.2 In summary, we take issue the fact that that Local Plan (as modified) is a very different plan to that which was originally submitted. The result is that not all reasonable alternatives have been considered in relation to how the District's increased housing needs (and Oxford's housing needs) should be met through the consultation and SA process, and the Council have failed to prepare the plan in line with their Statement of Community Involvement.

Background
2.3 The settlement hierarchy within the Submission Draft Local Plan5 identifies three Main Service Centres at Witney, Carterton and Chipping Norton as the primary focus for new homes, jobs and services. This is known as the 'three towns' spatial distribution.

2.4 Through the process, we have fully supported the Council's decision to pursue this option as the most sustainable, logical and realistic approach to future growth in West Oxfordshire.6 Indeed, the Sustainability
Appraisal (February 2015) justified this choice of spatial distribution in a robust and comprehensive manner.

2.5 The first Local Plan hearing sessions dealing with strategic matters, including the duty to co-operate and housing and employment requirements, was in November 2015. The Inspector made the following recommendations in his preliminary findings (examination documents IN 015 and IN 016):

* The overall housing requirement likely to increase to somewhere between the current proposed level (525 dpa) and the SHMA midpoint (660 dpa), or 10,500 to 13,200.
* Council will also need to take account of their apportionment of Oxford’s unmet needs (currently estimated at 15,000), which due to be determined by the Oxford Growth Board in July 2016, (rather than addressing it through an early review like the other authorities).
* That the plan should make additional allocations of larger sites and less reliance on windfall for delivering affordable housing, as the Inspector notes a substantial gap between affordable need and likely delivery from the plan.

2.6 It was therefore clear that the Council needed to identify and allocate significant additional sites across the district and at Paragraph 9.1 of the Inspector’s preliminary findings (examination document IN 015) he states:

“At submission, I consider that the SA had adequately addressed reasonable alternatives for a plan seeking only to address the needs of West Oxon. Two alternative options (a new village and concentration of development along transport corridors) were dropped following the Issues and Options Stage in 2008 (CD2 paragraphs 4.7-4.10). I consider that the rejection of these 2 options was reasonable for the reasons the Council gives in the context of meeting the needs of West Oxon alone. If any further work undertaken by the Council anticipates some apportionment of Oxford’s needs to West Oxon, then the range of alternative strategies to be considered in the SA will need to be reviewed.”

2.7 In response to the Inspectors preliminary findings, several changes to the housing requirements and distribution are proposed within the Proposed Modifications and were subject to a Sustainability Appraisal7.

2.8 The spatial distribution now includes the Main Service Centres of Witney, Carterton and Chipping Norton and focusses much more on the Eynsham area, which will have a new Rural Service Centre (Garden Village SDA).

2.9 The Council are of the view that the Proposed Modifications are an ‘adjustment’ to the strategy and settlement hierarchy and that the changes will meet the needs of the district without changing its character8.

2.10 Before addressing whether the proposed modified spatial distribution strategy represents a suitable / sustainable approach, we question whether the Council have followed the necessary process as set out in the Planning and Compulsory Purchase Act 2004, and supporting guidance.

The Process

2.11 We are now clearly at an advanced stage of the Local Plan process with initial examination hearings having taken place. Main Modifications are being proposed and we are being offered the opportunity to provide representations to the Council for their consideration before formally submitting the Main Modifications to the Secretary of State.

2.12 The Planning Inspectorates ‘Procedural Practice in the Examination of Local Plans’ (June 2016 4th Edition v.1) on this subject says the following at Paragraph 5.24:
'Where the Inspector identifies that there may be a need for MMs to the plan in order to resolve problems that would otherwise make the plan unsound or not legally compliant, the nature and likely extent of the MMs should be fully discussed at the hearings. These may consist of redrafted text, the omission of a policy or section of text (or the inclusion of a new one).'

2.13 The guidance goes on to state at Paragraph 5.26: 'If the Inspector considers that the plan may require MMs to make it sound/legally compliant, he/she must be satisfied that requirements for public consultation and sustainability appraisal have been or will be met with regard to the modifications.'

2.14 Paragraph 5.27 then goes on to consider the precise arrangements for public consultation on any proposed Main Modifications. It notes that this may vary from case to case but there are a number of important principles that apply throughout:

* it should be made clear that the consultation is only about proposed MMs and not other aspects of the plan and that these are put forward without prejudice to the Inspector's final conclusions on the plan;
* all representations made upon the MMs will be taken into account by the inspector;
* the consultation document should include all proposed MMs, whether initially suggested by the LPA or put forward by the Inspector, and there is no need to distinguish between the two in the document; the key requirement is that the Inspector should be reasonably satisfied at this point that the proposed MMs are necessary to rectify the unsoundness and/or legal compliance problem(s) that have already been identified;
* additional modifications should not be included in the consultation exercise but if they are published for completeness at the LPA’s request it should be made clear that they are not before the Inspector;
* the Inspector will not contemplate recommending a MM to remedy unsoundness or legal non-compliance unless any party whose interests might be prejudiced has had a fair opportunity to comment on it;
* the scope and length of the consultation on proposed MMs should reflect the consultation at regulation 19 stage (usually at least 6 weeks);
* the general expectation is that issues raised on the consultation of the draft MMs will be considered through the written representations process and further hearing sessions will only be scheduled exceptionally; and - in very limited circumstances, the Inspector may be satisfied that no party would be prejudiced by a possible new MM (or the amendment of one that has already been publicised) that he/she is contemplating towards the end of an examination; for example, this may be because the scope of the consultation that has already been undertaken on related MMs has adequately addressed this point or because a matter is being deferred to another plan.

2.15 Paragraph 5.28 of the PINS guidance goes further and states (bold our emphasis):

'There could be circumstances where the plan is so flawed that it is in effect irreparable: for example, the MMs that would be required might be so significant or extensive that they would amount to completely rewriting the plan. In this case an Inspector would have great difficulty in complying with a section 20(7C) request and in any event to do so would not be within the meaning of the Localism Act 2011. There is no discretion to reject a request under section 20(7C) but in practice in these circumstances, the Inspector would indicate to the LPA that such a request would be inappropriate. Withdrawal of the plan would normally be expected in such cases.'

2.16 The Council have put the Proposed Modification to the public and they have updated the Sustainability Appraisal. Whilst we welcome the opportunity to comment on these changes/modifications and support many (not all) of the changes put forward by the Proposed Modification Local Plan, we do not consider the Local Plan
is capable of complying with the relevant Acts and Regulations, or the Council's own set processes when preparing the Local Plan.

2.17 Ultimately, this is because the Local Plan Proposed Modification Version is fundamentally different to the Submitted Local Plan. Whilst there is no strict interpretation of what can and cannot constitute a Main Modification, it must be acknowledged that the Main Modifications being put forward as part of this Local Plan result in a very different quantum and spatial distribution of development patterns that effects residents, businesses and the environment within the area in many different ways.

2.18 With this in mind, the Council and the Local Plan Inspector need to be satisfied that the process has complied with the Planning and Compulsory Purchase Act 2004, the Localism Act 2011, and the Town and Country Planning (Local Planning (England) Regulation 2012. Upon a full review, we conclude that it does not. Compliance with the Planning and Compulsory Purchase Act (LDS and SCI points)

2.19 Section 15 of the Act refers to the requirements of a Local Development Scheme. The need to submit an LDS to the SoS for approval was omitted following the Localism Act (Section 111). However, Section 15 continues to confirm the LDS must (amongst other things) including:

* the need to set out which document will be development plan documents;
* the subject matter and geographical area to which they will relate to;
* identify any matter or area in respect of which the authority have agreed (or propose to agree) to the constitution of a joint committee; and,
* a timetable for producing development plan documents.

2.20 Section 17 confirms that documents that must be referred to in the Local Development Scheme are Development Plan Documents and a Statement of Community Involvement. The Council's revised Local Development Scheme 2016-2019 does indeed refer to the Local Plan and the Council's Statement of Community Involvement ("the SCI").

2.21 Section 18 highlights the requirements of a Statement of Community Involvement confirming one must be prepared and that it is a statement of the authority's policy as to the involvement in the exercise of the authorities functions under the following sections of the Act: Section 19 (Preparation of LDDs), Section 26 (Revision of LDDs) and 28 (Joint LDDs).

2.22 Importantly, Section 19 confirms that Local Development Plan Documents must be prepared in accordance / comply with the:

* Local Development Scheme (1);
* national policy, etc (2); and,
* the Council's Statement of Community Involvement (3) albeit only once the SCI is adopted (4); and,
* the plan must be subject to an appraisal of the sustainability of each policy (5).

2.23 Section 20 (Independent Examination) relates to the examination process confirming a Development Plan Document should not be submitted to the SoS unless they think it is ready for examination (i.e. that it is sound) (2b). Section 20(5a) confirms the examiner needs to consider if Section 19 has been complied with (i.e. the process / preparation of the plan, part of which is set out in the Council's own documents (the revised LDS and SCI).
2.24 In the context of Local Development Schemes, Paragraph 009 (reference ID: 12-009-20140306) of the Planning Practice Guidance, also states (bold our emphasis): “A Local Development Scheme is required under Section 15 of the Planning and Compulsory Purchase Act 2004 (as amended by the Localism Act 2011). This must specify (among other matters) the documents which, when prepared, will comprise the Local Plan for the area. It must be made publically available and kept up-to-date. It is important that local communities and interested parties can keep track of progress. Local planning authorities should publish their Local Development Scheme on their website”

2.25 The Council’s LDS that was relevant at the time of submitting the Local Plan was dated January 2015 (examination document SD6). It set out the programme for the production of various documents, including the Local Plan, for between 2015-2018. It replaced a version of the LDS issued in March 2014 and there were several iterations before that dating back to April 2005. What is clear is that the Council have consistently altered LDS to reflect the altering and continually delayed Local Plan process. One might, therefore, be forgiving if the local community were not able to realistically keep track of what the Council where intending.

2.26 The position is further complicated by the fact that since the submission of the Local Plan, a further LDS Addendum has been issued dated July 2015 covering the period 2016-2019 (examination document SD6a). One of the major changes that we have noticed in relation to the production of the Local Plan between the LDS originally submitted and the latest version relates to how the Council intend to deal with Oxfordshire’s unmet housing needs. Indeed, the January 2015 version confirms that the Council would undertake an early Local Plan Review in relation to these unmet needs. It confirmed the Local Plan Review would have been an independent Local Development Document (LDD). Based on the timetable set out at Appendix 2 of the January 2015 LDS, it would have therefore undergone an informal consultation process (IC). We presume the Council set out this approach/timetable for the Local Plan Review because this is precisely approach advocated in the Council’s adopted Statement of Community Involvement for all LDDs (we come onto the relevance of the SCI shortly).

2.27 One of the major changes that we have noticed in relation to the production of the Local Plan between the LDS originally submitted and the latest version relates to how the Council intend to deal with Oxfordshire’s unmet housing needs. Indeed, the January 2015 version confirms that the Council would undertake an early Local Plan Review in relation to these unmet needs. It confirmed the Local Plan Review would have been an independent Local Development Document (LDD). Based on the timetable set out at Appendix 2 of the January 2015 LDS, it would have therefore undergone an informal consultation process (IC). We presume the Council set out this approach/timetable for the Local Plan Review because this is precisely approach advocated in the Council’s adopted Statement of Community Involvement for all LDDs (we come onto the relevance of the SCI shortly).

2.28 The July 2015 LDS ditches the Local Plan Review process (i.e. the separate LDD to deal with Oxford's unmet needs) and instead sets out the following timetable/approach, whereby Oxford’s unmet needs are to be addressed as part of this plan:

* January – August 2016 Preparation of evidence base, formulation of Main Modifications,
* August 2016 - Apportionment of Oxford City’s unmet housing needs agreed
* September 2016 - Cabinet/Council agree ‘main modifications’ consultation
* October 2016 - Consultation on proposed ‘main modifications’
* November 2016 - Review of consultation responses
* December 2016 - Submission of main modifications to Inspector
* February 2017 - Examination hearing sessions
* June 2017 – Inspector’s Response
* Sept 2017 - Adoption

2.29 Whilst some slippage has taken place, it is applaudable that the Council have broadly stuck to this new timetable. What is apparent, however, is that only one month has ever been envisaged in terms of considering representations to the main modifications before being issued to the Inspector / SoS.

2.30 Perhaps a month to review representations would not be entirely unreadable where the extent of modifications after an examination process were envisaged to be relatively minor in nature. However, bearing in mind the extent of the modification (the nature of which were evident after that last round of examination
hearings and the Inspector's interim conclusion), we find this somewhat surprising as it clearly implies the Council have assumed that the representations to the Proposed Modification will be slight and that this document is practically a 'fait accompli'.

2.31 Whilst we are highly sympathetic to the desire and rush to get Local Plans adopted, the process has to be entirely fair, transparent and meaningful. Given the Council are now at such an advanced stage of the Local Plan production and are under increasing pressure to close this process, we cannot see how the Council could genuinely seek to engage in a meaningful consultation process when allowing only one month to process responses received towards such wide spread modifications to the Local Plan.

2.32 We raise this now because once the Proposed Modifications are submitted to the Inspector / SoS for further examination, the Local Plan is assumed to be sound by the Local Authority. As we know, in testing the soundness of a Local Plan, an Inspector addresses a very specific set of tests. It is not the Inspector's role to determine if there is a better alternative for the Local Plan. However, the Local Plan process should be one of genuine consultation where the public, local communities and business including the development industry have a genuine ability to influence and inform local planning officers of whether there is a better or alternative option for development.

2.33 This type of genuine consultation and thought process can only be meaningfully achieved through Regulation 18 consultation, as prescribed by the Town and Country Planning (Local Planning (England) Regulation 2012, whereby issues and options relating to a Local Plan can be debated and discussed. Indeed, Regulation 18 (3) confirms that LPA's must take these representations into account when preparing the Development Plan Document and the NPPG reaffirms this position at paragraph ID 12-018-20140306, which states:

'Local planning authorities will need to identify and engage at an early stage with all those that may be interested in the development or content of the Local Plan, including those groups who may be affected by its proposals but who do not play an active part in most consultations.... ...Regulation 18 of the Town and Country Planning (Local Planning) (England) Regulations 2012 sets out specific bodies or persons that a local planning authority must notify and invite representations from in developing its Local Plan. The local planning authority must take into account any representation made, and will need to set out how the main issues raised have been taken into account...

...Section 18 of the Planning and Compulsory Purchase Act 2004 requires local planning authorities to produce a Statement of Community Involvement, which should explain how they will engage local communities and other interested parties in producing their Local Plan and determining planning applications...

2.34 In short, the Council have not carried out Regulation 18 consultation in relation to the latest proposed changes to the Plan. We understand that Regulation 18 consultation is not a statutory requirement under the P&CPC Act 2014. Indeed, only Regulation 19 consultation is a statutory requirement as set out Section 19 of the Act, which the Council are currently undertaking.

2.35 However, as noted above, Section 19 of the P&CPC Act 2004 also confirms that one of the key tests is to ensure the Local Plan is prepared in accordance with the Authority's own Statement of Community Involvement. It is within the SCI where the authority sets out how it will deal with consultation under Regulations 18 and 19 of the T&CPC Regulation 2012.

2.36 The Council's SCI is dated December 2014. It therefore precedes the Publication (March 2015), Submission
(July 2015), and Examination (November 2015) of the Local Plan and therefore does not take account of the fact that a significant number of major modifications are required to the West Oxfordshire Local Plan.

2.37 With regard to Regulation 18 consultation, Figure 2.2 in the SCI (copied below as Figure 1 ATTACHED) notes that consultation with the public is optional.

2.38 Notwithstanding this, at paragraph 2.12 of the SCI the following is stated in relation to what the Council state they will do (bold our emphasis):

‘Anyone can be involved in the preparation of the Local Plan and planning policy documents. The hope is that by involving a broad range of people, especially early on in the process, there will be a better understanding of the issues and needs for the area by bringing together different perspectives, expertise and knowledge from local communities and stakeholders and providing an opportunity to shape and influence planning policies and future development. There are certain groups and organisations the Council must consult – statutory consultees – and others that the Council will seek to get involved.’

2.39 Subsequent tables in the SCI go on to list a range of groups, including harder to reach groups. In addition, from Pages 13 to 16 there are further tables/schedules setting out what consultation the Council will undertake. Copied below is what the Council confirm they ‘will always do’ and what they ‘may also do’ in relation to Regulation 18 when preparing the plan, gathering evidence and considering issues and options.

2.40 We don’t doubt the fact that the Council will have undertaken these various tasks when preparing the Submitted Local Plan. However, as previously noted, no Regulation 18 consultation has been carried out in relation to what is now a very different plan to what was originally submitted. Given the Council’s SCI clearly states they will always undertake ‘early engagement with local communities, businesses and other interested parties’, when gathering evidence and considering issues, it is hard to see how the SCI requirements have been satisfied in relation to the latest plan.

The Key Differences to the Submitted Local Plan and the Proposed Modifications

2.41 The changes to the Local Plan extend to no less than 242 Main Modifications! This many modifications to a Local Plan is significant in its own right.

2.42 The modifications are wide spread but key changes relate to the quantum of development that is required and the spatial distribution of development.

2.43 Importantly, no consultation prior to that in relation to these latest Proposed Modifications to the Local Plan have identified significant development at Eynsham or addressed the need to meet unmet needs from Oxford. Indeed, these options were not presented at the Regulation 18 consultation or as part of the Publication Draft of the Local Plan prior to submission.

2.44 A total of three spatial distribution options were consulted upon at the Regulation 18 Issues and Options consultation stage (March 2008):

* Concentrate development at Witney;
* Concentrate development at Witney, Carterton and Chipping Norton; and,
* More dispersed development amongst a variety of towns and villages but still including development in Witney, Carterton and Chipping Norton. Obviously there could be many variations to Option C given the number of villages in the District
<table>

<tr>
<th>Respondent ID</th>
<th>Respondent Organisation</th>
<th>Respondent Name</th>
<th>Respondent Title</th>
<th>Respondent Surname</th>
<th>Comment ID</th>
<th>Document Full Path</th>
<th>Comment (plain text)</th>
</tr>
</thead>
</table>

2.45 The Issues and Options consultation document made reference to other options which the Council did not consider appropriate or likely to conform with national and regional policy, and thus opinion was not sought on these options at that time. These included:

* A new village; and,
* Concentration along transport corridors, including expansion of existing settlements and/or new villages.

2.46 With regards to the ‘new village’ option (which was not location specific), the Council were of the view that the amount of development likely to be accommodated in a new settlement may not create a sustainable community within a reasonable timescale when considered within the West Oxfordshire context. The number of residents without access to a satisfactory range of services and facilities would increase and extra car travel would result. It was also recognised that a new settlement is a high risk strategy and is likely to need significant expenditure to fund new infrastructure.

2.47 Despite the Council’s initial dismissal of the ‘new village’ option they are now pursuing this as an option through the newly introduced the Garden Village SDA in the Proposed Modifications. Given the previous outcome of the Issues and Options consultation, it would not have been unreasonable for the public to rightfully assume that a refreshed Issues and Options consultation would be undertaken in light of the new evidence on housing needs and the need to accommodate some of Oxford’s unmet needs (particularly when this approach was set out in the LDS at the time of submitting the Local Plan).

2.48 Notwithstanding this and the fact that Policy EW1a suggests the Garden Village SDA will be a free-standing settlement, the reality is that it is directly related to the settlement of Eynsham. Indeed, the Garden Village SDA boundary falls within the Parish boundary of Eynsham (copied below) as does the West of Eynsham SDA.

2.49 Whilst the A40 separates the Garden Village SDA from Eynsham and it is proposed that it will contain its own services, the reality is that the existing northern defined settlement boundary of Eynsham goes right up to the A40. The Garden Village southern boundary also goes right up to the A40. Moreover, links between the two areas (including an iconic bridge) are actively endorsed and both the new and existing communities can interact, benefit from public transport services and utilise services in each area/settlement.

2.50 Notwithstanding this, Eynsham is described in the Submission Local Plan as a Rural Service Centre. For namesake purposes, it also appears to keep this definition in the Proposed Modifications in the Local Plan (Table 4.1). However, it would be folly to suggest that Eynsham is not physically expanding by virtue of these new proposals and that its character and role and function would not substantially alter. Indeed, Policy OS2 now confirms the settlements will make a “significant contribution” towards meeting identified housing needs of the area.

2.51 The Eynsham-Woodstock sub-area is to increase by 2,800 new dwellings to meet West Oxfordshire’s need. A further 2,750 homes will also be provided to meet Oxford’s unmet needs, therefore totalling 5,500 new dwellings over the plan period. The Eynsham-Woodstock sub area is therefore subject to 243% increase in the number of homes it needs to accommodate compared to what was presented in the original Submission Draft Local Plan (5,500 compared 1,600). This is a substantial change.

2.52 The parish of Eynsham had a population of 4,648 in 2011. Based on an additional 5,500 dwellings and the average household size of 2.36 for West Oxfordshire, the population change would increase by 12,980 people to over 17,600. This cannot be regarded as anything other than a substantial change to the Local Plan strategy.
particularly when considering the population figures of the three main towns: Witney (27,522), Carterton (15,769), and Chipping Norton (6,337). Indeed, Eynsham would essentially become the second largest settlement within the District in terms of its population.

2.53 MM5 also states there will be a need for the expansion of secondary school capacity to support the Garden Village and other growth in the area, which is one example of the impacts generated by the development which we consider should have undergone Regulation 18 consultation.

2.54 Overall the Proposed Modifications to the Local Plan represent a substantial change to the originally preferred ‘three towns’ strategy of Witney, Carterton and Chipping Norton and it has significant implications for the residents of Eynsham who have essentially had their right to contribute to the process through Regulation 18 consultation by-passed. For these reason, we consider the Proposed Modifications Local Plan is not in accordance with the Council’s own SCI and it therefore fails Sections 18 and 19 of the Planning and Compulsory Purchase Act 2004.

Testing Options in the Sustainability Appraisal for Overall Growth Requirements

2.55 As previously quoted at paragraph 2.6 above, the Local Plan Inspector has highlighted that the supporting Sustainability Appraisal would need to reconsider a range of new development options should West Oxfordshire have to meet some of Oxford’s housing needs.

2.56 Chapter 3 of the updated SA tests the following options, which reflect those during the previous versions of the Local Plan:

* Option 1: Witney Focus
* Option 2: Three Towns Focus – Witney, Carterton, Chipping Norton
* Option 3: Dispersed but still including development at the 3 Towns
* Option 4: Concentration along transport corridors including expansion of existing settlements and/or new villages
* Option 5: A New Village

2.57 Additional housing growth options have also been tested and the site / policy specific options for growth including the SDAs (including the new ones at Eynsham).

2.58 When combined with the above options, the 3 town strategy (Option 2) is still regarded as being the most sustainable and we accept there does not appear to be any overriding issues as to why the Eynsham sites should not be identified.

2.59 However, we would have expected to see a greater number of potential options relating to the spatial distribution of development being considered in light of the need to meet Oxford’s unmet needs as part of this Local Plan Sustainability Appraisal (notwithstanding the findings of other reports undertaken by Oxford). Indeed, we would have assumed a greater number of potential surrounding Rural Centre’s might have also been the focus of an assessment.

Testing Options in the Sustainability Appraisal for Growth at Chipping Norton

2.60 A further concern is the distinct lack of alternative options that have been considered through the SA for the direction of growth related to Chipping Norton. Only Tank Farm has been assessed. This compares to the approach taken for Witney where 6 options are tested including a ‘multi-site’ option (paragraph 3.8). The same
2.61 At paragraph 3.10 the following is stated: Directions of Growth at Chipping Norton: One strategic option (East – Tank Farm) has been considered through plan-making and tested through SA since 2010. Taking into account the Inspector's Preliminary Findings [INF015 & 016] and updated evidence indicating the need for an uplift in housing, this option was reconsidered by including a wider site area to accommodate further homes increasing from 600 to 1,400 dwellings plus the provision of 9 ha of employment land. This option was subject to detailed SA in February 2015 Appendix V [CD2] and the SA findings remain relevant and valid. The implications for the uplift in housing and employment land provision are considered in Section 4 of this SA Addendum Report.

2.62 Indeed, no other options for growth at Chipping Norton have been considered by the Council through the SA. Even at paragraph 3.14, where it is confirmed that the SA has considered 15 non-strategic sites (300 dwellings or less), none of these sites are within or adjacent to Chipping Norton. As one of the 3 principle towns, we would have expected such an assessment to have been carried out particularly in light of the scale of growth that Tank Farm is now expected to accommodate and the fact that the Local Plan inspector explicitly stated it was highly likely additional housing allocations would need to be identified for Chipping Norton.

2.63 Even the findings of the SA within Chapter 4 confirm many of the impacts of the Tank Farm proposal/policy are uncertain until further master planning is carried out. It is noted the potential loss of allotment spaces will be a significant impact. We are also unable to pay little regard to comments that suggest: 'positive effects for community SA objectives are strengthened as the larger scale of development could provide further green infrastructure – to be detailed in masterplanning.'

2.64 As we highlight in Section 4, there are serious issues with the ability for Tank Farm to accommodate 1,400 homes on the site as well as the other benefits that are being suggested in the policy. For this reason, other sites should have been tested irrespective of whether [TRUNCATED FOR EXCEL].

We believe the submission draft of the Local Plan, including proposed modifications, does not, but should, have explicit regard and reference to the potential impact of the housing developments on the viability and capacity of existing local schools.

For example, with specific reference to the proposed development of 1400 homes in the defined North Witney Strategic Development Area, the existing modification 103 (policy WIT 2) to specify the education solution for this Strategic Development area as being the development of WCP school, or a new 2FE school on site, does not have regard for, nor express any consideration of, the potential short and long term implications and impact of this proposal to Hailey School and, consequently, the sustainability of the Hailey parish community and infrastructure.

This appears to be in direct conflict with other references in the WODC Local Plan to protecting existing community facilities and infrastructure, improving rates of educational achievement, protecting and enhancing local employment opportunities, and employing sustainable transport strategies that minimise carbon emissions, among others.

The draft Plan also makes reference to the pressure schools are under already for pupil places with an acknowledged issue (pg 22) being “generally limited or no spare capacity in existing primary schools”. As various small, and initial phases of larger developments come on line, there will be children and families in immediate need of education before the new schools are built. We note with alarm the implications of this which could include “bulge” classes, or even imposition of additional temporary accommodation. Indeed,

<td>General Comments</td>
<td>latest Pupil Plan (2016-2020) specifically cites these “solutions” as matters stand. Such unplanned and unmanaged reactive solutions could have serious consequences for the wellbeing of pupils and staff at a school, the quality of the education able to be provided, and also to the neighbourhood around the school, as transport and other infrastructure would not be in place to manage the additional capacity. Unlike many other Witney sub-area schools, with the right investment Hailey School does have the space to increase its capacity from a half to one form entry. We believe the Local Plan should consider opportunities to utilise existing schools like Hailey School to deliver proactive, planned and managed solutions for the infrastructure needs associated with developments. In our case, there is a need to understand the impacts on, and opportunities presented by Hailey School, for the developments across the wider Witney sub-area. There is currently no consideration of this in the draft Plan. For these reasons, we do not believe the submission draft, including proposed modifications, is sound, legally compliant or meets the duty to co-operate as it stands.</td>

<td>General Comments</td>
<td>The Parish Council generally welcomes the Draft Local Plan on the basis that, when approved, it will provide a more settled background for the assessment of future planning applications. The current draft is in its overall emphasis an analysis of future housing needs and land availability. For it to be a Local Plan, properly defined, it would need to take a holistic, integrated approach to the relevant enabling issues that would make the achievement of the housing plan possible. These are mostly infrastructure issues such as transport links and upgrades to capacity, educational and medical facilities and their ability to cope with greatly increased demand, parking, road safety, clean air and other related issues. Importantly little consideration is given to employment available to the occupants of the newly available housing. Most of these</td>

MM412 has a 20+ year resident in Woodstock; and for me these changes pile Pelion upon Ossa of rural vandalism, obliterating acre upon acre of pristine greenfield sites with the wrong houses in the wrong places for the wrong people at the wrong prices. This kind of developer-driven cynical opportunism, exploiting temporary loopholes in the broken-down NPPF system, catering for weekending bankers and mansion-seeking Mayfair retirees, does less than noting for the homeless or even the ‘barely coping’. The districts must rebel full-frontally against the intolerable abuse of the broken NPPF and demand an ‘emergency break’ to over-rule Inspectors who approve large schemes opposed by planning authorities and trying to creep under the radar because of bogus ‘housing supply’ calculations based on arbitrary and baseless numbers generated by the developers themselves masquerading as the unelected Local Enterprise Partnerships. This has degenerated into a naked racket respected by no one and bringing despair to all Oxfordshire residents and indeed to all others except developer shareholders who live somewhere else. Please call a stop now. Do not get bogged down in legalistic planning mumbo-jumbo. Speak instead for people, especially those who elected local councils to defend and protect their homes, their communities and their environment. |

<td>MM415</td>
<td>Stonesfield Parish Council</td>
<td>Ms Hill</td>
<td>917</td>
<td>&gt; General Comments</td>
<td>matters are dealt with as an add-on afterthought which detracts from the value of the draft plan. The need for more housing is well understood and there is awareness of Central Government’s housing policy but the Parish Council is concerned about inaccuracies of the draft plan. The Local Plan was first prepared in 2011 and with the passage of time the two paragraphs which specifically refer to Stonesfield are incorrect. Para 9.6.2 states: Stonesfield has a population of 1500; this was no doubt taken from the 2011 census which is 1527. However, since 2011 about 80 homes have been completed or are in the process of completion during the next year. Consequently the population will rise accordingly to approximately 1700. Para 9.6.7 states: Stonesfield has seen considerable consolidation of development in the past with redevelopment of farmyards and conversion of barns for housing primarily during the 1980s and there has been only limited new build in recent years as few opportunities remain for residential development. The second part of the previous sentence fails to recognise that since the 2011 census and by the end of 2017, as stated above, some 80 new homes will have been completed. 33 of these are affordable, self-build or social housing. The revised numbers are partly included in the amended table 9.5. The paragraph ignores the fact that the preschool is over-subscribed and the primary school will be full when all current builds are complete. It is recommended that the 2 paragraphs are amended to reflect the current situation and read: Para 9.6.2: Stonesfield will have a population of 1700 by the end of 2017. Para 9.6.7: Stonesfield has seen considerable development in the past, with redevelopment of farmyards and conversion of barns for housing, primarily during the 1980s. Since the 2011 census and by the end of 2017 some 80 new homes will have been built. 33 of these are affordable, self-build or social housing. The preschool is over-subscribed and the primary school will be full when all current ongoing building is complete. If the 2 inaccurate paragraphs in the plan are amended to reflect the current situation the new scheme under consideration on land north of Woodstock Road to allow another 68 homes – 18 more than quoted in the draft Plan - is questionable. There is also the probability of 10-30 units – quoted as flexible – on land at North Farm. The village has exceeded any reasonable obligation to provide new homes and further builds will seriously over-develop this relatively small settlement placing a significant burden on facilities, resources, infrastructure and amenities within Stonesfield. On this point, the draft plan states certain criteria should be met, three of which are listed below: …be well located to the highway and public transport network, as well as having safe and convenient vehicular, cycle and pedestrian access to local services and facilities, especially schools, shops and healthcare …be of an appropriate location and scale not to have an adverse impact on environment or heritage assets and the character and appearance of the surrounding area.</td>

| MM416 | Witney Town Council | Witney Town Council | Mrs | Groth | 919 | > General Comments | ..not conflict with the objectives of Green Belt or AONB designation.

On the first point, Stonesfield is only served by an hourly bus service which plies between Oxford and Charlbury; we lack footpaths and cycle ways, have one village shop, a failing public house, bus journey to doctors' surgeries and no street lighting.

On the second and third points a reminder is given that Stonesfield is a sensitive area, falling entirely within the AONB as acknowledged in the plan and as such any development within or on the edge of the village will need to be judged against the national policy considerations.

To conclude the necessity of this plan being passed is essential to curtail further speculative developers but it is hoped our concerns are given full weight when preparing the final copy for the inspectorate. |
| MM46 | Ramsden Parish Council | Ramsden Parish Council | Mr | Gammage | 96 | > General Comments | Comments from Ramsden Parish Council with points 1 and 3 relating to Ramsden and points 2 to 6 relating to the plan in general.

1) Ramsden is a small village and any future development, in such villages, should be appropriate in size.

2) There is a need for housing and affordable housing needs to be part of the overall plan. For example, a few years ago Ramsden PC supported an appropriately sized development (6 social houses) in the Parish.

3) AONB and Conservation areas should be protected.

4) Large developments should include improving the infrastructure at the developers expense and contain an element of affordable houses.

5) Approvals for larger developments should insist that all houses are built promptly. This is to avoid developers building up a large land bank for future development and consequently pushing up the price of housing.

6) All future developments should conform to high energy saving standards. |
Whilst the introduction sets out words relating to the importance of maintaining the special character of the region, based on concerns that have been raised, these appear to be hollow words of appeasement as the remainder of the draft plan fails completely to take any notice of this need. In addition, the underlying assumption of the planning inspector in terms of housing demand has been accepted verbatim without further analysis. This housing demand is based on forced growth targets and resultant people migration projections which were set pre Brexit and even then were highly questionable and totally undemocratic. The surprise Brexit vote and the current uncertainty of what that means for Britain, including the down projections of growth from the Bank of England and including statements from government suggesting the likelihood of a reduction in net migration, mean that any pre-Brexit targets and projections are now null and void. This means that the local planning process needs to go back to the first step, which is revision of targets based on post Brexit scenarios.

In terms of legal compliance, whilst the council has gone through the steps of the legal process, in terms of local consultation, there is an underlying assumption in the legal need to consult which is that significant issues resulting from that consultation will be addressed. Whilst there are words added in to the plan to recognise and in many cases affirm these issues, the actual plan fails to address them - either to apply effective mitigations or to conclude that such mitigations are not required.

In addition, I believe that there may be a major legal non-compliance with the plan, in that the impact of NOx pollution from the proposed new developments has not been adequately addressed and that the new developments will result in increases to emissions in areas which are already exceeding legally binding maximum levels and will, as roads approach gridlock, result in additional areas exceeding legally binding maximum levels. The plan fails to take account of the levels of increase in emissions on roads and in particular, fails to take account of the non-linear increase in emissions caused by congestion. Traffic moving in congestion emits several times more pollutants per cubic metre than the same volume of traffic moving freely. In addition, the plan fails to address the further increase in NOx emissions from the increase in central heating systems in the newly proposed housing where this adjoins already high NOx transportation routes. A report on the London Atmospheric Emissions Inventory http://tfeip-secretariat.org/assets/Meetings/Presentations/Ghent-2014/KKing-London-Domestic-Boilers.pdf estimated that 16% of NOx levels were due to domestic boilers. I therefore expect that with the increase in traffic burden, increase in congestion and increase in domestic NOx outputs, that the revised local plan, if enacted, would result in the council approving development that would directly lead to the breaching (and further breaching) of legally binding pollution levels.

It appears that the council has rolled over as a result of pressure from the planning inspector, based on outdated and forced growth targets. In doing this, the council has ignored its democratic responsibility as elected representatives of the local population. It also appears that the council has included words of thinly guised protest within the draft plan, however, as elected representatives of the local residents we look to the council to fight unreasonable demands, not to roll over and include fruitless words of protest.

Until the major issue of overall target setting is resolved and until the major issue of lack of addressing the local residents concerns is addressed, there is little point in commenting on the further details of the plan.

> SECTION 1 - INTRODUCTION  
> MAIN 2  
Main Modification (MM)2 of the draft plan confirms that an Area Action Plan (AAP) is proposed for Eynsham to address the issue of unmet housing need arising from Oxford City. As we will identify later in these representations, whilst not objecting to the principle of strategic development at Eynsham, concern is raised regarding the quantum of housing which is deliverable within the Plan period to 2031. The Council’s Local Development Scheme does not refer to the timetable for the preparation of this document. This introduces a further stage of plan making which may affect the timescale for the delivery of the strategic site, which the Council assumes will commence from 2021 onwards. This timescale will be challenging assuming adoption of the AAP is required before West Oxfordshire determines the relevant planning application. There are also massive infrastructure requirements, including a realignment of the A40 (required to maintain support from Eynsham Parish Council), and the power network in this area is wholly inadequate.

**MM752**  
Bloombridge Bloombridge Mr Cutler 1866

**MM751**  
Goldfield Estates Goldfield Estates - - 1871  
> SECTION 1 - INTRODUCTION  
> MAIN 2  
MAIN 2 Para 1.18 states an Area Action Plan will be prepared for Eynsham. MAIN 49 POLICY E1 states that an AAP will be prepared for the Eynsham Garden village. We agree that an AAP should be prepared to guide the proposed Garden Village to the north of Eynsham to guide this strategic mixed use development. However we consider that the Local Plan should make clear that the AAP will not include the allocation to the west of Eynsham, which proposed Policy EW1b states will be secured through a 'masterplan'. The proposed modifications make clear that the two allocations will come forward separately with the Garden Village being self-contained and the land to the West of Eynsham creating a residential extension to Eynsham.

For the reasons set out about in relation to early delivery and the also the scale of the allocation we do not consider that an AAP would be required to support the delivery of the land the West of Eynsham.

| MM61         | NP                      | Mr Pearce | 135 |  | &gt; SECTION 1 - INTRODUCTION &gt; MAIN 1 | On the contrary, it appears that WODC is over-cooperating. Why should Eynsham bear the whole burden of meeting Oxford City's unmet housing needs? As the &quot;Notes to Accompany the Model Representation Form&quot; say, these unmet needs should be met &quot;where it is reasonable to do so and consistent with achieving sustainable development&quot;. It is highly questionable whether WODC's plans for Eynsham are either reasonable or sustainable. WODC (and Eynsham) could instead offer to take on some of the burden (out of a duty to cooperate), while ensuring that it did not interfere with local housing and other needs, or damage local quality of life. Make a reduced offer. |
| MM741        | CPRE Oxfordshire Helen CPRE Oxon | Mrs Marshall | 1440 |  | &gt; SECTION 1 - INTRODUCTION &gt; MAIN 1 | It is important to understand that the SHMA is representative of only one version of the future, which may be unlikely. It should not be considered as an absolute and used to justify applications that will do significant harm. Therefore, CPRE would encourage an early review in case CPRE's concerns that the target is too high prove founded. The review should exclude an upwards adjustment, but consider whether the target does exceed the demand and need, as suspected by CPRE and indeed many. CPRE suggests an earlier review than the 5 year timeframe suggested in clause 1.7. Should the target prove to be above the need, then 'spare' allocations without permission could be dropped or carried over to the next Plan Period to avoid unnecessary harm moving forward. For sure, sustaining this level of growth beyond 2031 will be difficult. |</p>

<td>MAIN 1 – Paragraph 1.7 2.1. The landowners support the need for a plan to be regularly reviewed to ensure that it remains relevant. However, the reference of a review ‘typically every 5 years or so’ brings into question the robustness of the plan and the guidance in paragraph 157 of the Framework that plans should have an appropriate timescale, preferably of 15-years. Is the reference to a plan review in circa 5 years an admission that the plan is failing to meet its statutory duty of providing the required number of homes?</td>

<td>&gt; SECTION 1 - INTRODUCTION &gt; MAIN 1</td>
<td>MAIN 1, Para 1.6 Does not comply with duty to cooperate On the contrary, it appears that WODC is over-cooperating. Why should Eynsham bear the whole burden of meeting Oxford City's unmet housing needs? As the 'Notes to Accompany the Model Representation Form' say, these unmet needs should be met 'where it is reasonable to do so and consistent with achieving sustainable development'. It is highly questionable whether WODC's plans for Eynsham are either reasonable or sustainable. WODC (and Eynsham) could instead offer to take on some of the burden (out of a duty to cooperate), while ensuring that it did not interfere with local housing and other needs, or damage local quality of life. Make a reduced offer.</td>

</tbody>
</table>
and applied through local plan policies: for example, community democracy, Eco housing, travel by non car modes, high density housing to support public transport, green infrastructure (e.g. allotments), suitably rewarded employment, and pedestrian and cycle networks. The Draft Plan seeks, in principle, most of these injunctions.

1.11 Growth Board and generation of Housing Need allocations through the SHMA.

There are significant doubts about the methodology, assumptions, economic bias and democratic control underlying the aggregate county housing "need" and allocation between Districts.

Public participation is a crude ideological sham if the underlying housing and employment targets are not subject to public contribution, review and challenge at local plan public inquiry. How can the institutional bias and methodological weaknesses be subjected to rigorous evaluation?

The Plan's housing figures appear not to be objectively modelled forecasts, but economic value judgements of employers and developers. How can the posited housing need be twice as large as the previous transparently modelled forecasts of government offices?

<td>&gt; SECTION 2 - WEST OXFORDSHIRE IN 2016 &gt; MIN 20</td>
<td>MIN 20 Paragraph 2.50&lt;br&gt;In the SWOT table below paragraph 2.50 of the Local Plan, the Council identifies within the ‘Challenges’ section:&lt;br&gt;&quot;the delivery of historically high, for West Oxfordshire, housing targets given the local track record of the development industry&quot;. &lt;br&gt;We do not dispute the fact that meeting the housing needs of the District moving forward requires a materially higher level of housing delivery than has historically been the case (a low level of provision that has resulted in increases to the house price to income ratio, a ratio that was already much higher than the national average).&lt;br&gt;However, the above statement suggests that the problem of low housing delivery levels is the fault of the development industry. This is wholly unjustified and ignores the Council's fundamental role in this lack of delivery.&lt;br&gt;In a relatively high value area such as West Oxfordshire, developers want to build. This was demonstrated by the number of developer participants at the Local Plan Examination in November 2015. The primary reasons for low levels of historic housing delivery relate to the Council's failure to put in place an up to date Local Plan, and its consistent refusal of residential planning applications at the local level in wholly sustainable and appropriate locations (applications which are delayed substantially and then allowed at appeal). The Council must accept that it is part of the problem and work with the development industry, not blame it.</td>

</table>

It is indeed too soon to understand the implications of Brexit. For example, UKTI’s February 2016 report on ‘UK Financial Centres of Excellence’ noted that the ‘financial and related professional services’ sector accounts for 11.8% of GDP and employs over 2 million people, two-thirds of them outside Greater London. Exports account for 37% of the sector’s contribution to GDP, and 40% of the sector’s tax receipts come from international firms who have their European base in the UK. It is too soon to say whether the sector will emerge from Brexit stronger or weaker, but given the potential loss of revenue for the UK, and hence for public spending, if things go badly, would it not be more sensible to wait at least until after Article 50 is triggered, and preferably for another year or so, before making long-term financial commitments of this kind?

CPRE feels that the focus in Carterton should be to strengthen the core of the town. Therefore, CPRE is supportive of the release of REEMA Central for housing and of the intention to increase the density at REEMA North, yielding an additional allocation of a total of 300 more homes across the 2 sites. Therefore, CPRE supports clauses 9.3.5-9.3.6, 9.3.36 & 9.3.50.

However, the REEMA areas cover 146 acres in total. The last information from the MOD indicated that 742 SFA homes are needed, which at the usual JSP density of 12 per acre, will require 62 acres, leaving 84 acres spare. North and Central areas cover approximately 70 acres (22 at REEMA North and 48 at REEMA Central), so the allocation of 300 houses in addition to the existing 200 is modest, even accounting for some retail or leisure land. CPRE also feels that there is likely to be potential in other REEMA areas in the town and it now appears that past claims of increasing housing need generated by RAF Brize Norton were unfounded. The existing houses are at an approximate density of 6 homes per acre, as they are not well-planned.

Therefore, no further expansion of the town should occur until these sites achieve their potential and any future development in Carterton should be focused at REEMA. It is clearly preferable to development on open countryside and CPRE agrees with WODC that it will improve the style and image of the town. It is development that would lead to clear betterment and would be likely to be well supported in the community. In line with the need, mostly apartments and small homes should be built, with a few larger gateway properties for kerb appeal. Some housing for the elderly would be beneficial. That means that the density could be relatively high, in line with most town centre developments. It would not be unreasonable to expect a density of 20-30 per acre or 50-75 per ha to be achieved in line with other mixed developments in the area, giving a total potential of at least 1,680 homes in REEMA North and Central areas alone, based on 50 units per ha.

In fact, Carterton has the least infrastructure and facilities of the three main towns and lags behind in terms of employment opportunities, as noted in the Draft Local Plan clauses 2.26, 9.3.10, 9.3.39 & 9.3.42. There is a pre-existing imbalance between numbers of jobs and homes/workers, meaning that out-commuting is high. It’s the furthest from Oxford and has no A road access. There is mention in 9.3.15 and 9.3.67 of upgrading the B4477 in Brize Norton to an A road at a cost of £3.9M, but clauses 7.48 & policy T2 are vague...

<td>about funding. It appears that there is no firm commitment or allocated funding. It is not clear either where the £7.2M for westbound slips onto the A40 will come from at Minster Lovell. Carterton should not therefore be seen as the obvious place to put any houses that other areas do not want, as has been suggested by some. If a significant number of houses were moved from Witney to Carterton, Carterton would encounter significantly more growth per capita than Witney. Carterton could not sustain such growth without further major incursion into open countryside in neighbouring parishes (over and above that already caused by Shilton Park, Carterton North and Carterton East in Brize Norton and Shilton Parishes), which CPRE considers unacceptable.</td>

<td>&gt; SECTION 2 - WEST OXFORDSHIRE IN 2016 &gt; MIN 14</td>
<td>MIN 14 Paragraphs 2.30-2.33 Paragraphs 2.28-2.33 summarise transport matters in the District generally. Reference is made to the relationship of the District with Oxford city and the two main rail lines (the Cotswold Line and the Cherwell Valley Line). In terms of bus provision, reference is made to Witney and Carterton together with the good services in the ‘Woodstock area’. We assume that the reference to ‘the Woodstock area’ is intended to refer to the Eynsham – Woodstock Sub-Area as defined in the Local Plan – an area that also includes the Rural Service Centres of Long Hanborough and Eynsham, with the former providing not only good access to bus services but also access to Hanborough Station, one of the largest and the most well-used stations in the District providing services to Oxford and beyond. On this assumption, paragraph 2.32 should be amended accordingly for the purposes of clarity and consistency with the Council’s own evidence.</td>
</tr>
</tbody>
</table>
2.29. It must be clarified that commuters travel by car to all parts of the Oxford city conurbation, and not all to the city centre. Travel by car is the only realistic option for many commuters because there is no likelihood of direct public transport to major employers, such as the hospitals for example.

2.30. NB. The Cherwell valley line barely skirts the WODC region and should be discounted from this plan. It is not relevant. Trains on it at infrequent and not suitable for any form of regular commuting.

2.31. The Cotswold line is operating close to full capacity at peak times, and regularly operates as standing room only. Given the single line nature there is no capacity for additional frequency. The likelihood of any line upgrade before 2031 is almost completely impossible. Even before the chancellor’s autumn statement of 2016 the electrification of the main line from Paddington even as far as Oxford was severely delayed until at least 2024, and now we know that there is no money available for other works to other regional lines. Travelling the 20minutes journey through already heavily congested roads to Oxford Parkway will achieve one thing. Even worse congestion and further damage to air quality.

2.32. Therefore any and all further housing might best be considered close to the main bus stations in Witney or Carterton, or otherwise considered unsustainable.

It is of note that clause 2.40 indicates that road deaths and injuries are worse than the national average in West Oxfordshire, indicating that we have a higher than average number of accident blackspots / junctions that are dangerous.

Although the 'Older Persons' sub-section within Section 5 ‘Providing New Homes’ identifies that West Oxfordshire has a rapidly ageing population (at 25.8% the percentage increase in the number of older people in West Oxfordshire between 2001 and 2011 was over double the national average of 11% - ONS, 2001 and 2011 Censuses) this is not mentioned within the ‘Health and Well-Being’ sub-section in ‘West Oxfordshire in 2016’.

As the Director of Public Health Annual Report 2016 identifies the growth in the number and proportion of older people in the population as the biggest challenge to health and to services in Oxfordshire it is strongly recommend that this is included within 'Health and Well-Being' sub-section in 'West Oxfordshire in 2016'.

In addition to promoting lifetime homes developers should also be asked to consider how high quality public space can help people to maintain their independence into older age e.g. safe and convenient walking routes to local facilities and amenities with level non slip surfaces, benches and good natural surveillance etc.

2.1 As set out in the supporting settlement hierarchy to the policy the top tier of settlements
2.2 We continue to support the Council's settlement hierarchy in this respect. The Policy itself advises that:

"A significant proportion of new homes, jobs and supporting services will be focused within and on the edge of the main service centres of Witney, Carterton and Chipping Norton. A number of site allocations are proposed to ensure needs are met. Further allocations may be made through Neighbourhood Plans."

2.3 We support the recognition that Chipping Norton is a suitable location to accommodate additional development. The Council's updated Settlement Sustainability Report (November 2016) which is published in support of the consultation classifies Chipping Norton as the second most sustainable settlement in the District (weighted and unweighted).

2.4 Our comments in relation to Chipping Norton itself are set out with regards to the section of the Plan dealing with the Chipping Norton Sub-Area itself and as such are not repeated here.

| MM455      | Commercial Estates Group| Commercial Estates Group | - | Commercial Estates Group | 1108 | > SECTION 2 - WEST OXFORDSHIRE IN 2016 > MAIN 3 | Paragraph 2.5  
As identified within our detailed representations to Policy OS2, we object to the removal of Long Hanborough as a Rural Service Centre. This change is wholly unreasonable, unjustified and is not supported by the Council's own evidence and is, therefore, demonstrably unsound.  
Paragraph 2.5a  
We do not object to the proposed allocation of the new Garden Village at Eynsham as a matter of principle. However, as set out in more detail in our more detailed representations to Policy OS2, the downgrading of Long Hanborough to a 'Village' is not justified by any available facts or evidence. The Council's position seems to be that there can only be a finite number of Rural Service Centres and, accordingly, that the proposal that the new Garden Village should, in time, become a Rural Service Centre somehow requires the downgrading of an existing Rural Service Centre. This is clearly flawed logic. There can of course be as many Rural Service Centres as meet the Council's relevant criteria as set out in its Settlement Sustainability Reports. Even if there were only a finite number (which is clearly wrong), as set out in our representations to Policy OS2 logic would clearly dictate that the Rural Service Centre to be downgraded would be that identified by the Council to be the least sustainable i.e. Bampton. |
| MM741      | CPRE Oxfordshire         | Helen CPRE Oxon | Mrs          | Marshall          | 1455     | > SECTION 2 - WEST OXFORDSHIRE IN 2016 > MAIN 3 | The A40 has undergone improvements, but queueing starts way back from the Wolvercote roundabout, so CPRE doubts whether the extra traffic from the planned development at Eynsham as noted in clauses 2.5a & 2.9, on top of the 18% of workers elsewhere in the District in existing and new households, can be accommodated. It is not clear within OCC's current consultation on the bus lanes and park & ride at Eynsham, whether the full planned growth in West Oxfordshire is accounted for as detailed figures are not provided. It is of note that OCC's consultation paper clarifies on p.14 that even with the improvements, car queueing time will not reduce, because traffic increases match improvements. We will therefore be no further forward. |
| MM722      | Graham Flint             | Mr             | Flint          | 1643              | > SECTION 2 - WEST OXFORDSHIRE IN 2016 > MAIN 3 | The proposal to remove Long Hanborough from the Rural Service Centres and designate it as a village is unsound for the following reasons:  
1. Its long history as a Service Centre  
Long Hanborough has been designated as a Service Centre for a long time. It is designated as a Service Centre in the West Oxfordshire Local Plan 2001 - 2011 (Figure 5.2) and was proposed to be designated as a Rural Service Centre in the submission West Oxfordshire Local Plan 2031 (Table 4.1.). The National Planning Policy Framework (NPPF) requires that 'the plan should be the most appropriate strategy, when considered against the reasonable alternatives, based on proportionate evidence,' (para 182) and the Council has long accepted that there is sufficient evidence to justify the designation of Long Hanborough as a Rural Service Centre. |
2. Wide range of services and facilities

There is ample evidence that Long Hanborough has a wide range of services and facilities and therefore merits its Rural Service Centre status. These include a new spacious doctors’ surgery for which planning permission was obtained in July 2016 and which will be provided as part of the residential development on the land south of Witney Road granted planning permission under appeal ref: APP/D3125/W/15/3129767. The new doctors’ surgery is required to be provided under conditions 15 & 16 of the permission within 2 years of commencement of the development and to remain in that specified use. This will replace the current cramped doctors’ surgery, which is well below NHS England standards of provision for the population it serves, and not only improve facilities for existing residents, but also provide the capacity for the provision of more homes in Long Hanborough. Other services and facilities include a primary school; petrol station; churches; post office; two Co-op food stores; dental practice; playing fields; spacious village hall; nursery; beauty salon; two public houses; fish and chip shop; substantial employment estate (circa 10.72 hectares) and a mainline train station (the Cotswold Line).

3. Close relationship to the Oxford and Oxfordshire City Deal and the 'Knowledge Spine'

A key part of the case for Long Hanborough to remain as a Rural Service Centre is its close relationship to the City Deal. The Oxford and Oxfordshire City Deal is part of the Government’s initiative to devolve powers locally in exchange for local authorities taking on responsibility for creating economic growth in their areas. The Oxford and Oxfordshire City Deal aims to promote growth by maximising the existing educational, pharmaceutical and science assets in order to promote Oxford and Oxfordshire’s status as a prosperous economic area.

The City Deal, is a cooperative venture, which will be delivered through the Oxford Local Enterprise Partnership (LEP) bringing together other bodies and institutions, including Oxford City Council, Cherwell District Council, South Oxfordshire District Council, Vale of the White Horse District Council, West Oxfordshire District Council, Oxfordshire County Council, Oxford Brookes University and Oxford University. The area of the City Deal is County wide.

The proposed development at Long Hanborough is very close to the ‘Knowledge Spine’ identified in the City Deal, which stretches from Science Vale, near Didcot to Bicester, with Oxford at its heart. Paragraph 9.5.11 of the Local Plan acknowledges this, stating that the proximity of the Eynsham-Woodstock sub-area to major employment growth areas ‘present a diverse range of opportunities within close distance including within the Oxfordshire knowledge spine suggesting the Eynsham Woodstock area has a positive role to play in terms of economic development.’ Two key proposed employment sites that are close to Long Hanborough, and which housing there would help to serve, are the Science Park at Begbroke, which Cherwell District Council has identified in its Local Plan 2011 - 2031 (adopted July 2015) policy Kidlington 1 for Accommodating High Value Employment Needs and the Northern Gateway, which adjoins the A44 at the northern edge of Oxford, which Oxford City Council has allocated in its Northern Gateway Area Action Plan (adopted July 2015) policy NG2 for up to 90,000 m2 of employment uses that directly relate to the
knowledge economy and include science and technology; research; bio-technology; and spin off companies from the universities and hospitals.

The City Deal commits the participating local authorities to accelerate the delivery of 7,500 homes across the county; and recognizes that the provision of quality housing close to the employment areas is fundamental to the delivery of innovation led growth.

The importance of housing provision to the achievement of the objectives of the City Deal is emphasized in the section on 'Planning for Development;' that states: 'The City Deal should enable further economic growth. However, this success has placed pressure on the local housing market. Oxford and Oxfordshire have overwhelming evidence that the lack of choice and availability of housing and affordable housing is a major barrier to growth. Oxford and other areas in the county are identified as among the least affordable locations in the country, and significantly ahead of London. The universities and businesses in the knowledge economy identify that housing is a significant barrier to the recruitment and retention of staff, including senior management and researchers. More housing is essential for the future of the knowledge economy in Oxford and Oxfordshire. City Deal partners recognise that a more strategic and ambitious approach towards housing growth is essential to the future of the knowledge economy in Oxford and Oxfordshire, and will ensure that the area continues to be a dynamic place to invest and work.

The proximity of Long Hanborough to the 'Growth Spine,' and its ability to contribute to the City Deal further emphasizes the importance of it continuing to be designated as a Rural Service Centre.

4. Recent Rail Improvements & Further Improvements Detailed in the Main Modifications will enhance Long Hanborough's role as a Rural Service Centre

There is therefore absolutely no evidence to demonstrate that it should be downgraded to village status. In fact, the service centre role performed by Long Hanborough has improved in recent years due to the improvements that have taken place in the rail service with further improvements proposed.

The presence of the train station at Long Hanborough is virtually unique in West Oxfordshire. None of the three main settlements of Witney; Carterton and Chipping Norton has a train station and the only other service centre which has one is Charlbury, which is located within the Cotswolds Area of Outstanding Natural Beauty (AONB) where development is therefore constrained in accordance with the advice in the National Planning Policy Framework (paragraphs 115 - 116). At Long Hanborough there is a regular direct train service to Oxford, Didcot, Reading, Slough, London and Worcester with the journey to Oxford only taking ten minutes. This is of particular significance, as paragraph 9.5.34 of the Submission Local plan acknowledges that the Eynsham/Woodstock sub area, within which Long Hanborough is located, has 'very strong linkages with Oxford, with a high proportion of residents working in the city and much of the economic activity forming part of the wider Oxford city region economy.'

The proposed main modification 66 reinforces the importance of the Hanborough train station with paragraph 7.57(a) stating that: 'passenger growth on the Cotswold line has been significant with exceptional
growth at Hanborough (up 239%). It states that ‘There is the potential for further growth with the introduction of an hourly service in December 2018. New trains will bring increased capacity with additional seating and will also achieve faster journey times, with some services from Hanborough reaching London Paddington in 63 minutes.’

There are also proposals for further improvements with paragraph 7.57 (b) stating that:

‘LTP4 identifies a strategic aspiration to develop Hanborough Station as a transport hub to help reduce congestion on the A40 as part of an overall package of public transport measures. To fulfil its potential, the station will require a larger car park, footbridge and new platform so any trains extended from Oxford can terminate and turnaround. To fully realise the potential of the railway, further redoubling will be required at the eastern and western ends of the line, between Wolvercote Junction and Hanborough, and from west of Evesham towards Pershore. This would allow up to three trains per hour to Hanborough and/or Char/bury and two trains per hour between London and Worcester, with a journey time under two hours.’

These points are also reiterated in paragraph 9.5.16 which refers to Hanborough station as being ‘one of the District’s largest and most well-used stations. Car parking facilities have recently been expanded at Hanborough to improve capacity and there are aspirations for further station improvements,’ and then goes on to repeat the improvements outlined in paragraph 7.57 above.

Paragraph 9.5.34 also states that: ‘there is potential to develop Hanborough Station as a stronger transport interchange, with additional parking, and improved access from the south.’

These improvements will further improve the sustainability of Long Hanborough and mean that it is far more accessible by public transport, particularly to Oxford, than any other service centre in West Oxfordshire, apart from Charlbury, which is in the AONB. This constant reiteration in the Main Modifications of the importance of Hanborough station and the further improvements planned for it, prove that Long Hanborough certainly merits its designation as a Rural Service Centre.

The proposed Main Modifications, however, go on to state in paragraph 7.57c that:

‘In light of the proposed improvements to Hanborough Station a key element of the proposed garden village to the north of Eynsham will be the provision of improved connectivity between the new settlement and the station particularly by bus and cycle.’

Given, that Long Hanborough is located adjoining the station there is already excellent connectivity with the train station, with a pedestrian and cycle path through the settlement providing access to it. It is also located closer to the station than the proposed garden village. With the recent and proposed improvements to the station it therefore clearly performs the role of an important transport hub and should retain its status as a Rural Service Centre.

5. Scoring in the West Oxfordshire Local Development Framework Settlement Sustainability Report
The Council has prepared a Settlement Sustainability Report (November 2016), which gives weighted and unweighted scores. In both Hanborough scores above all of the villages, scoring the same as the Rural Service Centre of Bampton and 2 points more than Bampton in the Weighted Score. However, Long Hanborough’s position as a Rural Service Centre is even more significant than this indicates as there are three different positive indicators for a bus service which are:

- Daytime bus service;
- Evening bus service;
- Bus service every 30 minutes

However, for the train there is only one score for a railway station in the parish. At Hanborough Station there is an evening train service, with the last train arriving at 23.02. The train also only takes 10 minutes from Oxford station, giving Hanborough a high level of accessibility, so the rail service clearly merits a higher score than the unweighted score of 1 or the weighted score of 2.

With regard to the weighted score, there is a strong argument that having a railway station in the parish should result in a weighted score of 4 being given, as is the case where a Post Office; Shops; Primary School; Doctors’ Surgery and Local Employment Opportunities are present.

6. The Planning Inspector Philip Asquith who considered the appeal into the proposed residential development and doctors’ surgery on land south of Witney Road, Long Hanborough considered that Long Hanborough merited designation as a Rural Service Centre

The Inspector who determined the planning appeal relating to land south of Witney Road, Long Hanborough, (APP/D3125/W/15/3129767 & 12/1234/P/OP) also considered Long Hanborough to merit the designation as a Rural Service Centre, stating that:

49. ‘Long Hanborough is one of the nine larger settlements in the district classified in the WOLP as Service Centres. These, by definition, have a good range of facilities, services and transport accessibility to support their immediate communities as well as neighbouring hinterlands. This is confirmed by the Council’s Settlement Sustainability Report, revised in December 2013. The village is also defined as one of six Rural Service Centres within the emerging Local Plan 2031. The Statement of Common Ground between the appellant and the Council notes that Long Hanborough is a suitable location to accommodate significant residential growth. There is a range of local services, including a small business park adjacent to the station, which allows a proportion of travel demand (alternative to the car) to be met locally.’

50. The village is one of two settlements within the category of Main Towns and Rural Service Centres in the district to have a mainline station. The rail line provides direct services to London, Oxford, and Worcester.
...... It is apparent that there is a commitment to the introduction of new trains with greater capacity, with a longer-term commitment to increase the number of trains from Long Hanborough to Oxford, cut journey times to London and undertake enhancements to the station's facilities.'

Counter Arguments

There is therefore abundant evidence that Long Hanborough merits its Rural Service Centre designation.

There are two arguments against its designation which are the Council’s statement in paragraph 9.5.3a that:

‘Given the residential schemes of 169 homes and 50 homes recently approved, the limited role of the settlement and its landscape setting, it is only suitable for very modest levels of further development.’

The other being the argument made in the officers’ report to Council on the 26 October 2016, (paragraph 5.9), that the proposed designation of the West Oxfordshire Garden Village would mean that there would be too many Rural Service Centres in this part of Oxfordshire.

 Neither of these arguments is considered to be a valid reason to remove Long Hanborough’s status as a Rural Service Centre. In the first place the Council is itself proposing in the main modifications to designate two additional sites at Long Hanborough for residential development, these being land at Myrtle Farm, Long Hanborough for 50 homes under policy EW1 f and the other being land at Oliver’s Garage, Long Hanborough for 25 dwellings under Policy EW1 g. There is also land north of Witney Road, Long Hanborough, which is on the opposite side of the road to the 169 dwellings granted approval on appeal, which could be allocated for residential development without a significant impact on its setting, as the issues are very similar to those relating to the land south of Witney Road. (Further consideration is given to this issue in the representations submitted in relation to Main Modifications 27; 160; 170; 171; 172, 173, 174 & 175 seeking the designation of this site.) It is therefore not considered to be true that Long Hanborough ‘is only suitable for very modest levels of further development.’

With regard to the argument with regard to the proximity of the West Oxfordshire Garden Village, this argument is made in the officers’ report to Council on the 26 October 2016 which stated in paragraph 5.9 that:

It is recommended that the proposed Garden Village should be identified as a future rural service centre. The Garden Village would then replace Long Hanborough which would no longer be a defined rural service centre. This reflects the significant scale of development proposed in the Garden Village, the key role it will play as a transport and business hub, and the relatively limited scope for further development in Long Hanborough. It also avoids an over concentration of rural service centres in this part of the District.

However, there are two reasons why it should not replace Long Hanborough as a Rural Service Centre. One is that the proposed Garden Village site currently consists of fields, with no services and facilities and is not therefore a Rural Service Centre. Indeed, given the significant planning issues; funding and infrastructure
that is required for a new settlement, the West Oxfordshire Garden Village may never come to fruition or may develop much more slowly than currently envisaged and so not perform a Rural Service Centre function during the entire plan period. Even on the most optimistic trajectory it is clear that it will not perform the role of a Rural Service Centre for many years.

Secondly it will effectively form an extension to Eynsham. Indeed, paragraph 9.5.40r of Main Modification 153 states that:

‘By ensuring good links across the A40 (e.g. an iconic feature bridge as suggested in the Council’s Garden Village expression of interest) existing residents of Eynsham to the south will be able to access the Garden Village to enjoy the services, facilities and amenities it will offer. Conversely, residents of the Garden Village will be able to access Eynsham and its services and facilities, thereby playing a complementary rather than a competing role.’

It will therefore effectively form an extension to Eynsham, in the same way that other settlement extensions such as the Littlemore Science Park and Blackbird Leys or Barton form part of Oxford, notwithstanding their separation from other parts of the city by the A4142 and the A40 respectively.

Indeed, by designating it as a separate Service Centre means that there would be two contiguous Service Centres. It makes much more sense to have Eynsham and the proposed Garden Village as one Rural Service Centre and Long Hanborough as another, as Long Hanborough serves a different area of the District to Eynsham.

**Conclusion**

For the reasons set out above it is considered that Long Hanborough is a highly sustainable location for development and therefore the designation of Long Hanborough as a Rural Service Centre, as proposed by the Council in the original submission West Oxfordshire Local Plan 2031 ‘is the most appropriate strategy when considered against the reasonable alternatives’, (NPPF, para 182) based on the Council’s own evidence base and that it would be wrong for it to be downgraded to a village.

<td>1788</td>
<td>&gt; SECTION 2 - WEST OXFORDSHIRE IN 2016 &gt; MAIN 3</td>
<td>2.1 It is proposed that Long Hanborough should no longer be designated as a Rural Service Centre but should be reclassified as a Village. Long Hanborough has a population of 2,400, has a good range of services and facilities and importantly has a railway station on the Cotswold Railway line providing access to Oxford and London. The Local Plan proposes two housing allocations within the settlement for 50 and 25 dwellings respectively and there is an existing planning permission for 169 dwellings. Gladman considers that Long Hanborough is an eminently sustainable settlement (one of the few in the District with a train station) which has the capacity to accommodate further growth and that there is no logical reason for it not to be classified as a Rural Service Centre.</td>

<td>We do not believe that the Garden Village proposal at Eynsham is an appropriate measure for delivering the unmet need for Oxford. It is based on an ambitious timescale for delivery and given that the Government’s announcement for the results of Garden Village proposals has not yet been announced (MAIN 17 references an application for funding), it is unclear how and whether the council will be able to deliver the scheme if the site is not selected of the Locally-led Garden Villages. The anticipated delivery numbers in the bid document are also unrealistic. It would be more appropriate to deal with the objectively assessed need and allocate development to settlements that can deliver homes across the plan period in a more effective manner. MAIN 3, 9, 15, 16, 17, 23, 24 and 27 should be reconsidered and amended accordingly.</td>

<td>OXFORDSHIRE IN 2016 &gt; MAIN 3</td>
<td>Proposed modification- Downgrading of Long Hanborough: The proposed modifications involve the downgrading of Long Hanborough from a service centre, to a lower order village. This change pertains to numerous modifications, we therefore set out our response below which we wish to be considered in response to the following modifications: MAIN3, MAIN13, MAIN14, MAIN15, MAIN59, MAIN66, MAIN145, MAIN149. Detailed comments particular to each modification are set out in detail against the relevant reference in following sections. We object to proposed modifications which suggests the downgrading of Long Hanborough from a rural service centre to a village. The submission plan confirmed the rural service centres were classified as such because they benefitted from a range of services and facilities which supported the village and surrounding area. They are able to support additional homes in the short-term, while proposed growth can enhance the role of the settlement in supporting the surrounding rural area (paragraph 4.18). This approach was directly in line with the plan’s objective 1 ‘strong market towns and villages’ and objective 4 ‘sustainable communities with access to services and facilities’, both of which remain un-modified. Long Hanborough retains the same services and facilities which existed at the time the plan was submitted, furthermore planning permission has been granted which allows significant expansion of the primary school (15/03341/FLU). While additional housing has been permitted no evidence has been produced to suggest additional homes would result in any harm to the character or sustainability of the settlement. The village therefore remains well placed to fulfil the role of a rural service centre.</td>
</tr>
</tbody>
</table>
The downgrading of Long Hanborough proposed through modifications is largely unexplained and not supported by any evidence. The Council cite the creation of a ‘new’ service centre through the northern expansion of Eynsham as justifying the downgrading of Long Hanborough as the new development will need to “develop a critical mass of services and facilities” (paragraph 2.5a).

We are concerned the Council’s explanation suggests an intention to restrict the development of Long Hanborough and reduce services in the village in order to encourage their replacement in the new development. A restrictive approach to development stifling an existing sustainable settlement and vibrant community is clearly at odds with the Plan’s vision, policies of the NPPF and good planning practice.

The provision of an additional service centre would be entirely in line with the Plan objectives. If the development proposed north of Eynsham is to proceed it is clearly preferable that Long Hanborough maintains its status as a service centre complementing any new facilities created. The need to retain the service centre is particularly pronounced due to the unclear deliverability of the proposed site north of Eynsham, even if the site is delivered this will not be until the latter part of the plan period, therefore there is a need for services and facilities in the interim.

The submitted plan set out clear objectives which the following policies sought to deliver sustainable communities. The Council seeks to deviate from this approach without explanation, evidence or proper assessment, we therefore believe this modification should be deleted.

Proposed modification - Expansion of Eynsham: The proposed modifications introduce a significant strategic development to the north of Eynsham to meet Oxford City’s unmet housing need. This change pertains to numerous modifications, we therefore set out our response below which we wish to be considered in response to the following modifications: MAIN3, MAIN7, MAIN9, MAIN13, MAIN14, MAIN15, MAIN23, MAIN24, MAIN27, MAIN58, MAIN60, MAIN149 Detailed comments particular to each modification are set out in detail against the relevant reference in following sections.

The same modification seeks to introduce the new strategic development north of Eynsham. The proposed development is of a strategic scale in a location which previously only saw limited development. The strategic area has been newly introduced at the examination stage, rather than through the extensive consultation process which should inform fundamental decisions in plan making.

The proposed ‘Garden Village’ is a strategic site suggested to be a new standalone settlement. Such a development is a clear departure from the submitted spatial strategy which emerged from the earlier consultation stages and was informed by the evidence base. The proposed new development is a clear departure from the proposed development plan, not a mere modification.

The proposed changes to the plan are so significant that they amount to a fundamentally different strategy to that submitted for examination. Should the Council wish to make such a fundamental change it should be done so through a new plan informed by a suitable evidence base and following a formal consultation.
process. To do otherwise would undermine the credibility of the plan and public confidence in the planning process.

A consequence of the limited considerations which have informed the introduction of the development area is considerable uncertainty as to the achievability of the proposed scheme. The site was previously discounted as unsuitable for development within the submitted SHLAA, no updated document has been published to revise this status. Noise impacts, segregation across the A40 and landscape impacts are all identified as being prohibitive to development. No information has been produced to demonstrate how these issues may be overcome, nor whether they are less pronounced at any other development site. Similarly the proposal was dismissed as not being realistic in the submitted SA, little is offered to justify such a fundamental change in stance.

Development strategy for the proposed site is deferred to a later Area Action Plan, we consider however development parameters must be set out and explored in order to ensure the proposed scheme is achievable. The Plan also refers to an expression of interest submitted to Government seeking to obtain Garden Village status for the development, unlocking funding streams to deliver infrastructure to unlock the site.

Although an expression has been submitted, no decision has yet been issued. In excess of 50 similar expressions have been made nationally, therefore Garden Village status is far from guaranteed. Proper exploration must be made as to the sustainability, suitability and deliverability of this site and essential infrastructure in the event it does not secure Garden Village status.

MAIN9: The propose modification identifies the proposed expansion north of Eynsham to be an ‘exemplar’ development with regard to design and environmental performance. The aspirations for the development are laudable, however only very high level initial assessments have been undertaken to establish whether this is deliverable, particularly in the context of the landscape previously considered vulnerable to development.

MAIN23: The proposed alteration to the wording from the ‘majority’ of development being delivered in the district’s towns, to a significant proportion, confirms the proposed expansion to the north of Eynsham to be a deviation from the strategy set out under policy OS2 in the Submission Plan. We consider the fundamental change of the strategy renders this a new plan, it should therefore be developed as such, rather than processed through modifications.

MAIN25: We welcome the proposed increase in housing provision within the plan to reflect the objectively assessed need set out in the Oxfordshire SHMA (660 dwellings per annum). Although the headline figure for housing provision is increased the means of meeting that need is somewhat unclear in the document.

The proposed site allocations fall someway short of the accepted housing requirement. Allocated sites and suggested windfalls total 11,545 homes, some 1,655 homes below the housing target for West Oxfordshire (13,200). Although not clearly stated it seems the Plan is reliant on a significant number of sites which have
The published housing supply position paper sets out the Council's assumptions on the deliverability of permitted homes. This is set against a backdrop of previous under-delivery in relation to the objectively assessed need, including in the initial five years of the plan period. The anticipated delivery of homes from larger sites (more than ten units) is particularly optimistic given the recent under-delivery of homes and the longstanding nature of several of the outline planning permissions.

The anticipated delivery figures (Appendix 1) do not appear to assume all planning permissions granted for larger sites will be implemented. The assessment of smaller sites makes a concession (9.1%) in acknowledgement that not all permissions will be implemented; an allowance for non-delivery of larger sites is also required.

While uncertainty exists as to the deliverability of a significant proportion of the required housing supply questions remain as to the soundness of the plan. Robust evidence should be produced to show the permitted sites can be relied upon to deliver homes, additional allocations should also be made to mitigate against any shortfall.

MAIN27: The allocation of non-strategic sites is welcomed and we believe imperative if the housing need of the district is to be satisfied. We are concerned that those sites allocated have not been selected through thorough testing, including consideration of all reasonable alternatives as set out by the regulations. As a consequence the soundness of the allocations and broader plan is in doubt.

We have raised our concerns with regard to the unpublished SHELAA earlier in these representations; those comments also apply to this modification. The fact that the plan preceded the assessment significantly undermines the credibility of the plan as an evidence based document as do shortcomings in the assessment.

We consider Long Hanborough to be a suitable location for development as it benefits from an excellent range of services and facilities, including a railway station. We believe additional development sites should be permitted in the village alongside those proposed in the modifications. The proposed development site at Tuckwells Pit, Church Road (SHELAA ref 225) is a suitable location for new development. It can sensitively accommodate new homes in a location which benefits from access to key services and facilities. A Landscape and Visual Impact Assessment has confirmed development of the site can have a beneficial effect on the landscape while the off-road cycleway on Main Road provides viable access to the railway station.

MAIN29: The proposed modifications seek to rely upon windfall development to fulfill the housing requirement at a rate of 125 homes per year. Although this policy is informed by previous delivery rates the published SHELAA suggests insufficient developable sites exist to fulfill that rate of development throughout the plan period. As the Council's own SHELAA suggests insufficient sites are available to fulfill the suggested windfall rate either the evidence, or the proposed strategy must be unsound.
Historic windfall delivery rates have been achieved in the district’s larger settlements including those designated as service centres. The proposed downgrading of Long Hanborough reduces the likelihood of homes being delivered in the village further reducing the chances of windfall housing rates being maintained. Although an alternative service centre is proposed to be provided this is for delivery within the plan period and therefore will not give rise to any windfalls.

MAIN59: The proposed emphasis on the desirability of locating development in locations with access to public transport is at odds with the modification suggesting downgrading Long Hanborough’s settlement status. The village is one of only two in the district which benefit from a significant railway station.

MAIN60: The plan identifies significant challenges upon the A40, particularly with regard to access to Oxford. Although several alleviation options are suggested none is carried forward in plan proposals which acknowledges necessary funding is not available.

The proposed strategic development area at Eynsham is suggested on the basis that alleviation of A40 issues could be provided, however their achievability is unknown. The uncertainty of delivery of necessary highway improvements calls into question the suitability of the proposed strategic development area. The Plan which relies upon this area to meet its portion of Oxford’s unmet housing need cannot be sound until the site is known to be deliverable.

MAIN66: The proposed modification underlines a success in the current plan period in encouraging use of railway connections in the district, particularly from Long Hanborough. The modification acknowledges the capability of the rail corridor to remove vehicles from the A40 as residents travel toward Oxford and London, and the desirability of increasing capacity of Hanborough station and the railway link.

The modification supports improvements to the rail connection and acknowledges the need to provide the proposed development north of Eynsham with connections to Hanborough station. It is perverse therefore that the plan seeks to restrict development in Long Hanborough as developments in the village could provide easy access to the railway station and contribute to providing enhanced services and facilities. We consider the village should retain its rural service centre status and consideration given to additional non-strategic allocations to make the most of this opportunity for sustainable development.

MAIN145: The proposed modification suggests Long Hanborough is not in a position to support significant levels of additional development, however no evidence is provided as to any particular harm which would arise from residential development over and above that in the plan.

The document identifies the opportunity in the village in enhancing sustainable transport options through improvements to the station, this presents scope for new homes to be developed with a tangible benefit for the district. No unique sensitivities are identified, we therefore believe additional housing development should be allocated (beyond that proposed) and windfalls encouraged in Long Hanborough.

MAIN149, 180: We welcome the acknowledgement in the modification of the potential for enhancement of
Hanborough Station as a transport interchange, however the proposed downgrading of the settlement is clearly at odds with this and undermines the aspiration for improvements. Such an approach is also at odds with the NPPF’s encouragement of environmentally sustainable development.

The modification suggests increased car parking at the station, whilst this could encourage rail commuters from rural areas it is clearly preferable to remove the need for car use altogether. Additional cycle parking should be provided and homes provided in locations which already benefit from access to the station by sustainable means.

New homes created in Long Hanborough would benefit from existing foot and cycle access to the station, therefore they could be delivered early in the plan period and support enhanced rail services without need for additional car journeys. To seek to restrict this undermines the aspiration of the plan.

The Council suggest the proposed northern extension of Eynsham could benefit from sustainable access options through creation of new foot/cycle routes from the south. These would be more distant than any point within Long Hanborough, furthermore their delivery cannot at this point be guaranteed. If the Council wishes to make the most of opportunities presented by rail routes from Hanborough permitting of additional development in the village is clearly the correct path.

<td>&gt; SECTION 2 - WEST OXFORDSHIRE IN 2016 &gt; MAIN 3</td>
<td>Para 2.5 Long Hanborough should be included in the Plan as a rural service centre. Long Hanborough has its own facilities and institutions, has fairly good bus links to Witney and Woodstock, and significantly has a railway station, all of which create conditions for allocated residential development, ideally bridging the gap between the railway station and the village centre. The proposed Garden Village to the north of Eynsham is between 2-3 miles (depending on exact location) to Hanborough rail station, which is above comfortable walking distance for most people but acceptable for journeys by bicycle. The new Eynsham Garden Village connects with the A40 transport corridor, and particularly to bus routes to Oxford, both along the A40 and along the B4044 routes to Oxford and its rail station. It will be challenging to provide meaningful bus connectivity between the Eynsham Garden Village and Hanborough station, as there is no basis for a commercial bus service between these points. Conversely Long Hanborough residents can walk to Hanborough rail station, which is their natural rail-head, in exactly the same manner as in Charlbury.</td>

</table>
It is not considered that the 2,750 homes is an agreed, reasonable and proportionate division of Oxford City needs given that between 15,000 and 18,000 homes are to be distributed across the four Oxfordshire Districts.

In addition, if the annual housing requirement (the Districts own housing needs together with Oxford City needs) do not include for past backlog, any calculation of housing land supply will need to factor in the backlog and due consideration will need to be given as to whether a 5% or 20% buffer should be applied on the basis of persistent underperformance.

Furthermore, as drafted the Plan does not reflect the latest position within the wider Strategic Housing Market Area in the context of the Duty to Cooperate. A Memorandum of Cooperation exists between all of the Oxfordshire Authorities in the context of having to meet the needs of Oxford City which cannot be accommodated within the city boundary. The Oxfordshire Growth Board have been tasked with identifying housing needs in Oxfordshire and then agreeing distribution across the authorities. The Plan for West Oxfordshire has been drafted on the basis of taking 2,750 houses in accordance with the Memorandum of Cooperation however South Oxfordshire have not agreed to their proportion of housing as confirmed at the Oxfordshire Growth Board meeting on 27th September 2016.

This is significant and goes to the heart of soundness for two key reasons:

Firstly, the Duty to Cooperate cannot be said to be met when one of the parties with whom West Oxfordshire are seeking to cooperate with are not in agreement on the strategy for distributing unmet housing need from Oxford City. This in itself indicates that the Plan for West Oxfordshire cannot be sound; and

Secondly, In terms of housing numbers, South Oxfordshire were recommended as part of the Duty to Cooperate to accommodate 4,950 houses from Oxford City. This compares with 4,400 houses for Cherwell District, 2,200 for the Vale of White Horse and 2,750 houses in respect of West Oxfordshire. Thus, it can be seen that South Oxfordshire have not agreed to take these housing numbers is far greater than had the situation arisen in Cherwell District, Vale of White Horse District or West Oxfordshire District.

The consequence is that objectively assessed housing need are not being met in the housing market area until such time as either South Oxfordshire reverse their position and accept 4,950 houses arising from Oxford City; or the remaining authorities agree to take additional housing to reduce the amount that South Oxfordshire have to accommodate, to such a level that South Oxfordshire are prepared to agree to the housing numbers to be delivered in their administrative boundary.

There is no resolution to this matter and no indication from the Oxfordshire Growth Board Meeting of 27th September 2016 as to the extent of housing from Oxford City that South Oxfordshire District are prepared
to accommodate. There is no alternative strategy available to the local authorities in Oxfordshire and no easy solution.

Such are the implications arising from the wider Housing Market Area it is recommended that further work on the West Oxfordshire Plan, including progressing further with the Examination be put on hold pending resolution of these key issues at the heart of Oxfordshire and the West Oxfordshire Plan.

1846  
> SECTION 2 - WEST OXFORDSHIRE IN 2016 > MAIN 4

MAIN 4 Para 2.9 states:

"Importantly, this Local Plan seeks not only to meet the identified housing needs of West Oxfordshire District but also to make additional provision to accommodate a proportion of 'unmet' housing need that Oxford City are unable to provide for within their own administrative boundary."

We fully support this modification, we consider it important that West Oxford cooperates with its neighbouring Boroughs and seeks to accommodate the agreed shortfall from Oxford City Council. For the reasons set out above we support this modification.

We support MAIN 4 and all other modifications that note West Oxford District Council will help meet the wider housing needs and that Eynsham shall play a key part of this, as set out in MAIN 1. 2. 13, 14, 15, 17, 23, 24, 27.

> SECTION 2 - WEST OXFORDSHIRE IN 2016 > MAIN 4

Our client supports the modification of paragraph 2.9 which outlines that the Local Plan 2031 will now support additional housing provision to accommodate a proportion of unmet need arising from Oxford City. Our client agrees with the principle of reflecting such additional provision in the emerging plan to better align the thrust of emerging policies with the agreed outcomes of the recommendations of the Oxfordshire Growth Board. The proposed level of housing delivery in the District should not be considered an absolute maximum, but instead should be viewed as a minimum target to assist in delivery of identified housing requirements. The Main Modifications document would therefore benefit from clarification on this matter.

---

Oxford University and Colleges  
-  
1986  
> SECTION 2 - WEST OXFORDSHIRE IN 2016 >

Ensuring that adequate provision for meeting Oxford's housing need is fully made and in a location that is sustainable in its relationship to the city is of central importance to the University & Colleges in order to address the affordability crisis in the city that is giving rise to difficulties in the retention and recruitment of staff and adversely impacting the local economy. The amendment at paragraph 2.9 is therefore supported.

| MM769         | Rivar Ltd               | Rivar Ltd       | Rivar Ltd        | Rivar Ltd         | 2013       | > SECTION 2 - WEST OXFORDSHIRE IN 2016 > MAIN 4 | Savills has been instructed by Rivar Ltd to submit written representations to the West Oxfordshire Local Plan 2031 Proposed Main Modifications document. These representations are made in respect of land at Marriott Close, Wootton-by-Woodstock.

The site at Marriott Close, Wootton-by-Woodstock comprises greenfield land to the west of existing built development. The existing development adjacent to the site is located outside of the main built up area of the village. Notwithstanding the site is well located to the village edge and represents a logical extension to the village. Planning history for the site is limited. Neighbouring land uses benefit from recent planning history for residential development at the adjoining site. The site has the benefit of positive previous pre-application advice relating to a similar proposal scheme sought from West Oxfordshire District Council in February 2015, and November 2016.

Rivar Ltd supports the modification of paragraph 2.9 which outlines that the Local Plan 2031 will now support additional housing provision to accommodate a proportion of unmet need arising from Oxford City. Our client agrees with the principle of reflecting such additional provision in the emerging plan to better align the thrust of emerging policies with the agreed outcomes of the recommendations of the Oxfordshire Growth Board. For reference, the proportion of Oxford’s unmet need allocated to West Oxfordshire was identified as 2,750 dwellings. Notwithstanding, this proposed level of housing delivery in the District should not be considered an absolute maximum, but instead should be viewed as a minimum target to assist in delivery of identified housing requirements. The Main Modifications document would therefore benefit |

in that it acknowledges that the Local Plan now includes additional provision to meet a proportion of the 'unmet' housing need arising from Oxford City, but which cannot be met within the city's administrative area. This is the correct approach and indeed necessary in order to meet the duty to cooperate following the meeting of the Oxfordshire Growth Board (OGB) on 26th September 2016 at which the proportion of Oxford's housing need to be met in West Oxfordshire - 2,750 dwellings - was agreed (with the exception of South Oxfordshire District Council).

Whilst generally supportive of the technical work and approach of the OGB, the University & Colleges identify that the 2014 SHMA specifies that the housing requirement for Oxford is between 1200-1600 dwellings per annum, with a midpoint of 1400, equating to between 24,000-32,000 over the 20-year Local Plan period with a midpoint of 28,000. The OGB however has taken as its starting point for Oxford's housing requirement as 25,000. On the basis that the urban capacity of the City is some 10,000, the unmet element of the city's housing need has been defined as 15,000 dwellings and it is this figure that the OGB has said should be provided in the adjoining authorities. There is therefore built into the OGB assessment a level of under provision of some 3,000 homes for Oxford compared with the SHMA midpoint.

The University & Colleges assess that the shortfall is not so great as to invalidate the work of the OGB and, on balance, that it is of greater importance that the Local Plan processes in Oxfordshire should proceed on the basis of the OGB work. In light of the shortfall, however, the conclusions of the OGB should be regarded as a minimum requirement for each of the adjoining districts and not an 'up to' figure. Policy H1 should express the housing requirement in these terms (See Main Modification 22 below).

</tr>
<tr>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td>Strong objections are raised in respect of this Main Modification. Particular objections are raised in respect of the level of unmet need from Oxford City being accommodated within the District. Paragraph 5.13 of the Plan sets out that a working assumption of 15,000 homes has been agreed by the Oxfordshire Authority's as representing the quantum of Oxfords unmet housing need which must be accommodated elsewhere within the Oxfordshire Housing Market Area. However, the actual unmet need as set out within the SHMA is a</td>
</tr>
</tbody>
</table>
range of between 15,000 – 18,000 homes. The District have applied a midpoint in applying the SHMA to the Districts own housing need and in the interest of consistency the same approach should be taken in respect of Oxford City’s housing needs. Furthermore, Paragraph 5.14 states that it has been agreed that West Oxfordshire will accommodate 2,750 homes in the period 2021 – 2031. This equates to 935 dwellings per annum when added to the Districts own housing requirements however this excludes past backlogs.

It is not considered that the 2,750 homes is an agreed, reasonable and proportionate division of Oxford City needs given that between 15,000 and 18,000 homes are to be distributed across the four Oxfordshire Districts. In addition, if the annual housing requirement (the Districts own housing needs together with Oxford City needs) do not include for past backlog, any calculation of housing land supply will need to factor in the backlog and due consideration will need to be given as to whether a 5% or 20% buffer should be applied on the basis of persistent underperformance.

Furthermore, as drafted the Plan does not reflect the latest position within the wider Strategic Housing Market Area in the context of the Duty to Cooperate. A Memorandum of Cooperation exists between all of the Oxfordshire Authorities in the context of having to meet the needs of Oxford City which cannot be accommodated within the city boundary. The Oxfordshire Growth Board have been tasked with identifying housing needs in Oxfordshire and then agreeing distribution across the authorities. The Plan for West Oxfordshire has been drafted on the basis of taking 2,750 houses in accordance with the Memorandum of Cooperation however South Oxfordshire have not agreed to their proportion of housing as confirmed at the Oxfordshire Growth Board meeting on 27th September 2016. This is significant and goes to the heart of soundness for two key reasons:

Firstly, the Duty to Cooperate cannot be said to be met when one of the parties with whom West Oxfordshire are seeking to cooperate with are not in agreement on the strategy for distributing unmet housing need from Oxford City. This in itself indicates that the Plan for West Oxfordshire cannot be sound; and

In terms of housing numbers, South Oxfordshire were recommended as part of the Duty to Cooperate to accommodate 4,950 houses from Oxford City. This compares with 4,400 houses for Cherwell District, 2,200 for the Vale of White Horse and 2,750 houses in respect of West Oxfordshire. Thus, it can be seen that South Oxfordshire were proposed to accommodate the greatest proportion of Oxford City’s unmet housing need and therefore the scale of the issue that has now arisen given that South Oxfordshire have not agreed to take these housing numbers is far greater than had the situation arisen in Cherwell District, Vale of White Horse District or West Oxfordshire District.

The consequence is that objectively assessed housing need are not being met in the housing market area until such time as either South Oxfordshire reverse their position and accept 4,950 houses arising from Oxford City; or the remaining authorities agree to take additional housing to reduce the amount that South Oxfordshire have to accommodate, to such a level that South Oxfordshire are prepared to agree to the housing numbers to be delivered in their administrative boundary.

<td>&gt; SECTION 2 - WEST OXFORDSHIRE IN 2016 &gt; MAIN 4</td>
<td>2.28 and 2.50 (carbon footprint): 35% of the working population out commute and 7500 travel to Oxford by car. Sadly a reflection of the unsustainable structure and flow of life in the county. In the absence of a rational strategy, the Districts should cooperate to review the inner boundary of the Green Belt. To reduce unsustainable travel, and enhance sustainable movement (public transport, walking and cycling) for access to jobs and services, more housing should be provided on the edge of Oxford. The proposed Local Plan response is to build a ring of new satellite settlements and enlarged settlements on the outer edge of the Green Belt. Development that is functionally part of Oxford, yet spatially separate from jobs and services in Oxford. The prospect is inequitable: it privileges those living in Oxford and discriminates against those who have to decant into extra Green Belt housing with the associated costs of travel to work and services, less information about job and leisure opportunities, deracinating and isolating former Oxford residents from family, friends and opportunities. This is especially pertinent for those on lower income, who would be spatially isolated from their known city in dormitories.</td>

<td>Oxford City Council Ms Dell</td>
<td>-</td>
<td>-</td>
<td>-</td>
<td>681</td>
<td>&gt; SECTION 2 - WEST OXFORDSHIRE IN 2016 &gt; MAIN 4</td>
<td>Oxford City’s unmet housing need As a result of the continued joint working arrangements through the SHMA it does now appear that the modifications to the Local Plan include revisions to their housing policies to include an element of Oxford’s ‘unmet’ housing need of some 2,750 dwellings This has been achieved principally by identifying two new strategic site allocations comprising West of Eynsham and north of the A40 new Eynsham (new ‘garden village’).</td>
</tr>
</tbody>
</table>
These new sites identified in Eynsham were originally highlighted by the consultants through the joint working arrangements as part of the Post SHMA apportionment. These sites were explored as spatial options for additional housing provision and subject to sustainability assessment. This showed the value of all partners working together to prepare and agree the evidence base using shared working assumptions. They do appear therefore to be the most realistic options for seeking to help meet Oxford’s unmet housing need.

Support: Oxford City Council wish to support in principle the revised changes to the Local Plan and in particular:

* Main Mod 4 (Para 2.9), together with those in Main Mod 9 (Vision) and
* the Overall Strategy (Paras 4.17 and 4.18 and 4.18a) which show the local authority’s commitment to ‘play a role in helping to meet wider needs’ including the ‘unmet housing needs’ of Oxford (Main Mod 15) through the allocation of the Eynsham site and the Garden Village.

Objection:

The City Council consider that it would be helpful if a separate published housing trajectory could be provided with their AMR each year to demonstrate progress made in meeting the housing needs of the city, nomination rights for affordable housing and provision extended to OCC housing list.

Given the proposed allocations are to help to contribute towards meeting Oxford’s unmet housing need it would therefore be important to understand and agree how the ‘affordable housing’ element will be provided. For example the proportion and type of affordable housing that will be delivered should as near as possible be shown to relate to Oxford’s need.

Another key issue of concern is transport and infrastructure which arises from the sustainability assessment which does highlight the existing traffic and congestion problems currently experienced along the A40 leading into Oxford. In this context it will be vitally important to the delivery of this housing development that the proposed infrastructure improvements to the A40 (including new bus lanes and significantly improved cycling facilities and routes) is agreed as part of the wider transport strategy for the County and that evidence to show how it fits in with the revised Oxford Transport Strategy is essential to the successful delivery of this major project. Prior to the development taking place these transport and infrastructure mitigation measures should be agreed and appropriate funding secured to ensure that these are fully implemented before development takes place.

A detailed transport assessment should therefore be required by future developers, and submitted to the County Council as Highway Authority, but also widely consulted upon with neighbouring authorities such as Oxford City Council to show how this significant amount of new housing development will meet the standards of a truly ‘sustainable development.’ It is therefore considered important that the amount of car parking is reduced to a minimum and good alternative cycling and pedestrian facilities (both routes and

<td>Ascott Parish Council</td>
<td>-</td>
<td>Carter</td>
<td>690</td>
<td>&gt; SECTION 2 - WEST OXFORDSHIRE IN 2016 &gt; MAIN 4</td>
<td>Ascott-under-Wychwood Parish Council notes that our village has actually been named for the first time in the Draft Local Plan 2031 and has been moved to the 'Villages' category. We are very concerned that this has been done apparently arbitrarily and without any consultation at all with the Parish Council. The consequence is that certain statements which were acceptable last year (when only 2 Wychwood villages were named) are no longer accurate with Ascott-u-W included. Ascott is a village one half and one third of the size of the other two Wychwood villages and with far fewer amenities. It is not accurate to include Ascott in the general Wychwood statements written last year. This places us in the difficult position of strongly objecting to statements which are not among the amendments but our objections do flow from the original critical amendment – that of naming Ascott-under-Wychwood in the Villages category. In particular, we feel that the impression is given over and over again that Ascott-u-W is reasonably well served by public transport. This is blatantly not the case and the situation has got worse in the past 6 months with the cuts in bus subsidies (as indicated in our response to the WODC Planning Services Parish Survey 2016). Ascott-u-W also appears to have a Post Office (Friday afternoon in Tiddy Hall does not constitute a Post Office) – and a smart railway station with a reasonable service (when in fact it has 1 train each way on weekdays only, too late in the morning for London commuters and even Oxford schools). We are extremely concerned that an inspector, if considering a planning application appeal, might refer to the WODC Local Plan 2031 and think that Ascott-under-Wychwood has amenities equal to Shipton and Milton and we would ask that the Draft Local Plan be amended to reflect the true picture.</td>

<td>Appendix 2 – Education Comments Other village growth Non-strategic sites totalling 75 homes are included for Long Hanborough and 50 for Stanton Harcourt. Already permitted developments in Long Hanborough provide opportunities to expand Hanborough Manor Primary School sufficiently to meet the proposed housing growth in this village. Stanton Harcourt Primary School would need to expand to accommodate housing growth, and options to achieve this are being explored. The proposed scale of development at Minster Lovell, Stonesfield and Shipton-under-Wychwood can be accommodated in the existing primary schools. The proposed scale of development at Burford would be expected to exceed the current primary school's capacity, and this school may be challenging to expand due to site constraints. The proposed scale of development at Charlbury would be expected to exceed the current primary school's capacity, and expansion of the school will be needed to meet this and other developments already permitted. Options are being assessed, but initial conclusions are that this school would be challenging to expand. In previous responses, OCC advised that expansion of Enstone CE Primary School was not thought to be possible. Further work has now identified limited scope for expansion.</td>

| MM756   | Cantay Estates     | Cantay Estates  | -     | Cantay Estates | 1928       | > SECTION 2 - WEST OXFORDSHIRE IN 2016 > MAIN 7                          | Proposed modification- Expansion of Eynsham: The proposed modifications introduce a significant strategic development to the north of Eynsham to meet Oxford City’s unmet housing need. This change pertains to numerous modifications, we therefore set out our response below which we wish to be considered in response to the following modifications: MAIN3, MAIN7, MAIN9, MAIN13, MAIN14, MAIN15, MAIN23, MAIN24, MAIN27, MAIN58, MAIN60, MAIN149 Detailed comments particular to each modification are set out in detail against the relevant reference in following sections.  
The same modification seeks to introduce the new strategic development north of Eynsham. The proposed development is of a strategic scale in a location which previously only saw limited development. The strategic area has been newly introduced at the examination stage, rather than through the extensive consultation process which should inform fundamental decisions in plan making.  
The proposed 'Garden Village' is a strategic site suggested to be a new standalone settlement. Such a development is a clear departure from the submitted spatial strategy which emerged from the earlier consultation stages and was informed by the evidence base. The proposed new development is a clear departure from the proposed development plan, not a mere modification.  
The proposed changes to the plan are so significant that they amount to a fundamentally different strategy to that submitted for examination. Should the Council wish to make such a fundamental change it should be done so through a new plan informed by a suitable evidence base and following a formal consultation process. To do otherwise would undermine the credibility of the plan and public confidence in the planning process. |
A consequence of the limited considerations which have informed the introduction of the development area is considerable uncertainty as to the achievability of the proposed scheme. The site was previously discounted as unsuitable for development within the submitted SHLAA, no updated document has been published to revise this status. Noise impacts, segregation across the A40 and landscape impacts are all identified as being prohibitive to development. No information has been produced to demonstrate how these issues may be overcome, nor whether they are less pronounced at any other development site. Similarly the proposal was dismissed as not being realistic in the submitted SA, little is offered to justify such a fundamental change in stance.

Development strategy for the proposed site is deferred to a later Area Action Plan, we consider however development parameters must be set out and explored in order to ensure the proposed scheme is achievable. The Plan also refers to an expression of interest submitted to Government seeking to obtain Garden Village status for the development, unlocking funding streams to deliver infrastructure to unlock the site.

Although an expression has been submitted, no decision has yet been issued. In excess of 50 similar expressions have been made nationally, therefore Garden Village status is far from guaranteed. Proper exploration must be made as to the sustainability, suitability and deliverability of this site and essential infrastructure in the event it does not secure Garden Village status.

MAIN9: The propose modification identifies the proposed expansion north of Eynsham to be an ‘exemplar’ development with regard to design and environmental performance. The aspirations for the development are laudable, however only very high level initial assessments have been undertaken to establish whether this is deliverable, particularly in the context of the landscape previously considered vulnerable to development.

MAIN23: The proposed alteration to the wording from the ‘majority’ of development being delivered in the district’s towns, to a significant proportion, confirms the proposed expansion to the north of Eynsham to be a deviation from the strategy set out under policy OS2 in the Submission Plan. We consider the fundamental change of the strategy renders this a new plan, it should therefore be developed as such, rather than processed through modifications.

MAIN25: We welcome the proposed increase in housing provision within the plan to reflect the objectively assessed need set out in the Oxfordshire SHMA (660 dwellings per annum). Although the headline figure for housing provision is increased the means of meeting that need is somewhat unclear in the document. The proposed site allocations fall someway short of the accepted housing requirement. Allocated sites and suggested windfalls total 11,545 homes, some 1,655 homes below the housing target for West Oxfordshire (13,200). Although not clearly stated it seems the Plan is reliant on a significant number of sites which have on the deliverability of these sites.
The published housing supply position paper sets out the Council’s assumptions on the deliverability of permitted homes. This is set against a backdrop of previous under-delivery in relation to the objectively assessed need, including in the initial five years of the plan period. The anticipated delivery of homes from larger sites (more than ten units) is particularly optimistic given the recent under-delivery of homes and the longstanding nature of several of the outline planning permissions.

The anticipated delivery figures (Appendix 1) do not appear to assume all planning permissions granted for larger sites will be implemented. The assessment of smaller sites makes a concession (9.1%) in acknowledgement that not all permissions will be implemented; an allowance for non-delivery of larger sites is also required.

While uncertainty exists as to the deliverability of a significant proportion of the required housing supply questions remain as to the soundness of the plan. Robust evidence should be produced to show the permitted sites can be relied upon to deliver homes, additional allocations should also be made to mitigate against any shortfall.

MAIN27: The allocation of non-strategic sites is welcomed and we believe imperative if the housing need of the district is to be satisfied. We are concerned that those sites allocated have not been selected through thorough testing, including consideration of all reasonable alternatives as set out by the regulations. As a consequence the soundness of the allocations and broader plan is in doubt.

We have raised our concerns with regard to the unpublished SHELAA earlier in these representations; those comments also apply to this modification. The fact that the plan preceded the assessment significantly undermines the credibility of the plan as an evidence based document as do shortcomings in the assessment.

We consider Long Hanborough to be a suitable location for development as it benefits from an excellent range of services and facilities, including a railway station. We believe additional development sites should be permitted in the village alongside those proposed in the modifications. The proposed development site at Tuckwells Pit, Church Road (SHELAA ref 225) is a suitable location for new development. It can sensitively accommodate new homes in a location which benefits from access to key services and facilities. A Landscape and Visual Impact Assessment has confirmed development of the site can have a beneficial effect on the landscape while the off-road cycleway on Main Road provides viable access to the railway station.

MAIN29: The proposed modifications seek to rely upon windfall development to fulfill the housing requirement at a rate of 125 homes per year. Although this policy is informed by previous delivery rates the published SHELAA suggests insufficient developable sites exist to fulfill that rate of development throughout the plan period. As the Council’s own SHELAA suggests insufficient sites are available to fulfill the suggested windfall rate either the evidence, or the proposed strategy must be unsound.

Historic windfall delivery rates have been achieved in the district’s larger settlements including those designated as service centres. The proposed downgrading of Long Hanborough reduces the likelihood of

<tr>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td>homes being delivered in the village further reducing the chances of windfall housing rates being maintained. Although an alternative service centre is proposed to be provided this is for delivery within the plan period and therefore will not give rise to any windfalls.</td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td>MAIN59: The proposed emphasis on the desirability of locating development in locations with access to public transport is at odds with the modification suggesting downgrading Long Hanborough’s settlement status. The village is one of only two in the district which benefit from a significant railway station.</td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td>MAIN60: The plan identifies significant challenges upon the A40, particularly with regard to access to Oxford. Although several alleviation options are suggested none is carried forward in plan proposals which acknowledges necessary funding is not available.</td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td>The proposed strategic development area at Eynsham is suggested on the basis that alleviation of A40 issues could be provided, however their achievability is unknown. The uncertainty of delivery of necessary highway improvements calls into question the suitability of the proposed strategic development area. The Plan which relies upon this area to meet its portion of Oxford’s unmet housing need cannot be sound until the site is known to be deliverable.</td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td>MAIN66: The proposed modification underlines a success in the current plan period in encouraging use of railway connections in the district, particularly from Long Hanborough. The modification acknowledges the capability of the rail corridor to remove vehicles from the A40 as residents travel toward Oxford and London, and the desirability of increasing capacity of Hanborough station and the railway link.</td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td>The modification supports improvements to the rail connection and acknowledges the need to provide the proposed development north of Eynsham with connections to Hanborough station. It is perverse therefore that the plan seeks to restrict development in Long Hanborough as developments in the village could provide easy access to the railway station and contribute to providing enhanced services and facilities. We consider the village should retain its rural service centre status and consideration given to additional non-strategic allocations to make the most of this opportunity for sustainable development.</td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td>MAIN145: The proposed modification suggests Long Hanborough is not in a position to support significant levels of additional development, however no evidence is provided as to any particular harm which would arise from residential development over and above that in the plan.</td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td>The document identifies the opportunity in the village in enhancing sustainable transport options through improvements to the station, this presents scope for new homes to be developed with a tangible benefit for the district. No unique sensitivities are identified, we therefore believe additional housing development should be allocated (beyond that proposed) and windfalls encouraged in Long Hanborough.</td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td>MAIN149, 180: We welcome the acknowledgement in the modification of the potential for enhancement of Hanborough Station as a transport interchange, however the proposed downgrading of the settlement is clearly at odds with this and undermines the aspiration for improvements. Such an approach is also at odds</td>
</tr>
</tbody>
</table>
The modification suggests increased car parking at the station, whilst this could encourage rail commuters from rural areas it is clearly preferable to remove the need for car use altogether. Additional cycle parking should be provided and homes provided in locations which already benefit from access to the station by sustainable means.

New homes created in Long Hanborough would benefit from existing foot and cycle access to the station, therefore they could be delivered early in the plan period and support enhanced rail services without need for additional car journeys. To seek to restrict this undermines the aspiration of the plan.

The Council suggest the proposed northern extension of Eynsham could benefit from sustainable access options through creation of new foot/cycle routes from the south. These would be more distant than any point within Long Hanborough, furthermore their delivery cannot at this point be guaranteed. If the Council wishes to make the most of opportunities presented by rail routes from Hanborough permitting of additional development in the village is clearly the correct path.

Consider rephrasing to reflect that the majority of cycle routes in Oxfordshire are on road:

Limited opportunities for safe travel by foot or cycle outside main towns such as where routes are on or adjacent to busy roads

An acknowledged weakness in the plans is the air quality in Chipping Norton - which is an AQMA, but there is no opportunity recorded to improve the current air quality. Surely the air quality should be being improved before it is further impacted by significant house building? The plans at best attempt to mitigate the impact of the houses and mitigating the impact is impossible to achieve, so there will be further deterioration in air quality in Chipping Norton. See the Chipping Norton Transport Options study:

3.2.1 - At the outset of undertaking this Study, OCC Officers stressed the need to consider what mitigation measures might be required to provide effective mitigation of additional development within and around the town. Of particular concern is the need to address existing air quality issues and provide effective mitigation of predicted deterioration in air quality within the town centre, particularly along the A44 High Street / Horsefair corridor that has been declared an Air Quality Management Area (AQMA)

The 4th line:

Attracting "inward investment" and a more "self contained local economy" is a contradiction in terms.

Addressing congestion is not an opportunity, it is a necessity, and clarifies that there is no capacity for further housing. Road infrastructure improvements are needed to satisfy the current population, and should not be a proxy for further demographic growth.
"New" sustainable construction methods do not require energy intensive gravel extraction, which is one of the "oldest" activities known to prehistoric man. The presence of such is therefore not a relevant "strength", especially given well-publicised national skilled labour shortages in the construction industry.

How on earth would greater numbers of affordable housing increase the numbers of home workers? There are the least likely people to be able to home-work.

The weakness identified as 'imbalance between jobs and homes in Carterton' could be partly addressed by locating the new Science Park in Carterton, rather than Eynsham, particularly as the imbalance will be increased by the building of new homes there. Once a Science Park is a certain distance from the academic centre (University of Oxford), does it really make much difference if it is 18.1 rather 7.8 miles away, particularly if bus services will improve (and a railway from Oxford to Witney to Carterton is built)?

The Weakness identified, as an "imbalance between jobs and homes in Carterton" should be addressed by locating the proposed Eynsham North "Garden Village" Science Park at Carterton. This would maximize the potential synergy and exploit the critical mass between the future expansion of a BAe / RAF Science and Technology zone. A small, free standing Science Park in the highly visible A40 corridor approach to the Cotswolds AONB and Oxford Green Belt, as proposed, makes no strategic, landscape or employment sense.

To make the heroic assumption that residents of the "Garden Village" will work in the proposed "Science Park" is not credible and is not borne out by experience.

There is a small industrial estate within Freeland Village, to my knowledge not a single village resident works within the Estate.

<td>Nick Small, Stagecoach Bus Dr Small</td>
<td>Dr Small</td>
<td>753</td>
<td>&gt; SECTION 2 - WEST OXFORDSHIRE IN 2016 &gt; MAIN 7</td>
<td>MAIN 7 para 2.50 &quot;Opportunities&quot; Stagecoach welcomes and strongly supports the renewed recognition that there are opportunities presented to Plan in such a way that public transport infrastructure and services can be improved. Stagecoach agrees that targeted road improvements are also clearly justified, and these can directly or indirectly improve the speed, attractiveness and reliability of bus services. In particular, the Shores Green Slip Roads, and the B4477 &quot;Access to Carterton Improvement&quot; would fall into this category. The West End Link Road is clearly necessary if planned development north of Witney is to take place without unacceptable deterioration in traffic conditions. Transport issues ought to be considered holistically to ensure access and movement is optimally facilitated. There are some instances where the soundness of the Plan remains questionable, because of the failure to demonstrate that the preferred development strategy does not lead, on implementation, to serious unmitigated transport impacts. Nor is it clear in a few cases, that the options selected are the most appropriate when all reasonable alternatives have been considered.</td>

<td>1815</td>
<td>&gt; SECTION 2 - WEST OXFORDSHIRE IN 2016 &gt; MAIN 8</td>
<td>We note the modification that states: “The delivery of historically high, for West Oxfordshire, housing targets given the local track record of the development industry”. We consider this statement to be unnecessary. It is true that the new housing requirement will be higher than ones set previously under different planning regimes. This may present challenges for the council and for developers. Nevertheless, the objectively assessed housing need of the district is what it is, and the Framework requires those needs to be met. Therefore, using the Plan to speculate on the ability of the industry to meet the new requirement isn’t strictly necessary. Moreover, what transpired in the past does not necessarily serve as a reliable indicator of what could happen in the future. Oxfordshire has a strong economy and a vibrant housing market where housing is much in demand. Oxford City is confronted by critical shortfalls of housing supply compared to need hence the need for the four satellite authorities to...</td>
<td></td>
</tr>
</tbody>
</table>
make provision. The view of the industry is that housing targets have been too low in West Oxfordshire in the past compared to need and demand. This is why we now have acute affordability issues in the county. The Council also has a poor track record of delivery compared to past targets, such as the target set by the South East Plan (365 dpa). We illustrated this is our response to the August consultation on the OAN review. This under-delivery will not have helped to increase the capacity of the industry. Decisions about land supply and local policies will also have contributed to suppressing delivery.

Nevertheless, achieving the new requirement could present challenges. One of the essential ingredients to increasing and sustaining the rate of housing delivery will be for the Council to diversify the nature of the land supply across the district by providing a healthy mix of small, medium and large sites. Sites in different places and of different sizes will help to meet the business needs of different sized housebuilding companies.

This will tend to build-up the long-term capacity of the industry. We will make some further comments on this subject below.

Resolving the housing crises requires a partnership between private sector housebuilders and local government. As the Government asserts in the foreword to the Framework, planning "should be a collective enterprise". We agree. The delivery of the new plan is the responsibility of the Council as much as the development industry - they are two sides of the same coin. We hope that Council will consider removing this sentence.

<td>2072</td>
<td>&gt; SECTION 2 - WEST OXFORDSHIRE IN 2016 &gt; MAIN 8</td>
<td>The new insertion appears to highlight that higher delivery rates are considered challenging for the District given the local track record of the development industry and cites past rates of delivery as evidence of this. This is an over-simplistic approach and appears to suggest that the industry will struggle to deliver the higher housing numbers. When looking at more recent data from 2008/09 onwards, it is important to remember that the recession will have affected more recent housing delivery. Furthermore, much of WODC’s past delivery has been linked to urban extensions which inevitably take longer to come on stream. Furthermore, the Council have in recent years habitually refused applications in the face of an acknowledged shortfall in housing land supply, which has both exacerbated the issue and means in turn that suitable sites are taking longer to come through the system due to the need for them to be determined through the appeal system.</td>

2.4. The landowners wish to make the observation that the delivery of an annual housing target which is historically high for West Oxfordshire has to be seen in the context of the prevailing planning policy in the current Local Plan and its previous iterations.

Simply because such a number had not been achieved before, is more than just a simple reflection on the ability of the development industry to deliver at such rates.

Unsound as there is no proof of the further major investment opportunities that are claimed.

**RAF BRIZE NORTON INFORMATION**

There are currently circa 7,300 people employed at the base. This comprises 5,800 Service Personnel, 1,200 Civilians and 300 Civil Servants. (Source: Paragraph 9.3.2 Local Plan, http://www.raf.mod.uk/rafbrizenorton/organisation/index.cfm)

The ‘Real Estate’ and infrastructure are now at capacity and the latest elements have been completed by transient workers.

Project Gateway, which completes in 2018, will not afford any increases to manpower.

Strategic Defence Review (SDR) 2015 – achieved further reductions in MOD personnel and Civil Servants along with additional cost savings. Military personnel are at a steady state and will not increase; it is in fact, more likely to decrease.

Planning assumption for SDR 2020 will include a reduction in operational consultants, Civil Servants and Service Personnel.

Two new aircraft, Air Tanker (Voyager) and Airbus (A400M), have created new jobs but these positions are now fulfilled.

There is a potential for approximately 200 new jobs related to the above aircraft over the next decade but this will be offset by a similar reduction in maintenance and flight crews associated with the Hercules.

With the above in mind, the only opportunity for new personnel to potentially purchase a property in Carterton is derived from natural staff turn-over.
Based on the information presented above, the opportunities and challenges detailed in MAIN 8 2.50 (SWOC table) seem unrealistic.

Historic England welcomes and supports Proposed Main Modification MAIN9 for the addition of “historically” and the reference to the landscape setting of Witney as part of the positive strategy for conserving and enjoying, and clear strategy for enhancing, the historic environment as required by the National Planning Policy Framework.

Main 9: Paragraph 3.2
1.1 The Vision for the Future continues with only limited alteration compared to that which informed and defined the original submission version of the Plan with the emphasis placed on directing development (now a ‘significant proportion of new development’ as opposed to ‘most development’) towards the three largest settlements within the District, namely Witney, Carterton and Chipping Norton. In addition the strategy includes creation of a ‘Garden Village’ north of Eynsham to help meet the unmet housing needs of Oxford, which were not addressed within the earlier submission version of the Plan. Importantly the Vision states that elsewhere within the District the distinctive qualities of West Oxfordshire’s towns and villages will be protected and where possible enhanced, with appropriately scaled development accommodated within settlements, subject to the provision that such development should not compromise the defining character, appearance or setting of the settlements within which it is located.

1.2 This is an important requirement and one that should be adhered to assiduously in prosecuting the overarching strategy of the Local Plan. It should be noted, having regard to the need to ensure that the Plan is not just consistent with national policy, but is also internally consistent in its approach, that the Vision has not changed in respect of the defining strategy for delivering development (the ‘Three Towns Focus’). In this respect also the components of the Vision that relate to Witney, Carterton and Chipping Norton have not altered, with the exception of ensuring that there is a direct reference to protecting the landscape setting of Witney.

1.3 The undertaking to protect and enhance the distinctive qualities of the District’s towns and villages is maintained; although this is made subject to the additional proviso that any development that takes place should not compromise or detract from character, appearance and setting. While this is welcomed, and is consistent with the evidence base that underpinned the submission version of the Plan, it is questionable whether this Vision is appropriate to the strategy that is adopted in respect of delivering housing to meet the uplifted OAHN for West Oxfordshire.

1.4 The policies that are set out within the Local Plan are not now wholly consistent with the Vision as expressed at the outset of the document and therefore cannot be considered to be justified having regard to the tests of soundness set out at paragraph 182 of the NPPF.

| MM55         |                        | Catherine      | Mrs              | Baker             | 124        | > SECTION 3 - WEST OXFORDSHIRE IN 2031 - OUR VISION > MAIN 9 | 2 OVERALL STRATEGY Paragraph 4.2 (bullet 2)  
2.1 For reasons essentially the same as set out in respect of Main 9 (3.2) the overall strategy of the Local Plan is based on five key strands that inform all policy decisions contained within: The second strand in this list is the objective of ensuring that all development is located in the 'right places'. The criteria that informed the submission Local Plan have not been diluted or diminished; in fact the Main Modifications impose further criteria, which require that all decisions on where to locate development must contribute positively to conserving and enhancing the natural and historic environment.  
2.2 This approach is consistent with the Vision and with the evidence base that supports the Local Plan, and the reinforcement of the objective is welcomed. However the approach that is taken to locating development is not consistent and is therefore not justified having regard to paragraph 182 of the NPPF.  |
| MM505        |                        | Verena Hunt    | Miss             | Hunt              | 1243       | > SECTION 3 - WEST OXFORDSHIRE IN 2031 - OUR VISION > MAIN 9 | The intrinsic character, appearance and setting of Eynsham will be irrevocably altered by the addition of so much extra housing to the north and west of the village, at odds with the stated aim of the Vision for West Oxfordshire. If the plan to build over all available land to the north and west goes ahead, Eynsham will inevitably change from a self-contained large village with services that have grown organically to support its changing character over the centuries to something quite different - this change will be rapid and it will not be within the local residents’ control. At this point we don’t have a clear picture of how the proposed Tilgarsley settlement or the extension to Eynsham to the west will look, or of the services that may or may not be provided for residents there. So it is impossible to feel confident that the proposed plan will offer any kind of improvement for current Eynsham residents, or that new residents of Tilgarsley and west Eynsham will have the services they need. One thing that does seem clear, however, is that the character of the Eynsham area will change completely rather than being preserved as the Vision statement requires. |
| MM728        | Abbey Developments and David Wilson Homes Southern | -              | -                | -                 | 1657       | > SECTION 3 - WEST OXFORDSHIRE IN 2031 - OUR VISION > MAIN 9 | Given its proximity to Oxford and good transport links, the proposed new ‘Garden Village’ near Eynsham makes strategic sense to help meet Oxford City’s unmet housing need.  |
|              | 'Our Vision’           |                |                  |                   |            |                   | We note that the Proposed Modifications (MAIN9) includes new wording to the section of the Vision relating to Witney. As we set out in more detail below, the additional wording appears to conflict with the increased capacity of the proposed SDA at North Witney and East Witney, which is not supported by the Council’s Landscape evidence.  
By contrast, the Council’s Landscape evidence (Landscape and Visual Review of Submissions: Carterton and Witney (Witney Addendum) January 2013)) identified that the South Witney site should be considered |

<td>1929</td>
<td>&gt; SECTION 3 - WEST OXFORDSHIRE IN 2031 - OUR VISION &gt; MAIN 9</td>
<td>Proposed modification - Expansion of Eynsham: The proposed modifications introduce a significant strategic development to the north of Eynsham to meet Oxford City’s unmet housing need. This change pertains to numerous modifications, we therefore set out our response below which we wish to be considered in response to the following modifications: MAIN3, MAIN7, MAIN9, MAIN13, MAIN14, MAIN15, MAIN23, MAIN24, MAIN27, MAIN58, MAIN60, MAIN149 Detailed comments particular to each modification are set out in detail against the relevant reference in following sections. The same modification seeks to introduce the new strategic development north of Eynsham. The proposed development is of a strategic scale in a location which previously only saw limited development. The strategic area has been newly introduced at the examination stage, rather than through the extensive consultation process which should inform fundamental decisions in plan making. The proposed ‘Garden Village’ is a strategic site suggested to be a new standalone settlement. Such a development is a clear departure from the submitted spatial strategy which emerged from the earlier consultation stages and was informed by the evidence base. The proposed new development is a clear departure from the proposed development plan, not a mere modification. The proposed changes to the plan are so significant that they amount to a fundamentally different strategy to that submitted for examination. Should the Council wish to make such a fundamental change it should be done so through a new plan informed by a suitable evidence base and following a formal consultation process. To do otherwise would undermine the credibility of the plan and public confidence in the planning process. A consequence of the limited considerations which have informed the introduction of the development area is considerable uncertainty as to the achievability of the proposed scheme. The site was previously discounted as unsuitable for development within the submitted SHLAA, no updated document has been</td>
</tr>
</tbody>
</table>

We do not believe that the Garden Village proposal at Eynsham is an appropriate measure for delivering the unmet need for Oxford. It is based on an ambitious timescale for delivery and given that the Government’s announcement for the results of Garden Village proposals has not yet been announced (MAIN 17 references an application for funding), it is unclear how and whether the council will be able to deliver the scheme if the site is not selected of the Locally-led Garden Villages. The anticipated delivery numbers in the bid document are also unrealistic. It would be more appropriate to deal with the objectively assessed need and allocate development to settlements that can deliver homes across the plan period in a more effective manner. MAIN 3, 9, 15 16, 17, 23, 24 and 27 should be reconsidered and amended accordingly. |
published to revise this status. Noise impacts, segregation across the A40 and landscape impacts are all identified as being prohibitive to development. No information has been produced to demonstrate how these issues may be overcome, nor whether they are less pronounced at any other development site. Similarly the proposal was dismissed as not being realistic in the submitted SA, little is offered to justify such a fundamental change in stance.

Development strategy for the proposed site is deferred to a later Area Action Plan, we consider however development parameters must be set out and explored in order to ensure the proposed scheme is achievable. The Plan also refers to an expression of interest submitted to Government seeking to obtain Garden Village status for the development, unlocking funding streams to deliver infrastructure to unlock the site.

Although an expression has been submitted, no decision has yet been issued. In excess of 50 similar expressions have been made nationally, therefore Garden Village status is far from guaranteed. Proper exploration must be made as to the sustainability, suitability and deliverability of this site and essential infrastructure in the event it does not secure Garden Village status.

MAIN9: The propose modification identifies the proposed expansion north of Eynsham to be an ‘exemplar’ development with regard to design and environmental performance. The aspirations for the development are laudable, however only very high level initial assessments have been undertaken to establish whether this is deliverable, particularly in the context of the landscape previously considered vulnerable to development.

MAIN23: The proposed alteration to the wording from the ‘majority’ of development being delivered in the district’s towns, to a significant proportion, confirms the proposed expansion to the north of Eynsham to be a deviation from the strategy set out under policy OS2 in the Submission Plan. We consider the fundamental change of the strategy renders this a new plan, it should therefore be developed as such, rather than processed through modifications.

MAIN25: We welcome the proposed increase in housing provision within the plan to reflect the objectively assessed need set out in the Oxfordshire SHMA (660 dwellings per annum). Although the headline figure for housing provision is increased the means of meeting that need is somewhat unclear in the document. The proposed site allocations fall someway short of the accepted housing requirement. Allocated sites and suggested windfalls total 11,545 homes, some 1,655 homes below the housing target for West Oxfordshire (13,200). Although not clearly stated it seems the Plan is reliant on a significant number of sites which have on the deliverability of these sites.

The published housing supply position paper sets out the Council’s assumptions on the deliverability of permitted homes. This is set against a backdrop of previous under-delivery in relation to the objectively assessed need, including in the initial five years of the plan period. The anticipated delivery of homes from larger sites (more than ten units) is particularly optimistic given the recent under-delivery of homes and the
longstanding nature of several of the outline planning permissions.

The anticipated delivery figures (Appendix 1) do not appear to assume all planning permissions granted for larger sites will be implemented. The assessment of smaller sites makes a concession (9.1%) in acknowledgement that not all permissions will be implemented; an allowance for non-delivery of larger sites is also required.

While uncertainty exists as to the deliverability of a significant proportion of the required housing supply questions remain as to the soundness of the plan. Robust evidence should be produced to show the permitted sites can be relied upon to deliver homes, additional allocations should also be made to mitigate against any shortfall.

MAIN27: The allocation of non-strategic sites is welcomed and we believe imperative if the housing need of the district is to be satisfied. We are concerned that those sites allocated have not been selected through thorough testing, including consideration of all reasonable alternatives as set out by the regulations. As a consequence the soundness of the allocations and broader plan is in doubt.

We have raised our concerns with regard to the unpublished SHELAA earlier in these representations; those comments also apply to this modification. The fact that the plan preceded the assessment significantly undermines the credibility of the plan as an evidence based document as do shortcomings in the assessment.

We consider Long Hanborough to be a suitable location for development as it benefits from an excellent range of services and facilities, including a railway station. We believe additional development sites should be permitted in the village alongside those proposed in the modifications. The proposed development site at Tuckwells Pit, Church Road (SHELAA ref 225) is a suitable location for new development. It can sensitively accommodate new homes in a location which benefits from access to key services and facilities. A Landscape and Visual Impact Assessment has confirmed development of the site can have a beneficial effect on the landscape while the off-road cycleway on Main Road provides viable access to the railway station.

MAIN29: The proposed modifications seek to rely upon windfall development to fulfill the housing requirement at a rate of 125 homes per year. Although this policy is informed by previous delivery rates the published SHELAA suggests insufficient developable sites exist to fulfill that rate of development throughout the plan period. As the Council’s own SHELAA suggests insufficient sites are available to fulfill the suggested windfall rate either the evidence, or the proposed strategy must be unsound.

Historic windfall delivery rates have been achieved in the district’s larger settlements including those designated as service centres. The proposed downgrading of Long Hanborough reduces the likelihood of homes being delivered in the village further reducing the chances of windfall housing rates being maintained. Although an alternative service centre is proposed to be provided this is for delivery within the plan period and therefore will not give rise to any windfalls.
MAIN59: The proposed emphasis on the desirability of locating development in locations with access to public transport is at odds with the modification suggesting downgrading Long Hanborough's settlement status. The village is one of only two in the district which benefit from a significant railway station.

MAIN60: The plan identifies significant challenges upon the A40, particularly with regard to access to Oxford. Although several alleviation options are suggested none is carried forward in plan proposals which acknowledges necessary funding is not available.

The proposed strategic development area at Eynsham is suggested on the basis that alleviation of A40 issues could be provided, however their achievability is unknown. The uncertainty of delivery of necessary highway improvements calls into question the suitability of the proposed strategic development area. The Plan which relies upon this area to meet its portion of Oxford's unmet housing need cannot be sound until the site is known to be deliverable.

MAIN66: The proposed modification underlines a success in the current plan period in encouraging use of railway connections in the district, particularly from Long Hanborough. The modification acknowledges the capability of the rail corridor to remove vehicles from the A40 as residents travel toward Oxford and London, and the desirability of increasing capacity of Hanborough station and the railway link.

The modification supports improvements to the rail connection and acknowledges the need to provide the proposed development north of Eynsham with connections to Hanborough station. It is perverse therefore that the plan seeks to restrict development in Long Hanborough as developments in the village could provide easy access to the railway station and contribute to providing enhanced services and facilities. We consider the village should retain its rural service centre status and consideration given to additional non-strategic allocations to make the most of this opportunity for sustainable development.

MAIN145: The proposed modification suggests Long Hanborough is not in a position to support significant levels of additional development, however no evidence is provided as to any particular harm which would arise from residential development over and above that in the plan.

The document identifies the opportunity in the village in enhancing sustainable transport options through improvements to the station, this presents scope for new homes to be developed with a tangible benefit for the district. No unique sensitivities are identified, we therefore believe additional housing development should be allocated (beyond that proposed) and windfalls encouraged in Long Hanborough.

MAIN149, 180: We welcome the acknowledgement in the modification of the potential for enhancement of Hanborough Station as a transport interchange, however the proposed downgrading of the settlement is clearly at odds with this and undermines the aspiration for improvements. Such an approach is also at odds with the NPPFs encouragement of environmentally sustainable development.

The modification suggests increased car parking at the station, whilst this could encourage rail commuters from rural areas it is clearly preferable to remove the need for car use all together. Additional cycle parking
should be provided and homes provided in locations which already benefit from access to the station by sustainable means.

New homes created in Long Hanborough would benefit from existing foot and cycle access to the station, therefore they could be delivered early in the plan period and support enhanced rail services without need for additional car journeys. To seek to restrict this undermines the aspiration of the plan.

The Council suggest the proposed northern extension of Eynsham could benefit from sustainable access options through creation of new foot/cycle routes from the south. These would be more distant than any point within Long Hanborough, furthermore their delivery cannot at this point be guaranteed. If the Council wishes to make the most of opportunities presented by rail routes from Hanborough permitting of additional development in the village is clearly the correct path.

<td>204</td>
<td>&gt; SECTION 3 - WEST OXFORDSHIRE IN 2031 - OUR VISION &gt; MAIN 9</td>
<td>The vision for the future should be agreed by the population. Taking Witney as an example, how on earth will parking be provided for approximately 3 times more cars than there are at the moment. I saw a reference to the building of multi-storey car parks at the Witney expo. The suggestion was to build them on the current car park on Witman Way. That would compromise the landscape setting. Imagine facing such ugly (they always are) buildings when walking in to town from Madley Park or when travelling in to town along that route. Think of the additional traffic jams and the additional pollution. Witney town center would suffer and lose custom. Consequently, Witney would no longer be a small, vibrant market town.</td>

</tbody>
</table>
The link below and my report is the outcome, which is entitled:

'A new future for Witney and the Cotswolds: a discussion paper'

A holistic approach

In that report, you will see that I have taken into account the housing increases mentioned above and the locations tabled in the current revised draft Local Plan where that demand is sought to be met.

As examples, those locations include Witney North and West, West Eynsham, the recently proposed Garden Village north of the A40 at Eynsham, as well as Carterton, Freeland and Hanborough.

In preparing the report, I have met with certain key statutory officers as well as community representatives from each of those locations. The views of such directly relevant players as the Station Commander of the military air base in Brize Norton have also been taken into account.

My thinking has embraced Oxfordshire County Council's goals for the A40 junction at Shores Green, a Park and Ride at Eynsham and the very welcomed enhancements planned for the A40, with transport being a pivotal point of reference as part of an holistic approach.

Having been involved in many developments as an Architect, I have in parallel anticipated the significant increase in demand for utilities such as gas, water, electricity and tele-communications new housing generates.

My conclusions, therefore, regard infrastructure not as an add on over time, but as a fundamental pre-requisite to every stage in the implementation of a Local Plan.

That priority is even more relevant here in West Oxfordshire knowing its transport infrastructure, even when with the currently planned enhancements, falls far short of what is needed and even further when the scale of population increase anticipated is embraced.

Getting ahead, making a problem an opportunity

My view is that the draft Local Plan in its present form will fail because of grossly inadequate forward planned transport infrastructure.

If the Local Plan fails in the era up to 2031, the negative consequences will then accelerate in the 15 year period that then follows - and it will exacerbate on and on. Pro-action now that is on a realistic as well as imaginative base is, therefore, needed.

I also concluded that such pro-action had to be private sector core funded, thereby enabling early implementation. My thinking outlined in the report is, therefore, geared to that end.

My goal then is that every community within our district and county ‘gets ahead’ of the problems it currently faces and grasps the opportunity to shape a new future for Witney and the Cotswolds, starting in the immediate present: namely in 2017.
The proposals outlined seek to do that. Their context is the draft Local Plan now being consulted on. As will be seen, their content, however, is very different.

That difference does not suggest a lack of appreciation of the work carried out by officers and their appointed colleagues. Indeed the opposite is the case: for such ideas as a park and ride at Eynsham and a Garden Town nearby are admirable. My recent understanding of OCC's thinking for a form of 'water world' to the south of Witney only adds to that appreciation.

It does, however, suggest that there now needs to be a 'stepping back' in order to grasp more fully the scope, scale, immediacy as well as longevity of what is coming. When doing so, my view is that the strategic and detailed thinking needs to go much, much further.

Based on my own long experience, that is what I have sought to do, with an outcome that is set out here as a basis for further discussion.

An exemplar in 'Localism'

As part of my own consultations, I have in my report referred to a meeting I had with the Leader of Oxfordshire County Council, Cllr Ian Hudspeth, and the Mayor of Witney, Cllr Chris Holliday.

Their shared fundamental conclusion was that the final version of the West Oxfordshire District Council's 2031 Local Plan must not prevent my conclusions being taken further and considered for possible delivery. Their view was that the contents of the Local Plan should facilitate such consideration.

As I have mentioned that meeting, do note that I have copied this email and the document attached to both Ian and Chris for their reference.

When reading the document, do also note reference to the innovation capability of so many of the businesses in our District and their potential response to the global need to generate green energy. As you can see, my goal is to showcase that capability and develop a knowledge and skill base of substance ready for a market place that is world wide.

In parallel, do then note that a key dimension of my thinking has been the involvement of as many local people as is possible in its formation.

As is explained more fully in the report, having met with many members of the broader community, the thinking outlined here was presented to an extraordinary meeting of Witney Town Council on November 1st, 2016. All present welcomed it as a community-led initiative and with an enthusiastic response.

There is now the view that the process so far could lead to an exemplar in 'bottom up' thinking that captures the essence of Central Government's 'Localism' agenda.

With that in mind, do note in my report the response of 'top down' national regeneration specialist, Lord Heseltine, to the proposals outlined: proposals that have also been welcomed by key landowners, with a meeting planned with several to explore further.

Finally, do note that the report has been written in a form that is not coldly 'professional', but in a way that
seeks to be engaging and embracing for others.

For my view is that a future that grows in a clear context from within a community succeeds, whilst one that is imposed tends always to fall short, with significant opportunities lost.

In conclusion

I am writing having appreciated the willingness of planning officers to listen and embrace as many views as is possible from within our community.

My own view is that the revised and ongoing scale of population growth now requires an urgent ‘stepping back’ with a significantly varied and enhanced approach adopted to the Local Plan.

It is only then that existing serious problems can be solved and a far bigger opportunity grasped.

It is an opportunity that must have at its core significantly robust new infrastructure and a design, development and delivery approach that is community, private/business as well as public sector led.

Thanks to this consultation process, I believe that prospect is now within reach.

My trust, therefore, is that the Inspector will regard this introductory email and the report attached to be helpful toward that end.

3.2 Vision:

unexceptionable aims and objectives. Nonetheless, adding 3200 dwellings to Eynsham’s population of 5000 does not meet the principle of “without compromising their intrinsic character, appearance and setting”.

Policy CO 1, “minimise need to travel, particularly by car” is directly contradicted by not building on the edge of Oxford and locating overspill on the edge of the Green Belt. Similar criticism of the contradiction contained in CO4, CO7.

Policy CO 2, “protect and enhance the individual form, character and identity of our towns and villages” is again directly contradicted by building 3200 dwellings at Eynsham.

CO10, many objections will focus on the inability of the proposed housing development not funding the necessary social, environmental and physical infrastructure. At best, the infrastructure, especially for movement, lags behind the provision of profitable house building. This especially evident in and around Eynsham on the A 40 and Swinford Toll Bridge. For example, any future SDA western extension of Eynsham must be preceded by the construction of a western distributor from the A 40 to the Stanton Harcourt road. The same principle applies to the proposed Garden Village: no development should be permitted until there is a convenient link to an enlarged Hanborough Station and A 40 improvement.

CO 11, this principle must be followed, viz, improved cycle lanes on the A 40 and provision of a cycle way between Eynsham and Botley.

As a result of the continued joint working arrangements through the SHMA it does now appear that the

<td>&gt; SECTION 3 - WEST OXFORDSHIRE IN 2031 - OUR VISION &gt; MAIN 10</td>
<td>We would agree with content of paragraph 3.4 which sets out the recognition of the need for and benefits of new development to the rural District. Hailey is categorised as a village within the Local Plan as set out within table 4.1 Settlement Hierarchy. Hailey is situated to the north-west of Witney (a Main Service Centre) and benefits from several services and facilities including a local primary school. Higher order services and facilities are available, via the X9 bus route, within Witney (which is less than 4km from the site) to the south east. Several bus services in Oxfordshire have recently been stopped however the X9 service has continued including a service to both the local railway station and the centre of Witney and this makes Hailey one of the most sustainable settlements outside of the main urban areas. The site at Hailey, as shown on the enclosed Plan at Appendix 1, demonstrates that the site is of a commensurate size to accommodate development within the village. Furthermore, it occupies a sustainable location being adjacent to the settlement boundary of the village and is not constrained by landscape designations such as Area of Outstanding Natural Beauty, Green Belt or heritage assets, as much of the District of West Oxfordshire is. The site therefore offers a logical and proportionate extension to the village of Hailey which would assist in meeting the housing needs of the District, including those of Oxford City. It is therefore considered that the site meets the requirements of appropriate scale and type, being commensurate with the capacity, role and function of the settlement of Hailey. Such a proposal is commensurate with both recent consents and proposed allocations in similar villages such as Milton-Under-Wychwood and Minster Lovell, where indeed in both cases constraints of AONB and heritage apply.</td>

<td>Hammond</td>
<td>44</td>
<td>&gt; SECTION 3 - WEST OXFORDSHIRE IN 2031 - OUR VISION &gt; MAIN 10</td>
<td>The plans seem to pay lip-service to the need to retain the district’s rural characteristics. In the original draft local plan, 5500 houses were planned over the period to 2029 (306 p.a. over 18 years). A higher figure of 6700 houses, based on economic forecasts, was ruled out on the basis that it would put infrastructure under pressure, with potential negative sustainability impact. Now just 2 years on, we are facing a proposed target of 15950 houses by 2031 - an average of 800 p.a. How can this make sense? Organic small-scale growth in the housing stock is to be welcomed, but now virtually every settlement in the district is being saddled with exponential growth which will certainly be unsustainable.</td>

<td>* the increase in the size of existing strategic sites and the allocation of 15 new sites for housing. Combe Parish Council supports the proposal to develop housing at a series of key sites and rural service centres. However, we question the adequacy of the supporting infrastructure and the ability to deliver necessary improvements on an appropriate timescale given the current period of austerity and economic uncertainty. The Council specifically wishes to comment on the following modifications: MAIN 10, Para. 3.4: This paragraph emphasises the ‘capacity’ to absorb additional growth without changing the District’s distinctive rural characteristics. We would like to question the capacity to absorb the projected growth given the scale, density and location of proposed developments. The scale of development in particular is unlikely to maintain the character of rural West Oxfordshire and its villages in a way that is consistent with the West Oxfordshire Design Guide.</td>

<td>4.7 “Reducing the current reliance that is placed on the private car for journeys into, within and beyond the District by promoting opportunities for active travel through walking and cycling as well as encouraging the use of public transport” Seriously? Do you envisage that 2300+ homes in Chipping Norton will reduce the reliance placed on private cars? Chipping Norton is not a town that is easy to cycle around and walking is a hazard because of thin pavements and traffic build up at junctions and roundabouts (see CN Road traffic survey). So the 2300+ homes will bring in plenty more cars and where will the jobs be? Not in the town. Commuters will use cars and yes some will use the bus, but most will use their cars. The plan cannot claim an objective is to reduce the use of cars when so many houses are proposed to be built in Chipping Norton.</td>

</tbody>
</table>
The minor modification at paragraph 4.43 is also welcomed. It references the Infrastructure Delivery Plan which is a key document in identifying the likely future education provision across the district. It also confirms that a CIL regime is likely to be implemented during 2017.

For the reasons expanded upon in our representation to Policy OS2, we object to the amendment to Figure 4.1 to downgrade Long Hanborough from a ‘Rural Service Centre’ to a ‘Village’. This change is wholly unjustified, is not supported by the Council’s own evidence and is demonstrably unsound.

The proposed modifications to Table 4.1 are insufficient to ensure the delivery of the substantially increased housing requirement in the period to 2031, and are inconsistent with Main Modification 15 that changes the distribution strategy from a focus of ‘most’ development at the Witney, Carterton and Chipping Norton Sub-area to a ‘significant’ proportion.

In Part 1 of his Preliminary Findings (IN 015), the Inspector acknowledged that the development strategy of
the plan may not be appropriate to accommodate any significant needs arising from Oxford, and that additional greenfield sites would need to be found (para. 7.7). The Council’s response is to include in the strategy a new Garden Village in the south-east of the district, which was already targeted for a disproportionate share of the growth requirements. For reasons that are set out in the representations below, the substantially increased housing requirement to accommodate both the District’s own needs and those of the neighbouring city of Oxford necessitates a broader distribution, including to the northern sub-area of Chipping Norton to ensure that the requirement is deliverable. It also necessitates allocation of smaller, immediately deliverable sites to alleviate the shortfall in the five-year housing land supply, including the backlog of under-provision.

To ensure the delivery of the overall housing requirement during the plan period therefore necessitates a greater distribution across the district, with an increased focus on smaller sites associated with the Rural Service Centres and Villages. This is reflected in the proposed development of a new Rural Service Centre, comprising the West Oxfordshire Garden Village. However, the development of a completely new settlement is accompanied by associated risks of delivery delays/failure, there being, as yet, no certainty of Government funding for the proposed new village.

The revised strategy should therefore also provide for a greater distribution of growth to existing villages, including the identification of additional Rural Service Centres, particularly in the north of the district to provide for a more even distribution of growth, and to alleviate the over-concentration on the south-east of the district with its inherent risks of delivery failures through market saturation. This would be entirely consistent with the development strategy of the Plan which is that:

Not all growth can or indeed should go to Witney, Carterton and Chipping Norton however and there is a need for development elsewhere to help meet the unmet housing needs of Oxford City, to spread the potential benefits of growth and to help sustain the more rural parts of the district. (para. 4.15)

A prime settlement for upgrading to a Rural Service Centre is Middle Barton, which is the principal settlement in the north-east of the district, as is evident from Figure 4.1. The Chipping Norton Sub-Area does not currently contain a Rural Service Centre and is the only sub-area in the district in which one is not identified. Given the status of Middle Barton as the principal settlement in the comparatively rural north eastern part of the district, it has an important role to play as a service centre for the surrounding rural hinterland. The Sustainability Matrix 2016 contained in the Settlement Sustainability Report (November 2016) confirms that Middle Barton is one of the larger villages with a population in excess of 1,000, and has a good range of social and community facilities, including: ·

- Full-time Post Office and other shops.
- Primary School.
- Community Building.
- Public House.
- Place of Worship.
- Bus Service (including evenings).

| MM751        | Goldfield Estates       | Goldfield Estates | -               | -          | 1849               | It is also germane that Middle Barton is within a 5 kilometre cycling distance of key employment facilities, notably the Lotus F1 facility to the south west and Enstone Airfield to the west, which support a number of businesses. In the opposite direction, it is approximately 5 kilometres from Heyford Railway Station, which is accessible by bus. Middle Barton is therefore well positioned to provide opportunities for sustainable travel for those who work in the local rural business hubs, and for those who need to travel further afield by train.  
The evidence demonstrates that it is the most sustainable settlement in the Chipping Norton Sub-Area to perform the role of a Rural Service Centre to serve the north-east of the Plan area. Whilst it does not currently have some of the facilities of the existing service centres, there are no existing settlements of such scale in the north-east of the Plan area, aside from Chipping Norton in the north-west part of the sub-area. It is therefore appropriate to focus growth on settlements that have the potential for growth that will contribute to sustaining and improving existing facilities and have potential to attract more. It is noted that the emerging Plan does not set out a minimum level of facilities that are necessary in order for a settlement to be designated as a Rural Service Centre. It is therefore entirely appropriate for the Plan strategy to designate such a centre based on its intended role rather than simply having regard to its existing scale and level of facilities.  
Middle Barton has the potential to accommodate a modest scale of growth, the rate of which is unlikely to be restrained by local market saturation given its detachment from the major growth areas to the south. It therefore offers much greater certainty of delivery, beneficial choice of housing location, and can contribute to delivering housing, including affordable housing, quickly and therefore contributing to alleviating the shortfall in the five year housing land supply.  
An allocation of housing would also assist in bolstering existing services within Middle Barton. This is supported by the PPG in which it is held to be: ...  
Important to recognise the particular issues facing rural areas in terms of housing supply and affordability, and the role of housing in supporting the broader sustainability of villages and smaller settlements. ...  
A thriving rural community in a living, working countryside depends, in part, on retaining local services and community facilities such as schools, local shops, cultural venues, public houses and places of worship. Rural housing is essential to enable viable use of these local facilities. (PPG, Paragraph: 001 Reference ID: 50-001-20160519, emphasis added). |

| MAIN 4 Para 2.9 states:  
"Importantly, this Local Plan seeks not only to meet the identified housing needs of West Oxfordshire District but also to make additional provision to accommodate a proportion of ‘unmet’ housing need that Oxford City are unable to provide for within their own administrative boundary."  
We fully support this modification, we consider it important that West Oxford cooperates with its neighbouring Boroughs and seeks to accommodate the agreed shortfall from Oxford City Council. For the reasons set out above we support this modification.  
We support MAIN 4 and all other modifications that note West Oxford District Council will help meet the wider housing needs and that Eynsham shall play a key part of this, as set out in MAIN 1, 2, 13, 14, 15, 17, 23, 24, 27. |

<td>Cantay Estates</td>
<td>Cantay Estates</td>
<td>-</td>
<td>1911</td>
<td>&gt; SECTION 4 - OVERALL STRATEGY &gt; MAIN 13</td>
<td>Proposed modification- Downgrading of Long Hanborough: The proposed modifications involve the downgrading of Long Hanborough from a service centre, to a lower order village. This change pertains to numerous modifications, we therefore set out our response below which we wish to be considered in response to the following modifications: MAIN3, MAIN13, MAIN14, MAIN15, MAIN59, MAIN66, MAIN145, MAIN149. Detailed comments particular to each modification are set out in detail against the relevant reference in following sections. We object to proposed modifications which suggests the downgrading of Long Hanborough from a rural service centre to a village. The submission plan confirmed the rural service centres were classified as such because they benefitted from a range of services and facilities which supported the village and surrounding area. They are able to support additional homes in the short-term, while proposed growth can enhance the role of the settlement in supporting the surrounding rural area (paragraph 4.18). This approach was directly in line with the plan's objective 1 ‘strong market towns and villages’ and objective 4 ‘sustainable communities with access to services and facilities’, both of which remain un-modified. Long Hanborough retains the same services and facilities which existed at the time the plan was submitted, furthermore planning permission has been granted which allows significant expansion of the primary school (15/03341/FUL). While additional housing has been permitted no evidence has been produced to suggest additional homes would result in any harm to the character or sustainability of the settlement. The village therefore remains well placed to fulfil the role of a rural service centre. The downgrading of Long Hanborough proposed through modifications is largely unexplained and not supported by any evidence. The Council cite the creation of a ‘new’ service centre through the northern expansion of Eynsham as justifying the downgrading of Long Hanborough as the new development will need to “develop a critical mass of services and facilities” (paragraph 2.5a). We are concerned the Council’s explanation suggests an intention to restrict the development of Long Hanborough and reduce services in the village in order to encourage their replacement in the new development. A restrictive approach to development stifling an existing sustainable settlement and vibrant community is clearly at odds with the Plan’s vision, policies of the NPPF and good planning practice. The provision of an additional service centre would be entirely in line with the Plan objectives. If the development proposed north of Eynsham is to proceed it is clearly preferable that Long Hanborough maintains its status as a service centre complementing any new facilities created. The need to retain the service centre is particularly pronounced due to the unclear deliverability of the proposed site north of Eynsham, even if the site is delivered this will not be until the latter part of the plan period, therefore there is a need for services and facilities in the interim. The submitted plan set out clear objectives which the following policies sought to deliver sustainable communities. The Council seeks to deviate from this approach without explanation, evidence or proper assessment, we therefore believe this modification should be deleted.</td>

<tr>
<td></td>
<td>The published housing supply position paper sets out the Council’s assumptions on the deliverability of permitted homes. This is set against a backdrop of previous under-delivery in relation to the objectively assessed need, including in the initial five years of the plan period. The anticipated delivery of homes from larger sites (more than ten units) is particularly optimistic given the recent under-delivery of homes and the longstanding nature of several of the outline planning permissions.</td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td>The anticipated delivery figures (Appendix 1) do not appear to assume all planning permissions granted for larger sites will be implemented. The assessment of smaller sites makes a concession (9.1%) in acknowledgement that not all permissions will be implemented; an allowance for non-delivery of larger sites is also required.</td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td>While uncertainty exists as to the deliverability of a significant proportion of the required housing supply questions remain as to the soundness of the plan. Robust evidence should be produced to show the permitted sites can be relied upon to deliver homes, additional allocations should also be made to mitigate against any shortfall.</td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>MAIN27:</td>
<td>The allocation of non-strategic sites is welcomed and we believe imperative if the housing need of the district is to be satisfied. We are concerned that those sites allocated have not been selected through thorough testing, including consideration of all reasonable alternatives as set out by the regulations. As a consequence the soundness of the allocations and broader plan is in doubt.</td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td>We have raised our concerns with regard to the unpublished SHELAA earlier in these representations; those comments also apply to this modification. The fact that the plan preceded the assessment significantly undermines the credibility of the plan as an evidence based document as do shortcomings in the assessment.</td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td>We consider Long Hanborough to be a suitable location for development as it benefits from an excellent range of services and facilities, including a railway station. We believe additional development sites should be permitted in the village alongside those proposed in the modifications. The proposed development site at Tuckwells Pit, Church Road (SHELAA ref 225) is a suitable location for new development. It can sensitively accommodate new homes in a location which benefits from access to key services and facilities. A Landscape and Visual Impact Assessment has confirmed development of the site can have a beneficial effect on the landscape while the off-road cycleway on Main Road provides viable access to the railway station.</td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>MAIN29:</td>
<td>The proposed modifications seek to rely upon windfall development to fulfill the housing requirement at a rate of 125 homes per year. Although this policy is informed by previous delivery rates the published SHELAA suggests insufficient developable sites exist to fulfill that rate of development throughout</td>

<td></td>
<td></td>
<td></td>
<td>the plan period. As the Council’s own SHELAA suggests insufficient sites are available to fulfil the suggested windfall rate either the evidence, or the proposed strategy must be unsound. Historic windfall delivery rates have been achieved in the district’s larger settlements including those designated as service centres. The proposed downgrading of Long Hanborough reduces the likelihood of homes being delivered in the village further reducing the chances of windfall housing rates being maintained. Although an alternative service centre is proposed to be provided this is for delivery within the plan period and therefore will not give rise to any windfalls. MAIN59: The proposed emphasis on the desirability of locating development in locations with access to public transport is at odds with the modification suggesting downgrading Long Hanborough’s settlement status. The village is one of only two in the district which benefit from a significant railway station. MAIN60: The plan identifies significant challenges upon the A40, particularly with regard to access to Oxford. Although several alleviation options are suggested none is carried forward in plan proposals which acknowledges necessary funding is not available. The proposed strategic development area at Eynsham is suggested on the basis that alleviation of A40 issues could be provided, however their achievability is unknown. The uncertainty of delivery of necessary highway improvements calls into question the suitability of the proposed strategic development area. The Plan which relies upon this area to meet its portion of Oxford’s unmet housing need cannot be sound until the site is known to be deliverable. MAIN66: The proposed modification underlines a success in the current plan period in encouraging use of railway connections in the district, particularly from Long Hanborough. The modification acknowledges the capability of the rail corridor to remove vehicles from the A40 as residents travel toward Oxford and London, and the desirability of increasing capacity of Hanborough station and the railway link. The modification supports improvements to the rail connection and acknowledges the need to provide the proposed development north of Eynsham with connections to Hanborough station. It is perverse therefore that the plan seeks to restrict development in Long Hanborough as developments in the village could provide easy access to the railway station and contribute to providing enhanced services and facilities. We consider the village should retain its rural service centre status and consideration given to additional non-strategic allocations to make the most of this opportunity for sustainable development. MAIN145: The proposed modification suggests Long Hanborough is not in a position to support significant levels of additional development, however no evidence is provided as to any particular harm which would arise from residential development over and above that in the plan. The document identifies the opportunity in the village in enhancing sustainable transport options through improvements to the station, this presents scope for new homes to be developed with a tangible benefit for the district. No unique sensitivities are identified, we therefore believe additional housing development should be allocated (beyond that proposed) and windfalls encouraged in Long Hanborough. MAIN149, 180: We welcome the acknowledgement in the modification of the potential for enhancement of Hanborough Station as a transport interchange, however the proposed downgrading of the settlement is clearly at odds with this and undermines the aspiration for improvements. Such an approach is also at odds with the NPPFs encouragement of environmentally sustainable development.</td>

Land at Sunset View is under the control of Empire Homes Limited, is available now and capable of delivering around 41 homes in a sustainable location to help boost housing supply, ensure a 5 year supply of housing and provide robustness to ensure that the housing requirement of the modified WOLP 2031 is delivered.

This representation (in attached file) provide further information on the Land at Sunset View and should be read in conjunction with Edgars Limited’s representations regarding housing supply which are not repeated here.

INTRODUCTION AND SUMMARY

i. These representations are submitted in response to the West Oxfordshire Local Plan 2031 – Proposed Modifications Consultation, December 2016 (WOLP 2031 Modifications). They are made by Edgars Limited on behalf of Empire Homes Limited who have land north of the A44 and south of the Banbury Road, Chipping Norton under their control. The land extends to approximately 42 hectares and is identified on the plan attached as Appendix 1 to these representations.

ii. Empire Homes Limited object to Table 4.1 (Main Modification, MM, 14) Policies H1 (MM24), H2 (MM29 and MM30), CN1 (MM140) and CN2 (MM143) on the basis that insufficient sites for housing have been identified to provide for a five year supply of housing in accordance with national policy.

iii. Edgars Limited have prepared representations on behalf of a number of clients which demonstrates that a five year land supply cannot be demonstrated when appropriate assumptions are used in accordance with national planning policy and guidance. These representations conclude that only 2.7 year supply can be demonstrated. Edgars consider that additional sites are required to be allocated to ensure sufficient housing land supply.

iv. Land north of the A44 and south of the Banbury Road, Chipping Norton is available and capable of delivering residential development in a sustainable location to help boost housing supply, ensure a 5 year supply of housing and provide robustness to ensure that the housing requirement of the modified WOLP 2031 is delivered.

v. The following representations provide further information on the land north of the A44 and south of the Banbury Road, Chipping Norton.

1.0 DELIVERY AT EAST CHIPPING NORTON SDA (Policy CN1, MM138-MM140)

1.1 The East Chipping Norton allocation has been increased from about 600 dwellings at Tank Farm south of the London Road to 1,400 dwellings including 1,200 dwellings south of London Road and 200 north of London Road. The SDA now includes the provision of an Eastern Link Road.

1.2 Limited evidence has been published to demonstrate and assess the impacts of the increased allocation. The previous assessment of Strategic Site Options (Examination Document Ref OTH1) has not been updated. This provides a comprehensive overview of the site and a summary of the site constraints and impacts.

1.3 There would appear to be no evidence document which provides a summary of the modified East Chipping Norton SDA and its constraints. The SHELAA assesses a number of component sites but there is no expression of the overall size of the site and its developable area to ascertain whether delivery is realistic.

1.4 Previous landscape evidence was prepared for the Council by Kirkham Landscape Planning, the

<td>1644</td>
<td>&gt; SECTION 4 - OVERALL STRATEGY &gt; MAIN 14</td>
<td>The proposal to remove Long Hanborough from the Rural Service Centres and designate it as a village is unsound for the following reasons: 1. Its long history as a Service Centre Long Hanborough has been designated as a Service Centre for a long time. It is designated as a Service Centre in the West Oxfordshire Local Plan 2001 - 2011 (Figure 5.2) and was proposed to be designated as a Rural Service Centre in the submission West Oxfordshire Local Plan 2031 (Table 4.1). The National Planning Policy Framework (NPPF) requires that 'the plan should be the most appropriate strategy, when considered against the reasonable alternatives, based on proportionate evidence,' (para 182) and the Council has long accepted that there is sufficient evidence to justify the designation of Long Hanborough as a Rural Service Centre. 2. Wide range of services and facilities There is ample evidence that Long Hanborough has a wide range of services and facilities and therefore merits its Rural Service Centre status. These include a new spacious doctors’ surgery for which planning permission was obtained in July 2016 and which will be provided as part of the residential development on the land south of Witney Road granted planning permission under appeal ref: APP/D3125/W/15/3129767. The new doctors’ surgery is required to be provided under conditions 15 &amp; 16 of the permission within 2 years of commencement of the development and to remain in that specified use. This will replace the current cramped doctors’ surgery, which is well below NHS England standards of provision for the population it serves, and not only improve facilities for existing residents, but also provide the capacity for the provision of more homes in Long Hanborough. Other services and facilities include a primary school; petrol station; churches; post office; two Co-op food stores; dental practice; playing fields; spacious village hall; nursery;</td>
</tr>
</tbody>
</table>
beauty salon; two public houses; fish and chip shop; substantial employment estate (circa 10.72 hectares) and a mainline train station (the Cotswold Line).

3. Close relationship to the Oxford and Oxfordshire City Deal and the 'Knowledge Spine'

A key part of the case for Long Hanborough to remain as a Rural Service Centre is its close relationship to the City Deal. The Oxford and Oxfordshire City Deal is part of the Government’s initiative to devolve powers locally in exchange for local authorities taking on responsibility for creating economic growth in their areas. The Oxford and Oxfordshire City Deal aims to promote growth by maximising the existing educational, pharmaceutical and science assets in order to promote Oxford and Oxfordshire’s status as a prosperous economic area.

The City Deal, is a cooperative venture, which will be delivered through the Oxford Local Enterprise Partnership (LEP) bringing together other bodies and institutions, including Oxford City Council, Cherwell District Council, South Oxfordshire District Council, Vale of the White Horse District Council, West Oxfordshire District Council, Oxfordshire County Council, Oxford Brookes University and Oxford University. The area of the City Deal is County wide.

The proposed development at Long Hanborough is very close to the 'Knowledge Spine' identified in the City Deal, which stretches from Science Vale, near Didcot to Bicester, with Oxford at its heart. Paragraph 9.5.11 of the Local Plan acknowledges this, stating that the proximity of the Eynsham-Woodstock sub-area to major employment growth areas ‘present a diverse range of opportunities within close distance including within the Oxfordshire knowledge spine suggesting the Eynsham Woodstock area has a positive role to play in terms of economic development.’ Two key proposed employment sites that are close to Long Hanborough, and which housing there would help to serve, are the Science Park at Begbroke, which Cherwell District Council has identified in its Local Plan 2011 - 2031 (adopted July 2015) policy Kidlington 1 for Accommodating High Value Employment Needs and the Northern Gateway, which adjoins the A44 at the northern edge of Oxford, which Oxford City Council has allocated in its Northern Gateway Area Action Plan (adopted July 2015) policy NG2 for up to 90,000 m2 of employment uses that directly relate to the knowledge economy and include science and technology; research; bio-technology; and spin off companies from the universities and hospitals.

The City Deal commits the participating local authorities to accelerate the delivery of 7,500 homes across the county; and recognizes that the provision of quality housing close to the employment areas is fundamental to the delivery of innovation led growth.

The importance of housing provision to the achievement of the objectives of the City Deal is emphasized in the section on 'Planning for Development,' that states: 'The City Deal should enable further economic growth. However, this success has placed pressure on the local housing market. Oxford and Oxfordshire have overwhelming evidence that the lack of choice and availability of housing and affordable housing is a major barrier to growth. Oxford and other areas in the county are identified as among the least affordable locations in the country, and significantly ahead of London. The universities and businesses in the knowledge economy identify that housing is a significant barrier to the recruitment and retention of staff, including senior management and researchers. More housing is essential for the future of the knowledge economy in Oxford and Oxfordshire. City Deal partners recognise that a more strategic and ambitious approach towards housing growth is essential to the future of the knowledge economy in Oxford and Oxfordshire, and will ensure that the area continues to be a dynamic place to invest and work.'

emphasizes the importance of it continuing to be designated as a Rural Service Centre.

4. Recent Rail Improvements & Further Improvements Detailed in the Main Modifications will enhance Long Hanborough's role as a Rural Service Centre

There is therefore absolutely no evidence to demonstrate that it should be downgraded to village status. In fact, the service centre role performed by Long Hanborough has improved in recent years due to the improvements that have taken place in the rail service with further improvements proposed.

The presence of the train station at Long Hanborough is virtually unique in West Oxfordshire. None of the three main settlements of Witney; Carterton and Chipping Norton has a train station and the only other service centre which has one is Charlbury, which is located within the Cotswolds Area of Outstanding Natural Beauty (AONB) where development is therefore constrained in accordance with the advice in the National Planning Policy Framework (paragraphs 115 - 116). At Long Hanborough there is a regular direct train service to Oxford, Didcot, Reading, Slough, London and Worcester, with the journey to Oxford only taking ten minutes. This is of particular significance, as paragraph 9.5.34 of the Submission Local plan acknowledges that the Eynsham/Woodstock sub area, within which Long Hanborough is located, has 'very strong linkages with Oxford, with a high proportion of residents working in the city and much of the economic activity forming part of the wider Oxford city region economy.'

The proposed main modification 66 reinforces the importance of the Hanborough train station with paragraph 7.57(a) stating that: 'passenger growth on the Cotswold line has been significant with exceptional growth at Hanborough (up 239%).' It states that 'There is the potential for further growth with the introduction of an hourly service in December 2018. New trains will bring increased capacity with additional seating and will also achieve faster journey times, with some services from Hanborough reaching London Paddington in 63 minutes.'

There are also proposals for further improvements with paragraph 7.57 (b) stating that:

'LTP4 identifies a strategic aspiration to develop Hanborough Station as a transport hub to help reduce congestion on the A40 as part of an overall package of public transport measures. To fulfil its potential, the station will require a larger car park, footbridge and new platform so any trains extended from Oxford can terminate and turnaround. To fully realise the potential of the railway, further redoubling will be required at the eastern and western ends of the line, between Wolvercote Junction and Hanborough, and from west of Evesham towards Pershore. This would allow up to three trains per hour to Hanborough and/or Charlbury and two trains per hour between London and Worcester, with a journey time under two hours.'

These points are also reiterated in paragraph 9.5.16 which refers to Hanborough station as being 'one of the District’s largest and most well-used stations. Car parking facilities have recently been expanded at Hanborough to improve capacity and there are aspirations for further station improvements,' and then goes on to repeat the improvements outlined in paragraph 7.57 above.

Paragraph 9.5.34 also states that: 'there is potential to develop Hanborough Station as a stronger transport interchange, with additional parking, and improved access from the south.'

These improvements will further improve the sustainability of Long Hanborough and mean that it is far more accessible by public transport, particularly to Oxford, than any other service centre in West Oxfordshire, apart from Charlbury, which is in the AONB. This constant reiteration in the Main Modifications of the
importance of Hanborough station and the further improvements planned for it, prove that Long Hanborough certainly merits its designation as a Rural Service Centre.

The proposed Main Modifications, however, go on to state in paragraph 7.57c that:

'In light of the proposed improvements to Hanborough Station a key element of the proposed garden village to the north of Eynsham will be the provision of improved connectivity between the new settlement and the station particularly by bus and cycle.'

Given, that Long Hanborough is located adjoining the station there is already excellent connectivity with the train station, with a pedestrian and cycle path through the settlement providing access to it. It is also located closer to the station than the proposed garden village. With the recent and proposed improvements to the station it therefore clearly performs the role of an important transport hub and should retain its status as a Rural Service Centre.

5. Scoring in the West Oxfordshire Local Development Framework Settlement Sustainability Report (November 2016)

The Council has prepared a Settlement Sustainability Report (November 2016), which gives weighted and unweighted scores. In both Hanborough scores above all of the villages, scoring the same as the Rural Service Centre of Bampton and 2 points more than Bampton in the Weighted Score. However, Long Hanborough’s position as a Rural Service Centre is even more significant than this indicates as there are three different positive indicators for a bus service which are:

• Daytime bus service;
• Evening bus service;
• Bus service every 30 minutes

However, for the train there is only one score for a railway station in the parish. At Hanborough Station there is an evening train service, with the last train arriving at 23.02. The train also only takes 10 minutes from Oxford station, giving Hanborough a high level of accessibility, so the rail service clearly merits a higher score than the unweighted score of 1 or the weighted score of 2.

With regard to the weighted score, there is a strong argument that having a railway station in the parish should result in a weighted score of 4 being given, as is the case where a Post Office; Shops; Primary School; Doctors’ Surgery and Local Employment Opportunities are present.

6. The Planning Inspector Philip Asquith who considered the appeal into the proposed residential development and doctors’ surgery on land south of Witney Road, Long Hanborough considered that Long Hanborough merited designation as a Rural Service Centre

The Inspector who determined the planning appeal relating to land south of Witney Road, Long Hanborough, (APP/D3125/W/15/3129767 & 12/1234/P/OP) also considered Long Hanborough to merit the designation as a Rural Service Centre, stating that:

49. ‘Long Hanborough is one of the nine larger settlements in the district classified in the WOLP as Service
Centres. These, by definition, have a good range of facilities, services and transport accessibility to support their immediate communities as well as neighbouring hinterlands. This is confirmed by the Council’s Settlement Sustainability Report, revised in December 2013. The village is also defined as one of six Rural Service Centres within the emerging Local Plan 2031. The Statement of Common Ground between the appellant and the Council notes that Long Hanborough is a suitable location to accommodate significant residential growth. There is a range of local services, including a small business park adjacent to the station, which allows a proportion of travel demand (alternative to the car) to be met locally.

50. The village is only one of two settlements within the category of Main Towns and Rural Service Centres in the district to have a mainline station. The rail line provides direct services to London, Oxford, and Worcester . . . It is apparent that there is a commitment to the introduction of new trains with greater capacity, with a longer-term commitment to increase the number of trains from Long Hanborough to Oxford, cut journey times to London and undertake enhancements to the station’s facilities.

Counter Arguments

There is therefore abundant evidence that Long Hanborough merits its Rural Service Centre designation. There are two arguments against its designation which are the Council’s statement in paragraph 9.5.3a that:

‘Given the residential schemes of 169 homes and 50 homes recently approved, the limited role of the settlement and its landscape setting, it is only suitable for very modest levels of further development.’

The other being the argument made in the officers’ report to Council on the 26 October 2016, (paragraph 5.9), that the proposed designation of the West Oxfordshire Garden Village would mean that there would be too many Rural Service Centres in this part of Oxfordshire.

Neither of these arguments is considered to be a valid reason to remove Long Hanborough’s status as a Rural Service Centre. In the first place the Council is itself proposing in the main modifications to designate two additional sites at Long Hanborough for residential development, these being land at Myrtle Farm, Long Hanborough for 50 homes under policy EW1 f and the other being land at Oliver’s Garage, Long Hanborough for 25 dwellings under Policy EW1 g. There is also land north of Witney Road, Long Hanborough, which is on the opposite side of the road to the 169 dwellings granted approval on appeal, which could be allocated for residential development without a significant impact on its setting, as the issues are very similar to those relating to the land south of Witney Road. (Further consideration is given to this issue in the representations submitted in relation to Main Modifications 27; 160; 170; 171; 172, 173, 174 & 175 seeking the designation of this site.) It is therefore not considered to be true that Long Hanborough ‘is only suitable for very modest levels of further development.’

With regard to the argument with regard to the proximity of the West Oxfordshire Garden Village, this argument is made in the officers’ report to Council on the 26 October 2016 which stated in paragraph 5.9 that:

It is recommended that the proposed Garden Village should be identified as a future rural service centre. The Garden Village would then replace Long Hanborough which would no longer be a defined rural service centre. This reflects the significant scale of development proposed in the Garden Village, the key role it will play as a transport and business hub, and the relatively limited scope for further development in Long Hanborough. It also avoids an over concentration of rural service centres in this part of the District.
However, there are two reasons why it should not replace Long Hanborough as a Rural Service Centre. One is that the proposed Garden Village site currently consists of fields, with no services and facilities and is not therefore a Rural Service Centre. Indeed, given the significant planning issues; funding and infrastructure that is required for a new settlement, the West Oxfordshire Garden Village may never come to fruition or may develop much more slowly than currently envisaged and so not perform a Rural Service Centre function during the entire plan period. Even on the most optimistic trajectory it is clear that it will not perform the role of a Rural Service Centre for many years.

Secondly it will effectively form an extension to Eynsham. Indeed, paragraph 9.5.40r of Main Modification 153 states that:

‘By ensuring good links across the A40 (e.g. an iconic feature bridge as suggested in the Council’s Garden Village expression of interest) existing residents of Eynsham to the south will be able to access the Garden Village to enjoy the services, facilities and amenities it will offer. Conversely, residents of the Garden Village will be able to access Eynsham and its services and facilities, thereby playing a complementary rather than a competing role.’

It will therefore effectively form an extension to Eynsham, in the same way that other settlement extensions such as the Littlemore Science Park and Blackbird Leys or Barton form part of Oxford, notwithstanding their separation from other parts of the city by the A4142 and the A40 respectively.

Indeed, by designating it as a separate Service Centre means that there would be two contiguous Service Centres. It makes much more sense to have Eynsham and the proposed Garden Village as one Rural Service Centre and Long Hanborough as another, as Long Hanborough serves a different area of the District to Eynsham.

Conclusion
For the reasons set out above it is considered that Long Hanborough is a highly sustainable location for development and therefore the designation of Long Hanborough as a Rural Service Centre, as proposed by the Council in the original submission West Oxfordshire Local Plan 2031 ‘is the most appropriate strategy when considered against the reasonable alternatives’, (NPPF, para 182) based on the Council’s own evidence base and that it would be wrong for it to be downgraded to a village.

We note that Long Hanborough has been demoted to the status of a ‘Village’. Previously it was a Rural Service Centre. This re-classification is justified on the basis of the new allocation for the West Oxfordshire Garden Village, but it is unclear why the allocation of the West Oxfordshire Garden Village should automatically lead to the re-classification of Long Hanborough. If the settlement has the services and amenities to warrant classification as a service centre then it is unclear why this needs to change.

As a ‘village’ only a limited amount of housing development will be allowed in Long Hanborough. We note that Policy OS2 (MAIN 16) may allow for an allocation and in Policy EW2 (MAIN 183) we note that 75 dwellings appear to be allowed on two sites. Long Hanborough may be able to support more development. It has a railway station with connections to Oxford and London. As such it is a sustainable location to take an allocation for more housing. Changes to Government planning policy may encourage an increase in the supply of housing around rail stations. As we have argued above under MM8, increasing the number of sites of all sizes is key to sustaining delivery, so taking advantage of as many opportunities as possible across the district would help to provide a flexible supply of land and would help to ensure that the overall requirement
Similarly, we are surprised to read that Ascott-under-Wychwood is also designated a village rather than a rural service centre. The consequence of this is no specific, guaranteed, housing allocation. Ascott-under-Wychwood also has a rail station with regular daily train services to London Paddington. As a sustainable location with a store, post office, library, pubs, bus services, etc the Council should consider allocating a housing number to this settlement.

The proposed modifications to Table 4.1 are insufficient to ensure the delivery of the substantially increased housing requirement in the period to 2031, and are inconsistent with Main Modification 15 that changes the distribution strategy from a focus of ‘most’ development at the Witney, Carterton and Chipping Norton Sub-area to a ‘significant’ proportion.

In Part 1 of his Preliminary Findings (IN 015), the Inspector acknowledged that the development strategy of the plan may not be appropriate to accommodate any significant needs arising from Oxford, and that additional greenfield sites would need to be found (para. 7.7). The Council’s response is to include in the strategy a new Garden Village in the south-east of the district, which was already targeted for a disproportionate share of the growth requirements. For reasons that are set out in the representations below, the substantially increased housing requirement to accommodate both the District’s own needs and those of the neighbouring city of Oxford necessitates a broader distribution, including to the northern sub-area of Chipping Norton to ensure that the requirement is deliverable. It also necessitates allocation of smaller, immediately deliverable sites to alleviate the shortfall in the five-year housing land supply, including the backlog of under-provision.

To ensure the delivery of the overall housing requirement during the plan period therefore necessitates a greater distribution across the district, with an increased focus on smaller sites associated with the Rural Service Centres and Villages. This is reflected in the proposed development of a new Rural Service Centre, comprising the West Oxfordshire Garden Village. However, the development of a completely new settlement is accompanied by associated risks of delivery delays/failure, there being, as yet, no certainty of Government funding for the proposed new village.

The revised strategy should therefore also provide for a greater distribution of growth to existing villages, including the identification of additional Rural Service Centres, particularly in the north of the district to provide for a more even distribution of growth, and to alleviate the over-concentration on the south-east of the district with its inherent risks of delivery failures through market saturation. This would be entirely consistent with the development strategy of the Plan which is that:

Not all growth can or indeed should go to Witney, Carterton and Chipping Norton however and there is a need for development elsewhere to help meet the unmet housing needs of Oxford City, to spread the potential benefits of growth and to help sustain the more rural parts of the district. (para. 4.15)

A prime settlement for upgrading to a Rural Service Centre is Middle Barton, which is the principal settlement in the north-east of the district, as is evident from Figure 4.1. The Chipping Norton Sub-Area does not currently contain a Rural Service Centre and is the only sub-area in the district in which one is not identified. Given the status of Middle Barton as the principal settlement in the comparatively rural north eastern part of the district, it has an important role to play as a service centre for the surrounding rural hinterland. The Sustainability Matrix 2016 contained in the Settlement Sustainability Report (November 2016) confirms that Middle Barton is one of the larger villages with a population in excess of 1,000, and has a good range of social and community facilities, including:
Full-time Post Office and other shops.

Primary School.

Community Building.

Public House.

Place of Worship.

Bus Service (including evenings).

It is also germane that Middle Barton is within a 5 kilometre cycling distance of key employment facilities, notably the Lotus F1 facility to the south west and Enstone Airfield to the west, which support a number of businesses. In the opposite direction, it is approximately 5 kilometres from Heyford Railway Station, which is accessible by bus. Middle Barton is therefore well positioned to provide opportunities for sustainable travel for those who work in the local rural business hubs, and for those who need to travel further afield by train.

The evidence demonstrates that it is the most sustainable settlement in the Chipping Norton Sub-Area to perform the role of a Rural Service Centre to serve the north-east of the Plan area. Whilst it does not currently have some of the facilities of the existing service centres, there are no existing settlements of such scale in the north-east of the Plan area, aside from Chipping Norton in the north-west part of the sub-area. It is therefore appropriate to focus growth on settlements that have the potential for growth that will contribute to sustaining and improving existing facilities and have potential to attract more. It is noted that the emerging Plan does not set out a minimum level of facilities that are necessary in order for a settlement to be designated as a Rural Service Centre. It is therefore entirely appropriate for the Plan strategy to designate such a centre based on its intended role rather than simply having regard to its existing scale and level of facilities.

Middle Barton has the potential to accommodate a modest scale of growth, the rate of which is unlikely to be restrained by local market saturation given its detachment from the major growth areas to the south. It therefore offers much greater certainty of delivery, beneficial choice of housing location, and can contribute to delivering housing, including affordable housing, quickly and therefore contributing to alleviating the shortfall in the five year housing land supply.

An allocation of housing would also assist in bolstering existing services within Middle Barton. This is supported by the PPG in which it is held to be: ...

important to recognise the particular issues facing rural areas in terms of housing supply and affordability, and the role of housing in supporting the broader sustainability of villages and smaller settlements. ...

A thriving rural community in a living, working countryside depends, in part, on retaining local services and community facilities such as schools, local shops, cultural venues, public houses and places of worship. Rural housing is essential to enable viable use of these local facilities. (PPG, Paragraph: 001 Reference ID: 50-001-20160519, emphasis added).

| MM756        | Cantay Estates          | Cantay Estates | -               | Cantay Estates    | 1912       | > SECTION 4 - OVERALL STRATEGY > MAIN 14 | Proposed modification- Downgrading of Long Hanborough: The proposed modifications involve the downgrading of Long Hanborough from a service centre, to a lower order village. This change pertains to numerous modifications, we therefore set out our response below which we wish to be considered in response to the following modifications: MAIN3, MAIN13, MAIN14, MAIN15, MAIN59, MAIN66, MAIN145, MAIN149.

Detailed comments particular to each modification are set out in detail against the relevant reference in following sections.

We object to proposed modifications which suggests the downgrading of Long Hanborough from a rural service centre to a village. The submission plan confirmed the rural service centres were classified as such because they benefitted from a range of services and facilities which supported the village and surrounding area. They are able to support additional homes in the short-term, while proposed growth can enhance the role of the settlement in supporting the surrounding rural area (paragraph 4.18). This approach was directly in line with the plan's objective 1 'strong market towns and villages' and objective 4 'sustainable communities with access to services and facilities', both of which remain un-modified.

Long Hanborough retains the same services and facilities which existed at the time the plan was submitted, furthermore planning permission has been granted which allows significant expansion of the primary school (15/03341/FUL). While additional housing has been permitted no evidence has been produced to suggest additional homes would result in any harm to the character or sustainability of the settlement. The village therefore remains well placed to fulfil the role of a rural service centre.

The downgrading of Long Hanborough proposed through modifications is largely unexplained and not supported by any evidence. The Council cite the creation of a ‘new’ service centre through the northern expansion of Eynsham as justifying the downgrading of Long Hanborough as the new development will need to “develop a critical mass of services and facilities” (paragraph 2.5a).

We are concerned the Council’s explanation suggests an intention to restrict the development of Long Hanborough and reduce services in the village in order to encourage their replacement in the new development. A restrictive approach to development stifling an existing sustainable settlement and vibrant community is clearly at odds with the Plan’s vision, policies of the NPPF and good planning practice.

The provision of an additional service centre would be entirely in line with the Plan objectives. If the development proposed north of Eynsham is to proceed it is clearly preferable that Long Hanborough maintains its status as a service centre complementing any new facilities created. The need to retain the service centre is particularly pronounced due to the unclear deliverability of the proposed site north of |

<td>MM756 &gt; Cantay Estates</td>
<td>Cantay Estates</td>
<td>-</td>
<td>Cantay Estates</td>
<td>1931</td>
<td>&gt; SECTION 4 - OVERALL STRATEGY &gt; MAIN 14</td>
<td>Proposed modification- Expansion of Eynsham: The proposed modifications introduce a significant strategic development to the north of Eynsham to meet Oxford City’s unmet housing need. This change pertains to numerous modifications, we therefore set out our response below which we wish to be considered in response to the following modifications: MAIN3, MAIN7, MAIN9, MAIN13, MAIN14, MAIN15, MAIN23, MAIN24, MAIN27, MAIN58, MAIN60, MAIN149 Detailed comments particular to each modification are set out in detail against the relevant reference in following sections. The same modification seeks to introduce the new strategic development north of Eynsham. The proposed development is of a strategic scale in a location which previously only saw limited development. The strategic area has been newly introduced at the examination stage, rather than through the extensive consultation process which should inform fundamental decisions in plan making. The proposed ‘Garden Village’ is a strategic site suggested to be a new standalone settlement. Such a development is a clear departure from the submitted spatial strategy which emerged from the earlier consultation stages and was informed by the evidence base. The proposed new development is a clear departure from the proposed development plan, not a mere modification. The proposed changes to the plan are so significant that they amount to a fundamentally different strategy to that submitted for examination. Should the Council wish to make such a fundamental change it should be done so through a new plan informed by a suitable evidence base and following a formal consultation process. To do otherwise would undermine the credibility of the plan and public confidence in the planning process. A consequence of the limited considerations which have informed the introduction of the development area is considerable uncertainty as to the achievability of the proposed scheme. The site was previously discounted as unsuitable for development within the submitted SHLAA, no updated document has been published to revise this status. Noise impacts, segregation across the A40 and landscape impacts are all identified as being prohibitive to development. No information has been produced to demonstrate how these issues may be overcome, nor whether they are less pronounced at any other development site. Similarly the proposal was dismissed as not being realistic in the submitted SA, little is offered to justify such a fundamental change in stance. Development strategy for the proposed site is deferred to a later Area Action Plan, we consider however development parameters must be set out and explored in order to ensure the proposed scheme is achievable. The Plan also refers to an expression of interest submitted to Government seeking to obtain Garden Village status for the development, unlocking funding streams to deliver infrastructure to unlock the site. Although an expression has been submitted, no decision has yet been issued. In excess of 50 similar expressions have been made nationally, therefore Garden Village status is far from guaranteed. Proper exploration must be made as to the sustainability, suitability and deliverability of this site and essential infrastructure in the event it does not secure Garden Village status.</td>

<tr>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td>MAIN9: The propose modification identifies the proposed expansion north of Eynsham to be an ‘exemplar’ development with regard to design and environmental performance. The aspirations for the development are laudable, however only very high level initial assessments have been undertaken to establish whether this is deliverable, particularly in the context of the landscape previously considered vulnerable to development.</td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td>MAIN23: The proposed alteration to the wording from the ‘majority’ of development being delivered in the district’s towns, to a significant proportion, confirms the proposed expansion to the north of Eynsham to be a deviation from the strategy set out under policy OS2 in the Submission Plan. We consider the fundamental change of the strategy renders this a new plan, it should therefore be developed as such, rather than processed through modifications.</td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td>MAIN25: We welcome the proposed increase in housing provision within the plan to reflect the objectively assessed need set out in the Oxfordshire SHMA (660 dwellings per annum). Although the headline figure for housing provision is increased the means of meeting that need is somewhat unclear in the document. The proposed site allocations fall someway short of the accepted housing requirement. Allocated sites and suggested windfalls total 11,545 homes, some 1,655 homes below the housing target for West Oxfordshire (13,200). Although not clearly stated it seems the Plan is reliant on a significant number of sites which have on the deliverability of these sites.</td>
<td></td>

<td></td>
<td></td>
<td>The proposed site allocations fall someway short of the accepted housing requirement. Allocated sites and suggested windfalls total 11,545 homes, some 1,655 homes below the housing target for West Oxfordshire (13,200). Although not clearly stated it seems the Plan is reliant on a significant number of sites which have on the deliverability of these sites. The published housing supply position paper sets out the Council’s assumptions on the deliverability of permitted homes. This is set against a backdrop of previous under-delivery in relation to the objectively assessed need, including in the initial five years of the plan period. The anticipated delivery of homes from larger sites (more than ten units) is particularly optimistic given the recent under-delivery of homes and the longstanding nature of several of the outline planning permissions. The anticipated delivery figures (Appendix 1) do not appear to assume all planning permissions granted for larger sites will be implemented. The assessment of smaller sites makes a concession (9.1%) in acknowledgement that not all permissions will be implemented; an allowance for non-delivery of larger sites is also required. While uncertainty exists as to the deliverability of a significant proportion of the required housing supply questions remain as to the soundness of the plan. Robust evidence should be produced to show the permitted sites can be relied upon to deliver homes, additional allocations should also be made to mitigate against any shortfall.</td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td>MAIN27: The allocation of non-strategic sites is welcomed and we believe imperative if the housing need of the district is to be satisfied. We are concerned that those sites allocated have not been selected through thorough testing, including consideration of all reasonable alternatives as set out by the regulations. As a consequence the soundness of the allocations and broader plan is in doubt.</td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td>We have raised our concerns with regard to the unpublished SHELAA earlier in these representations; those comments also apply to this modification. The fact that the plan preceded the assessment significantly undermines the credibility of the plan as an evidence based document as do shortcomings in the assessment.</td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td>We consider Long Hanborough to be a suitable location for development as it benefits from an excellent</td>
<td></td>
</tr>
</tbody>
</table>
range of services and facilities, including a railway station. We believe additional development sites should be permitted in the village alongside those proposed in the modifications. The proposed development site at Tuckwells Pit, Church Road (SHELAA ref 225) is a suitable location for new development. It can sensitively accommodate new homes in a location which benefits from access to key services and facilities. A Landscape and Visual Impact Assessment has confirmed development of the site can have a beneficial effect on the landscape while the off-road cycleway on Main Road provides viable access to the railway station.

MAIN29: The proposed modifications seek to rely upon windfall development to fulfill the housing requirement at a rate of 125 homes per year. Although this policy is informed by previous delivery rates the published SHELAA suggests insufficient developable sites exist to fulfill that rate of development throughout the plan period. As the Council’s own SHELAA suggests insufficient sites are available to fulfill the suggested windfall rate either the evidence, or the proposed strategy must be unsound.

Historic windfall delivery rates have been achieved in the district’s larger settlements including those designated as service centres. The proposed downgrading of Long Hanborough reduces the likelihood of homes being delivered in the village further reducing the chances of windfall housing rates being maintained. Although an alternative service centre is proposed to be provided this is for delivery within the plan period and therefore will not give rise to any windfalls.

MAIN59: The proposed emphasis on the desirability of locating development in locations with access to public transport is at odds with the modification suggesting downgrading Long Hanborough’s settlement status. The village is one of only two in the district which benefit from a significant railway station.

MAIN60: The plan identifies significant challenges upon the A40, particularly with regard to access to Oxford. Although several alleviation options are suggested none is carried forward in plan proposals which acknowledges necessary funding is not available.

The proposed strategic development area at Eynsham is suggested on the basis that alleviation of A40 issues could be provided, however their achievability is unknown. The uncertainty of delivery of necessary highway improvements calls into question the suitability of the proposed strategic development area. The Plan which relies upon this area to meet its portion of Oxford’s unmet housing need cannot be sound until the site is known to be deliverable.

MAIN66: The proposed modification underlines a success in the current plan period in encouraging use of railway connections in the district, particularly from Long Hanborough. The modification acknowledges the capability of the rail corridor to remove vehicles from the A40 as residents travel toward Oxford and London, and the desirability of increasing capacity of Hanborough station and the railway link.

The modification supports improvements to the rail connection and acknowledges the need to provide the proposed development north of Eynsham with connections to Hanborough station. It is perverse therefore that the plan seeks to restrict development in Long Hanborough as developments in the village could provide easy access to the railway station and contribute to providing enhanced services and facilities. We consider the village should retain its rural service centre status and consideration given to additional non-strategic allocations to make the most of this opportunity for sustainable development.

MAIN145: The proposed modification suggests Long Hanborough is not in a position to support significant levels of additional development, however no evidence is provided as to any particular harm which would arise from residential development over and above that in the plan.

| MM772         | Spitfire Homes          | Spitfire Homes  | -                | Spitfire Homes    | 2066       | > SECTION 4 - OVERALL STRATEGY > MAIN 14 | Main Modification 14 – Table 4.1  
Policy OS2 is updated to reflect allocations made through the Proposed Modifications. Spitfire Homes supports that the ‘villages are suitable for limited development which respects the village character and local distinctiveness and would help to maintain the vitality of these communities’. This principle is in line with paragraph 55 of the NPPF. Nevertheless, we comment further below on the quantum of allocated sites and the benefit that directing further development to the village locations could have in respect of meeting housing targets.

Our client acknowledges the amendments to the Settlement Hierarchy at Table 4.1. Standlake continues to be appropriately classified as a ‘village’ location, the sustainable credentials of which are reported by the Council’s Settlement Sustainability Report (SSR, November 2016). The SSR reports both an un-weighted and weighted score for the settlements assessed. In both scenarios the sustainable credentials of Standlake are recognised, with the settlement performing strongly and ranked highly within the ‘village’ tier (scoring 11 and 30 respectively).

Further, it is noted that the settlement of Standlake is relatively unconstrained by protective policy designations. The village lies outside of the Oxford Green Belt and is not subject to either Area of Outstanding Natural Beauty or Conservation Area constraints. The capacity of the settlement to deliver development, as demonstrated by Spitfire Homes land interest, aligns neatly with its sustainability credentials. In turn, development at Standlake would assist the Council in fulfilling the principle of Policy OS2, that is ‘locating development in the right places’.  

The document identifies the opportunity in the village in enhancing sustainable transport options through improvements to the station, this presents scope for new homes to be developed with a tangible benefit for the district. No unique sensitivities are identified, we therefore believe additional housing development should be allocated (beyond that proposed) and windfalls encouraged in Long Hanborough.

MAIN149, 180: We welcome the acknowledgement in the modification of the potential for enhancement of Hanborough Station as a transport interchange, however the proposed downgrading of the settlement is clearly at odds with this and undermines the aspiration for improvements. Such an approach is also at odds with the NPPF’s encouragement of environmentally sustainable development.

The modification suggests increased car parking at the station, whilst this could encourage rail commuters from rural areas it is clearly preferable to remove the need for car use all together. Additional cycle parking should be provided and homes provided in locations which already benefit from access to the station by sustainable means.

New homes created in Long Hanborough would benefit from existing foot and cycle access to the station, therefore they could be delivered early in the plan period and support enhanced rail services without need for additional car journeys. To seek to restrict this undermines the aspiration of the plan.

The Council suggest the proposed northern extension of Eynsham could benefit from sustainable access options through creation of new foot/cycle routes from the south. These would be more distant than any point within Long Hanborough, furthermore their delivery cannot at this point be guaranteed. If the Council wishes to make the most of opportunities presented by rail routes from Hanborough permitting of additional development in the village is clearly the correct path.

### Status of 'village' needs some differentiation - some of these localities are quite well-located on existing transport corridor, so these villages are connected by hourly commercial bus routes, or better, which could be improved through developer contributions and growth in population/patronage and then there are other villages which have no commercial bus service, or likelihood of commercial bus services

The suggested hierarchy of villages, according to 'connectivity' by commercial bus services follows:

- Well connected – at least an hourly daytime bus service
- Partly connected – at least 5 commercial bus services per day
- Not connected – no commercial bus service.

### Introduction and Summary

1. These representations are submitted in response to the West Oxfordshire Local Plan 2031 – Proposed Modifications Consultation, December 2016 (WOLP 2031 Modifications). They are made by Edgars Limited on behalf of Lagan Homes who have land under their control off School Hill, Minster Lovell. The land extends to 2.5ha and is identified on the plan attached as Appendix 1 to these representations.

2. Lagan Homes object to Table 4.1 (Main Modification, MM, 14) Policies H1 (MM24), H2 (MM29 and MM30) and WIT4 (MM115) on the basis that insufficient sites for housing have been identified to provide for a five year
supply of housing in accordance with national policy.

iii. Edgars Limited have prepared representations on behalf of a number of clients which demonstrates that a five year land supply cannot be demonstrated when appropriate assumptions are used in accordance with national planning policy and guidance. These representations conclude that only a 2.7 year supply can be demonstrated. Edgars consider that additional non-strategic sites are required to be allocated to ensure sufficient housing land supply.

iv. Land at School Lane is under the control of Lagan Homes, is available now and capable of delivering around 25 homes in a sustainable location to help boost housing supply, ensure a 5 year supply of housing between 2016-2021 and provide robustness to ensure that the housing requirement of the modified WOLP 2031 is delivered.

v. Lagan Homes object to Table 4.1 and the reference to Minster Lovell ‘south of the Burford Road’ (MM14). There is no reason why Land at School Lane and north of the Burford Road is in anyway less sustainable in locational terms than other land on the edge of the village.

vi. The following representations provide further information on the Land at School Lane and should be read in conjunction with Edgars Limited’s representations regarding housing supply which are not repeated in detail in these representations.

1.0 LAND AT SCHOOL LANE, MINSTER LOVELL

1.1 Lagan Homes object to Table 4.1 (Main Modification, MM, 14) Policies H1 (MM24), H2 (MM29 and MM30) and WIT4 (MM115) on the basis that the modified plan has not identified sufficient housing land to provide for a 5 year supply of housing and that Land at School Lane should be allocated for around 25 homes to help address this deficiency.

Site and Surrounding Area

1.2 The site lies adjacent to the village of Minster Lovell and the B4047 Burford Road some 3 miles (5km) west of Witney and 4 miles (6km) north of Carterton. There is an off-road cycle path to Witney (within reasonable cycling distance) and an hourly bus service to Witney. The village also has a number of amenities including a small shopping parade, Post Office, Primary School, Public House and Butcher. There are also several businesses along the Brize Norton Road.

1.3 The site is a single 2.5ha open grassland field immediately north of the Burford Road and west of School Lane. It is part of the north facing slope of the Windrush Valley. A site plan is attached at Appendix 1.

1.4 The site lies some 1m below the Burford Road and is screened by a strong hedgerow along the road frontage such that the open nature of the site is not readily perceptible from this frontage.

1.5 On the southern side of Burford Road is some modern development which is also mostly set back from the road frontage. The White Hart Public House (Listed Grade II) along with the War Memorial and Methodist Church frame the Brize Norton Road junction opposite the site. 1.6 There is a farm access in the south western corner and a strong hedgerow bounds to the west along with a Thames Water pumping station.

<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td>1.16 Minster Lovell is identified as a village in the Local Plan 2031. Draft WOLP Policy H2 permits new housing adjacent to villages to meet housing needs. As such housing development on the site would be acceptable in principle.</td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td>1.17 Draft Policies H2 and WIT4 seek delivery of 4,400 homes in the Witney Sub Area including Minster Lovell. Delivery is proposed through three Strategic Development Areas (SDAs - West, East and North Witney)</td>
</tr>
</tbody>
</table>
1.18 There is residual windfall requirement of 304 homes within the Witney Sub- Area.

1.19 In Edgars opinion, there is a significant risk of delays in delivery on SDAs which will likely result in continuing housing supply deficits. There is a need to address deficiencies in the 5 year housing supply. Given the long lead in times of SDAs, addressing the current supply deficiencies is best achieved through allocating additional non-strategic developments such as Land at School Lane, Minster Lovell.

1.20 Land at School Lane lies adjacent to Minster Lovell, close to amenities and public transport links. The village bus stops, public house and shops are located on the opposite site of the Burford Road to the site in very close proximity. The village school lies within 500m to the south. The site is also within cycling distance of the West Witney employment areas (2km) and Witney Town Centre (5km). In locational terms, it is sustainable. Indeed, the site lies closer to village amenities than the proposed allocation west of the village.

1.21 It is noted that Table 4.1 of the plan includes Minster Lovell as a village within the settlement hierarchy but this has been modified to (MM 14) to include reference to Minster Lovell ‘south of the Burford Road’. Lagan Homes object to this modification.

1.22 In Edgars opinion, the development of Land at School Lane and north of the Burford Road can comply with Policy H2 in being adjacent to a village in the settlement hierarchy.

1.23 There is no reason why land at School Lane, north of the Burford Road, is in any way less sustainable in locational terms than other land adjoining the village. Indeed, land at School Lane is in closer proximity to many of the villages amenities, including the school, shops and public house than other land on the edge of the village.

Village character, AONB landscape and Conservation Area

1.24 Draft Policy OS2 Locating development in the right places states that villages are suitable for limited development which respects the village character and local distinctiveness and would help to maintain the vitality of these communities. Development should form a logical complement to the settlement pattern, protect landscape character and settlement identity.

1.25 The site does not appear to have been part of the historic Chartist settlement for which Minster Lovell is known. The site does lie within the Cotswolds AONB and adjacent to a Conservation Area.

1.26 The site is not identified in the Council’s Conservation Area appraisal as where there is a notable sensitive view into or out of the Conservation Area.

1.27 Views of the site are already filtered by vegetation and topography. The WOLA identifies that this area of the Windrush Valley can accommodate development within a strong landscape structure. Indeed, in views from across the valley, existing landscape features act as a screen to existing dwellings on the Burford Road.
1.28 The setting of the Conservation Area and AONB can be preserved and enhanced through a low density but high quality development within a strong and extensive landscape structure. Although the extent of the land is 2.5ha, only around 25 dwellings are proposed leaving significant scope for open space and landscaping.

1.29 In Edgars opinion, a development of this scale does not comprise ‘major’ development for the purposes of NPPF paragraph 116 and that a development within a strong landscape structure will not have a significant impact on the landscape and scenic beauty of the wider AONB.

1.30 A low density development within a strong landscape structure will also respects the settlement pattern and separate identities of Little Minster and Minster Lovell.

1.31 Although further work is being undertaken, Edgars consider that development can be achieved on the site which makes an important contribution to meeting housing land supply in a sustainable location, without significant impact on the settlement character, AONB or adjoining Conservation Area.

1.32 Further detailed technical information and development design work is likely to be available during the next stages of the WOLP 2031 Examination.

ASCOTT-UNDER-WYCHWOOD PARISH COUNCIL
RESPONSE TO WODC DRAFT LOCAL PLAN 2031 CONSULTATION

Ascott-under-Wychwood Parish Council notes that our village has actually been named for the first time in the Draft Local Plan 2031 and has been moved to the ‘Villages’ category. We are very concerned that this has been done apparently arbitrarily and without any consultation at all with the Parish Council.

The consequence is that certain statements which were acceptable last year (when only 2 Wychwood villages were named) are no longer accurate with Ascott-u-W included. Ascott is a village one half and one third of the size of the other two Wychwood villages and with far fewer amenities. It is not accurate to include Ascott in the general Wychwood statements written last year. This places us in the difficult position of strongly objecting to statements which are not among the amendments but our objections do flow from the original critical amendment – that of naming Ascott-under-Wychwood in the Villages category.

In particular, we feel that the impression is given over and over again that Ascott-u-W is reasonably well served by public transport. This is blatantly not the case and the situation has got worse in the past 6 months with the cuts in bus subsidies (as indicated in our response to the WODC Planning Services Parish Survey 2016). Ascott-u-W also appears to have a Post Office (Friday afternoon in Tiddy Hall does not constitute a Post Office) – and a smart railway station with a reasonable service (when in fact it has 1 train each way on weekdays only, too late in the morning for London commuters and even Oxford schools).

We are extremely concerned that an inspector, if considering a planning application appeal, might refer to the WODC Local Plan 2031 and think that Ascott-under-Wychwood has amenities equal to Shipton and Milton and we would ask that the Draft Local Plan be amended to reflect the true picture.

Stagecoach objects to the removal of the Local Service Centre designation from Long Hanborough.

| West          |                         |                 |                  |                   | MAIN 14    |                   | The Council's own evidence base strongly supports the categorisation, which is one of a number of important considerations influencing the development strategy. Removing this settlement from the Category is inconsistent with the evidence base and thus appears arbitrary, and consequently unsound.  
The village has a range of services, but most significantly is one of the main railheads serving the District. This is itself recognised elsewhere in the Draft Plan, at paragraph 9.5.48 in particular, which seeks to substantially build upon the potential to make the settlement an interchange between rail services and other modes, including bus services both to Witney and Woodstock; and also to the proposed West Oxfordshire Garden Village, sited north of Eynsham. It makes sense for some development needs to be met at this location, consistent with its size and other environmental and heritage constraints, particularly given that this is likely to mean that pressure on the local and wider highway network is reduced as a result.  
The West Oxfordshire Garden Village is unlikely to deliver an equivalent range of facilities to that available at Hanborough for a considerable period of time. In fact, Stagecoach notes that the proposal is not proposed to begin to deliver new housing until after 2021 at the earliest. A significant range of facilities looks unlikely to be provided there until about 2025. While in due course, it is anticipated to provide a range of local services, the timescale is clearly not in the immediately foreseeable future. At the point they are provided, it is equally unclear how far they will be relevant to any significant wider hinterland, given the spatial distribution of settlements in this part of the District, which will have access to equivalent existing facilities and services either locally or closer nearby.  
Long Hanborough should be retained as Local Service Centre consistent with its current role meeting service needs from a wider hinterland, and public transport in particular. That role is likely to increase, consistent with the objectives set out elsewhere in the emerging Plan at paragraph 9.5.48, which states that "(WODC) anticipate(s) Hanborough Station developing into a highly effective transport hub".  
At a future point when the Plan is reviewed, should services and facilities at least as comprehensive have been provided in the New Garden Village, then it may prove appropriate to add the settlement to the Local Service Centre category, or its equivalent nomenclature. |
| MM451         | English Heritage        | Historic England| Mr                | Small             | 1053       | > SECTION 4 - OVERALL STRATEGY > MAIN 15 | Historic England welcomes and supports Proposed Main Modification MAIN15 for the addition of paragraph 4.18b as part of the positive strategy for conserving and enjoying, and clear strategy for enhancing, the historic environment as required by the National Planning Policy Framework. |
| MM491         | Crest Strategic Projects| Crest Strategic Projects | - | Crest Strategic Projects | 1263       | > SECTION 4 - OVERALL STRATEGY > MAIN 15 | 2.6 Paragraph 4.15 is consistent with the submission version of the Local Plan with the exception that the phrase 'most future development' becomes 'a significant proportion of future development', when referring to the amount of development that is being directed to the Witney, Carterton and Chipping Norton sub areas. What is retained is the intention within the Local Plan that there should be a particular focus on steering development to the three Main Service Centres of Witney, Carterton and Chipping Norton. The fact that there is no change in this approach is justified by the acknowledgement that the 'Three Town Strategy/Focus' takes into account previous consultation responses and the results of several Sustainability Appraisal reports.  
2.7 Paragraph 4.16 recognises that the three towns offer greatest access to services and facilities, are accessible by a range of transport modes, offer a good range of job opportunities and have suitable and deliverable development sites available to meet the development requirements of the district. As a |
consequence the strategy directs both strategic and non-strategic scale development to the Main Service Centres. This approach is consistent with the evidence base and with the Vision and key strands that inform the policy-making approach of the Local Plan.

2.8 Paragraph 4.17 is amended, compared to the submission version of the Local Plan, only insofar as the justification for directing development to other locations away from the three towns is based on helping to meet the unmet housing needs of Oxford City. There is no suggestion here that the approach to meeting West Oxfordshire’s housing needs requires a different strategy to that contained in the submission Plan, which was informed by several rounds of public consultation and sustainability appraisal. If that strategy required revision in the face of an uplift in the approach to meeting the District’s OAHN the main modifications should articulate the change; they do not.

2.9 Without any prior explanation of why, or indeed justification for the proposed change to the strategy for accommodating the District’s housing needs, the Submission Plan version of paragraph 4.18 is deleted in its entirety. The text stating that the six (secondary tier) rural service centres are suitable for accommodating development of ‘an appropriate scale’ and type to reinforce their role as such is removed. In place Eynsham is singled out as having ‘a particularly important role to play’ in meeting West Oxfordshire’s housing needs, alongside some of the unmet housing needs of Oxford City. This appears incongruous from the perspective of the settlement hierarchy: Eynsham has a population of 5,000 and is a rural service centre, while Carterton is a Main Service Centre with a population of 16,000, yet is allocated no strategic scale development.

2.10 To this end the new paragraph 4.18 introduces the notion of an SDA to the west of Eynsham, something not mentioned or signalled in the preceding pages, or more importantly in the Vision for the District. Considering that this is ‘particularly important’ to the new strategy of the Local Plan, it would be reasonable to assume that the Vision should identify Eynsham itself (not simply the proposed self-contained Garden Village) as a key component in the Council’s housing strategy. However, Eynsham remains classified as a Rural Service Centre, the role of which is to accommodate a scale of development sufficient to meet the needs of the settlement itself and its immediate rural hinterland, not as is indicated at paragraph 4.18, the needs of the whole of the District. This is out of step with the evidence base and with the proposed settlement hierarchy.

2.11 Paragraph 4.18a refers to the proposed Garden Village located to the north of the A40, which the Vision describes as being ‘self-contained’ and which paragraph 4.17 indicates is required to address the District’s share of the unmet housing needs of Oxford City. This will become a ‘new rural service centre’, making clear its independence from Eynsham itself.

2.12 This distinction is important, and is set out within the evidence base at paragraph 1.5 of the Sustainability Appraisal (SA) Addendum Report, which advises that the SA process had adequately addressed, via the February 2015 document and the iterative process leading to it, reasonable alternatives to strategies for meeting housing needs arising only in respect of the District itself. The submission Local Plan chose to do this via the preferred spatial option (considered against all reasonable alternatives), which was Option 2 within the Pre Submission Draft SA Report (February 2015) (ATTACHED).

2.13 The SA takes the approach that the strategic options for meeting housing needs need only be revisited to address land allocations to help meet unmet housing needs from Oxford City. Under this scenario the range of options needs to be extended to include other options (paragraph 1.5).

2.14 The clear implication of this approach is that there is no specific requirement to reinvent the whole...
strategy of the Local Plan if the Council chooses not to do so as the Three Towns focus, with a limited degree of dispersal to help sustain the rural areas (Option 2), is justified and appropriate for meeting the OAHN of West Oxfordshire. It is only because the Local Plan chose not to embrace meeting needs from Oxford City specifically in the submission version that the Inspector considered there to be a need to reconsider additional spatial options to those appraised when selecting the Three Towns focus, if an element of Oxford’s housing needs was subsequently included.

2.15 In response the SA revisited the two spatial options that formed part of the initial SA of options considered for accommodating growth:

* A new village; and
* Concentration of development along transport corridors.

2.16 The SA Addendum recognises that the changes to the Local Plan are concerned principally with accommodating a higher quantum of housing development to ensure that the approach to housing requirements within the Plan has a reasonable chance of being found sound. The 5,450 dwelling uplift proposed via the Main Modifications would accord with the recommendations within the Oxfordshire SHMA for West Oxfordshire (660 dpa/13,200 dwellings) and would incorporate in addition 2,750 dwellings to help meet the unmet housing needs for Oxford City under the duty to cooperate (paragraphs 1.8 and 1.9).

2.17 The SA addendum did not start the whole process afresh, but rather revisited and reconsidered the uplift in housing required to address the two shortcomings identified by the Inspector at the Stage One hearings, namely failure to plan positively to meet the District’s own needs and to plan to help meet the needs of Oxford. Importantly the SA re-assesses the Council’s spatial decision-making within the submission Local Plan and considers an appropriate response to meeting the needs of Oxford. The February 2015 SA was therefore reviewed to include additional alternatives for accommodating the combined (West Oxfordshire and Oxford City unmet need) OAHN. This approach is considered to be sound. However it is the execution of this exercise that is confused and partial and which appears (on the face of it) to be contrived to fit a preferred outcome, rather than itself being the process that leads to recommendation of an outcome (from the perspective of sustainability). Further points are made in this regard in subsequent representations.

2.18 It is reasonable to assume that the provisions of paragraphs 4.18a and b sit within the context of paragraph 4.17, which defines the Local Plan’s strategy:

* Three Towns focus = significant proportion of future development directed to the Main Service Centre Sub Areas with particular focus on Witney, Carterton and Chipping Norton;
* West Oxfordshire Garden Village = to help meet the unmet housing needs of Oxford City; and
* Development dispersed across the district = to help spread the benefits of growth and to sustain the more rural parts of the District.

2.19 This approach is justified by the SA process, but only insofar as it is consistent with the findings of the SA, which considered the spatial options for accommodating growth solely to meet the needs of the District (initially), and subsequently to meet these needs plus some of the unmet housing needs of Oxford City. The refreshed and updated SA provides that the most sustainable spatial approach to accommodating this (combined) scale of development is through a combination of the Three Towns focus, with limited dispersal (original Option 2) and a new village (Option 5).

2.20 In this regard the SA Addendum is clear at Section 3.0: Alternatives Considered & Sustainability.
Appraisal, that five spatial strategy options were considered, with options 1-3 (Witney Focus; Three Towns Focus; Dispersal, with some growth at the three towns) reappraised in the context of the uplift in housing required to respond positively to the West Oxfordshire OAHN, and options 4 and 5 (concentration along transport corridors and a new village) re-introduced to address the Oxford unmet need (paragraph 3.2).

2.21 Section 4.0: SA Findings describes the case for the spatial approach to allocating housing identified by the SA as the most sustainable and therefore that which should underpin the policy approach within the Local Plan. It states in very clear terms at paragraphs 4.11-4.14 why the Three Towns Focus (Option 2) and New Village (Option 5) together represent the right strategy for allocating housing development across the District. Paragraph 4.11 proclaims that the reason for maintaining the Three Towns focus remains as described at Table 4.3 of the February 2015 SA (set out above).

2.22 It is clear that the primary foci for development are the three Main Service Centres, which are the most sustainable locations within the District and which are most able to meet the requirements of residents across the Plan period in a sustainable manner. In essence there is confirmation that the spatial strategy, tried and tested via three iterations of the SA (paragraph 3.3) for meeting West Oxfordshire’s needs, remains fit for purpose and should be carried forward to examination.

2.23 The new village option has been reconsidered, although the reason for selecting this option as a key component of the Local Plan housing strategy is made rather obliquely. Paragraph 4.121 explains why it was not pursued originally, namely because there were concerns about the long-lead times and delivery risks and because development in this location would not meet the needs of the wider District. There is no clear explanation, other than the uplift in housing numbers required, as to why it is once more being considered.

2.24 However it becomes clearer exactly what role the new settlement is playing by referring to the Directions of Growth at Eynsham section of the SA Addendum: Paragraphs 3.11 and 3.12 make clear that Eynsham was not a strategic location for growth considered appropriate to meet the housing needs of West Oxfordshire, but taking into account the required uplift in housing it has been revisited. A key consideration in evaluating options for growth at Eynsham, referred to within the SA, is the report prepared by Land Use Consultants (LUC) – Oxford Spatial Options Assessment Final Report (September 2016). The Executive Summary (p.1) sets out very succinctly what the terms of reference/aims and objectives of this report are (0.2):

The overall aim of the Spatial Options Assessment was to provide a criteria-based analysis of the spatial options for meeting Oxford’s unmet housing need. The brief was to develop and implement a methodology for testing spatial options which can meet Oxford’s unmet housing need, either in part or in whole, providing guidance and evidence to inform decisions on how this unmet need can best be distributed across the County.

2.25 What is clear is that the new village option, and further development to the west of Eynsham, were tested only as options to help accommodate the unmet housing needs of Oxford. Three options were considered (North, West and Eynsham Park), of which, the study concluded, only North and West have the potential to help meet some of Oxford’s unmet need. Within the Plan period to 2031 the land to the north has potential to deliver up to 2,200 dwellings, while land to the west a further 550. There was no evaluation of a 1,000 dwelling urban extension to the west.

2.26 Taking this into account the evidence on which the Council is relying to allocate further land at Eynsham is germane only insofar as it considers the sustainability of the location in the context of helping to meet
Oxford’s unmet need for housing – not meeting the wider housing needs of West Oxfordshire, as a location for which it has already been rejected via an earlier iteration of the SA. Therefore while it is appropriate for the Council to cite this report as evidence in support of Eynsham as a suitable location for meeting Oxford’s unmet need, it cannot be extended further, on the basis that it was not considering such.

2.27 To be a reasonable location to meet the housing needs of West Oxfordshire the SA Addendum would have needed to redefine the spatial strategy chosen for this purpose (Option2) and reject the Option 2 conclusions set out at Table 4.3 of the submission SA, which did not include development options at Eynsham on the scale being considered within the modifications. In this regard there is insufficient justification within the evidence base to support the role that Eynsham is now proposed to play in helping to meet, not just the unmet housing needs of Oxford, but also strategic scale housing to meet the wider needs of the District.

2.28 On the same grounds the introduction of Woodstock as a location for growth is not supported by the evidence base. Woodstock is a Rural Service Centre with a population of 3,000 people. The proposed modifications introduce three sites for development that collectively would total 670 new dwellings. Based on average household size derived from 2011 Census data this would suggest a c.45% increase in the size of the population of Woodstock during the Plan period if these sites are developed.

2.29 For the same reasons outlined above the strategy for housing delivery that has been subject to SA and which the Council relies upon spatially did not contemplate this scale of growth at rural service centres as part of the Three Towns focus. Furthermore, Woodstock is considered to be an extremely sensitive location in terms of heritage considerations, being dominated as it is by the presence of the Blenheim Palace and Park World Heritage site (WHS). The settlement also has a large conservation area and a large number of listed buildings of all grades. The setting of the WHS is clearly a highly significant consideration and one that needs to be dealt with very carefully and clearly in the plan-making process. Paragraph 4.18b asserts that the settlement can accommodate a reasonable scale of development, whilst protecting the historic character and setting of Blenheim Palace.

2.30 There are two issues with this proposed modification that arise immediately; in the context of a highly historic rural service centre with a population of c.3,000 people a c.45 % increase in population as a consequence of new residential development is not considered reasonable. More importantly the text asserts boldly that the settlement can accommodate this level of development while preserving its historic character. The evidence base does not support this statement, or indeed provide any reasoned justification for it.

2.31 The submission version of the Local Plan did not contain any allocations at Woodstock and so did not assess impacts on heritage considerations arising from such. The evidence base only considered potential impacts on heritage assets in respect of Woodstock within the February 2015 submission version of the SA (there is no separate district wide assessment of the significance of the historic environment, or indeed an up to date assessment of the historic environment around Woodstock forming part of the evidence base of the Local Plan) when considering the relative merits of the spatial options for distributing development across the district. In assessing Option 3 – Dispersal (an option that was rejected initially and the subsequently when reappraised as part of the SA refresh in the 2016 SA Addendum) SA Objective 14 – Conserve and Enhance Landscape Character and the Historic Environment was classified as ‘Major Negative/Uncertain’. In summarising the likely nature of the SA effects there is no clear demarcation of landscape effects and heritage effects, but it can be assumed that the conclusions in respect of heritage considerations are ‘Uncertain’ insofar as the summary states:
<table>
<thead>
<tr>
<th>Comment ID</th>
<th>Document Full Path</th>
<th>Comment (plain text)</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td></td>
<td>The nature and significance of the effect on heritage is dependent on the scale and precise location of development as well as the sensitivity of receptors. Dispersing development across the District has the potential to have negative effects on a larger number of heritage assets than the other Options, which includes the Blenheim Palace WHS.</td>
</tr>
<tr>
<td>2.32</td>
<td></td>
<td>What is clear from this is that the dispersal option was not considered to be optimal from a heritage perspective. However the uncertainty of effect was based only on a presumption that policy provisions could be included that would mitigate potential harmful effects. This is considered to be overly optimistic and somewhat naïve (although this was not at this stage significant as the dispersal option was rejected) given that there is recognition within the SA that the significance of the effect is determined by the scale and location of development proposed and the sensitivity of receptors. In the case of Woodstock, WHS status renders Blenheim Palace highly sensitive as a receptor in heritage terms and therefore it is reasonable to assume that it should be afforded the highest protection as a designated heritage asset. With regard to the question of scale there is no clarity within the February 2015 SA, and no clarity per se on heritage impacts arising from this option.</td>
</tr>
<tr>
<td>2.33</td>
<td></td>
<td>The 2016 SA Addendum is now charged with assessing site specific impacts in this context where proximity to the WHS is known and the scale of development at Woodstock is also defined. The conclusions are considered to be no more robust or convincing than they were in the submission SA. However the gravity is now far greater given that the modifications to the Local Plan propose significant development at Woodstock.</td>
</tr>
<tr>
<td>2.34</td>
<td></td>
<td>Paragraph 4.77 of the SA Addendum acknowledges that as a consequence of the three proposed allocations (notably the sites to the north and east) there are potential negative effects on the setting of the WHS and associated cumulative negative effects on landscape and transport. While these are not expanded upon specifically with regard to their associated impacts on the setting of the WHS, or indeed the conservation area and other listed buildings within Woodstock, it would be reasonable to assume that there would be some concomitant adverse effect on heritage.</td>
</tr>
<tr>
<td>2.35</td>
<td></td>
<td>To address this the SA Addendum states that while there are likely to be negative effects on heritage (ie. harm), site specific requirements that would be secured through policy measures have the potential to mitigate any impacts, although this is uncertain pending completion of ‘detailed project level studies’.</td>
</tr>
<tr>
<td>2.36</td>
<td></td>
<td>This approach to policy making within the setting of a WHS is surprising.</td>
</tr>
<tr>
<td>2.37</td>
<td></td>
<td>The SA, which is the only piece of ‘evidence’ that considers the impact on the WHS, acknowledges harm, but asserts that this could be addressed by ‘site specific requirements’ and through policy provisions (EW1/EH7) although the site specific requirements would not be known until ‘detailed project level studies’ have been undertaken. This is a plan-making process and project level studies will not be available – it is reasonable to assume – until the site is allocated, by which time it will be too late to determine, in the context of the allocation, whether any harmful effects arising from allocation could be mitigated successfully. Paragraph 169 of the NPPF directs that when assembling a proportionate evidence base in support of plan-making: Local Planning Authorities should have up-to-date evidence about the historic environment in their area and use it to assess the significance of heritage assets and the contribution they make to their environment.</td>
</tr>
<tr>
<td>2.38</td>
<td></td>
<td>Paragraph 4.77 of the SA Addendum demonstrates very clearly that this is not the case. In the context of considering impacts on the setting of a WHS arising from draft allocations within an emerging Local Plan this</td>
</tr>
</tbody>
</table>
2.39 With regard to the assertion that the draft policies EW1 and EH7 will provide sufficient protection to mitigate any harm, these points are addressed in detail under the relevant representations to these policies. However it is pertinent to point out here that the policies contain no specific provisions that would militate against harm with any certainty, they merely require proposals to ensure there will be no harm to heritage assets. This is a circular and meaningless position: There will be no harm to designated heritage assets, because the policy requires there to be none. If there is no evidence compiled that considers the value of the historic environment and the sensitivity of receptors, how can there be any certainty that the provisions of the policy can be met with respect to a specific allocation. The approach is entirely unsound and unjustified.

Paragraph 4.18a: This paragraph claims that the new village will be based on “garden village” principles, but it will find it hard to keep to some of them. The Department for Communities and Local Government’s document of 16 March 2016, “Locally-Led Garden Villages, Towns and Cities”, sets out some specific criteria that Garden Villages must meet:

"They must work as self-sustaining places, not dormitory suburbs." (Commuter belt for Oxford's unmet housing needs?)

It is "important for the new community to establish a clear and distinct sense of identity". (Too close to Eynsham?)

The government is "not looking to support places which merely use 'garden' as a convenient label", but will support the development of "communities that stand out from the ordinary". (The Local Plan uses the right language, but the words often seem rather empty.)

They should not be "an extension of an existing town or village". (Hard to avoid, given the proximity to Eynsham.)

2.1 As set out in the supporting settlement hierarchy to the policy the top tier of settlements is comprised of the three main service centres of Witney, Carterton and Chipping Norton.

2.2 We continue to support the Council’s settlement hierarchy in this respect. The Policy itself advises that:

"A significant proportion of new homes, jobs and supporting services will be focused within and on the edge of the main service centres of Witney, Carterton and Chipping Norton. A number of site allocations are proposed to ensure needs are met. Further allocations may be made through Neighbourhood Plans."

2.3 We support the recognition that Chipping Norton is a suitable location to accommodate additional development. The Council's updated Settlement Sustainability Report (November 2016) which is published in support of the consultation classifies Chipping Norton as the second most sustainable settlement in the District (weighted and unweighted).
2.4 Our comments in relation to Chipping Norton itself are set out with regards to the section of the Plan dealing with the Chipping Norton Sub-Area itself and as such are not repeated here.

The proposal to remove Long Hanborough from the Rural Service Centres and designate it as a village is unsound for the following reasons:

1. Its long history as a Service Centre

Long Hanborough has been designated as a Service Centre for a long time. It is designated as a Service Centre in the West Oxfordshire Local Plan 2001 - 2011 (Figure 5.2) and was proposed to be designated as a Rural Service Centre in the submission West Oxfordshire Local Plan 2031 (Table 4.1). The National Planning Policy Framework (NPPF) requires that 'the plan should be the most appropriate strategy, when considered against the reasonable alternatives, based on proportionate evidence.' (para 182) and the Council has long accepted that there is sufficient evidence to justify the designation of Long Hanborough as a Rural Service Centre.

2. Wide range of services and facilities

There is ample evidence that Long Hanborough has a wide range of services and facilities and therefore merits its Rural Service Centre status. These include a new spacious doctors’ surgery for which planning permission was obtained in July 2016 and which will be provided as part of the residential development on the land south of Witney Road granted planning permission under appeal ref: APP/D3125/W/15/3129767. The new doctors’ surgery is required to be provided under conditions 15 & 16 of the permission within 2 years of commencement of the development and to remain in that specified use. This will replace the current cramped doctors’ surgery, which is well below NHS England standards of provision for the population it serves, and not only improve facilities for existing residents, but also provide the capacity for the provision of more homes in Long Hanborough. Other services and facilities include a primary school; petrol station; churches; post office; two Co-op food stores; dental practice; playing fields; spacious village hall; nursery; beauty salon; two public houses; fish and chip shop; substantial employment estate (circa 10.72 hectares) and a mainline train station (the Cotswold Line).

3. Close relationship to the Oxford and Oxfordshire City Deal and the ‘Knowledge Spine’

A key part of the case for Long Hanborough to remain as a Rural Service Centre is its close relationship to the City Deal. The Oxford and Oxfordshire City Deal is part of the Government’s initiative to devolve powers locally in exchange for local authorities taking on responsibility for creating economic growth in their areas. The Oxford and Oxfordshire City Deal aims to promote growth by maximising the existing educational, pharmaceutical and science assets in order to promote Oxford and Oxfordshire’s status as a prosperous economic area.

The City Deal, is a cooperative venture, which will be delivered through the Oxford Local Enterprise Partnership (LEP) bringing together other bodies and institutions, including Oxford City Council, Cherwell District Council, South Oxfordshire District Council, Vale of the White Horse District Council, West Oxfordshire District Council, Oxfordshire County Council, Oxford Brookes University and Oxford University. The area of the City Deal is County wide.

The proposed development at Long Hanborough is very close to the ‘Knowledge Spine’ identified in the City Deal, which stretches from Science Vale, near Didcot to Bicester, with Oxford at its heart. Paragraph 9.5.11 of
the Local Plan acknowledges this, stating that the proximity of the Eynsham-Woodstock sub-area to major employment growth areas 'present a diverse range of opportunities within close distance including within the Oxfordshire knowledge spine suggesting the Eynsham Woodstock area has a positive role to play in terms of economic development.' Two key proposed employment sites that are close to Long Hanborough, and which housing there would help to serve, are the Science Park at Begbroke, which Cherwell District Council has identified in its Local Plan 2011 - 2031 (adopted July 2015) policy Kidlington 1 for Accommodating High Value Employment Needs and the Northern Gateway, which adjoins the A44 at the northern edge of Oxford, which Oxford City Council has allocated in its Northern Gateway Area Action Plan (adopted July 2015) policy NG2 for up to 90,000 m² of employment uses that directly relate to the knowledge economy and include science and technology; research; bio-technology; and spin off companies from the universities and hospitals.

The City Deal commits the participating local authorities to accelerate the delivery of 7,500 homes across the county; and recognizes that the provision of quality housing close to the employment areas is fundamental to the delivery of innovation led growth.

The importance of housing provision to the achievement of the objectives of the City Deal is emphasized in the section on 'Planning for Development,' that states: 'The City Deal should enable further economic growth. However, this success has placed pressure on the local housing market. Oxford and Oxfordshire have overwhelming evidence that the lack of choice and availability of housing and affordable housing is a major barrier to growth. Oxford and other areas in the county are identified as among the least affordable locations in the country, and significantly ahead of London. The universities and businesses in the knowledge economy identify that housing is a significant barrier to the recruitment and retention of staff, including senior management and researchers. More housing is essential for the future of the knowledge economy in Oxford and Oxfordshire. City Deal partners recognise that a more strategic and ambitious approach towards housing growth is essential to the future of the knowledge economy in Oxford and Oxfordshire, and will ensure that the area continues to be a dynamic place to invest and work.

The proximity of Long Hanborough to the 'Growth Spine,' and its ability to contribute to the City Deal further emphasizes the importance of it continuing to be designated as a Rural Service Centre.

4. Recent Rail Improvements & Further Improvements Detailed in the Main Modifications will enhance Long Hanborough's role as a Rural Service Centre

There is therefore absolutely no evidence to demonstrate that it should be downgraded to village status. In fact, the service centre role performed by Long Hanborough has improved in recent years due to the improvements that have taken place in the rail service with further improvements proposed.

The presence of the train station at Long Hanborough is virtually unique in West Oxfordshire. None of the three main settlements of Witney; Carterton and Chipping Norton has a train station and the only other service centre which has one is Charlbury, which is located within the Cotswolds Area of Outstanding Natural Beauty (AONB) where development is therefore constrained in accordance with the advice in the National Planning Policy Framework (paragraphs 115 - 116). At Long Hanborough there is a regular direct train service to Oxford, Didcot, Reading, Slough, London and Worcester, with the journey to Oxford only taking ten minutes. This is of particular significance, as paragraph 9.5.34 of the Submission Local plan acknowledges that the Eynsham/Woodstock sub area, within which Long Hanborough is located, has 'very strong linkages with Oxford, with a high proportion of residents working in the city and much of the economic activity forming part of the wider Oxford city region economy.'

<td>The proposed main modification 66 reinforces the importance of the Hanborough train station with paragraph 7.57(a) stating that: ‘passenger growth on the Cotswold line has been significant with exceptional growth at Hanborough (up 239%).’ It states that ‘there is the potential for further growth with the introduction of an hourly service in December 2018. New trains will bring increased capacity with additional seating and will also achieve faster journey times, with some services from Hanborough reaching London Paddington in 63 minutes.’</td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td>There are also proposals for further improvements with paragraph 7.57(b) stating that: ‘LTIP4 identifies a strategic aspiration to develop Hanborough Station as a transport hub to help reduce congestion on the A40 as part of an overall package of public transport measures. To fulfil its potential, the station will require a larger car park, footbridge and new platform so any trains extended from Oxford can terminate and turnaround. To fully realise the potential of the railway, further redoubling will be required at the eastern and western ends of the line, between Wolvercote Junction and Hanborough, and from west of Evesham towards Pershore. This would allow up to three trains per hour to Hanborough and/or Char/Bury and two trains per hour between London and Worcester, with a journey time under two hours.’</td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td>These points are also reiterated in paragraph 9.5.16 which refers to Hanborough station as being ‘one of the District’s largest and most well-used stations. Car parking facilities have recently been expanded at Hanborough to improve capacity and there are aspirations for further station improvements,’ and then goes on to repeat the improvements outlined in paragraph 7.57 above.</td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td>Paragraph 9.5.34 also states that: ‘there is potential to develop Hanborough Station as a stronger transport interchange, with additional parking, and improved access from the south.’</td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td>These improvements will further improve the sustainability of Long Hanborough and mean that it is far more accessible by public transport, particularly to Oxford, than any other service centre in West Oxfordshire, apart from Char/Bury, which is in the AONB. This constant reiteration in the Main Modifications of the importance of Hanborough station and the further improvements planned for it, prove that Long Hanborough certainly merits its designation as a Rural Service Centre.</td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td>The proposed Main Modifications, however, go on to state in paragraph 7.57c that: ‘In light of the proposed improvements to Hanborough Station a key element of the proposed garden village to the north of Eynsham will be the provision of improved connectivity between the new settlement and the station particularly by bus and cycle.’</td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td>Given, that Long Hanborough is located adjoining the station there is already excellent connectivity with the train station, with a pedestrian and cycle path through the settlement providing access to it. It is also located closer to the station than the proposed garden village. With the recent and proposed improvements to the station it therefore clearly performs the role of an important transport hub and should retain its status as a Rural Service Centre.</td>

<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td>The Council has prepared a Settlement Sustainability Report (November 2016), which gives weighted and unweighted scores. In both Hanborough scores above all of the villages, scoring the same as the Rural Service</td>
</tr>
</tbody>
</table>
Centre of Bampton and 2 points more than Bampton in the Weighted Score. However, Long Hanborough’s position as a Rural Service Centre is even more significant than this indicates as there are three different positive indicators for a bus service which are:

- Daytime bus service;
- Evening bus service;
- Bus service every 30 minutes

However, for the train there is only one score for a railway station in the parish. At Hanborough Station there is an evening train service, with the last train arriving at 23.02. The train also only takes 10 minutes from Oxford station, giving Hanborough a high level of accessibility, so the rail service clearly merits a higher score than the unweighted score of 1 or the weighted score of 2.

With regard to the weighted score, there is a strong argument that having a railway station in the parish should result in a weighted score of 4 being given, as is the case where a Post Office; Shops; Primary School; Doctors’ Surgery and Local Employment Opportunities are present.

6. The Planning Inspector Philip Asquith who considered the appeal into the proposed residential development and doctors’ surgery on land south of Witney Road, Long Hanborough considered that Long Hanborough merited designation as a Rural Service Centre

The Inspector who determined the planning appeal relating to land south of Witney Road, Long Hanborough, (APP/D3125/W/15/3129767 & 12/1234/P/OP) also considered Long Hanborough to merit the designation as a Rural Service Centre, stating that:

49. ‘Long Hanborough is one of the nine larger settlements in the district classified in the WOLP as Service Centres. These, by definition, have a good range of facilities, services and transport accessibility to support their immediate communities as well as neighbouring hinterlands. This is confirmed by the Council’s Settlement Sustainability Report, revised in December 2013. The village is also defined as one of six Rural Service Centres within the emerging Local Plan 2031. The Statement of Common Ground between the appellant and the Council notes that Long Hanborough is a suitable location to accommodate significant residential growth. There is a range of local services, including a small business park adjacent to the station, which allows a proportion of travel demand (alternative to the car) to be met locally.’

50. The village is only one of two settlements within the category of Main Towns and Rural Service Centres in the district to have a mainline station. The rail line provides direct services to London, Oxford, and Worcester....... It is apparent that there is a commitment to the introduction of new trains with greater capacity, with a longer-term commitment to increase the number of trains from Long Hanborough to Oxford, cut journey times to London and undertake enhancements to the station’s facilities.’

Counter Arguments

There is therefore abundant evidence that Long Hanborough merits its Rural Service Centre designation.

There are two arguments against its designation which are the Council’s statement in paragraph 9.5.3a that:
<table>

<th>Comment (plain text)</th>
</tr>
</thead>
</table>

'Given the residential schemes of 169 homes and 50 homes recently approved, the limited role of the settlement and its landscape setting, it is only suitable for very modest levels of further development.'

The other being the argument made in the officers’ report to Council on the 26 October 2016, paragraph 5.9, that the proposed designation of the West Oxfordshire Garden Village would mean that there would be too many Rural Service Centres in this part of Oxfordshire.

Neither of these arguments is considered to be a valid reason to remove Long Hanborough’s status as a Rural Service Centre. In the first place the Council is itself proposing in the main modifications to designate two additional sites at Long Hanborough for residential development, these being land at Myrtle Farm, Long Hanborough for 50 homes under policy EW1 f and the other being land at Oliver’s Garage, Long Hanborough for 25 dwellings under Policy EW1 g. There is also land north of Witney Road, Long Hanborough, which is on the opposite side of the road to the 169 dwellings granted approval on appeal, which could be allocated for residential development without a significant impact on its setting, as the issues are very similar to those relating to the land south of Witney Road. (Further consideration is given to this issue in the representations submitted in relation to Main Modifications 27; 160; 170; 171; 172, 173, 174 & 175 seeking the designation of this site.) It is therefore not considered to be true that Long Hanborough ‘is only suitable for very modest levels of further development.’

With regard to the argument with regard to the proximity of the West Oxfordshire Garden Village, this argument is made in the officers’ report to Council on the 26 October 2016 which stated in paragraph 5.9 that:

It is recommended that the proposed Garden Village should be identified as a future rural service centre. The Garden Village would then replace Long Hanborough which would no longer be a defined rural service centre. This reflects the significant scale of development proposed in the Garden Village, the key role it will play as a transport and business hub, and the relatively limited scope for further development in Long Hanborough. It also avoids an over concentration of rural service centres in this part of the District.

However, there are two reasons why it should not replace Long Hanborough as a Rural Service Centre. One is that the proposed Garden Village site currently consists of fields, with no services and facilities and is therefore not a Rural Service Centre. Indeed, given the significant planning issues; funding and infrastructure that is required for a new settlement, the West Oxfordshire Garden Village may never come to fruition or may develop much more slowly than currently envisaged and so not perform a Rural Service Centre function during the entire plan period. Even on the most optimistic trajectory it is clear that it will not perform the role of a Rural Service Centre for many years.

Secondly it will effectively form an extension to Eynsham. Indeed, paragraph 9.5.40r of Main Modification 153 states that:

‘By ensuring good links across the A40 (e.g. an iconic feature bridge as suggested in the Council’s Garden Village expression of interest) existing residents of Eynsham to the south will be able to access the Garden Village to enjoy the services, facilities and amenities it will offer. Conversely, residents of the Garden Village will be able to access Eynsham and its services and facilities, thereby playing a complementary rather than a competing role.’

It will therefore effectively form an extension to Eynsham, in the same way that other settlement extensions such as the Littlemore Science Park and Blackbird Leys or Barton form part of Oxford, notwithstanding their
<table>

| MM724         | Gallagher Estates Limited | Gallagher Estates Limited | - | 1705 > SECTION 4 - OVERALL STRATEGY > MAIN 15 | separation from other parts of the city by the A4142 and the A40 respectively.

Indeed, by designating it as a separate Service Centre means that there would be two contiguous Service Centres. It makes much more sense to have Eynsham and the proposed Garden Village as one Rural Service Centre and Long Hanborough as another, as Long Hanborough serves a different area of the District to Eynsham.

Conclusion

For the reasons set out above it is considered that Long Hanborough is a highly sustainable location for development and therefore the designation of Long Hanborough as a Rural Service Centre, as proposed by the Council in the original submission West Oxfordshire Local Plan 2031 ‘is the most appropriate strategy when considered against the reasonable alternatives’, (NPPF, para 182) based on the Council’s own evidence base and that it would be wrong for it to be downgraded to a village.

Main 15 - 16 - Policy OS2 – Locating Development in the Right Places & Supporting Text

2.1 As set out in the supporting settlement hierarchy to the policy, after the three main service centres of Witney, Carterton and Chipping Norton, the next tier of settlements is the rural service centres comprised of:

- Bampton
- Burford
- Charlbury
- Eynsham
- West Oxfordshire Garden Village (at North Eynsham)
- Woodstock.

2.2 We continue to support the Council’s settlement hierarchy in this respect. The Policy itself advises that:

“The rural service centres of Bampton, Burford and Charlbury are relatively constrained and are intended to accommodate a modest level of development of an appropriate type that will help to reinforce their existing service centre role. A number of site allocations are proposed to ensure identified needs are met. Further allocations may be made through Neighbourhood Plans.”

2.3 We support the recognition that Bampton is a suitable location to accommodate additional development and that this is important to reinforce its existing service centre role. The Council’s updated Settlement Sustainability Report (November 2016) which is published in support of the consultation classifies Bampton as being within the top eight most sustainable settlements in the District (unweighted).

2.4 Proposed paragraph 4.18c of the supporting text states that:

“The focus on development at the existing rural service centres of Bampton, Burford and Charlbury will be more limited. These service centres contain a good range of services and facilities but are constrained in terms of their capacity to accommodate further development. Bampton already has a large housing scheme of 160 homes under construction and site allocations are proposed in Burford and Charlbury to ensure the...
delivery of new housing on suitable available sites, including the delivery of much needed affordable housing."

2.5 Bampton falls within the Carterton Sub-Area of the Plan. Our comments in relation to the suitability of Bampton to accommodate additional development and the suitability of our client’s site at land at Aston Road/Mount Owen Road are discussed in relation to the proposed modifications to the Carterton Sub-Area below, and as such are not repeated here.

2.6 In summary the Council’s recognition of the sustainability of Bampton is supported, however it is considered that the settlement is capable of accommodating additional development to help meet the Council’s objectively assessed need and that our client’s site at Aston Road/Mount Owen Road, Bampton should be allocated for 160 dwellings to help meet this requirement. The Council have provided no evidence to support their assertion that Bampton is constrained in terms of its capacity to accommodate additional development. Indeed the consultation responses received in respect of our client’s application for the proposed development of land at Aston Road/Mount Owen Road, Bampton confirm that there are no capacity issues that cannot be adequately mitigated by Section 106 contributions.

<td>The Church Commissioners for England</td>
<td>Miss Kateley</td>
<td>-</td>
<td>Kateley</td>
<td>1758</td>
<td>&gt; SECTION 4 - OVERALL STRATEGY &gt; MAIN 15</td>
<td>Introduction We write on behalf of our client the Church Commissioners for England (the Commissioners) which manages a well-diversified investment portfolio to support the Church’s work across the country and is a long-term landowner in the West Oxfordshire area. We understand that the Council are currently consulting on the proposed modification to the Submission Draft West Oxfordshire Local Plan Local Plan 2031 Consultation. The Submission Draft West Oxfordshire Local Plan Local Plan 2031 seeks to address the initial concerns raised by the inspector in December 2015 following the first Local Plan hearing which dealt with strategic matters. These concerns generally related to the overall housing requirement and deliverability of these sites. We recognise that in response West Oxfordshire has increased the total housing requirement to 15,950 homes, allocated new sites and increased the size of strategic sites. We submitted representations in relation to the following five sites located within West Oxfordshire on behalf of the Commissioners to the West Oxfordshire Call for Sites in February 2016: · Land North of Bampton · Deanery Farm · Church Close</td>

</tr>
</tbody>
</table>

- Land at Lower Farm Cottages
- Ansells Farmyard

All five sites are immediately available and are suitable for allocation. We understand these have not been included within the Submission Draft West Oxfordshire Local Plan Local Plan 2031 and instead there is a focus on larger allocations.

Housing

The Commissioners generally support MAIN 16 Policy OS2 which states, in relation to Bampton, that "further allocations may be made through Neighbourhood Plans" however it also recognises that a number of site allocations are proposed to ensure identified needs are met. It is unfortunate that as per MAIN 15 PARA 4.18c we understand that specifically for Bampton, this relies on one major site for 160 homes. Smaller sites should also be included.

Planning Practice Guidance (PPG) states that when undertaking a Housing and Economic Land Availability Assessment all types of sites should be considered, including vacant and derelict land and buildings (including disused agricultural buildings). Whilst the NPPF states that the supply of new homes can sometimes be best achieved through planning for larger scale development it also states that sites must be deliverable. Larger sites require significant investment in infrastructure and take longer to develop.

Smaller sites on the other hand offer a number of benefits. Typically smaller sites require less infrastructure investment and can be quicker to develop and deliver whilst still providing a valuable contribution to the Council’s 5 year land supply and housing targets.

The development of a mix of smaller sites and larger sites can also enable a mix of housing to be delivered in accordance with paragraph 50 of the NPPF which states that local planning authorities should plan for a mix of housing based on current and future trends. The development of smaller sites can offer a range of housing sizes, type’s tenure and range of housing in accordance with the local demand for current and future demographic trends. New developments on smaller sites can also be designed to be more in keeping with the character of the local area.

There are often fewer barriers to the delivery of housing on smaller sites where the requirement for remediation works and new infrastructure is often less than that of larger sites. The level of disruption is also in turn lower which can result in less opposition to new development. This combined with quicker building times allows a quicker turn around for delivery. The development of smaller sites will also help small and medium sized builders which will help with the Governments initiative to assist small and medium sized builders.

</table>
| District. Indeed, even among the Rural Service Centres, Burford enjoys particular sustainability credential with a secondary school located in the town and as a result of the towns employment and retail base. In general level the emerging Local Plan considers the service centres to be entirely suitable for development because of their range of services and facilities. Growth of an appropriate scale is perceived as adding to the prosperity of the towns in the rural areas around them. Specifically, therefore, BC1 of the WOLP2013 indicates that within the sub-area, "the focus of new development will be Burford and Charlbury" i.e the two towns. The positive strategy for accommodating development at Burford set out in the emerging WOLP 2031 to date was also explicitly linked to the Town Council's aspiration "to see an increase in the housing stock to provide some affordable housing to enable younger families to live in the town, secure the future of the primary school and increase the supply of key workers" (para 9.6.26). New housing in Burford is therefore an important planning objective to be realised through the Local Plan. Main modifications 15 and 16 appear to suggest some downplaying of the role of the town by suggesting that the focus of development at Burford will be more limited (para 4.18c) and that development should be modest (Policy OS2). This is inconsistent with the sustainability of town and with the wider strategy for the Burford-Charlbury Sub-area - where the number of dwellings to be accommodated has quite correctly increased - to 1000 new dwellings (at least). The support of the Town Council for proposals, other than that allocated in the Local Plan to the east of Burford (and notwithstanding the broad objections to that site), indicates that there are other opportunities in the town that will bring local benefits as well as meet wider needs. In particular Hallam supports the allocation of SHELA site 146 in the SHELA (land to the west of Shilton Road) provides opportunities for sustainable development. Reference therefore to the focus of development at Burford being more limited should therefore be removed from the suggested para 4.16c in MM15. Moreover the wording of the policy in OS2 as proposed to be modified should revert to that in the previous version of the plan insofar as it addresses Burford i.e. the rural service centre of Burford (with such others as may be appropriate) should be "considered to be suitable for development of an appropriate scale and type that would reinforce their service centre role". MM16 also refers to the allocation of sites within the rural service centres. Notwithstanding Hallam's objections to the sites identified it is important that the Plan adopts a positive approach and continues to set out the need for additional sustainable sites to come forward "within or on the edge of these service centres" - as had previously been explicitly set out in OS2 before it was proposed to be modified. Explicit reference should be added to the MM15 such that it is clear that ongoing opportunities on the edges of such settlements should continue to be supported as being necessary to deliver the overall housing strategy and the other objectives of the Plan. MM15 should be modified accordingly. In the absence of such amendments this section of the plan is not positively prepared in promoting opportunities for sustainable development nor justified in terms of the evidence base. Eynsham Garden Village We do not believe that the Garden Village proposal at Eynsham is an appropriate measure for delivering the

| MM746         | Hallam Land Management  | Hallam Land Management | 1835       | > SECTON 4 - OVERALL STRATEGY > MAIN 15 | The proposed modifications to Table 4.1 are insufficient to ensure the delivery of the substantially increased housing requirement in the period to 2031, and are inconsistent with Main Modification 15 that changes the distribution strategy from a focus of 'most' development at the Witney, Carterton and Chipping Norton Sub-area to a 'significant' proportion.  

In Part 1 of his Preliminary Findings (IN 015), the Inspector acknowledged that the development strategy of the plan may not be appropriate to accommodate any significant needs arising from Oxford, and that additional greenfield sites would need to be found (para. 7.7). The Council’s response is to include in the strategy a new Garden Village in the south-east of the district, which was already targeted for a disproportionate share of the growth requirements. For reasons that are set out in the representations below, the substantially increased housing requirement to accommodate both the District’s own needs and those of the neighbouring city of Oxford necessitates a broader distribution, including to the northern sub-area of Chipping Norton to ensure that the requirement is deliverable. It also necessitates allocation of smaller, immediately deliverable sites to alleviate the shortfall in the five-year housing land supply, including the backlog of under-provision.  

To ensure the delivery of the overall housing requirement during the plan period therefore necessitates a greater distribution across the district, with an increased focus on smaller sites associated with the Rural Service Centres and Villages. This is reflected in the proposed development of a new Rural Service Centre, comprising the West Oxfordshire Garden Village. However, the development of a completely new settlement is accompanied by associated risks of delivery delays/failure, there being, as yet, no certainty of Government funding for the proposed new village.  

The revised strategy should therefore also provide for a greater distribution of growth to existing villages, including the identification of additional Rural Service Centres, particularly in the north of the district to provide for a more even distribution of growth, and to alleviate the over-concentration on the south-east of the district with its inherent risks of delivery failures through market saturation. This would be entirely consistent with the development strategy of the Plan which is that:  

Not all growth can or indeed should go to Witney, Carterton and Chipping Norton however and there is a need for development elsewhere to help meet the unmet housing needs of Oxford City, to spread the potential benefits of growth and to help sustain the more rural parts of the district. (para. 4.15)  

A prime settlement for upgrading to a Rural Service Centre is Middle Barton, which is the principal settlement in the north-east of the district, as is evident from Figure 4.1. The Chipping Norton Sub-Area does not currently contain a Rural Service Centre and is the only sub-area in the district in which one is not identified.  

Given the status of Middle Barton as the principal settlement in the comparatively rural north eastern part of the district, it has an important role to play as a service centre for the surrounding rural hinterland. The Sustainability Matrix 2016 contained in the Settlement Sustainability Report (November 2016) confirms that Middle Barton is one of the larger villages with a population in excess of 1,000, and has a good range of social and community facilities, including: -
It is also germane that Middle Barton is within a 5 kilometre cycling distance of key employment facilities, notably the Lotus F1 facility to the south west and Enstone Airfield to the west, which support a number of businesses. In the opposite direction, it is approximately 5 kilometres from Heyford Railway Station, which is accessible by bus. Middle Barton is therefore well positioned to provide opportunities for sustainable travel for those who work in the local rural business hubs, and for those who need to travel further afield by train.

The evidence demonstrates that it is the most sustainable settlement in the Chipping Norton Sub-Area to perform the role of a Rural Service Centre to serve the north-east of the Plan area. Whilst it does not currently have some of the facilities of the existing service centres, there are no existing settlements of such scale in the north-east of the Plan area, aside from Chipping Norton in the north-west part of the sub-area. It is therefore appropriate to focus growth on settlements that have the potential for growth that will contribute to sustaining and improving existing facilities and have potential to attract more. It is noted that the emerging Plan does not set out a minimum level of facilities that are necessary in order for a settlement to be designated as a Rural Service Centre. It is therefore entirely appropriate for the Plan strategy to designate such a centre based on its intended role rather than simply having regard to its existing scale and level of facilities.

Middle Barton has the potential to accommodate a modest scale of growth, the rate of which is unlikely to be restrained by local market saturation given its detachment from the major growth areas to the south. It therefore offers much greater certainty of delivery, beneficial choice of housing location, and can contribute to delivering housing, including affordable housing, quickly and therefore contributing to alleviating the shortfall in the five year housing land supply.

An allocation of housing would also assist in bolstering existing services within Middle Barton. This is supported by the PPG in which it is held to be: ...

Important to recognise the particular issues facing rural areas in terms of housing supply and affordability, and the role of housing in supporting the broader sustainability of villages and smaller settlements. ...

A thriving rural community in a living, working countryside depends, in part, on retaining local services and community facilities such as schools, local shops, cultural venues, public houses and places of worship. Rural housing is essential to enable viable use of these local facilities. (PPG, Paragraph: 001 Reference ID: 50-001-20160519, emphasis added).
"Importantly, this Local Plan seeks not only to meet the identified housing needs of West Oxfordshire District but also to make additional provision to accommodate a proportion of ‘unmet’ housing need that Oxford City are unable to provide for within their own administrative boundary."

We fully support this modification, we consider it important that West Oxford cooperates with its neighbouring Boroughs and seeks to accommodate the agreed shortfall from Oxford City Council. For the reasons set out above we support this modification.

We support MAIN 4 and all other modifications that note West Oxford District Council will help meet the wider housing needs and that Eynsham shall play a key part of this, as set out in MAIN 1, 2, 13, 14, 15, 17, 23, 24, 27.

MAIN 15 Paras 4.15 - 4.19 notes that the strategic urban extension to the west of Eynsham will include a new link road that will connect the A40 to the south of Eynsham. We strongly support this proposed link road and consider that it will be important in ensuring a comprehensive approach to development of this area. We consider that the link road should connect to the proposed junction of the A40 that will be created by the proposed Park & Ride facility. The link road would then pass through the site, we would suggest that this link could be secured through a legal agreement for an approval of this site to provide a connection through the south.

We appreciate that the alignment of the SDA link road shown in proposed Figure 9.15b is indicative, however, the highway geometry for an acute approach to the A40, as indicated, some distance to the west of Eynsham, will be difficult to achieve in practice and sensibly the SDA spine road should link directly to the proposed Park & Ride junction, to minimise new junctions on the A40 primary route and to focus and manage movement in the area of the Park & Ride site.

There will be a number of existing and new residents of Eynsham who will drive to the Park & Ride to catch the bus service to Oxford, but it is expected that there will be a significant number of pedestrians and cyclists who will also access the Park & Ride site. Direct and safe movement will be important. The new junction will also give the opportunity to re-plan and improve bus services to Eynsham village using the new SDA link road. Oxfordshire County Council’s Park & Ride consultation runs to the 12th January 2017 and we making representation to OCC to future proof the design of the A40 junction accordingly.

Having provided the most appropriate connection to the A40, as described above, the West Eynsham SDA link road would be able to perform the highways and transport function described in the draft Policy text. It is unlikely in our view that the link road would be designed as a ‘by-pass’; it would most likely serve as a residential distributor road to the development, for efficiency of infrastructure and to provide frontage activity and over-looking for pedestrians and cyclists.

The spine road will provide the most appropriate and direct route to the A40/Park & Ride site and for connectivity to the proposed Garden Village to the north. Clear, safe crossings of the A40 will be required, sensibly focussed on the new A40 Park & Ride junction. It is likely that ace will have to consider access to the proposed Garden Village in parallel with the design and development of the Park & Ride site.

Early resolution of the detailed layout of the A40 access will facilitate the comprehensive development of the West Eynsham SDA. Given the need for OCC to meet their funding ‘window’ for the Parle & Ride scheme, it is important that the SDA A40 access is resolved as soon as possible. It is our Intention to work closely with OCC in the planning and design of the A40 junction, following the expected Committee approval to proceed with

| MM756 | Cantay Estates | Cantay Estates | - | Cantay Estates | 1913 | > SECTION 4 - OVERALL STRATEGY > MAIN 15 | Proposed modification - Downgrading of Long Hanborough: The proposed modifications involve the downgrading of Long Hanborough from a service centre, to a lower order village. This change pertains to numerous modifications, we therefore set out our response below which we wish to be considered in response to the following modifications: MAIN3, MAIN13, MAIN14, MAIN15, MAIN59, MAIN66, MAIN145, MAIN149.

Detailed comments particular to each modification are set out in detail against the relevant reference in following sections.

We object to proposed modifications which suggests the downgrading of Long Hanborough from a rural service centre to a village. The submission plan confirmed the rural service centres were classified as such because they benefitted from a range of services and facilities which supported the village and surrounding area. They are able to support additional homes in the short-term, while proposed growth can enhance the role of the settlement in supporting the surrounding rural area (paragraph 4.18). This approach was directly in line with the plan's objective 1 ‘strong market towns and villages' and objective 4 ‘sustainable communities with access to services and facilities', both of which remain un-modified.

Long Hanborough retains the same services and facilities which existed at the time the plan was submitted, furthermore planning permission has been granted which allows significant expansion of the primary school (15/03341/FUL). While additional housing has been permitted no evidence has been produced to suggest additional homes would result in any harm to the character or sustainability of the settlement. The village therefore remains well placed to fulfil the role of a rural service centre.

The downgrading of Long Hanborough proposed through modifications is largely unexplained and not supported by any evidence. The Council cite the creation of a ‘new' service centre through the northern expansion of Eynsham as justifying the downgrading of Long Hanborough as the new development will need to “develop a critical mass of services and facilities” (paragraph 2.5a).

We are concerned the Council's explanation suggests an intention to restrict the development of Long Hanborough and reduce services in the village in order to encourage their replacement in the new development. A restrictive approach to development stifling an existing sustainable settlement and vibrant community is clearly at odds with the Plan's vision, policies of the NPPF and good planning practice.

The provision of an additional service centre would be entirely in line with the Plan objectives. If the development proposed north of Eynsham is to proceed it is clearly preferable that Long Hanborough maintains its status as a service centre complementing any new facilities created. The need to retain the service centre is particularly pronounced due to the unclear deliverability of the proposed site north of Eynsham, even if the site is delivered this will not be until the latter part of the plan period, therefore there is a need for services and facilities in the interim.

The submitted plan set out clear objectives which the following policies sought to deliver sustainable communities. The Council seeks to deviate from this approach without explanation, evidence or proper assessment, we therefore believe this modification should be deleted. |
<p>| MM756 | Cantay Estates | Cantay Estates | - | Cantay Estates | 1932 | &gt; SECTION 4 - OVERALL STRATEGY &gt; | Proposed modification - Expansion of Eynsham: The proposed modifications introduce a significant strategic development to the north of Eynsham to meet Oxford City's unmet housing need. This change pertains to numerous modifications, we therefore set out our response below which we wish to be considered in |</p>

</tr>
<tr>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td>The same modification seeks to introduce the new strategic development north of Eynsham. The proposed development is of a strategic scale in a location which previously only saw limited development. The strategic area has been newly introduced at the examination stage, rather than through the extensive consultation process which should inform fundamental decisions in plan making.</td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td>The proposed ‘Garden Village’ is a strategic site suggested to be a new standalone settlement. Such a development is a clear departure from the submitted spatial strategy which emerged from the earlier consultation stages and was informed by the evidence base. The proposed new development is a clear departure from the proposed development plan, not a mere modification.</td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td>The proposed changes to the plan are so significant that they amount to a fundamentally different strategy to that submitted for examination. Should the Council wish to make such a fundamental change it should be done so through a new plan informed by a suitable evidence base and following a formal consultation process. To do otherwise would undermine the credibility of the plan and public confidence in the planning process.</td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td>A consequence of the limited considerations which have informed the introduction of the development area is considerable uncertainty as to the achievability of the proposed scheme. The site was previously discounted as unsuitable for development within the submitted SHLAA, no updated document has been published to revise this status. Noise impacts, segregation across the A40 and landscape impacts are all identified as being prohibitive to development. No information has been produced to demonstrate how these issues may be overcome, nor whether they are less pronounced at any other development site. Similarly the proposal was dismissed as not being realistic in the submitted SA, little is offered to justify such a fundamental change in stance.</td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td>Development strategy for the proposed site is deferred to a later Area Action Plan, we consider however development parameters must be set out and explored in order to ensure the proposed scheme is achievable. The Plan also refers to an expression of interest submitted to Government seeking to obtain Garden Village status for the development, unlocking funding streams to deliver infrastructure to unlock the site.</td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td>Although an expression has been submitted, no decision has yet been issued. In excess of 50 similar expressions have been made nationally, therefore Garden Village status is far from guaranteed. Proper exploration must be made as to the sustainability, suitability and deliverability of this site and essential infrastructure in the event it does not secure Garden Village status.</td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td>MAIN9: The propose modification identifies the proposed expansion north of Eynsham to be an ‘exemplar’ development with regard to design and environmental performance. The aspirations for the development are laudable, however only very high level initial assessments have been undertaken to establish whether this is deliverable, particularly in the context of the landscape previously considered vulnerable to development.</td>

<td>deviation from the strategy set out under policy OS2 in the Submission Plan. We consider the fundamental change of the strategy renders this a new plan, it should therefore be developed as such, rather than processed through modifications.</td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td>MAIN25: We welcome the proposed increase in housing provision within the plan to reflect the objectively assessed need set out in the Oxfordshire SHMA (660 dwellings per annum). Although the headline figure for housing provision is increased the means of meeting that need is somewhat unclear in the document.</td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td>The proposed site allocations fall someway short of the accepted housing requirement. Allocated sites and suggested windfalls total 11,545 homes, some 1,655 homes below the housing target for West Oxfordshire (13,200). Although not clearly stated it seems the Plan is reliant on a significant number of sites which have on the deliverability of these sites.</td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td>The published housing supply position paper sets out the Council's assumptions on the deliverability of permitted homes. This is set against a backdrop of previous under-delivery in relation to the objectively assessed need, including in the initial five years of the plan period. The anticipated delivery of homes from larger sites (more than ten units) is particularly optimistic given the recent under-delivery of homes and the longstanding nature of several of the outline planning permissions.</td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td>The anticipated delivery figures (Appendix 1) do not appear to assume all planning permissions granted for larger sites will be implemented. The assessment of smaller sites makes a concession (9.1%) in acknowledgement that not all permissions will be implemented; an allowance for non-delivery of larger sites is also required.</td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td>While uncertainty exists as to the deliverability of a significant proportion of the required housing supply questions remain as to the soundness of the plan. Robust evidence should be produced to show the permitted sites can be relied upon to deliver homes, additional allocations should also be made to mitigate against any shortfall.</td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td>MAIN27: The allocation of non-strategic sites is welcomed and we believe imperative if the housing need of the district is to be satisfied. We are concerned that those sites allocated have not been selected through thorough testing, including consideration of all reasonable alternatives as set out by the regulations. As a consequence the soundness of the allocations and broader plan is in doubt.</td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td>We have raised our concerns with regard to the unpublished SHELAA earlier in these representations; those comments also apply to this modification. The fact that the plan preceded the assessment significantly undermines the credibility of the plan as an evidence based document as do shortcomings in the assessment.</td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td>We consider Long Hanborough to be a suitable location for development as it benefits from an excellent range of services and facilities, including a railway station. We believe additional development sites should be permitted in the village alongside those proposed in the modifications. The proposed development site at Tuckwells Pit, Church Road (SHELAA ref 225) is a suitable location for new development. It can sensitively accommodate new homes in a location which benefits from access to key services and facilities. A Landscape and Visual Impact Assessment has confirmed development of the site can have a beneficial effect on the landscape while the off-road cycleway on Main Road provides viable access to the railway station.</td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td>MAIN29: The proposed modifications seek to rely upon windfall development to fulfill the housing requirement at a rate of 125 homes per year. Although this policy is informed by previous delivery rates the</td>
</tr>
</tbody>
</table>
published SHELAA suggests insufficient developable sites exist to fulfill that rate of development throughout the plan period. As the Council’s own SHELAA suggests insufficient sites are available to fulfill the suggested windfall rate either the evidence, or the proposed strategy must be unsound.

Historic windfall delivery rates have been achieved in the district’s larger settlements including those designated as service centres. The proposed downgrading of Long Hanborough reduces the likelihood of homes being delivered in the village further reducing the chances of windfall housing rates being maintained. Although an alternative service centre is proposed to be provided this is for delivery within the plan period and therefore will not give rise to any windfalls.

MAIN59: The proposed emphasis on the desirability of locating development in locations with access to public transport is at odds with the modification suggesting downgrading Long Hanborough’s settlement status. The village is one of only two in the district which benefit from a significant railway station.

MAIN60: The plan identifies significant challenges upon the A40, particularly with regard to access to Oxford. Although several alleviation options are suggested none is carried forward in plan proposals which acknowledges necessary funding is not available.

The proposed strategic development area at Eynsham is suggested on the basis that alleviation of A40 issues could be provided, however their achievability is unknown. The uncertainty of delivery of necessary highway improvements calls into question the suitability of the proposed strategic development area. The Plan which relies upon this area to meet its portion of Oxford’s unmet housing need cannot be sound until the site is known to be deliverable.

MAIN66: The proposed modification underlines a success in the current plan period in encouraging use of railway connections in the district, particularly from Long Hanborough. The modification acknowledges the capability of the rail corridor to remove vehicles from the A40 as residents travel toward Oxford and London, and the desirability of increasing capacity of Hanborough station and the railway link.

The modification supports improvements to the rail connection and acknowledges the need to provide the proposed development north of Eynsham with connections to Hanborough station. It is perverse therefore that the plan seeks to restrict development in Long Hanborough as developments in the village could provide easy access to the railway station and contribute to providing enhanced services and facilities. We consider the village should retain its rural service centre status and consideration given to additional non-strategic allocations to make the most of this opportunity for sustainable development.

MAIN145: The proposed modification suggests Long Hanborough is not in a position to support significant levels of additional development, however no evidence is provided as to any particular harm which would arise from residential development over and above that in the plan.

The document identifies the opportunity in the village in enhancing sustainable transport options through improvements to the station, this presents scope for new homes to be developed with a tangible benefit for the district. No unique sensitivities are identified, we therefore believe additional housing development should be allocated (beyond that proposed) and windfalls encouraged in Long Hanborough.

MAIN149, 180: We welcome the acknowledgement in the modification of the potential for enhancement of Hanborough Station as a transport interchange, however the proposed downgrading of the settlement is clearly at odds with this and undermines the aspiration for improvements. Such an approach is also at odds

| MM761         |                         | R Jonas         | Mr               | Jonas      | 1970               | with the NPPFs encouragement of environmentally sustainable development.  

The modification suggests increased car parking at the station, whilst this could encourage rail commuters from rural areas it is clearly preferable to remove the need for car use all together. Additional cycle parking should be provided and homes provided in locations which already benefit from access to the station by sustainable means.

New homes created in Long Hanborough would benefit from existing foot and cycle access to the station, therefore they could be delivered early in the plan period and support enhanced rail services without need for additional car journeys. To seek to restrict this undermines the aspiration of the plan.

The Council suggest the proposed northern extension of Eynsham could benefit from sustainable access options through creation of new foot/cycle routes from the south. These would be more distant than any point within Long Hanborough, furthermore their delivery cannot at this point be guaranteed. If the Council wishes to make the most of opportunities presented by rail routes from Hanborough permitting of additional development in the village is clearly the correct path.

Main Modification 15 proposes that, in addition to development in the four Strategic Development Areas (SDA) identified in the submission version of the Local Plan, a number of smaller, ‘non-strategic’ allocations should be brought forward to meet the objectively assessed need for housing in West Oxfordshire District. In the Eynsham/ Woodstock sub-area, which covers the Land East of Main Road, Stanton Harcourt, six nonstrategic sites are allocated for development adjacent to Woodstock, Long Hanborough and Stanton Harcourt.

In addition, a new rural service centre is proposed to the north of Eynsham to assist in meeting Oxford City’s unmet housing need.

As set out below, we support the District Council’s decision to seek to fully address the Objectively Assessed Need for housing in West Oxfordshire District. Similarly, we support the decision to assist Oxford City Council in meeting some of its unmet housing need.

The overall housing target is challenging, with the timing of delivery of new housing and supporting infrastructure a key consideration.

We are concerned that the Submission Draft Local Plan (including Proposed Main Modifications) places too much reliance on the four SDA’s and a small ‘basket’ of non-strategic allocations. It is clear that in a number of instances there are significant landowner and infrastructure delivery issues to address, which could...
significantly delay the delivery of new dwellings.

We believe that the Local Plan should allocate additional sites to increase flexibility and provide greater certainty over delivery of the District’s housing requirement.

There is more capacity to deliver sustainable development adjacent to the villages in West Oxfordshire - and we set out below the further changes required to the Local Plan to facilitate such development, and specifically, the merits of development on Land to the East of Main Road, Stanton Harcourt.

Whilst the University & Colleges do not wish to comment generally on site specific matters, it is essential that the housing provision identified in the Local Plan to meet the needs of Oxford should be located so as to be easily accessible by sustainable transport from the City. The economic success of Oxford, and the preference for employees to find a home close to their place of work, are key factors in generating the level of housing need that Oxford experiences. It is likely therefore that the greater proportion of residents living in the Oxford related component of the housing that the Local Plan identifies, such as the Eynsham Garden Village, will have their place of work in Oxford.

The 2011 Census illustrates the scale of in-commuting to Oxford from the adjoining authorities and elsewhere. Some 114,000 jobs are located within the administrative area of Oxford – representing approximately one third of the total jobs in the Oxfordshire economy. Some 46% of those working in Oxford, some 45,950 people, commute into the city everyday from elsewhere. In West Oxfordshire this relationship is apparent in the high proportion of travel to work journeys from Witney along the A40 corridor. When undertaken using single occupancy vehicles, this level of commuting causes traffic congestion on the key routes into Oxford harming the local economy through delayed and unreliable journey times and increased transport emissions of air pollutants and carbon. Traffic congestion on these key routes also risks diminishing the benefit of providing additional housing in adjoining districts if that housing resource is not easily accessible from the City and generates unsustainable commuting patterns.

The University & Colleges note that Oxfordshire County Council launched its most recent consultation on the proposed £35m, LGF financed ‘A40 Eynsham Park and Ride and Bus Lane Scheme’ on the 1st December 2016. The consultation document does not specifically identify the Garden Village proposal, albeit the location of the Park & Ride is the same as that shown in the ‘West Oxfordshire Garden Village Expression of Interest’. It therefore needs to be demonstrated how the Garden Village will interact with the proposed new infrastructure and whether this is sufficient to ensure that there is adequate transport capacity to facilitate the anticipated level of commuting and other journeys from the Garden Village into Oxford and vice versa by sustainable transport i.e. Park & Ride, local bus services and cycling. It is therefore requested that 4.18a is amended so that it makes reference to the delivery of the A40 Eynsham Park & Ride and Bus Lane Scheme to ensure that adequate transport capacity exists in this key corridor to create an effective sustainable transport link between Eynsham and Oxford whereby the new trips generated by the Eynsham Garden Village proposal towards Oxford can be undertaken by mass transit, car-sharing and cycling.

<td>MM766</td>
<td>Land and Partners Ltd</td>
<td>Tom Hutchinson</td>
<td>Mr Hutchinson</td>
<td>2017</td>
<td>&gt; SECTION 4 - OVERALL STRATEGY &gt; MAIN 15</td>
<td>new housing on suitable/available sites as sought by proposed Policy OS2 and the relevant supporting text. Land &amp; Partners Ltd (L&amp;P) is a privately owned development company which has identified Ascott under Wychwood as a sustainable location for development. A summary of the company’s approach to development is outlined in Section 2.0. L&amp;P objects to Main Modifications 15, 16, 27, 30 and 172 of the current consultation, as set out below. We object to the identification of West Oxfordshire Garden Village as a strategic location for growth next to the Rural Service Centre of Eynsham. The settlement has not been selected by the Government for such an initiative and the eligibility criteria clearly state that the garden village must be a new discrete settlement, and not an extension of an existing town or village. Therefore, the whole strategy of the Plan is on an uncertain foundation; it cannot be demonstrated to be deliverable over its plan period and that it is the most appropriate strategy. Whilst we agree with the recognition that some development will be required in the villages beyond the service centres, we do not consider the wording to be sufficiently precise to ensure new housing is delivered to meet the identified needs of the Plan. Paragraph 4.19 (as amended) has an additional sentence on village growth stating that “A number of site allocations are proposed to ensure the delivery of new housing on suitable, available sites”. This is not considered to be adequate to address the range of opportunities contained within Policies OS2 and H2 (as amended). Policy OS2 (as amended) recognises that some of the Rural Service Centres are relatively constrained and the Council’s intention is that these accommodate only a modest level of development. It correspondingly seeks considerable growth in the less constrained Rural Service Centre of Eynsham and its extension northwards.</td>
</tr>
</tbody>
</table>
"West Oxfordshire Garden Village"). This provides a very clear and prescriptive framework for growth, which contrasts with the lack of clarity about the villages, where similar opportunities and constraints are unevenly distributed. We seek a more unequivocal statement in paragraph 4.19 on how the ‘village’ tier in the settlement hierarchy is to deliver housing growth.

Policy H2 (as amended) is in part a criteria-based policy for dealing with unallocated greenfield sites in service centres and villages. It states that (provided it is consistent with other policies in the plan) new dwellings in these locations will be permitted on undeveloped land within or adjoining the built up area where the proposed development is necessary to meet identified housing needs. Therefore, it is clear that villages will need to grow through sites that are not specifically allocated within local or neighbourhood plans. We seek more precise wording in paragraph 4.19 that acknowledges how Policy H2 anticipates the delivery of new homes, which explicitly encompasses unallocated sites.

In the circumstances we propose confirmation in paragraph 4.19 that housing development in villages on suitable, available sites will be delivered by means other than specific site allocations. There should be recognition that policies OS2 and H2 (as amended) allow for proposals to come forward on unallocated sites adjoining the village.
Even if it were appropriate to consider the modifications through an SA addendum we believe the addendum itself to be incorrect. The Inspector confirmed in his Interim Findings (INO16) that any new site allocation must be informed by Sustainability Appraisal including assessment against reasonable alternatives. The published SA addendum solely considers two new strategic development sites adjoining Eynsham, rather than seeking to compare any reasonable alternatives.

Those sites closer to Oxford were dismissed out of hand due to Green Belt constraints, while those to the west were dismissed as being too distant from the city. The purpose of the SA is to enable a transparent and balanced assessment of alternative options against sustainability criteria, allowing a judgement to be made. For example a site closer to Oxford would benefit from physical proximity, but present challenges with regard to green belt impacts; a proper SA allows a balanced judgement to be made in a transparent manner offering sound foundations for the plan making process.

The SA does not consider all reasonable alternative options, merely the impacts of the Council’s pre-selected sites. This approach pre-judges the outcomes of the SA, removes the robustness and transparency of the plan making process and results in an unsound Plan.

Evidence base for proposed modifications: The proposed modifications must be informed by a robust and comprehensive evidence base. The modifications to the plan claim to be informed by an updated SHELAA; however this document was not published until 9th December 2016- some four weeks into the six week consultation period on the Local Plan. The sequence of publication suggests the evidence has been tailored to fit the plan, rather than informing the Council’s selection of the most sustainable options. It is clearly unacceptable that this consultation has allowed only a fortnight for inspection of the modifications and evidence base. The SHELAA is fundamental to understanding the soundness of the proposed changes, particularly as the document which accompanied the submitted plan was identified as deficient by the Inspector in his interim findings (INO16).

Failure to undertake proper consultation at this stage leaves any decision upon the plan vulnerable to legal challenge as the plan making process, including consultations have not adhered to proper process.

The limited assessment which it has been possible to undertake of the SHELAA suggests it has been treated as a means to limit development in the district, rather than explore the theoretical capacity of suitable development sites.

Numerous sites, including our client’s land in Ducklington (ref 342) are incorrectly classed as unsuitable for development as surmountable constraints are treated as fundamental barriers to development. For example site 342 (Ducklington) is considered unsuitable for development owing to landscape impacts; however no consideration appears to be afforded to potential mitigation. Furthermore no consideration is given to benefits which can arise from development; in the case of this site the use of playing fields, presently rented by the community, could be secured.

The restrictive approach applied through the SHELAA means it does not fulfil the purpose of the evidence document. It fails to provide the ‘menu of sites’ for assessment to ensure the most appropriate are chosen. This issue was identified by the Inspector in his initial findings (INO16) and does not appear to have been satisfactorily addressed; as a consequence the foundations do not exist upon which the Council can build a sound development plan.
We object to the identification of West Oxfordshire Garden Village as a strategic location for growth next to the Rural Service Centre of Eynsham. The settlement has not been selected by the Government for such an initiative and the eligibility criteria clearly state that the garden village must be a new discrete settlement, and not an extension of an existing town or village. Therefore, the whole strategy of the Plan is on an uncertain foundation; it cannot be demonstrated to be deliverable over its plan period and that it is the most appropriate strategy.

Whilst we agree with the recognition that some development will be required in the villages beyond the service centres, we do not consider the wording to be sufficiently precise to ensure new housing is delivered to meet the identified needs of the Plan. We therefore put forward some revised wording below, to ensure that the Plan is sound.

Paragraph 4.19 (as amended) has an additional sentence on village growth stating that "A number of site allocations are proposed to ensure the delivery of new housing on suitable, available sites". This is not considered to be adequate to address the range of opportunities contained within Policies OS2 and H2 (as amended).

Policy OS2 (as amended) recognises that some of the Rural Service Centres are relatively constrained and the Council’s intention is that these accommodate only a modest level of development. It correspondingly seeks considerable growth in the less constrained Rural Service Centre of Eynsham and its extension northwards (‘West Oxfordshire Garden Village’). This provides a very clear and prescriptive framework for growth, which contrasts with the lack of clarity about the villages, where similar opportunities and constraints are unevenly distributed. We seek a more unequivocal statement in paragraph 4.19 on how the ‘village’ tier in the settlement hierarchy is to deliver housing growth.

Policy H2 (as amended) is in part a criteria-based policy for dealing with unallocated greenfield sites in service centres and villages. It states that (provided it is consistent with other policies in the plan) new dwellings in these locations will be permitted on undeveloped land within or adjoining the built up area where the proposed development is necessary to meet identified housing needs. Therefore, it is clear that villages will need to grow through sites that are not specifically allocated within local or neighbourhood plans. We seek more precise wording in paragraph 4.19 that acknowledges how Policy H2 anticipates the delivery of new homes, which explicitly encompasses unallocated sites.

In the circumstances we propose confirmation in paragraph 4.19 that housing development in villages on suitable, available sites will be delivered by means other than specific site allocations. There should be recognition that policies OS2 and H2 (as amended) allow for proposals to come forward on unallocated sites adjoining the village.

It is noted at paragraph 4.17 that not all growth can or should go to the Main Service Centres of Witney, Carterton and Chipping Norton and the fact that there is a need for development elsewhere within the District, particularly to sustain the more rural parts of the District. We are therefore of the opinion that the

| MM766 | Land and Partners Ltd | Tom Hutchinson | Mr | Hutchinson | 2077 | > SECTION 4 - OVERALL STRATEGY > MAIN 15 | This representation is made in respect of Land between Witney Road and High Street, Finstock. 

This site is Ref: 267 in the Strategic Housing Land Availability Assessment (SHLAA). The site lies outside the AONB. The owners of the site are willing to make the site available for housing development, as recorded in the SHLAA. We disagree with the assessment of suitability in the SHLAA for the reasons set on in Section 4.7. 

Finstock is in the ‘village’ tier of the Plan’s Settlement Hierarchy (Table 4.1, p35) where development will be supported where it respects the village character and local distinctiveness and would help maintain the vitality of the local community. Our promoted site at Finstock would accord with the above criteria and we propose that the site is allocated to secure the delivery of new housing on suitable/available sites as sought by proposed Policy OS2 and the relevant supporting text. 

Land & Partners Ltd (L&P) is a privately owned development company which has identified this site as a sustainable location for development. L&P has reputation for engaging with the local community and securing high quality design, tailored to the local context. Negotiations are progressing with the landowners and the intention is to engage with residents and the Parish in early 2017. 

Objection to Main Modification 15 
We object to the identification of West Oxfordshire Garden Village as a strategic location for growth next to the Rural Service Centre of Eynsham. The settlement has not been selected by the Government for such an initiative and the eligibility criteria clearly state that the garden village must be a new discrete settlement, and not an extension of an existing town or village. Therefore, the whole strategy of the Plan is on an uncertain foundation; it cannot be demonstrated to be deliverable over its plan period and that it is the most appropriate strategy. 

Whilst we agree with the recognition that some development will be required in the villages beyond the service centres, we do not consider the wording to be sufficiently precise to ensure new housing is delivered to meet the identified needs of the Plan. We therefore put forward some revised wording below, to ensure that the Plan is sound. 

Paragraph 4.19 (as proposed for modification) has an additional sentence on village growth stating “A number of site allocations are proposed to ensure the delivery of new housing on suitable, available sites”. This is not considered to be adequate to address the range of opportunities contained within Policies OS2 and H2 (as proposed for modification). 

Policy OS2 (as proposed for modification) recognises that some of the Rural Service Centres are relatively... |

<td>constrained and the Council’s intention is that these accommodate only a modest level of development. It correspondingly seeks considerable growth in the less constrained Rural Service Centre of Eynsham and its extension northwards ('West Oxfordshire Garden Village'). This provides a very clear and prescriptive framework for growth, which contrasts with the lack of clarity about the villages, where similar opportunities and constraints are unevenly distributed. We seek a more unequivocal statement in paragraph 4.19 about how the 'village' tier in the settlement hierarchy is to deliver housing growth. Policy H2 (as proposed for modification) is in part a criteria-based policy for dealing with unallocated greenfield sites in service centres and villages. It states that (provided it is consistent with other policies in the plan) new dwellings in these locations will be permitted on undeveloped land within or adjoining the built up area where the proposed development is necessary to meet identified housing needs. Therefore, it is clear that villages will need to grow through sites that are not specifically allocated within local or neighbourhood plans. We seek more precise wording in paragraph 4.19 that acknowledges the wording of Policy H2 in anticipating the delivery of new homes, which explicitly encompasses unallocated sites. In the circumstances, we propose confirmation in paragraph 4.19 that housing development in villages on suitable, available sites will be delivered by means other than specific site allocations. There should be explicit recognition that policies OS2 and H2 (as proposed for modification) allow for proposals to come forward on unallocated sites adjoining villages.</td>

<td>Main 15 Paragraph 4.18a</td>
<td>Not Sound</td>
<td>The terminology attached to the proposal to build 2,200 houses north of Eynsham as a “Garden Village” is simply greenwash developer speak with no credible identification of what this actually means. The DCLG document of 16th March 2016 “Locally-Led Garden Villages, Towns and Cities” sets out some of the criteria which Garden Villages must meet? &quot;They must work as self-sustaining places, not dormitory suburbs. It is important for the new community to establish a clear and distinct sense of identity “…..they should not be “ an extension of an existing town or village “ The Local Plan actually admits that the Garden Village is largely intended to serve as</td>
</tr>
</tbody>
</table>
a dormitory for Oxford’s overspill, thereby completely undermining the concept of a self-sustaining place. The site’s proximity to Eynsham village also undermines the second and third criteria of a Garden Village, as the proposed development would form a village extension with no freestanding identity.

What is being proposed is, therefore, a spectacularly poorly conceived housing estate in valuable countryside, which will adversely affect the quality of life of thousands of local residents and millions of motorists passing by in either direction on the A40.

4.7, Excellent principles of reduced out commuting, increased self containment, reduced private car use, minimised climate change, but contradicted by other larger scale policies (see comments above on the defects of satellite development outside the green Belt (GB)).

4.18, Garden Village north of Eynsham: see comments on strategic vision. Notwithstanding my principled objections to the faux strategy of satellite commuter villages, this location has fewer intrinsic objections than many places in the District if one accepts the SMHA targets and the need to provide for Oxford’s overspill. However, the risks are undeniably great: for example, lagged provision of facilities, failure to grow an overspill community, intolerable congestion/ cost/ pollution on the A40 (made worse by Northern Gateway traffic at the two north Oxford roundabouts). The social risks are especially high if a resilient and balanced community of income, education, age and employment fails to emerge from Oxford’s overspill.

4.18a, “garden village” principles: if this is to be successful, inter alia, the betterment problem must be resolved by the village capturing and investing the socially produced land value, rather than enhanced land value being appropriated by the landowner (Letchworth Garden City, etc.).

Policy SO 2, enlarging major towns is the correct policy, notwithstanding my criticism to the lack of a county strategy. Eynsham cannot accept a western SDA and Garden Village because the quantum of development is too great for a village of 5000 people. The central facilities, roads and services would be overwhelmed. Community cohesion would be severely challenged. The problem would be at its most damaging during the construction of the new houses and before the necessary infrastructure were in place.

Policy SO 2, General Principles: scale and pattern of settlements; amenity; local landscape; access to services: these would be negated by the scale of proposed Eynsham development.

Policy SO3, “minimise the need to travel” is expressly contradicted by not matching homes and jobs in Oxford. Meeting Oxford’s housing need at the Garden Village requires commuting, notwithstanding the proposed large employment/ science park, which would in itself generate in commuting from the District and County.

Policy OS 4, High Quality Design: zero carbon design should be a primary principle.

<td>Oxford City Council</td>
<td>Ms Dell</td>
<td></td>
<td>683</td>
<td>&gt; SECTION 4 &gt; OVERALL STRATEGY &gt; MAIN 15</td>
<td>Policy OS 5, Supporting Infrastructure: no dwellings should be be built in the west Eynsham SDA without a western distributor road being built first; and no dwellings should be built in the Garden Village before provision of a convenient link to an enlarged Hanborough Station and comprehensive A 40 and Toll Bridge improvements ( public transport, cycling, etc.). Policy CO 4, reduce need to travel: see comments above. Oxford City's unmet housing need As a result of the continued joint working arrangements through the SHMA it does now appear that the modifications to the Local Plan include revisions to their housing policies to include an element of Oxford's 'unmet' housing need of some 2,750 dwellings. This has been achieved principally by identifying two new strategic site allocations comprising West of Eynsham and north of the A40 new Eynsham (new 'garden village'). These new sites identified in Eynsham were originally highlighted by the consultants through the joint working arrangements as part of the Post SHMA apportionment. These sites were explored as spatial options for additional housing provision and subject to sustainability assessment. This showed the value of all partners working together to prepare and agree the evidence base using shared working assumptions. They do appear therefore to be the most realistic options for seeking to help meet Oxford's unmet housing need. Support: Oxford City Council wish to support in principle the revised changes to the Local Plan and in particular: * Main Mod 4 (Para 2.9), together with those in Main Mod 9 (Vision) and * the Overall Strategy (Paras 4.17 and 4.18 and 4.18a) which show the local authority's commitment to 'play a role in helping to meet wider needs' including the 'unmet housing needs' of Oxford (Main Mod 15) through the allocation of the Eynsham site and the Garden Village. Objection: The City Council consider that it would be helpful if a separate published housing trajectory could be provided with their AMR each year to demonstrate progress made in meeting the housing needs of the city, nomination rights for affordable housing and provision extended to OCC housing list. Given the proposed allocations are to help to contribute towards meeting Oxford's unmet housing need it would therefore be important to understand and agree how the 'affordable housing' element will be provided. For example the proportion and type of affordable housing that will be delivered should as near as possible be shown to relate to Oxford's need. Another key issue of concern is transport and infrastructure which arises from the sustainability assessment which does highlight the existing traffic and congestion problems currently experienced along the A40 leading into Oxford. In this context it will be vitally important to the delivery of this housing development that the proposed infrastructure improvements to the A40 (including new bus lanes and significantly improved cycling facilities and routes) is agreed as part of the wider transport strategy for the County and that evidence to show how it fits in with the revised Oxford Transport Strategy is essential to the successful delivery of this major project. Prior to the development taking place these transport and infrastructure mitigation measures should be agreed and appropriate funding secured to ensure that these are fully implemented before development takes place.</td>
</tr>
</tbody>
</table>
A detailed transport assessment should therefore be required by future developers, and submitted to the County Council as Highway Authority, but also widely consulted upon with neighbouring authorities such as Oxford City Council to show how this significant amount of new housing development will meet the standards of a truly ‘sustainable development’. It is therefore considered important that the amount of car parking is reduced to a minimum and good alternative cycling and pedestrian facilities (both routes and significantly improved surface treatment) and public transport options (Park and Ride and bus services) is provided.

Public transport bus links either from the Park and Ride or other bus options should ensure that there are regular services provided to existing nearby train stations serving London such as Hanborough (Worcester - Paddington) and Oxford Parkway (Oxford to Marylebone).

Given the scale of the new development being proposed by the allocation of the new strategic site allocations it will be important to fully take into account the local transport, education and health implications for the existing settlement at Eynsham.

<td>- Construction Carterton Construction</td>
<td></td>
<td>942</td>
<td>&gt; SECTION 4 - OVERALL STRATEGY &gt;</td>
<td>2.1 As set out in the supporting settlement hierarchy to the policy, after the three main service centres of Witney, Carterton and Chipping Norton, the next tier of settlements is the rural service centres comprised of:</td>
<td></td>
</tr>
</tbody>
</table>
2.2 We continue to support the Council's settlement hierarchy in this respect. The Policy itself advises that:

"The rural service centres of Bampton, Burford and Charlbury are relatively constrained and are intended to accommodate a modest level of development of an appropriate type that will help to reinforce their existing service centre role. A number of site allocations are proposed to ensure identified needs are met. Further allocations may be made through Neighbourhood Plans."

2.3 We support the recognition that Burford is a suitable location to accommodate additional development and that this is important to reinforce its existing service centre role. The Council's updated Settlement Sustainability Report (November 2016) which is published in support of the consultation classifies Bampton as being within the top six most sustainable settlements in the District (weighted and unweighted).

2.4 Proposed paragraph 4.18c of the supporting text states that:

"The focus on development at the existing rural service centres of Bampton, Burford and Charlbury will be more limited. These service centres contain a good range of services and facilities but are constrained in terms of their capacity to accommodate further development. Bampton already has a large housing scheme of 160 homes under construction and site allocations are proposed in Burford and Charlbury to ensure the delivery of new housing on suitable available sites, including the delivery of much needed affordable housing."

2.5 Burford falls within the Burford-Charlbury Sub-Area of the Plan. Our comments in relation to the suitability of Burford to accommodate additional development and the suitability of our client's site to the east of Burford are discussed in relation to the proposed modifications to the Burford-Charlbury Sub-Area below, and as such are not repeated here.

2.6 In summary the Council’s recognition of the sustainability of Burford is supported, however it is considered that the settlement is capable of accommodating additional development to help meet the Council's objectively assessed need and our client considers its wider landholding to the east of Burford should be allocated to meet these requirements. We consider this matter in greater detail in respect of Main Modification 200 below and as such do not repeat this here.

We would request that the policy makes it clear that new infrastructure required to mitigate the impact of development should be funded by developer contributions via CIL or provided on site via S106 Agreements, subject to the relevant policy tests.
When the Local Plan was originally developed, it made sense to concentrate housing developments in the three market towns. However, it is not appropriate to merely extrapolate the original allocations to take the additional numbers required by the Inspector and the SHMA. In particular, it is not sustainable to allocate an additional 800 homes to the Chipping Norton SDA. The percentage of residents employed locally has been falling steadily over the last decade and is now below 30%. Employment growth in the County is centred on the ‘knowledge spine’ running from Bicester through Oxford to the South. Chipping Norton is too inaccessible to attract significant potential employers, who will want to locate near the clusters along the spine. The main employment locally is for ‘minimum wage’ jobs in retail and caring sectors. New residents looking for professional or technical jobs will be forced to commute by car using the sub-standard A44 towards Oxford or the more dangerous A361 towards Banbury. The bus service to Oxford only runs hourly and has to cope with the severe congestion in the Wolvercote roundabout area. Access to the North Cotswold railway line at Kingham is also difficult - the connecting bus service is now sparse and unreliable following the County Council cuts, not as implied in para. 7.56.

The additional 800 homes must be allocated nearer to Oxford with easy access to a railway line, thereby linking easily to the main employment areas in the County. The modified Plan already picks up on this logic, by proposing the Eynsham garden village with good links to Hanborough station (and with the potential to be eventually linked to a re-opened railway line to Witney) and with employment areas nearer to the ‘knowledge spine’ clusters. The Chipping Norton “800” should therefore be reallocated to the Eynsham area or sites even nearer to Oxford, with a start date earlier than the 2021 proposed for the garden village.

The Chipping Norton Eastern Link Road proposed as part of the Tank Farm SDA will not achieve the reduction in HGVs through the town centre - the vast majority of HGVs are on the A44 towards Evesham, not on the A361. The link road will be a “road from nowhere to nowhere”. The money on the link would be wasted and reduce the likelihood of achieving a proper Chipping Norton by-pass on the A44.

The commercial viability of the Stagecoach S3 bus to Oxford and the availability of a cadre of local drivers is dependent upon an overnight bus park in Chipping Norton. As part of the masterplan for the Tank Farm development a site of at least 0.3 Ha should be set aside for this vital bus parking.

Historic England welcomes and supports Proposed Main Modification MAIN16 for the references to the important historic character of Woodstock and the setting of Blenheim Palace; the intrinsic character of small villages, hamlets and the open countryside; and conserving and enhancing the natural, historic and built environment, as part of the positive strategy for conserving and enjoying, and clear strategy for enhancing, the historic environment as required by the National Planning Policy Framework.

We strongly object to the amendments to Policy OS2 which seek to ‘downgrade’ Long Hanborough from its current and long-standing status as a ‘Rural Service Centre’ to a ‘Village’, with the consequential effect of making it appear to be a much less sustainable location suitable only for very minor levels of additional growth. This modification is wholly unjustified and illogical, and is not supported by either fact or evidence. As such it is demonstrably unreasonable and unsound.

Figure 3.1 of the adopted West Oxfordshire Local Plan 2011 identifies Long Hanborough as a ‘Service Centre’, below only the ‘Main Town Centres’ of Witney, Carterton and Chipping Norton in the settlement hierarchy. Figure 5.23 confirms that Long Hanborough, together with settlements including Eymsnham, Woodstock, are ‘Group C Other Centres’, below only the ‘Group C Main Centres’ of Witney, Carterton and Chipping Norton.

|              |                         |                 |                  |           |                    | Consistent with the approach in the adopted Local Plan, Figure 4.1 of the West Oxfordshire Local Plan 2031 as submitted in July 2015 (CD1), identifies Long Hanborough as one of six ‘Rural Service Centres’ (again in the same category as settlements such as Woodstock and Eynsham) as confirmed in Figure 4.1 of the submitted Plan. Paragraph 4.8 of the Plan as submitted further confirms that:

"Outside of the three main towns……..the focus of development will be the six rural service centres of Bampton, Burford Charlbury, Eynsham, Long Hanborough and Woodstock."

This settlement hierarchy was subsequently reflected in Policies OS2 and EW2 in the Local Plan as submitted, with Policy EW2 confirming specifically that the focus for new development, within the Eynsham – Woodstock Sub Area, would be Eynsham, Long Hanborough and Woodstock.

The settlement hierarchy / strategy in the Local Plan as submitted was underpinned by an evidence base document entitled 'Settlement Sustainability Report - December 2013' (Appendix 1). As set out in Section 3 of that document, the 120 settlements in the District were categorised according to their size, character and role and, in particular, the number of services and facilities they offered. This created four groups, including 'Group C' which comprised 9 towns and villages. Appendix 1 to the document confirms that Long Hanborough is one of the 9 ‘Group C’ centres and, consistent with Figure 5.23 of the adopted Local Plan, it is identified as one of six ‘Other Centres’, together with Eynsham and Woodstock. Appendix 4 of the document confirms that Long Hanborough has one of the fewest ‘Restraint Indicators’ of any of the Group C service centres (identifying only the presence of a Conservation Area), whilst it is identified as fulfilling the significant majority of the ‘Positive Indicators’ - performing very similarly to Eynsham and Woodstock.

This evidence therefore fully supports the identification of Long Hanborough as a Rural Service Centre. However, since submitting the Local Plan 2031 (CD1) in July 2015, and since the initial Examination sessions in November 2015, the Council now advances the position that Long Hanborough no longer fulfils a role as a ‘Rural Service Centre’ and should be downgraded to a ‘Village’.

Given the conclusions of the 2013 Settlement Sustainability Report, which echoed the approach in the adopted Local Plan i.e. that Long Hanborough has for some time met the criteria warranting Rural Service Centre status, this is a somewhat remarkable proposition and suggests that there must have been a significant reduction in the sustainability of the village by virtue of the facilities / services that it offers.

However, there has demonstrably been no such reduction.

Indeed, not only has there been no reduction in facilities but in fact, as a result of recently approved developments at Long Hanborough, not only has additional housing been consented but these developments will also deliver significant improvements to both doctors’ surgery provision and education provision in the village (the proposals by Pye Homes on land south of Witney Road, Long Hanborough, allowed on appeal in July 2016, include the provision of a new and much larger doctors’ surgery, and the provision of additional land for the expansion of the existing primary school). Furthermore, since 2013, Great Western Railways (GWR) has confirmed that services from Hanborough Station will be increased (as reflected in the Local Plan as modified), as will the capacity of the trains running through it. In addition, GWR has identified longer term and even more substantial aspirations to dual the rail line and provide significantly enhanced station facilities and car parking...
As such it is simply not the case that Long Hanborough is any less sustainable now than it was in 2013 when the Settlement Sustainability Report was produced, or in 2015 when the Local Plan was submitted. Indeed, quite the contrary - it demonstrably has even more to offer.

We note that the Council has now produced an updated version of its Settlement Sustainability Report dated November 2016 (Appendix 2). It is in this document that you would expect to find evidence to support the Council's proposed downgrading of Long Hanborough.

However, unsurprisingly given the facts, no such rationale exists in this document.

In fact, Section 2 of this revised document simply repeats the conclusions of the previous 2013 document, identifying Long Hanborough as a Rural Service Centre. Reductions in service provision in some villages are noted at paragraph 5 of the document, but none of these reductions relate to Long Hanborough. Improvements in service provision in some villages are also noted, although the clear improvements at Long Hanborough (summarised above) are for some reason omitted.

Reference to Section 4.6 of this document confirms that whether an unweighted score of sustainability is used, or a weighted score, Long Hanborough meets the tests to warrant Rural Service Centre status (although it would seem that the weighted approach, which gives greater weight to the availability of key facilities such as Post Offices, Primary Schools, Doctors and local employment opportunities over less fundamental facilities, should be the preferred method of assessment).

As such it is evident that neither the 2013 Settlement Sustainability Report, nor the latest 2016 version, support the Council's proposed downgrading of Long Hanborough.

Indeed, if the downgrading of any 'Rural Service Centre' to a 'Village' was warranted (which is demonstrably not the case) then logic would suggest that it would be the least sustainable of the Rural Service Centres. However, the Council's own evidence confirms that the least sustainable of the Rural Service Centres is Bampton (and Section 2 of the 2016 document confirms that Bampton has in fact lost a shop since the 2013 survey). However, perversely, this settlement retains its Rural Service Centre status whilst Long Hanborough is proposed to be downgraded.

To add to these concerns, footnote 1 to the 2016 document (which adds detail to the Council's conclusion that Long Hanborough is a Rural Service Centre) notes that notwithstanding the conclusions of this evidence base document:

"...proposed modifications to the submission draft Local Plan seek to re-classify Long Hanborough as a village rather than a rural service centre although as this proposal remains in draft form only this report continues to classify it as a rural service centre."

This is a remarkable statement by the Council. This is a clear written admission that the proposal to downgrade Long Hanborough is not an evidence-based amendment, but an amendment made contrary to the available and up to date evidence. The Council is saying, overtly, that if the downgrading of Long Hanborough is endorsed through the Local Plan process, that the evidence base will be amended to reflect that.

As the Council is well aware, the Local Plan process is an evidence-based process. It is not a process
whereby ad hoc / politically motivated proposals can be advanced and accepted, with evidence subsequently amended or produced to post-justify such decisions. To do so would make a mockery of, and wholly undermine, the plan-led process advanced by the NPPF. Against this background it is demonstrably the case that the downgrading of Long Hanborough is wholly unjustified and consequently unsound.

I support the amendments to Policy OS2, to locate development in the right places. In a rural area like West Oxfordshire, it is essential that the separate identity and character of our settlements and the surrounding open countryside is maintained.

2.40 The main criticisms and case against the modifications to Policy OS2 are set out in the GL Hearn response to Main 15. However it is necessary to restate the points and to cross refer to Main 15 in respect of the re-worded policy.

2.41 It is worth highlighting that the 2016 SA Addendum concludes that Option 2 (Three Towns – with a focus on Witney, Carterton and Chipping Norton, and limited dispersal across the District) remains the most sustainable approach to allocating development to meet the housing needs of the District. Accordingly Policy OS2 should reflect this spatial strategy, derived from the evidence base, and follow closely the spatial distribution advocated by Option2. The benefits are summarised within the February 2015 version of the SA:

This Option would concentrate development at the three main service centres of Witney, Carterton and Chipping Norton, while also allowing a limited amount of dispersed development across the District. (GL Hearn emphasis)

2.42 With the above in mind it is difficult to justify the policy approach taken in respect of Eynsham, in the context of the settlement hierarchy prescribed at Table 4.1 of the Local Plan (p.35). Eynsham is a rural service centre occupying a second tier ranking within the hierarchy; the function of rural service centres is to accommodate development of ‘an appropriate scale’ and type to reinforce their role as such. In contrast Policy OS2 now elevates Eynsham’s status (relative to other second tier centres) ascribing it a role of ‘significance’ in meeting identified housing needs – the implication being those arising under the duty to cooperate and in respect of the District’s own OAHN. This approach is not consistent with the evidence base, which acknowledges that Eynsham has a role to play in helping to meet Oxford’s unmet need for housing, within the terms of reference set out by the Oxfordshire Growth Board, but does not consider it as a candidate location to accommodate strategic scale development under the spatial distribution advocated by the SA process. In this context the policy approach to Eynsham within OS2 is not justified against the evidence base.

2.43 OS2 refers to the decision to allocate a new Garden Village north of the A40, which will be self-contained. The evidence on which this decision relies considered the role of Eynsham as a candidate location specifically to meet the unmet housing needs of Oxford. The land to the north of the A40 was introduced at this stage of plan-making in response to the Inspector’s Preliminary Findings, which advised that further spatial options would need to be considered via SA if the Local Plan was to make provision for meeting housing needs under the duty to cooperate. The new village option was therefore re-considered.

The policy should therefore be clear that the new settlement is dedicated to this purpose and worded accordingly.

2.44 As set out in response to Main 15 there is no evidence to justify the contention that Woodstock is suitable for what the Local Plan purports to be a ‘reasonable scale’ of development. ‘Reasonable’ in the

<td>&gt; SECTION 4 - OVERALL STRATEGY &gt; MAIN 16</td>
<td>context of a settlement with a population of c. 3,000 people, is not considered to be an increase of c.45% in the size of the town. Furthermore in what is undoubtedly a highly significant location in heritage terms there is an extremely surprising lack of evidence as to the potential impacts that development (on what contextually and cumulatively is a significant scale) in close proximity to the WHS would have on the integrity of this highly sensitive receptor. 2.45 An extract from the UNESCO description of Blenheim Palace (Appendix 1) is reproduced below highlighting the important considerations applying to development within the setting of the WHS: Integrity 2.46 The integrity of the property is well protected by its enclosing wall but important visual links do exist between the gates, the parkland buildings, buildings in the surrounding villages and landscape, and care needs to be taken to ensure these key visual links are protected. 2.47 There is no published evidence on which the Council is relying that demonstrates to any reasonable degree how the Council has considered and responded to the sensitivity of the important visual links between the WHS and the surrounding landscape. On this basis the approach taken to the allocation of a cumulatively strategic scale of development at Woodstock is clearly unsound when considered against the NPPF requirement to base policy-making on a proportionate evidence base. The sensitivity of the receptor demands that a highly precautionary approach to the allocation of any development within the setting of the WHS is taken. In contrast the Council has determined, in absence of any considered heritage assessment (pursuant to paragraph 169 of the NPPF), that Woodstock is an appropriate location for significant development. This approach is considered to be contrary to paragraph 182 (bullet 2) of the NPPF. Main 21: Paragraph 5.1 3.1 Paragraph 5.1 is modified to qualify the approach that should be taken to managing the delivery of housing. The requirement to manage growth effectively to ensure that ‘significant change’ to the ‘intrinsic character’ of the District is prevented is not applied consistently within the Local Plan. 3.2 The intrinsic character of the District is described at paragraph 2.3 of the Local Plan, with expansion (via modification) at paragraph 2.49. Key characteristics of the District are held to be: * Predominantly rural character; * Strong sense of place from the Cotswold vernacular building style; * Rolling countryside; * Sparse population density; * One third of the District is covered by AONB notation; and * The rich and varied historic environment. 3.3 The historic environment is described as ‘contributing greatly to the distinctive character and identity of the area’. It is contended that effective management of growth (via the plan-making process) has not taken place; the spatial options that the Council is now proposing fail to accord with this undertaking. Clear examples of the disconnect between the ambition set out at paragraph 5.1 and the practical application of policy arise in respect of the proposed allocations at Woodstock, within the setting of the WHS, and the failure to allocate any strategic scale development at the Main Service Centre of Carterton, a location unaffected by the majority of the District’s defining characteristics that contribute to the intrinsic character, which is to be protected. 3.4 While the intention of the modification is supported, it is not applied to the policy-making process and</td>

<td>&gt; SECTION 4 - OVERALL STRATEGY &gt; MAIN 16</td>
<td>The Stanton Harcourt Estate supports that the 'villages are suitable for limited development which respects the village character and local distinctiveness and would help to maintain the vitality of these communities. A number of site allocations are proposed to ensure identified needs are met.' This principle is in line with the paragraph 55 of the NPPF. The Estate agrees with the principle that the villages are suitable for development which respects the character and local distinctiveness, and would help to maintain the vitality of these communities. It is, nevertheless, considered that the use of 'limited' suggests a cap on the volume of development to the villages. It is noted that development which respects village character will generally be limited in nature, and so explicit reference to this is not deemed wholly necessary. Furthermore, identification that the figures in the policy are not to be considered a 'maximum ceiling to development' (Main 24) is supported as being in line with the NPPF. The Estate also support the Council's objective that new dwellings will be permitted on undeveloped land adjoining the built up area where the proposed development is necessary to meet identified needs (Main 50). Furthermore, our client acknowledges the amendments to the Settlement Hierarchy at Table 4.1 (Main 14) Stanton Harcourt continues to be appropriately classified as a 'village' location, the sustainable credentials of which are reported by the Council's Settlement Sustainability Report (SSR, November 2016). The SSR reports both an unweighted and weighted score for the settlements assessed. In both scenarios the sustainable credentials of Stanton Harcourt are recognised (scoring 7 and 20 respectively).</td>

<td>&gt; SECTION 4 - OVERALL STRATEGY &gt; MAIN 16</td>
<td>These principles state that all development should (1) “not involve the loss of an area of open space or any other feature that makes an important contribution to the character or appearance of the area”. Clearly, the Garden Village will do precisely that on a grand scale, nor is there any way of avoiding it. All development should (2) “not have a harmful impact on the amenity of existing occupants”. Given that the nine dwellings in and around City Farm are envisaged to be entirely surrounded by new homes and roads, street lights and other urban paraphernalia, how can the Garden Village not have a harmful impact on this amenity (defined as “the pleasantness of a place” by the Concise Oxford English Dictionary)? All development should (3) “safeguard mineral resources”. There are sand and gravel deposits within the Garden Village site, some parts of which, towards the south, are commercially viable to exploit. The village will build over these, or, if some parts are eventually exploited, they will be right next to the new residents. Is that OK by everyone?</td>

| MM721        | The Blenheim Palace Estate | -               | Neilson          | 1625              | > SECTION 4 - OVERALL STRATEGY > MAIN 16 | 2) Policy OS2 - Locating Development in the Right Places  

  The Local Plan generally seeks to focus development in sustainable locations and such an approach, in so far as it reflects the National Planning Policy Framework, is supported.  

However, whilst Policy OS2 generally promotes development in those locations where facilities and services are readily accessible, it proposes to remove Long Hanborough’s “Rural Service Centre” status and instead, place the settlement in the “Small Villages, Hamlets and Open Countryside” category.  

As set out below, this is a contrived approach. It appears intended to support the proposed allocation of land for a Garden Village some 3 km to the south of Long Hanborough. If a new Garden Village is to be considered, it should be capable of coming forward without any accompanying need to “downgrade” the status of existing settlements.  

The approach set out is in direct conflict with national policy and contradicts West Oxfordshire District Council’s own Report accompanying the proposed changes to the Local Plan. This concluded that the proposed changes to the Local Plan would:  

“...also support the Council’s ability to work in partnership to sustain economically prosperous towns and villages with full employment.”  

In contrast to this, the proposal in the Local Plan to “downgrade” Long Hanborough to the Small Villages, Hamlets and Open Countryside category would severely and inappropriately restrict sustainable development. It would serve to frustrate and prevent investment into the settlement’s economy. Sustainable development would be prevented and this would harm the settlement’s future.  

Long Hanborough has a main line railway station, providing West Oxfordshire’s most rapidly growing railway service (as recognised by the Local Plan as comprising exceptional growth with much scope for more), providing frequent trains and West Oxfordshire District’s fastest direct route into central London. The settlement also has, amongst other services and facilities: an approved and funded new Doctor’s Surgery, which has been sized to accommodate the anticipated expansion of the established Rural Service Centre; an expanded Primary School; two supermarkets; a petrol station; a range of shops; 2 pubs; and an employment area/business park. There can be no disputing Long Hanborough’s status as a sustainable settlement.  

Long Hanborough’s long-standing role as a Rural Service Centre means that the settlement has grown, and continues to grow, in a sustainable manner, such that new development takes place alongside and supports existing, new and enhanced facilities and services.
Long Hanborough is not a small village and nor is it a hamlet. Rather, it is established as one of the District’s most important and accessible Rural Service Centres. More, it has plenty of identified opportunities for growth around it.

Recently approved housing developments will add several hundred more homes to Long Hanborough. This will inevitably result in increased demand for new and enhanced services and facilities within the settlement. Such improvements form an important and integral part of continuing sustainable growth, in line with national planning policy. Severely downgrading the settlement’s status would simply serve to frustrate investment. It would be in direct conflict with national planning policy, such that sustainable growth would be prevented, not encouraged.

Long Hanborough is a large, well-served and growing Rural Service Centre with significant employment areas and an increasingly busy train station. The proposed changes to Policy OS2 fail to acknowledge Long Hanborough’s long standing status as a Rural Service Centre and ignore its continually developing role as one of West Oxfordshire’s most important and sustainable settlements.

The previous iteration of the draft Local Plan sought to place “a particular focus” on Long Hanborough’s role as a Rural Service Centre in respect of providing for housing need. The only thing that has happened since this previous draft is that Long Hanborough has grown in size and that large-scale applications have been approved, such that it will continue to grow in size. Its established status as a Rural Service Centre has become even more established. Long Hanborough has become more sustainable.

This leads to the inevitable question, why suddenly decide to suggest that one of the District’s most sustainable settlements as something it is not – a small village or hamlet – and suggest that it is no longer something that it is - a Rural Service Centre ?

The proposal to demote Long Hanborough does not, in any way, support the allocation of land for a new Garden Village without the support of an appropriate and robust site assessment process.

No substantive evidence has been provided to demonstrate that Long Hanborough has become less sustainable. It is a long-established Rural Service Centre. It appeared as such in the previous draft Local Plan and comprises a Rural Service Centre in the adopted Local Plan. The absence of substantive evidence is largely because Long Hanborough is a Rural Service Centre where sustainable growth is continuing to take place – because it is appropriate for it to do so.

A Rural Service Centre does not suddenly cease to exist as a service centre, unless its services and facilities somehow disappear, or largely diminish. In the case in Long Hanborough the direct opposite is happening. This is evidenced by such things as new housing, new approved developments, the rapid and continuing expansion of rail travel from Long Hanborough’s station, proposals to expand the school and a new doctors’ surgery.

Long Hanborough is a thriving Rural Service Centre. This reflects the settlement’s sustainable qualities.

West Oxfordshire District Council, in defence of its attempt to “demote” Long Hanborough, claims that there is no longer general “scope for further development” around the settlement and proposes a far more restrictive approach founded, apparently, on there now only being “some scope for very modest” development.
This is simply not the case. There is plentiful land adjacent to the settlement which can be developed without any harm in respect of, for example, flooding, the AONB or the Oxford Green Belt (which is some miles distant).

Land capable of providing for hundreds of houses are currently being promoted on the edge of Long Hanborough. This land is within walking distance of village services, outside the AONB and can be brought forward in a sustainable manner. The land is readily deliverable. Given the sustainable nature of Long Hanborough as a long-standing and growing Rural Service Centre, readily deliverable land on the edge of the settlement would have very significant sustainability benefits. Such benefits support the continued sustainable growth of Long Hanborough.

In light of the above, an interesting sustainability comparison could be made with the continued growth of Long Hanborough and the proposed allocation of land for a “Garden Village” in the open countryside. However, it is noted that no appropriately robust site allocation process has taken place in respect of the Local Plan’s “Garden Village” proposals, so it is not possible to understand how the sustainability of Long Hanborough, for example, compares to the sustainability of land in the open countryside.

It is also pertinent to note that planning applications for large-scale housing development in and around Long Hanborough continue to result in planning permissions. Such permissions are due, in large, to Long Hanborough’s sustainable status and its related capacity for sustainable growth.

However, despite this, West Oxfordshire District Council, in the Report to Committee that accompanied the proposed changes to the Local Plan, referred to:

“...the relatively limited scope for further development in Long Hanborough.”

No substantive evidence has been provided to substantiate this assertion. By way of contrast, there is evidence of significant potential for the sustainable growth of Long Hanborough. For example, there is much scope for considerable and appropriate development immediately to the west, south and south west of the settlement. It is unclear why this potential for growth has been ignored.

Whilst no substantive evidence has been provided to support the major change proposed by “downgrading” the status of Long Hanborough, there is plentiful evidence, including existing planning applications and representations made to West Oxfordshire District Council’s latest housing land assessment (SHELAA), of there being readily deliverable opportunities for development adjacent to the settlement. These can appropriately provide for housing and for other uses, including, for example a new primary school. None of the land is within the AONB, which lies to the North of the settlement and all of the land is within easy walking or cycling distance of Hanborough Station, which the Local Plan earmarks for substantial growth as a major “transport hub.”

Taking all of the above into account, the changes to the Local Plan appear to seek to prevent sustainable development. This is in direct conflict with national policy.

West Oxfordshire District Council has a statutory duty to provide for sustainable development. It is imperative that the Local Plan continue to recognise Long Hanborough’s status as a Rural Service Centre and plan for the settlement’s continued sustainable growth.

Unusually, the Council’s own Report to Committee, accompanying the proposed changes to the Local Plan,

| MM722         |                         | Graham Flint    | Mr               | Flint             | 1634       | > SECTION 4 - OVERALL STRATEGY > MAIN 16 | claimed that no longer considering Long Hanborough as a Rural Service Centre would avoid “an over-concentration of Rural Service Centres” in this location should the proposed “Garden Village” come forward! This can only be described as a proposition that lacks credibility, irrespective of whether or not the proposed Garden Village comes forward. Taken plainly, it is an approach that suggests that something that already exists should no longer be considered to exist because something else might exist in the future. This appears to be the kind of existentialist proposition that led Jean Paul Sartre to entitle one of his work’s “Nausea.”

Long Hanborough is a successful Rural Service Centre and as such, it is a sustainable settlement. The very point of sustainable development is to provide for appropriate growth. Seeking to create a new, motor-vehicle based, Rural Service Centre on a greenfield site some 3 km away, whilst relying upon the sustainable transport credentials of the existing Rural Service Centre of Long Hanborough, whilst at the same time, seeking to severely and unnecessarily restrict the continued sustainable growth of Long Hanborough, would simply comprise poor planning.

If an underlying principle of planning for the future was to prevent the prevalence of Rural Service Centres in the sub-area, then, sensibly, logically and reasonably, the Local Plan should not seek to create another one where one does not currently exist.

It is noted that, had the provision of a Garden Village in the District emerged through a proper and robust planning assessment and consultation, then the possible impacts of the “over-concentration” of Rural Service Centres might have been duly and appropriately considered. This policy makes no explicit reference to the ability of Long Hanborough to accommodate development. The submission Local Plan stated that:

‘The rural service centres of Bampton, Burford, Charlbury, Eynsham, Long Hanborough and Woodstock are suitable for development of an appropriate scale and type that would help to reinforce their existing service centre role. Sites may be specifically identified by the Council within or on the edge of some of these service centres, including through Neighbourhood Plans.’

Under Main Modification 16 Long Hanborough has been removed from the Rural Service Centres and designated as a village. The text that relates to villages states that: ‘The villages are suitable for limited development which respects the village character and local distinctiveness and would help to maintain the vitality of these communities.’

The replacement of the words ‘development of an appropriate scale and type,’ with ‘limited development,’ represents a significant change in the proposed policy. It is considered that this is not justified, based on the significant range of services located in Long Hanborough which include a number of shops, including a Co-op food store; full time Post Office; Primary School; Community Building; Public Houses; places of worship; doctors’ surgery; playing fields; petrol filling station; local employment opportunities; bus service and railway station. The presence of these services as listed in the Sustainability Matrix of the Council’s ‘Settlement Sustainability Report,’ (November 2016) demonstrates that Long Hanborough has the necessary services and facilities to represent a sustainable location for development and this demonstration would be even more pronounced if due recognition of the importance of the rail station and evening services was given in the settlement scoring as set out in the JA Pye (Oxford) Ltd representations on Main Modification 14.

In addition, a number of significant improvements are due to be made to services in Long Hanborough. These include a new spacious doctors’ surgery for which planning permission was obtained in July 2016 and which has to be provided as part of the residential development on the land south of Witney Road granted planning
permission on appeal (ref: APP/03125/W/15/3129767). This will replace the current cramped doctors’ surgery, which is well below NHS England standards of provision for the population it serves, and not only improve facilities for existing residents, but also provide the capacity for the provision of more homes in Long Hanborough. In addition, a new playing field is to be provided for Hanborough Manor School, for which planning permission has been obtained by J A Pye (Oxford) Ltd on appeal (ref: APP/D3125/W/15/3139807), which will provide a much improved playing field for the use of the school, and enable the school to expand to accommodate extra residents.

Another reason why Long Hanborough is suitable for more than limited development is its close relationship to the City Deal and its location very close to the ‘knowledge spine’ identified in the City Deal, which stretches from Science Vale, near Didcot to Bicester, with Oxford at its heart, as detailed in the representations submitted on behalf of J A Pye (Oxford) Ltd in relation to Main Modification 14. Two key proposed employment sites that are close to Long Hanborough and which housing there would help to serve are the Science Park at Begbroke, which Cherwell District Council has identified in its Local Plan 2011 - 2031 (adopted July 2015) policy Kidlington 1 for Accommodating High Value Employment Needs and the Northern Gateway, which adjoins the A44 at the northern edge of Oxford, which Oxford City Council has allocated in its Northern Gateway Area Action Plan (adopted July 2015) policy NG2 for up to 90,000 m2 of employment uses that directly relate to the knowledge economy and include science and technology; research; bio-technology; and spin off companies from the universities and hospitals.

With further improvements proposed to the rail station and rail line as detailed in paragraphs 7.57a; 7.57b and 9.5.16 of the Local Plan the suitability of Long Hanborough to support development will improve further in the future.

The National Planning Policy Framework (NPPF) makes it clear that one of the Core Planning Principles that underpins both plan-making and decision taking is to ‘actively manage patterns of growth to make the fullest possible use of public transport, walking and cycling, and focus significant development in locations which are or can be made sustainable.’ As Long Hanborough is the only settlement that has been designated as a Service Centre that has a train station in West Oxfordshire, apart from Charlbury, which is located in the Cotswolds AONB and where development is therefore restricted, it is the only location where there is the opportunity to locate significant development where the future residents would be able to travel by rail without first undertaking a journey by car. For these reasons it is considered that policy OS2, which would only allow limited development in Long Hanborough, does not accord with the NPPF’s principle of supporting sustainable development (paragraph 14) or the Core Planning Principle of actively managing patterns of growth to make the fullest possible use of public transport (paragraph 17). For these reasons it is considered that policy OS2 is unsound as it is not consistent with national policy as stated in the NPPF and neither is it justified as it does not represent ‘the most appropriate strategy, when considered against the reasonable alternatives, based on proportionate evidence.’
2.2 We continue to support the Council's settlement hierarchy in this respect. The Policy itself advises that:
"The rural service centres of Bampton, Burford and Charlbury are relatively constrained and are intended to accommodate a modest level of development of an appropriate type that will help to reinforce their existing service centre role. A number of site allocations are proposed to ensure identified needs are met. Further allocations may be made through Neighbourhood Plans."

2.3 We support the recognition that Bampton is a suitable location to accommodate additional development and that this is important to reinforce its existing service centre role. The Council's updated Settlement Sustainability Report (November 2016) which is published in support of the consultation classifies Bampton as being within the top eight most sustainable settlements in the District (unweighted).

2.4 Proposed paragraph 4.18c of the supporting text states that:
"The focus on development at the existing rural service centres of Bampton, Burford and Charlbury will be more limited. These service centres contain a good range of services and facilities but are constrained in terms of their capacity to accommodate further development. Bampton already has a large housing scheme of 160 homes under construction and site allocations are proposed in Burford and Charlbury to ensure the delivery of new housing on suitable available sites, including the delivery of much needed affordable housing."

2.5 Bampton falls within the Carterton Sub-Area of the Plan. Our comments in relation to the suitability of Bampton to accommodate additional development and the suitability of our client’s site at land at Aston Road/Mount Owen Road are discussed in relation to the proposed modifications to the Carterton Sub-Area below, and as such are not repeated here.

2.6 In summary the Council's recognition of the sustainability of Bampton is supported, however it is considered that the settlement is capable of accommodating additional development to help meet the Council’s objectively assessed need and that our client’s site at Aston Road/Mount Owen Road, Bampton should be allocated for 160 dwellings to help meet this requirement. The Council have provided no evidence to support their assertion that Bampton is constrained in terms of its capacity to accommodate additional development. Indeed the consultation responses received in respect of our client’s application for the proposed development of land at Aston Road/Mount Owen Road, Bampton confirm that there are no capacity issues that cannot be adequately mitigated by Section 106 contributions.

**Comment (plain text)**
- Eynsham
- West Oxfordshire Garden Village (at North Eynsham)
- Woodstock.

Broad support is offered in respect of Policy OS2 - Locating Development in the right places. The main service centres should be the subject of growth given they act as administrative, retail, employment and tourism hubs across the District.

<td>&gt; SECTION 4</td>
<td>Policy OS2 makes clear that a number of site allocations are proposed in the villages to ensure identified housing needs are met. As set out elsewhere in these representations, objections are lodged to a number of the sites that have been identified for allocation in the Plan. The development to be directed to rural service centres and villages should not be at the expense of the main service centres however and a balanced portfolio of sites across a wide range of sustainable settlements in the District as is broadly advocated in Policy OS2 provides for a justifiable and deliverable strategy for delivering housing. Policy OS2 continues to recognise Chipping Norton as a ‘Main Service Centre’ and CALA supports changes to the policy wording which maintains that Chipping Norton is a sustainable location for growth to accommodate a &quot;significant proportion of new homes, jobs and supporting services&quot;.</td>

</tr>
</tbody>
</table>
allocations are proposed to ensure identified needs are met. It is unfortunate that as per MAIN 15 PARA 4.18c we understand that specifically for Bampton, this relies on one major site for 160 homes. Smaller sites should also be included.

Planning Practice Guidance (PPG) states that when undertaking a Housing and Economic Land Availability Assessment all types of sites should be considered, including vacant and derelict land and buildings (including disused agricultural buildings). Whilst the NPPF states that the supply of new homes can sometimes be best achieved through planning for larger scale development it also states that sites must be deliverable. Larger sites require significant investment in infrastructure and take longer to develop.

Smaller sites on the other hand offer a number of benefits. Typically smaller sites require less infrastructure investment and can be quicker to develop and deliver whilst still providing a valuable contribution to the Council’s 5 year land supply and housing targets.

The development of a mix of smaller sites and larger sites can also enable a mix of housing to be delivered in accordance with paragraph 50 of the NPPF which states that local planning authorities should plan for a mix of housing based on current and future trends. The development of smaller sites can offer a range of housing sizes, type’s tenure and range of housing in accordance with the local demand for current and future demographic trends. New developments on smaller sites can also be designed to be more in keeping with the character of the local area.

There are often fewer barriers to the delivery of housing on smaller sites where the requirement for remediation works and new infrastructure is often less than that of larger sites. The level of disruption is also in turn lower which can result in less opposition to new development. This combined with quicker building times allows a quicker turn around for delivery. The development of smaller sites will also help small and medium sized builders which will help with the Governments initiative to assist small and medium sized builders.

The EWLC notes with some concern that the first paragraph of this draft Policy has been amended so that new homes, jobs and supporting services will no longer be ‘primarily focused’ on the main service centres, but that ‘a significant proportion of the new homes, jobs and supporting services’ will be located in these towns.

As one of the rural service centres, we agree that there is need for development in Burford and that the town should make a substantial contribution to the identified housing need for the Burford-Charlbury sub-area of at least 1,000 homes (MAIN 24). Again, this should be seen as a minimum number and not an overall cap/target to be met.

Burford is in the saved adopted Local Plan a key location for development and has been proposed as such in the WOLP. This is supported by the West Oxfordshire Settlement Sustainability Report which is part of the evidence base for the Local Plan. The Sustainability Report both in its original guise and as updated in November 2016 identifies Burford as one of the most sustainable locations to accommodate growth in the District. Indeed, even among the Rural Service Centres, Burford enjoys particular sustainability credential with a secondary school located in the town and as a result of the towns employment and retail base.

In general level the emerging Local Plan considers the service centres to be entirely suitable for development because of their range of services and facilities. Growth of an appropriate scale is perceived as adding to the prosperity of the towns in the rural areas around them.
Specifically, therefore, BC1 of the WOLP2013 indicates that within the sub-area, "the focus of new development will be Burford and Charlbury" i.e the two towns.

The positive strategy for accommodating development at Burford set out in the emerging WOLP 2031 to date was also explicitly linked to the Town Council's aspiration "to see an increase in the housing stock to provide some affordable housing to enable younger families to live in the town, secure the future of the primary school and increase the supply of key workers" (para 9.6.26). New housing in Burford is therefore an important planning objective to be realised through the Local Plan. Main modifications 15 and 16 appear to suggest some downplaying of the role of the town by suggesting that the focus of development at Burford will be more limited (para 4.18c) and that development should be modest (Policy OS2).

This is inconsistent with the sustainability of town and with the wider strategy for the Burford-Charlbury Sub-area - where the number of dwellings to be accommodated has quite correctly increased - to 1000 new dwellings (at least).

The support of the Town Council for proposals, other than that allocated in the Local Plan to the east of Burford (and notwithstanding the broad objections to that site), indicates that there are other opportunities in the town that will bring local benefits as well as meet wider needs. In particular Hallam supports the allocation of SHELA site 146 in the SHELA (land to the west of Shilton Road) provides opportunities for sustainable development.

Reference therefore to the focus of development at Burford being more limited should therefore be removed from the suggested para 4.16c in MM15. Moreover the wording of the policy in OS2 as proposed to be modified should revert to that in the previous version of the plan insofar as it addresses Burford i.e. the rural service centre of Burford (with such others as may be appropriate) should be "considered to be suitable for development of an appropriate scale and type that would reinforce their service centre role".

MM16 also refers to the allocation of sites within the rural service centres. Notwithstanding Hallam's objections to the sites identified it is important that the Plan adopts a positive approach and continues to set out the need for additional sustainable sites to come forward "within or on the edge of these service centres" - as had previously been explicitly set out in OS2 before it was proposed to be modified. Explicit reference should be added to the MM15 such that it is clear that ongoing opportunities on the edges of such settlements should continue to be supported as being necessary to deliver the overall housing strategy and the other objectives of the Plan. MM15 should be modified accordingly.

In the absence of such amendments this section of the plan is not positively prepared in promoting opportunities for sustainable development nor justified in terms of the evidence base.

Eynsham Garden Village

We do not believe that the Garden Village proposal at Eynsham is an appropriate measure for delivering the unmet need for Oxford. It is based on an ambitious timescale for delivery and given that the Government's announcement for the results of Garden Village proposals has not yet been announced (MAIN 17 references an application for funding), it is unclear how and whether the council will be able to deliver the scheme if the site is not selected of the Locally-led Garden Villages. The anticipated delivery numbers in the bid document are also unrealistic. It would be more appropriate to deal with the objectively assessed need and allocate development to settlements that can deliver homes across the plan period in a more effective manner. MAIN 3, 9, 15 16, 17, 23, 24 and 27 should be reconsidered and amended accordingly.

<td>&gt; SECTION 4 - OVERALL STRATEGY &gt; MAIN 16</td>
<td>In relation to General Principles - the phrase 'having regard to the potential cumulative impact of development in the locality' is ineffective, legally vague and unsound as a policy. It provides no clear guidance as to what this might mean. It would I fear provide objectors with an easy and vague notion that a particular development is unacceptable purely because there has been 'too much' in that village or town. Whilst cumulative impact can be measured or assessed in relation to highways impact in terms of subjective issues such as village character this provides a hopelessly unpredictable and open ended reason for refusal based. As such this should be either removed (my preference) or directed towards objectively quantifiable cumulative matters such as traffic impact.</td>

<td>For the reasons outlined above in relation to MAIN 13-15, objection is raised to Policy OS2 which fails to identify Middle Barton as a Rural Service Centre suitable for accommodating a modest level of development. The provision for only 'limited' development in other villages is also too restrictive. Provision should be made for modest growth in selected rural settlements outside the AONB which have the potential to facilitate the delivery of the overall housing requirement and to make an early contribution to the five year housing land supply and redressing the backlog in housing delivery in the plan period to date.</td>

<td>We note the proposed modification and welcome the more permissive approach to new housing in villages. The text confirms development will be permitted on undeveloped sites adjacent to villages so far as development is necessary to meet housing needs. We understand this to permit suitable sites which are not allocated in the Plan (or any following document) that lie adjacent to villages. We welcome this approach, however clear wording should be included to confirm the permissive stance to avoid ambiguity and ensure the policy is applied in a positive manner. In essence that the presumption is that homes to meet housing need should be permitted on sites adjoining villages and proposals should only be refused where they give rise to discernible harm, on the planning balance. The permissive policy is fundamental to achieving suggested levels of windfall development; therefore any uncertainty undermines the deliverability of the planned housing. It is also necessary given the sea-change from previous WODC policy. The plan correctly acknowledges that previously developed land is a diminishing resource in the district; therefore a more permissive approach to village-edge sites is essential if windfall delivery is to be maintained.</td>

<td>further amended to remove the reference to 'limited development' in villages. This would ensure that Policy OS2 is consistent with the approach set out in Policy H2 – Delivery of New Homes, and could enable more development to come forward in the villages. The first sentence of the sixth paragraph of Policy OS2 should be amended to read: 'The villages are suitable for development which respects the village character and local distinctiveness and would help maintain the vitality of these communities, where the proposed development is necessary to meet identified housing needs.' This amendment would also ensure that Policy OS2 and the Plan’s spatial strategy complies with Paragraph 55 of the NPPF, which states that: 'To promote sustainable development in rural areas, housing should be located where it will enhance or maintain the vitality of rural communities.' Stanton Harcourt and Sutton are identified as a village in the Local Plan. There is a primary school, a church, a public house and a shop in the village. Development of my client’s site would assist in ensuring the continuing vitality and viability of these facilities.</td>

<td>1976</td>
<td>&gt; SECTION 4 - OVERALL STRATEGY &gt; MAIN 16</td>
<td>Main Modification 16 and 24 Our client supports the Council’s approach to locating development in the right places. Charlbury is identified as a Rural Service Centre and the Main modification identifies that it should provide for a modest level of development appropriate to support their roles as rural service centre. Our client supports the Council’s ambition to deliver a greater quantum of development in the District. It is noted that the plan aims to deliver 13,200 homes over the period 2011-2031 with a further 2750 homes to meet Oxford’s unmet need. As above, this proposed level of housing delivery in the District should not be considered an absolute maximum, but instead should be viewed as a minimum target to assist in delivery of identified housing requirements. It is agreed that provision of new housing should be made in each sub-area at appropriate village locations in line with relevant policies of the Plan. The revision to this policy, in order to identify the additional housing delivery requirement across the District is, in principle, supported. The identification that the figures in the policy are not to be considered a ‘maximum ceiling to development’ is supported as being inline with the NPPF.</td>
</tr>
</tbody>
</table>

Whilst the University & Colleges do not wish to comment generally on site specific matters, it is essential that the housing provision identified in the Local Plan to meet the needs of Oxford should be located so as to be easily accessible by sustainable transport from the City. The economic success of Oxford, and the preference for employees to find a home close to their place of work, are key factors in generating the level of housing need that Oxford experiences. It is likely therefore that the greater proportion of residents living in the Oxford related component of the housing that the Local Plan identifies, such as the Eynsham Garden Village, will have their place of work in Oxford. The 2011 Census illustrates the scale of in-commuting to Oxford from the adjoining authorities and elsewhere. Some 114,000 jobs are located within the administrative area of Oxford – representing... |
approximately one third of the total jobs in the Oxfordshire economy. Some 46% of those working in Oxford, some 45,950 people, commute into the city everyday from elsewhere. In West Oxfordshire this relationship is apparent in the high proportion of travel to work journeys from Witney along the A40 corridor. When undertaken using single occupancy vehicles, this level of commuting causes traffic congestion on the key routes into Oxford harming the local economy through delayed and unreliable journey times and increased transport emissions of air pollutants and carbon. Traffic congestion on these key routes also risks diminishing the benefit of providing additional housing in adjoining districts if that housing resource is not easily accessible from the City and generates unsustainable commuting patterns.

The University & Colleges note that Oxfordshire County Council launched its most recent consultation on the proposed £35m, LGF financed ‘A40 Eynsham Park and Ride and Bus Lane Scheme’ on the 1st December 2016. The consultation document does not specifically identify the Garden Village proposal, albeit the location of the Park & Ride is the same as that shown in the ‘West Oxfordshire Garden Village Expression of Interest’. It therefore needs to be demonstrated how the Garden Village will interact with the proposed new infrastructure and whether this is sufficient to ensure that there is adequate transport capacity to facilitate the anticipated level of commuting and other journeys from the Garden Village into Oxford and vice versa by sustainable transport i.e. Park & Ride, local bus services and cycling. It is therefore requested that 4.18a is amended so that it makes reference to the delivery of the A40 Eynsham Park & Ride and Bus Lane Scheme to ensure that adequate transport capacity exists in this key corridor to create an effective sustainable transport link between Eynsham and Oxford whereby the new trips generated by the Eynsham Garden Village proposal towards Oxford can be undertaken by mass transit, car-sharing and cycling.

This representation is made in respect of the sustainable settlement of Ascott under Wychwood, which is in the ‘village’ tier of the Plan’s Settlement Hierarchy (Table 4.1, p35) where development will be supported where it respects the village character and local distinctiveness and would help maintain the vitality of the local community. We propose that additional sites are allocated in the Local Plan to secure the delivery of new housing on suitable/available sites as sought by proposed Policy OS2 and the relevant supporting text.

L&P objects to Main Modifications 15, 16, 27, 30 and 172 of the current consultation, as set out below.

Main Modification 16 relates to Policy OS2 – Locating Development in the Right Places. We agree with the general strategy which is clear in its justification of allocations in the main and rural service centres. However, the policy as amended lacks clarity in justifying the Council’s choice of allocations in the villages.

We suggest that the part of the policy referring to the villages is amended. The part which lack justification currently reads: A number of site allocations are proposed to ensure identified needs are met. Further allocations may be made through Neighbourhood Plans.

Savills has been instructed by Rivar Ltd to submit written representations to the West Oxfordshire Local Plan 2031 Proposed Main Modifications document. These representations are made in respect of land at Marriott Close, Wootton-by-Woodstock.

The site at Marriott Close, Wootton-by-Woodstock comprises greenfield land to the west of existing built development. The existing development adjacent to the site is located outside of the main built up area of the village. Notwithstanding the site is well located to the village edge and represents a logical extension to
The Sustainability Appraisal (SA): The Submission Local Plan only included a proposed housing requirement of 10,500 homes between 2011 and 2031, amounting to 525 new units per year. The plan sought to address only the housing need arising in the district of West Oxfordshire. Although it was acknowledged additional housing was likely to be required to assist in meeting the housing needs of Oxford City no provision was made in the document.

The examination of the Local Plan is presently suspended as the Inspector confirmed the Submission Plan was unsound as it failed to address the objectively assessed housing need; the Council now seeks to address this. Modifications proposed increase housing provision to 13,200 to provide for West Oxfordshire's need, a further 2,750 homes are also proposed to serve Oxford City. The revised housing provision is some 5,450 units higher than that proposed in the Submission Plan and remains to be delivered over the same plan period. In order to meet the increased figure 'Strategic Development Areas' are now proposed. The introduction of these substantial new sites in an area previously proposed for only limited development is a considerable deviation from the spatial strategy of the submission plan proposed. The inclusion of homes to satisfy Oxford's need is also a significant deviation in spatial strategy from that submitted which solely looked to serve the rural district of West Oxfordshire.

A development strategy involving a new settlement has been subject to SA; the option was 'scoped out' of the previous assessment as it was not considered to represent a reasonable option. As the Submission Plan did not include any provision for Oxford no SA was undertaken as to a spatial strategy which looked to serve two housing areas (West Oxfordshire and Oxford City).

The modified Plan amounts to a fundamentally different document to that submitted for examination both in the level of development and the spatial approach. Despite this the changes are dealt with in the SA as an "addendum", rather than fresh consideration being given to the most appropriate options for the distribution of housing.

The modifications proposed are crude additions to a predetermined strategy, rather than choices informed by a full and transparent assessment of all reasonable alternatives. We believe the SA to be deficient; therefore the Plan which follows from it cannot be sound.

Even if it were appropriate to consider the modifications through an SA addendum we believe the addendum
Itself to be incorrect. The Inspector confirmed in his Interim Findings (INO16) that any new site allocation must be informed by Sustainability Appraisal including assessment against reasonable alternatives. The published SA addendum solely considers two new strategic development sites adjoining Eynsham, rather than seeking to compare any reasonable alternatives.

Those sites closer to Oxford were dismissed out of hand due to Green Belt constraints, while those to the west were dismissed as being too distant from the city. The purpose of the SA is to enable a transparent and balanced assessment of alternative options against sustainability criteria, allowing a judgement to be made. For example a site closer to Oxford would benefit from physical proximity, but present challenges with regard to green belt impacts; a proper SA allows a balanced judgement to be made in a transparent manner offering sound foundations for the plan making process.

The SA does not consider all reasonable alternative options, merely the impacts of the Council’s pre-selected sites. This approach pre-judges the outcomes of the SA, removes the robustness and transparency of the plan making process and results in an unsound Plan.

Evidence base for proposed modifications: The proposed modifications must be informed by a robust and comprehensive evidence base. The modifications to the plan claim to be informed by an updated SHELAA; however this document was not published until 9th December 2016- some four weeks into the six week consultation period on the Local Plan. The sequence of publication suggests the evidence has been tailored to fit the plan, rather than informing the Council’s selection of the most sustainable options. It is clearly unacceptable that this consultation has allowed only a fortnight for inspection of the modifications and evidence base. The SHELAA is fundamental to understanding the soundness of the proposed changes, particularly as the document which accompanied the submitted plan was identified as deficient by the Inspector in his interim findings (INO16).

Failure to undertake proper consultation at this stage leaves any decision upon the plan vulnerable to legal challenge as the plan making process, including consultations have not adhered to proper process.

The limited assessment which it has been possible to undertake of the SHELAA suggests it has been treated as a means to limit development in the district, rather than explore the theoretical capacity of suitable development sites.

Numerous sites, including our client’s land in Ducklington (ref 342) are incorrectly classed as unsuitable for development as surmountable constraints are treated as fundamental barriers to development. For example site 342 (Ducklington) is considered unsuitable for development owing to landscape impacts; however no consideration appears to be afforded to potential mitigation. Furthermore no consideration is given to benefits which can arise from development; in the case of this site the use of playing fields, presently rented by the community, could be secured.

The restrictive approach applied through the SHELAA means it does not fulfil the purpose of the evidence document. It fails to provide the ‘menu of sites’ for assessment to ensure the most appropriate are chosen. This issue was identified by the Inspector in his initial findings (INO16) and does not appear to have been satisfactorily addressed; as a consequence the foundations do not exist upon which the Council can build a sound development plan.

This representation is made in respect of the sustainable settlement of Long Hanborough, which is in the ‘village’ tier of the Plan’s Settlement Hierarchy (Table 4.1, p35) where development will be supported where it respects the village character and local distinctiveness and would help maintain the vitality of the local community.

<td>Stormport (UK) Ltd</td>
<td>Stormport (UK) Ltd</td>
<td>-</td>
<td>Stormport (UK) Ltd</td>
<td>MAIN 16</td>
<td>&gt; SECTION 4 - OVERALL STRATEGY &gt; MAIN 16</td>
<td>Stormport has the following comments to make on the modification. There is no clarity in the policy as to what constitutes a “modest” level of development and such vagueness is considered incompatible with other Plan objectives of delivering 660 dwellings per annum. Stormport support the policy insofar as it relates to the modified Policy H2 in that this will allow the delivery of housing on undeveloped land adjacent to the built-up areas of settlements. There is no requirement for such sites to come forward in either the Local Plan as an allocation or through the Neighbourhood Planning process. Stormport supports the proposed policy approach to villages, this is a positive and permissive framework, which when read in conjunction with Policy H2 allows for non-allocated sites to come forward for development.</td>
</tr>
</tbody>
</table>
In terms of general principles, Stormport’s observations are as follows:

First Bullet point – There is a concern about the use of terms as “proportionate” and having to see development in the context of “potential cumulative impact.” The concern rests on how these are measured. It is a simple case of some form of numerical standard being applied or is it more a question of impact on facilities and services. If it is the former, there is no prescriptive formula for when something is no longer “proportionate” and given the Council’s ambitious housing target, there will be a need for a step change in housing delivery and levels of development, which could be seen, by some, as being disproportionate. In dealing with the cumulative impact test, again, this is a subjective issue and there is a concern about what the timeframe is for judging cumulative impact. As a result, such a test should be deleted.

This representation is made in respect of the sustainable settlement of Tackley, which is in the ‘village’ tier of the Plan’s Settlement Hierarchy (Table 4.1, p35) where development will be supported where it respects the village character and local distinctiveness and would help maintain the vitality of the local community. We propose that additional sites are allocated in the Local Plan to secure the delivery of new housing on suitable/available sites as sought by proposed Policy OS2 and the relevant supporting text.

Main Modification 16 relates to Policy OS2 – Locating Development in the Right Places. We agree with the general strategy which is clear in its justification of allocations in the main and rural service centres. However, the policy as amended lacks clarity in justifying the Council’s choice of allocations in the villages.

We suggest that the part of the policy referring to the villages is amended. The part which lacks justification currently reads: A number of site allocations are proposed to ensure identified needs are met. Further allocations may be made through Neighbourhood Plans.

Main Modification 16 – Policy OS2

Policy OS2 is updated to reflect allocations made through the Proposed Modifications. Spitfire Homes supports that the ‘villages are suitable for limited development which respects the village character and local distinctiveness and would help to maintain the vitality of these communities’. This principle is in line with paragraph 55 of the NPPF. Nevertheless, we comment further below on the quantum of allocated sites and the benefit that directing further development to the village locations could have in respect of meeting housing targets.

Our client acknowledges the amendments to the Settlement Hierarchy at Table 4.1. Standlake continues to be appropriately classified as a ‘Village’ location, the sustainable credentials of which are reported by the Council’s Settlement Sustainability Report (SSR, November 2016). The SSR reports both an un-weighted and weighted score for the settlements assessed. In both scenarios the sustainable credentials of Standlake are recognised, with the settlement performing strongly and ranked highly within the ‘village’ tier (scoring 11 and 30 respectively).

Further, it is noted that the settlement of Standlake is relatively unconstrained by protective policy designations. The village lies outside of the Oxford Green Belt and is not subject to either Area of Outstanding Natural Beauty or Conservation Area constraints. The capacity of the settlement to deliver development, as demonstrated by Spitfire Homes land interest, aligns neatly with its sustainability credentials. In turn,

<td>Land and Partners Ltd</td>
<td>Tom Hutchinson</td>
<td>Mr</td>
<td>Hutchinson</td>
<td>2078</td>
<td>&gt; SECTION 4 - OVERALL STRATEGY &gt; MAIN 16</td>
<td>This representation is made in respect of Land between Witney Road and High Street, Finstock. This site is Ref: 267 in the Strategic Housing Land Availability Assessment (SHLAA). The site lies outside the AONB. The owners of the site are willing to make the site available for housing development, as recorded in the SHLAA. We disagree with the assessment of suitability in the SHLAA for the reasons set out in Section 4.7. Finstock is in the 'village' tier of the Plan's Settlement Hierarchy (Table 4.1, p35) where development will be supported where it respects the village character and local distinctiveness and would help maintain the vitality of the local community. Our promoted site at Finstock would accord with the above criteria and we propose that the site is allocated to secure the delivery of new housing on suitable/available sites as sought by proposed Policy OS2 and the relevant supporting text. Land &amp; Partners Ltd (L&amp;P) is a privately owned development company which has identified this site as a sustainable location for development. L&amp;P has reputation for engaging with the local community and securing high quality design, tailored to the local context. Negotiations are progressing with the landowners and the intention is to engage with residents and the Parish in early 2017. Objection to Main Modification 16 Main Modification 16 relates to Policy OS2 – Locating Development in the Right Places. We agree with the general strategy which is clear in its justification of allocations in the main and rural service centres. However, the policy (as proposed for modification) lacks clarity in justifying the Council's choice of allocations in the villages. We suggest amending the part of the policy referring to the village tier of the Settlement Hierarchy. The part which lack justification currently reads: A number of site allocations are proposed to ensure identified needs are met. Further allocations may be made through Neighbourhood Plans.</td>

<tr>
<td>MM773</td>
<td>Sharba Homes</td>
<td>Sharba Homes</td>
<td>Sharba Homes</td>
<td>Sharba Homes</td>
<td>2079</td>
<td>&gt; SECTION 4 - OVERALL STRATEGY &gt; MAIN 16</td>
<td>In principle, we would agree with the amended Policy OS2 – Locating Development in the Right Places. Of particular interest is the section in relation to development within the villages. We agree that development should be distributed to the villages and should not rely solely on development to the Main Service Centres, however, we consider that the use of &quot;limited development&quot; restricts the level of growth which some villages can accommodate in assisting to meet the unmet housing needs of the District and those of Oxford City. For example, Hailey is a highly sustainable village, within proximity to a Main Service Centre, and has a level of services and facilities which make it suitable to sustain a reasonable level of growth at least equivalent to that either taken or proposed for similar villages in the District. We therefore consider that the site at Hailey offers a suitable extension to the village, in a sustainable location which will have minimal impact upon the surrounding landscape to the village, thereby maintaining the intrinsic character of the setting of the village itself. It is suggested that the word &quot;limited&quot; can be deleted without harm to the strategic aims and objectives of the policy. The final two sentences under this section appear to suggest further sites in such areas will come through</td>
</tr>
</tbody>
</table>
either via site allocations or through Neighbourhood Plans. This conflicts with the sub-area policies where it is clear that windfall developments also form a vital component of supply. Such sites would not be allocated in a plan. It is suggested that the final two sentences be deleted.

We also reference the Hailey Village Survey which confirmed that there was local support for housing needed in the rest of the parish (excluding North Witney) to allow the villages to grow. The response was a significant two thirds in favour of such housing – twice the number against it.

Savills has been instructed by Spitfire Homes to submit written representations to the West Oxfordshire Local Plan 2031 Proposed Main Modifications document. These representations are made in respect of land at Jubilee Lane, Milton under Wychwood.

The site off Jubilee Lane, Milton under Wychwood comprises greenfield land to the south of existing built development. The site is well located to the village edge and represents a logical extension to the village providing an opportunity to improve the character of the edge of the settlement. Planning history for the site is limited.

Spitfire Homes supports that the ‘villages are suitable for limited development which respects the village character and local distinctiveness and would help to maintain the vitality of these communities’. This principle is in line with the paragraph 55 of the NPPF. Our client agrees with the principle that the villages are suitable for development which respects the character and local distinctiveness, and would help to maintain the vitality of these communities. It is, nevertheless, considered that the use of ‘limited’ suggests a cap on the volume of development to the villages. It is noted that development which respects village character will generally be limited in nature, and so explicit reference to this is not deemed wholly necessary. Furthermore, the identification that the figures in the policy are not to be considered a ‘maximum ceiling to development’ is supported as being inline with the NPPF.

Furthermore, our client acknowledges the amendments to the Settlement Hierarchy at Table 4.1. Milton-under-Wychwood continues to be appropriately classified as a ‘Village’ location, the sustainable credentials of which are reported by the Council’s Settlement Sustainability Report (SSR, November 2016). The SSR reports both an unweighted and weighted score for the settlements assessed. In both scenarios the sustainable credentials of Milton-under Wychwood are recognised. Given the proximity of the settlement to Shipton-under-Wychwood it could be argued that the settlements could be considered to score more highly through their linked relationship (i.e. Shipton-under-Wychwood has a school and post office which are both within walking distance of Milton-under-Wychwood).

Policy OS2 sets out a hierarchy for the distribution of development across the District. A significant proportion of the planned growth is directed to the three Main Service Centres of Witney, Carterton and Chipping Norton. Additionally, within the main modification 16, and due to its connections to Oxford City, a new Rural Service Centre to the north of Eynsham, is also proposed to make a significant contribution towards meeting the District’s revised OAN figure. A further strategic allocation is proposed on the western edge of the village for a 1,000 dwellings, but does not form part of the ‘garden village’ related allocation. Beyond the three Main Service Centres, the focus of development is the Rural Service Centres of Bampton, Burford and Charlbury. Within Table 4.1 of the conjoined proposed modifications and submission draft of the emerging local plan, Bampton is retained as a Rural Service Centre. Its retention as such is wholly supported. Furthermore, the previous draft wording to the policy states that the majority of new homes will be focused on Witney, Carterton and Chipping Norton. Within the proposed modifications, it is clear that the focus will...
not solely be on Witney, Carterton and Chipping Norton but that the rural service centres of Bampton, Burford and Charlbury will also be a focus for future housing growth. The modification to this policy with regards to the distribution to rural service centres is also supported.

CALA are generally supportive of this policy, however there are aspects within the text of the policy which are unclear and in some cases appear to be contrary to the NPPF.

For example, Policy OS2 – Locating Development in the Right Places, which states:

“The rural service centres of Bampton, Burford and Charlbury are relatively constrained and are intended to accommodate a modest level of development of an appropriate type that will help to reinforce their existing service centre role. A number of site allocations are proposed to ensure identified needs are met. Further allocations may be made through Neighbourhood Plans.”

This paragraph clearly intends to limit development in Bampton given its apparent constraints and existing commitments such as land at New Road, Bampton. However, CALA contests that unlike a number of other settlements within the District such as Burford and Charlbury (i.e. the two other rural service centres, which are constrained by AONB) there are no constraints to the delivery of additional growth on the edge of the settlement. We believe land to the north of New Road, and between Station Road and Mount Owen Road, Bampton offers further potential without the significant constraint of AONB. Additional growth in this location will provide additional much needed affordable housing, the delivery of housing generally in the short term within the District (where there is currently a 5 year supply deficit) and further assist in helping to maintain the vitality of the settlement.

The reference to ‘constrained’ in the wording of the policy is said to be contrary to the Framework, not just in terms of environmental and landscape designations, but also in terms of the size of settlements where growth can actually occur. The NPPF (paragraphs 54 and 55) makes it clear that development in rural areas is part of the overall pattern of sustainable development. Indeed the NPPG is clear at Paragraph: 001 Reference ID: 50-001-20140306 that “A thriving rural community in a living, working countryside depends, in part, on retaining local services and community facilities such as schools, local shops, cultural venues, public houses and places of worship. Rural housing is essential to ensure viable use of these local facilities. Assessing housing need and allocating sites should be considered at a strategic level and through the Local Plan and/or neighbourhood plan process. However, all settlements can play a role in delivering sustainable development in rural areas – and so blanket policies restricting housing development in some settlements and preventing other settlements from expanding should be avoided unless this can be supported by robust evidence.”

There is no reason to resist further growth in Bampton given its size and certainly not because of any environmental related constraints because they simply don’t exist.

The Proposed Modifications to the emerging Local Plan seeks to allocate a number of sites within the rural service centres in addition to emerging Neighbourhood Plans.

In the first instance, concern is raised over the ability for strategic and non-strategic allocations to support the necessary delivery of housing going forward and maintaining a continuous 5YHLS. Bampton, as mentioned earlier, is not constrained by environmental and landscape designations such as the AONB (which is the case in Burford and Charlbury where there is an intention to provide ‘major development’ within it). There is also a strong market demand to buy housing in Bampton. Building new homes in this location will therefore provide an almost (e.g. barring any future recessions) guaranteed steady flow of housing. This

<td>Broad support is offered in respect of Policy OS2 - Locating Development in the right places. The main service centres should be the subject of growth given they act as administrative, retail, employment and tourism hubs across the District. The development to be directed to rural service centres and villages should not be at the expense of the main service centres however and a balanced portfolio of sites across a wide range of sustainable settlements in the District as is broadly advocated in Policy OS2 provides for a justifiable and deliverable strategy for delivering housing. Policy OS2 makes clear that a number of site allocations are proposed in the villages to ensure identified housing needs are met. As set out elsewhere in these representations, objections are lodged to a number of the sites that have been identified for allocation in the Plan.</td>

<td>&gt; SECTION 4 - OVERALL STRATEGY &gt; MAIN 16</td>
<td>Policy OS2 – development in the right places Development should take account of the availability of commercial bus services and the likelihood of improving these services. Burford, Charlbury and Bampton are located on commercial bus routes which are capable of enhancement to levels of service which are attractive for people travelling to work. Without population growth and consequent developer funding, the bus services in these localities could reduce in frequency and become less useful for these localities. Bus routes serve adjacent villages like beads on a string. To create an improved bus service, to the general benefit of local people, modest development would logically be allocated to each village along development corridors, for example: (Carterton)-Alvescot-Clanfield-Bampton-Aston-Standlake-Ducklington-(Witney) Burford-(Carterton)-Minster Lovell-(Witney)North Leigh-Long Hanborough-Bladon-(Woodstock) Charlbury-Stonesfield-Combe-(Woodstock) Chipping Norton – Over Norton – Great Rollright (then into Cherwell District). Proposed developments in the 'not connected' list of villages would normally be resisted due to the lack of sustainable travel options,</td>

2.6. The landowners object to the de-classification of Lang Hanborough as a Rural service Centre and its re-categorisation as a Village. Such an approach is considered unsound, as it is not justified by a proportionate evidence base.

2.7. In objecting to this re-classification, it is necessary to highlight the guidance in paragraph 158, which requires a Local Plan to be based on an adequate, up-to-date, and relevant evidence base in making decisions about strategy and the allocation of development sites. In this instance, the Modifications is supported by a Settlement Sustainability Report, dated November 2016.

2.8. In this Report, footnote 1 on Page 2 makes it clear that Long Hanborough is reclassified as a village. However, there is no explanation as to the reason why this is and it is further undermined by the case that the Matrix of Services on page 15 shows the village scoring well against a number of assessment criteria (positive indicators) whilst at the same time not being subject to the more significant restraint indicators (e.g. AONB). Furthermore, in his Interim Findings on the Local Plan, the Inspector considered that the settlement

<td>hierarchy to be justified, therefore, what evidence has the Council put forward to support such a change? 2.9. In reviewing the Cabinet Paper which accompanied the Proposed Modifications passage though the Council Committee process, paragraph 5.9 of the document makes reference to the reclassification of Long Hanborough and its replacement with the Garden Village. Given the above concerns about the deliverability of the Garden Village, it remains to be seen that the Council’s position that the declassification of Long Hanborough “avoids an over-concentration of rural service centres in this part of the District” is a sufficiently robust and supported by evidence. This apparent justification is not considered by the landowners to be sufficiently robust to support the modification to Table 4.1, and is therefore, unsound.</td>

| MM792        | Alvescot Parish Council | Alvescot Parish Council | Mrs Hoad | 2320 | > SECTION 4 - OVERALL STRATEGY > MAIN 16 | to avoid ambiguity ensure the policy is applied in a positive manner. In essence that the presumption is that homes to meet housing need should be permitted on sites adjoining villages and proposals should only be refused where they give rise to discernible harm. The permissive policy is fundamental to achieving suggested levels of windfall development; therefore any uncertainty undermines the deliverability of the planned housing.  
20. The plan correctly acknowledges that previously developed land is a diminishing resource in the district; therefore a more permissive approach to village-edge sites is essential if windfall delivery is to be maintained.  
21. We welcome the pragmatism in acknowledging the uncertainty of progress for neighbourhood plans. Planning applications preceding these plans should not therefore be seen as premature unless a neighbourhood plan has reached an advanced stage within the terms of the NPPF. |
| MM61         | NP                      | Mr Pearce | 537 | > SECTION 4 - OVERALL STRATEGY > MAIN 16 | MAIN 16, Policy OS2 Locating development in the right places  
After consultation with residents to create a Community-Led Plan for the village, the Parish Council has a policy of supporting development which is appropriate in scale and character, and which in particular, provides affordable housing and enables residents to continue living in the village despite age or disability. This seems generally consistent with the Policy proposed for small villages. However, now included among the General Principals (page 20) is the sensible requirement that no development should be at risk of flooding or likely to increase the risk of flooding elsewhere. The Parish Council will oppose any development either in the village or surrounding settlements which increases the load on the sewerage system and pumping station at Lower End, which are already inadequate and prone to cause overflows, until this problem is resolved. |
| MM328        | Russ Canning | Mr Canning | 606 | > SECTION 4 - OVERALL STRATEGY > MAIN 16 | Not Sound  
The proposed site for a “Garden Village” at Eynsham North flagrantly flies in the face of this policy. The proposed site, whilst not within the Oxford Green Belt or Cotswolds AONB, fulfills a critical landscape function in linking these two areas and maintaining a continuous Green Corridor and gateway into the Cotswolds traveling west and a non-suburban green approach into the city of Oxford traveling east. |

| MM363         | Oxford City Council     | Ms              | Dell             | 684        | > SECTION 4 - OVERALL STRATEGY > MAIN 16 | Land and New Allocations
It does appear that the new strategic site allocations (West of Eynsham & the 'Garden City' Eynsham) together with increasing the capacity on the three existing strategic allocations provides sufficient land in principle to meet their SHMA targets and make a significant contribution to Oxford’s ‘unmet’ housing need.

The two new strategic allocations in Eynsham (Garden Village and West of Eynsham) have emerged through the joint working arrangements and given their strategic spatial location appear to be best placed to help

The land to the north of the A40 with its gently undulating topography, irregular, small scale grazing fields, hedgerows and copses is of demonstrably higher landscape value and sensitivity to change than that to the south of the A40.

The area also falls within the boundaries of the Wychwood Forest Project and as such any development should be modest in scale e.g. limited expansion of existing settlements and not encompass a 2,200 house new settlement.

Whilst the impacts upon the acknowledged assets of both the rural landscape and its bio-diversity will not be capable of mitigation, neither will the severe impact upon the Listed Buildings of City Farm whose setting would be destroyed by a “Garden Village in this location.

The West Oxfordshire Strategic Housing Land Availability Assessment [SHELAA] of June 2014 concluded that the land north of the A40, currently proposed as the site of a “Garden Village” was “Not suitable as a consequence of noise impact and the unacceptable impact of development on the countryside “…

The only change that has taken place during the intervening 2 years is an increase in both traffic and noise levels on the A40. The proposed siting of a “Garden Village” north of the A40 is, therefore, both contrary to WODC’s own report and is totally at odds with this policy.

Main 16 Policy OS2 [General Principles]
Not Sound

These principles state that all development should “(1) Not involve the loss of an area of open space or any other feature that makes an important contribution to the character or appearance of the Area.”

It is clear that the construction of Eynsham North would have a devastating impact upon the high quality rural landscape, local residents and passing motorists’ views of that landscape, the rich bio-diversity of the area and the listed buildings of City Farm.

All these features of acknowledged importance, both together and individually, make a significant contribution to the character and appearance of the area. The proposed “Garden Village” therefore is fundamentally at odds with this policy.

Paragraph 9.5.40u
Not Sound

</table>
Stagecoach supports the rewritten policy.

The evidence base makes clear that Eynsham and its immediate hinterland affords the best opportunities to meet the housing needs of Oxford. Locations nearer to Oxford would tend to be more consistent to reducing the need travel. However it is clear no such opportunities are available within the Green Belt that are not heavily and fundamentally constrained, by a range of landscape, environmental, heritage or engineering factors.

The development strategy selected to help meet the City of Oxford's unmet needs, takes the best possible advantage of the opportunities for sustainable transport. The “A40 Science Vale Transit Phase 1” Project is close to being implemented with funding committed, and this will provide bus lanes on the A40 from a new Park and Ride site north of the A40 to Dukes Cut, where a bus gate will be provided; and westbound on the approach to the B4449 Eynsham Roundabout. This will reduce bus journey times, making them considerably more competitive compared with door-to-door journey times by car to the major destinations within Oxford City. At least as important, it will make journey times greatly more predictable; and services will be much more reliable.

It is proposed that this scheme will be followed by a “phase 2” project that will complete westbound bus lanes from Dukes Cut to Eynsham. These schemes will also be linked seamlessly with bus priority on the A40 on approach to Wolvercote to be provided with the implementation of the proposals for employment-led development at Oxford Northern Gateway.

Stagecoach is intending, as a response to the opportunities presented by Science Transit phase 1, to offer direct regular services from Carterton, Witney and Eynsham Park and Ride to Oxford’s Eastern Arc, and, within that wider area, the Hospitals and Brookes University in particular. The frequency of the service between Eynsham Park and Ride and Oxford via the A40 is anticipated to increase to at least 4 buses/hour, with more frequent services likely to be provided at peak times. These services will all be available at the Park and Ride, within reasonable walking distance and good cycling distance of the proposed development West of Eynsham, and from the New Garden Village North of Eynsham. Design of the P+R site, should maximise such connectivity, and also provide scope for buses serving the Park and Ride to continue on to penetrate the developments themselves.

Once Phase 2 is implemented, it is highly likely that more frequent service will be implemented, with extensions further towards Cowley, in line with the Oxford Transport Strategy. The exact response will be subject to a great extent to the implementation of measures to facilitate significantly more efficient bus operation within the City being implemented as proposed in the Oxford Transport Strategy, including that arising from the committed Access to Headington Project which is now under construction.

Stagecoach recognises that Woodstock also has capacity to meet housing needs sustainably, being a settlement that offers a range of local shops and services, including a secondary school. It also benefits from a range of regular direct public transport connections to existing and likely future employment growth on a strategic scale, provided or envisaged at Oxford Airport/Langford Lane, Begbroke, and Oxford Northern Gateway.

Stagecoach has announced a considerable enhancement of the bus service offer to Woodstock, in the form of new service 7, which will serve the whole town and run every 30 minutes to Oxford Parkway and City
| Comment (plain text)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | Respondent ID | Respondent Organisation | Respondent Name | Respondent Title | Respondent Surname | Comment ID | Document Full Path |
Accordingly where the presumption in favour of sustainable development does not apply.

It is therefore recommended that Footnote 9 of the NPPF is stated within Policy OS1

"For example, those policies relating to sites protected under...and/or designated as...an Area of Outstanding Natural Beauty,...".

As the Overall Strategy section sets the context for the rest of the plan the Board recommends that reference to Footnote 9 is included. This approach should also include OS2 Locating Development in the Right Places which currently allows for the allocation of development sites within the AONB. OS2 is specifically referenced in policy H2 Delivery of New Homes. It is therefore crucial that both OS1 and OS2 are fully compliant with the NPPF.

The NNPF makes specific reference to development in AONBs. Paragraph 115 affords 'great weight' to conserving landscape and scenic beauty in AONBs and Paragraph 116 advises that major developments in AONBs should only be permitted in 'exceptional circumstances'.

This advice was recently utilised in the Vale of the White Horse Local Plan 2031: Part 1 Inspectors Report (November 2016). As another Oxfordshire authority with an AONB the Vale is also required to help meet Oxford City's unmet housing need. Issue 5 (page 31 of the report) "Whether or not the plan sets out a soundly-based strategy for the South East Vale Sub-Area, including whether or not the housing allocations proposed in the North Wessex Downs AONB are soundly-based" is particularly relevant.

The Inspector concluded that two sites located within the AONB should be withdrawn given that the need for housing in the AONB had not been demonstrated and that the exceptional circumstances necessary for approval were unlikely to exist. The Board recommends the West Oxfordshire Local Plan adopts a similar approach to sites within the Cotswolds AONB.
3.4 Whilst we note that a wider dispersed option was tested through the SA, there does not appear to have been an option that looked specifically at dispersed growth option in the eastern part of the district, which could have considered For example, an alternative option to targeting growth towards the settlement of Eynsham could have been to consider additional growth spread across the villages to the Eynsham-Woodstock sub area of the District and perhaps areas to the east of Witney, Duckington, Hailey, Finstock, Stonfield and Charlbury. Dispersed growth across these settlements would appear to be a potential option to meet Oxford’s unmet needs.

3.5 ASL support the recognition that further allocations may need to be made through Neighbourhood Plans in relation to villages but note that should it become evident that the Local Plan is not delivering, there will need to be sufficient policies and triggers within this Local Plan to require an early review, as the burden to meet needs cannot simply be left to local communities.

Policy H1 – Amount and Distribution of Housing (MM21 to MM24)

3.6 Regarding MM21, we do not dispute the position that the level of growth needs to considered against associated impacts, but we are not convinced that ‘growth needs to be managed in order to prevent significant change to the intrinsic character of the District’ is the correct term to use here as the barometer to which impact will be considered. Indeed, the modified Plan proposes significant change to the character of some areas (i.e. Eynsham). The test has to be if the meeting needs would significantly and demonstrably outweigh the benefits, as set out at paragraph 14 of the NPPF.

3.7 With regard to the overall quantum of housing now being proposed as part of MM22, we can confirm that we support the evidence base conclusions on housing requirements, which have been placed within the Modified Policy H1 (MM24). ASL support the 15,950 dwelling requirement overall, which comprises of 13,200 homes for West Oxfordshire and 2,750 homes for Oxford’s unmet needs that are now enshrined in this policy.

3.8 ASL do not take specific issue with the proposed distribution of new homes. Indeed, we support the requirement for the Chipping Norton sub area at 2,400 new homes over the plan period and notwithstanding our points regarding statutory requirements in relation to the preparation of a Local Plan (as set out in Section 2), we do not take particular issue with the spatial distribution that is being proposed, we just do not feel such a major change can be enveloped into the current process without serious risk of by-passing key requirements of the law when preparing a Local Plan. Put simply, we thing the changes have gone a step to far to be incorporated in to this plan as modifications post submission of the plan.

3.9 The increased housing requirement within each of the districts sub-areas is set out in Table 1 (ATTACHED). The housing requirement for the District has gone up by 51%, which has then led to significant changes to the spatial distribution of development.

3.10 The Eynsham-Woodstock sub-area requires 243% more homes that originally envisaged within the Submission Draft Local Plan, which perfectly highlights the substantial change to the distribution of development that is now being promoted.

3.11 Chipping Norton’s requirement has also increased by 50% and as noted above we support this as it brings it more in line with requirements for the other three main towns (whilst noting Chipping Norton is the smallest of the three towns). However, as noted in Section 2, in proposing this increase in housing numbers for the settlement, the Council have only considered one option for delivering this number of new homes.

| MM398        | Freeland Parish Council | Freeland Parish Council | Mrs | Smith | 863 | > SECTION 4 - OVERALL STRATEGY » MAIN 16 | Core Policy OS2 of the WODC Draft Local Plan also states that for small villages, hamlets and open countryside:  
"Development in the small villages, hamlets and open countryside will be limited to that which requires and is appropriate for a rural location and which respects the intrinsic character of the area."  
The Policy goes on to state that the General Principles for development will be:  
"All development will be located where:  
* it forms a logical complement to the existing scale and pattern of development and/or the character of the area;  
* it protects or enhances the local landscape and the setting of the settlement/s;  
* it makes use of previously developed land where available, provided it is not of high environmental value (e.g. ecology) and the loss of any existing use would not conflict with other policies of this plan;  
* it does not involve the loss of an area of open space or any other feature that makes an important contribution to the character or appearance of the area;  
* it can be provided with safe vehicular access and safe and convenient pedestrian access to supporting services and facilities."

Freeland Councillors do not feel that these policy principles are being met with the proposed Garden Village as a huge valuable open green space is being lost which makes an important contribution to the character and appearance of the approach to Freeland and the village as a whole. Whilst they recognise that some of the green space is being retained, if this application goes ahead there are real concerns that, in time, the rest of this area will be developed with even more houses, with the result that the current rural approach to Freeland will be lost. |
<p>| MM760        | North Leigh Parish Council | North Leigh Parish Council | Ms | Kern | 912 | &gt; SECTION 4 - OVERALL STRATEGY » MAIN 16 | We support the general principles of development restated in Main 16, but the North Witney proposal - whether 1000 or worse 1400 dwellings, fails on various counts to satisfy some of those key principles - it is not a logical complement to the existing scale and pattern of development and the character of the area, it has a potentially harmful effect on existing occupants and damages rather than enhances and protects the local landscape; it significantly increases the risk of flooding both from surface water and foul water drainage as the existing systems are known to be inadequate; it will generate significant additional traffic likely to rat run through North Leigh via the New Yatt Road which will link to the northern distributor road and if the West End Link Road is built yet more traffic from West Witney and beyond will be able to take the same short cuts and increase traffic flows in our village to an unacceptable level. In these respects the modifications are |</p>

| MM425        | Carterton Construction | -              | Carterton Construction | 944        | > SECTION 4 - OVERALL STRATEGY > MAIN 16 | unsound and these elements legally non compliant.  
2.1 As set out in the supporting settlement hierarchy to the policy, after the three main service centres of Witney, Carterton and Chipping Norton, the next tier of settlements is the rural service centres comprised of:  
- Bampton  
- Burford  
- Charlbury  
- Eynsham  
- West Oxfordshire Garden Village (at North Eynsham)  
- Woodstock.  
2.2 We continue to support the Council’s settlement hierarchy in this respect. The Policy itself advises that:  
“The rural service centres of Bampton, Burford and Charlbury are relatively constrained and are intended to accommodate a modest level of development of an appropriate type that will help to reinforce their existing service centre role. A number of site allocations are proposed to ensure identified needs are met. Further allocations may be made through Neighbourhood Plans.”  
2.3 We support the recognition that Burford is a suitable location to accommodate additional development and that this is important to reinforce its existing service centre role. The Council’s updated Settlement Sustainability Report (November 2016) which is published in support of the consultation classifies Bampton as being within the top six most sustainable settlements in the District (weighted and unweighted).  
2.4 Proposed paragraph 4.18c of the supporting text states that:  
“The focus on development at the existing rural service centres of Bampton, Burford and Charlbury will be more limited. These service centres contain a good range of services and facilities but are constrained in terms of their capacity to accommodate further development. Bampton already has a large housing scheme of 160 homes under construction and site allocations are proposed in Burford and Charlbury to ensure the delivery of new housing on suitable available sites, including the delivery of much needed affordable housing.”  
2.5 Burford falls within the Burford-Charlbury Sub-Area of the Plan. Our comments in relation to the suitability of Burford to accommodate additional development and the suitability of our client’s site to the east of Burford are discussed in relation to the proposed modifications to the Burford-Charlbury Sub-Area below, and as such are not repeated here.  
2.6 In summary the Council’s recognition of the sustainability of Burford is supported, however it is considered that the settlement is capable of accommodating additional development to help meet the Council’s objectively assessed need and our client considers its wider landholding to the east of Burford should be allocated to meet these requirements. We consider this matter in greater detail in respect of Main Modification...

<td>&gt; SECTION 4 - OVERALL STRATEGY &gt; MAIN 17</td>
<td>Eynsham Garden Village: We do not believe that the Garden Village proposal at Eynsham is an appropriate measure for delivering the unmet need for Oxford. It is based on an ambitious timescale for delivery and given that the Government’s announcement for the results of Garden Village proposals has not yet been announced (MAIN 17 references an application for funding), it is unclear how and whether the council will be able to deliver the scheme if the site is not selected of the Locally-led Garden Villages. The anticipated delivery numbers in the bid document are also unrealistic. It would be more appropriate to deal with the objectively assessed need and locate development to settlements that can deliver homes across the plan period in a more effective manner. MAIN 3, 9, 15, 16, 17, 23, 24 and 27 should be reconsidered and amended accordingly.</td>

</tbody>
</table>

3.1 Main Modification 18 proposes a requirement for new development to achieve the optional building regulation standard in respect of water efficiency on the grounds that West Oxfordshire falls within an area of demonstrable water stress.

3.2 The PPG (PPG ID 56-014-20150327) states that all new homes already have to meet the mandatory national standard in the Building Regulations of 125 litres/person/day. Where there is a clear local need, local planning authorities can set out Local Plan policies requiring new dwellings to meet the tighter Building Regulations requirement of 110 litres/person/day. Gladman does not consider that the Council has produced any robust evidence for seeking a requirement above and beyond the building regulations target of 125 litres/person/day. No consideration has been given as to the impact of seeking this higher level or whether this is actually achievable across the area; the impact on viability has not been appropriately assessed.

3.3 The West Oxfordshire Water Cycle Study: Phase 1 Scoping (2016) has been produced which does not consider financial implications. Gladman is aware that concerns about viability have already been expressed in relation to a number of strategic allocations in the Local Plan at earlier hearing sessions. The PGG (Ref ID: 10-005-20140306) is clear when it states:

"Local Plans and neighbourhood plans should be based on a clear and deliverable vision of the area. Viability assessment should be considered as a tool that can assist with the development of plans and plan policies. It should not compromise the quality of development but should ensure that the Local Plan vision and policies are realistic and provide high level assurance that plan policies are viable.

Development of plan policies should be iterative – with draft policies tested against evidence of the likely ability of the market to deliver the plan’s policies, and revised as part of a dynamic process.

Evidence should be proportionate to ensure plans are underpinned by a broad understanding of viability. Greater detail may be necessary in areas of known marginal viability or where the evidence suggests that viability might be an issue – for example in relation to policies for strategic sites which require high infrastructure investment."

3.4 The requirement proposed in the Policy will only serve to exacerbate viability concerns. This part of the Policy should therefore be removed.

<td>CPRE supports the existing designation of the Shill Brook as a Conservation Target Area as noted in 9.3.27, 9.3.88 and 9.3.90, as it’s clearly an important and ecologically sensitive location in the sub-area. CPRE supports the planned enhancement, so that the natural environment and ecology in this area and adjacent Local Wildlife Sites and the SSSI is protected. In this regard, CPRE supports policies OS2 &amp; OS4 which seek to protect important landscape, conserve the natural environment and habitats of biodiversity value. This is not a new or revised point in the Draft Local Plan, but it does mean that the alternative option to the West of Carterton in 9.3.54-56 is not suitable, as the Shill Brook would be breached and the natural environment disturbed. The high cost of the infrastructure for this site would limit affordable housing provision. Also, this site is in prominent open countryside, unbounded on all 4 sides. The alternative options to the North are in open countryside too and so as above, REEMA should be the next priority for development in the town.</td>
</tr>
<tr>
<td>MM735</td>
<td>Braemar Property Developments</td>
<td>- Braemar Property Developments</td>
<td>No specific objections are lodged in respect of Policy OS4 - High Quality Design. However, it is important for the purposes of development management in assessing planning applications and appeals that the test in the policy to conserve or enhance areas, buildings and features of historic, architectural and environmental significance should not be read as a requirement in all instances to provide enhancement. Instead the policy should be noted as requiring a neutral impact if policy is to be met.</td>
</tr>
</tbody>
</table>
| MM745        | Gladman Developments Limited| Richard House (Gladman) Mr House  | 4.1 Amended wording to Policy OS4 is proposed to "more clearly highlight the importance of historic, architectural and landscape character in relation to the design of new development and to ensure consistency with national policy in relation to the historic environment".  
4.2 Gladman considers that the proposed reference in the Policy to non-designated heritage assets and habitats of bio-diversity value is inconsistent with the NPPF. Paragraph 113 makes it clear that: "Local planning authorities should set criteria based policies against which proposals for any development on or affecting protected wildlife or geodiversity sites or landscape areas will be judged. Distinctions should be made between the hierarchy of international, national and locally designated sites, so that protection is commensurate with their status and gives appropriate weight to their importance and the contribution that they make to wider ecological networks."  
4.3 Similarly, Paragraphs 133 and 135 of the NPPF make it clear that the tests to be applied in the determination of planning applications will be different dependent upon whether the heritage asset(s) affected are designated or non-designated.  
4.4 Gladman considers that the proposed amended wording of Policy OS4 should be removed and the Policy wording should be amended to be consistent with the NPPF. |

...
The sustainability of the transport infrastructure, which is already under significant pressure, is a particular worry [MAIN 60-63, Policy T1]. We would like to register specific concerns about the impact of increased traffic flows and congestion on quality of life, growing emissions and increasing pollution levels. Combe has already witnessed an increase in the volume and speed of commuter traffic using the narrow village roads to avoid congested routes, with consequences for safety (especially outside Combe primary school) and quality of life. The growth of Stonesfield and surrounding villages is only likely to exacerbate this. Increasing and unsustainable pressure on the A40 is also of central concern. The proposed science park at the Eynsham Garden Village would generate increased commuter flows into the area served by this seriously congested road.

We note that a reduced reliance on the car is central to the Plan's development vision (Para. 3.2) and welcome this, but question whether the proposed modifications to decrease travel by car is fully deliverable. Key limitations arise through:

- patterns of commuting across the region (e.g. to the hospitals, science parks etc.) that fall outside the public transport proposals;
- the assumption that Hanborough station could function as a 'transport hub' [MAIN 66, Para. 7.57b]. This assumption, which is integral to the sustainable transport strategy for Eynsham Garden Village, seems misplaced. This service is operating at full capacity, with passenger numbers having more than doubled in the last five years. There are significant existing pressures on car parking for commuters from villages with no integrated bus service (e.g. Combe). The current service is unreliable and it is uncertain whether proposed upgrades could be deliverable in the required timescale. The proposed electrification of the Cotswold line has already been seriously delayed until 2024;
- the timing of key modifications to the A40, and the challenges of alleviating congestion given existing pressures on this road.

If proposed transport improvements do not come to fruition, we fear that we will see further displacement of traffic from congested roads such as the A40 into the villages and on to other heavily loaded roads such as the A4095, as well as increasing pressures on existing commuter bottlenecks such as Swinford Bridge. Commuters readily revert to their cars when public transport fails to serve them adequately.

<td>MM21 is supported, which states that growth needs to be effectively managed in order to prevent significant change to the intrinsic character of the District, and this highlights that the strategy proposed by the Council in draft Policy H1 is flawed in particular with regard to the fact that significant development is proposed in both Woodstock, Chipping Norton and Burford which will negatively impact upon the historic character of Woodstock and the adjoining Blenheim World Heritage Site; would affect a substantial piece of land which is a Conservation Target Area (CTA) at Tank Farm (owned by the County Council), east of Chipping Norton which is stated in Main Modification 68 as the potential to be an Ecological constraint, and which relies on the delivery of a relief road which includes third party land; and would relate to land within the AONB at Burford which could be met in locations outside of the AONB in accordance with the advice in Paragraph 116 of the Framework. The draft plan is inconsistent with national policy and not justified when considered against the reasonable alternatives to development outside the AONB.</td>

<td>How can a Garden Village (and the extra homes west of Eynsham) ‘prevent significant change to the intrinsic character’ of this part of the District, when open space will disappear, farmland and biodiversity will be destroyed or reduced, and roads and traffic will be added to currently rural locations?</td>
</tr>
</tbody>
</table>
This policy stipulates that development should "...prevent significant change to the intrinsic character " of the District. It is self evident from the responses above that the development of Eynsham North would have a severe, long term impact upon the attractive rural landscape between Eynsham and Freeland villages resulting in a significant change to the District's local " intrinsic character."

3. OVERALL STRATEGY AND PROVIDING NEW HOMES
Policy OS2 – Locating Development in the Right Places (MM16)

3.1 The Submission Draft Local Plan (May 2015) contains core objectives to help guide the development of the District. Core objectives C01, C02 and C04 place significant emphasis on locating development in appropriate locations where it can meet local needs and reduce the need to travel. These core objectives are taken forward into a defined settlement hierarchy and a development strategy set out by Policy OS2 – Locating Development in the Right Places, which is effectively the plans spatial distribution policy. Policy OS2 is therefore clearly a major policy which goes to the very heart of the Local Plan. Policy OS2 is subject to a major modification (Modification 16).

3.2 Our principle issue with the revised policy is the extent to which it has been modified which results in a very different plan to what was submitted. We have raised a number of issues with regard to the manner in which this policy has been modified from a procedural perspective in Section 2.

3.3 Regarding the revised Policy OS2 itself, we continue to support the identification of the three main service towns as the principle focus for development, including Chipping Norton. However, it is now clear that Eynsham will effectively become a settlement that will have a higher population than Chipping Norton and Carterton. In effect, it will become the second largest settlement in the District. We do not believe this is consistent with the long-established 'three towns' strategy and this therefore has implications for the Local Plan as a whole.

3.4 Whilst we note that a wider dispersed option was tested through the SA, there does not appear to have been an option that looked specifically at dispersed growth option in the eastern part of the district, which could have considered for example, an alternative option to targeting growth towards the settlement of Eynsham could have been to consider additional growth spread across the villages to the Eynsham-Woodstock sub area of the District and perhaps areas to the east of Witney, Duckington, Hailey, Finstock, Stonfield and Charlbury. Dispersed growth across these settlements would appear to be a potential option to meet Oxford’s unmet needs.

3.5 ASL support the recognition that further allocations may need to be made through Neighbourhood Plans in relation to villages but note that should it become evident that the Local Plan is not delivering, there will need to be sufficient policies and triggers within this Local Plan to require an early review, as the burden to meet needs cannot simply be left to local communities.

Policy H1 – Amount and Distribution of Housing (MM21 to MM24)

3.6 Regarding MM21, we do not dispute the position that the level of growth needs to considered against associated impacts, but we are not convinced that ‘growth needs to be managed in order to prevent significant change to the intrinsic character of the District’ is the correct term to use here as the barometer to
which impact will be considered. Indeed, the modified Plan proposes significant change to the character of some areas (i.e. Eynsham). The test has to be if the meeting needs would significantly and demonstrably outweigh the benefits, as set out at paragraph 14 of the NPPF.

3.7 With regard to the overall quantum of housing now being proposed as part of MM22, we can confirm that we support the evidence base conclusions on housing requirements, which have been placed within the Modified Policy H1 (MM24). ASL support the 15,950 dwelling requirement overall, which comprises of 13,200 homes for West Oxfordshire and 2,750 homes for Oxford’s unmet needs that are now enshrined in this policy.

3.8 ASL do not take specific issue with the proposed distribution of new homes. Indeed, we support the requirement for the Chipping Norton sub area at 2,400 new homes over the plan period and notwithstanding our points regarding statutory requirements in relation to the preparation of a Local Plan (as set out in Section 2), we do not take particular issue with the spatial distribution that is being proposed, we just do not feel such a major change can be enveloped into the current process without serious risk of by-passing key requirements of the law when preparing a Local Plan. Put simply, we thing the changes have gone a step to far to be incorporated in to this plan as modifications post submission of the plan.

3.9 The increased housing requirement within each of the districts sub-areas is set out in Table 1 (ATTACHED). The housing requirement for the District has gone up by 51%, which has then led to significant changes to the spatial distribution of development.

3.10 The Eynsham-Woodstock sub-area requires 243% more homes than originally envisaged within the Submission Draft Local Plan, which perfectly highlights the substantial change to the distribution of development that is now being promoted.

3.11 Chipping Norton’s requirement has also increased by 50% and as noted above we support this as it brings it more in line with requirements for the other three main towns (whilst noting Chipping Norton is the smallest of the three towns). However, as noted in Section 2, in proposing this increase in housing numbers for the settlement, the Council have only considered one option for delivering this number of new homes through the SA by increasing the size of the Tank Farm Site (SDA).

3.12 We note the other areas have not increased as much and even in those instances, we note the SA has tested various site options for the increased growth.

3.13 In terms of other issues with the revised policy, we object to the notion that the Garden Village should be regarded as a free standing settlement. It isn’t and is clearly related and connected to Eynsham, with the site and urban boundaries adjoining and the entirety of the site falling within Eynsham Parish.

3.14 We continue to support the final paragraph in Policy H1 which confirms the Council will monitor development annually to ensure that the overall strategy is being delivered.
Revised Policy H1 proposes to meet West Oxfordshire’s housing needs as identified in the 2014 Oxfordshire SHMA (660dpa) over the period identified in the SHMA (2011 to 2031). In addition, the Council propose to deliver a further 2,750 homes over the second half of the plan period (2021 to 2031). This commitment is predicated upon a memorandum of understanding between the Oxfordshire Authorities (reached in September 2016) for West Oxfordshire District Council (WODC) to contribute towards unmet needs in Oxford City.

Upon review of the Oxfordshire SHMA, it is clear that the objectively assessed housing need figure for Oxford City Council covers the period 2011 to 2031. Work undertaken by the Oxfordshire Growth Board has confirmed that Oxford City Council (OCC) has an unmet need of 14,850 dwellings, to be provided in other Oxfordshire Authorities.

Whilst the Council's acceptance of the requirement to meet a proportion of OCC’s need is positive in terms of working with the Council’s neighbours so to meet full objectively assessed needs in the housing market area; we object to the proposed phasing of OCC’s need until 2021 for the following reasons.

First, this approach is contrary to the EiP Inspector’s preliminary findings. When considering the needs of OCC in his preliminary findings, the EiP Inspector stated:

>'In eventually considering the soundness of this plan (following the further work and consultation on the matters of concern in this Note) regard would have to be given to any apportionment to West Oxford made by the OGB. If any such apportionment is made then that would become part of the housing need for the district. Any such apportionment is not immediately a definitive housing requirement, since it must be taken through a local plan process to test its deliverability and environmental impact. Nevertheless, it will be a figure of considerable significance and weight, since it will have emerged from an evidence-based process to inform spatial options for growth outside Oxford City. My initial view is that it would need to be taken into account in calculating the 5 year land supply' (Paragraph 7.6). (Our emphasis).

The above provides that the EiP Inspector’s initial view was that OCC’s unmet need should be included in any 5 year housing land supply calculation today. It is highly relevant that OCC’s needs are backdated to 2011 and 5 years have already passed, in which no strategy as to accounting for unmet needs has been identified. It follows that there is a pressing need to identify ways of meeting this need now. WODC’s intention to delay the delivery of this need (that already stems from a base date of 2011) for another 5 years is therefore contrary to the EiP Inspector’s interim findings.

Second, and for the reasons set out above, the proposed phasing of the requirement is contrary to paragraph 47 of the NPPF that seeks to boost significantly the supply of housing.

Third, the Council’s justification for not meeting OCC’s need until 2021, relies upon a decision to allocate two strategic urban extensions at Eynsham and the associated lag times that will occur between the allocation of these strategic sized sites and first housing completions. WODC have therefore made a plan making decision not to identify a larger suite of smaller / medium sized sites to support these strategic allocations, contrary to the EiP Inspector’s comments. As set out in other representations, suitable, available and achievable sites exist to supplement the identified strategic and non-strategic...

<td>sites that are not presently allocated in the plan and could assist in meeting OCC's needs now. For the above reasons, the plan is not justified when compared to the reasonable alternative of allocating additional small/medium sized that can deliver in the immediate 5 year period and contribute towards OCC's unmet needs immediately. In addition, the proposed phased requirement is contrary to NPPF paragraph 47 and therefore inconsistent with national policy and is not effective when considered against the alternative of meeting a neighbouring Council's needs earlier in the plan period.</td>

<td>RESPONSETOTHEWESTOXFORDSHIRELOCALPLAN-SCHEDULEOFPROPOSEDMAIN MODIFICATIONS-ONBEHALFOFMESSRSSTRAINGEPESAHELLFARMCURBRIDGEWITNEY</td>
<td>This statement has been prepared by Brown and Co on behalf of clients and landowners MjS Strainge in response to the consultation on proposed modifications to the draft West Oxfordshire Local Plan 2031... These representations relate specifically to our clients land to the West of Witney, located to the West of Downs Road between the West Witney Urban Expansion, and Minster Lovell. The land in question is highlighted as an 'area of long term future development potential' in Main 115 and 116 - FIG9.6, and is therefore favoured as the future direction of growth for Witney. General comments Further to the Examination in Public in late 2015, the Local Plan was suspended for 12 months as a result of the Inspectors Preliminary findings. The suspension has allowed the preparation and consultation on necessary changes to the Plan (the 'main modifications') and also to consider the unmet need from Oxford City's housing numbers, and the proportion that is to be attributed to WODC. We are encouraged by the process that plan has made, with an increase in the housing numbers from 10,500 to 15,950 within the Plan Period 2011-2031. We understand that of the 15,950, 13,200 dwellings are required to meet West Oxford's identified housing needs and a further 2,750 are to meet WODC's proportion of Oxford City's unmet housing need. We would however draw to your attention to the fact that South Oxfordshire have not agreed to the Oxfordshire Growth Board distribution to Oxford's unmet needs within SODC, and that as a result, the unmet need to be apportioned to West Oxfordshire may still be subject to change to resolve this situation. Flexibility should therefore be built into the plan to ensure that there is a sufficient supply of available and deliverable sites that can brought forward should the objectively assessed and unmet housing need change. Whilst the notion of accommodating Oxford's unmet needs is generally supported, we have some concerns over the 'ring fencing' of this figure (2,750) as a separate quantum, effectively treating it as a separate housing need as a standalone, separate to that of the OAN for the wider WODC. Our concerns stem from the strategy response to treating the unmet need through the provision of a new Garden Village. The proposed Eynsham Garden Village will require significant infrastructure requirements, has a complex nature of landownerships, with varying different aspirations, and will take many years to...</td>

| MM491        | Crest Strategic Projects | Crest Strategic Projects | > SECTION 5 - PROVIDING NEW HOMES > MAIN 22 | Main 22: Paragraph 5.8–5.17

3.5 The proposed modifications that accept the Oxfordshire SHMA OAHN figure for West Oxfordshire of 660 dwellings per annum 2011-2031 (13,200) are supported and reflect the evidence provided by GL Hearn to the first stage hearings in 2015.

3.6 Similarly, GL Hearn supports the undertaking to make provision for up to 2,750 dwellings to contribute towards meeting the Oxford Growth Board (OGB) working assumption of 15,000 dwellings that constitute Oxford City’s likely unmet need for housing within the plan period.

3.7 Paragraph 5.14 notes that this will require an annual average rate of delivery of 935 dwellings per annum over the plan period, which is characterised as an extremely challenging delivery target for the house building industry. While this is acknowledged it is pertinent to note that the Inspector recognised in his Preliminary Findings (para.4.3) that between 2005 and 2007, when an adopted Local Plan containing housing allocations was in place, delivery averaged around 800 dwellings per annum. Therefore, while historic long-term rates of housing delivery may average only around 50% of the proposed Local Plan target, with the introduction of a positive policy context and sufficient deliverable housing allocations the housebuilding industry is able to respond positively to the ‘challenge’.

| MM741        | CPRE Oxfordshire       | Mrs Marshall     | > SECTION 5 - PROVIDING NEW HOMES > MAIN 22 | CPRE’s view remains that housing need in Oxfordshire has been exaggerated and considers the target set in clause 5.15 & Policy H2 is too high. Factors like a significant upwards adjustment for an unproven, unattributable population change (UPC) in Oxford have bolstered the numbers. Other factors built into the model include low occupancy and low economic activity per home. The number of jobs expected has not been converted to an FTE figure. When the model relies heavily on high in-migration and the main purpose of accelerated housebuilding is to provide affordable housing and also workers to fill expected jobs growth, the assumptions regarding low occupancy and economic activity per home make no sense. With affordability an undoubted issue, people won’t have enough money to live at low occupancy especially with less people working in each household. The mix of housing proposed includes significant family housing, which means that the model relies on increased under-occupancy, which is unlikely in the current climate. Anyway, underoccupancy is already high here. Counter factors such as extended working age and existing resources amongst working age people within the County, have been ignored.

The end result is a proposal to build 40% more houses in Oxfordshire than have ever been built before. These 100,000 houses will be supported by 88,000 jobs (i.e. 0.88 jobs per home), yet currently 260,000 houses are supported by 360,000 jobs (i.e. 1.4 jobs per home).

It is obvious then that prosperity will suffer and the economic growth does not match the planned housing and population growth. The model is therefore flawed. Even the expected economic growth at the heart of the SHMA relies principally on increased jobs in the service sector, which in turn relies on population growth. Therefore, the SHMA is largely based on a circular argument and the jobs growth may well not materialise to the extent hoped.

CPRE therefore does not agree with the SHMA and sees it as representative of a desire to grow, as opposed to an objectively assessed need.
CPRE welcomes the most recent work carried out by Peter Brett, suggesting a compromise target of 568 homes per annum. The number of working age people has been reconsidered and found to be higher than the SHMA analysis. Nevertheless, this new study is still attempting to meet the growth plans initiated by OxLEP, which are driving the County's future. Past out-commuting trends are carried forward and part-time jobs are ignored in line with the SHMA. The distortion in doing so is at least acknowledged by Peter Brett, which CPRE considers to be positive, even though no adjustments have been made. In particular, thousands of people out-commute from West Oxfordshire to work already. So, should we encounter jobs growth here, it makes sense to seek to reduce the out-commuting ratio, rather than carry it forward in determining the population and housing growth needed to support the new jobs. Here, we are lacking sufficient jobs for the existing population, so if jobs grow, we don’t necessarily need more people. In fact, more people out-commute now than the number of workers required to fill the expected number of new jobs in the Plan Period. That’s unsustainable and we should certainly not plan to allow 18% of the future immigrating workers to out-commute. Why bring them here to live, only to work elsewhere?

Neither the SHMA nor the Peter Brett study have considered what impact increased growth in other districts will have on the market in West Oxfordshire. Because of past underdelivery, the other Oxfordshire districts have to increase delivery by a factor of 2.5 under the SHMA moving forward. This is bound to have an impact on demand in West Oxfordshire, which was the only district over delivering in the last plan period. People moved here, because there weren’t enough houses elsewhere, but that is changing. Land is now being sold off by the MOD at 3 sites elsewhere in the County and these are surely better sites for housing than sites on green-field land.

Still it is regrettable though understandable that the Peter Brett study is not being used to determine the target. WODC is reverting to the higher SHMA figure of 660 homes per annum as noted in clauses 5.8 & 5.12s, as it is the least risky option. Clearly the sooner a plan is in place, the better to avoid uncertainty, but CPRE reservations on the validity of the target remain, based on the logical arguments put forward. If the Council is minded to go ahead, an early review is essential.

It is important to understand that the SHMA is representative of only one version of the future, which may be unlikely. It should not be considered as an absolute and used to justify applications that will do significant harm. Therefore, CPRE would encourage an early review in case CPRE’s concerns that the target is too high prove founded. The review should exclude an upwards adjustment, but consider whether the target does exceed the demand and need, as suspected by CPRE and indeed many. CPRE suggests an earlier review than the 5 year timeframe suggested in clause 1.7. Should the target prove to be above the need, then ‘spare’ allocations without permission could be dropped or carried over to the next Plan Period to avoid unnecessary harm moving forward. For sure, sustaining this level of growth beyond 2031 will be difficult.

<td>Oxford Overspill With regard to policies H1, H2 and clauses 5.14 &amp; 5.19, CPRE does not agree with the SHMA figures regarding the housing need in Oxford City and in particular the use of the UPC to justify most of the unmet need. It’s a thumb in the air on a matter that has too much impact to be based on such flimsy evidence. West Oxfordshire is expected to take 2,750 homes for Oxford, bringing the total to 15,950 or 890 per annum. Considering that the target suggested in 2011 was 300 per annum, this is an increase that is unlikely to be achieved. Oxford City has too many jobs for the number of people. West Oxfordshire has too many houses for the number of jobs. The obvious and sustainable solution is to encourage more jobs in West Oxfordshire to</td>

</table>
for this period. Consequently, there is significant un-met need already arising from the city and therefore West Oxfordshire must include an appropriate response through their Local Plan to address this. Coupled with the Council’s approach to five year housing supply (discussed separately below) this underlines the need for the Council to augment its housing land supply to identify and allocate additional land for housing in the short term to meet housing needs in the first half of the plan period.

This is especially important given the existing significant shortfall of 1,836 homes (the equivalent to a 23/4-year shortfall against the SHMA), the very serious affordability concerns in the local area (house prices 10 times lowest incomes) and in light of the Inspector’s preliminary findings that it was his initial view that unmet need would need to be taken into account in calculating the 5-year land supply (Paragraph 7.6 (IN015)). A consequential change to MAIN23 (paragraph 5.22) is required to delete this additional text which refers to taking Eynsham into account for land supply purposes from 2021 onwards.

Notwithstanding our concerns regarding the Council’s approach to only addressing unmet needs from the City of Oxford post 2021, the expectation that North Eynsham will deliver 220 dwellings per annum over a 10-year period is both optimistic and unrealistic. It is highly likely that North Eynsham will continue to deliver homes beyond the plan period. Whilst that in itself is not of concern, this underscores that it is unlikely to yield the number of homes within the plan period as claimed by the Council. The recent NLP report on housing delivery in November 2016 confirms that the average planning approval period for sites of 2,000 or more dwellings is 5 years and the average annual build out rate for sites of 2,000 or more dwellings is 161dpa. This reflects the limits to number of sales outlets possible on a site, and overall market absorption rates. Given the proximity of West Eynsham to the North Eynsham proposal, this is likely to affect the rate of delivery overall in terms of local market competition. We consider that Eynsham is unlikely to yield development completions in 2021 given the need for the planning approval process, including an Area Action Plan (AAP) prior to a planning application and recognition of a delivery rate of 160dpa and a start in 2022 (at the earliest) (the site is unlikely to deliver completions in its first monitoring year), the site will only deliver up to 1,440 homes in the plan period: 760 less than assumed by the Council.

MAIN22 (paragraph 5.14) asserts that the delivery of unmet Oxford City housing need at North Eynsham will be delivered in the period 2021 to 2031 - which would require delivery of 220 dwellings per annum from a standing start in 2021: itself highly optimistic - rather than starting to address unmet needs also within the first 5 years of the plan period given the under delivery of homes in the City 2011-16. Whilst it is not disputed that Eynsham will not deliver prior to 2021, this underlines the need for the Council to augment its housing land supply to identify and allocate additional deliverable land for housing in the short term to meet housing needs in the first half of the plan period. This is especially important given the significant shortfall of 1,836 homes, the serious affordability concerns in the local area (house prices 10 times lowest incomes) and in light of the Inspector’s preliminary findings that it was his initial view that unmet need would need to be taken into account in calculating the 5-year land supply (Paragraph 7.6 (IN015)).

Furthermore, it is considered a key concern that there is too high a reliance on development which will deliver after 2021 within the plan as a whole. The Council’s Housing Land Supply Position Statement October 2016 indicates only 1,035 homes out of 8,169 dwellings on proposed allocation sites in the draft Plan will occur prior to 2021: that is a paltry 12.6% or 207dpa. This will only address a little over half of the current backlog let alone what is needed going forward and consequently this will impact upon whether the 20% buffer should be applied within the district. This extremely low delivery for the first 10 years of the plan further risks exacerbating affordability challenges district wide and places further stress on housing need.
that decision making should proactively drive and support sustainable development to deliver the homes, businesses, infrastructure and thriving places that the country needs.

One of the key objectives of the NPPF is to boost the supply of housing required to meet the needs of present and future generations, whilst delivering a wide choice of high quality homes, widening opportunities for home ownership and creating sustainable, inclusive and mixed communities.

New para 5.13 sets out that "in addition to meeting West Oxfordshire's identified housing needs we are committed to assisting our neighbours Oxford City" and establishes a working assumption of 15,000 homes over the Plan Period.

The pressing need for new housing has been translated into policy targets for the delivery of new homes across West Oxfordshire, and across the County.

New paragraph 5.14 continues, stating "it has been agreed that West Oxfordshire will accommodate 2,750 homes in the period between 2021 and 2031 to assist Oxford City with its unmet housing need". The District Council acknowledges that "this rate of delivery is nearly double the historic long term housing delivery rate in the District and will be extremely challenging for the house building industry to deliver."

Paragraph 181 of the NPPF states that local planning authorities will be expected to demonstrate evidence of having effectively cooperated to plan for issues with cross-boundary impacts when their Local Plans are submitted for examination.

In this regard we would support the increased housing allocation for the District, both in terms of providing for its own housing needs and those of Oxford City.

The Plan demonstrates cross-boundary cooperation across Oxfordshire in seeking to deliver the homes the county needs, in accordance with the provisions of the NPPF.

<td>Strong objections are raised in respect of this Main Modification.</td>
</tr>
</tbody>
</table>

Particular objections are raised in respect of the level of unmet need from Oxford City being accommodated within the District. Paragraph 5.13 of the Plan sets out that a working assumption of 15,000 homes has been agreed by the Oxfordshire Authority's as representing the quantum of Oxford's unmet housing need which must be accommodated elsewhere within the Oxfordshire Housing Market Area. However, the actual unmet need as set out within the SHMA is a range of between 15,000 – 18,000 homes. The District have applied a midpoint in applying the SHMA to the District's own housing need and in the interest of consistency the same approach should be taken in respect of Oxford City's housing needs.

Furthermore, Paragraph 5.14 states that it has been agreed that West Oxfordshire will accommodate 2,750 homes in the period 2021 – 2031. This equates to 935 dwellings per annum when added to the Districts own housing requirements however this excludes past backlogs.

It is not considered that the 2,750 homes is an agreed, reasonable and proportionate division of Oxford City needs given that between 15,000 and 18,000 homes are to be distributed across the four Oxfordshire Districts.

In addition, if the annual housing requirement (the Districts own housing needs together with Oxford City needs) do not include for past backlog, any calculation of housing land supply will need to factor in the

<td>&gt; SECTION 5 - PROVIDING NEW HOMES &gt; MAIN 22</td>
<td>The new local plan takes account of Oxford City's inability to meet its housing requirement. However, the plan proposes to impose 2,400 new homes on Chipping Norton (roughly doubling the size of town). Chipping Norton is NOT served by adequate public transport links to Oxford for the existing population, let alone roughly double the number of residents. In addition, the A44 heading towards Oxford is already unacceptably congested at peak times. The traffic from Chipping Norton would also be joining the additional traffic from a significant number of new homes in Woodstock. I do not consider that this proposal is an appropriate way to deliver additional housing for Oxford. I would respectfully suggest that Oxford be asked to reconsider its own backlog and due consideration will need to be given as to whether a 5% or 20% buffer should be applied on the basis of persistent underperformance. Furthermore, as drafted the Plan does not reflect the latest position within the wider Strategic Housing Market Area in the context of the Duty to Cooperate. A Memorandum of Cooperation exists between all of the Oxfordshire Authorities in the context of having to meet the needs of Oxford City which cannot be accommodated within the city boundary. The Oxfordshire Growth Board have been tasked with identifying housing needs in Oxfordshire and then agreeing distribution across the authorities. The Plan for West Oxfordshire has been drafted on the basis of taking 2,750 houses in accordance with the Memorandum of Cooperation however South Oxfordshire have not agreed to their proportion of housing as confirmed at the Oxfordshire Growth Board meeting on 27th September 2016. This is significant and goes to the heart of soundness for two key reasons: Firstly, the Duty to Cooperate cannot be said to be met when one of the parties with whom West Oxfordshire are seeking to cooperate with are not in agreement on the strategy for distributing unmet housing need from Oxford City. This in itself indicates that the Plan for West Oxfordshire cannot be sound; and In terms of housing numbers, South Oxfordshire were recommended as part of the Duty to Cooperate to accommodate 4,750 houses from Oxford City. This compares with 4,400 houses for Cherwell District, 2,200 for the Vale of White Horse and 2,750 houses in respect of West Oxfordshire. Thus, it can be seen that South Oxfordshire were proposed to accommodate the greatest proportion of Oxford City's unmet housing need and therefore the scale of the issue that has now arisen given that South Oxfordshire have not agreed to take these housing numbers is far greater than had the situation arisen in Cherwell District, Vale of White Horse District or West Oxfordshire District. The consequence is that objectively assessed housing need are not being met in the housing market area until such time as either South Oxfordshire reverse their position and accept 4,950 houses arising from Oxford City; or the remaining authorities agree to take additional housing to reduce the amount that South Oxfordshire have to accommodate, to such a level that South Oxfordshire are prepared to agree to the housing numbers to be delivered in their administrative boundary. There is no resolution to this matter and no indication from the Oxfordshire Growth Board Meeting of 27th September 2016 as to the extent of housing from Oxford City that South 15.065/Reps Oxfordshire District are prepared to accommodate. There is no alternative strategy available to the local authorities in Oxfordshire and no easy solution. Such are the implications arising from the wider Housing Market Area it is recommended that further work on the West Oxfordshire Plan, including progressing further with the Examination be put on hold pending resolution of these key issues at the heart of Oxfordshire and the West Oxfordshire Plan.</td>

**Introduction**

We write on behalf of our client the Church Commissioners for England (the Commissioners) which manages a well-diversified investment portfolio to support the Church’s work across the country and is a long-term landowner in the West Oxfordshire area. We understand that the Council are currently consulting on the proposed modification to the Submission Draft West Oxfordshire Local Plan Local Plan 2031 Consultation.

The Submission Draft West Oxfordshire Local Plan Local Plan 2031 seeks to address the initial concerns raised by the inspector in December 2015 following the first Local Plan hearing which dealt with strategic matters. These concerns generally related to the overall housing requirement and deliverability of these sites. We recognise that in response West Oxfordshire has increased the total housing requirement to 15,950 homes, allocated new sites and increased the size of strategic sites.

We submitted representations in relation to the following five sites located within West Oxfordshire on behalf of the Commissioners to the West Oxfordshire Call for Sites in February 2016:

- Land North of Bampton
- Deanery Farm
- Church Close
- Land at Lower Farm Cottages
- Ansells Farmyard

All five sites are immediately available and are suitable for allocation. We understand these have not been included within the Submission Draft West Oxfordshire Local Plan Local Plan 2031 and instead there is a focus on larger allocations.

**Housing**

We understand that MAIN22 of the Submission Draft West Oxfordshire Local Plan Local Plan 2031 now includes a proportion of 2,750 Oxford’s unmet housing need as well as West Oxfordshire’s own housing need. MAIN 23 and MAIN24 then highlights how this and West Oxfordshire’s own housing need will be accommodated across the borough. Smaller sites can make a significant contribution through windfall development to meeting this housing target.

<td>HOMES &gt; MAIN 22</td>
<td>We strongly support the Council's decision to re-base its local plan on meeting the level of housing need that was judged to be necessary under the Oxfordshire Growth Board's Committed Economic Growth scenario (SHMA 2014). This is a very positive and most welcome move on the part of the Council. There is now a strong prospect that the full housing and employment needs of Oxfordshire, including Oxford City, are going to be planned for and hopefully met by 2031. Paragraphs 5.13 - 5.23 We note that the Council will be making provision for Oxford City's unmet need. This is a most welcome development and is strongly supported by the HBF. We commend the Council for committing to this path of action. The Oxfordshire authorities can probably make claim to being the first HMA in the country to have the makings of coordinated plans that will deal with a major unmet need from a land constrained conurbation (although they may be beaten to first place by the Horsham/Crawley/Mid Sussex HMA). Nevertheless we have some remaining concerns. Some of these concerns may relate to matters of soundness. Paragraph 5.15 shows that planning for an element of Oxford City's unmet need results in a requirement that is: 13,200 for the period 2011 – 2031 to meet West Oxfordshire's housing need; and 2,750 for the period 2021 – 2031 to meet an element of Oxford City's unmet need. Overall housing requirement = 15,950 homes. We have four concerns that flow from this. First, it is unclear what the basis is for the decision that 2,750 homes is adequate. It is unclear how this figure has been decided upon as an appropriate share for West Oxfordshire. It would be helpful if the Council could clarify what the basis is for the apportionment as there does not appear to be any supporting documentation. We note paragraph 5.14 which states that this figure has been agreed by the Oxfordshire Growth Board but there is no supporting documentation of the Council's web-site to show this. This may be a matter of soundness. If the six authorities of the HMA are unable to show how the full OAN for the HMA is accommodated, then the West Oxfordshire Plan may fail the positively prepared test of the Framework. Second, it is unclear whether the apportionment for the plans for the other three authorities (Cherwell, Vale of White Horse and South Oxfordshire) will be adequate to meet Oxford City's full unmet need. If the duty to cooperate has been effectively discharged then the Council should be able to clarify whether Oxford City's unmet need of 15,000 homes will be met in full by 2031 or if there is a residual figure that still needs to be planned for. If there is a residual figure then the Plan needs to be clear about how West Oxfordshire working with the other four authorities intends to address this issue by 2031. Is it intended to review the plan within five years? Third, we do not agree that the delivery of Oxford City's unmet need has to be confined to the period 2021 – 2031. There is no justification for this. Providing for an element of Oxford City's unmet need does not have to be confined to a particular time period and to one specific location (the West Oxfordshire Garden Village).</td>

Modifications. As was acknowledged by the Inspector in Part 2 of his Preliminary Findings (IN 016), there are considerable delivery risks associated with the development of this allocation owing to conflicting aims between the main parties, and the landowner not owning all the land required to deliver the requisite highway infrastructure (IN 016, paras. 2.3-2.6). Although the Council has responded by amending the delivery trajectory to postpone first completions until 2021-22, there is no certainty that the difficulties can be resolved.

With regard to Witney, given the delays in bringing forward the strategic development area to the west of the town, together with the substantial strategic development areas identified in the current Plan, the uplift in housing delivery required to yield its capacity in the period to 2031 is substantial for a town of its size. It is questionable whether the local market can sustain substantial sales volumes from three strategic development areas simultaneously, as well as a number of smaller sites, to deliver its required contribution during the plan period.

Through the proposed modifications the overall requirement for the Chipping Norton Sub-Area is increased by approximately 33%. This compares with a proportionate increase of approximately double that for the other sub-areas combined comprising the south of the plan area. That is a disproportionate increase that reflects the strategy to focus on a small number of large strategic sites in each of the sub areas.

The strategy for the Chipping Norton Sub-Area seems to be driven by the environmental sensitives affecting the principal settlement itself, and in particular its “… prominent hill-top position on the eastern edge of the Cotswolds Area of Outstanding Natural Beauty (AONB) within which most of the town is situated” (para. 9.4.1). However, those constraints do not affect the other principal settlements in the sub-area of Enstone and Middle Barton, which are outside the AONB and, particularly in the case of Middle Barton, a considerable distance away from it. In setting a capacity for the sub-area as a whole, insufficient regard appears to have been had to the potential of smaller settlements to accommodate growth.

To reduce the risks of delivery failure a more balanced distribution is required that increases the requirement for the Chipping Norton Sub-Area and provides a wider development focus, including smaller development opportunities at the rural settlements that can make an early contribution to improving the five year housing land supply. To achieve this more balanced strategy, a Rural Service Centre should be designated in the northern part of the Plan area, in which respect Middle Barton is the most appropriate settlement.

Principle of increasing housing need

The Council’s Housing Land Supply Position Statement October 2016 sets out the Council’s housing land supply position for the five year period 1st April 2016 to 31st March 2021. We agree with the conclusions of assessment in terms of revised housing numbers for the District which is based on the conclusions of the partial update of the Oxfordshire Strategic Housing Market Assessment (SHMA), and updating of other technical studies such as the Infrastructure Delivery Plan (IDP) and the Strategic Flood Risk Assessment (SFRA).

We also agree with the approach to accommodate some of the agreed housing shortfall from Oxford City Council which is an agreed requirement of the duty to cooperate. We note that these changes respond directly to address concerns raised by the Inspector to date.

MAIN 22 Para 5.8 states:

*The most up to date assessment of housing need in Oxfordshire is set out in the Oxfordshire Strategic
Housing Market Assessment (SHMA) which was published in April 2014. In relation to West Oxfordshire, the SHMA identifies the need for between 635 - 685 homes per year in the period 2011 - 2031. The mid-point figure is 660 homes per year and this is defined as the 'objectively assessed need' or DAN. The proposed housing requirement for West Oxfordshire in the period 2011-2031 is therefore 660 homes per year which equates to 13,200 homes in total. This will require a significant increase in the future rate of delivery of new housing in the District in comparison with historic long term delivery rates particularly when 'under-supply' since 2011 is factored in. In addition to meeting West Oxfordshire’s identified housing needs we are committed to assisting our neighbours Oxford City. Evidence demonstrates that Oxford City cannot meet their housing need in full within their own administrative boundary. A working assumption of 15,000 homes has been agreed by the Oxfordshire authorities as representing the quantum of Oxford's ‘unmet’ housing need which must be accommodated elsewhere within the Oxfordshire Housing Market Area (HMA). Joint working has been taking place between the Oxfordshire local authorities and co-ordinated via the Oxfordshire Growth Board (OGB). As part of this process it has been agreed that West Oxfordshire will accommodate 2,750 homes in the period between 2021 and 2031 to assist Oxford City with its unmet housing need. In order to meet this apportionment, and deliver the District’s own housing needs, 935 dwellings per year will need to be delivered between 2021 and 2031 (excluding past backlog). This rate of delivery is nearly double the historic long term housing delivery rate in the District and will be extremely challenging for the house building industry to deliver. The total level of housing provision in West Oxfordshire in the period up to 2031 will therefore be 15,950 homes. This comprises 13,200 homes in the period 2011 - 2031 to meet West Oxfordshire’s own identified housing needs and a further 2,750 homes in the period 2021 - 2031 to assist with the unmet housing needs of Oxford City.

We fully support this modification to the plan, we agree that adopting an approach to housing need from the joint assessment is the correct approach and complies with the duty to cooperate, as set out by localism Act 2011, and amends the Planning and Compulsory Purchase Act 2004. We also consider that the changes to accommodate an increased level of housing need, in line with the partial update of SHMA provides a robust evidence base that is legally compliant, justified and sound.

<td>&gt; SECTION 5 - PROVIDING NEW HOMES &gt; MAIN 22</td>
<td>Objective Assessment of Housing Need MM22 (paragraph 5.8) states that the Strategic Housing Market Assessment (SHMA) in relation to West Oxfordshire identified a need for 635-685 homes per year in the period 2011-2031 with West Oxfordshire concluding a mid-point objective of 660 homes per year. It proposes an increase in overall housing provision and the increased of the Objectively Assessed Housing Need (OAN) from 10,500 to 13,200. In addition to this, paragraph 5.14 acknowledges the West Oxfordshire needs to accommodate 2,750 homes in the plan period to assist Oxford City with its unmet housing need. However, whilst this increase is acknowledged, it must be highlighted that full OAN is 688dpa which would meet affordable housing need in full. Accordingly, we object to MM22 in that whilst it represents an uplift to the previous draft Local Plan figure, it still fails to address affordable housing need. A supplementary Barton Willmore Report is appended to this representation (Appendix 4) which critiques PBA’s methodology for housing need. It is concluded that 688dpa should be an absolute minimum requirement for addressing housing need. Changes should therefore be made to Paragraph 5.8 to reflect the need to plan for 688dpa. Accordingly, the plan is not positively prepared as it does not meet objectively assessed need for affordable housing nor is it justified or consistent with national policy. The mid-point approach taken by WODC is not consistent with the need to boost significantly the supply of housing, nor does it reflect the need to fix the backlog. Objection is also made to Paragraph 5.14 in that it refers to the unmet need from Oxford City being addressed in the period from 2021 onwards. As detailed above, Oxford City has only delivered 1,371 dwellings between 2011 and 2016 which is less than 20% of the 7,000 homes required to achieve the...</td>

</tbody>
</table>
SHMA mid-point. Therefore, there is a substantial unmet need arising from the City which should be addressed at the earliest opportunity.

Whilst delaying addressing the City's unmet need until 2021 may reflect the work undertaken by the Oxfordshire Growth Board, the fact that this is consistent with West Oxfordshire's aspirational delivery trajectory for North Eynsham is not a justification to support this approach. The non-delivery in the period to 2021 at Eynsham for Oxford's unmet needs underlines the need for the Council to augment its housing land supply to identify and allocate additional land for housing in the short term to meet housing needs in the first half of the plan period. This is especially important given the significant shortfall of 1,836 homes (the equivalent to a 23/4 year shortfall against the SHMA), the very serious affordability concerns in the district (house prices 10 times lowest incomes) and in light of the Inspector's preliminary findings that it was his initial view that unmet need would need to be taken into account in calculating the 5-year land supply (Paragraph 7.6 (IN015)). A consequential change to MM23 Paragraph 5.22 is required to delete this additional text which refers to taking Eynsham into account for land supply purposes from 2021 onwards. The change is necessary to ensure that the plan is deliverable and effective.

Notwithstanding our concern regarding the Council's approach to only addressing unmet needs from the City of Oxford post 2021, the expectation that North Eynsham will deliver 220 dwellings per annum over a 10-year period is both optimistic and unrealistic. Housing delivery rates at Bicester Eco-Town do not support this, and the infrastructure delivery problems with the Northern Gateway (allocated in 2010, followed by an AAP, and now 11 years in the pipeline since inception) also suggest caution is merited. More sites (e.g. North Carterton) will make it more likely that delivery targets are achieved. In contrast, with the status quo, it is highly likely that North Eynsham will continue to deliver homes beyond the plan period. Whilst that in itself is not of concern, this underscores that it is unlikely to yield the number of homes within the plan period as claimed by the Council. The recent NLP report on housing delivery in November 20164 confirms that the average planning approval period for sites of 2,000 or more dwellings is 5 years and the average annual build out rate for sites of 2,000 or more dwellings is 161dpa: This reflects the limits to the number of sales outlets possible on a site, and overall market absorption rates (hence reinforcing the fact that a series of medium sites is better than a single large site). Given the proximity of West Eynsham to the North Eynsham proposal (in a village with a population of 4,648 according to the Census, 2011), this is likely to affect the rate of delivery overall in terms of local market competition/saturation. We consider that Eynsham is unlikely to yield development completions in 2021 given the need for the planning approval process, including an Area Action Plan prior to a planning application and recognition of a delivery rate of 160dpa and a start in 2022 (at the earliest) (the site is unlikely to deliver completions in its first calendar year) and the site will only deliver up to 1,440 homes in the plan period: 760 less than assumed by the Council. The change is necessary to ensure that the plan is deliverable and effective.

Objection is raised to MM23 (Paragraphs 5.21a and 5.21b) with reference to the proposed allocations at Woodstock, Burford and Charlbury (see representations below).

We consider that Eynsham is unlikely to yield development completions in 2021 given the need for the planning approval process, including an Area
Action Plan prior to a planning application and recognition of a delivery rate of 160dpa and a start in 2022 (at the earliest) (the site is unlikely to deliver completions in its first calendar year), the site will only deliver up to 1,440 homes in the plan period: 760 less than assumed by the Council. The change is necessary to ensure that the plan is deliverable and effective.

Objection is raised to MM23 (Paragraphs 5.21a and 5.21b) with reference to the proposed allocations at Woodstock, Burford and Charlbury (see representations below).

Main Modification 22/23/24 (Unsound)

The consortium supports the housing requirement of 660 homes per year as identified in the Oxfordshire Strategic Housing Market Assessment (SHMA) which was published in April 2014.

The Oxfordshire Growth Board, where all Oxfordshire Districts are represented has agreed to meet Oxford’s unmet housing need and the report published in September 2016 sets out the apportionment of need to each Council. The unmet housing need apportioned to West Oxfordshire is 2,750 homes. The consortium supports the Council’s agreement that it will deliver the agreed proportion of Oxford City’s unmet need of 2,750 homes. The delivery of the unmet need between 2011 and 2031 is not supported. On the basis that we are already five years into the SHMA period (2011-2016) 688 homes should have already been delivered as part of Oxford’s unmet need.

It should also be noted that within the report published by the Oxfordshire Growth Board, ‘A Countywide Approach to Meeting the Unmet Housing need for Oxford states the following:

One critical matter to recognise is that the assessment of the spatial options included recognition that deliverability of allocated sites was considered on a comparable basis between the different Districts, with an assumed start date of 2021 for the commencement of development after the adoption of the respective Local Plan review or Local Plan update/refresh. This assumption does not preclude earlier delivery, but does recognise the complexity of the issues being considered and has sought to factor in reasonable lead times to enable options to come forward and to be fully considered through the Local Plan process.

It is recognised that Oxford City’s unmet need apportioned to West Oxfordshire of 2,750 homes will be delivered through a strategic urban extension to the west of Eynsham and a new Garden Village to the north of the A40 near Eynsham. The New Garden Village at Eynsham is proposed for at least 2,200 homes. The consortium believes that it is overly optimistic to assume commencement of development within 2021 given the complexity of the site in terms of land assembly and associated infrastructure requirements. It is also recognised that an Area Action plan is to be drawn up for the site, which from our experience can take up to two years to produce.

In paragraph 5.22, the Council states that the garden Village proposal (2,750 homes) will treat the provision for 2,750 homes separately from the West Oxfordshire’s housing requirement. The Garden Village should not be treated as its own housing market area, there is no justification for treating the Garden Village as its own entity with its own five year housing land supply calculation. There is also no justification as to why the unmet needs of Oxford City are to be delivered post 2021, the housing need for West Oxfordshire is from 2011 and this should be dealt with imminently. Concern is raised that a five year housing land supply will not be met upon the Plan’s adoption.

Modifications to Policy H1 set out that provision for housing in the district will be based on the evidence contained in the 2014 SHMA, specifically the midpoint of the range 635-685 homes per annum i.e. 660

<td></td>
<td>homes per annum. Taking this as the objectively assessed need for homes arising from the district defines a requirement over the plan period of 13,200 homes, as identified in paragraph 5.13. This approach is consistent with the University &amp; Colleges earlier representations on this matter.</td>
</tr>
<tr>
<td>In addition, it is welcomed that the Modifications also allow for the provision of housing to contribute to the needs of Oxford City on the basis prescribed by the OGB i.e. 2,750 homes. This gives rise to a combined figure of 15,950 homes in the Local Plan period 2011-2031. The University &amp; Colleges agree with the principle of providing this level of new homes, albeit as a minimum threshold for the reasons set out in relation to MM4 i.e. that the OGB working understates the overall housing requirement for Oxford. Having defined this overall requirement across the Local Plan period, the University &amp; Colleges further comment that there is no need to make a distinction between the timing for delivery of the West Oxfordshire housing requirement and that for Oxford as specified in the last sentence of paragraph 5.15 and this text should therefore be deleted.</td>

<td></td>
<td>We note that the objectively assessed need for West Oxfordshire is set at 660 dwellings per annum (13,200 homes in total) and we would agree that this will result in a significant increase in the rate of delivery within the District compared to the previously historic lower rates. We acknowledge the amended wording in relation to the unmet need from Oxford City and the rationale behind the apportionment allocated to West Oxfordshire to deliver. We agree that to meet this requirement that the delivery rates will need to increase substantially to 935 dwellings per annum from 2021 to 2031 to meet this need and that this will be extremely challenging for the District to deliver. As such, we believe that as many sustainable and unconstrained sites as possible should come forward for development at the earliest possible opportunity. As set out previously within these representations, we believe the site at Hailey offers a logical and sustainable location for growth within the village within close proximity to the Main Service Centre of Witney.</td>
</tr>
<tr>
<td>We strongly object to the proposal for a separate land supply calculation for the 2,750 dwellings at Eynsham - to be taken account of in the period 2021-2031. There is nothing within the NPPF or the PPG to support this approach. The NPPF is clear that when dealing with need, it is the need of the Housing Market Area as whole which needs to be met. It is not appropriate to 'ring-fence' need in this manner.</td>

Housing states that Local Planning Authorities should aim to deal with any undersupply within the first 5 years of the plan period, thus the Sedgefield approach should be adopted. This is especially important given the severe shortfall of 1,836 homes, the serious affordability concerns in the local area (house prices 10 times lowest incomes).

Alongside this context of a severe shortfall in housing delivery, the report of the Oxfordshire Growth Board Post SHMA Strategic Work Programme report2 states that:

"133) The Programme is not seeking to allocate or release sites, but has at a high level and using a common basis, through the work streams; identify the evidence of each district’s ability to absorb additional growth to meet a share of Oxford’s unmet need. It will be for each of the districts through their normal Local Plan processes to allocate sites sufficient to meet their proposed share of Oxford’s unmet need under the requirements of the Duty to Co-operate.

134) It is also important to note that the yield figures for each area of search represent estimated housing numbers to be delivered by 2031 – total capacities at a number of these sites may change through local assessment as part of the more detailed Local Plan process, taking a wider range of planning factors into account, including the potential to deliver further housing beyond 2031."

MM22 Paragraph 5.17 asserts that the delivery of unmet Oxford City housing need at Eynsham will be delivered in the period 2021 to 2031 – which would require delivery of 220 dwellings per annum from a standing start in 2021: itself highly optimistic – rather than address unmet needs also within the first 5 years of the plan period. Whilst it is not disputed that Eynsham will not deliver prior to 2021, this underlines the need for the Council to augment its housing land supply to identify and allocate additional land for housing in the short term to meet housing needs in the first half of the plan period. This is especially important given the significant shortfall of 1,836 homes, the serious affordability concerns in the local area (house prices 10 times lowest incomes) and considering the Inspector’s preliminary findings that it was his initial view that unmet need would need to be considered in calculating the 5-year land supply (Paragraph 7.6 (IN015)).

Instead the Council’s Housing Land Supply Position Statement October 2016 simply indicates that Eynsham will ‘kick in’ from 2021 onwards as ‘agreed’ through the joint work at the Growth Board: such a view is not supported by the statement above from the September 2016 OGB report which emphasises the sovereign nature of Local Plans in identifying land to address unmet need. Rather than the response to delivery new homes to meet unmet needs ‘kicking in’ in 2021, this should be seen as ‘kicking the can down the road’. Unmet need, is, by definition, unmet.

It is counter intuitive for the Council to hold the view that the present day need for housing should be addressed in 5 years’ time or beyond. The Inspector’s Preliminary Findings (IN015) confirmed that if the Council failed to consider the implications of unmet housing needs the plan would be out of date before it can be adopted. The inescapable conclusion to this is that unmet housing needs should begin to be addressed at the time of adoption of this plan: arguably now. Were that not the case, logically an early review which gives time to consider and then respond to unmet needs would be appropriate, which it is evidently not.

The Vale of White Horse Local Plan, recently adopted, commits to allocating sites to contribute towards Oxford’s unmet housing need within the Local Plan 2031: Part 2, to be submitted to the Secretary of State, within two years of adoption of the Local Plan 2031: Part 1 - i.e. by December 2018: otherwise the unmet housing needs from Oxford City will become part of its housing land supply requirement. West Oxfordshire’s
approach to this issue is therefore wholly contradictory: the timing of its plan enables the Council to seize the
topportunity to deliver new homes to meet unmet housing needs from the City of Oxford, yet to put this off
until after 2021 will simply fail those who are presently in need of a new home. One cannot meet today's
needs tomorrow.

Furthermore, it is considered a key concern that there is too high a reliance on development which will
deliver after 2021 within the plan as a whole. The Council's Housing Land Supply Position Statement October
2016 indicates only 1,035 homes out of 8,169 dwellings on proposed allocation sites in the draft Plan will
occur prior to 2021: that is a paltry 12.6% or 207dpa. This will only address a little over half of the current
backlog let alone what is needed going forward. This extreme low delivery for the first 10 years of the plan
risks exacerbating affordability challenges district wide and places further stress on housing need.

When drilling down into the detail, it is proposed that the Witney sub-area (which incorporates Hailey) will
provide 4,400 homes. This is made up from proposed allocations and additional sustainable sites which come
forward and are available for development. It is also noted that additional sites may be allocated through
Neighbourhood Plans to increase the housing supply over and above that which has been identified and
planned for in the Local Plan. However, the Witney sub-area policy references windfall sites as being a potential
source of supply and attributes a specific number to these. This is not the same as sites being allocated through the Neighbourhood Plan. To restrict such a source of supply solely to potential Neighbourhood Plan sites is engaging a restriction on development and treating windfall sites as engaging a prematurity argument in seeking to come forward in advance of a Neighbourhood Plan. This is not in accordance with the NPPF. Furthermore, the policy as currently drafted means that were the villages not to develop Neighbourhood Plans, then there is no way of this element of the supply being delivered. We consider it should be clarified that the 8th paragraph should be amended to read:

Provision for new housing will also be made in the remainder of each sub-area at appropriate village
locations.

Given the confusion which exists between this policy and the respective sub-area policies, it is considered
that the third paragraph from the end should also be deleted as again it references additional sites coming
forward through Neighbourhood Plans only.

Main Modification 24, Policy H1, relates to the distribution of housing which is supported by a revised
Sustainability Appraisal (SA). We consider that there needs to be reconsideration of a further uplift in housing
in the Burford - Charlbury sub area (proposed housing requirement increase of 20% from 800 to 1,000
homes). Paragraph 116 of the NPPF clearly states that exceptional circumstances must be demonstrated to
justify allowing major development in the AONB. This paragraph states that consideration of such applications should include an assessment of the need for the development and its impact on the local economy, the cost of, and scope for, developing elsewhere outside the designated area, or meeting the need for it in some other way, and any detrimental effect on the environment and the landscape. The Council appears to seek to justify this by indicating that development is of necessity within the AONB given the widespread extent of the AONB encompassing almost the whole of the sub area: however, that is not a reason to increase housing within the sub area. The draft plan is not consistent with national policy and has not been justified with regard to reasonable alternatives which exist to deliver development outwith the AONB, nor is it deliverable and effective in terms of proposed sites.

MM778  Kier Group  Kier Group  -  Kier Group  2109  > SECTION 5 - PROVIDING NEW
Strong objections are raised in respect of this Main Modification. Particular objections are raised in respect of
the level of unmet need from Oxford City being accommodated within the District. Paragraph 5.13 of the Plan
sets out that a working assumption of 15,000 homes has been agreed by the Oxfordshire Authority’s as
representing the quantum of Oxford’s unmet housing need which must be accommodated elsewhere within the Oxfordshire Housing Market Area. However, the actual unmet need as set out within the SHMA is a range of between 15,000 – 18,000 homes. The District have applied a midpoint in applying the SHMA to the District’s own housing need and in the interest of consistency the same approach should be taken in respect of Oxford City’s housing needs.

Furthermore, Paragraph 5.14 states that it has been agreed that West Oxfordshire will accommodate 2,750 homes in the period 2021 – 2031. This equates to 935 dwellings per annum when added to the District’s own housing requirements however this excludes past backlogs.

It is not considered that the 2,750 homes is an agreed, reasonable and proportionate division of Oxford City’s needs given that between 15,000 and 18,000 homes are to be distributed across the four Oxfordshire Districts.

In addition, if the annual housing requirement (the District’s own housing needs together with Oxford City’s needs) do not include for past backlog, any calculation of housing land supply will need to factor in the backlog and due consideration will need to be given as to whether a 5% or 20% buffer should be applied on the basis of persistent underperformance.

Furthermore, as drafted the Plan does not reflect the latest position within the wider Strategic Housing Market Area in the context of the Duty to Cooperate. A Memorandum of Cooperation exists between all of the Oxfordshire Authorities in the context of having to meet the needs of Oxford City which cannot be accommodated within the city boundary. The Oxfordshire Growth Board have been tasked with identifying housing needs in Oxfordshire and then agreeing distribution across the authorities. The Plan for West Oxfordshire has been drafted on the basis of taking 2,750 houses in accordance with the Memorandum of Cooperation however South Oxfordshire have not agreed to their proportion of housing as confirmed at the Oxfordshire Growth Board meeting on 27th September 2016.

This is significant and goes to the heart of soundness for two key reasons:

Firstly, the Duty to Cooperate cannot be said to be met when one of the parties with whom West Oxfordshire are seeking to cooperate with are not in agreement on the strategy for distributing unmet housing need from Oxford City. This in itself indicates that the Plan for West Oxfordshire cannot be sound; and

In terms of housing numbers, South Oxfordshire were recommended as part of the Duty to Cooperate to accommodate 4,950 houses from Oxford City. This compares with 4,400 houses for Cherwell District, 2,200 for the Vale of White Horse and 2,750 houses in respect of West Oxfordshire. Thus, it can be seen that South Oxfordshire were proposed to accommodate the greatest proportion of Oxford City’s unmet housing need and therefore the scale of the issue that has now arisen given that South Oxfordshire have not agreed to take these housing numbers is far greater than had the situation arisen in Cherwell District, Vale of White Horse District or West Oxfordshire District.

The consequence is that objectively assessed housing need are not being met in the housing market area until such time as either South Oxfordshire reverse their position and accept 4,950 houses arising from Oxford City; or the remaining authorities agree to take additional housing to reduce the amount that South Oxfordshire have to accommodate, to such a level that South Oxfordshire are prepared to agree to the housing numbers to be delivered in their administrative boundary.

<td>Messrs Walker, Smith, Summerfield</td>
<td>2162</td>
<td>&gt; SECTION 5 - PROVIDING NEW HOMES &gt; MAIN 22</td>
<td>At paragraph 5.5 of the Inspector’s Preliminary Findings Part 1, it is stated that ‘the SHMA’s recommended figure of a need for 274 affordable dwellings per annum is justified for the period 2013-2031’. The SHMA indicates (Table 89) that to meet the objectively assessed affordable housing need 685 dwellings per annum should be planned for over the plan period. Main modifications (Main 22) indicates that the ‘mid-point figure is 660 homes per year and this is defined as the objectively assessed need’. Main modifications (Main 24) to Policy H1 state that, utilising the mid-point figure of 660 homes per year, provision will be made for 13,200 homes to meet West Oxfordshire’s identified housing need and a further 2,750 homes to meet Oxford City’s housing need. At paragraph 5.11 of the Inspector’s Preliminary Findings Part 1, the Inspector raises concerns that an uplift in market housing has not been considered to meet the affordable housing need set out within the SHMA. It is reasonable to conclude the vast majority of affordable housing delivery will occur as a proportion of open-market schemes and is therefore extremely dependent for its delivery upon market housing being developed. The SHMA Update, dated November 2016, indicates at paragraph 6.6 that the total net need for affordable housing is 275 dwellings per annum. Furthermore, paragraph 6.7 concludes the Council should consider an appropriate uplift to address affordable housing need. Paragraph 159 of the NPPF clearly states that ‘Local planning authorities should have a clear understanding of housing needs in their area. They should: ... address the need for all types of housing, including affordable housing. The WOLP does not provide for an uplift beyond that of the SHMA mid-point of 660 dwellings per annum. The strategic development areas are likely to provide less than the affordable housing policy requirements due to significant costs associated with the delivery of infrastructure. The Planning Practice Guidance advises at paragraph 029 (Ref ID: 2a-029-20140306) how plan makers should use the results of the affordable needs assessment: ‘The total affordable housing need should then be considered in the context of its likely delivery as a proportion of mixed market and affordable housing developments, given the probable percentage of affordable housing to be delivered by market housing led</td>

<td>It seems that Oxford’s proposed answer to ‘desperately needed affordable housing’ (in parentheses, as I’m not quite sure what that means) is to build on and destroy green belt land in West Oxfordshire. If so, it will certainly keep houses in Oxford itself unaffordable and create massive problems for the small towns and villages where affordable housing will be built. At the moment we are told there is a housing shortage, perhaps in 10 years time we’ll be told we have a housing glut in West Oxfordshire (the transport infrastructure making a commute to Oxford impractical) and a ‘desperate need for farmland to cut down on imported food’ - sadly lost due to short sighted housing policies. For those with long memories may recall that both Abingdon and Whitney were once rail connected to Oxford. They too, weren’t needed at the time.</td>

<td>Andrew Garbutt</td>
<td>Mr</td>
<td>Garbutt</td>
<td>461</td>
<td>&gt; SECTION 5 - PROVIDING NEW HOMES &gt; MAIN 22</td>
<td>The Objectively Assessed Need (OAN) We remain of the view that the proposed housing target given in clause 5.15 &amp; Policies H1 &amp; H2 is too high for reasons outlined at previous stages of the development of the Draft Local Plan. As the analysis previously provided has not been considered in setting the target, we recognise that there is no value in repeating the detail. We simply have to accept that there is currently a political will to build a significant quantum of new houses. In our view, it is unlikely that the affordable housing crisis, which is cited as one of the key drivers for growth, will not be resolved in this way. Instead, this initiative is more about boosting the economy (although it will only ever be a temporary fix) and therefore, over-estimates of the housing need are considered positive and the Development Sector is being allowed a free reign. The harm associated with high growth is being ignored. The sustainability of the high growth itself is also not being considered, nor the potential for market collapse, as has occurred in Ireland and other countries with similar pro-development policies. In that respect, we believe that the National Planning Policy Framework (NPPF) is not working, but it is a reality that we have no choice but to live with at present. As previously outlined, the SHMA relies on a series of assumptions that all augment the</td>
</tr>
</tbody>
</table>
housing need and when compounded, the upwards effect is significant. The model doesn’t stack up, as for example the falling occupancy assumption does not match the falling economic activity assumption, as the latter will worsen affordability and prosperity. The mix of housing proposed does not match the assumed occupancy. The expected economic growth at the root of the SHMA, relies principally on increased jobs in the service sector, which in turn relies on population growth. Therefore, the SHMA is to a great extent reliant on a circular argument. The jobs growth may well not materialise to the extent hoped and no consideration has been given to what would happen then.

The SHMA is often considered as an absolute truth, but in reality it presents one scenario for the future. In our view, it’s not at all a likely outcome. More and more people are seeing past the propaganda on desperate housing need and interrogating the data. They are realising that developers and big business are behind the growth plans for their own gain and that the situation with regard to affordable housing (i.e. the real need) will most likely not be resolved.

The SHMA conclusion to build 40% more houses in Oxfordshire as a whole, than have ever been built before is unsustainable, as is the plan to build 15,950 homes in West Oxfordshire.

It must be noted in particular that in this District we have too many homes for the number of jobs. Therefore, if jobs are to be created, it makes sense to limit growth and look first to the existing population, many of whom are forced to out-commute.

We were encouraged by Peter Brett Associates (PBA) suggesting a compromise target of 568 homes per annum, based on a more accurate number of working age people. However, PBA indicates though that this would not provide sufficient affordable housing, should WODC wish to cater for every possible need and suggests no solution. We assume this is why WODC has reverted to the SHMA figure. However, we feel that developers cannot be relied upon to provide sufficient affordable housing full-stop and placing this important requirement in their hands is deeply flawed.

In any event, this new study by PBA is still attempting to meet the growth plans initiated by OxLEP, which are also behind the SHMA and have not been drawn up democratically. PBA acknowledges the number of jobs expected is not converted to a full-time equivalent (FTE) number and that past high (and undesirable) out-commuting trends are carried forward, which are issues we have raised previously. The distortion in doing so is acknowledged, although under-played by PBA, but no associated adjustments have been made. Had these issues been investigated further, PBA’s target would have been significantly lower.

After all, in 2011, there were 14% more jobs than employees in the County, indicating that a significant number of people have more than one job. Therefore, the 88,000 jobs expected, could reasonably be reduced by a factor of 1.14 to calculate the number of workers needed, which is a significant reduction.

Also, thousands of people have no choice but to out-commute from West Oxfordshire to work because we have too few jobs for the number of residents. Tellingly, more people outcommute now than the number of workers required to fill the expected number of new jobs created in the Plan Period, so we have the solution within the District already. Therefore, any jobs growth should be used to reduce the out-commuting ratio, rather than be accompanied by pro-rata population growth and a perpetuation of the out-commuting ratio amongst the new population. That’s unsustainable and for sure, we should not allow for 18% of the future in-migrating workers to out-commute. What would be the point of bring them to live here, only to work elsewhere?

**Cherwell District Council**

David Peckford

Objection: The principle concern however is deliverability. There does seem to be a real challenge ahead for West Oxfordshire to be able to deliver the number of housing being proposed, based on past housing trends and delivery rates.

The Plan makes reference to an Area Action Plan (AAP) being prepared for these two new strategic sites. Since this will be critical to the ‘front-loading’ of the process and indeed the delivery of these sites, the Local Plan should include a clear statement of intent backed up by a timetable for its completion.

Thank you for your email dated 11 November 2016 consulting Cherwell District Council on your Proposed Modifications to your Submission Local Plan. This letter comprises an officer response to the consultation and our comments are restricted to those matters that are of particular interest to Cherwell district.

We have previously recorded our history of working cooperatively and collaboratively on planning issues of strategic and mutual interest through the Oxfordshire Planning Policy Officers group (OPPO), the Oxfordshire Growth Board (OGB), the Spatial Planning and Infrastructure Partnership (SPIP) which preceded the OGB, and joint working on specific projects including the Oxfordshire Strategic Housing Market Assessment 2014 (SHMA), Strategic Flood Risk Assessment and assessing the housing needs of the travelling communities.

More specifically, we have found West Oxfordshire’s contribution to countywide cooperative working over, approximately, the past 18 months to be constructive and solution-driven. We welcome the Proposed Modifications to increase West Oxfordshire’s housing target (2011-2031) to meet its own needs from 10,500 homes (525 per annum) to 13,200 (660 per annum) and to incorporate the apportionment of 2,750 homes to contribute in meeting Oxford’s unmet housing needs as was agreed by the Oxfordshire Growth Board on 26 September 2016.

We know of no reason to consider that your Proposed Modifications have not been prepared in accordance with the Duty to Cooperate and we are not aware of any legal or procedural failings from this Council’s perspective. We have of course met and spoken at officer level to discuss respective plan-making and strategic and cross-boundary issues.

**Combe Parish Council**

Combe Parish Council recognises the need to secure the swift implementation of the West Oxfordshire Local Plan 2031 given growing pressures for private development in the District. The Council wishes, however, to register its concerns over the proposed modifications to the Plan as follows:

1. the increase in the overall housing requirement to 15,950 homes [MAIN22, Paras 5.8-5.15]

We reject the premises upon which the increased housing requirement is founded. Pre-Brexit targets and projected housing need (SHMA 2014) have been accepted without revision, despite a change in economic and political climate. We believe that greater economic uncertainty calls these outdated projections into question. There is also an assumption that continuing economic growth in the city of Oxford will take place, and is indeed desirable. Investment in other centres for growth within and beyond Oxfordshire (as would be
consistent, for example, with government support for the Northern Powerhouse) should be considered.

In light of the above, we question and object to the increased requirement to meet the City of Oxford’s unmet housing need and the scale of projected demand for housing in West Oxfordshire, which will bring the gradual erosion of the AONB. We support the stated priority for affordable housing, but question the ability to deliver truly affordable options for vulnerable groups in the inflated West Oxfordshire housing market.

In sum, the proposal to increase the housing requirement to 15,950 homes does not appear to have fully responded to the concerns of local residents about scales of development raised in the earlier consultation, and has not justified the adjusted projected housing demand satisfactorily.

3. OVERALL STRATEGY AND PROVIDING NEW HOMES
Policy OS2 – Locating Development in the Right Places (MM16)

3.1 The Submission Draft Local Plan (May 2015) contains core objectives to help guide the development of the District. Core objectives C01, C02 and C04 place significant emphasis on locating development in appropriate locations where it can meet local needs and reduce the need to travel. These core objectives are taken forward into a defined settlement hierarchy and a development strategy set out by Policy OS2 – Locating Development in the Right Places, which is effectively the plans spatial distribution policy. Policy OS2 is therefore clearly a major policy which goes to the very heart of the Local Plan. Policy OS2 is subject to a major modification (Modification 16).

3.2 Our principle issue with the revised policy is the extent to which it has been modified which results in a very different plan to what was submitted. We have raised a number of issues with regard to the manner in which this policy has been modified from a procedural perspective in Section 2.

3.3 Regarding the revised Policy OS2 itself, we continue to support the identification of the three main service towns as the principle focus for development, including Chipping Norton. However, it is now clear that Eynsham will effectively become a settlement that will have a higher population than Chipping Norton and Carterton. In effect, it will become the second largest settlement in the District. We do not believe this is consistent with the long-established ‘three towns’ strategy and this therefore has implications for the Local Plan as a whole.

3.4 Whilst we note that a wider dispersed option was tested through the SA, there does not appear to have been an option that looked specifically at dispersed growth option in the eastern part of the district, which could have considered For example, an alternative option to targeting growth towards the settlement of Eynsham could have been to consider additional growth spread across the villages to the Eynsham-Woodstock sub area of the District and perhaps areas to the east of Witney, Buckdington, Hailey, Finstock, Stonfield and Charlbury. Dispersed growth across these settlements would appear to be a potential option to meet Oxford’s unmet needs.

3.5 ASL support the recognition that further allocations may need to be made through Neighbourhood Plans in relation to villages but note that should it become evident that the Local Plan is not delivering, there will need to be sufficient policies and triggers within this Local Plan to require an early review, as the burden to meet needs cannot simply be left to local communities.

Policy H1 – Amount and Distribution of Housing (MM21 to MM24)

3.6 Regarding MM21, we do not dispute the position that the level of growth needs to considered against associated impacts, but we are not convinced that ‘growth needs to be managed in order to prevent
significant change to the intrinsic character of the District’ is the correct term to use here as the barometer to which impact will be considered. Indeed, the modified Plan proposes significant change to the character of some areas (i.e. Eynsham). The test has to be if the meeting needs would significantly and demonstrably outweigh the benefits, as set out at paragraph 14 of the NPPF.

3.7 With regard to the overall quantum of housing now being proposed as part of MM22, we can confirm that we support the evidence base conclusions on housing requirements, which have been placed within the Modified Policy H1 (MM24). ASL support the 15,950 dwelling requirement overall, which comprises of 13,200 homes for West Oxfordshire and 2,750 homes for Oxford’s unmet needs that are now enshrined in this policy.

3.8 ASL do not take specific issue with the proposed distribution of new homes. Indeed, we support the requirement for the Chipping Norton sub area at 2,400 new homes over the plan period and notwithstanding our points regarding statutory requirements in relation to the preparation of a Local Plan (as set out in Section 2), we do not take particular issue with the spatial distribution that is being proposed, we just do not feel such a major change can be enveloped into the current process without serious risk of by-passing key requirements of the law when preparing a Local Plan. Put simply, we thing the changes have gone a step too far to be incorporated in to this plan as modifications post submission of the plan.

3.9 The increased housing requirement within each of the districts sub-areas is set out in Table 1 (ATTACHED). The housing requirement for the District has gone up by 51%, which has then led to significant changes to the spatial distribution of development.

3.10 The Eynsham-Woodstock sub-area requires 243% more homes that originally envisaged within the Submission Draft Local Plan, which perfectly highlights the substantial change to the distribution of development that is now being promoted.

3.11 Chipping Norton’s requirement has also increased by 50% and as noted above we support this as it brings it more in line with requirements for the other three main towns (whilst noting Chipping Norton is the smallest of the three towns). However, as noted in Section 2, in proposing this increase in housing numbers for the settlement, the Council have only considered one option for delivering this number of new homes through the SA by increasing the size of the Tank Farm Site (SDA).

3.12 We note the other areas have not increased as much and even in those instances, we note the SA has tested various site options for the increased growth.

3.13 In terms of other issues with the revised policy, we object to the notion that the Garden Village should be regarded as a free standing settlement. It isn’t and is clearly related and connected to Eynsham, with the site and urban boundaries adjoining and the entirety of the site falling within Eynsham Parish.

3.14 We continue to support the final paragraph in Policy H1 which confirms the Council will monitor development annually to ensure that the overall strategy is being delivered.
3.9 The Council’s policy approach of directing a ‘significant proportion’ of growth to these locations could be argued as being consistent with the SA assessment if the distinction between ‘most’/’significant proportion’ is interpreted as being essentially the same. However, as stated within other representations, the practical effect of the distinction is extremely wide, including as it does strategic scale allocations (individually and cumulatively) at Eynsham and Woodstock, in preference to any strategic allocation at Carterton.

3.10 Paragraph 5.21a characterises Woodstock as having a ‘relatively’ good range of services and facilities, although it is not clear what this is relative to. It is also deemed able to accommodate a ‘reasonable’ scale of development.

3.11 It is interesting to consider what ‘reasonable’ might mean in this context, having regard to criteria such as the size of the settlement; its capacity for absorbing development without compromising its character as a town typical of the Cotswold Vernacular (a defining characteristic of the District that paragraph 5.1 of the Local Plan advises must be protected); and having clear regard to its importance in terms of designated and non-designated heritage assets, both within the settlement itself and adjoining in the case of the Blenheim Palace and Park WHS. There is an absence of analysis within the evidence base as to what impact development might have on the significance of the latter.

3.12 The Parish of Woodstock comprises of 1,514 dwellings7, which includes all dwellings within the built up limits of the town and outlying properties within the parish. On this basis the development now proposed within the Local Plan modifications would see a c.45% increase in the number of dwellings and population within the settlement. This, by any estimation, cannot be considered ‘reasonable’; a near 50% increase in the size of an historic settlement located adjoining a WHS does not suggest good planning or the ‘effective management of growth’ with the objective of preventing significant change to locations that contribute to the intrinsic character of the District.8

3.13 What is more since WHS status was assigned to Blenheim Palace in 1987 the nature of change at Woodstock has been limited: The 1991 Census showed that all residents in Woodstock numbered 2,768; by the 2001 Census this had risen to 2,924 residents and in 2011 3,1009. Using an average household size of 2.12 derived from the summary material, it is possible to estimate the number of new households formed over this 20 year period by dividing the population growth by the average household size. This indicates that 157 new households formed in Woodstock in the period between the Censuses. This is a far more appropriate scale of growth, and is one that would reflect the position of the town in the settlement hierarchy and would not be disproportionate compared to the level of growth proposed at the other Rural Service Centres. It would also better reflect the important historic sensitivity of the settlement itself and its role within the setting of the WHS.

3.14 The inconsistencies in the Proposed Modifications are stark and incoherent having regard to the SA: Large scale housing development(s) are being directed towards second tier settlements, in contradiction of the chosen spatial strategy and without having been subject to consistent and proper SA evaluation.

3.15 The Council’s approach to housing distribution within the Plan is unjustified having regard to the evidence base and is internally inconsistent. The strategy is considered to be unsound and is not supported by the evidence base.

<td>&gt; SECTION 5 - PROVIDING NEW HOMES &gt; MAIN 23</td>
<td>Paragraph 5.20: The “strategic urban extension” to the west of Eynsham, including 550 homes for Oxford City, will lead to more commuting to Oxford and increased flood risk. Surely it is a mistake to build on either side of the Chil Brook (a “functional floodplain”, according to the 2016 SFRA Update Report). Presumably you will follow the advice of the Cherwell and West Oxfordshire Level 1 Strategic Flood Risk Assessment and carry out the “required” Level 3 Flood Risk Assessment before you do anything else?</td>

<tr>
<td>MM3</td>
<td>Richard Andrews Mr Andrews</td>
<td>160</td>
<td>&gt; SECTION 5 - PROVIDING NEW HOMES &gt; MAIN 23</td>
<td>Comments made on behalf of Eynsham Parish Council. Para 5.20-21 and policy H1: unsound due to inadequate justification of assumptions about site capability and achievable build rates. There is much duplication between this section and Section 9.40a-c / policy EW1a so the comments are also very similar. Allocating 1000 houses to west Eynsham is too aggressive - the site may not be able to accommodate that many homes at all and building such a large number there takes away the opportunity to achieve good design and preserve the rural context of the village. In a sense this is recognised by describing the development as ‘urban’ which, as 1000 extra homes onto a 2000 dwelling village, it is! Conversely, allocating only 2200 homes to the Garden Village is unnecessarily unambitious to the point where the sustainability of the new settlement may be questionable as it will not to be able to fund the necessary infrastructure unless a higher build rate can be achieved. In the unprecedented situation of a an entirely new settlement, relying on past - very lacklustre - local build rates will always yield a poor outcome. We would prefer to see all 3200 new homes allocated to the Garden Village in the first instance with a plan - rather than just an aspiration - to achieve a fast build rate by working with financial and housing association partners. The west Eynsham site is capable of delivering 600 new homes with low risk. Its development should be planned along with the Garden Village as part of a single SDA/AAP to ensure proper co-ordination of road access, shared services and the correct combination of connectivity by foot and cycle. However, the west should be held as a reserve site so the main focus is on delivering homes and infrastructure in the Garden Village. It may not be necessary to develop to the west of Eynsham until the next local plan period begins in 2031. It should be noted that 237 new houses are already approved for the west of Eynsham and so the ‘local needs’ will be well catered for for some years ahead.</td>

<td>MM722</td>
<td>Graham Flint Mr Flint</td>
<td>1646</td>
<td>&gt; SECTION 5 - PROVIDING NEW HOMES &gt; MAIN 23</td>
<td>The proposal to remove Long Hanborough from the Rural Service Centres and designate it as a village is unsound for the following reasons: 1. Its long history as a Service Centre Long Hanborough has been designated as a Service Centre for a long time. It is designated as a Service Centre in the West Oxfordshire Local Plan 2001 - 2011 (Figure 5.2) and was proposed to be designated as a Rural Service Centre in the submission West Oxfordshire Local Plan 2031 (Table 4.1). The National Planning Policy Framework (NPPF) requires that ‘the plan should be the most appropriate strategy, when considered against the reasonable alternatives, based on proportionate evidence,’ (para 182) and the Council has long accepted that there is sufficient evidence to justify the designation of Long Hanborough as a Rural Service Centre.</td>
</tr>
</tbody>
</table>
### 2. Wide range of services and facilities

There is ample evidence that Long Hanborough has a wide range of services and facilities and therefore merits its Rural Service Centre status. These include a new spacious doctors' surgery for which planning permission was obtained in July 2016 and which will be provided as part of the residential development on the land south of Witney Road granted planning permission under appeal ref: APP/D3125/W/15/3129767. The new doctors' surgery is required to be provided under conditions 15 & 16 of the permission within 2 years of commencement of the development and to remain in that specified use. This will replace the current cramped doctors' surgery, which is well below NHS England standards of provision for the population it serves, and not only improve facilities for existing residents, but also provide the capacity for the provision of more homes in Long Hanborough. Other services and facilities include a primary school; petrol station; churches; post office; two Co-op food stores; dental practice; playing fields; spacious village hall; nursery; beauty salon; two public houses; fish and chip shop; substantial employment estate (circa 10.72 hectares) and a mainline train station (the Cotswold Line).

### 3. Close relationship to the Oxford and Oxfordshire City Deal and the 'Knowledge Spine'

A key part of the case for Long Hanborough to remain as a Rural Service Centre is its close relationship to the City Deal. The Oxford and Oxfordshire City Deal is part of the Government’s initiative to devolve powers locally in exchange for local authorities taking on responsibility for creating economic growth in their areas. The Oxford and Oxfordshire City Deal aims to promote growth by maximising the existing educational, pharmaceutical and science assets in order to promote Oxford and Oxfordshire’s status as a prosperous economic area.

The City Deal is a cooperative venture, which will be delivered through the Oxford Local Enterprise Partnership (LEP) bringing together other bodies and institutions, including Oxford City Council, Cherwell District Council, South Oxfordshire District Council, Vale of the White Horse District Council, West Oxfordshire District Council, Oxfordshire County Council, Oxford Brookes University and Oxford University. The area of the City Deal is County wide.

The proposed development at Long Hanborough is very close to the 'Knowledge Spine' identified in the City Deal, which stretches from Science Vale, near Didcot to Bicester, with Oxford at its heart. Paragraph 9.5.11 of the Local Plan acknowledges this, stating that the proximity of the Eynsham-Woodstock sub-area to major employment growth areas 'present a diverse range of opportunities within close distance including within the Oxfordshire knowledge spine suggesting the Eynsham Woodstock area has a positive role to play in terms of economic development.' Two key proposed employment sites that are close to Long Hanborough, and which housing there would help to serve, are the Science Park at Begbroke, which Cherwell District Council has identified in its Local Plan 2011 - 2031 (adopted July 2015) policy Kidlington 1 for Accommodating High Value Employment Needs and the Northern Gateway, which adjoins the A44 at the northern edge of Oxford, which Oxford City Council has allocated in its Northern Gateway Area Action Plan (adopted July 2015) policy NG2 for up to 90,000 m2 of employment uses that directly relate to the knowledge economy and include science and technology; research; bio-technology; and spin off companies from the universities and hospitals.

The City Deal commits the participating local authorities to accelerate the delivery of 7,500 homes across the county; and recognizes that the provision of quality housing close to the employment areas is fundamental to the delivery of innovation led growth.

The importance of housing provision to the achievement of the objectives of the City Deal is emphasized in
the section on 'Planning for Development,' that states: 'The City Deal should enable further economic growth. However, this success has placed pressure on the local housing market. Oxford and Oxfordshire have overwhelming evidence that the lack of choice and availability of housing and affordable housing is a major barrier to growth. Oxford and other areas in the county are identified as among the least affordable locations in the country, and significantly ahead of London. The universities and businesses in the knowledge economy identify that housing is a significant barrier to the recruitment and retention of staff, including senior management and researchers. More housing is essential for the future of the knowledge economy in Oxford and Oxfordshire. City Deal partners recognise that a more strategic and ambitious approach towards housing growth is essential to the future of the knowledge economy in Oxford and Oxfordshire, and will ensure that the area continues to be a dynamic place to invest and work.

The proximity of Long Hanborough to the 'Growth Spine,' and its ability to contribute to the City Deal further emphasizes the importance of it continuing to be designated as a Rural Service Centre.

4. Recent Rail Improvements & Further Improvements Detailed in the Main Modifications will enhance Long Hanborough’s role as a Rural Service Centre

There is therefore absolutely no evidence to demonstrate that it should be downgraded to village status. In fact, the service centre role performed by Long Hanborough has improved in recent years due to the improvements that have taken place in the rail service with further improvements proposed.

The presence of the train station at Long Hanborough is virtually unique in West Oxfordshire. None of the three main settlements of Witney; Carterton and Chipping Norton has a train station and the only other service centre which has one is Charlbury, which is located within the Cotswolds Area of Outstanding Natural Beauty (AONB) where development is therefore constrained in accordance with the advice in the National Planning Policy Framework (paragraphs 115 - 116). At Long Hanborough there is a regular direct train service to Oxford, Didcot, Reading, Slough, London and Worcester, with the journey to Oxford only taking ten minutes. This is of particular significance, as paragraph 9.5.34 of the Submission Local plan acknowledges that the Eynsham/Woodstock sub area, within which Long Hanborough is located, has 'very strong linkages with Oxford, with a high proportion of residents working in the city and much of the economic activity forming part of the wider Oxford city region economy.'

The proposed main modification 66 reinforces the importance of the Hanborough train station with paragraph 7.57(a) stating that: ‘passenger growth on the Cotswold line has been significant with exceptional growth at Hanborough (up 239%).’ It states that 'There is the potential for further growth with the introduction of an hourly service in December 2018. New trains will bring increased capacity with additional seating and will also achieve faster journey times, with some services from Hanborough reaching London Paddington in 63 minutes. '

There are also proposals for further improvements with paragraph 7.57 (b) stating that:

'LTPI identifies a strategic aspiration to develop Hanborough Station as a transport hub to help reduce congestion on the A40 as part of an overall package of public transport measures. To fulfil its potential, the station will require a larger car park, footbridge and new platform so any trains extended from Oxford can terminate and turnaround. To fully realise the potential of the railway, further redoubling will be required at the eastern and western ends of the line, between Wolvercote Junction and Hanborough, and from west of Evesham towards Pershore. This would allow up to three trains per hour to Hanborough and/or Char/bury and two trains per hour between London and Worcester, with a journey time under two hours.'
These points are also reiterated in paragraph 9.5.16 which refers to Hanborough station as being ‘one of the District’s largest and most well-used stations. Car parking facilities have recently been expanded at Hanborough to improve capacity and there are aspirations for further station improvements,’ and then goes on to repeat the improvements outlined in paragraph 7.57 above.

Paragraph 9.5.34 also states that: ‘there is potential to develop Hanborough Station as a stronger transport interchange, with additional parking, and improved access from the south.’

These improvements will further improve the sustainability of Long Hanborough and mean that it is far more accessible by public transport, particularly to Oxford, than any other service centre in West Oxfordshire, apart from Charbury, which is in the AONB. This constant reiteration in the Main Modifications of the importance of Hanborough station and the further improvements planned for it, prove that Long Hanborough certainly merits its designation as a Rural Service Centre.

The proposed Main Modifications, however, go on to state in paragraph 7.57c that:

‘In light of the proposed improvements to Hanborough Station a key element of the proposed garden village to the north of Eynsham will be the provision of improved connectivity between the new settlement and the station particularly by bus and cycle.’

Given, that Long Hanborough is located adjoining the station there is already excellent connectivity with the train station, with a pedestrian and cycle path through the settlement providing access to it. It is also located closer to the station than the proposed garden village. With the recent and proposed improvements to the station it therefore clearly performs the role of an important transport hub and should retain its status as a Rural Service Centre.

5. Scoring in the West Oxfordshire Local Development Framework Settlement Sustainability Report (November 2016)

The Council has prepared a Settlement Sustainability Report (November 2016), which gives weighted and unweighted scores. In both Hanborough scores above all of the villages, scoring the same as the Rural Service Centre of Bampton and 2 points more than Bampton in the Weighted Score. However, Long Hanborough’s position as a Rural Service Centre is even more significant than this indicates as there are three different positive indicators for a bus service which are:

• Daytime bus service;
• Evening bus service;
• Bus service every 30 minutes

However, for the train there is only one score for a railway station in the parish. At Hanborough Station there is an evening train service, with the last train arriving at 23.02. The train also only takes 10 minutes from Oxford station, giving Hanborough a high level of accessibility, so the rail service clearly merits a higher score than the unweighted score of 1 or the weighted score of 2.

With regard to the weighted score, there is a strong argument that having a railway station in the parish
6. The Planning Inspector Philip Asquith who considered the appeal into the proposed residential development and doctors’ surgery on land south of Witney Road, Long Hanborough considered that Long Hanborough merited designation as a Rural Service Centre.

The Inspector who determined the planning appeal relating to land south of Witney Road, Long Hanborough, (APP/D3125/W/15/3129767 & 12/1234/P/OP) also considered Long Hanborough to merit the designation as a Rural Service Centre, stating that:

49. ‘Long Hanborough is one of the nine larger settlements in the district classified in the WOLP as Service Centres. These, by definition, have a good range of facilities, services and transport accessibility to support their immediate communities as well as neighbouring hinterlands. This is confirmed by the Council’s Settlement Sustainability Report, revised in December 2013. The village is also defined as one of six Rural Service Centres within the emerging Local Plan 2031. The Statement of Common Ground between the appellant and the Council notes that Long Hanborough is a suitable location to accommodate significant residential growth. There is a range of local services, including a small business park adjacent to the station, which allows a proportion of travel demand (alternative to the car) to be met locally.’

50. The village is only one of two settlements within the category of Main Towns and Rural Service Centres in the district to have a mainline station. The rail line provides direct services to London, Oxford, and Worcester. It is apparent that there is a commitment to the introduction of new trains with greater capacity, with a longer-term commitment to increase the number of trains from Long Hanborough to Oxford, cut journey times to London and undertake enhancements to the station’s facilities.’

Counter Arguments

There is therefore abundant evidence that Long Hanborough merits its Rural Service Centre designation.

There are two arguments against its designation which are the Council’s statement in paragraph 9.5.3a that:

‘Given the residential schemes of 169 homes and 50 homes recently approved, the limited role of the settlement and its landscape setting, it is only suitable for very modest levels of further development.’

The other being the argument made in the officers’ report to Council on the 26 October 2016, (paragraph 5.9), that the proposed designation of the West Oxfordshire Garden Village would mean that there would be too many Rural Service Centres in this part of Oxfordshire.

Neither of these arguments is considered to be a valid reason to remove Long Hanborough’s status as a Rural Service Centre. In the first place the Council itself is proposing in the main modifications to designate two additional sites at Long Hanborough for residential development, these being land at Myrtle Farm, Long Hanborough for 50 homes under Policy EW1 f and the other being land at Oliver’s Garage, Long Hanborough, for 25 dwellings under Policy EW1 g. There is also land north of Witney Road, Long Hanborough, which is on the opposite side of the road to the 169 dwellings granted approval on appeal, which could be allocated for residential development without a significant impact on its setting, as the issues are very similar to those relating to the land south of Witney Road. (Further consideration is given to this issue in the representations submitted in relation to Main Modifications 27; 160; 170; 171; 172, 173, 174 & 175 seeking the designation...
of this site.) It is therefore not considered to be true that Long Hanborough 'is only suitable for very modest levels of further development.'

With regard to the argument with regard to the proximity of the West Oxfordshire Garden Village, this argument is made in the officers' report to Council on the 26 October 2016 which stated in paragraph 5.9 that:

It is recommended that the proposed Garden Village should be identified as a future rural service centre. The Garden Village would then replace Long Hanborough which would no longer be a defined rural service centre. This reflects the significant scale of development proposed in the Garden Village, the key role it will play as a transport and business hub, and the relatively limited scope for further development in Long Hanborough. It also avoids an over concentration of rural service centres in this part of the District.

However, there are two reasons why it should not replace Long Hanborough as a Rural Service Centre. One is that the proposed Garden Village site currently consists of fields, with no services and facilities and is not therefore a Rural Service Centre. Indeed, given the significant planning issues; funding and infrastructure that is required for a new settlement, the West Oxfordshire Garden Village may never come to fruition or may develop much more slowly than currently envisaged and so not perform a Rural Service Centre function during the entire plan period. Even on the most optimistic trajectory it is clear that it will not perform the role of a Rural Service Centre for many years.

Secondly it will effectively form an extension to Eynsham. Indeed, paragraph 9.5.40r of Main Modification 153 states that:

'By ensuring good links across the A40 (e.g. an iconic feature bridge as suggested in the Council's Garden Village expression of interest) existing residents of Eynsham to the south will be able to access the Garden Village to enjoy the services, facilities and amenities it will offer. Conversely, residents of the Garden Village will be able to access Eynsham and its services and facilities, thereby playing a complementary rather than a competing role.'

It will therefore effectively form an extension to Eynsham, in the same way that other settlement extensions such as the Littlemore Science Park and Blackbird Leys or Barton form part of Oxford, notwithstanding their separation from other parts of the city by the A4142 and the A40 respectively.

Indeed, by designating it as a separate Service Centre means that there would be two contiguous Service Centres. It makes much more sense to have Eynsham and the proposed Garden Village as one Rural Service Centre and Long Hanborough as another, as Long Hanborough serves a different area of the District to Eynsham.

Conclusion

For the reasons set out above it is considered that Long Hanborough is a highly sustainable location for development and therefore the designation of Long Hanborough as a Rural Service Centre, as proposed by the Council in the original submission West Oxfordshire Local Plan 2031 'is the most appropriate strategy when considered against the reasonable alternatives', (NPPF, para 182) based on the Council's own evidence base and that it would be wrong for it to be downgraded to a village.
Whilst Sustainable Urban Extensions on a large scale are a useful tool in delivering significant and challenging housing numbers – which is the case in West Oxfordshire – in this District SUEs are untested in planning and market terms.

There is, therefore, significant risk in the delivery of the SUEs, both in terms of lead in times through planning and site starts, and delivery rates once construction has commenced.

In itself this may not be significant an issue in respect of soundness however in West Oxfordshire through a combination of delays to the preparation of the Plan due largely to the Council seeking to bring forward a Plan which did not meet its own or Oxford City’s housing needs; and in the context of the District being someway short of delivering a five year housing land supply and being acknowledged as persistently underperforming in housing delivery reliance upon two SUEs which are unlikely to deliver in the timescales or the quantities envisaged will lead to the Plan failing and perpetuating the deficiency in the five year housing land supply.

The alternative approach is to allocate a greater number of smaller sites, which provide for inherent flexibility in the Plan and allows for rapid change in the event that any given site is delayed or isn’t brought forward since other sites are available to immediately address the issue. The alternative strategy is to allocate a series of reserve sites to ensure that in circumstances where the SUEs do not deliver in the timescale and quantities envisaged there are alternative options available to ensure as a minimum that the five year housing land supply requirement is met and the Plan does not fail.

This is a preferred strategy compared to committing to an early review of the Plan in the event that the SUEs do not deliver, since evidence in West Oxfordshire alone indicates that Plan preparation is slow and cannot be relieved upon as a means of delivering housing land supply.

We submit representations in relation to the following five sites located within West Oxfordshire on behalf of the Commissioners to the West Oxfordshire Call for Sites in February 2016:

- Land North of Bampton
- Deanery Farm
- Church Close
All five sites are immediately available and are suitable for allocation. We understand these have not been included within the Submission Draft West Oxfordshire Local Plan Local Plan 2031 and instead there is a focus on larger allocations.

**Housing**

We understand that MAIN22 of the Submission Draft West Oxfordshire Local Plan Local Plan 2031 now includes a proportion of 2,750 Oxford’s unmet housing need as well as West Oxfordshire’s own housing need. MAIN 23 and MAIN24 then highlights how this and West Oxfordshire’s own housing need will be accommodated across the borough. Smaller sites can make a significant contribution through windfall development to meeting this housing target.

Main Modifications 23 and 24 refer to the amount and distribution of housing across the district. We agree with the inclusion of unmet need arising from Oxford City in the draft Local Plan. This has updated the total housing need for the district to 15,950 for the period up to 2031, including 13,200 homes from 2011-2031 to meet the district’s own need and 2,750 from the period 2021-2031 to meet Oxford City’s unmet need.

We would however point out that as South Oxfordshire have not agreed to the Oxfordshire Growth Board figures and that the unmet need to be apportioned to West Oxfordshire may be subject to change to resolve this situation. Flexibility should therefore be built into the plan to ensure that there is a sufficient supply of available and deliverable sites that can brought forward should the objectively assessed and unmet housing need change.

Moreover Hallam Land considers that it is not necessary to ring fence the requirement to meet unmet Oxford City needs and rather that this should be included within an overall combined requirement for the district. In addition, due to uncertainty regarding housing need in the area the objectively assessed need, as reflected in the housing requirement should not be considered a maximum but a minimum as it should in each of the sub-area policies. Not only will this allow for flexibility in the local plan, it will ensure that sufficient homes are being built in West Oxfordshire to support local growth, the local economy and sustaining local infrastructure and services – this is particularly the case in main and rural service centres across the district.

**Eynsham Garden Village**

We do not believe that the Garden Village proposal at Eynsham is an appropriate measure for delivering the unmet need for Oxford. It is based on an ambitious timescale for delivery and given that the Government’s announcement for the results of Garden Village proposals has not yet been announced (MAIN 17 references an application for funding), it is unclear how and whether the council will be able to deliver the scheme if the site is not selected of the Locally-led Garden Villages. The anticipated delivery numbers in the bid document are also unrealistic. It would be more appropriate to deal with the objectively assessed need and allocate development to settlements that can deliver homes across the plan period in a more effective manner. MAIN 3, 9, 15 16, 17, 23, 24 and 27 should be reconsidered and amended accordingly.

<td>Main Modification 22/23/24 (Unsound) The consortium supports the housing requirement of 660 homes per year as identified in the Oxfordshire Strategic Housing Market Assessment (SHMA) which was published in April 2014. The Oxfordshire Growth Board, where all Oxfordshire Districts are represented has agreed to meet Oxford’s unmet housing need and the report published in September 2016 sets out the apportionment of need to each Council. The unmet housing need apportioned to West Oxfordshire is 2,750 homes. The consortium supports the Council’s agreement that it will deliver the agreed proportion of Oxford City’s unmet need of 2,750 homes. The delivery of the unmet need between 2011 and 2031 is not supported. On the basis that we are already five years into the SHMA period (2011-2016) 688 homes should have already been delivered as part of Oxford’s unmet need. It should also be noted that within the report published by the Oxfordshire Growth Board, ‘A Countywide Approach to Meeting the Unmet Housing need for Oxford states the following: One critical matter to recognise is that the assessment of the spatial options included recognition that deliverability of allocated sites was considered on a comparable basis between the different Districts, with an assumed start date of 2021 for the commencement of development after the adoption of the respective Local Plan review or Local Plan update/refresh. This assumption does not preclude earlier delivery, but does recognise the complexity of the issues being considered and has sought to factor in reasonable lead times to enable options to come forward and to be fully considered through the Local Plan process. It is recognised that Oxford City’s unmet need apportioned to West Oxfordshire of 2,750 homes will be delivered through a strategic urban extension to the west of Eynsham and a new Garden Village to the north of the A40 near Eynsham. The New Garden Village at Eynsham is proposed for at least 2,200 homes. The consortium believes that it is overly optimistic to assume commencement of development within 2021 given the complexity of the site in terms of land assembly and associated infrastructure requirements. It is also</td>

<td>recognised that an Area Action plan is to be drawn up for the site, which from our experience can take up to two years to produce. In paragraph 5.22, the Council states that the garden Village proposal (2,750 homes) will treat the provision for 2,750 homes separately from the West Oxfordshire's housing requirement. The Garden Village should not be treated as its own housing market area, there is no justification for treating the Garden Village as its own entity with its own five year housing land supply calculation. There is also no justification as to why the unmet needs of Oxford City are to be delivered post 2021, the housing need for West Oxfordshire is from 2011 and this should be dealt with imminently. Concern is raised that a five year housing land supply will not be met upon the Plan's adoption.</td>

<td></td>
<td></td>
<td></td>
<td></td>
<td>Proposed modification- Expansion of Eynsham: The proposed modifications introduce a significant strategic development to the north of Eynsham to meet Oxford City’s unmet housing need. This change pertains to numerous modifications, we therefore set out our response below which we wish to be considered in response to the following modifications: MAIN3, MAIN7, MAIN9, MAIN13, MAIN14, MAIN15, MAIN23, MAIN24, MAIN27, MAIN58, MAIN60, MAIN149 Detailed comments particular to each modification are set out in detail against the relevant reference in following sections. The same modification seeks to introduce the new strategic development north of Eynsham. The proposed development is of a strategic scale in a location which previously only saw limited development. The strategic area has been newly introduced at the examination stage, rather than through the extensive consultation process which should inform fundamental decisions in plan making. The proposed 'Garden Village' is a strategic site suggested to be a new standalone settlement. Such a development is a clear departure from the submitted spatial strategy which emerged from the earlier consultation stages and was informed by the evidence base. The proposed new development is a clear departure from the proposed development plan, not a mere modification. The proposed changes to the plan are so significant that they amount to a fundamentally different strategy to that submitted for examination. Should the Council wish to make such a fundamental change it should be done so through a new plan informed by a suitable evidence base and following a formal consultation process. To do otherwise would undermine the credibility of the plan and public confidence in the planning process. A consequence of the limited considerations which have informed the introduction of the development area is considerable uncertainty as to the achievability of the proposed scheme. The site was previously discounted as unsuitable for development within the submitted SHLAA, no updated document has been published to revise this status. Noise impacts, segregation across the A40 and landscape impacts are all identified as being prohibitive to development. No information has been produced to demonstrate how these issues may be overcome, nor whether they are less pronounced at any other development site. Similarly the proposal was dismissed as not being realistic in the submitted SA, little is offered to justify such a fundamental change in stance. Development strategy for the proposed site is deferred to a later Area Action Plan, we consider however development parameters must be set out and explored in order to ensure the proposed scheme is achievable. The Plan also refers to an expression of interest submitted to Government seeking to obtain Garden Village status for the development, unlocking funding streams to deliver infrastructure to unlock the site.</td>
</tr>
</tbody>
</table>
Although an expression has been submitted, no decision has yet been issued. In excess of 50 similar expressions have been made nationally, therefore Garden Village status is far from guaranteed. Proper exploration must be made as to the sustainability, suitability and deliverability of this site and essential infrastructure in the event it does not secure Garden Village status.

MAIN9: The propose modification identifies the proposed expansion north of Eynsham to be an ‘exemplar’ development with regard to design and environmental performance. The aspirations for the development are laudable, however only very high level initial assessments have been undertaken to establish whether this is deliverable, particularly in the context of the landscape previously considered vulnerable to development.

MAIN23: The proposed alteration to the wording from the ‘majority’ of development being delivered in the district’s towns, to a significant proportion, confirms the proposed expansion to the north of Eynsham to be a deviation from the strategy set out under policy OS2 in the Submission Plan. We consider the fundamental change of the strategy renders this a new plan, it should therefore be developed as such, rather than processed through modifications.

MAIN25: We welcome the proposed increase in housing provision within the plan to reflect the objectively assessed need set out in the Oxfordshire SHMA (660 dwellings per annum). Although the headline figure for housing provision is increased the means of meeting that need is somewhat unclear in the document.

The proposed site allocations fall someway short of the accepted housing requirement. Allocated sites and suggested windfalls total 11,545 homes, some 1,655 homes below the housing target for West Oxfordshire (13,200). Although not clearly stated it seems the Plan is reliant on a significant number of sites which have on the deliverability of these sites.

The published housing supply position paper sets out the Council’s assumptions on the deliverability of permitted homes. This is set against a backdrop of previous under-delivery in relation to the objectively assessed need, including in the initial five years of the plan period. The anticipated delivery of homes from larger sites (more than ten units) is particularly optimistic given the recent under-delivery of homes and the longstanding nature of several of the outline planning permissions.

The anticipated delivery figures (Appendix 1) do not appear to assume all planning permissions granted for larger sites will be implemented. The assessment of smaller sites makes a concession (9.1%) in acknowledgement that not all permissions will be implemented; an allowance for non-delivery of larger sites is also required.

While uncertainty exists as to the deliverability of a significant proportion of the required housing supply questions remain as to the soundness of the plan. Robust evidence should be produced to show the permitted sites can be relied upon to deliver homes, additional allocations should also be made to mitigate against any shortfall.

MAIN27: The allocation of non-strategic sites is welcomed and we believe imperative if the housing need of the district is to be satisfied. We are concerned that those sites allocated have not been selected through thorough testing, including consideration of all reasonable alternatives as set out by the regulations. As a consequence the soundness of the allocations and broader plan is in doubt.

We have raised our concerns with regard to the unpublished SHELAA earlier in these representations; those
We consider Long Hanborough to be a suitable location for development as it benefits from an excellent range of services and facilities, including a railway station. We believe additional development sites should be permitted in the village alongside those proposed in the modifications. The proposed development site at Tuckwells Pit, Church Road (SHELAA ref 225) is a suitable location for new development. It can sensitively accommodate new homes in a location which benefits from access to key services and facilities. A Landscape and Visual Impact Assessment has confirmed development of the site can have a beneficial effect on the landscape while the off-road cycleway on Main Road provides viable access to the railway station.

MAIN29: The proposed modifications seek to rely upon windfall development to fulfill the housing requirement at a rate of 125 homes per year. Although this policy is informed by previous delivery rates the published SHELAA suggests insufficient developable sites exist to fulfill that rate of development throughout the plan period. As the Council’s own SHELAA suggests insufficient sites are available to fulfill the suggested windfall rate either the evidence, or the proposed strategy must be unsound.

Historic windfall delivery rates have been achieved in the district’s larger settlements including those designated as service centres. The proposed downgrading of Long Hanborough reduces the likelihood of homes being delivered in the village further reducing the chances of windfall housing rates being maintained. Although an alternative service centre is proposed to be provided this is for delivery within the plan period and therefore will not give rise to any windfalls.

MAIN59: The proposed emphasis on the desirability of locating development in locations with access to public transport is at odds with the modification suggesting downgrading Long Hanborough’s settlement status. The village is one of only two in the district which benefit from a significant railway station.

MAIN60: The plan identifies significant challenges upon the A40, particularly with regard to access to Oxford. Although several alleviation options are suggested none is carried forward in plan proposals which acknowledges necessary funding is not available.

The proposed strategic development area at Eynsham is suggested on the basis that alleviation of A40 issues could be provided, however their achievability is unknown. The uncertainty of delivery of necessary highway improvements calls into question the suitability of the proposed strategic development area. The Plan which relies upon this area to meet its portion of Oxford’s unmet housing need cannot be sound until the site is known to be deliverable.

MAIN66: The proposed modification underlines a success in the current plan period in encouraging use of railway connections in the district, particularly from Long Hanborough. The modification acknowledges the capability of the rail corridor to remove vehicles from the A40 as residents travel toward Oxford and London, and the desirability of increasing capacity of Hanborough station and the railway link.

The modification supports improvements to the rail connection and acknowledges the need to provide the proposed development north of Eynsham with connections to Hanborough station. It is perverse therefore that the plan seeks to restrict development in Long Hanborough as developments in the village could provide easy access to the railway station and contribute to providing enhanced services and facilities. We consider the village should retain its rural service centre status and consideration given to additional non-strategic allocations to make the most of this opportunity for sustainable development.

<td></td>
<td>The District compared to the previously historic lower rates. We acknowledge the amended wording in relation to the unmet need from Oxford City and the rationale behind the apportionment allocated to West Oxfordshire to deliver. We agree that to meet this requirement that the delivery rates will need to increase substantially to 935 dwellings per annum from 2021 to 2031 to meet this need and that this will be extremely challenging for the District to deliver. As such, we believe that as many sustainable and unconstrained sites as possible should come forward for development at the earliest possible opportunity. As set out previously within these representations, we believe the site at Hailey offers a logical and sustainable location for growth within the village within close proximity to the Main Service Centre of Witney.</td>

<td>We strongly object to the proposal for a separate land supply calculation for the 2,750 dwellings at Eynsham – to be taken account of in the period 2021 -2031. There is nothing within the NPPF or the PPG to support this approach. The NPPF is clear that when dealing with need, it is the need of the Housing Market Area as whole which needs to be met. It is not appropriate to ‘ring-fence’ need in this manner.</td>

<td></td>
<td></td>
<td></td>
<td>Housing Need and Affordability</td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td>The plan is considered not to suitably address housing need despite the uplift in numbers. There has been insufficient development in the first five years (up to 2016) which is further increasing unmet need. The Council assert that the residual Liverpool method is most appropriate to address the 1,836-dwelling backlog (excluding Oxford City unmet need) from 2011-2016 rather than Sedgefield which is recognised in Planning Practice Guidance (PPG).</td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td>However, in an appeal decision dated 26th July 2016 at Milton-under-Wychwood1, the Inspector concluded that “Housing land supply in the District is less than 2 years. Such a shortfall must be regarded to be severe.” This was based on the ‘Sedgefield’ method of calculation and was not contested by the Council. Nine other recent Appeals this year in the District have concluded similar shortfalls and all those decisions by the Inspectorate have used the Sedgefield approach. There is no justification supplied for using the Liverpool method.</td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td>Main Modification 29 (paragraphs 5.34b) confirms that West Oxfordshire will apply the Liverpool method in calculating the 5-year housing land supply which seeks to address the under-supply over the plan period rather than the immediate 5-year period. IND16 (The Inspectors Preliminary Findings – Part 2 para 2.15) stated that WODC need to have regard for National Guidance as the Liverpool method is not mentioned. Furthermore, the Houses of Parliament Briefing Paper Number 03741 dated 25 May 2016 Planning for Housing states that Local Planning Authorities should aim to deal with any undersupply within the first 5 years of the plan period, thus the Sedgefield approach should be adopted. This is especially important given the severe shortfall of 1,836 homes, the serious affordability concerns in the local area (house prices 10 times lowest incomes).</td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td>Alongside this context of a severe shortfall in housing delivery, the report of the Oxfordshire Growth Board Post SHMA Strategic Work Programme report2 states that:</td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td>&quot;133) The Programme is not seeking to allocate or release sites, but has at a high level and using a common basis, through the work streams; identify the evidence of each district’s ability to absorb additional growth to meet a share of Oxford’s unmet need. It will be for each of the districts through their normal Local Plan processes to allocate sites sufficient to meet their proposed share of Oxford’s unmet need under the requirements of the Duty to Co-operate.&quot;</td>
</tr>
</tbody>
</table>
134) It is also important to note that the yield figures for each area of search represent estimated housing numbers to be delivered by 2031 – total capacities at a number of these sites may change through local assessment as part of the more detailed Local Plan process, taking a wider range of planning factors into account, including the potential to deliver further housing beyond 2031.”

MM22 Paragraph 5.17 asserts that the delivery of unmet Oxford City housing need at Eynsham will be delivered in the period 2021 to 2031 – which would require delivery of 220 dwellings per annum from a standing start in 2021: itself highly optimistic – rather than address unmet needs also within the first 5 years of the plan period. Whilst it is not disputed that Eynsham will not deliver prior to 2021, this underlines the need for the Council to augment its housing land supply to identify and allocate additional land for housing in the short term to meet housing needs in the first half of the plan period. This is especially important given the significant shortfall of 1,836 homes, the serious affordability concerns in the local area (house prices 10 times lowest incomes) and considering the Inspector’s preliminary findings that it was his initial view that unmet need would need to be considered in calculating the 5-year land supply (Paragraph 7.6 (IN015)).

Instead the Council’s Housing Land Supply Position Statement October 2016 simply indicates that Eynsham will ‘kick in’ from 2021 onwards as ‘agreed’ through the joint work at the Growth Board: such a view is not supported by the statement above from the September 2016 OGB report which emphasises the sovereign nature of Local Plans in identifying land to address unmet need. Rather than the response to delivery new homes to meet unmet needs ‘kicking in’ in 2021, this should be seen as ‘kicking the can down the road’. Unmet need, is, by definition, unmet.

It is counter intuitive for the Council to hold the view that the present day need for housing should be addressed in 5 years’ time or beyond. The Inspector’s Preliminary Findings (IN015) confirmed that if the Council failed to consider the implications of unmet housing needs the plan would be out of date before it can be adopted. The inescapable conclusion to this is that unmet housing needs should begin to be addressed at the time of adoption of this plan: arguably now. Were that not the case, logically an early review which gives time to consider and then respond to unmet needs would be appropriate, which it is evidently not.

The Vale of White Horse Local Plan, recently adopted, commits to allocating sites to contribute towards Oxford’s unmet housing need within the Local Plan 2031: Part 2, to be submitted to the Secretary of State, within two years of adoption of the Local Plan 2031: Part 1 – i.e. by December 2018: otherwise the unmet housing needs from Oxford City will become part of its housing land supply requirement. West Oxfordshire’s approach to this issue is therefore wholly contradictory: the timing of its plan enables the Council to seize the opportunity to deliver new homes to meet unmet housing needs from the City of Oxford, yet to put this off until after 2021 will simply fail those who are presently in need of a new home. One cannot meet today’s needs tomorrow.

Furthermore, it is considered a key concern that there is too high a reliance on development which will deliver after 2021 within the plan as a whole. The Council’s Housing Land Supply Position Statement October 2016 indicates only 1,035 homes out of 8,169 dwellings on proposed allocation sites in the draft Plan will occur prior to 2021; that is a paltry 12.6% or 207dpa. This will only address a little over half of the current backlog let alone what is needed going forward. This extreme low delivery for the first 10 years of the plan risks exacerbating affordability challenges district wide and places further stress on housing need.

When drilling down into the detail, it is proposed that the Witney sub-area (which incorporates Hailey) will provide 4,400 homes. This is made up from proposed allocations and additional sustainable sites which come

Objections are lodged in respect of the proposed Strategic Urban Extension of around 1,000 homes to be delivered to the west of Eynsham together with the 2,200 new homes proposed in the new garden village near Eynsham to the north of the A40.

Whilst Sustainable Urban Extensions on a large scale are a useful tool in delivering significant and challenging housing numbers – which is the case in West Oxfordshire – in this District SUEs are untested in planning and market terms.

There is, therefore, significant risk in the delivery of the SUEs, both in terms of lead in times through planning and site starts, and delivery rates once construction has commenced.

In itself this may not be significant a issue in respect of soundness however in West Oxfordshire through a combination of delays to the preparation of the Plan due largely to the Council seeking to bring forward a Plan which did not meet its own or Oxford City’s housing needs; and in the context of the District being someway short of delivering a five year housing land supply and being acknowledged as persistently underperforming in housing delivery reliance upon two SUEs which are unlikely to deliver in the timescales or the quantities envisaged will lead to the Plan failing and perpetuating the deficiency in the five year housing

<td>MM363</td>
<td>Oxford City Council</td>
<td>Ms Dell</td>
<td>685</td>
<td>&gt; SECTION 5 - PROVIDING NEW HOMES &gt; MAIN 23</td>
<td>Land and New Allocations. It does appear that the new strategic site allocations (West of Eynsham &amp; the ‘Garden City’ Eynsham) together with increasing the capacity on the three existing strategic allocations provides sufficient land in principle to meet their SHMA targets and make a significant contribution to Oxford’s ‘unmet’ housing need. The two new strategic allocations in Eynsham (Garden Village and West of Eynsham) have emerged through the joint working arrangements and given their strategic spatial location appear to be best placed to help contribute to meeting Oxford’s ‘unmet’ housing need. Support: The City Council therefore support in principle: * Main Mod 16 Policy O2 ‘Locating development in the right places’, which identifies Eynsham and the Garden Village as the most appropriate allocations to help to meet Oxford’s unmet housing need * Main Mod 23, and in particular paragraphs 5.20 and 5.21 which also confirm the importance of these two principal sites. * Main Mod 27 which then goes on to identify these sites as ‘strategic development areas’ in para 5.29 and 5.34d and * Main Mod 30 Policy H2 'Delivery of new homes' which incorporates “further 2,750 homes in the period 2021 – 2031 to meet Oxford City's housing needs.” Objection: Given Oxford’s acute housing shortage the City Council would seek some assurance that the deliverability of the two new strategic allocations will be prioritised over and above increasing the capacity on the three existing strategic site allocations. Otherwise there could be further delay in meeting the city’s urgent housing requirements, particularly bearing in mind this Plan only goes to 2031 and development will not start until 2021. The delivery of this housing is urgently needed to meet Oxford’s unmet housing need and therefore the City Council would expect an Area Action Plan for Eynsham and the Garden Village to be commenced at the earliest opportunity to take forward the delivery of these ‘Strategic Development Areas’.</td>

<td>8</td>
<td>&gt; SECTION 5 - PROVIDING NEW HOMES &gt; MAIN 23</td>
<td>Sustainability Appraisal addendum report; Comments 14-11-16 1 The report should summarise previous analysis of the sources which lead to the number of houses considered necessary in west Oxfordshire rising from 10500 to 15950 in the period reviewed. It seems that after the inspectors comments the houses needed have increased by ~50%. Such a major alteration of scale needs a clear, traceable line of argument. The planning exercise since 2007 does not clearly and strongly engaged the business community in Oxfordshire as to the nature and scale of economic growth that might be credibly forecast in order to assess housing numbers, the type of people to be housed and the location of employment sites. The whole exercise seems to be limited to “where houses can be built” and hope economic benefits might follow.</td>

| MM388             | Ainscough Strategic Land  | Ainscough Strategic Land | - | Ainscough Strategic Land | BS2 | > SECTION 5 - PROVIDING NEW HOMES > MAIN 23 | 2 The planning process is dominated by the location of houses but with inadequate consideration of costs that fall on local tax payers with respect to increasing the capacity of education, of health care, and of communications. Have the NHS and Oxfordshire county council education "signed off" that the increase in population can be accommodated without deterioration of service to the established population? The population of west Oxfordshire is given as 105,000 (2011) and the housing numbers proposed in the next 15 years will result in a further 50,000 people living in the area at the end of the period. I see no evidence that there is a plan to maintain quality of life for the total proposed population.  
3 The AONB should be protected at all costs. The environment and landscape of the Cotswolds provides for a valuable tourist industry and creates a sense of wellbeing in the many small communities distributed throughout the area. These features attract people to work in the area who thereby contribute to the economy, but they need to be integrated with established communities without destroying the very features which attracted them to the area in the first place. Each acre of green field land built on means one less person can be fed from UK resources. Only small (circa 10 houses) developments should be allowed in the AONB, located with well thought out and delivered design to mesh new settlements with the existing landscape and built environment.  
3. OVERALL STRATEGY AND PROVIDING NEW HOMES  
Policy OS2 – Locating Development in the Right Places (MM16)  
3.1 The Submission Draft Local Plan (May 2015) contains core objectives to help guide the development of the District. Core objectives C01, C02 and C04 place significant emphasis on locating development in appropriate locations where it can meet local needs and reduce the need to travel. These core objectives are taken forward into a defined settlement hierarchy and a development strategy set out by Policy OS2 – Locating Development in the Right Places, which is effectively the plans spatial distribution policy. Policy OS2 is therefore clearly a major policy which goes to the very heart of the Local Plan. Policy OS2 is subject to a major modification (Modification 16).  
3.2 Our principle issue with the revised policy is the extent to which it has been modified which results in a very different plan to what was submitted. We have raised a number of issues with regard to the manner in which this policy has been modified from a procedural perspective in Section 2.  
3.3 Regarding the revised Policy OS2 itself, we continue to support the identification of the three main service towns as the principle focus for development, including Chipping Norton. However, it is now clear that Eynsham will effectively become a settlement that will have a higher population than Chipping Norton and Carterton. In effect, it will become the second largest settlement in the District. We do not believe this is consistent with the long-established ‘three towns’ strategy and this therefore has implications for the Local Plan as a whole.  
3.4 Whilst we note that a wider dispersed option was tested through the SA, there does not appear to have been an option that looked specifically at dispersed growth option in the eastern part of the district, which could have considered For example, an alternative option to targeting growth towards the settlement of Eynsham could have been to consider additional growth spread across the villages to the Eynsham-Woodstock sub area of the District and perhaps areas to the east of Witney, Duckington, Hailey, Finstock, Stonfield and Charlbury. Dispersed growth across these settlements would appear to be a potential option to meet Oxford’s unmet needs.  
3.5 ASL support the recognition that further allocations may need to be made through Neighbourhood Plans |
in relation to villages but note that should it become evident that the Local Plan is not delivering, there will need to be sufficient policies and triggers within this Local Plan to require an early review, as the burden to meet needs cannot simply be left to local communities.

Policy H1 – Amount and Distribution of Housing (MM21 to MM24)

3.6 Regarding MM21, we do not dispute the position that the level of growth needs to considered against associated impacts, but we are not convinced that ‘growth needs to be managed in order to prevent significant change to the intrinsic character of the District’ is the correct term to use here as the barometer to which impact will be considered. Indeed, the modified Plan proposes significant change to the character of some areas (i.e. Eynsham). The test has to be if the meeting needs would significantly and demonstrably outweigh the benefits, as set out at paragraph 14 of the NPPF.

3.7 With regard to the overall quantum of housing now being proposed as part of MM22, we can confirm that we support the evidence base conclusions on housing requirements, which have been placed within the Modified Policy H1 (MM24). ASL support the 15,950 dwelling requirement overall, which comprises of 13,200 homes for West Oxfordshire and 2,750 homes for Oxford's unmet needs that are now enshrined in this policy.

3.8 ASL do not take specific issue with the proposed distribution of new homes. Indeed, we support the requirement for the Chipping Norton sub area at 2,400 new homes over the plan period and notwithstanding our points regarding statutory requirements in relation to the preparation of a Local Plan (as set out in Section 2), we do not take particular issue with the spatial distribution that is being proposed, we just do not feel such a major change can be enveloped into the current process without serious risk of by-passing key requirements of the law when preparing a Local Plan. Put simply, we thing the changes have gone a step to far to be incorporated in to this plan as modifications post submission of the plan.

3.9 The increased housing requirement within each of the districts sub-areas is set out in Table 1 (ATTACHED). The housing requirement for the District has gone up by 51%, which has then led to significant changes to the spatial distribution of development.

3.10 The Eynsham-Woodstock sub-area requires 243% more homes that originally envisaged within the Submission Draft Local Plan, which perfectly highlights the substantial change to the distribution of development that is now being promoted.

3.11 Chipping Norton's requirement has also increased by 50% and as noted above we support this as it brings it more in line with requirements for the other three main towns (whilst noting Chipping Norton is the smallest of the three towns). However, as noted in Section 2, in proposing this increase in housing numbers for the settlement, the Council have only considered one option for delivering this number of new homes through the SA by increasing the size of the Tank Farm Site (SDA).

3.12 We note the other areas have not increased as much and even in those instances, we note the SA has tested various site options for the increased growth.

3.13 In terms of other issues with the revised policy, we object to the notion that the Garden Village should be regarded as a free standing settlement. It isn't and is clearly related and connected to Eynsham, with the site and urban boundaries adjoining and the entirety of the site falling within Eynsham Parish.

3.14 We continue to support the final paragraph in Policy H1 which confirms the Council will monitor
WTC is concerned about the high housing target that is now being proposed. In the original draft Local Plan, development annually to ensure that the overall strategy is being delivered.

| MM448         | Woodstock Town Council | Woodstock Town Council | Mrs Grant | 1038 | > SECTION 5 - PROVIDING NEW HOMES > MAIN 24 | WTC is extremely concerned about the level of housing proposed in the Plan for Woodstock and the impacts it will have on local transport and the unique and historic character of the town. WTC notes that the Plan at paragraph 9.5.3 recognises that "Woodstock is a historic town of national, if not international renown". The Plan also recognises that tourism is particularly important to Woodstock’s livelihood. WTC is therefore confused and frustrated as to why WODC appears to be at odds with these acknowledgements by proposing excessive development which will only degrade the town. WODC first published a Draft Local Plan Part 1 in November 2012. The housing targets in that document were based primarily on South East Plan May 2009 figures extended on a pro-rata basis. The South East Plan was revoked in March 2013. Government guidance in paragraph 49 of the National Planning Policy Framework ("the Framework") states that local authorities should: "use their evidence base to ensure that their Local Plan meets the full, objectively assessed needs for market and affordable housing in the housing market area" The guidance goes on to state at paragraph 159 that local authorities should: "prepare a Strategic Housing Market Assessment to assess their full housing needs, working with neighbouring authorities where housing market areas cross administrative boundaries. The Strategic Housing Market Assessment should identify the scale and mix of housing and the range of tenures that the local population is likely to need over the plan period" This guidance led the Oxfordshire local authorities jointly to commission an Oxfordshire Strategic Housing Market Assessment (SHMA), which was published in April 2014. This countywide SHMA pointed to a requirement for more housing than has been anticipated previously, which in turn resulted in higher housing targets across the County.

The SHMA identified a requirement in West Oxfordshire for 660 dwellings per annum (dpa) or 13,200 over a 20-year plan period. In the initial submission version of the Plan, the WODC argued that the housing figures in the SHMA for West Oxfordshire were based on an abnormally high period of housing building and that consequently, the figures for the district were too high and should be adjusted downwards.

The Examination in Public (EiP) for the Plan was carried out in the autumn of 2015. Following the hearings, the Inspector in his preliminary findings stated that the level of housing identified in the Plan was not justified and consequently the examination was suspended in order for WODC to carry out further work on the level of housing identified in the Plan.

The Plan now provides for the full 13,200 dwellings as identified in the SHMA as well as 2,750 new dwellings to assist with the unmet housing needs of Oxford (a figure agreed through the Oxfordshire Growth Board; a joint committee of the six councils of Oxfordshire set up to facilitate and enable joint working on economic development, strategic planning and growth). WTC is concerned about the high housing target that is now being proposed. In the original draft Local Plan,
5,500 new households were planned over the period to 2029 (306 per annum over 18 years). A higher figure of 6,700, based on economic growth forecasts, was ruled out on the basis that it would put infrastructure under pressure, with potential negative sustainability impact. Now, just two years on, we are facing a proposed target of 15,950 houses by 2031 - an average of nearly 800 per annum.

This is completely beyond what has ever been achieved in the past and is not realistically achievable. If WODC were to fall behind on these targets, it would be vulnerable to much more of the speculative and inappropriate development which we have seen in the area over the last year or so. The system is being set up to fail.

The figures for Oxford’s unmet need are not based on existing need but on the need that would be generated by notional jobs that may or may not be created. Given its virtually full employment levels, there is of course no logical reason why Oxford City should be continuing to zone land for employment creation, whilst expecting the Districts to meet its housing need. These new jobs do not need to be created in Oxford, or even Oxfordshire, but could be directed to the County towns or supported in other parts of England where employment need is acute.

WTC would like to point out that there are a number of sites in Oxford which the city could release for housing to reduce the unmet housing need and the burden on neighbouring authorities. These are (but not limited to):

- Southfield Golf Course
- Oxford Stadium

There are a number of additional transport measures proposed to link in to the increased housing numbers. However, the A40 remains a major constraint. The modifications suggest a west bound bus lane between Oxford and Witney and duelling of the A40 between Witney and Eynsham. However ‘the anticipated cost of these improvements is £55m and there is no current funding available’. Moreover, an appeal has been allowed in Long Hanborough for 169 dwellings (14/1234/P/OP) and an additional appeal has been lodged for 120 dwellings (15/03797/0UT) in the same settlement. Houses are also being built in Bladon in the same area. Paragraph 27 of WODC’s Local Plan Monitoring Report states that the road section showing the greatest increase in vehicles between 2011 and 2015 was the A4095. This will only worsen with WODC’s proposals.

WTC is concerned that, despite the increase in housing numbers, there is no clear policy on housing density. To sustainably meet housing need, we need small, high density units. Any land allocations must deliver the maximum number of units and those units must be as affordable as possible. This can only be achieved via high density development. As it stands, the mix of housing proposed does not maximise the land available, nor deliver the lowest cost housing that is clearly needed. WTC therefore proposes an urgent review of allocations to ensure that maximum densities are achieved. Specifically, it should be investigated whether the same number of houses could be built on less land, leaving space for the next Plan Period instead of having to make additional allocations.

MM451 English Heritage Historic England Mr Small 1057 > SECTION 5 - PROVIDING NEW HOMES > MAIN 24

Historic England welcomes and supports Proposed Main Modification MAIN24 for the caveat of protecting the important historic character and the setting of Blenheim Palace in Woodstock as part of the positive strategy for conserving and enjoying, and clear strategy for enhancing, the historic environment as required by the National Planning Policy Framework.
I object to the local development plan for provision of housing in Chipping Norton for these reasons:

1. The town’s infrastructure will not cope - the hospital has recently been downgraded, the fire service and station have been downgraded to one engine, the sewers already struggle to cope.
2. The road system already struggles with current traffic levels at all times of day.
3. Air pollution is already above recommended levels and the town is an Air Quality Management Area (AQMA).
4. Local employment opportunities are limited. Newcomers will mostly commute, adding more pressure to the roads.
5. Even with the new primary school incorporated in the Tank Farm plans, both Primary and Secondary school capacity isn’t adequate for the numbers proposed.
test its deliverability and environmental impact. Nevertheless, it will be a figure of considerable significance and weight, since it will have emerged from an evidence-based process to inform spatial options for growth outside Oxford City. My initial view is that it would need to be taken into account in calculating the 5 year land supply’ (Paragraph 7.6). (Our emphasis).

The above provides that the EiP Inspector’s initial view was that OCC’s unmet need should be included in any 5 year housing land supply calculation today. It is highly relevant that OCC’s needs are back dated to 2011 and 5 years have already passed, in which no strategy as to accounting for unmet needs has been identified. It follows that there is a pressing need to identify ways of meeting this need now. WODC’s intention to delay the delivery of this need (that already stems from a base date of 2011) for another 5 years is therefore contrary to the EiP Inspector’s interim findings.

Second, and for the reasons set out above, the proposed phasing of the requirement is contrary to paragraph 47 of the NPPF that seeks to boost significantly the supply of housing.

Third, the Council’s justification for not meeting OCC’s need until 2021, relies upon a decision to allocate two strategic urban extensions at Eynsham and the associated lag times that will occur between the allocation of these strategic sized sites and first housing completions. WODC have therefore made a plan making decision not to identify a larger suite of smaller / medium sized sites to support these strategic allocations, contrary to the EiP Inspector’s comments. As set out in other representations, suitable, available and achievable sites exist to supplement the identified strategic and non-strategic sites that are not presently allocated in the plan and could assist in meeting OCC’s needs now.

For the above reasons, the plan is not justified when compared to the reasonable alternative of allocating additional small/medium sized that can deliver in the immediate 5 year period and contribute towards OCC’s unmet needs immediately. In addition, the proposed phased requirement is contrary to NPPF paragraph 47 and therefore inconsistent with national policy and is not effective when considered against the alternative of meeting a neighbouring Council’s needs earlier in the plan period.

<td>&gt; SECTION 5 - PROVIDING NEW HOMES &gt; MAIN 24</td>
<td>Main 24: Policy H1 3.16 The proposed modifications to Policy H1 are addressed and considered in respect of the approach to distribution against the proposed settlement hierarchy under submission Main 15 and Main 16. The inconsistent approach to the distribution of growth having regard to the settlement hierarchy and the findings of the SA is not supported by the evidence base. 3.17 It is notable that the proposed distribution of housing is now incongruously skewed having regard to the proposed settlement hierarchy and the preferred spatial options for accommodating growth set out within the SA11. Comparison of the submission Local Plan’s approach and that now proposed via the modifications highlights the consequence of the changes:</td>
</tr>
</tbody>
</table>
3.18 What is immediately apparent from the table above (ATTACHED) is that the Three Towns focus, with limited dispersal to the rest of the District, identified by the SA to be the most appropriate and sustainable option for the distribution of development, is no longer being followed. The approach taken by the Local Plan now, setting aside the introduction of the proposed Garden Village to help address the unmet housing needs of Oxford City, is to apportion development to meet the District’s OAHN target to locations that do not accord fully with the spatial approach supported by the evidence base.

3.19 While the apportionment of growth to the upper and lower ends of the distribution is broadly consistent, there is a narrowing in the distinction between Carterton and Chipping Norton within the Main Service Centre sub group in terms of their roles relative to one another in the hierarchy. This suggests a blurring of distinction and a failure to apportion growth in accordance with the scale of the receptor. Within the submission version of the Local Plan there was a clear and logical apportionment between the three main towns according to their scale, and a cascade down through the tiers of the hierarchy. The proposed modifications abandon this logical and consistent approach (having regard to the evidence) assigning similar levels of growth to Carterton and Chipping Norton (2,600/2,400) over the plan period despite Carterton being almost 2.5 times the size of Chipping Norton and comparatively much less constrained.

3.20 What is also immediately apparent is that despite a 25% uplift in the housing target for the District no additional development is directed to the second largest and second most sustainable settlement. Instead 33% more growth is directed to Chipping Norton and 19% more to Witney. However, remarkably the amount of growth directed to the Eynsham-Woodstock sub-area (not forming part of the Option 2 Three Towns focus) increases by 75% compared to the submission version of the Local Plan, elevating it to the second most important growth location in the District, despite being classed as a Rural Service centre, the function of which is inconsistent with the status now afforded via the changes to Policy H1. This excludes the apportionment to help meet Oxford City’s unmet need for housing.

3.21 Put simply the Council’s approach to distributing growth is entirely inconsistent with its own strategy and the evidence base that purports to support that strategy. The settlement hierarchy and the work that underpinned its formulation appears to have been abandoned. The approach is unsound and is not supported by the evidence.

supply of housing and provide robustness to ensure that the housing requirement of the modified WOLP 2031 is delivered.

v. The following representations provide further information on the land north of the A44 and south of the Banbury Road, Chipping Norton.

1.0 DELIVERY AT EAST CHIPPING NORTON SDA (Policy CN1, MM138-MM140)

1.1 The East Chipping Norton allocation has been increased from about 600 dwellings at Tank Farm south of the London Road to 1,400 dwellings including 1,200 dwellings south of London Road and 200 north of London Road. The SDA now includes the provision of an Eastern Link Road.

1.2 Limited evidence has been published to demonstrate and assess the impacts of the increased allocation. The previous assessment of Strategic Site Options (Examination Document Ref OTH1) has not been updated. This provides a comprehensive overview of the site and a summary of the site constraints and impacts.

1.3 There would appear to be no evidence document which provides a summary of the modified East Chipping Norton SDA and its constraints. The SHELAA assesses a number of component sites but there is no expression of the overall size of the site and its developable area to ascertain whether delivery is realistic.

1.4 Previous landscape evidence was prepared for the Council by Kirkham Landscape Planning, the Landscaper and Visual Review of Chipping Norton Strategic Site Option (May 2014, Examination Document Ref LAN2). This concludes an indicative housing capacity for the land south of London Road of 500 dwellings within a similar area as now proposed by the Council.

1.5 This is significantly lower than the 1,200 dwellings now assumed by the Council and draws into question the deliverability of this number of dwellings.

1.6 Furthermore, it is noted that the East Chipping Norton SDA now also includes the provision of a link road through the allotment garden land.

1.7 The updated Infrastructure Delivery Plan 2016 does not provide a cost estimate for the provision of the link road. It is unclear what has been assumed for viability purposes.

1.8 Edgars Limited understand that the allotment land is under the ownership of Chipping Norton Town Council who object to the provision of the link road. This draws into question the deliverability of the eastern link road which is now integral to the modified East Chipping Norton allocation.

1.9 In Edgars opinion, the increased allocation at East Chipping Norton is not justified by the published evidence and there is a significant risk that it will not be realised.

1.10 Empire Homes Limited object to Policies H1 (MM24), H2 (MM29 and MM30), CN1 (MM140) and CN2 (MM143) on the basis that the modified plan has not identified sufficient housing land to provide for a 5 year supply of housing and contend that Land north of the A44 and south of the Banbury Road, Chipping Norton should be allocated to assist with the delivery of the East Chipping Norton SDA.

<td>Gallagher Estates Limited</td>
<td>1640</td>
<td>&gt; SECTION 5 - PROVIDING NEW HOMES &gt; MAIN 24</td>
<td>HOMES &gt; MAIN 24 responsibility to plan for housing need are to be welcomed. In general, the allocation of land to ensure that the District can provide for at least 15,950 homes during the plan period is supported. This takes into account relevant evidence and is more reflective of the District's housing needs than the previously unjustified figure of 10,500 homes. National planning policy is clear in providing for sustainable development to come forward without delay. In this regard, it is recommended that Policy H1 should reflect national policy and be changed to: &quot;...at least 15,950 homes during the period 2011-2031.&quot; As set out, the proposed revision to Policy H1 refers to “a total of” 15,950 homes. This effectively places a cap on development and could prevent sustainable development from coming forward. The imposition of a maximum number, or a cap, on the number of houses is not justified. It is not supported by any substantive evidence and it is in direct conflict with national planning policy.</td>
</tr>
</tbody>
</table>
2.9 In addition to the 13,200 homes planned to be provided in order to meet the needs of West Oxfordshire, a further 2,750 homes are planned to meet Oxford City’s identified needs. The proposed 2,750 homes figure represents the recently agreed apportionment by the members of the Oxfordshire Growth Board, with the exception of South Oxfordshire District Council, at its meeting on 26th September 2016. The proposed apportionment had been determined on the basis of a report from Land Use Consultants (LUC), which provided a spatial assessment of options for accommodating the unmet needs of the City, as well other evidence relating to economic, education and transport considerations.

2.10 It had been expected that the authorities would confirm a Memorandum of Cooperation at the meeting on the 26th September to the effect that the six authorities ‘agree’ that the apportionment figures “represent the agreed apportionment”. However SODC was unwilling to agree to the Memorandum on the basis that the areas of search within their administrative area included in the LUC report had not been put forward by the District Council.

2.11 Although the recognition by WODC of the need to make provision to assist in meeting Oxford City’s unmet needs is supported, there remains significant uncertainty as to whether the 2,750 dwellings proposed to be provided for is in fact the correct level of development to be planning for.

2.12 The 2,750 dwellings is based upon the apportionment proposed by the Oxfordshire Growth Board and agreed by the majority of the LPAs, which is itself based on an assumption that the unmet needs of Oxford City totals 15,000 dwellings. This 15,000 dwellings figure has yet to be publically tested, and we envisage that the West Oxon EIP will be the first time this occurs. Notably, the Oxford City First Steps consultation (August 2016) itself appears to identify a shortfall of 22,000 rather than the 15,000 which was planned for by the Growth Board. There therefore remains a question as to whether the high level apportionment figure is correct, and consequently what implications there may be for the West Oxon Local Plan.

2.13 In refusing to agree the apportionment proposed by the Growth Board, South Oxfordshire did raise that in their view Oxford City may be able to accommodate more of its own needs than is currently being allowed for. Whether this would equate to the additional 7,000 dwellings which appear to potentially be unaccounted for at this stage, and additionally reduce the currently proposed apportionment figures would appear to be unlikely. At this stage therefore as a minimum there are 4,950 dwellings (the proposed apportionment for South Oxfordshire) for which provision is not being currently being made for within Oxfordshire, and this could potentially increase to 11,950 dwellings, if the unmet need is ultimately determined to be 22,000 dwellings rather than 15,000.

2.14 Following the Growth Board meeting on 26th September there has been no published update as to how matters are to be progressed following the failure to agree the
apportionment figures with all authorities. As such it is unclear, leaving aside the question of the true scale of Oxford City's unmet needs, how the additional 4,950 (or at least a proportion of this assuming South Oxfordshire would be willing to accommodate some of this need) is to be provided for.

2.15 Notably the Growth Board papers for the 26th September meeting themselves highlighted that "it remains for individual authorities to test the SHMA results and its application in their respective local circumstances and to determine whether their Local Plans can sustainably accommodate development to meet the housing need identified.” The proposed apportionment has not been subject to Sustainability Appraisal and as such there remains uncertainty that having agreed to the apportionment figures whether these authorities will in fact be able to deliver these requirements.

2.16 As such, whilst we commend West Oxfordshire for agreeing to accommodate 2,750 dwellings of Oxford City's unmet needs and consider it to be a pro-active response which potentially complies with the Duty to Cooperate, due to the remaining uncertainties we consider a commitment should be made in the Plan to an early review of the Plan. This would provide a commitment for an early review should a need to provide for an increased number of dwellings to meet the needs of Oxford City be demonstrated. Such a commitment was included in the Proposed Submission Draft of the Local Plan, and it is considered that similar wording should be reinserted into the Plan to ensure it is justified and effective. We note that this approach was taken in the Vale of White Horse.

Other Matters

2.17 The Proposed Modifications to Policy H1 as currently drafted state that “provision will be made for a total of 15,950 homes in the period 2011 – 2031.” This contrasts with the wording of the Submission Version of the Plan which stated that "West Oxfordshire will provide at least 10,500 new homes between 1st April 2011 and 31st March 2031.”

2.18 Paragraph 14 of the NPPF makes clear that “Local Plans should meet objectively assessed needs, with sufficient flexibility to adapt to rapid change.” The Policy as currently drafted does acknowledge that:

"This is an indicative distribution and should not be taken as an absolute target for each sub-area or maximum ceiling to limit development.

Additional sites may for example be identified through Neighbourhood Plans increasing housing supply above that which has been identified and planned for in this Local Plan."

2.19 Furthermore it is noted that Policy H2, discussed in turn below, does state that the target is to deliver “at least 15,950 new homes.” As such, for consistency and to ensure the Plan is justified and effective, we would recommend that the proposed policy wording is amended to state that:

"Provision will be made for a minimum of 15,950 homes in the period 1st April 2011 to 31st March 2031."
The proposal to remove Long Hanborough from the Rural Service Centres and designate it as a village is unsound for the following reasons:

1. Its long history as a Service Centre

Long Hanborough has been designated as a Service Centre for a long time. It is designated as a Service Centre in the West Oxfordshire Local Plan 2001 - 2011 (Figure 5.2) and was proposed to be designated as a Rural Service Centre in the submission West Oxfordshire Local Plan 2031 (Table 4.1). The National Planning Policy Framework (NPPF) requires that ‘the plan should be the most appropriate strategy, when considered against the reasonable alternatives, based on proportionate evidence,’ (para 182) and the Council has long accepted that there is sufficient evidence to justify the designation of Long Hanborough as a Rural Service Centre.

2. Wide range of services and facilities

There is ample evidence that Long Hanborough has a wide range of services and facilities and therefore merits its Rural Service Centre status. These include a new spacious doctors’ surgery for which planning permission was obtained in July 2016 and which will be provided as part of the residential development on the land south of Witney Road granted planning permission under appeal ref: APP/D3125/W/15/3129767. The new doctors’ surgery is required to be provided under conditions 15 & 16 of the permission within 2 years of commencement of the development and to remain in that specified use. This will replace the current cramped doctors’ surgery, which is well below NHS England standards of provision for the population it serves, and not only improve facilities for existing residents, but also provide the capacity for the provision of more homes in Long Hanborough. Other services and facilities include a primary school; petrol station; churches; post office; two Co-op food stores; dental practice; playing fields; spacious village hall; nursery; beauty salon; two public houses; fish and chip shop; substantial employment estate (circa 10.72 hectares) and a mainline train station (the Cotswold Line).

3. Close relationship to the Oxford and Oxfordshire City Deal and the ‘Knowledge Spine’

A key part of the case for Long Hanborough to remain as a Rural Service Centre is its close relationship to the City Deal. The Oxford and Oxfordshire City Deal is part of the Government’s initiative to devolve powers locally in exchange for local authorities taking on responsibility for creating economic growth in their areas. The Oxford and Oxfordshire City Deal aims to promote growth by maximising the existing educational, pharmaceutical and science assets in order to promote Oxford and Oxfordshire’s status as a prosperous economic area.

The City Deal, is a cooperative venture, which will be delivered through the Oxford Local Enterprise Partnership (LEP) bringing together other bodies and institutions, including Oxford City Council, Cherwell District Council, South Oxfordshire District Council, Vale of the White Horse District Council, West Oxfordshire District Council, Oxfordshire County Council, Oxford Brookes University and Oxford University. The area of the City Deal is County wide.

The proposed development at Long Hanborough is very close to the ‘Knowledge Spine’ identified in the City Deal, which stretches from Science Vale, near Didcot to Bicester, with Oxford at its heart. Paragraph 9.5.11 of the Local Plan acknowledges this, stating that the proximity of the Eynsham-Woodstock sub-area to major...
employment growth areas 'present a diverse range of opportunities within close distance including within the Oxfordshire knowledge spine suggesting the Eynsham Woodstock area has a positive role to play in terms of economic development.' Two key proposed employment sites that are close to Long Hanborough, and which housing there would help to serve, are the Science Park at Begbroke, which Cherwell District Council has identified in its Local Plan 2011 - 2031 (adopted July 2015) policy Kidlington 1 for Accommodating High Value Employment Needs and the Northern Gateway, which adjoins the A44 at the northern edge of Oxford, which Oxford City Council has allocated in its Northern Gateway Area Action Plan (adopted July 2015) policy NG2 for up to 90,000 m2 of employment uses that directly relate to the knowledge economy and include science and technology; research; bio-technology; and spin off companies from the universities and hospitals.

The City Deal commits the participating local authorities to accelerate the delivery of 7,500 homes across the county; and recognizes that the provision of quality housing close to the employment areas is fundamental to the delivery of innovation led growth.

The importance of housing provision to the achievement of the objectives of the City Deal is emphasized in the section on 'Planning for Development,' that states: 'The City Deal should enable further economic growth. However, this success has placed pressure on the local housing market. Oxford and Oxfordshire have overwhelming evidence that the lack of choice and availability of housing and affordable housing is a major barrier to growth. Oxford and other areas in the county are identified as among the least affordable locations in the country, and significantly ahead of London. The universities and businesses in the knowledge economy identify that housing is a significant barrier to the recruitment and retention of staff, including senior management and researchers. More housing is essential for the future of the knowledge economy in Oxford and Oxfordshire. City Deal partners recognise that a more strategic and ambitious approach towards housing growth is essential to the future of the knowledge economy in Oxford and Oxfordshire, and will ensure that the area continues to be a dynamic place to invest and work.

The proximity of Long Hanborough to the 'Growth Spine,' and its ability to contribute to the City Deal further emphasizes the importance of it continuing to be designated as a Rural Service Centre.

4. Recent Rail Improvements & Further Improvements Detailed in the Main Modifications will enhance Long Hanborough's role as a Rural Service Centre

There is therefore absolutely no evidence to demonstrate that it should be downgraded to village status. In fact, the service centre role performed by Long Hanborough has improved in recent years due to the improvements that have taken place in the rail service with further improvements proposed.

The presence of the train station at Long Hanborough is virtually unique in West Oxfordshire. None of the three main settlements of Witney, Carterton and Chipping Norton has a train station and the only other service centre which has one is Charlbury, which is located within the Cotswolds Area of Outstanding Natural Beauty (AONB) where development is therefore constrained in accordance with the advice in the National Planning Policy Framework (paragraphs 115 - 116). At Long Hanborough there is a regular direct train service to Oxford, Didcot, Reading, Slough, London and Worcester, with the journey to Oxford only taking ten minutes. This is of particular significance, as paragraph 9.5.34 of the Submission Local plan acknowledges that the Eynsham/Woodstock sub area, within which Long Hanborough is located, has 'very strong linkages with Oxford, with a high proportion of residents working in the city and much of the economic activity forming part of the wider Oxford city region economy.'

The proposed main modification 66 reinforces the importance of the Hanborough train station with
<table>

<tbody>
<tr>
<td></td>
<td></td>
<td></td>
<td></td>
<td>paragraph 7.57(a) stating that: ‘passenger growth on the Cotswold line has been significant with exceptional growth at Hanborough (up 239%).’ It states that ‘There is the potential for further growth with the introduction of an hourly service in December 2018. New trains will bring increased capacity with additional seating and will also achieve faster journey times, with some services from Hanborough reaching London Paddington in 63 minutes.’</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

There are also proposals for further improvements with paragraph 7.57 (b) stating that:

‘LTP4 identifies a strategic aspiration to develop Hanborough Station as a transport hub to help reduce congestion on the A40 as part of an overall package of public transport measures. To fulfil its potential, the station will require a larger car park, footbridge and new platform so any trains extended from Oxford can terminate and turnaround. To fully realise the potential of the railway, further redoubling will be required at the eastern and western ends of the line, between Wolvercote Junction and Hanborough, and from west of Evesham towards Pershore. This would allow up to three trains per hour to Hanborough and/or Charlbury and two trains per hour between London and Worcester, with a journey time under two hours.’

These points are also reiterated in paragraph 9.5.16 which refers to Hanborough station as being ‘one of the District’s largest and most well-used stations. Car parking facilities have recently been expanded at Hanborough to improve capacity and there are aspirations for further station improvements,’ and then goes on to repeat the improvements outlined in paragraph 7.57 above.

Paragraph 9.5.34 also states that: ‘there is potential to develop Hanborough Station as a stronger transport interchange, with additional parking, and improved access from the south.’

These improvements will further improve the sustainability of Long Hanborough and mean that it is far more accessible by public transport, particularly to Oxford, than any other service centre in West Oxfordshire, apart from Charlbury, which is in the AONB. This constant reiteration in the Main Modifications of the importance of Hanborough station and the further improvements planned for it, prove that Long Hanborough certainly merits its designation as a Rural Service Centre.

The proposed Main Modifications, however, go on to state in paragraph 7.57c that:

‘In light of the proposed improvements to Hanborough Station a key element of the proposed garden village to the north of Eynsham will be the provision of improved connectivity between the new settlement and the station particularly by bus and cycle.’

Given, that Long Hanborough is located adjoining the station there is already excellent connectivity with the train station, with a pedestrian and cycle path through the settlement providing access to it. It is also located closer to the station than the proposed garden village. With the recent and proposed improvements to the station it therefore clearly performs the role of an important transport hub and should retain its status as a Rural Service Centre.

5. Scoring in the West Oxfordshire Local Development Framework Settlement Sustainability Report (November 2016)

The Council has prepared a Settlement Sustainability Report (November 2016), which gives weighted and unweighted scores. In both Hanborough scores above all of the villages, scoring the same as the Rural Service Centre of Bampton and 2 points more than Bampton in the Weighted Score. However, Long Hanborough’s
position as a Rural Service Centre is even more significant than this indicates as there are three different positive indicators for a bus service which are:

- Daytime bus service;
- Evening bus service;
- Bus service every 30 minutes

However, for the train there is only one score for a railway station in the parish. At Hanborough Station there is an evening train service, with the last train arriving at 23.02. The train also only takes 10 minutes from Oxford station, giving Hanborough a high level of accessibility, so the rail service clearly merits a higher score than the unweighted score of 1 or the weighted score of 2.

With regard to the weighted score, there is a strong argument that having a railway station in the parish should result in a weighted score of 4 being given, as is the case where a Post Office; Shops; Primary School; Doctors' Surgery and Local Employment Opportunities are present.

6. The Planning Inspector Philip Asquith who considered the appeal into the proposed residential development and doctors' surgery on land south of Witney Road, Long Hanborough considered that Long Hanborough merited designation as a Rural Service Centre.

The Inspector who determined the planning appeal relating to land south of Witney Road, Long Hanborough, (APP/D3125/W/15/3129767 & 12/1234/P/OP) also considered Long Hanborough to merit the designation as a Rural Service Centre, stating that:

49. 'Long Hanborough is one of the nine larger settlements in the district classified in the WOLP as Service Centres. These, by definition, have a good range of facilities, services and transport accessibility to support their immediate communities as well as neighbouring hinterlands. This is confirmed by the Council’s Settlement Sustainability Report, revised in December 2013. The village is also defined as one of six Rural Service Centres within the emerging Local Plan 2031. The Statement of Common Ground between the appellant and the Council notes that Long Hanborough is a suitable location to accommodate significant residential growth. There is a range of local services, including a small business park adjacent to the station, which allows a proportion of travel demand (alternative to the car) to be met locally.’

50. The village is only one of two settlements within the category of Main Towns and Rural Service Centres in the district to have a mainline station. The rail line provides direct services to London, Oxford, and Worcester ......... It is apparent that there is a commitment to the introduction of new trains with greater capacity, with a longer-term commitment to increase the number of trains from Long Hanborough to Oxford, cut journey times to London and undertake enhancements to the station’s facilities.’

Counter Arguments

There is therefore abundant evidence that Long Hanborough merits its Rural Service Centre designation.

There are two arguments against its designation which are the Council’s statement in paragraph 9.5.3a that:

‘Given the residential schemes of 169 homes and 50 homes recently approved, the limited role of the
settlement and its landscape setting, it is only suitable for very modest levels of further development.’

The other being the argument made in the officers’ report to Council on the 26 October 2016, (paragraph 5.9), that the proposed designation of the West Oxfordshire Garden Village would mean that there would be too many Rural Service Centres in this part of Oxfordshire.

Neither of these arguments is considered to be a valid reason to remove Long Hanborough’s status as a Rural Service Centre. In the first place the Council is itself proposing in the main modifications to designate two additional sites at Long Hanborough for residential development, these being land at Myrtle Farm, Long Hanborough for 50 homes under policy EW1 f and the other being land at Oliver’s Garage, Long Hanborough for 25 dwellings under Policy EW1 g. There is also land north of Witney Road, Long Hanborough, which is on the opposite side of the road to the 169 dwellings granted approval on appeal, which could be allocated for residential development without a significant impact on its setting, as the issues are very similar to those relating to the land south of Witney Road. (Further consideration is given to this issue in the representations submitted in relation to Main Modifications 27; 160; 170; 171; 172, 173, 174 & 175 seeking the designation of this site.) It is therefore not considered to be true that Long Hanborough ‘is only suitable for very modest levels of further development.’

With regard to the argument with regard to the proximity of the West Oxfordshire Garden Village, this argument is made in the officers’ report to Council on the 26 October 2016 which stated in paragraph 5.9 that:

It is recommended that the proposed Garden Village should be identified as a future rural service centre. The Garden Village would then replace Long Hanborough which would no longer be a defined rural service centre. This reflects the significant scale of development proposed in the Garden Village, the key role it will play as a transport and business hub, and the relatively limited scope for further development in Long Hanborough. It also avoids an over concentration of rural service centres in this part of the District.

However, there are two reasons why it should not replace Long Hanborough as a Rural Service Centre. One is that the proposed Garden Village site currently consists of fields, with no services and facilities and is not therefore a Rural Service Centre. Indeed, given the significant planning issues; funding and infrastructure that is required for a new settlement, the West Oxfordshire Garden Village may never come to fruition or may develop much more slowly than currently envisaged and so not perform a Rural Service Centre function during the entire plan period. Even on the most optimistic trajectory it is clear that it will not perform the role of a Rural Service Centre for many years.

Secondly it will effectively form an extension to Eynsham. Indeed, paragraph 9.5.40r of Main Modification 153 states that:

‘By ensuring good links across the A40 (e.g. an iconic feature bridge as suggested in the Council’s Garden Village expression of interest) existing residents of Eynsham to the south will be able to access the Garden Village to enjoy the services, facilities and amenities it will offer. Conversely, residents of the Garden Village will be able to access Eynsham and its services and facilities, thereby playing a complementary rather than a competing role.’

It will therefore effectively form an extension to Eynsham, in the same way that other settlement extensions such as the Littlemore Science Park and Blackbird Leys or Barton form part of Oxford, notwithstanding their separation from other parts of the city by the A4142 and the A40 respectively.
Indeed, by designating it as a separate Service Centre means that there would be two contiguous Service Centres. It makes much more sense to have Eynsham and the proposed Garden Village as one Rural Service Centre and Long Hanborough as another, as Long Hanborough serves a different area of the District to Eynsham.

**Conclusion**

For the reasons set out above it is considered that Long Hanborough is a highly sustainable location for development and therefore the designation of Long Hanborough as a Rural Service Centre, as proposed by the Council in the original submission West Oxfordshire Local Plan 2031 'is the most appropriate strategy when considered against the reasonable alternatives', (NPPF, para 182) based on the Council's own evidence base and that it would be wrong for it to be downgraded to a village.

<td>Paragraph 116 of the NPPF clearly states that exceptional circumstances must be demonstrated to justify allowing major development in the AONB. This paragraph states that consideration of such applications should include an assessment of the need for the development and its impact on the local economy, the cost of, and scope for, developing elsewhere outside the designated area, or meeting the need for it in some other way, and any detrimental effect on the environment and the landscape.</td>
<td></td>
</tr>
</tbody>
</table>
The Council appears to seek to justify this by indicating that development is of necessity within the AONB given the widespread extent of the AONB encompassing almost the whole of the sub area; however, that is not a reason to increase housing within the sub area.

Given the opportunities to address housing need outside of the AONB, recognising that there will still be 800 homes in the sub area, there have been no exceptional circumstances given for the inclusion of additional land within the AONB for development in the draft Local Plan. As a consequence, MM184 should be deleted as it refers to allocations at Burford, Charlbury, Shipton-under-Wychwood and Stonesfield, all within the AONB. The plan is not justified when considered against the reasonable alternative to development in the AONB and inconsistent with national policy.

Support MAIN 24 – amended Policy H1 amount and distribution of housing Council's Housing Land Supply Position Statement October 2016 The NPPF’s Core Planning Principles (Para 17) state that decision making should proactively drive and support sustainable development to deliver the homes, businesses, infrastructure and thriving places that the country needs.

One of the key objectives of the NPPF is to boost the supply of housing required to meet the needs of present and future generations, whilst delivering a wide choice of high quality homes, widening opportunities for home ownership and creating sustainable, inclusive and mixed communities

New para 5.13 sets out that “in addition to meeting West Oxfordshire's identified housing needs we are committed to assisting our neighbours Oxford City” and establishes a working assumption of 15,000 homes over the Plan Period.

The pressing need for new housing has been translated into policy targets for the delivery of new homes across West Oxfordshire, and across the County.

New paragraph 5.14 continues, stating "it has been agreed that West Oxfordshire will accommodate 2,750 homes in the period between 2021 and 2031 to assist Oxford City with its unmet housing need". The District Council acknowledges that "this rate of delivery is nearly double the historic long term housing delivery rate in the District and will be extremely challenging for the house building industry to deliver."

Paragraph 181 of the NPPF states that local planning authorities will be expected to demonstrate evidence of having effectively cooperated to plan for issues with cross-boundary impacts when their Local Plans are submitted for examination.

In this regard we would support the increased housing allocation for the District, both in terms of providing for its own housing needs and those of Oxford City.

The Plan demonstrates cross-boundary cooperation across Oxfordshire in seeking to deliver the homes the county needs, in accordance with the provisions of the NPPF.
2.8 As part of the process to address the Inspector’s concerns and to ensure the Plan is sound, the Council held a consultation on a SHMA Partial Update in July 2016, which our clients responded to. The SHMA Partial Update concluded that the objectively assessed need for the District was 568dpa over the period 2011-2031. Although an increase above the 525dpa which had been proposed in the submission version of the Local Plan, this continued to fall significantly short of the 661 dpa advocated in the Oxfordshire SHMA (2014).

2.9 The Council’s proposed modifications now seek to meet the OAN advocated in the Oxfordshire SHMA, with a total of 13,200 new dwellings to be delivered over the Plan period 2011-2031 to meet the needs of West Oxfordshire. The preparation of a joint SHMA for the whole of the Oxfordshire HMA is considered to have been a significant positive step which recognises the interrelated nature of the individual local authority areas and meets the requirements of the Duty to Cooperate. The soundness of the OANs advocated in the Oxfordshire SHMA have already been the subject of rigorous testing through both the Cherwell and Vale of White Horse Local Plan Examinations and have been confirmed to be a robust and sound basis on which to base those respective Local Plan’s, as shown in the latest Vale of White Horse inspector’s report (albeit with a 2 year ‘review clause’).

2.10 We support the proposed modification to make provision for the full OAN of the District, which ensures a consistent and robust baseline is being used in order to plan for the needs of the County and is considered to be a sound basis for the preparation of the Plan. Oxford City Unmet Needs

2.11 In addition to the 13,200 homes planned to be provided in order to meet the needs of West Oxfordshire, a further 2,750 homes are planned to meet Oxford City’s identified needs. The 2,750 homes represents the recently agreed apportionment by the members of the Oxfordshire Growth Board, with the exception of South Oxfordshire District Council, at its meeting on 26th September 2016. The proposed apportionment had been determined on the basis of a report from Land Use Consultants (LUC), which provided a spatial assessment of options for accommodating the unmet needs of the City, as well other evidence relating to economic, education and transport considerations.

2.12 It had been expected that the authorities would confirm a Memorandum of Cooperation at the meeting on the 26th September to the effect that the six authorities ‘agree’ that the apportionment figures “represent the agreed apportionment”. However SODC was unwilling to agree to the Memorandum on the basis that the areas of search within their administrative area included in the LUC report had not been put forward by the District Council.

2.13 Although the recognition by WODC of the need to make provision to assist in meeting Oxford City’s unmet needs is supported, there remains significant uncertainty as to whether the 2,750 dwellings proposed to be provided for is in fact the correct level of development to be planning for.

2.14 The 2,750 dwellings is based upon the apportionment proposed by the Oxfordshire

<td>Growth Board and agreed by the majority of the LPAs, which is itself based on an assumption that the unmet needs of Oxford City totals 15,000 dwellings. This 15,000 dwellings figure has yet to be publically tested, and we envisage that the West Oxon EiP will be the first time this occurs. Notably, the Oxford City First Steps consultation (August 2016) itself appears to identify a shortfall of 22,000 rather than the 15,000 which was planned for by the Growth Board. There therefore remains a question as to whether the high level apportionment figure is correct, and consequently what implications there may be for the West Oxon Local Plan.</td>
</tr>
<tr>
<td>2.15</td>
<td>In refusing to agree the apportionment proposed by the Growth Board, South Oxfordshire did raise that in their view Oxford City may be able to accommodate more of its own needs than is currently being allowed for. Whether this would equate to the additional 7,000 dwellings which appear to potentially be unaccounted for at this stage, and additionally reduce the currently proposed apportionment figures would appear to be unlikely. At this stage therefore as a minimum there are 4,950 dwellings (the proposed apportionment for South Oxfordshire) for which provision is not being currently being made for within Oxfordshire, and this could potentially increase to 11,950 dwellings, if the unmet need is ultimately determined to be 22,000 dwellings rather than 15,000.</td>

<td>As such, whilst we commend West Oxfordshire for agreeing to accommodate 2,750 dwellings of Oxford City's unmet needs and consider it to be a pro-active response which potentially complies with the Duty to Cooperate, due to the remaining uncertainties we consider a commitment should be made in the Plan to an early review of the Plan. This would provide a commitment for an early review should a need to provide for an increased number of dwellings to meet the needs of Oxford City be demonstrated. Such a commitment was included in the Proposed Submission Draft of the Local Plan, and it is considered that similar wording should be reinserted into the Plan to ensure it is justified and effective. We note that this approach was taken in the Vale of White Horse.</td>

2.19 The Proposed Modifications to Policy H1 as currently drafted state that “provision will be made for a total of 15,950 homes in the period 2011-2031.” This contrasts with the wording of the Submission Version of the Plan which stated that “West Oxfordshire will provide at least 10,500 new homes between 1st April 2011 and 31st March 2031.”

2.20 Paragraph 14 of the NPPF makes clear that “Local Plans should meet objectively assessed needs, with sufficient flexibility to adapt to rapid change.” The Policy as currently drafted does acknowledge that: “This is an indicative distribution and should not be taken as an absolute target for each sub-area or maximum ceiling to limit development. Additional sites may for example be identified through Neighbourhood Plans increasing housing supply above that which has been identified and planned for in this Local Plan.”

2.21 Furthermore it is noted that Policy H2, discussed in turn below, does state that the target is to deliver “at least 15,950 new homes.” As such, for consistency and to ensure the Plan is justified and effective, we would recommend that the proposed policy wording is amended to state that: “Provision will be made for a minimum of 15,950 homes in the period 1st April 2011 to 31st March 2031.”

2.22 We comment elsewhere in this Statement on the Council’s proposed allocations proposed to meet the housing requirement and how the requirement is to be distributed over the Plan period and as such we do not repeat these comments here.
for additional flexibility should also be considered. Concern is therefore raised that the plan as currently drafted is not positively prepared, justified, effective or consistent with National Policy. Further consideration is likely to be required as to how this requirement can be met, including through additional allocations.

Five Year Housing Land Supply

2.28 The revised Policy as currently drafted states:

"With regard to 5-year housing land supply the Council will apply the residual (Liverpool) approach with any under-supply (backlog) of housing to be delivered over the remaining plan period to 2031. The additional provision being made for Oxford City’s needs will be incorporated into housing delivery assumptions from 2021 onwards."

2.29 The NPPG is clear in its guidance to LPAs (D 3-035-20140306) that they should aim to deal with any undersupply within the first 5 years of the plan period where possible. The NPPG makes clear that in circumstances where the LPA is unable to meet its undersupply in the first 5 years then it will need to work with neighbouring authorities under the ‘Duty to Cooperate.’ This matter was specifically raised by the Inspector in his Initial Findings: Part 2.

2.30 Proposed paragraph 5.34c seeks to justify the Council’s proposed approach by advising that:

“To provide a 5-year supply under the Sedgefield method, in excess of 1,000 homes per year would need to be built consistently over the next 5 years, well in excess of what has been achieved in West Oxfordshire in the past, even during several housing booms. Insufficient capacity has been identified through this Local Plan and the supporting assessment of housing land availability to achieve a 5-year supply under the Sedgefield approach and it could only be achieved by releasing a large number of sites that have been assessed by the Council as being unsuitable for new housing. The Council does not consider this to be an appropriate way forward and that addressing the shortfall in a more measured way over the remaining plan period using the Liverpool approach is considered to be entirely justified.”

2.31 As is clear from the extract above the NPPG clearly advocates the Sedgefield approach as the most suitable approach. This is borne out in numerous appeal decisions and case law. Where the Sedgefield method cannot be achieved then the LPA must seek to liaise with neighbouring authorities under the Duty to Cooperate in order to redistribute this requirement. Although the Council have sought to justify its decision to seek to pursue the Liverpool method, no indication is provided as to whether the approach advocated in the NPPG of seeking the assistance of neighbouring authorities to meet this shortfall in the short term has been pursued.

2.32 Given the discussions which have taken place in respect of the Oxford City apportionment, and the fact that full agreement has yet to be reached on this matter, it would appear unlikely in any event that such assistance would be forthcoming.

2.33 Given our comments above it is clear that the Council will need to propose additional

| MM736         | South Oxfordshire District Council | South Oxfordshire District Council | Planning | Policy Team | 1713 | > SECTION 5 - PROVIDING NEW HOMES > MAIN 24 | I note that your overall housing target is 15,950 for the period 2011-2031. This comprises of 660 dpa x 20 years (13,200), plus the 2750 dwellings as the agreed apportionment of Oxford City's unmet housing need. You advise in paragraph 5.14 (Mods consult; page 32) that you agreed the Growth Board's recommendation for the apportionment, which will be delivered over the last ten years of the plan period as recognised by the Growth Board work. Consequently, the dpa will rise to 935 over the last ten years, 660+275 (2750/10), however it doesn't appear that this scenario has been tested. We believe that testing the 800 dpa scenario appears to be insufficient, if as stated, Oxford's unmet housing need would only be delivered over the last ten years.

I recognise that the approach you have chosen to meet Oxford City's unmet housing need is for you to determine, but believe more clarity should be provided particularly on how you will treat this unmet housing need separately. Will a 'ring-fence' apply to this unmet need or will it be treated in a different way? |

It is not considered that the Main Modifications appropriately seek to meet the identified housing need of West Oxfordshire District as well as making additional provision to accommodate an appropriate proportion of unmet housing need that Oxford City are now unable to provide for within their own administrative boundary.

Strong objections are raised in respect of this Main Modification.

Particular objections are raised in respect of the level of unmet need from Oxford City being accommodated within the District. Paragraph 5.13 of the Plan sets out that a working assumption of 15,000 homes has been agreed by the Oxfordshire Authority's as representing the quantum of Oxford's unmet housing need which must be accommodated elsewhere within the Oxfordshire Housing Market Area. However, the actual unmet need as set out within the SHMA is a range of between 15,000 – 18,000 homes. The District have applied a midpoint in applying the SHMA to the Districts own housing need and in the interest of consistency the same approach should be taken in respect of Oxford City's housing needs.

Furthermore, Paragraph 5.14 states that it has been agreed that West Oxfordshire will accommodate 2,750 homes in the period 2021 – 2031. This equates to 935 dwellings per annum when added to the Districts own housing requirements however this excludes past backlogs.

It is not considered that the 2,750 homes is an agreed, reasonable and proportionate division of Oxford City needs given that between 15,000 and 18,000 homes are to be distributed across the four Oxfordshire Districts.

In addition, if the annual housing requirement (the Districts own housing needs together with Oxford City needs) do not include for past backlog, any calculation of housing land supply will need to factor in the backlog and due consideration will need to be given as to whether a 5% or 20% buffer should be applied on the basis of persistent underperformance.

Furthermore, as drafted the Plan does not reflect the latest position within the wider Strategic Housing Market Area in the context of the Duty to Cooperate. A Memorandum of Cooperation exists between all of the Oxfordshire Authorities in the context of having to meet the needs of Oxford City which cannot be accommodated within the city boundary. The Oxfordshire Growth Board have been tasked with identifying housing needs in Oxfordshire and then agreeing distribution across the authorities. The Plan for West Oxfordshire has been drafted on the basis of taking 2,750 houses in accordance with the Memorandum of Cooperation however South Oxfordshire have not agreed to their proportion of housing as confirmed at the Oxfordshire Growth Board meeting on 27th September 2016.

This is significant and goes to the heart of soundness for two key reasons:

Firstly, the Duty to Cooperate cannot be said to be met when one of the parties with whom West Oxfordshire are seeking to cooperate with are not in agreement on the strategy for distributing unmet housing need from Oxford City. This in itself indicates that the Plan for West Oxfordshire cannot be sound; and

In terms of housing numbers, South Oxfordshire were recommended as part of the Duty to Cooperate to accommodate 4,950 houses from Oxford City. This compares with 4,400 houses for Cherwell District, 2,200 for the Vale of White Horse and 2,750 houses in respect of West Oxfordshire. Thus, it can be seen that South Oxfordshire were proposed to accommodate the greatest proportion of Oxford City's unmet 15.065/Rep's housing need and therefore the scale of the issue that has now arisen given that South Oxfordshire have not
agreed to take these housing numbers is far greater than had the situation arisen in Cherwell District, Vale of White Horse District or West Oxfordshire District.

The consequence is that objectively assessed housing need are not being met in the housing market area until such time as either South Oxfordshire reverse their position and accept 4,950 houses arising from Oxford City; or the remaining authorities agree to take additional housing to reduce the amount that South Oxfordshire have to accommodate, to such a level that South Oxfordshire are prepared to agree to the housing numbers to be delivered in their administrative boundary.

There is no resolution to this matter and no indication from the Oxfordshire Growth Board Meeting of 27th September 2016 as to the extent of housing from Oxford City that South Oxfordshire District are prepared to accommodate. There is no alternative strategy available to the local authorities in Oxfordshire and no easy solution.

Such are the implications arising from the wider Housing Market Area it is recommended that further work on the West Oxfordshire Plan, including progressing further with the Examination be put on hold pending resolution of these key issues at the heart of Oxfordshire and the West Oxfordshire Plan.

Policy H1 – Amount and Distribution of Housing

Modifications to Policy H1 set out that provision will be made for a total of 15,950 homes in the period 2011-2031. CALA supports the principle of providing this level of new homes as a minimum threshold for housing delivery in the District over the plan period.

It is pointed out that the 2,750 homes is to assist in meeting part of Oxford City's un met need and that this figure may increase or decrease following the ongoing review of the Oxford City Local Plan that is currently due to be adopted in 2019. The West Oxfordshire Local Plan needs to remain flexible to address this issue. An early review is seen as the most appropriate mechanism to take account of this matter.

Main Modification 24 introduces an amendment to the emerging Local Plan 2031 to reflect that the Chipping Norton Sub-area is now proposed to accommodate more growth than originally envisaged in the submission draft Local Plan. This increase is fully supported by CALA. Chipping Norton is a sustainable location for development and is relatively un-constrained in terms of infrastructure.

Introduction

We write on behalf of our client the Church Commissioners for England (the Commissioners) which manages a well-diversified investment portfolio to support the Church’s work across the country and is a long-term landowner in the West Oxfordshire area. We understand that the Council are currently consulting on the proposed modification to the Submission Draft West Oxfordshire Local Plan Local Plan 2031 Consultation.

The Submission Draft West Oxfordshire Local Plan Local Plan 2031 seeks to address the initial concerns raised by the inspector in December 2015 following the first Local Plan hearing which dealt with strategic matters. These concerns generally related to the overall housing requirement and deliverability of these sites. We recognise that in response West Oxfordshire has increased the total housing requirement to 15,950 homes, allocated new sites and increased the size of strategic sites.

We submitted representations in relation to the following five sites located within West Oxfordshire on behalf of the Commissioners to the West Oxfordshire Call for Sites in February 2016:
The following representations provide further information on the site at Churchill Road and should be read in conjunction with Edgars’ general representations regarding housing supply which are not repeated here.

Site and Surrounding Area

1.2 The site is situated in the south western part of Chipping Norton, which is the third largest town in the district offering both residents and visitors a good range of services and facilities. The site lies approximately 700m from the town centre and is a similar distance from Chipping Norton Leisure Centre and Chipping Norton School (secondary). It is less than 400m from St Mary’s School (primary). There are bus stops located on Churchill Road (within 150m of No. 34 Churchill Road), which provide access to a high frequency service to Oxford (S3) and a slightly less frequent service to Banbury (488). There is also a service (X8) that links Chipping Norton with Kingham Railway Station. The site is therefore in a highly sustainable location.

1.3 The site comprises approximately 4.5 hectares of land, identified on the plan attached at Appendix 1. The land forms part of the side of a valley and slopes downwards from the south east to the north west of the site. There is a two story dwellinghouse at 34 Churchill Road with vehicular access and egress to the front of the property via dropped kerbs in two locations. Access to the land at the rear (north west) of 34 Churchill Road is via an agricultural gate and grassed track situated between numbers 34 and 32 Churchill Road. The land north west of 34 Churchill Road is not currently actively used for agriculture, except for occasional grazing. Consequently, it could be described as unmanaged grassland, declining in quality. This land is divided into two parts, almost equal in area, by a tree-lined stream which runs from the site’s southernmost corner to its northernmost corner. The trees along this line are substantial and mature and are effective as a visual barrier.

1.4 The principal north-eastern and south-eastern site boundaries are shared with residential properties at The Leys and Lords Piece Road respectively. The rear gardens which back onto the site include considerable tree cover in the more Representations on behalf of the owners of land north west of 34 Churchill Road, Chipping Norton West Oxfordshire Local Plan 2031 Proposed Modifications Consultation. December 2016 historic environment of The Leys. There is less tree cover in the 20th century residential development at Lords Piece Road which forms the more elevated backdrop to the site. There is a small group of industrial buildings, with a high number of trees in the curtilages, immediately adjacent to the site's northwestern boundary along the route of a former railway line in the floor of the valley. The group contains some relatively modern structures, which are unremarkable, but among them sits Bliss Mill. This is an imposing 19th century building (now converted to apartments), Grade II* listed and a notable local landmark. Beyond the industrial buildings lies the Chipping Norton Regulated Pastures, which is common land with open public access for recreation. Open countryside lies to the south west of the site.

1.5 The site falls within the Cotswolds Area of Outstanding Natural Beauty, the Chipping Norton Conservation Area and the setting of the listed building (Bliss Mill).

1.6 The 'Cotswolds AONB Landscape Strategy and Guidelines' (adopted in June 2016) states in relation to 'Vale of Moreton Farmed Slopes' Character Area (in which the site is situated) that the expansion of existing settlements onto the Farmed Slopes is regarded as a local force for change, with a range of potential landscape implications including the 'encroachment of built development onto the Farmed slopes intruding
1.7 It is to be noted in this instance that the site does not occupy the uppermost slopes. The existing substantial tree cover, both on the perimeter and a belt running through the site, makes the land less visually prominent than the common land to the north west and the open countryside to the south west.

1.8 The Chipping Norton Conservation Area Character Appraisal identifies the bowl-shaped valley landscape setting of Bliss Mill as the most significant area of open space in the Conservation Area. While it is envisaged that within the Conservation Area the existing buildings, land uses, historic settlement patterns and open spaces should remain largely undisturbed, the guidance does enable development where views into and out of Chipping Norton, as well as views within Chipping Norton, are not harmed and where existing features of historic, visual or natural importance, such as trees, hedgerows, ponds, stone walls, paths and tracks are incorporated.

1.9 The site is not within an area that is at risk from flooding.

1.10 The site has not previously been submitted to the Council or considered in the Strategic Housing and Economic Land Availability Assessment (SHELAA).

Key Planning Site Considerations

1.11 Additional technical work, including a Landscape and Visual Impact Assessment is currently being undertaken and likely to be available in advance of further WOLP 2031 examination hearings. Without prejudice to this further work, the following planning considerations are identified as relevant to the potential allocation of the site.

The principle of housing development at Chipping Norton

1.12 Chipping Norton is identified as a Main Service Centre in the Local Plan 2031. Draft WOLP Policy H2 permits new housing on undeveloped land adjoining the built-up area to meet identified housing needs. As such housing development on the site would be acceptable in principle.

1.13 Draft Policies H2 and CN2 seek to secure the delivery of 2,400 new homes focused on Chipping Norton. Delivery is proposed partly through a strategic mixed used development area of around 1,400 dwellings on the eastern side of Chipping Norton. The provision of an eastern link road is an integral part of the proposed Strategic Development Area (SDA).

1.14 In Edgars opinion, there is a significant risk of delays in delivery on SDAs which is likely to result in continuing housing supply deficits. There is a need to address deficiencies in the 5 year housing supply. Given the long lead in times of SDAs, addressing the current supply deficiencies is best achieved through allocating additional non-strategic developments such as Land at 34 Churchill Road and adjoining land to the north west.

1.15 In Edgars opinion, the development of Land at 34 Churchill Road and adjoining land to the north west can comply with Policy H2 in being adjacent to the built up area of a Main Service Centre in the settlement.

1.16 Draft Policy OS2Locating Development in the Right Places states that a significant proportion of new homes, jobs and supporting services will be

Representations on behalf of the owners of land north west of 34 Churchill Road, Chipping Norton West Oxfordshire Local Plan 2031 Proposed Modifications Consultation, December 2016 focused within and on the edge of the main service centres of Witney, Carterton and Chipping Norton. Development is required to:

- form a logical complement to the existing scale and pattern of development and/or the character of the area;
- Be compatible with adjoining uses and not have a harmful impact on the amenity of existing occupants;
- as far as is reasonably possible protect or enhance the local landscape and the setting of the settlement/s;
- be provided with safe vehicular access and safe and convenient pedestrian access to supporting services and facilities; and
- Conserve and enhance the natural, historic and built environment.

1.17 The site is surrounded on three sides by existing residential and industrial development. It is considered that allocating the site for housing would form a logical extension of the existing built-up area, without encroaching on the more visually prominent parts of the valley that would otherwise cause harm to the setting of Bliss Mill.

1.18 Use of the land for housing is entirely compatible with the adjoining residential development at The Leys and Lords Piece Road. The retention of existing trees and hedgerows, especially on the perimeter of the site, will help to ensure that there is no harmful impact on the amenity of the existing occupiers of properties in these two roads. It will also help to preserve and enhance the character and appearance of the conservation area.

1.19 A new all-purpose access road is capable of being provided off Churchill Road following demolition of the existing dwelling at No. 34. A 6.0m wide access road with 9.0m radii (like the Lords Piece Road/Churchill Road junction) with 2.0m wide footways each side would be constructed. Junction visibility splays of 2.4m x 43m are readily available in accordance with the 30mph speed limit on Churchill Road. An offset distance of 20m (centreline to centreline) would be provided between the new access and the cul-de-sac on the opposite side of Churchill Road, named Edward Stone Rise. This specification would facilitate a development of up to 150 dwellings. However, having regard to the importance and sensitivity of the landscape, the character and appearance of the Conservation Area and the setting of the listed building, it is considered that around 75 dwellings would represent a more appropriate scale of development for this site.

Representations on behalf of the owners of land north west of 34 Churchill Road, Chipping Norton

1.20 If the total number of dwellings on the site generated a need for a separate emergency access, this could be achieved by utilising existing rights of access to the gate in the northern corner of the site, from The Leys/Station Road. It would also provide an additional means of access for pedestrians and cyclists. In this manner, the development would be provided with safe vehicular access and safe and convenient pedestrian
1.21 The character and appearance of the AONB and the Conservation Area can be preserved and enhanced through a high quality evidence based development within a strong and extensive landscape framework. While the extent of the land is 4.5ha, around 75 dwellings are proposed leaving significant scope for open space and landscaping.

1.22 In Edgars opinion, a development of this scale does not comprise 'major' development for the purposes of NPPF paragraph 116 and that a development within a strong landscape framework will not have a significant adverse impact on the landscape and scenic beauty of the wider AONB. The public benefits of the scheme would outweigh any harm to the Conservation Area and the setting of Bliss Mill.

1.23 Although further work is being undertaken, Edgars consider that development can be achieved on the site which makes an important contribution to meeting housing land supply in a sustainable location, without significant impact on the settlement character, AONB or the Conservation Area.

1.24 Further detailed technical information is likely to be available during the next stages of the WOLP 2031 Examination.

We are concerned that the Council’s modified strategy for meeting future development needs is not the most sustainable, given the reasonable available alternatives. Our concerns relate both to the deliverability of the strategy overall, and whether the strategy is the most sustainable approach.

The Council’s housing requirement is for the delivery of at least 15,950 new homes in the period 2011-31. This is confirmed in draft Policy H2, and the wording of the first paragraph of draft Policy H1 needs amending for consistency.

It is recognised that this scale of development will require a significant increase in annual build rates, and we believe the District Council must respond by taking a positive and proactive approach to housing delivery. There needs to be a flexible supply of deliverable housing sites, which will allow the Council to deliver a minimum of 15,950 dwellings in the period 2011-31, even if some sites fail to come forward, or take longer to deliver than anticipated.

Unfortunately, draft Policy H1 (and relating supporting evidence, including the housing trajectory) provide no such flexibility. The draft Local Plan (incorporating proposed Main Modifications) only provides for 15,764 units, a theoretical shortfall of 186 units, with no plan-led flexibility to address unforeseen circumstances, including inevitable delays in the planning process.

A significant change between the publication version of the Local Plan and the Proposed Modifications version is that significant new development is proposed at Eynsham, in the form of a Garden village, and separately identified Strategic Development Area (SDA). The Council are expecting some 3,200 new dwellings to be delivered at Eynsham by 2031 – with maximum annual delivery rates (325 dwellings per annum) being achieved by 2021-22. This timeframe allows just over four years for the Local Plan to be adopted; an Area

<td>The EWLC supports the continued allocation of Land to the East of Witney, as set out in paragraph 5.29 of the Local Plan. However, as set out elsewhere in these representations, we believe that the future development capacity at East Witney is higher than the indicated 450 homes.</td>
</tr>
</tbody>
</table>

Action Plan to be prepared, examined and adopted; outline and detailed planning to be achieved (including completion of S.106 agreements); and early phase infrastructure to be delivered. We consider the timetable for delivery at Eynsham to be at best optimistic – with a number of significant risks to the delivery of this scale of development within the Local Plan timeframe.

The time it has taken to negotiate the S.106 for development at North Curbridge (West Witney) demonstrates the risks involved in delivery and implementation. In October 2012 WODC published a Position Statement on Housing Land Supply. This stated at paragraph 1.23 – “In addition to the allocated sites, noted above, the West Oxfordshire Local Plan 2011 also included a proposal (Proposal 8) for a mixed-use development site at North Curbridge (to the west of Witney). A planning application has been submitted, showing a development including 1,000 new dwellings. It is estimated that delivery of these homes will commence in 2013/14, with around 600 being built during the 5 year period covered by this paper.”

The five year period referred to above is to 31st March 2018.

The Housing Trajectory included in Main Modifications version of the Local Plan assumes no completions at North Curbridge before 1st April 2018. This assists in demonstrating the vulnerability of the proposed Local Plan housing strategy.

In summary, we are concerned specifically about the assumed housing delivery rates at Eynsham and generally about the lack of flexibility in the proposed Local Plan strategy and housing allocations to deal with the inevitable delays in the planning and delivery process. Accordingly, we have concerns about the deliverability of the housing numbers as set out in the Proposed Modifications version of the Local Plan.

We are similarly concerned about the proposed intention to significantly increase the scale of development at some of the smaller settlements within West Oxfordshire District. The Sustainability Settlement Report clearly identifies Witney as the largest and most sustainable settlement in West Oxfordshire District. The Proposed Modifications result in a significant change in the distribution of development in the District, which in our view represents an inappropriate shift in the spatial strategy. Of the additional housing to be accommodated through the Main Modifications, only 28% is proposed to be accommodated at Witney, with 72% (the vast majority) to be accommodated at settlements further down the settlement hierarchy.

Chipping Norton, which abuts the Cotswolds AONB on three sides, has seen a very significant increase in the allocated scale of development allocated here, despite the facilities, services and employment opportunities being much less than afforded at Witney.

We believe that there is scope to deliver more development at East Witney and on Land off Jubilee Way, which is sustainability located, deliverable, and would assist in supporting the Local Plan strategy (as set out in the Local Plan, prior to the proposed Main Modifications). The merits of Land at East Witney and Land off Jubilee Way are considered further below, and have been set out in previous representations, including those made in response to the submission draft Local Plan (refer letter dated 8th May 2015).
5.1 Gladman generally supports the increase in the total housing provision in the Plan to 15,950 homes up to 2031, comprising 13,200 homes to meet West Oxfordshire’s own needs and 2,750 homes to assist with meeting the unmet needs of Oxford City. This increase is in line with the 2014 Oxfordshire SHMA and with the Memorandum of Cooperation in respect of Oxford’s unmet housing needs issued by the Oxfordshire Growth Board (OGB). It should, however, be expressed as a minimum requirement.

5.2 That being said, with regard to the provision towards Oxford’s unmet housing need, Gladman has a number of specific concerns. Firstly, the modification refers to the 2,750 homes being provided in the period 2021 to 2031. Whilst the Oxfordshire Growth Board Memorandum of Cooperation assumes the start date for the provision of the homes will be after 2021, it does not preclude delivery before 2021 or granting planning permissions for sites towards this need before 2021. It is clearly the case that planning applications need to be submitted ASAP and planning permissions made from now onwards in order that sites can be ready to deliver 2,750 by 2031. Indeed, the need to address the substantial unmet housing need in Oxford is urgent bearing in mind the SHMA period began in 2011 and some six years of that need being unmet has already elapsed (825 dwellings (2,750/20*6)) should have been provided within Oxford City. The Local Plan period means that Oxford’s unmet needs are only to be addressed in a 10-year period from 2021-2031, and wholly in one location (Eynsham). Bearing in mind the historic delivery rates in West Oxfordshire, and the obvious land ownership issues currently experienced on the large sites at Eynsham, the risk that the need will simply go unaddressed by the end of the plan period is very apparent; what if the two large Eynsham sites do not deliver? Gladman considers that the issue of unmet need should be dealt with in the short term with greater urgency (given the housing needs originate from 2011 and exorbitant affordability ratios across Oxfordshire), as would appear to have been the view of the Inspector as set out in his Preliminary Findings Part 1 (IN15 dated 15 December 2015) which stated that the unmet need would need to be taken into account in calculating the 5-year land supply. The Local Plan is therefore not effective, is inconsistent with NPPF, is not positively prepared and cannot therefore be considered to be sound.

5.3 Gladman’s second concern relates to South Oxfordshire District Council’s failure to sign the Growth Board Memorandum of Cooperation in relation to its apportionment of 4,950 homes of Oxford’s unmet need. If, as it appears likely, South Oxfordshire is unable or unwilling to accommodate its full share of Oxford’s unmet need, it will be necessary for the balance to be redistributed between the other Oxfordshire Districts including West Oxfordshire. However elsewhere in the Oxfordshire Strategic Housing Market Area, the Cherwell Local Plan was adopted in 2015 and a Partial Review to consider meeting its share of Oxford’s unmet need is at a very early stage. The Vale of White Horse Part 1 Local Plan has recently been found sound following examination and will be adopted early in 2017. A Part 2 Plan to deal with Oxford’s unmet need has not yet commenced and is not expected to be adopted until 2019. Unlike the other authorities in the Oxfordshire Strategic Housing Market Area, West Oxfordshire is therefore well placed to address this situation now and the Local Plan should build in flexibility to address any subsequent increase in its apportionment of Oxford’s unmet need.

5.4 The Council proposes to modify Policy H1 to significantly increase the amount of new housing at Eynsham to address the increased housing need and to contribute towards Oxford City’s identified housing need. The Plan proposes a new strategic extension located to the west of Eynsham and a new Garden Village to the north of Eynsham on the northern side of the A40.

5.5 Whilst Gladman supports the increase in the housing requirement in the Plan and considers that the Witney/Eynsham area is a sustainable location with the scope to support and benefit from additional new housing development, it has concerns regarding the robustness and soundness of the process of site selection that the Council has undertaken. These concerns are elaborated upon in our submissions in respect
5.6 The proposed modifications to Policy H1 make alterations to the indicative distribution of housing between the 5 Sub Areas of the District. Similar changes are proposed by the Council to the Tables showing anticipated housing delivery in the Sub Areas (Tables 9.1; 9.2; 9.3; 9.4 and 9.5) (Main Modifications 90, 119, 135, 150 and 185 refer).

5.7 The aggregated anticipated housing delivery from the Sub Areas meets the District’s housing requirement of 15,900 dwellings, however Gladman has analysed the actual delivery of housing from each Sub Area (as set out in Tables 9.1 - 9.5). This analysis is set out below (Table provided in original representations) and demonstrates that, as proposed to be modified, the Local Plan will not deliver the housing requirement.

5.8 The above table (Table provided in original representations) indicates that the Local Plan will deliver 15,764 dwellings compared to the housing requirement of at least 15,900 dwellings, a shortfall of 136 dwellings. In order to be found sound the Plan should be positively prepared and should at least be able to demonstrate that it will deliver the housing requirement. It should also be flexible and have the capacity to respond to changing circumstances; in order to do this some headroom in terms of housing provision should be built into the Plan. This is particularly important because the Council is already aware of a number of issues associated with permitted sites and those identified as emerging allocations.

5.9 The recent Local Plan Experts Group (LPEG) Report also recommends that “the NPPF makes clear that local plans should be required not only to demonstrate a five year land supply but also focus on ensuring a more effective supply of developable land for the medium to long term (over the whole plan period), plus make provision for, and provide a mechanism for the release of, developable Reserve Sites equivalent to 20% of their housing requirement, as far as is consistent with the policies set out in the NPPF” (para 11.4 of the LPEG Report). Gladman would suggest that a 20% contingency in housing supply should be built in to the Plan; this would require a housing supply of 19,080 to be identified.

5.10 In order to provide the appropriate degree of flexibility and contingency, Gladman submits that the Council need to allocate additional sites for housing development in the towns and sustainable rural settlements. Gladman generally supports an approach to the distribution of housing which reflects the needs and characteristics of individual settlements. However, in considering the distribution of housing growth, it is important to note that a fundamental objective of NPPF is to secure a thriving rural economy “by taking a positive approach to sustainable new development”2 The NPPF seeks to significantly boost the supply of new housing in rural areas; “housing should be located where it will enhance or maintain the vitality of rural communities” and market housing may be allowed where it “would facilitate the provision of significant affordable housing to meet local needs”.

Main Modifications 23 and 24 refer to the amount and distribution of housing across the district. We agree with the inclusion of unmet need arising from Oxford City in the draft Local Plan. This has updated the total housing need for the district to 15,950 for the period up to 2031, including 13,200 homes from 2011-2031 to meet the district’s own need and 2,750 from the period 2021-2031 to meet Oxford City’s unmet need.

We would however point out that as South Oxfordshire have not agreed to the Oxfordshire Growth Board figures and that the unmet need to be apportioned to West Oxfordshire may be subject to change to resolve this situation. Flexibility should therefore be built into the plan to ensure that there is a sufficient supply of available and deliverable sites that can brought forward should the objectively assessed and unmet housing need change.
Moreover Hallam Land considers that it is not necessary to ring fence the requirement to meet unmet Oxford City needs and rather that this should be included within an overall combined requirement for the district.

In addition, due to uncertainty regarding housing need in the area the objectively assessed need, as reflected in the housing requirement should not be considered a maximum but a minimum as it should in each of the sub-area policies. Not only will this allow for flexibility in the local plan, it will ensure that sufficient homes are being built in West Oxfordshire to support local growth, the local economy and sustaining local infrastructure and services – this is particularly the case in main and rural service centres across the district.

Eynsham Garden Village

We do not believe that the Garden Village proposal at Eynsham is an appropriate measure for delivering the unmet need for Oxford. It is based on an ambitious timescale for delivery and given that the Government’s announcement for the results of Garden Village proposals has not yet been announced (MAIN 17 references an application for funding), it is unclear how and whether the council will be able to deliver the scheme if it is not selected of the Locally-led Garden Villages. The anticipated delivery numbers in the bid document are also unrealistic. It would be more appropriate to deal with the objectively assessed need and allocate development to settlements that can deliver homes across the plan period in a more effective manner. MAIN 3, 9, 15 16, 17, 23, 24 and 27 should be reconsidered and amended accordingly.

Notwithstanding our support for the overall housing requirement and the positive measures taken to accommodate an element of Oxford City’s unmet need, for the reasons we have outlined above, we consider that elements of the policy are unsound because they are: a) inconsistent with national policy; and b) potentially ineffective.

As we have argued above, we have some reservations about the planned supply in the West Oxfordshire Garden Village being ring-fenced and excluded from the overall land supply calculation.

The figures for the sub-areas including the West Oxfordshire Garden Village total up to 15,950. It would have been helpful if the Council also provided a description of the numbers of homes left to be provided in each sub-area after deducting completions. It would also be useful to see what the contribution will be in each sub-area from strategic and non-strategic sites.

The inclusion of an additional quantum of housing to meet Oxford’s unmet needs is supported, and responds to one of the concerns of the Inspector when suspending the Examination. However, this must now be treated as part of the district’s OAN, and included in the five year supply, rather than ring-fenced as a separate quantum to be accommodated in a different way. Given that the strategy response for accommodating this additional need is a new Garden Village, which is to be brought forward through an Area Action Plan, has significant infrastructure requirements, and will therefore take many years to procure, the requirement must be factored into the supply side now. This is particularly so given the somewhat unrealistic Housing Trajectory set out in the Plan at Appendix 2, which indicates not only the first contribution to housing delivery from the proposed Garden Village in 2021-22, but both an initial and sustained contribution of 220 dwellings per annum over the ensuing 10 year period This would appear to be extremely optimistic, and indeed unrealistic, in terms of both the initial delivery trajectory and that it can be sustained at the same level for the remainder of the Plan period.

The distribution of the revised quantum is too focused on the existing main settlements, or otherwise on the proposed, and to date unfunded, new Garden Village. The consequence is reliance on delivery of a substantial quantum of the overall housing requirement from a relatively few large strategic sites /
development locations. This in turn gives rise to significant risks of delivery failure arising from slippage in the delivery trajectories from those sites owing to infrastructure and other constraints, including market saturation causing developers to moderate the rate of release of plots to the market.

There is evidence of little progress having been made on some large sites that have been identified for a considerable period of time. Not least amongst these is the strategic development area at West Witney. Application for outline planning permission (Ref: 12/0084/P/OP) for 1,000 dwellings was made in January 2012, and yet according to the Council’s web site remains undetermined. Even if planning permission is granted in early 2017, the delivery trajectory set out in Appendix 2 to the Plan looks optimistic given the number of land interests involved, requirements for reserved matters applications, and the substantial infrastructure that will need to be put in place before the first houses can be available for occupation.

In addition to the above, there are difficulties with the proposed strategic development area at East Witney, and from which the Council is relying on increased delivery (450 dwellings in total) through the Proposed Modifications. As was acknowledged by the Inspector in Part 2 of his Preliminary Findings (IN 016), there are considerable delivery risks associated with the development of this allocation owing to conflicting aims between the main parties, and the landowner not owning all the land required to deliver the requisite highway infrastructure (IN 016, paras. 2.3-2.6). Although the Council has responded by amending the delivery trajectory to postpone first completions until 2021-22, there is no certainty that the difficulties can be resolved.

With regard to Witney, given the delays in bringing forward the strategic development area to the west of the town, together with the substantial strategic development areas identified in the current Plan, the uplift in housing delivery required to yield its capacity in the period to 2031 is substantial for a town of its size. It is questionable whether the local market can sustain substantial sales volumes from three strategic development areas simultaneously, as well as a number of smaller sites, to deliver its required contribution during the plan period.

Through the proposed modifications the overall requirement for the Chipping Norton Sub-Area is increased by approximately 33%. This compares with a proportionate increase of approximately double that for the other sub-areas combined comprising the south of the plan area. That is a disproportionate increase that reflects the strategy to focus on a small number of large strategic sites in each of the sub areas.

The strategy for the Chipping Norton Sub-Area seems to be driven by the environmental sensitives affecting the principal settlement itself, and in particular its “… prominent hill-top position on the eastern edge of the Cotswolds Area of Outstanding Natural Beauty (AONB) within which most of the town is situated” (para. 9.4.1). However, those constraints do not affect the other principal settlements in the sub-area of Enstone and Middle Barton, which are outside the AONB and, particularly in the case of Middle Barton, a considerable distance away from it. In setting a capacity for the sub-area as a whole, insufficient regard appears to have been had to the potential of smaller settlements to accommodate growth.

To reduce the risks of delivery failure a more balanced distribution is required that increases the requirement for the Chipping Norton Sub-Area and provides a wider development focus, including smaller development opportunities at the rural settlements that can make an early contribution to improving the five year housing land supply. To achieve this more balanced strategy, a Rural Service Centre should be designated in the northern part of the Plan area, in which respect Middle Barton is the most appropriate settlement.
"Importantly, this Local Plan seeks not only to meet the identified housing needs of West Oxfordshire District but also to make additional provision to accommodate a proportion of 'unmet' housing need that Oxford City are unable to provide for within their own administrative boundary."

"We fully support this modification, we consider it important that West Oxford cooperates with its neighbouring Boroughs and seeks to accommodate the agreed shortfall from Oxford City Council. For the reasons set out above we support this modification."

We support MAIN 4 and all other modifications that note West Oxford District Council will help meet the wider housing needs and that Eynsham shall play a key part of this, as set out in MAIN 1, 2, 13, 14, 15, 17, 23, 24, 27.

The consortium supports the housing requirement of 660 homes per year as identified in the Oxfordshire Strategic Housing Market Assessment (SHMA) which was published in April 2014. The Oxfordshire Growth Board, where all Oxfordshire Districts are represented has agreed to meet Oxford’s unmet housing need and the report published in September 2016 sets out the apportionment of need to each Council. The unmet housing need apportioned to West Oxfordshire is 2,750 homes. The consortium supports the Council’s agreement that it will deliver the agreed proportion of Oxford City’s unmet need of 2,750 homes. The delivery of the unmet need between 2011 and 2031 is not supported. On the basis that we are already five years into the SHMA period (2011-2016) 688 homes should have already been delivered as part of Oxford’s unmet need.

It should also be noted that within the report published by the Oxfordshire Growth Board, ‘A Countywide Approach to Meeting the Unmet Housing need for Oxford states the following:

One critical matter to recognise is that the assessment of the spatial options included recognition that deliverability of allocated sites was considered on a comparable basis between the different Districts, with an assumed start date of 2021 for the commencement of development after the adoption of the respective Local Plan review or Local Plan update/refresh. This assumption does not preclude earlier delivery, but does recognise the complexity of the issues being considered and has sought to factor in reasonable lead times to enable options to come forward and to be fully considered through the Local Plan process.

It is recognised that Oxford City’s unmet need apportioned to West Oxfordshire of 2,750 homes will be delivered through a strategic urban extension to the west of Eynsham and a new Garden Village to the north of the A40 near Eynsham. The New Garden Village at Eynsham is proposed for at least 2,200 homes. The consortium believes that it is overly optimistic to assume commencement of development within 2021 given the complexity of the site in terms of land assembly and associated infrastructure requirements. It is also recognised that an Area Action plan is to be drawn up for the site, which from our experience can take up to two years to produce.

In paragraph 5.22, the Council states that the garden Village proposal (2,750 homes) will treat the provision for 2,750 homes separately from the West Oxfordshire’s housing requirement. The Garden Village should not be treated as its own housing market area, there is no justification for treating the Garden Village as its own entity with its own five year housing land supply calculation. There is also no justification as to why the unmet needs of Oxford City are to be delivered post 2021, the housing need for West Oxfordshire is from 2011 and this should be dealt with imminently. Concern is raised that a five year housing land supply will not
Policy H1 - Amount and Distribution of New Housing

Main Modification 24, Policy H1, relates to the distribution of housing which is supported by a revised Sustainability Appraisal (SA). Policy H1 concluded that Carterton housing requirement would not be required to be adjusted from the original 2,600 allocation despite further provision being made in arguably significantly more constrained locations, including at Burford, Charlbury, Shipton-under-Wychwood and Stonesfield within the Area of Outstanding Natural Beauty (AONB), at Woodstock, despite impact on the setting of the World Heritage Site at Blenheim Palace, and at Chipping Norton, despite concerns regarding deliverability of a relief road and impact on ecology. Objection is raised to the increase in the scale of the Tank Farm proposal. The Sustainability Appraisal Proposed Modifications Addendum Report confirms that:

"Some uncertainty remains as details for mitigation/enhancement for landscape, biodiversity and green infrastructure effects, including longer-term cumulative effects, are dependent upon detailed masterplanning."

Policy H1 should be amended to omit reference to new housing at the rural service centres of Burford and Charlbury. As stated above, the Proposed Modifications have increased the Burford - Charlbury sub area proposed housing requirement by 25% from 800 to 1,000 homes. Paragraphs 115 and 116 of the NPPF clearly state that great weight should be given to conserving landscape and scenic beauty in AONBs and exceptional circumstances must be demonstrated to justify allowing major development in the AONB. Paragraph 116 states that consideration of such applications should include an assessment of the need for the development and its impact on the local economy, the cost of, and scope for, developing elsewhere outside the designated area, or meeting the need for it in some other way, and any detrimental effect on the environment and the landscape. The Council appears to seek to justify this by indicating that development is of necessity within the AONB given the widespread extent of the AONB encompassing almost the whole of the sub area; however, that is not a reason to increase housing within the sub area. The draft plan is not consistent with national policy and has not been justified with regard to reasonable alternatives which exist to deliver development outwith the AONB, nor is it deliverable and effective in terms of proposed sites. The 2,500 jobs in Carterton 'missing' from WODC's analysis is a further factor that tips the balance firmly away from the AONBconstrained settlements.

The proposed distribution within each sub area should be modified to reflect the omission of the following sites:

1. Omit Proposed Modification increase in quantum of development of Tank Farm, Chipping Norton - which should remain at 600 homes;

2. Delete proposed allocations at:
   a. Milestone Road, Carterton (200 homes): not deliverable;
   b. Land at Swinbrook Road (70 homes): not deliverable;
   c. Land North of Jefferson's Place, Charlbury (40 homes): within AONB - exceptional circumstances not demonstrated;
   d. Land North of Banbury Road, Woodstock (250 homes): impact on setting of World
Heritage Site;
e. Land North of Woodstock Road, Stonesfield (50 homes): within AONB - exceptional circumstances not demonstrated;
f. Land east of Burford (85 homes): within AONB - exceptional circumstances not demonstrated;
g. Land south of Milton Road, Shipton-under-Wychwood (44 homes): within AONB - exceptional circumstances not demonstrated.
The Chipping Norton sub area anticipated delivery in Table 9.3 only amounted to 2,326 and could not deliver 2,400 as suggested by Policy H1 (74 less). Notwithstanding this, with the reduction in Tank Farm to 600 homes, the Chipping Norton sub area should plan for 1,530 homes (a reduction of 870 homes).

The Burford - Charlbury sub area should remain at 800 homes (a reduction of 200 homes).

The Eynsham - Woodstock sub area anticipated delivery in Table 9.4 only amounted to 5,474 (or 2,724 excluding Oxford City unmet need), and not 2,800 as suggested by Policy H1 (76 less). Notwithstanding this, with the omission of 250 homes at Woodstock the sub area should be reduced to 1,720 homes with the remainder required to address unmet need from Oxford City.

The Carterton sub area anticipated delivery in Table 9.2 only amounted to 2,552 homes rather than 2,600 as suggested by Policy H1 (48 less). With the omission of the Milestone Road and Swinbrook Road sites (270 homes) the total would be 2,282 homes. The Draft Plan should then include the alternative sites at Land North of Swinbrook Park (115 homes), and Land at North Carterton, Kilkenny Farm for 750 homes. These replace the Proposed Modifications allocations at Swinbrook Road and Milestone Road due to concerns regarding their deliverability. This would adjust the Carterton sub area number of homes to 3,147, rounded to 3,150 homes. This is not out of proportion to the additional jobs and economic growth SQW consider is likely in the Carterton sub area; and this economic justification is far more convincing than the unproven great weight and exceptional circumstances case for the AONB settlements.

This would leave the following, required on soundness grounds:
Witney sub-area 4,400 homes;
Carterton sub area 3,150 homes;
Chipping Norton 1,530 homes;
Eynsham-Woodstock 1,720 homes;
Burford-Charlbury 800 homes;
Total 11,600 homes.

The full OAN is considered to be 688dpa (see enclosed Barton Willmore response to The Oxfordshire Strategic Housing Market Assessment Partial Update (SHMA update) published in July 2016 by Peter Brett Associates (PBA)) to take account of the full affordable housing need. This would require the plan to provide 13,760 homes rather than 13,200 homes. Accordingly, sites for a further 1,400 homes will need to be identified, plus 760 within the plan period to account for that part of North Eynsham expected to be delivered post 2031; that is on top of the inclusion of Kilkenny Farm and Land North of Swinbrook Park. The Council should consider additional sustainable sites at the main service centres, including around Witney, to address this shortfall consistent with its spatial strategy before considering land within the AONB. This strategy of concentrating growth around the 3 main towns (in broad proportion to their size) was assessed as appropriate within the Sustainability Appraisal and no clear evidence has been provided to demonstrate a departure from this.
As part of the proposal for Land North of Swinbrook Park, which would provide 115 new homes immediately adjacent to an existing residential development, the proposal also includes a large addition to the Kilkenny Country Park for recreation use for the wider locality. This would define the settlement limits and also provide a suitable buffer of greenspace to Shilton. As part of the west of Swinbrook Road proposal, the site presents opportunities to enhance additional opportunities to walk and cycle to and from Carterton and Shilton, as well as other local benefits that have been discussed with the Town Council.

The Kilkenny Farm land, as previously mentioned, provides sustainable options to West Oxfordshire for land within Carterton for a first phase of 300 and up to 750 homes, of which (and like land west of Swinbrook Road), the 300 dwelling first phase option can be delivered within the first 5 years. The Sustainability Appraisal, which apparently addressed the whole 250 acres rather than the 750 units supported by the Kirkham Landscape Review below the 110m contour, states:

"Land to the north (Kilkenny Farm) is poorly related to the town and poorly served by public transport; a significant incursion into the open countryside; and sensitive landscape, particularly for the northern parts. It was acknowledged that a reduced development in the south-east area could potentially address landscape concerns."

We do feel this statement reflects the lack of engagement. After all, the Carterton Town Master Plan reaches a wholly different conclusion. It seems reasonable to conclude that the scale of development proposed for Kilkenny Farm would not be disproportionate considering the overall extent of Carterton. An upper limit of 750 units is consistent with WODC’s evidence base and would also address concerns regarding potential development on the northern parts of Kilkenny Farm (quoted above), which would extend into the more open landscape, which as a result is more sensitive in landscape and visual terms.

There has not been any regard to Carterton Town Councils Masterplan and their Spatial Strategy which seeks development to the north of Carterton, significant employment provision, new facilities, infrastructure and Country Park extension. New development at Carterton will support the delivery of infrastructure improvements, such as that in the Council's IDP which states at Paragraph 3.10 that:

"Following an evaluation of different options by Oxfordshire County Council, the B4477 Minster Lovell Road has been identified as a priority for upgrading to A-road standard together with the provision of west facing slip roads at the junction of the B4477 and A40."

Policy H1 - Amount and Distribution of New Housing

Main Modification 24, Policy H 1, relates to the distribution of housing which is supported by a revised Sustainability Appraisal (SA). Policy H1 concluded that Carterton housing requirement would not be required to be adjusted from the original 2,600 allocation despite further provision being made in arguably significantly more constrained locations, including at Burford, Charlbury, Shipton-under-Wychwood and Stonesfield within the Area of Outstanding Natural Beauty (AONB), at Woodstock, despite impact on the setting of the World Heritage Site at Blenheim Palace, and at Chipping Norton, despite concerns regarding deliverability of a relief road and impact on ecology. Objection is raised to

the increase in the scale of the Tank Farm proposal. The Sustainability Appraisal Proposed Modifications Addendum Report confirms that:

"Some uncertainty remains as details for mitigation/enhancement for landscape, biodiversity and green infrastructure effects, including longer-term cumulative effects, are dependent upon detailed masterplanning."

Policy H1 should be amended to omit reference to new housing at the rural service centres of Burford and Charlbury. As stated above, the Proposed Modifications have increased the Burford - Charlbury sub area proposed housing requirement by 25% from 800 to 1,000 homes. Paragraphs 115 and 116 of the NPPF clearly state that great weight should be given to conserving landscape and scenic beauty in AONBs and exceptional circumstances must be demonstrated to justify allowing major development in the AONB. Paragraph 116 states that consideration of such applications should include an assessment of the need for the development and its impact on the local economy, the cost of, and scope for, developing elsewhere outside the designated area, or meeting the need for it in some other way, and any detrimental effect on the environment and the landscape. The Council appears to seek to justify this by indicating that development is of necessity within the AONB given the widespread extent of the AONB encompassing almost the whole of the sub area; however, that is not a reason to increase housing within the sub area. The draft plan is not consistent with national policy and has not been justified with regard to reasonable alternatives which exist to deliver development outwith the AONB, nor is it deliverable and effective in terms of proposed sites. The 2,500 jobs in Carterton 'missing' from WODC's analysis is a further factor that tips the balance firmly away from the AONB constrained settlements.

The proposed distribution within each sub area should be modified to reflect the omission of the following sites:

1. Omit Proposed Modification increase in quantum of development of Tank Farm, Chipping Norton - which should remain at 600 homes;

2. Delete proposed allocations at:
   a. Milestone Road, Carterton (200 homes): not deliverable;
   b. Land at Swinbrook Road (70 homes): not deliverable;
   c. Land North of Jefferson's Place, Charlbury (40 homes): within AONB - exceptional circumstances not demonstrated;
   d. Land North of Banbury Road, Woodstock (250 homes): impact on setting of World Heritage Site;
   e. Land North of Woodstock Road, Stonesfield (50 homes): within AONB - exceptional circumstances not demonstrated;
   f. Land east of Burford (85 homes): within AONB - exceptional circumstances not demonstrated;
   g. Land south of Milton Road, Shipton-under-Wychwood (44 homes): within AONB - exceptional circumstances not demonstrated.

The Chipping Norton sub area anticipated delivery in Table 9.3 only amounted to 2,326 and could not deliver 2,400 as suggested by Policy H1 (74 less). Notwithstanding this, with the reduction in Tank Farm to 600 homes, the Chipping Norton sub area should plan for 1,530 homes (a reduction of 870
The Burford-Charlbury sub area should remain at 800 homes (a reduction of 200 homes). The Eynsham-Woodstock sub area anticipated delivery in Table 9.4 only amounted to 5,474 (or 2,724 excluding Oxford City unmet need), and not 2,800 as suggested by Policy HI (76 less). Notwithstanding this, with the omission of 250 homes at Woodstock the sub area should be reduced to 1,720 homes with the remainder required to address unmet need from Oxford City.

The Carterton sub area anticipated delivery in Table 9.2 only amounted to 2,552 homes rather than 2,600 as suggested by Policy H1 (48 less). With the omission of the Milestone Road and Swinbrook Road sites (270 homes) the total would be 2,282 homes. The Draft Plan should then include the alternative sites at Land North of Swinbrook Park (115 homes), and Land at North Carterton, Kilkenny Farm for 750 homes. These replace the Proposed Modifications allocations at Swinbrook Road and Milestone Road due to concerns regarding their deliverability. This would adjust the Carterton sub area number of homes to 3,147, rounded to 3,150 homes. This is not out of proportion to the additional jobs and economic growth SQW consider is likely in the Carterton sub area; and this economic justification is far more convincing than the unproven great weight and exceptional circumstances case for the AONB settlements.

This would leave the following, required on soundness grounds:
- Witney sub-area 4,400 homes;
- Carterton sub area 3,150 homes;
- Chipping Norton 1,530 homes;
- Eynsham-Woodstock 1,720 homes;
- Burford-Charlbury 800 homes;
- Total 11,600 homes.

The full OAN is considered to be 688dpa (see enclosed Barton Willmore response to The Oxfordshire Strategic Housing Market Assessment Partial Update (SHMA update) published in July 2016 by Peter Brett Associates (PBA)) to take account of the full affordable housing need. This would require the plan to provide 13,760 homes rather than 13,200 homes. Accordingly, sites for a further 1,400 homes will need to be identified, plus 760 within the plan period to account for that part of North Eynsham expected to be delivered post 2031: that is on top of the inclusion of Kilkenny Farm and Land North of Swinbrook Park. The Council should consider additional sustainable sites at the main service centres, including around Witney, to address this shortfall consistently with its spatial strategy before considering land within the AONB. This strategy of concentrating growth around the 3 main towns (in broad proportion to their size) was assessed as appropriate within the Sustainability Appraisal and no clear evidence has been provided to demonstrate a departure from this.

As part of the proposal for Land North of Swinbrook Park, which would provide 115 new homes immediately adjacent to an existing residential development, the proposal also includes a large addition to the Kilkenny Country Park for recreation use for the wider locality. This would define the settlement limits and also provide a suitable buffer of greenspace to Shilton. As part of the west of Swinbrook Road proposal, the site presents opportunities to enhance additional opportunities to walk and cycle to and from Carterton and Shilton, as well as other local benefits that have been discussed with the Town Council.

The Kilkenny Farm land, as previously mentioned, provides sustainable options to West Oxfordshire...
for land within Carterton for a first phase of 300 and up to 750 homes, of which (and like land west of Swinbrook Road), the 300 dwelling first phase option can be delivered within the first 5 years. The Sustainability Appraisal, which apparently addressed the whole 250 acres rather than the 750 units supported by the Kirkham Landscape Review below the 110m contour, states:

"Land to the north (Kilkenny Farm) is poorly related to the town and poorly served by public transport; a significant incursion into the open countryside; and sensitive landscape, particularly for the northern parts. It was acknowledged that a reduced development in the south-east area could potentially address landscape concerns."

We do feel this statement reflects the lack of engagement. After all, the Carterton Town Master Plan reaches a wholly different conclusion. It seems reasonable to conclude that the scale of development proposed for Kilkenny Farm would not be disproportionate considering the overall extent of Carterton. An upper limit of 750 units is consistent with WODC's evidence base and would also address concerns regarding potential development on the northern parts of Kilkenny Farm (quoted above), which would extend in to the more open landscape, which as a result is more sensitive in landscape and visual terms.

There has not been any regard to Carterton Town Councils Masterplan and their Spatial Strategy which seeks development to the north of Carterton, significant employment provision, new facilities, infrastructure and Country Park extension. New development at Carterton will support the delivery of infrastructure improvements, such as that in the Council's IDP which states at Paragraph 3.10 that:

"Following an evaluation of different options by Oxfordshire County Council, the B4477 Minster Lovell Road has been identified as a priority for upgrading to A-road standard together with the provision of west facing slip roads at the junction of the B4477 and A40."

Proposed modification- Expansion of Eynsham: The proposed modifications introduce a significant strategic development to the north of Eynsham to meet Oxford City’s unmet housing need. This change pertains to numerous modifications, we therefore set out our response below which we wish to be considered in response to the following modifications: MAIN3, MAIN7, MAIN9, MAIN13, MAIN14, MAIN15, MAIN23, MAIN24, MAIN27, MAIN58, MAIN60, MAIN149 Detailed comments particular to each modification are set out in detail against the relevant reference in following sections.

The same modification seeks to introduce the new strategic development north of Eynsham. The proposed development is of a strategic scale in a location which previously only saw limited development. The strategic area has been newly introduced at the examination stage, rather than through the extensive consultation process which should inform fundamental decisions in plan making.

The proposed ‘Garden Village’ is a strategic site suggested to be a new standalone settlement. Such a development is a clear departure from the submitted spatial strategy which emerged from the earlier consultation stages and was informed by the evidence base. The proposed new development is a clear departure from the proposed development plan, not a mere modification.

The proposed changes to the plan are so significant that they amount to a fundamentally different strategy to that submitted for examination. Should the Council wish to make such a fundamental change it should be
done so through a new plan informed by a suitable evidence base and following a formal consultation process. To do otherwise would undermine the credibility of the plan and public confidence in the planning process.

A consequence of the limited considerations which have informed the introduction of the development area is considerable uncertainty as to the achievability of the proposed scheme. The site was previously discounted as unsuitable for development within the submitted SHLAA, no updated document has been published to revise this status. Noise impacts, segregation across the A40 and landscape impacts are all identified as being prohibitive to development. No information has been produced to demonstrate how these issues may be overcome, nor whether they are less pronounced at any other development site. Similarly the proposal was dismissed as not being realistic in the submitted SA, little is offered to justify such a fundamental change in stance.

Development strategy for the proposed site is deferred to a later Area Action Plan, we consider however development parameters must be set out and explored in order to ensure the proposed scheme is achievable. The Plan also refers to an expression of interest submitted to Government seeking to obtain Garden Village status for the development, unlocking funding streams to deliver infrastructure to unlock the site.

Although an expression has been submitted, no decision has yet been issued. In excess of 50 similar expressions have been made nationally, therefore Garden Village status is far from guaranteed. Proper exploration must be made as to the sustainability, suitability and deliverability of this site and essential infrastructure in the event it does not secure Garden Village status.

MAIN9: The propose modification identifies the proposed expansion north of Eynsham to be an ‘exemplar’ development with regard to design and environmental performance. The aspirations for the development are laudable, however only very high level initial assessments have been undertaken to establish whether this is deliverable, particularly in the context of the landscape previously considered vulnerable to development.

MAIN23: The proposed alteration to the wording from the ‘majority’ of development being delivered in the district’s towns, to a significant proportion, confirms the proposed expansion to the north of Eynsham to be a deviation from the strategy set out under policy OS2 in the Submission Plan. We consider the fundamental change of the strategy renders this a new plan, it should therefore be developed as such, rather than processed through modifications.

MAIN25: We welcome the proposed increase in housing provision within the plan to reflect the objectively assessed need set out in the Oxfordshire SHMA (660 dwellings per annum). Although the headline figure for housing provision is increased the means of meeting that need is somewhat unclear in the document. The proposed site allocations fall someway short of the accepted housing requirement. Allocated sites and suggested windfalls total 11,545 homes, some 1,655 homes below the housing target for West Oxfordshire (13,200). Although not clearly stated it seems the Plan is reliant on a significant number of sites which have on the deliverability of these sites.

The published housing supply position paper sets out the Council’s assumptions on the deliverability of permitted homes. This is set against a backdrop of previous under-delivery in relation to the objectively assessed need, including in the initial five years of the plan period. The anticipated delivery of homes from
The anticipated delivery figures (Appendix 1) do not appear to assume all planning permissions granted for larger sites will be implemented. The assessment of smaller sites makes a concession (9.1%) in acknowledgement that not all permissions will be implemented; an allowance for non-delivery of larger sites is also required.

While uncertainty exists as to the deliverability of a significant proportion of the required housing supply questions remain as to the soundness of the plan. Robust evidence should be produced to show the permitted sites can be relied upon to deliver homes, additional allocations should also be made to mitigate against any shortfall.

MAIN27: The allocation of non-strategic sites is welcomed and we believe imperative if the housing need of the district is to be satisfied. We are concerned that those sites allocated have not been selected through thorough testing, including consideration of all reasonable alternatives as set out by the regulations. As a consequence the soundness of the allocations and broader plan is in doubt.

We have raised our concerns with regard to the unpublished SHELAA earlier in these representations; those comments also apply to this modification. The fact that the plan preceded the assessment significantly undermines the credibility of the plan as an evidence based document as do shortcomings in the assessment.

We consider Long Hanborough to be a suitable location for development as it benefits from an excellent range of services and facilities, including a railway station. We believe additional development sites should be permitted in the village alongside those proposed in the modifications. The proposed development site at Tuckwells Pit, Church Road (SHELAA ref 225) is a suitable location for new development. It can sensitively accommodate new homes in a location which benefits from access to key services and facilities. A Landscape and Visual Impact Assessment has confirmed development of the site can have a beneficial effect on the landscape while the off-road cycleway on Main Road provides viable access to the railway station.

MAIN29: The proposed modifications seek to rely upon windfall development to fulfill the housing requirement at a rate of 125 homes per year. Although this policy is informed by previous delivery rates the published SHELAA suggests insufficient developable sites exist to fulfill that rate of development throughout the plan period. As the Council's own SHELAA suggests insufficient sites are available to fulfill the suggested windfall rate either the evidence, or the proposed strategy must be unsound.

Historic windfall delivery rates have been achieved in the district's larger settlements including those designated as service centres. The proposed downgrading of Long Hanborough reduces the likelihood of homes being delivered in the village further reducing the chances of windfall housing rates being maintained. Although an alternative service centre is proposed to be provided this is for delivery within the plan period and therefore will not give rise to any windfalls.

MAIN59: The proposed emphasis on the desirability of locating development in locations with access to public transport is at odds with the modification suggesting downgrading Long Hanborough's settlement status. The village is one of only two in the district which benefit from a significant railway station.

MAIN60: The plan identifies significant challenges upon the A40, particularly with regard to access to Oxford. Although several alleviation options are suggested none is carried forward in plan proposals which
The proposed strategic development area at Eynsham is suggested on the basis that alleviation of A40 issues could be provided, however their achievability is unknown. The uncertainty of delivery of necessary highway improvements calls into question the suitability of the proposed strategic development area. The Plan which relies upon this area to meet its portion of Oxford’s unmet housing need cannot be sound until the site is known to be deliverable.

MAIN66: The proposed modification underlines a success in the current plan period in encouraging use of railway connections in the district, particularly from Long Hanborough. The modification acknowledges the capability of the rail corridor to remove vehicles from the A40 as residents travel toward Oxford and London, and the desirability of increasing capacity of Hanborough station and the railway link.

The modification supports improvements to the rail connection and acknowledges the need to provide the proposed development north of Eynsham with connections to Hanborough station. It is perverse therefore that the plan seeks to restrict development in Long Hanborough as developments in the village could provide easy access to the railway station and contribute to providing enhanced services and facilities. We consider the village should retain its rural service centre status and consideration given to additional non-strategic allocations to make the most of this opportunity for sustainable development.

MAIN145: The proposed modification suggests Long Hanborough is not in a position to support significant levels of additional development, however no evidence is provided as to any particular harm which would arise from residential development over and above that in the plan.

The document identifies the opportunity in the village in enhancing sustainable transport options through improvements to the station, this presents scope for new homes to be developed with a tangible benefit for the district. No unique sensitivities are identified, we therefore believe additional housing development should be allocated (beyond that proposed) and windfalls encouraged in Long Hanborough.

MAIN149, 180: We welcome the acknowledgement in the modification of the potential for enhancement of Hanborough Station as a transport interchange, however the proposed downgrading of the settlement is clearly at odds with this and undermines the aspiration for improvements. Such an approach is also at odds with the NPPFs encouragement of environmentally sustainable development.

The modification suggests increased car parking at the station, whilst this could encourage rail commuters from rural areas it is clearly preferable to remove the need for car use all together. Additional cycle parking should be provided and homes provided in locations which already benefit from access to the station by sustainable means.

New homes created in Long Hanborough would benefit from existing foot and cycle access to the station, therefore they could be delivered early in the plan period and support enhanced rail services without need for additional car journeys. To seek to restrict this undermines the aspiration of the plan.

The Council suggest the proposed northern extension of Eynsham could benefit from sustainable access options through creation of new foot/cycle routes from the south. These would be more distant than any point within Long Hanborough, furthermore their delivery cannot at this point be guaranteed. If the Council wishes to make the most of opportunities presented by rail routes from Hanborough permitting of additional development in the village is clearly the correct path.

<td>&gt; SECTION 5 - PROVIDING NEW HOMES &gt; MAIN 24</td>
<td>We welcome the Council’s intention to make provision to meet its full Objectively Assessed Housing Needs, and its allocation of Oxford’s unmet housing need. However, it is disappointing that the new housing proposed in villages has been allocated on a small number of sites, with little flexibility provided for more houses to come forward from small sites in these areas, other than through Neighbourhood Plans. If no Neighbourhood Plan is being prepared, as is the case in Stanton Harcourt, delivery of new homes is effectively precluded (beyond any allocated sites) until such time as the Council can no longer demonstrate a 5-year housing land supply. We believe that the Council should adopted a more flexible and positive approach. Further development in the villages would assist in realising several benefits, both locally, and in terms of delivery of the Local Plan. At the local level, the main benefit will be assisting in ensuring the continuing vitality and viability of the villages in West Oxfordshire, by supporting local shops, services and contributing to public transport provision. At a more strategic level, a larger number of smaller sites will provide greater certainty of delivery of the overall housing target. Smaller sites are less likely to give rise to landownership issues and do not normally require complex infrastructure planning and investments. Further, if any issues do arise on any particular site, there will be a greater number of alternative development options to meet housing needs.</td>

<td>&gt; SECTION 5 - PROVIDING NEW HOMES &gt; MAIN 24</td>
<td>Our client supports the Council’s approach to locating development in the right places. Charlbury is identified as a Rural Service Centre and the Main modification identifies that it should provide for a modest level of development appropriate to support their roles as rural service centre. Our client supports the Council’s ambition to deliver a greater quantum of development in the District. It is noted that the plan aims to deliver 13,200 homes over the period 2011-2031 with a further 2750 homes to meet Oxford’s unmet need. As above, this proposed level of housing delivery in the District should not be considered an absolute maximum, but instead should be viewed as a minimum target to assist in delivery of identified housing requirements. It is agreed that provision of new housing should be made in each sub-area at appropriate village locations in line with relevant policies of the Plan. The revision to this policy, in order to identify the additional housing delivery requirement across the District is, in principle, supported.</td>

<td>Savills has been instructed by Rivar Ltd to submit written representations to the West Oxfordshire Local Plan 2021 Proposed Main Modifications document. These representations are made in respect of land at Marriott Close, Wootton-by-Woodstock. The site at Marriott Close, Wootton-by-Woodstock comprises greenfield land to the west of existing built development. The existing development adjacent to the site is located outside of the main built up area of the village. Notwithstanding the site is well located to the village edge and represents a logical extension to the village. Planning history for the site is limited. Neighbouring land uses benefit from recent planning history for residential development at the adjoining site. The site has the benefit of positive previous pre-application advice relating to a similar proposal scheme sought from West Oxfordshire District Council in February 2015, and November 2016. Rivar Ltd fully supports the Council’s ambition to delivering a greater quantum of development in the District. It is noted that the plan aims to deliver 13,200 homes over the period 2011-2031 with a further 2,750 homes to meet Oxford’s unmet need. As above, this proposed level of housing delivery in the District should not be considered an absolute maximum, but instead should be viewed as a minimum target to assist in delivery of identified housing requirements. For example, the Eynsham-Woodstock sub-area is proposed for 2,800 homes. This figure should not be seen as a maximum threshold, and the Plan would benefit from explicit clarification of this point. Notwithstanding, it is agreed that provision of new housing should be made in each sub-area at appropriate village locations in line with relevant policies of the Plan.</td>

<td>The revision to this policy, in order to identify the additional housing delivery requirement across the District is, in principle, supported. Our client notes the increased housing delivery of 1,200 units reported to the Eynsham - Woodstock sub-area. Increasing growth within this sub-area aligns with meeting the additional unmet housing needs, closest to the source of the problem.</td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td>&gt; SECTION 5 - PROVIDING NEW HOMES &gt; MAIN 24</td>
<td>We note that the objectively assessed need for West Oxfordshire is set at 660 dwellings per annum (13,200 homes in total) and we would agree that this will result in a significant increase in the rate of delivery within the District compared to the previously historic lower rates. We acknowledge the amended wording in relation to the unmet need from Oxford City and the rationale behind the apportionment allocated to West Oxfordshire to deliver. We agree that to meet this requirement that the delivery rates will need to increase substantially to 935 dwellings per annum from 2021 to 2031 to meet this need and that this will be extremely challenging for the District to deliver. As such, we believe that as many sustainable and unconstrained sites as possible should come forward for development at the earliest possible opportunity. As set out previously within these representations, we believe the site at Hailey offers a logical and sustainable location for growth within the village within close proximity to the Main Service Centre of Witney.</td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td>We strongly object to the proposal for a separate land supply calculation for the 2,750 dwellings at Eynsham - to be taken account of in the period 2021 -2031. There is nothing within the NPPF or the PPG to support this approach. The NPPF is clear that when dealing with need, it is the need of the Housing Market Area as whole which needs to be met. It is not appropriate to ‘ring-fence’ need in this manner.</td>

<td>Housing Need and Affordability</td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td>The plan is considered not to suitably address housing need despite the uplift in numbers. There has been insufficient development in the first five years (up to 2016) which is further increasing unmet need. The Council assert that the residual Liverpool method is most appropriate to address the 1,836-dwelling backlog (excluding Oxford City unmet need) from 2011-2016 rather than Sedgefield which is recognised In Planning Practice Guidance (PPG).</td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td>However, in an appeal decision dated 26th July 2016 at Milton-under-Wychwood1, the Inspector concluded that &quot;Housing land supply in the District is less than 2 years. Such a shortfall must be regarded to be severe.&quot; This was based on the 'Sedgefield' method of calculation and was not contested by the Council. Nine other recent Appeals this year in the District have concluded similar shortfalls and all those decisions by the Inspectorate have used the Sedgefield approach. There is no justification supplied for using the Liverpool method.</td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td>Main Modification 29 (paragraphs 5.34b) confirms that West Oxfordshire will apply the Liverpool method in calculating the 5-year housing land supply which seeks to address the under-supply over the plan period rather than the immediate 5-year period. IN016 (The Inspectors Preliminary Findings - Part 2 para 2.15) stated that WODC need to have regard for National Guidance as the Liverpool method is not mentioned. Furthermore, the Houses of Parliament Briefing Paper Number 03741 dated 25 May 2016 Planning for Housing states that Local Planning Authorities should aim to deal with any undersupply within the first 5 years of the plan period, thus the Sedgefield approach should be adopted. This is especially important given the severe shortfall of 1,836 homes, the serious affordability concerns in the local area (house prices 10 times lowest incomes).</td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td>Alongside this context of a severe shortfall in housing delivery, the report of the Oxfordshire Growth Board Post SHMA Strategic Work Programme report2 states that:</td>
</tr>
</tbody>
</table>
"133) The Programme is not seeking to allocate or release sites, but has at a high level and using a common basis, through the work streams; identify the evidence of each district’s ability to absorb additional growth to meet a share of Oxford’s unmet need. It will be for each of the districts through their normal Local Plan processes to allocate sites sufficient to meet their proposed share of Oxford’s unmet need under the requirements of the Duty to Co-operate.

134) It is also important to note that the yield figures for each area of search represent estimated housing numbers to be delivered by 2031 – total capacities at a number of these sites may change through local assessment as part of the more detailed Local Plan process, taking a wider range of planning factors into account, including the potential to deliver further housing beyond 2031."

MM22 Paragraph 5.17 asserts that the delivery of unmet Oxford City housing need at Eynsham will be delivered in the period 2021 to 2031 – which would require delivery of 220 dwellings per annum from a standing start in 2021: itself highly optimistic – rather than address unmet needs also within the first 5 years of the plan period. Whilst it is not disputed that Eynsham will not deliver prior to 2021, this underlines the need for the Council to augment its housing land supply to identify and allocate additional land for housing in the short term to meet housing needs in the first half of the plan period. This is especially important given the significant shortfall of 1,836 homes, the serious affordability concerns in the local area (house prices 10 times lowest incomes) and considering the Inspector’s preliminary findings that it was his initial view that unmet need would need to be considered in calculating the 5-year land supply (Paragraph 7.6 (IN015)).

Instead the Council’s Housing Land Supply Position Statement October 2016 simply indicates that Eynsham will ‘kick in’ from 2021 onwards as ‘agreed’ through the joint work at the Growth Board: such a view is not supported by the statement above from the September 2016 OGB report which emphasises the sovereign nature of Local Plans in identifying land to address unmet need. Rather than the response to delivery new homes to meet unmet needs ‘kicking in’ in 2021, this should be seen as ‘kicking the can down the road’. Unmet need, is, by definition, unmet.

It is counter intuitive for the Council to hold the view that the present day need for housing should be addressed in 5 years’ time or beyond. The Inspector’s Preliminary Findings (IN015) confirmed that if the Council failed to consider the implications of unmet housing needs the plan would be out of date before it can be adopted. The inescapable conclusion to this is that unmet housing needs should begin to be addressed at the time of adoption of this plan: arguably now. Were that not the case, logically an early review which gives time to consider and then respond to unmet needs would be appropriate, which it is evidently not.

The Vale of White Horse Local Plan, recently adopted, commits to allocating sites to contribute towards Oxford’s unmet housing need within the Local Plan 2031: Part 2, to be submitted to the Secretary of State, within two years of adoption of the Local Plan 2031: Part 1 – i.e. by December 2018: otherwise the unmet housing needs from Oxford City will become part of its housing land supply requirement. West Oxfordshire’s approach to this issue is therefore wholly contradictory: the timing of its plan enables the Council to seize the opportunity to deliver new homes to meet unmet housing needs from the City of Oxford, yet to put this off until after 2021 will simply fail those who are presently in need of a new home. One cannot meet today’s needs tomorrow.

Furthermore, it is considered a key concern that there is too high a reliance on development which will deliver after 2021 within the plan as a whole. The Council’s Housing Land Supply Position Statement October 2016 indicates only 1,035 homes out of 8,169 dwellings on proposed allocation sites in the draft Plan will
occur prior to 2021: that is a paltry 12.6% or 207dpa. This will only address a little over half of the current backlog let alone what is needed going forward. This extreme low delivery for the first 10 years of the plan risks exacerbating affordability challenges district wide and places further stress on housing need.

When drilling down into the detail, it is proposed that the Witney sub-area (which incorporates Hailey) will provide 4,400 homes. This is made up from proposed allocations and additional sustainable sites which come forward and are available for development. It is also noted that additional sites may be allocated through Neighbourhood Plans to increase the housing supply over and above that which has been identified and planned for in the Local Plan. However, the Witney sub-area policy references windfall sites as being a potential source of supply and attributes a specific number to these. This is not the same as sites being allocated through the Neighbourhood Plan. To restrict such a source of supply solely to potential Neighbourhood Plan sites is engaging a restriction on development and treating windfall sites as engaging a prematurity argument in seeking to come forward in advance of a Neighbourhood Plan. This is not in accordance with the NPPF. Furthermore, the policy as currently drafted means that were the villages not to develop Neighbourhood Plans, then there is no way of this element of the supply being delivered. We consider it should be clarified that the 8th paragraph should be amended to read:

Provision for new housing will also be made in the remainder of each sub-area at appropriate village locations.

Given the confusion which exists between this policy and the respective sub-area policies, it is considered that the third paragraph from the end should also be deleted as again it references additional sites coming forward through Neighbourhood Plans only.

Main Modification 24, Policy H1, relates to the distribution of housing which is supported by a revised Sustainability Appraisal (SA). We consider that there needs to be reconsideration of a further uplift in housing in the Burford - Charlbury sub area (proposed housing requirement increase of 20% from 800 to 1,000 homes). Paragraph 116 of the NPPF clearly states that exceptional circumstances must be demonstrated to justify allowing major development in the AONB. This paragraph states that consideration of such applications should include an assessment of the need for the development and its impact on the local economy, the cost of, and scope for, developing elsewhere outside the designated area, or meeting the need for it in some other way, and any detrimental effect on the environment and the landscape. The Council appears to seek to justify this by indicating that development is of necessity within the AONB given the widespread extent of the AONB encompassing almost the whole of the sub area: however, that is not a reason to increase housing within the sub area. The draft plan is not consistent with national policy and has not been justified with regard to reasonable alternatives which exist to deliver development outwith the AONB, nor is it deliverable and effective in terms of proposed sites.

Savills has been instructed by Spitfire Homes to submit written representations to the West Oxfordshire Local Plan 2031 Proposed Main Modifications document. These representations are made in respect of land at Jubilee Lane, Milton under Wychwood.

The site off Jubilee Lane, Milton under Wychwood comprises greenfield land to the south of existing built development. The site is well located to the village edge and represents a logical extension to the village providing an opportunity to improve the character of the edge of the settlement. Planning history for the site is limited.

Spitfire Homes fully supports the Council's ambition to delivery a greater quantum of development in the District. It is noted that the plan aims to deliver 13,200 homes over the period 2011-2031 with a further 2750 homes in the shorter term to 2026.

people with disabilities, service families and people wishing to build their own homes); and

* Caters for housing demand and the scale of housing supply necessary to meet this demand."

Further advice in respect of assessing and meeting housing need is set out in PPG. Section 2a-003 states that "Need for housing should cater for demand of the area and identify the scale of housing to meet that demand."

In section 2a-004 it states that "The assessment of development needs is an objective assessment of need based on facts and unbiased evidence. Plan makers should not apply constraints to the overall assessment of need, such as the limitations imposed by the supply of land for new development, historic under performance, viability, infrastructure or environmental constraints."

PPG (2a-007) requires local planning authorities to "assess their development needs working with the other local authorities in the relevant housing market area or functional economic market area in line with the duty to cooperate."

CALA are supportive of the uplift to the housing requirement for the plan period within Policy H1 which now takes into consideration Oxford City’s Housing Needs. However, concern is raised over the distribution of housing in particular land to the west of Eynsham and a new rural service centre garden village on land to the north of the A40 near Eynsham and the level of growth suggested in settlements in the AONB, particularly Burford and Charlbury. Regarding paragraph 116 of the Framework concern is raised as to whether the need for the planned level of development in these locations is appropriate given that opportunities clearly exist outside of Burford and Charlbury to help meet the District’s housing needs. Bampton is the perfect example of one such alternative location. It is also a rural service centre and without the AONB constraining its growth potential.

There appears to be a level of conflict in Policy H1 with regards to the delivery of 3,200 units to the west of Eynsham and the New Garden Village to create a rural service centre. Land to the west of Eynsham represents an urban extension of an existing rural service centre. One therefore queries why other rural service centres like Bampton cannot be considered for a higher level of growth than the 160 already committed, especially where there are no environmental designations affecting its future growth.

Suggested changes to the distribution of housing in relation to Policy H1 are suggested in the context of modification 27 in an accompanying representation.

Summary

With regards to Proposed Modification 24, the increase in the housing requirement for the plan period 2011-2031 is supported by CALA. However, concern is raised in relation to the wording which acts as a blanket policy restricting further growth in Bampton due to its existing commitments and apparent constraints.

Overall, CALA are of the view that the Proposed Modifications to the emerging Local Plan cannot be declared sound in their current format.

<td>&gt; SECTION 5 - PROVIDING NEW HOMES &gt; MAIN 24</td>
<td>Modifications to Policy H1 set out that provision will be made for a total of 15,950 homes in the period 2011-2031. The Consortium agree with the principle of providing this level of new homes as a minimum threshold for housing delivery in the District over the plan period. The Consortium further agree to the principle of providing at least 2,750 new homes at Eynsham over the period 2021-2031 to meet Oxford City's unmet housing needs, to be delivered in part through a new Garden Village to the north of the A40. The Consortium therefore agrees with the thrust of the proposed main modification set out at Paragraph 5.21 to provide at least 2,200 new homes at the proposed Eynsham Garden Village by 2031.</td>

<td>&gt; SECTION 5 - PROVIDING NEW HOMES &gt; MAIN 24</td>
<td>MAIN 24 – Policy H1 – Amount and Distribution of Housing West Oxfordshire District Housing Needs The Inspector’s Preliminary Findings were published in December 2015, following the initial EIP hearing sessions. Part 1 of the Findings outlined the Inspector’s concerns in respect of the housing requirement, the needs of Oxford City and the Duty to Co-operate and identified the work streams which would need to be undertaken to address the matters raised. As part of the process to address the Inspector’s concerns and to ensure the Plan is sound, the Council held a consultation on a SHMA Partial Update in July 2016. The SHMA Partial Update concluded that the objectively assessed need for the District was 568dpa over the period 2011-2031. Although an increase above the 525dpa which had been proposed in the submission version of the Local Plan, this continued to fall significantly short of the 661 dpa advocated in the Oxfordshire SHMA (2014). The Council’s proposed modifications now seek to meet the full mid-point OAN figure advocated in the Oxfordshire SHMA, with a total of 13,200 new dwellings to be delivered over the Plan period 2011-2031 to meet the needs of West Oxfordshire. The preparation of a joint SHMA for the whole of the Oxfordshire HMA is considered to have been a significant positive step which recognises the interrelated nature of the individual local authority areas and meets the requirements of the Duty to Cooperate. The soundness of the OANs advocated in the Oxfordshire SHMA have already been the subject of rigorous testing through both the Cherwell and Vale of White Horse Local Plan Examinations and have been confirmed to be a robust and sound basis on which to base those respective Local Plan’s, as shown in the latest Vale of White Horse Inspector’s report (albeit with a 2 year ‘review clause’). We support the proposed modification to make provision for the full OAN of the District, which ensures a consistent and robust baseline is being used in order to plan for the needs of the County and is considered to be a sound basis for the preparation of the Plan. Oxford City Unmet Needs In addition to the 13,200 homes planned to be provided in order to meet the needs of West Oxfordshire, a further 2,750 homes are planned to meet Oxford City’s identified needs. The proposed 2,750 homes figure represents the recently agreed apportionment by the members of the Oxfordshire Growth Board, with the exception of South Oxfordshire District Council, at its meeting on 26th September 2016. The proposed apportionment had been determined on the basis of a report from Land Use Consultants (LUC), which provided a spatial assessment of options for accommodating the unmet needs of the City, as well other</td>
</tr>
</tbody>
</table>
evidence relating to economic, education and transport considerations.

It had been expected that all the authorities would confirm a Memorandum of Cooperation at the meeting on the 26th September to the effect that the six authorities 'agree' that the apportionment figures "represent the agreed apportionment". However SODC was unwilling to agree to the Memorandum on the basis that the areas of search within their administrative area included in the LUC report had not been put forward by the District Council.

Although the recognition by WODC of the need to make provision to assist in meeting Oxford City's unmet needs is supported, there remains significant uncertainty as to whether the 2,750 dwellings proposed in West Oxon is in fact the correct level of development to be planning for, particularly in the absence of a Sustainability Appraisal relating to the Growth Board’s apportionment.

The 2,750 dwelling figure is based upon the apportionment proposed by the Oxfordshire Growth Board and agreed by the majority of the LPAs, which is itself based on an assumption that the unmet needs of Oxford City totals 15,000 dwellings. This 15,000 dwellings figure has yet to be publically tested, and we envisage that the West Oxon EiP will be the first time this occurs. Notably, the Oxford City First Steps consultation (August 2016) itself appears to identify a shortfall of 22,000 rather than the 15,000 which was planned for by the Growth Board. There therefore remains a question as to whether the high level apportionment figure is correct, and consequently what implications there may be for the West Oxon Local Plan.

In refusing to agree the apportionment proposed by the Growth Board, South Oxfordshire did raise that in their view Oxford City may be able to accommodate more of its own needs than is currently being allowed for. Whether this would equate to the additional 7,000 dwellings which appear to potentially be unaccounted for at this stage, and additionally reduce the currently proposed apportionment figures would appear to be unlikely. At this stage therefore as a minimum there are 4,950 dwellings (the proposed apportionment for South Oxfordshire) for which provision is not being currently being made for within Oxfordshire, and this could potentially increase to 11,950 dwellings, if the unmet need is ultimately determined to be 22,000 dwellings rather than 15,000.

Following the Growth Board meeting on 26th September, there has been no published update as to how matters are to be progressed following the failure to agree the apportionment figures with all authorities. As such it is unclear, leaving aside the question of the true scale of Oxford City’s unmet needs, how the additional 4,950 (or at least a proportion of this assuming South Oxfordshire would be willing to accommodate some of this need) is to be provided for.

Notably the Growth Board papers for the 26th September meeting highlighted that "it remains for individual authorities to test the SHMA results and its application in their respective local circumstances and to determine whether their Local Plans can sustainably accommodate development to meet the housing need identified.” The proposed apportionment has not been subject to Sustainability Appraisal and as such there remains uncertainty that having agreed to the apportionment figures whether these authorities will in fact be able to deliver these requirements.

As such, whilst we commend West Oxfordshire for agreeing to accommodate 2,750 dwellings of Oxford City’s unmet needs and consider it to be a pro-active response which potentially complies with the Duty to Cooperate, due to the remaining uncertainties we consider a commitment should be made in the Plan to an early review of the Plan. This would provide a commitment for an early review should a need to provide for an increased number of dwellings to meet the needs of Oxford City be demonstrated. Such a commitment

MM785 | Messrs Walker, Smith, Summerfield | Walker, Smith, Summerfield | 2163 | >SECTION 5 PROVIDING NEW HOMES > MAIN 24 | was included in the Proposed Submission Draft of the Local Plan, and it is considered that similar wording should be reinterted into the Plan to ensure it is justified and effective. We note that this approach was taken in the Vale of White Horse.

Other Matters

The Proposed Modifications to Policy H1 as currently drafted state that "provision will be made for a total of 15,950 homes in the period 2011 - 2031." This contrasts with the wording of the Submission Version of the Plan which stated that "West Oxfordshire will provide at least 10,500 new homes between 1st April 2011 and 31st March 2031."

Paragraph 14 of the NPPF makes clear that "Local Plans should meet objectively assessed needs, with sufficient flexibility to adapt to rapid change." The Policy as currently drafted does acknowledge that:

"This is an indicative distribution and should not be taken as an absolute target for each subarea or maximum ceiling to limit development".

Additional sites may for example be identified through Neighbourhood Plans increasing housing supply above that which has been identified and planned for in this Local Plan.

Furthermore it is noted that Policy H2, discussed in turn below, does state that the target is to deliver "at least 15,950 new homes." As such, for consistency and to ensure the Plan is justified and effective, we would recommend that the proposed policy wording is amended to state that:

"Provision will be made for a minimum of 15,950 homes in the period 1st April 2011 to 31st March 2031."

We comment elsewhere in this Statement on the Council's proposed additional allocations to meet the housing requirement and how the requirement is to be distributed over the Plan period and as such we do not repeat these comments here.

At paragraph 5.5 of the Inspector's Preliminary Findings Part 1, it is stated that 'the SHMA's recommended figure of a need for 274 affordable dwellings per annum is justified for the period 2013-2031'. The SHMA indicates (Table 89) that to meet the objectively assessed affordable housing need 685 dwellings per annum should be planned for over the plan period. Main modifications (Main 22) indicates that the 'mid-point figure is 660 homes per year and this is defined as the objectively assessed need'. Main modifications (Main 24) to Policy H1 state that, utilising the mid-point figure of 660 homes per year, provision will be made for 13,200 homes to meet West Oxfordshire's identified housing need and a further 2,750 homes to meet Oxford City's housing need.

At paragraph 5.11 of the Inspector's Preliminary Findings Part 1, the Inspector raises concerns that an uplift in market housing has not been considered to meet the affordable housing need set out within the SHMA.

It is reasonable to conclude the vast majority of affordable housing delivery will occur as a proportion of open-market schemes and is therefore extremely dependent for its delivery upon market housing being developed. The SHMA Update, dated November 2016, indicates at paragraph 6.6 that the total net need for affordable housing is 275 dwellings per annum. Furthermore, paragraph 6.7 concludes the Council should consider an appropriate uplift to address affordable housing need.

Paragraph 159 of the NPPF clearly states that 'Local planning authorities should have a clear understanding of...

<td>Mrs Jacobs</td>
<td>2187</td>
<td>&gt; SECTION 5 - PROVIDING NEW HOMES &gt; MAIN 24</td>
<td>housing needs in their area. They should: ... address the need for all types of housing, including affordable housing. The WOLP does not provide for an uplift beyond that of the SHMA mid-point of 660 dwellings per annum. The strategic development areas are likely to provide less than the affordable housing policy requirements due to significant costs associated with the delivery of infrastructure. The Planning Practice Guidance advises at paragraph 029 (Ref ID: 2a-029-20140306) how plan makers should use the results of the affordable needs assessment: 'The total affordable housing need should then be considered in the context of its likely delivery as a proportion of mixed market and affordable housing developments, given the probable percentage of affordable housing to be delivered by market housing led developments. An increase in the total housing figures included in the local plan should be considered where it could help deliver the required number of affordable homes.' An uplift in the objectively assessed housing need should be considered by the Council to deliver a greater number of affordable homes to ensure the affordable housing needs of the District are met over the plan period. There is currently no careful or balanced consideration by the Council of the extent to which the gap in affordable housing provision could be narrowed by an uplift in market housing. Overall Housing Number in the Plan We support Main Modifications (MM) 22, 24 and 30 which propose that the Local Plan should provide for at least 15,950 homes in the period 2011-31, including 13,200 to meet the district’s needs and 2,750 homes as West Oxfordshire’s contribution to providing for Oxford’s unmet housing need. Soundness Reason: Positively Prepared WODC propose to use the figure of 660 homes pa as their OAN which is the mid-point figure in the SHMA. This would be sufficient to support forecast economic growth and would help to meet affordable housing needs. (For information we do not accept Peter Brett’s rebuttal to our criticisms of the methodology used in the Oxfordshire Strategic Housing Market Assessment Partial Update. It remains our view that at least 598 homes p.a. are needed to meet the labour force requirement. It is not clear how WODC justify adopting the SHMA figure of 660pa as their OAN – presumably they have decided to uplift the number of homes Peter Brett identified as necessary to support economic growth to ensure new housing makes a significant contribution to the district’s identified affordable housing needs). The inclusion of 2,750 homes for Oxford’s unmet need is in line with the Growth Board’s apportionment of unmet need and reflects the terms of the Growth Board Memorandum of Cooperation1 signed by five of the Oxfordshire councils including WODC and the County Council. The figure has been tested at a high level through the post SHMA process and shown to be deliverable.</td>

<td>MM110</td>
<td>Lagan Homes</td>
<td>Lagan Homes</td>
<td>-</td>
<td>-</td>
<td>275</td>
<td>&gt; SECTION 5 - PROVIDING NEW HOMES &gt; MAIN 24</td>
<td>INTRODUCTION AND SUMMARY i. These representations are submitted in response to the West Oxfordshire Local Plan 2031 – Proposed Modifications Consultation, December 2016 (WOLP 2031 Modifications). They are made by Edgars Limited on behalf of Lagan Homes who have land under their control off School Hill, Minster Lovell. The land extends to 2.5ha and is identified on the plan attached as Appendix 1 to these representations. ii. Lagan Homes object to Table 4.1 (Main Modification, MM, 14) Policies H1 (MM24), H2 (MM29 and MM30) and WIT4 (MM115) on the basis that insufficient sites for housing have been identified to provide for a five year supply of housing in accordance with national policy.</td>
</tr>
</tbody>
</table>
iii. Edgars Limited have prepared representations on behalf of a number of clients which demonstrates that a five year land supply cannot be demonstrated when appropriate assumptions are used in accordance with national planning policy and guidance. These representations conclude that only a 2.7 year supply can be demonstrated. Edgars consider that additional non-strategic sites are required to be allocated to ensure sufficient housing land supply.

iv. Land at School Lane is under the control of Lagan Homes, is available now and capable of delivering around 25 homes in a sustainable location to help boost housing supply, ensure a 5 year supply of housing between 2016-2021 and provide robustness to ensure that the housing requirement of the modified WOLP 2031 is delivered.

v. Lagan Homes object to Table 4.1 and the reference to Minster Lovell ‘south of the Burford Road’ (MM14). There is no reason why Land at School Lane and north of the Burford Road is in anyway less sustainable in locational terms than other land on the edge of the village.

vi. The following representations provide further information on the Land at School Lane and should be read in conjunction with Edgars Limited’s representations regarding housing supply which are not repeated in detail in these representations.

1.0 LAND AT SCHOOL LANE, MINSTER LOVELL
1.1 Lagan Homes object to Table 4.1 (Main Modification, MM, 14) Policies H1 (MM24), H2 (MM29 and MM30) and WIT4 (MM115) on the basis that the modified plan has not identified sufficient housing land to provide for a 5 year supply of housing and that Land at School Lane should be allocated for around 25 homes to help address this deficiency.

Site and Surrounding Area

1.2 The site lies adjacent to the village of Minster Lovell and the B4047 Burford Road some 3 miles (5km) west of Witney and 4 miles (6km) north of Carterton. There is an off-road cycle path to Witney (within reasonable cycling distance) and an hourly bus service to Witney. The village also has a number of amenities including a small shopping parade, Post Office, Primary School, Public House and Butcher. There are also several businesses along the Brize Norton Road.

1.3 The site is a single 2.5ha open grassland field immediately north of the Burford Road and west of School Lane. It is part of the north facing slope of the Windrush Valley. A site plan is attached at Appendix 1.

1.4 The site lies some 1m below the Burford Road and is screened by a strong hedgerow along the road frontage such that the open nature of the site is not readily perceptible from this frontage.

1.5 On the southern side of Burford Road is some modern development which is also mostly set back from the road frontage. The White Hart Public House (Listed Grade II) along with the War Memorial and Methodist Church frame the Brize Norton Road junction opposite the site. 1.6 There is a farm access in the south western corner and a strong hedgerow bounds to the west along with a Thames Water pumping station.

1.7 School lane bounds to the east. The lane lies some 1.5m below the site and views are filtered through by
boundary vegetation.

1.8 School Lane leads to Little Minster. College Farm within Little Minster lies at the southern end of the site and there is a scattering of modern and historic buildings along School Lane and School Hill.

1.9 School Lane and College Farm fall within a Conservation Area. A Conservation Area Appraisal has been prepared by the Council. The site is not identified in the appraisal as where there is a notable sensitive view into or out of the Conservation Area. Buildings adjacent the site are identified as Locally Listed including College Farm and the Old School.

1.10 The site forms part of the northern slopes of the Windrush Valley and falls within the Cotswold AONB. The West Oxfordshire Landscape Assessment (WOLA) identifies the site as part of the Upper Windrush Character Area and part of Semi-Enclosed Valley Side Farmland which is noted to be sensitive to views within an across the valley but where there may be limited opportunities to accommodate small scale development within a strong landscape structure. The settlement pattern identifies scattered villages along the valley with Charteville (New Minster) a notable exception being sited on higher land.

1.11 The site is well screened from the Burford Road, but there are some more immediate views through boundary hedgerows from School Lane. The site is appreciable but not prominent in middle distance views back from the opposite side of the valley just south of Ashhall Leigh. From here existing dwellings at Little Minster and north of the Burford Road are well screened by existing trees.

1.12 There is no planning history of direct relevance to the site. The site lies within Flood Zone 1 Low Risk.

1.13 Access is available to School Lane and to the Burford Road. Further technical work is underway to establish the most appropriate access point.

1.14 Lagan Homes have only recently acquired an interest in the site and as such the site has not previously been submitted to the Council or considered in the Strategic Housing and Economic Land Availability Assessment (SHELAA). Key Planning Site Considerations

1.15 Lagan Homes are in the process of undertaking technical and development design work to inform a planning application and this is likely to be available in advance of further WOLP 2031 examination hearings. Without prejudice to this further work, the following planning considerations are identified as of particular relevance to the potential allocation of the site.

The principle of housing development in Minster Lovell, north of the Burford Road

1.16 Minster Lovell is identified as a village in the Local Plan 2031. Draft WOLP Policy H2 permits new housing adjacent to villages to meet housing needs. As such housing development on the site would be acceptable in principle.

1.17 Draft Policies H2 and WIT4 seek delivery of 4,400 homes in the Witney Sub Area including Minster Lovell. Delivery is proposed through three Strategic Development Areas (SDAs - West, East and North Witney) each with strategic
<table>

<td>1.18 There is residual windfall requirement of 304 homes within the Witney Sub–Area.</td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td>1.19 In Edgars opinion, there is a significant risk of delays in delivery on SDAs which will likely result in continuing housing supply deficits. There is a need to address deficiencies in the 5 year housing supply. Given the long lead in times of SDAs, addressing the current supply deficiencies is best achieved through allocating additional non-strategic developments such as Land at School Lane, Minster Lovell.</td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td>1.20 Land at School Lane lies adjacent to Minster Lovell, close to amenities and public transport links. The village bus stops, public house and shops are located on the opposite site of the Burford Road to the site in very close proximity. The village school lies within 500m to the south. The site is also within cycling distance of the West Witney employment areas (2km) and Witney Town Centre (5km). In locational terms, it is sustainable. Indeed, the site lies closer to village amenities than the proposed allocation west of the village.</td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td>1.21 It is noted that Table 4.1 of the plan includes Minster Lovell as a village within the settlement hierarchy but this has been modified to (MM 14) to include reference to Minster Lovell ‘south of the Burford Road’. Lagan Homes object to this modification.</td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>

<tr>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td>1.27 Views of the site are already filtered by vegetation and topography. The WOLA identifies that this area of the Windrush Valley can accommodate development within a strong landscape structure. Indeed, in views from across the valley, existing landscape features act as a screen to existing dwellings on the Burford Road.</td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td>1.28 The setting of the Conservation Area and AONB can be preserved and enhanced through a low density</td>
</tr>
</tbody>
</table>
but high quality development within a strong and extensive landscape structure. Although the extent of the land is 2.5ha, only around 25 dwellings are proposed leaving significant scope for open space and landscaping.

1.29 In Edgars opinion, a development of this scale does not comprise ‘major’ development for the purposes of NPPF paragraph 116 and that a development within a strong landscape structure will not have a significant impact on the landscape and scenic beauty of the wider AONB.

1.30 A low density development within a strong landscape structure will also respects the settlement pattern and separate identities of Little Minster and Minster Lovell.

1.31 Although further work is being undertaken, Edgars consider that development can be achieved on the site which makes an important contribution to meeting housing land supply in a sustainable location, without significant impact on the settlement character, AONB or adjoining Conservation Area.

1.32 Further detailed technical information and development design work is likely to be available during the next stages of the WOLP 2031 Examination.

<td>Mrs Kedward</td>
<td>419</td>
<td>&gt; SECTION 5 - PROVIDING NEW HOMES &gt; MAIN 24</td>
<td>I believe the Local Plan to be unsound with respect to the increase in housing numbers in the Chipping Norton sub-area from 1800 to 2400 (Main 24) and in particular the increase in numbers at the Tank Farm site from 600 to 1400 (Main 27) for a number of reasons, which I set out below.</td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td>- Firstly, there is mention in Main 24 of the new distribution meeting an identified housing need. However, Bellway Homes, who have now opened their development on Walterbush Road which consists of a few hundred homes, are really struggling to sell their houses. This would suggest that there is not a demand in Chipping Norton of the numbers expressed in the Local Plan.</td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td>- Secondly, the infrastructure in Chipping Norton is already struggling to meet the demands of the current population and cannot sustain the extra numbers suggested in the modifications. On rainy days, the sewers in the middle of the town near the Fox Hotel, back up and flood the road with unsanitary water, which is detrimental to health. The town fire service has been downgraded to one fire engine, and the community hospital has also recently been downgraded and is no longer run by the NHS.</td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td>- Another serious concern regarding infrastructure is the extra pressure that would be put on the town’s roads. The road system in Chipping Norton is unfortunately flawed as both ends of the main road through town suffer from junctions that are difficult to navigate and very small disruptions can result in the traffic backing up all the way through town. The proposed eastern link road (Main 62) will do very little to relieve the pressure on the centre of town. I frequently run in the Chipping Norton area and it is clear that the vast majority of through-traffic is on the A44 and very little in on the A361. Therefore traffic using the link road will predominantly be coming back into town either on Burford Road or London road and will enter the town at the difficult junctions mentioned previously. Whilst a small amount of traffic may be taken out of the town centre, the figures in the Local plan are clearly inflated and in no way will the link road mitigate the extra traffic caused by the new proposed housing numbers. A ten minute traffic survey is unlikely to give accurate results, and it is not clear what the extra restriction measures mentioned in the Plan might be, and whether they are at all feasible. Given that the Town Council has been trying to reduce air pollution in Chipping Norton for many years, this would suggest that there are no restriction measures that could be enforced, otherwise they would already be in place.</td>

<td></td>
<td></td>
<td></td>
<td>&gt; SECTION 5 - PROVIDING NEW HOMES &gt; MAIN 24</td>
<td>Regarding the allocation of the 15,950 new homes, I am impressed by the idea presented by Roger Thomas in 'The Witney Gazette' of 30 November, namely: &quot;if you take every village in West Oxfordshire and build a dozen houses, you'll get a lot of houses but without a lot of problems . . . smaller developments instead of larger ones would make everybody happy, because otherwise it's going to ruin a lot of the villages in West Oxfordshire.&quot; This is a good starting-point. As it happens, some places are already planning more houses, notably Eynsham (see earlier drafts of the Eynsham Neighbourhood Plan); so if Roger Thomas's suggestion looks as though it can't make up the numbers, the gap could be filled by pre-existing neighbourhood plans in Eynsham and elsewhere. This approach would be far less of a challenge to sustainability.</td>
</tr>
<tr>
<td>MM315</td>

<td>Gwinn</td>
<td>566</td>
<td>&gt; SECTION 5 - PROVIDING NEW HOMES &gt; MAIN 24</td>
<td>his modification increases significantly the number of properties to be built in the Chipping Norton SDA. This is backed up by unsound evidence and is not appropriate to the existing community. In particular:</td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td>a) Part of the Vision in section 3.2 is to &quot;play a role in helping to meet wider needs, without significant change to the intrinsic character of the District.&quot; Increasing the population of the town by 50% will inevitably change its character. Especially as the driver for the increase is the need to house those working in Oxford, so turning a working town into a dormitory town.</td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td>b) Core Objective CO2 is to &quot;Ensure that new developments are suitably located and well designed to protect and enhance the individual form, character and identity of our towns and villages as well as contributing to the quality of life in West Oxfordshire.&quot; This fails for the same reasons as the Vision statement.</td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td>c) Core Objective CO3 is to &quot;Promote safe, vibrant and prosperous town and village centres and resist proposals that would damage their vitality and viability or adversely affect measures to improve those centres.&quot; Whilst a modest increase in population will help the town, this huge increase, aimed at commuters into Oxford, will be detrimental. The plan mentions that the proposed development is within walking and cycling distance of the town centre, although it offers no evidence to support this. I visit the town centre most days and have never seen more than one bicycle in the cycle parking there. The area around the town is</td>
<td></td>
</tr>
</tbody>
</table>
too hilly for most of the population to cycle. A straw poll of people living in the Parkers Circus estate (which is closer to the town centre than is the SDA) indicates that none walk when going into town to do their shopping. These were all fit, active people. The town centre is also not safe. In the last few years, people have been killed by passing traffic while on the pavement at Horsefair. The proposed link road appears to be a "road to nowhere" as the majority of traffic (especially commercial traffic) enters or leaves the town on the A44 Moreton-in-Marsh road. This will become even more the case if a weight restriction is put on the ancient bridge in Burford, as has been suggested. In that event, no heavy vehicles will use this relief road. This increase in traffic will also affect air quality, which is already at illegal levels.

d) Core Objective CO4 is to "Locate new residential development where it will best help to meet local housing needs and reduce the need to travel." Policy T1 – Sustainable Transport says that "Priority will be given to locating new development in areas with convenient access to a good range of services and facilities and where the need to travel by private car can be minimised, due to opportunities for walking, cycling and the use of public transport, particularly where this would help to reduce traffic congestion on the routes around Oxford and the Air Quality Management Areas at Witney and Chipping Norton." The increase proposed in the modification is mainly to serve Oxford. There is no train link to Oxford. The bus to Oxford takes over an hour and is infrequent. The bus service from Kingham Station does not wait if a train is delayed, resulting in a possible two-hour wait for the bus that meets the next train. I see no solution to this problem as buses have to keep to timetables. Everyone I know has stopped using this bus, resulting in more car journeys and a station car park that can’t cope. The alternative is to travel to the station by driving through country lanes and the village of Churchill in contravention of Policy T1. The increased local traffic will make air quality worse. There is nothing in the proposed plan to solve these problems.

e) The proposed plan states in para 7.74 that "In Chipping Norton public car parking spaces in the town centre are insufficient to meet current needs." There is nothing in the proposed plan to solve this problem.

<td>680</td>
<td>&gt; SECTION 5 - PROVIDING NEW HOMES &gt; MAIN 24</td>
<td>Housing Target West Oxfordshire’s revised housing target has been increased from 10,500 to 15,950. This does now appear to fully meet their OAN target from the SHMA together with the portion of Oxford’s unmet housing need (2,750) to 2031 agreed at the Growth Board Meeting in September 2016. This approach does properly reflect the success of the joint working arrangements between the City Council and West Oxfordshire. Engagement between the two Councils has continued through the bilateral joint work. This serves to show how West Oxfordshire are fully meeting their ‘duty to co-operate’ with the City Council. Support: In addition support in principle is given to Main Mod 24 Policy H1 (Amount and distribution of housing) in seeking to positively meet the housing needs of West Oxon together with an agreed proportion of the ’unmet’ needs of Oxford. Objection: The principle concern however is deliverability. There does seem to be a real challenge ahead for West Oxfordshire to be able to deliver the number of housing being proposed, based on past housing trends and delivery rates.</td>

<td>Andrew Garbutt</td>
<td>Mr</td>
<td>Garbutt</td>
<td>735</td>
<td>&gt; SECTION 5 - PROVIDING NEW HOMES &gt; MAIN 24</td>
<td>Sub-Areas Ø Witney Sub-Area Witney appears to have suffered a higher increase in houses than Carterton in this latest draft of the Plan. However, the target is now more in line with the town's size and facilities. We do not support the high target planned at Witney, as we do not support the total target at all. However, we are aware that Witney residents wish for some of their target to be diverted to Carterton. This is not equitable, as explained below and if Witney North is not suitable, then another site in Witney must be found to make up the shortfall. Ø Eynsham Sub-Area See above regarding Oxford overspill. Ø Other Sub-Areas We have no specific comments, as we don't know enough about the sites, but we would say in general that historic rural character must be maintained. We would also point out that Burford (although on the A40) is without a decent public transport service, whereas other centres have train stations and good bus links. This must be taken into account.</td>

<td>&gt; SECTION 5 - PROVIDING NEW</td>
<td>3. OVERALL STRATEGY AND PROVIDING NEW HOMES Policy OS2 – Locating Development in the Right Places (MM16)</td>
</tr>
</tbody>
</table>
3.1 The Submission Draft Local Plan (May 2015) contains core objectives to help guide the development of the District. Core objectives C01, C02 and C04 place significant emphasis on locating development in appropriate locations where it can meet local needs and reduce the need to travel. These core objectives are taken forward into a defined settlement hierarchy and a development strategy set out by Policy OS2 - Locating Development in the Right Places, which is effectively the plans spatial distribution policy. Policy OS2 is therefore clearly a major policy which goes to the very heart of the Local Plan. Policy OS2 is subject to a major modification (Modification 16).

3.2 Our principle issue with the revised policy is the extent to which it has been modified which results in a very different plan to what was submitted. We have raised a number of issues with regard to the manner in which this policy has been modified from a procedural perspective in Section 2.

3.3 Regarding the revised Policy OS2 itself, we continue to support the identification of the three main service towns as the principle focus for development, including Chipping Norton. However, it is now clear that Eynsham will effectively become a settlement that will have a higher population than Chipping Norton and Carterton. In effect, it will become the second largest settlement in the District. We do not believe this is consistent with the long-established ‘three towns’ strategy and this therefore has implications for the Local Plan as a whole.

3.4 Whilst we note that a wider dispersed option was tested through the SA, there does not appear to have been an option that looked specifically at dispersed growth option in the eastern part of the district, which could have considered For example, an alternative option to targeting growth towards the settlement of Eynsham could have been to consider additional growth spread across the villages to the Eynsham-Woodstock sub area of the District and perhaps areas to the east of Witney, Duckington, Hailey, Finstock, Stonfield and Charlbury. Dispersed growth across these settlements would appear to be a potential option to meet Oxford’s unmet needs.

3.5 ASL support the recognition that further allocations may need to be made through Neighbourhood Plans in relation to villages but note that should it become evident that the Local Plan is not delivering, there will need to be sufficient policies and triggers within this Local Plan to require an early review, as the burden to meet needs cannot simply be left to local communities.

Policy H1 – Amount and Distribution of Housing (MM21 to MM24)

3.6 Regarding MM21, we do not dispute the position that the level of growth needs to considered against associated impacts, but we are not convinced that ‘growth needs to be managed in order to prevent significant change to the intrinsic character of the District’ is the correct term to use here as the barometer to which impact will be considered. Indeed, the modified Plan proposes significant change to the character of some areas (i.e. Eynsham). The test has to be if the meeting needs would significantly and demonstrably outweigh the benefits, as set out at paragraph 14 of the NPPF.

3.7 With regard to the overall quantum of housing now being proposed as part of MM22, we can confirm that we support the evidence base conclusions on housing requirements, which have been placed within the Modified Policy H1 (MM24). ASL support the 15,950 dwelling requirement overall, which comprises of 13,200 homes for West Oxfordshire and 2,750 homes for Oxford’s unmet needs that are now enshrined in this policy.

3.8 ASL do not take specific issue with the proposed distribution of new homes. Indeed, we support the requirement for the Chipping Norton sub area at 2,400 new homes over the plan period and notwithstanding
our points regarding statutory requirements in relation to the preparation of a Local Plan (as set out in Section 2), we do not take particular issue with the spatial distribution that is being proposed, we just do not feel such a major change can be enveloped into the current process without serious risk of by-passing key requirements of the law when preparing a Local Plan. Put simply, we thing the changes have gone a step too far to be incorporated in to this plan as modifications post submission of the plan.

3.9 The increased housing requirement within each of the districts sub-areas is set out in Table 1 (ATTACHED). The housing requirement for the District has gone up by 51%, which has then led to significant changes to the spatial distribution of development.

3.10 The Eynsham-Woodstock sub-area requires 243% more homes that originally envisaged within the Submission Draft Local Plan, which perfectly highlights the substantial change to the distribution of development that is now being promoted.

3.11 Chipping Norton’s requirement has also increased by 50% and as noted above we support this as it brings it more in line with requirements for the other three main towns (whilst noting Chipping Norton is the smallest of the three towns). However, as noted in Section 2, in proposing this increase in housing numbers for the settlement, the Council have only considered one option for delivering this number of new homes through the SA by increasing the size of the Tank Farm Site (SDA). 

3.12 We note the other areas have not increased as much and even in those instances, we note the SA has tested various site options for the increased growth.

3.13 In terms of other issues with the revised policy, we object to the notion that the Garden Village should be regarded as a free standing settlement. It isn’t and is clearly related and connected to Eynsham, with the site and urban boundaries adjoining and the entirety of the site falling within Eynsham Parish.

3.14 We continue to support the final paragraph in Policy H1 which confirms the Council will monitor development annually to ensure that the overall strategy is being delivered.

The overall housing numbers in the Local Plan fail to take account of the 467 dwellings that have been approved on appeal during 2016 (source REPORT OF THE HEAD OF PLANNING AND STRATEGIC HOUSING ON PLANNING APPEALS PERFORMANCE AND LESSONS FROM 2016 dated 21 November 2016 submitted to WODC Uplands subcommittee meeting on 12th December 2016)

Major housing schemes approved on appeal in 2016 - 467 dwellings in total:
Witney Rd, Long Hanborough 169 dwellings
Newland St, Eynsham 13 dwellings
High St, Milton 62 dwellings
Eynsham Nursery and Garden Centre 77 dwellings
Land at New Yatt Rd, N Leigh 76 dwellings
Land east of Nethercote Road, Tackley 70 dwellings
In addition, since 1st September 2016, WODC Planning Committees have approved a further 663 dwellings that are not included in the WODC Main modifications of the Local Plan 2031: Major housing schemes approved by WODC Planning Committees

</tr>
</tbody>
</table>

- Since 1 Sep 2016 – 663 in total
- Land at Downs Road, Curbridge 270 dwellings
- Land west of Thornbury Road, Eynsham 160 dwellings
- Land to the Rear of 15 & 16 Woodstock Road, Charlbury 13 dwellings
- Land between Wychwood House and Malvern Villas, Freeland 41 dwellings
- Land north of New Yatt Road, North Leigh 40 dwellings
- Land off Well Lane, Curbridge 14 dwellings
- Land north of Springfield Oval * 75 dwellings
- Land at former Stanton Harcourt airfield, Stanton Harcourt* 50 dwellings
- * Officer recommendation is to approve subject to Legal Agreement

A total of 1,130 dwellings are identified above - none of which are captured in the Main Modifications to WODCs Local Plan 2031. This additional volume demonstrates that a development of the magnitude of North Witney is not required to meet the overall housing requirements of the Local Plan.

As the most problematical and contentious element of plan is the North Witney housing proposal for 1,400 houses, it is proposed that this development is preferentially chosen for deletion from WODC’s Local Plan 2031 and the balance of 270 houses reallocated to the South Witney site.
2.7 The Inspector's Preliminary Findings were published in December 2015 following the initial EIP hearing sessions. Part 1 of the Findings outlined the Inspector's concerns in respect of the housing requirement, the needs of Oxford City and the Duty to Cooperate and identified the work streams which would need to be undertaken to address the matters raised.

2.8 As part of the process to address the Inspector's concerns and to ensure the Plan is sound, the Council held a consultation on a SHMA Partial Update in July 2016, which our clients responded to. The SHMA Partial Update concluded that the objectively assessed need for the District was 568dpa over the period 2011-2031. Although an increase above the 525dpa which had been proposed in the submission version of the Local Plan, this continued to fall significantly short of the 661 dpa advocated in the Oxfordshire SHMA (2014).

2.9 The Council's proposed modifications now seek to meet the full mid-point OAN figure advocated in the Oxfordshire SHMA, with a total of 12,200 new dwellings to be delivered over the Plan period 2011-2031 to meet the needs of West Oxfordshire. The preparation of a joint SHMA for the whole of the Oxfordshire HMA is considered to have been a significant positive step which recognises the interrelated nature of the individual local authority areas and meets the requirements of the Duty to Cooperate. The soundness of the OANs advocated in the Oxfordshire SHMA have already been the subject of rigorous testing through both the Cherwell and Vale of White Horse Local Plan Examinations and have been confirmed to be a robust and sound basis on which to base those respective Local Plan's, as shown in the latest Vale of White Horse Inspector's report (albeit with a 2 year 'review clause').

2.10 We support the proposed modification to make provision for the full OAN of the District, which ensures a consistent and robust baseline is being used in order to plan for the needs of the County and is considered to be a sound basis for the preparation of the Plan.

Oxford City Unmet Needs

2.11 In addition to the 12,200 homes planned to be provided in order to meet the needs of West Oxfordshire, a further 2,750 homes are planned to meet Oxford City's identified needs. The proposed 2,750 homes figure represents the recently agreed apportionment by the members of the Oxfordshire Growth Board, with the exception of South Oxfordshire District Council, at its meeting on 26th September 2016. The proposed apportionment had been determined on the basis of a report from Land Use Consultants (LUC), which provided a spatial assessment of options for accommodating the unmet needs of the City, as well other evidence relating to economic, education and transport considerations.

2.12 It had been expected that all the authorities would confirm a Memorandum of Cooperation at the meeting on the 26th September to the effect that the six authorities 'agree' that the apportionment figures "represent the agreed apportionment". However SODC was unwilling to agree to the Memorandum on the basis that the areas of search
2.13 Although the recognition by WODC of the need to make provision to assist in meeting Oxford City's unmet needs is supported, there remains significant uncertainty as to whether the 2,750 dwellings proposed in West Oxon is in fact the correct level of development to be planning for, particularly in the absence of a Sustainability Appraisal relating to the Growth Board's apportionment.

2.14 The 2,750 dwelling figure is based upon the apportionment proposed by the Oxfordshire Growth Board and agreed by the majority of the LPAs, which is itself based on an assumption that the unmet needs of Oxford City totals 15,000 dwellings. This 15,000 dwellings figure has yet to be publically tested, and we envisage that the West Oxon EiP will be the first time this occurs. Notably, the Oxford City First Steps consultation (August 2016) itself appears to identify a shortfall of 22,000 rather than the 15,000 which was planned for by the Growth Board. There therefore remains a question as to whether the high level apportionment figure is correct, and consequently what implications there may be for the West Oxon Local Plan.

2.15 In refusing to agree the apportionment proposed by the Growth Board, South Oxfordshire did raise that in their view Oxford City may be able to accommodate more of its own needs than is currently being allowed for. Whether this would equate to the additional 7,000 dwellings which appear to potentially be unaccounted for at this stage, and additionally reduce the currently proposed apportionment figures would appear to be unlikely. At this stage therefore as a minimum there are 4,950 dwellings (the proposed apportionment for South Oxfordshire) for which provision is not being currently being made for within Oxfordshire, and this could potentially increase to 11,950 dwellings, if the unmet need is ultimately determined to be 22,000 dwellings rather than 15,000.

2.16 Following the Growth Board meeting on 26th September there has been no published update as to how matters are to be progressed following the failure to agree the apportionment figures with all authorities. As such it is unclear, leaving aside the question of the true scale of Oxford City's unmet needs, how the additional 4,950 (or at least a proportion of this assuming South Oxfordshire would be willing to accommodate some of this need) is to be provided for.

2.17 Notably the Growth Board papers for the 26th September meeting highlighted that "It remains for individual authorities to test the SHMA results and its application in their respective local circumstances and to determine whether their Local Plans can sustainably accommodate development to meet the housing need identified." The proposed apportionment has not been subject to Sustainability Appraisal and as such there remains uncertainty that having agreed to the apportionment figures whether these authorities will in fact be able to deliver these requirements.

2.18 As such, whilst we commend West Oxfordshire for agreeing to accommodate 2,750 dwellings of Oxford City’s unmet needs and consider it to be a pro-active response which potentially complies with the Duty to Cooperate, due to the remaining
uncertainties we consider a commitment should be made in the Plan to an early review of the Plan. This would provide a commitment for an early review should a need to provide for an increased number of dwellings to meet the needs of Oxford City be demonstrated. Such a commitment was included in the Proposed Submission Draft of the Local Plan, and it is considered that similar wording should be reinserted into the Plan to ensure it is justified and effective. We note that this approach was taken in the Vale of White Horse.

Other Matters

2.19 The Proposed Modifications to Policy H1 as currently drafted state that “provision will be made for a total of 15,950 homes in the period 2011 – 2031.” This contrasts with the wording of the Submission Version of the Plan which stated that “West Oxfordshire will provide at least 10,500 new homes between 1st April 2011 and 31st March 2031.”

2.20 Paragraph 14 of the NPPF makes clear that “Local Plans should meet objectively assessed needs, with sufficient flexibility to adapt to rapid change.” The Policy as currently drafted does acknowledge that: “This is an indicative distribution and should not be taken as an absolute target for each sub-area or maximum ceiling to limit development. Additional sites may for example be identified through Neighbourhood Plans increasing housing supply above that which has been identified and planned for in this Local Plan.”

2.21 Furthermore it is noted that Policy H2, discussed in turn below, does state that the target is to deliver “at least 15,950 new homes.” As such, for consistency and to ensure the Plan is justified and effective, we would recommend that the proposed policy wording is amended to state that: “Provision will be made for a minimum of 15,950 new homes in the period 1st April 2011 to 31st March 2031.”

2.22 We comment elsewhere in this Statement on the Council’s proposed additional allocations to meet the housing requirement and how the requirement is to be distributed over the Plan period and as such we do not repeat these comments here.

Main 25: Housing Delivery Paragraph 5.25

3.22 The section entitled ‘Homes Already Built’ purports to demonstrate that the Council has been doing all that it can to facilitate delivery of housing, through reference to a ‘healthy supply of planning permissions and resolutions to grant’. The inference within the paragraph is that the poor performance in terms of actual delivery of housing is the fault of conditions in the housing market and a ‘lack of urgency from the development sector’. The average rate of delivery since the start of the Plan period is 293 dwellings per annum, considerably less than required to meet the overall OAHN.

3.23 What there appears to be little acknowledgement of is the continued reliance on sites that are beset with implementation challenges that have not been addressed satisfactorily. This is manifest at Witney and Carterton, where large scale sites have not been delivered as a consequence of infrastructure delivery issues and failure to complete S106 agreements. More detailed comments are made under the Witney and

Permissions in West Oxfordshire have always been strong and currently the pipeline is buoyant. Delivery by developers on the large sites remains slow however and supply is controlled by them. Clause 5.25 notes that the market has been flat and that there has been a lack of urgency by developers. This rather supports the argument that demand and need (at least for market housing) are in fact less than the SHMA target. After all, developers only proceed when demand is strong, so that profit can be maximised. Unless developers deliver, WODC will always struggle to demonstrate a 5 year supply and so will remain vulnerable to speculative and harmful applications. The problem will be worse if the target is set above demand level i.e. the higher the target, the more likely this is to happen. Should delivery lag behind permissions leaving a gap in the 5 year supply, this will increase land banks and developer share values, but it won’t help the District and in particular won’t provide the affordable housing that is undoubtedly needed, since affordable housing relies on market housing delivery. 

WODC is claiming a 5 year supply, which CPRE supports. No doubt developers will argue against it, but with permissions remaining strong, the lack of delivery is down to the developers themselves and they should not use this as justification for more allocations. CPRE therefore suggests a ‘use it or lose it’ policy with a set timeframe and deadline, to avoid land-banking by developers.

2.21 We have set out our comments in respect of the Council’s proposed housing target in relation to main modification 24 and as such do not repeat these here.

Sources of Supply

2.22 The supporting text to Policy H2 sets out the various sources through which the housing requirement will be met, as summarised in the table below (ATTACHED)

2.23 Clearly the Council are already failing to plan for sufficient new homes to meet the housing requirement over the Plan period.

2.24 We do note that currently no allowance is made for additional allocations which could be brought forward through Neighbourhood Plans of which there are currently five in preparation in the District as well as the made Chipping Norton Neighbourhood Plan, which does not seek to allocate any sites for development. Whilst additional development could be forthcoming through allocations in Neighbourhood Plans there is no guarantee that this will occur.

2.25 The NPPF makes clear that Local Plans “should meet objectively assessed needs, with sufficient flexibility to adapt to rapid change.” As currently drafted the Local Plan is failing not only to make provision for its own acknowledged objectively assessed need but allows for no flexibility to ensure the housing target is achieved. Concern is therefore raised that the Plan as currently drafted is not positively prepared, justified, effective or consistent with National Policy. Further consideration is likely to be required as to how...
this requirement can be met, including through additional allocations.

Five Year Housing Land Supply

2.26 The revised Policy as currently drafted states:

"With regard to 5-year housing land supply the Council will apply the residual (Liverpool) approach with any under-supply (backlog) of housing to be delivered over the remaining plan period to 2031. The additional provision being made for Oxford City’s needs will be incorporated into housing delivery assumptions from 2021 onwards."

2.27 The NPPG is clear in its guidance to LPAs (D 3-035-20140306) that they should aim to deal with any undersupply within the first 5 years of the plan period where possible. The NPPG makes clear that in circumstances where the LPA is unable to meet its undersupply in the first 5 years then it will need to work with neighbouring authorities under the ‘Duty to Cooperate.’ This matter was specifically raised by the Inspector in his Initial Findings: Part 2.

2.28 Proposed paragraph 5.34c seeks to justify the Council’s proposed approach by advising that:

“To provide a 5-year supply under the Sedgefield method, in excess of 1,000 homes per year would need to be built consistently over the next 5-years, well in excess of what has been achieved in West Oxfordshire in the past, even during several housing booms. Insufficient capacity has been identified through this Local Plan and the supporting assessment of housing land availability to achieve a 5-year supply under the Sedgefield approach and it could only be achieved by releasing a large number of sites that have been assessed by the Council as being unsuitable for new housing. The Council does not consider this to be an appropriate way forward and that addressing the shortfall in a more measured way over the remaining plan period using the Liverpool approach is considered to be entirely justified.”

2.29 As is clear from the extract above the NPPG clearly advocates the Sedgefield approach as the most suitable approach. This is borne out in numerous appeal decisions and case law. Where the Sedgefield method cannot be achieved then the LPA must seek to liaise with neighbouring authorities under the Duty to Cooperate in order to redistribute this requirement. Although the Council have sought to justify its decision to seek to pursue the Liverpool method, no indication is provided as to whether the approach advocated in the NPPG of seeking the assistance of neighbouring authorities to meet this shortfall in the short term has been pursued.

2.30 Given the discussions which have taken place in respect of the Oxford City apportionment, and the fact that full agreement has yet to be reached on this matter, it would appear unlikely in any event that such assistance would be forthcoming.

2.31 Given our comments above it is clear that the Council will need to propose additional allocations in order to meet the housing requirement. Given the shorter lead in times associated with small to medium size allocations it is likely that allocations of this scale

<td>The Council confirm that there is a significant backlog of 1,836 homes amount to approximately 3 years’ worth of housing supply when set against a requirement from 2011 of 660 homes. Part of the reason for this backlog, alleged by the Council at Paragraph 5.25 of the Plan, is a lack of urgency in bringing forward strategic sites. This validates our objections set out above at main 23 and main 24 in respect of the fragility of Sustainable Urban Extensions and that these should not be relied upon in terms of delivering a five year housing land supply or overall numbers in the Plan period.</td>
<td></td>
</tr>
</tbody>
</table>
Having recognised a significant backlog at Main Modification 25, the Plan does not identify how it intends to deal with the backlog. This is a failing of the Plan and would lead to repeated debates on a planning application by planning application basis as to the quantum of the backlog at any given point in time; whether a 5% or 20% buffer should be applied to the backlog on the basis of persistent underperformance; and whether the backlog should be addressed in the next five years of the Plan or spread across the Plan period.

To plan for predictability, Main 25 should identify how the backlog is to be addressed and by when.

This could be by allocating additional smaller sites of sufficient scale as to make a meaningful contribution to housing delivery but not so great as to be burdened by a combination of delays to the planning system and infrastructure delivery such that the backlog can be dealt with promptly within the next five years of the Plan period as required by the PPG.

We note the Council’s concerns about the slow delivery of the strategic sites. This is why it is important that the Council does not rely too much on a few strategic sites to deliver the housing requirement, especially in the first five years of the plan. It needs to allow time for these sites to be built out and this can be greatly assisted by increasing the number of outlets. The HBF is currently working with Government to try and increase the number of outlets in large schemes. The more outlets that are opened up, the better the rate of completions tends to be, as marketing and sales teams are able to reach different segments of the purchasing public.

As we have argued above, delivery can be assisted by increasing the number of development opportunities across the district. This would be helped by allocating small sites in every one of the large villages listed in Table 4.1. While we acknowledge that the Council allows sites in the villages to come forward through the neighbourhood planning process, there is little guarantee that this will happen. Many of the large villages are sustainable locations for growth. Some have small allocations but many do not. Some like Long Hanborough, Ascott-under-Wychwood and Finstock have rail stations. The latter two settlements appear to have no specific allocations in the Plan, at least according to paragraph 5.30a (non-strategic housing allocations).

The inclusion of an additional quantum of housing to meet Oxford’s unmet needs is supported, and responds to one of the concerns of the Inspector when suspending the Examination. However, this must now be treated as part of the district’s OAN, and included in the five year supply, rather than ring-fenced as a separate quantum to be accommodated in a different way. Given that the strategy response for accommodating this additional need is a new Garden Village, which is to be brought forward through an Area Action Plan, has significant infrastructure requirements, and will therefore take many years to procure, the requirement must be factored into the supply side now. This is particularly so given the somewhat unrealistic Housing Trajectory set out in the Plan at Appendix 2, which indicates not only the first contribution to housing delivery from the proposed Garden Village in 2021-22, but both an initial and sustained contribution of 220 dwellings per annum over the ensuing 10 year period. This would appear to be extremely optimistic, and indeed unrealistic, in terms of both the initial delivery trajectory and that it can be sustained at the same level for the remainder of the Plan period.

The distribution of the revised quantum is too focused on the existing main settlements, or otherwise on the proposed, and to date unfunded, new Garden Village. The consequence is reliance on delivery of a substantial quantum of the overall housing requirement from a relatively few large strategic sites / development locations. This in turn gives rise to significant risks of delivery failure arising from slippage in the delivery trajectories from those sites owing to infrastructure and other constraints, including market constraints.
saturation causing developers to moderate the rate of release of plots to the market.

There is evidence of little progress having been made on some large sites that have been identified for a considerable period of time. Not least amongst these is the strategic development area at West Witney. Application for outline planning permission (Ref: 12/0084/P/OP) for 1,000 dwellings was made in January 2012, and yet according to the Council’s web site remains undetermined. Even if planning permission is granted in early 2017, the delivery trajectory set out in Appendix 2 to the Plan looks optimistic given the number of land interests involved, requirements for reserved matters applications, and the substantial infrastructure that will need to be put in place before the first houses can be available for occupation.

In addition to the above, there are difficulties with the proposed strategic development area at East Witney, and from which the Council is relying on increased delivery (450 dwellings in total) through the Proposed Modifications. As was acknowledged by the Inspector in Part 2 of his Preliminary Findings (IN 016), there are considerable delivery risks associated with the development of this allocation owing to conflicting aims between the main parties, and the landowner not owning all the land required to deliver the requisite highway infrastructure (IN 016, paras. 2.3-2.6). Although the Council has responded by amending the delivery trajectory to postpone first completions until 2021-22, there is no certainty that the difficulties can be resolved.

With regard to Witney, given the delays in bringing forward the strategic development area to the west of the town, together with the substantial strategic development areas identified in the current Plan, the uplift in housing delivery required to yield its capacity in the period to 2031 is substantial for a town of its size. It is questionable whether the local market can sustain substantial sales volumes from three strategic development areas simultaneously, as well as a number of smaller sites, to deliver its required contribution during the plan period.

Through the proposed modifications the overall requirement for the Chipping Norton Sub-Area is increased by approximately 33%. This compares with a proportionate increase of approximately double that for the other sub-areas combined comprising the south of the plan area. That is a disproportionate increase that reflects the strategy to focus on a small number of large strategic sites in each of the sub areas.

The strategy for the Chipping Norton Sub-Area seems to be driven by the environmental sensitives affecting the principal settlement itself, and in particular its "... prominent hill-top position on the eastern edge of the Cotswolds Area of Outstanding Natural Beauty (AONB) within which most of the town is situated" (para. 9.4.1). However, those constraints do not affect the other principal settlements in the sub-area of Enstone and Middle Barton, which are outside the AONB and, particularly in the case of Middle Barton, a considerable distance away from it. In setting a capacity for the sub-area as a whole, insufficient regard appears to have been had to the potential of smaller settlements to accommodate growth.

To reduce the risks of delivery failure a more balanced distribution is required that increases the requirement for the Chipping Norton Sub-Area and provides a wider development focus, including smaller development opportunities at the rural settlements that can make an early contribution to improving the five year housing land supply. To achieve this more balanced strategy, a Rural Service Centre should be designated in the northern part of the Plan area, in which respect Middle Barton is the most appropriate settlement.

M752 Bloombridge Bloombridge Mr Cutler 1901 > SECTION 5 - PROVIDING NEW HOMES > Housing Delivery Objection is made to MM25 (Paragraph 5.25) which should be changed to reflect the overall housing requirement of 16,510 (OAN of 688dpa plus 2,750 unmet need) to ensure the plan is consistent with

| MM753         | David Wilson Homes Southern | David Wilson | -                | c/o Barton Willmore | 1902       | > SECTION 5 - PROVIDING NEW HOMES > MAIN 25 | We welcome the proposed increase in housing provision within the plan to reflect the objectively assessed need set out in the Oxfordshire SHMA (660 dwellings per annum). Although the headline figure for housing provision is increased the means of meeting that need is somewhat unclear in the document.
The proposed site allocations fall somewhat short of the accepted housing requirement. Allocated sites and suggested windfalls total 11,545 homes, some 1,655 homes below the housing target for West Oxfordshire (13,200). Although not clearly stated it seems the Plan is reliant on a significant number of sites which have already been permitted to deliver homes, however limited evidence is presented on the deliverability of these sites.

The published housing supply position paper sets out the Council's assumptions on the deliverability of permitted homes. This is set against a backdrop of previous under-delivery in relation to the objectively assessed need, including in the initial five years of the plan period.

The anticipated delivery figures (Appendix 1) do not appear to assume all planning permissions granted for larger sites will be implemented. The assessment of smaller sites makes a concession (9.1%) acknowledging that not all permissions will be implemented; an allowance for non-delivery of larger sites is also required. Uncertainty is particularly pronounced for older planning permissions for which schemes have been prepared at a time removed from the present housing market.

While uncertainty exists as to the deliverability of a significant proportion of the required housing supply questions remain as to the soundness of the plan. Robust evidence should be produced to show the permitted sites can be relied upon to deliver homes, additional allocations should also be made to mitigate against any shortfall. |

We have set out our comments in respect of the Council’s proposed housing target in relation to main modification 24 and as such do not repeat these here.

Sources of Supply

The supporting text to Policy H2 sets out the various sources through which the housing requirement for West Oxfordshire will be met (excluding unmet need from Oxford City), as summarised in the table on page 6 of the attachment.

Clearly the Council are already failing to plan for sufficient new homes to meet the housing requirement for West Oxfordshire of 13,200 over the Plan period.

We do note that currently no allowance is made for additional allocations which could be brought forward through Neighbourhood Plans of which there are currently five in preparation in the District, as well as the made Chipping Norton Neighbourhood Plan, which does not seek to allocate any sites for development. Whilst additional development could be forthcoming through allocations in Neighbourhood Plans there is no guarantee that this will occur.

The NPPF makes clear that Local Plans “should meet objectively assessed needs, with sufficient flexibility to adapt to rapid change.” As currently drafted the Local Plan is failing not only to make provision for its own acknowledged objectively assessed need but allows for no flexibility to ensure the housing target is achieved. Concern is therefore raised that the Plan as currently drafted is not positively prepared, justified, effective or consistent with National Policy. There should be no delays to deliverability on any allocated site, in the context of a current 5 year housing land supply shortfall, and therefore reference to their delivery post-2021 should be deleted. Further consideration is likely to be required as to how this requirement can be met, including through additional allocations.

Five Year Housing Land Supply

The revised Policy as currently drafted states: “With regard to 5-year housing land supply the Council will apply the residual (Liverpool) approach with any under-supply (backlog) of housing to be delivered over the remaining plan period to 2031. The additional provision being made for Oxford City’s needs will be incorporated into housing delivery assumptions from 2021 onwards.”

The NPPG is clear in its guidance to LPA’s (D 3-035-20140306) that they should aim to deal with any undersupply within the first 5 years of the plan period where possible. The NPPG makes clear that in circumstances where the LPA is unable to meet its undersupply in the first 5 years then it will need to work with neighbouring authorities under the ‘Duty to Cooperate.’ This matter was specifically raised by the Inspector in his Initial Findings: Part 2.
Proposed paragraph 5.34c seeks to justify the Council's proposed approach by advising that:

"To provide a 5-year supply under the Sedgefield method, in excess of 1,000 homes per year would need to be built consistently over the next 5-years, well in excess of what has been achieved in West Oxfordshire in the past, even during several housing booms. Insufficient capacity has been identified through this Local Plan and the supporting assessment of housing land availability to achieve a 5-year supply under the Sedgefield approach and it could only be achieved by releasing a large number of sites that have been assessed by the Council as being unsuitable for new housing. The Council does not consider this to be an appropriate way forward and that addressing the shortfall in a more measured way over the remaining plan period using the Liverpool approach is considered to be entirely justified."

As is clear from the extract above the NPPG clearly advocates the Sedgefield approach as the most suitable approach. This is borne out in numerous appeal decisions and case law. Where the Sedgefield method cannot be achieved then the LPA must seek to liaise with neighbouring authorities under the Duty to Cooperate in order to redistribute this requirement. Although the Council have sought to justify its decision to seek to pursue the Liverpool method, no indication is provided as to whether the approach advocated in the NPPG of seeking the assistance of neighbouring authorities to meet this shortfall in the short term has been pursued.

Given the discussions which have taken place in respect of the Oxford City apportionment, and the fact that full agreement has yet to be reached on this matter, it would appear unlikely in any event that such assistance would be forthcoming.

Given our comments above it is clear that the Council will need to propose additional allocations in order to meet the housing requirement. Given the shorter lead in times associated with small to medium size allocations it is likely that allocations of this scale would allow the Council to also address its backlog using the Sedgefield approach. Consideration should also be given to whether elements of the larger strategic sites could form an early phase of development without compromising the comprehensive development of the wider site.

Whilst the Council seeks to justify the use of the Liverpool method by referring back to past delivery rates, it must be recognised that these were set within a significantly different planning context when there was not the requirement as set out within the NPPF to meet the full objectively assessed need. The historic low levels of delivery are a reason to boost the supply of housing as soon as possible because the need has already arisen and has not yet been met, rather than being a reason to suppress the rate at which housing should come forward.

In light of the above, in order to ensure its soundness the Plan should make provision to meet the backlog in housing need using the Sedgefield method with the backlog delivered in the first five year period rather than being spread across the remaining Plan period (Liverpool) as currently proposed.

As currently drafted it is unclear whether the Council are proposing that post-2021 the supply of those allocations identified to meet the needs of Oxford City only would be accounted for, and that the additional 2,750 dwellings would not be added to the requirement side of the five year housing land supply equation. Plainly such an approach would be unsound and the Inspector in his preliminary findings advised that the apportionment figure should be counted within the five year housing land supply. As such we would recommend that the policy text is re-worded to clarify this position.
The previously proposed criteria in point 3 of the policy are proposed to be deleted and instead are addressed in Policy OS2 as discussed above. With regards to the Main Service Centres etc., the Policy wording in the third bullet continues to state development will be allowed where “it is consistent with the criteria in 3) below”. For clarity this wording therefore requires amendment.

22. MAIN25: We welcome the proposed increase in housing provision within the plan to reflect the objectively-assessed need set out in the Oxfordshire SHMA (660 dwellings per annum). Although the headline figure for housing provision is increased the means of meeting that need is somewhat unclear in the document.

23. The proposed site allocations fall someway short of the accepted housing requirement. Allocated sites and suggested windfalls total 11,545 homes, some 1,655 homes below the housing target for West Oxfordshire (13,200). Although not clearly stated it seems the Plan is reliant on a significant number of sites which have already been permitted to deliver on homes, however limited evidence is presented on the deliverability of these sites.

24. The published housing supply position paper sets out the Council’s assumptions on the deliverability of permitted homes. This is set against a backdrop of previous under-delivery in relation to the objectively assessed need, including in the initial five years of the plan period. The anticipated delivery of homes from larger sites (more than ten units) is particularly optimistic given the recent under-delivery of homes and the longstanding nature of several of the outline planning permissions.

25. The anticipated delivery figures (Appendix 1) do not appear to assume all planning permissions granted for larger sites will be implemented. The assessment of smaller sites makes a concession (9.1%) in acknowledgement that not all permissions will be implemented; an allowance for non-delivery of larger sites is also required.

26. While uncertainty exists as to the deliverability of a significant proportion of the required housing supply questions remain as to the soundness of the plan. Robust evidence should be produced to show the permitted sites can be relied upon to deliver homes, additional allocations should also be made to mitigate against any shortfall.

It should also be noted that permissions here are not really the issue. WODC has performed well in terms of permitting appropriate applications and additionally quite a few inappropriate sites have gained approval on appeal, due to the perceived lack of a five-year housing land supply. However, delivery by developers on the large sites is lagging behind and supply is being controlled by them. Clause 5.25 notes that the market has been flat and that there has been a lack of urgency by developers. This rather supports the argument that demand and need (at least for market housing) are in fact less than the SHMA target. After all, developers only proceed when demand is strong, so that profit can be maximised.

Unless developers deliver, WODC will always struggle to demonstrate a five-year supply and so will remain vulnerable to speculative and harmful applications. The problem will be worse if the target is set above demand level (that is, the higher the target, the more likely this is to happen). We believe that the target is indeed too high. Should delivery lag behind permissions (leaving a gap in the five-year supply), developer permissions, land banks and share values will be augmented. However, this won't help the District and in
particular won’t provide the affordable housing that is undoubtedly needed, since affordable housing relies on market housing delivery. Therefore, the process is fundamentally flawed as developers can delay delivery and then argue for more allocations or permissions, due to a lack of supply directly of their own making.

WODC is claiming a five-year supply, which we support. Permissions have been buoyant and many are of a small or medium size, which are likely to come forward quickly. No doubt developers will argue against the robustness of the five-year supply, but with permissions remaining strong, the lack of delivery is down to the developers themselves and they should not be allowed to use this as justification for more allocations.

<td>&gt; SECTION 5 - PROVIDING NEW HOMES &gt; MAIN 25</td>
<td>Policy H2 – Delivery of New Homes (MM25 to MM30) 3.15 With regard to the main body of the Policy and MM30 we agree with the overall housing requirements being set out in this policy too. However, we disagree with: * the application of the Liverpool approach in terms of addressing delivery; * the application of the 5% buffer (instead of 20%); and, * the extent of delivery over the plan period that is expected from the SDAs. 3.16 Overall, the Council cannot deliver a 5 year housing supply which has been addressed in a number of recent appeal decisions in detail, with the latest decision indicating the Council accept they can only demonstrate a 3.21 year supply. Moreover, we do not consider the SDA’s will be capable of delivering the requirement set out for them by the Council within the plan period. Sedgefield vs Liverpool 3.17 The NPPF is clear that the intention is to significantly boost the supply of housing. The NPPF confirms the Sedgefield approach is the preferred method as does the PAS guidance on the matter. The Sedgefield approach has also been endorsed at the following appeals within West Oxfordshire in recent months: * Gladman: Appeal ref: APP/D3125/W/15/3019438, dated 16th May 2016 * Pye Homes: Appeal ref: APP/D3125/W/15/3129767 &amp; APP/D3125/W/15/3139807, dated 4th July 2016 * Gladman: Appeal ref: APP/D3125/W/15/3005737, dated 24th Aug 2016 * Minister Lovell: Appeal ref: APP/D3125/W/16/3143114 &amp; APP/D3125/W/16/3148659, dated 25th Aug 2016 * Gladman: Appeal ref: APP/D3125/W/15/3136376 dated 2nd Nov 2016 * Barwoods: Appeal ref: APP/D3125/W/15/3138076, dated 14th Nov 2016 3.18 It is clearly evident that the Sedgefield approach is the one that should be followed. Should a different approach or path be pursued, it is our position that the Council would have to demonstrate significant impacts in order to deviate from the standard Sedgefield approach. Such significant impacts have not been established to warrant the Council’s approach. 5% vs 20% NPPF Buffer / Past Completions</td>
</tr>
</tbody>
</table>
3.19 The Local Plan Inspector confirmed the following at paragraph 2.14 of the preliminary findings (examination document IN 016):

'It is appropriate to consider whether there has been persistent under delivery over a long time period, such as 10 years or more, to incorporate the full economic cycle. In my Part 1 Note, I referred to the substantial over-delivery that had taken place between 2006-2011 compared with the requirement of the South East Plan. Delivery in recent years has been well below the requirement in the submitted local plan, but taking a 10 year period as a whole it would not be reasonable to conclude at present that there had been persistent under-delivery. Accordingly, only the normal 5% buffer is currently required. If delivery continues to be below that which is required, future decision makers may take a different view. The Council would be in a more robust position going forward if the plan creates a 5 year supply with a buffer greater than 5%, thus allowing for any unexpected delays on some sites.

3.20 We note the position has not moved on significantly since the last examination. However, bearing in mind the 2016/17 data will be available by the time we return to the Examination process we believe it would be prudent if the Council sought to plan for a 20% buffer now. Indeed, based on the analysis within Table 2 above it remains the case that the Council have not achieved its target for 5 years of the 10 years presented. However, it is more than likely that the 660 housing requirement figure will not be achieved in 2016/17, taking the under-supply position to 6 years on the trot, which is practically 2/3 of the last decade and a 100% of the period since the NPPF was adopted.

3.21 A key focus of the NPPF is to significantly boost housing supply and the 20% buffer was a key component of national policy to seek to try and achieve this. It hard to believe that the intention of the NPPF was not to impose the higher 20% in situations such a West Oxfordshire’s, where it is clearly evident that early completions within the plan period will be necessary. The application of the 20% buffer would assist with this objective.
Five Year Housing Land Supply

2.28 The revised Policy as currently drafted states: "With regard to 5-year housing land supply the Council will apply the residual (Liverpool) approach with any under-supply (backlog) of housing to be delivered over the remaining plan period to 2031. The additional provision being made for Oxford City’s needs will be incorporated into housing delivery assumptions from 2021 onwards."

2.29 The NPPG is clear in its guidance to LPA’s (D 3-035-20140306) that they should aim to deal with any undersupply within the first 5 years of the plan period where possible. The NPPG makes clear that in circumstances where the LPA is unable to meet its undersupply in the first 5 years then it will need to work with neighbouring authorities under the 'Duty to Cooperate.' This matter was specifically raised by the Inspector in his Initial Findings: Part 2.

2.30 Proposed paragraph 5.34c seeks to justify the Council’s proposed approach by advising that: "To provide a 5-year supply under the Sedgefield method, in excess of 1,000 homes per year would need to be built consistently over the next 5-years, well in excess of what has been achieved in West Oxfordshire in the past, even during several housing booms. Insufficient capacity has been identified through this Local Plan and the supporting assessment of housing land availability to achieve a 5-year supply under the Sedgefield approach and it could only be achieved by releasing a large number of sites that have been assessed by the Council as being unsuitable for new housing. The Council does not consider this to be an appropriate way forward and that addressing the shortfall in a more measured way over the remaining plan period using the Liverpool approach is considered to be entirely justified."

2.31 As is clear from the extract above the NPPG clearly advocates the Sedgefield approach as the most suitable approach. This is borne out in numerous appeal decisions and case law. Where the Sedgefield method cannot be achieved then the LPA must seek to liaise with neighbouring authorities under the Duty to Cooperate in order to redistribute this requirement. Although the Council have sought to justify its decision to seek to pursue the Liverpool method, no indication is provided as to whether the approach advocated in the NPPG of seeking the assistance of neighbouring authorities to meet this shortfall in the short term has been pursued.

2.32 Given the discussions which have taken place in respect of the Oxford City apportionment, and the fact that full agreement has yet to be reached on this matter, it would appear unlikely in any event that such assistance would be forthcoming.

2.33 Given our comments above it is clear that the Council will need to propose additional allocations in order to meet the housing requirement. Given the shorter lead in times
associated with small to medium size allocations it is likely that allocations of this scale would allow the Council to also address its backlog using the Sedgefield approach. Consideration should also be given to whether elements of the larger strategic sites could form an early phase of development without compromising the comprehensive development of the wider site.

2.34 Whilst the Council seeks to justify the use of the Liverpool method by referring back to past delivery rates, it must be recognised that these were set within a significantly different planning context when there was not the requirement as set out within the NPPF to meet the full objectively assessed need. The historic low levels of delivery are a reason to boost the supply of housing as soon as possible because the need has already arisen and has not yet been met, rather than being a reason to suppress the rate at which housing should come forward.

2.35 In light of the above, in order to ensure its soundness the Plan should make provision to meet the backlog in housing need using the Sedgefield method with the backlog delivered in the first five year period rather than being spread across the remaining Plan period (Liverpool) as currently proposed.

2.36 As currently drafted it is unclear whether the Council are proposing that post-2021 the supply of those allocations identified to meet the needs of Oxford City only would be accounted for, and that the additional 2,750 dwellings would not be added to the requirement side of the five year housing land supply equation. Plainly such an approach would be unsound and the Inspector in his preliminary findings advised that the apportionment figure should be counted within the five year housing land supply. As such we would recommend that the policy text is re-worded to clarify this position.

Other Matters

2.37 The previously proposed criteria in point 3 of the policy are proposed to be deleted and instead are addressed in Policy OS2 as discussed above. With regards to the Main Service Centres etc., the Policy wording in the third bullet continues to state development will be allowed where "it is consistent with the criteria in 3) below". For clarity this wording therefore requires amendment.

The Inclusion of C2 (Residential Institution Uses) within the Council’s Housing Land Supply ID: 3-037-20150320 of the PPG allows C2 units to contribute towards a Council’s housing supply where the approach to such uses is clearly set out in an adopted Local Plan. In this respect we refer to paragraph 9.85 of the 2014 Oxfordshire SHMA that states:

"The growing older population will however likely lead to some increase in requirements for specialist housing solutions. The analysis above suggests a 98% growth in older population with dementia, and an 82% increase in the older population with mobility problems. From a planning point of view, some of these people will require specialist housing such as sheltered or extra care provision. Increasing numbers of older people with health problems will also require jointworking..."
between housing and health (Council and NHS). The SHMA analysis indicates a potential need for between 280-450 additional housing units to be specialist accommodation across the County to meet the needs of the older person population each year moving to 2031. (Paragraph 9.85) (Our emphasis).

The SHMA is quite clear that specialist accommodation for older persons comprises an additional housing need as opposed to part of the baseline OAN. On this basis, C2 specialist residential uses should not be included within the Council’s housing land supply figures, unless the requirement is specifically amended to account for C2 uses. The Council’s position in this respect is therefore not justified and inconsistent with national guidance.

3.24 With regard to the reference to land to the west of Witney (1,000 dwellings) and land east of Carterton (700 dwellings), which are two significant scale commitments on which the Council is relying to support its housing strategy, it is pertinent to note that both sites have yet to achieve planning permission, more than five years into the Plan period.

3.25 The Statement of Common Ground (SoCG) between Oxfordshire Land Ltd (the development consortium) and the Council, which was signed in October 2015, notes that a resolution to grant planning permission for development of the site was agreed in March 2013. At the time of writing the permission has yet to be issued, pending resolution of issues relating to transport infrastructure. It is notable that the SoCG advised that on site infrastructure works would commence early in 2016, with residential completions likely in the third quarter of 2016 and delivery of up to 700 dwellings by March 2020. Given that there is still no planning permission it is unlikely that the time frames suggested can be achieved. A more realistic set of assumptions would suggest that first residential completions may be achieved by the end of 2017, with a delivery rate of c.150 units a year thereafter suggesting that the site may complete around 2025, assuming that all outstanding matters can be resolved satisfactorily.

3.26 In the case of East Carterton it is understood that the Council expects to complete the S106 agreement early in 2017, more than two years after the resolution to grant permission for development.

3.27 While it is not the case that the sites should not be relied upon to help achieve the OAHN target, it is clear that the housing strategy should be sufficiently flexible and with an even distribution of development such that delays in the delivery of sites within key locations/settlements can be compensated for via the delivery of development on other sites that also accord with the overall development strategy.

3.28 It is apparent that the Council has recently lost a number of residential appeals on sites that are unallocated due to its failure to guarantee a five year housing land supply. To ensure that the overall development strategy is facilitated a sufficient number of deliverable sites should be allocated at the Main Service Centres, in accordance with the Three Towns focus, to mitigate against potential slippage in housing delivery in accordance with the overarching strategy of the Local Plan. Such an approach would be in accordance with the paragraph 1414 requirement for Local Plans to meet objectively assessed needs with sufficient flexibility to adapt to rapid change.
2.22 The supporting text to Policy H2 sets out the various sources through which the housing requirement will be met, as summarised in the table below (ATTACHED).

2.23 Clearly the Council are already failing to plan for sufficient new homes to meet the housing requirement over the Plan period.

2.24 We do note that currently no allowance is made for additional allocations which could be brought forward through Neighbourhood Plans of which there are currently five in preparation in the District as well as the made Chipping Norton Neighbourhood Plan, which does not seek to allocate any sites for development. Whilst additional development could be forthcoming through allocations in Neighbourhood Plans there is no guarantee that this will occur.

2.25 The NPPF makes clear that Local Plans “should meet objectively assessed needs, with sufficient flexibility to adapt to rapid change.” As currently drafted the Local Plan is failing not only to make provision for its own acknowledged objectively assessed need but allows for no flexibility to ensure the housing target is achieved. Concern is therefore raised that the Plan as currently drafted is not positively prepared, justified, effective or consistent with National Policy. Further consideration is likely to be required as to how this requirement can be met, including through additional allocations.

Five Year Housing Land Supply

2.26 The revised Policy as currently drafted states:

"With regard to 5-year housing land supply the Council will apply the residual (Liverpool) approach with any under-supply (backlog) of housing to be delivered over the remaining plan period to 2031. The additional provision being made for Oxford City’s needs will be incorporated into housing delivery assumptions from 2021 onwards."

2.27 The NPPG is clear in its guidance to LPAs (D 3-035-20140306) that they should aim to deal with any undersupply within the first 5 years of the plan period where possible. The NPPG makes clear that in circumstances where the LPA is unable to meet its undersupply in the first 5 years then it will need to work with neighbouring authorities under the ‘Duty to Cooperate.’ This matter was specifically raised by the Inspector in his Initial Findings: Part 2.

2.28 Proposed paragraph 5.34c seeks to justify the Council’s proposed approach by advising that:

"To provide a 5-year supply under the Sedgefield method, in excess of 1,000 homes per year would need to be built consistently over the next 5-years, well in excess of what has been achieved in West Oxfordshire in the past, even during several housing booms. Insufficient capacity has been identified through this Local Plan and the supporting assessment of housing land availability to achieve a 5-year supply under the Sedgefield approach and it could only be achieved by releasing a large number of sites that have
been assessed by the Council as being unsuitable for new housing. The Council does not consider this to be an appropriate way forward and that addressing the shortfall in a more measured way over the remaining plan period using the Liverpool approach is considered to be entirely justified.”

2.29 As is clear from the extract above the NPPG clearly advocates the Sedgefield approach as the most suitable approach. This is borne out in numerous appeal decisions and case law. Where the Sedgefield method cannot be achieved then the LPA must seek to liaise with neighbouring authorities under the Duty to Cooperate in order to redistribute this requirement. Although the Council have sought to justify its decision to seek to pursue the Liverpool method, no indication is provided as to whether the approach advocated in the NPPG of seeking the assistance of neighbouring authorities to meet this shortfall in the short term has been pursued.

2.30 Given the discussions which have taken place in respect of the Oxford City apportionment, and the fact that full agreement has yet to be reached on this matter, it would appear unlikely in any event that such assistance would be forthcoming.

2.31 Given our comments above it is clear that the Council will need to propose additional allocations in order to meet the housing requirement. Given the shorter lead in times associated with small to medium size allocations it is likely that allocations of this scale would allow the Council to also address its backlog using the Sedgefield approach. Consideration should also be given to whether elements of the larger strategic sites could form an early phase of development without compromising the comprehensive development of the wider site.

2.32 Whilst the Council seeks to justify the use of the Liverpool method by referring back to past delivery rates, it must be recognised that these were set within a significantly different planning context when there was not the requirement as set out within the NPPF to meet the full objectively assessed need. The historic low levels of delivery are a reason to boost the supply of housing as soon as possible because the need has already arisen and has not yet been met, rather than being a reason to suppress the rate at which housing should come forward.

2.33 In light of the above, in order to ensure its soundness the Plan should make provision to meet the backlog in housing need using the Sedgefield method with the backlog delivered in the first five year period rather than being spread across the remaining Plan period (Liverpool) as currently proposed.

2.34 As currently drafted it is unclear whether the Council are proposing that post-2021 the supply of those allocations identified to meet the needs of Oxford City only would be accounted for and that the additional 2,750 dwellings would not be added to the requirement side of the five year housing land supply equation. Plainly such an approach would be unsound and the Inspector in his preliminary findings advised that the apportionment figure should be counted in the five year housing land supply. As such we would recommend that the policy text is re-worded to clarify this position.

Other Matters
2.35 The previously proposed criteria in point 3 of the policy are proposed to be deleted and instead are addressed in Policy OS2 as discussed above. With regards to the Main Service Centres etc., the Policy wording in the third bullet continues to state development will be allowed where “it is consistent with the criteria in 3) below”. For clarity this wording therefore requires amendment.

| MM746         | Hallam Land Management  | Hallam Land Management | - | Hallam Land Management | 1812 | > SECTION 5 - PROVIDING NEW HOMES > MAIN 26 | C2 Uses (MM 26)
Main Modification 26 seeks to count C2 permissions towards general housing needs claiming this to be in keeping with the Planning Practice Guidance. This was a matter considered in a recent example in Stratford-upon-Avon, as part of the Core Strategy Examination. The Inspector referred to the NPPG which requires that “The future need for specialist accommodation for older people broken down by tenure and type (e.g. sheltered, enhanced sheltered, extra-care, registered care) should be assessed... The assessment should set out the level of need for residential institutions (Use Class C2)” but was that the Council had not done this in that instance (paragraph 380 refers). The same applies here. In consequence because need is not assessed in relation to C2 uses, such uses should not be included within the housing land supply calculations in West Oxfordshire as well. This assertion should be removed from MM26. |
| MM749         | Home Builders Federation Ltd | Home Builders Federation Ltd Mr J Stevens | Mr | Stevens | 1822 | > SECTION 5 - PROVIDING NEW HOMES > MAIN 26 | MAIN 26
Paragraphs 5.26 – 5.27
MAIN 27
Paragraphs 5.28 - 5.30c
The Council has made some large strategic scale allocations and strategic sites. These will be responsible for delivering the majority of the requirement. All of these sites are concentrated around the three largest settlements, with the exception of Eynsham and the West Oxfordshire Garden Village. These strategic allocations are necessary but there may be problems associated in the short-term with market over-saturation at these particular locations. This could slow-down the rate of delivery. It will be important to increase the number of outlets on each of the strategic allocations to assist with build-out rates.

Delivery would be better assisted in the short to medium term by increasing the number of medium-sized scale schemes - i.e. the non-strategic allocations of about 20-100 dwellings. The Council could also greatly assist struggling small developers by making specific allocations in the villages for small schemes of 10 dwellings and fewer. This would provide certainty for small developers. As the Plan is drafted at the moment we feel that small developers will be discouraged from making applications in the villages given the prohibitive wording of Policies H2 and OS2. It would be hard for an applicant to know whether his/her application would be considered to be in conformity with the plan. There are too many clauses in these policies that could be interpreted by the Council’s development management team as counting against the scheme. |
| MM746         | Hallam Land Management  | Hallam Land Management | - | Hallam Land Management | 1840 | > SECTION 5 - PROVIDING NEW HOMES > | The Plan does not include a table that clearly sets out the residual requirement for which sites must be allocated in the Plan, including appropriate non-implementation allowances against both the existing commitments and proposed allocations. Indeed, it appears that the Plan presumes that both existing commitments and proposed allocations will be implemented in their entirety, and no contingency for slippage is included. This is considered to be an untenable position, and likely to result in the OAN not being |
A minimum slippage allowance of 10% should made against existing commitments. Given that existing commitments as of September 2016 stood at 4,751 dwellings, this gives rise to a requirement to allocate sites for an additional 475 dwellings.

A non-implementation allowance should also be made against the proposed allocations. Given the reliance placed on a small number of large strategic sites, from which a substantial uplift on past delivery rates is required, and which, as is clear from the delivery trajectory in Appendix 2, is heavily back-loaded towards the end of the plan period reflecting the long lead times to deliver housing from large new development areas, the risks of slippage are real and the consequences significant. It is therefore arguable that a nonimplementation allowance of greater than 10% should be applied in the circumstances of this case.

It is evident from the plan that a number of sites on which reliance is placed are of uncertain deliverability. In addition to the uncertainties surrounding the proposed Garden Village, there is evidence of constraints associated with the strategic development areas at Witney in particular. Moreover, there is evidence of constraints relating to a number of other, non-strategic sites that are allocated in the Plan (for example, Woodford Way Car Park and REEMA Central).

Applying the minimum slippage allowance of 10% to the proposed site allocations (strategic and nonstrategic sites) gives rise to a requirement to allocate land for an additional 817 homes.

The correctness of this approach is endorsed by the recent report (November 2016) of the Inspector concerning the Examination of Consequential Amendments to the Other Remitted North Somerset Core Strategy Policies. There are parallels with the current case in that, at the mid-point in the Core Strategy period, North Somerset Council is facing a substantial uplift in the housing requirement following quashing of the original housing requirement set out in Policy CS13, and its replacement with a revised requirement that reflects a substantial uplift (by approximately 50%) on the original. In considering the distribution of the revised requirement, the Inspector noted that two large strategic sites comprising new urban villages accounted for a substantial part of the District’s housing requirement, and held as follows: ...

projects of this size inevitably encounter practical obstacles to implementation. Significant progress has been made towards infrastructure provision ... but there is a lot more to do. Thirdly, build rates can vary according to the prevailing economic climate. Just a modest slippage in delivery against the indicated trajectory would diminish the contribution of this source towards the total requirement. (para. 18).

There is also uncertainty over planning permission lapse rates. The Council has applied a lapse rate of 9% to small site permissions which reflects the average lapse rate for the three years up to 2011, a figure derived from research for the 2011 Strategic Housing Land Availability Assessment. It has not applied a lapse rate to the larger sites because it says the average lapse rate between 2006 and 2011 was 0.73% of the dwelling stock. But some objectors argue that the lapse rate is higher – based on their calculations, around 2% on large sites and 24% based on historic rates. In reality, neither approach is especially reliable because the data from both calculations is derived from a short period which included both economic growth and recession and may not be indicative of future lapse rates, which could increase or decrease in response to economic prospects. The information supplied by the parties reinforces rather than dispels the uncertainty around this matter. There is a possibility that higher lapse rates than allowed for by the Council could occur in the next few years with a negative effect on housing supply if adequate flexibility is not built into the policies. (para. 19).
The conclusion to be drawn from the foregoing is that, whilst there is no reason to anticipate the failure of the strategy, there is potential for slippage and under-delivery. The Council has been optimistic in its approach to the residual requirement that needs to be provided for through the Site Allocations Plan...

(para. 22)

There are parallels in the current case. As in North Somerset, the current plan relies heavily on a limited number of large strategic sites, with the ‘inevitability’ that they will encounter obstacles to implementation as noted by the Inspector. As in North Somerset, a ‘modest slippage’ in delivery against the indicated trajectory would have a significant impact on the contribution of the strategic sites towards the total requirement, with particularly serious consequences in this instance given the ‘back-loading’ of the delivery trajectory from strategic sites.

The inclusion of a non-implementation allowance is therefore reasonable and indeed necessary. It should arguably be higher than 10% insofar as it applies to the strategic sites.

However, incorporating a 10% allowance for both extant planning permissions and allocated sites, the adjusted supply is as set out below (see attachment page 20).

Even on the Council’s own figures, and assuming that all existing commitments and emerging allocations yield their capacity in full during the plan period, the Proposed Modifications do not make sufficient provision to meet the OAN, which is a ‘minimum’ requirement. The adjusted supply, which makes reasonable allowances for non-implementation, and which would seem conservative having regard to the circumstances of the current case, indicates that provision needs to be made through the Plan for an additional 1,500 dwellings.

We have made presentations to you on behalf of our clients, the Dowley, Conlon, Brooks, Williams and Huntly families over a number of years during the ongoing review of the Local Plan, seeking to have their land at Brize Norton Road/Bushey Ground, Minster Lovell allocated for housing, including your most recent SHLAA call for sites consultation in February this year and put forward their land as being available and suitable for such a use. Previous ref 262.

We note that in the latest version of the Draft Plan a site for 85 dwellings has been proposed on a back land site adjoining the north west edge of the village and that following a planning application this site has been granted consent in the last month. We believe the Council may find the need to allocate more dwellings in sustainable settlements like Minster Lovell and our clients site is both suitable and available. There is an existing access via Bushey Ground which already serves a number of existing dwellings and businesses.

We realise this site is not large enough to be seen as a strategic one, but given the draft plan modifications have now included/identified a number of non-strategic sites ranging from 25 to 300 dwellings, we believe this site should have been included as well – so Modification Main 26 (para5.30b) should be amended to include this site and likewise Main 90 Witney sub Area table 1 and again Main 115. We anticipate the Council may find there will prove to be a need to provide more deliverable sites like this because the larger sites are either not deliverable quickly or worse not at all within the Plan period.

In Main 104 paras 9.2.51 a,b and c - our clients support the principle of extending development westwards from Downs Road and linking Downs Road to B4047. There is a four way link interchange proposed to the A40 at Downs road and possibly another may be provided at the B4477 at Minster Lovell.

Please take this letter as a repeat of our earlier representations – our client’s land is still available for housing
and possibly some element of employment and hope that you will now reconsider it for inclusion in your new allocations in the final draft plan before it goes before the EIP in March/April 2017.

We would be happy to discuss any aspect of this further with you if that would assist you. We attach a plan showing the land verged pink.

We would agree with the proposed amended and additional text to paragraphs 5.26 to 5.27. We would however suggest that for clarity the word “dwellings” is added to the end of the last sentence to paragraph 5.27 as set out below:

“As of 1st September 2016, the number of homes expected to be delivered through existing commitments was 4,751 comprising 4,107 on larger sites of 10 or more dwellings and 644 on smaller sites of less than 10 dwellings.” (added)

These paragraphs refer to existing commitments, Strategic Development Areas and Non-Strategic Housing Allocations. This demonstrates an extremely high reliance on large sites forming a component of the housing supply including: 4,107 dwellings on sites with planning permission or a resolution to grant; 6,450 dwellings on SDAs (principally sites over 1,000 dwellings) which do not currently benefit from planning permission; and several Non-Strategic sites of 200 or dwellings, again without planning permission at present. This equates to 73% of the overall housing requirement on large sites, the majority of which are located within the 3 MRCs, whilst only 304 dwellings are committed/allocated within 5 of the 34 Villages.

Whilst it is acknowledged that the majority of growth should be directed to the most sustainable locations within the District in line with the settlement hierarchy, it should also be recognised as detailed at paragraph 4.17 of the Draft Plan, that not all growth “can or indeed should go to Winney, Carterton and Chipping Norton” as there is a need for development elsewhere in the District in order to spread the benefits of growth to help sustain the more rural parts of the District. This is supported by the guidance at Paragraphs 54-55 of the NPPF and within the PPG in respect of Rural Housing, which highlights the need to recognise the particular issues facing such areas in terms of housing supply and affordability, and the role housing has in supporting the broader sustainability of villages by helping to retain local services and community facilities such as schools, local shops and cultural venues.

The extremely limited housing allocations to a handful of Villages ignores the potential availability of other sites within some of the other larger Villages, which are more sustainable- with reference to the Council’s updated Settlement Sustainability Report (December 2016), no housing allocations have been identified at 3 of the top 5 most sustainable Villages (North Leigh, Brize Norton and Enstone). This appears contrary to the Plan’s Vision and Core Objectives which highlight the challenge facing residents in view of house prices well above the national average and the special emphasis on providing homes for local people in housing need (C06).

RSL are promoting a site at land south of Oxford Road, Enstone (see enclosed Location Plan) is just one example. This is a site adjacent to the settlement boundary, outside the Cotswold AONB and is otherwise deliverable, achievable and viable with no technical constraints that would prevent it from coming forward in the next 5 years.

The supporting text to Policy H2 sets out the various sources through which the housing requirement for West Oxfordshire will be met (excluding unmet need from Oxford City), as summarised in the table on page 6 of the attachment.

Clearly the Council are already failing to plan for sufficient new homes to meet the housing requirement for West Oxfordshire of 13,200 over the Plan period.

We do note that currently no allowance is made for additional allocations which could be brought forward through Neighbourhood Plans of which there are currently five in preparation in the District, as well as the made Chipping Norton Neighbourhood Plan, which does not seek to allocate any sites for development. Whilst additional development could be forthcoming through allocations in Neighbourhood Plans there is no guarantee that this will occur.

The NPPF makes clear that Local Plans "should meet objectively assessed needs, with sufficient flexibility to adapt to rapid change." As currently drafted the Local Plan is failing not only to make provision for its own acknowledged objectively assessed need but allows for no flexibility to ensure the housing target is achieved. Concern is therefore raised that the Plan as currently drafted is not positively prepared, justified, effective or consistent with National Policy. There should be no delays to deliverability on any allocated site, in the context of a current 5 year housing land supply shortfall, and therefore reference to their delivery post-2021 should be deleted. Further consideration is likely to be required as to how this requirement can be met, including through additional allocations.

Five Year Housing Land Supply

The revised Policy as currently drafted states: "With regard to 5-year housing land supply the Council will apply the residual (Liverpool) approach with any under-supply (backlog) of housing to be delivered over the remaining plan period to 2031. The additional provision being made for Oxford City's needs will be incorporated into housing delivery assumptions from 2021 onwards."

The NPPG is clear in its guidance to LPA's (D 3-035-20140306) that they should aim to deal with any undersupply within the first 5 years of the plan period where possible. The NPPG makes clear that in circumstances where the LPA is unable to meet its undersupply in the first 5 years then it will need to work with neighbouring authorities under the 'Duty to Cooperate.' This matter was specifically raised by the Inspector in his Initial Findings: Part 2.

Proposed paragraph 5.34c seeks to justify the Council's proposed approach by advising that:

"To provide a 5-year supply under the Sedgefield method, in excess of 1,000 homes per year would need to be built consistently over the next 5-years, well in excess of what has been achieved in West Oxfordshire in the past, even during several housing booms. Insufficient capacity has been identified through this Local Plan and the supporting assessment of housing land availability to achieve a 5-year supply under the Sedgefield approach and it could only be achieved by releasing a large number of sites that have been assessed by the Council as being unsuitable for new housing. The Council does not consider this to be an appropriate way forward and that addressing the shortfall in a more measured way over the remaining plan period using the Liverpool approach is considered to be entirely justified."
As is clear from the extract above the NPPG clearly advocates the Sedgefield approach as the most suitable approach. This is borne out in numerous appeal decisions and case law. Where the Sedgefield method cannot be achieved then the LPA must seek to liaise with neighbouring authorities under the Duty to Cooperate in order to redistribute this requirement. Although the Council have sought to justify its decision to seek to pursue the Liverpool method, no indication is provided as to whether the approach advocated in the NPPG of seeking the assistance of neighbouring authorities to meet this shortfall in the short term has been pursued.

Given the discussions which have taken place in respect of the Oxford City apportionment, and the fact that full agreement has yet to be reached on this matter, it would appear unlikely in any event that such assistance would be forthcoming.

Given our comments above it is clear that the Council will need to propose additional allocations in order to meet the housing requirement. Given the shorter lead in times associated with small to medium size allocations it is likely that allocations of this scale would allow the Council to also address its backlog using the Sedgefield approach. Consideration should also be given to whether elements of the larger strategic sites could form an early phase of development without compromising the comprehensive development of the wider site.

Whilst the Council seeks to justify the use of the Liverpool method by referring back to past delivery rates, it must be recognised that these were set within a significantly different planning context when there was not the requirement as set out within the NPPF to meet the full objectively assessed need. The historic low levels of delivery are a reason to boost the supply of housing as soon as possible because the need has already arisen and has not yet been met, rather than being a reason to suppress the rate at which housing should come forward.

In light of the above, in order to ensure its soundness the Plan should make provision to meet the backlog in housing need using the Sedgefield method with the backlog delivered in the first five year period rather than being spread across the remaining Plan period (Liverpool) as currently proposed.

As currently drafted it is unclear whether the Council are proposing that post-2021 the supply of those allocations identified to meet the needs of Oxford City only would be accounted for, and that the additional 2,750 dwellings would not be added to the requirement side of the five year housing land supply equation. Plainly such an approach would be unsound and the Inspector in his preliminary findings advised that the apportionment figure should be counted within the five year housing land supply. As such we would recommend that the policy text is re-worded to clarify this position.

Other Matters

The previously proposed criteria in point 3 of the policy are proposed to be deleted and instead are addressed in Policy OS2 as discussed above. With regards to the Main Service Centres etc., the Policy wording in the third bullet continues to state development will be allowed where "it is consistent with the criteria in 3) below". For clarify this wording therefore requires amendment.
3.15 With regard to the main body of the Policy and MM30 we agree with the overall housing requirements being set out in this policy too. However, we disagree with:

- the application of the Liverpool approach in terms of addressing delivery;
- the application of the 5% buffer (instead of 20%); and,
- the extent of delivery over the plan period that is expected from the SDAs.

3.16 Overall, the Council cannot deliver a 5 year housing supply which has been addressed in a number of recent appeal decisions in detail, with the latest decision indicating the Council accept they can only demonstrate a 3.21 year supply. Moreover, we do not consider the SDA's will be capable of delivering the requirement set out for them by the Council within the plan period.

Sedgefield vs Liverpool

3.17 The NPPF is clear that the intention is to significantly boost the supply of housing. The NPPF confirms the Sedgefield approach is the preferred method as does the PAS guidance on the matter. The Sedgefield approach has also been endorsed at the following appeals within West Oxfordshire in recent months:

- Gladman: Appeal ref: APP/D3125/W/15/3019438, dated 16th May 2016
- Barwoods: Appeal ref: APP/D3125/W/15/3138076, dated 14th Nov 2016

3.18 It is clearly evident that the Sedgefield approach is the one that should be followed. Should a different approach or path be pursued, it is our position that the Council would have to demonstrate significant impacts in order to deviate from the standard Sedgefield approach. Such significant impacts have not been established to warrant the Council's approach.

5% vs 20% NPPF Buffer / Past Completions

3.19 The Local Plan Inspector confirmed the following at paragraph 2.14 of the preliminary findings (examination document IN 016):

'It is appropriate to consider whether there has been persistent under delivery over a long time period, such as 10 years or more, to incorporate the full economic cycle. In my Part 1 Note, I referred to the substantial over-delivery that had taken place between 2006-2011 compared with the requirement of the South East Plan. Delivery in recent years has been well below the requirement in the submitted local plan, but taking a 10 year period as a whole it would not be reasonable to conclude at present that there had been persistent under-delivery. Accordingly, only the normal 5% buffer is currently required. If delivery continues to be below that which is required, future decision makers may take a different view. The Council would be in a more robust position going forward if the plan creates a 5 year supply with a buffer greater than 5%, thus allowing for any unexpected delays on some sites.

3.20 We note the position has not moved on significantly since the last examination. However, bearing in

<td>mind the 2016/17 data will be available by the time we return to the Examination process we believe it would be prudent if the Council sought to plan for a 20% buffer now. Indeed, based on the analysis within Table 2 above it remains the case that the Council have not achieved its target for 5 years of the 10 years presented. However, it is more than likely that the 660 housing requirement figure will not be achieved in 2016/17, taking the under-supply position to 6 years on the trot, which is practically 2/3 of the last decade and a 100% of the period since the NPPF was adopted. 3.2.1 A key focus of the NPPF is to significantly boost housing supply and the 20% buffer was a key component of national policy to seek to try and achieve this. It hard to believe that the intention of the NPPF was not to impose the higher 20% in situations such as West Oxfordshire’s, where it is clearly evident that early completions within the plan period will be necessary. The application of the 20% buffer would assist with this objective.</td>

<td>&gt; SECTION 5 - PROVIDING NEW HOMES &gt; MAIN 27</td>
<td>When the Local Plan was originally developed, it made sense to concentrate housing developments in the three market towns. However, it is not appropriate to merely extrapolate the original allocations to take the additional numbers required by the Inspector and the SHMA. In particular, it is not sustainable to allocate an additional 800 homes to the Chipping Norton SDA. The percentage of residents employed locally has been falling steadily over the last decade and is now below 30%. Employment growth in the County is centred on the ‘knowledge spine’ running from Bicester through Oxford to the South. Chipping Norton is too inaccessible to attract significant potential employers, who will want to locate near the clusters along the spine. The main employment locally is for ‘minimum wage’ jobs in retail and caring sectors. New residents looking for professional or technical jobs will be forced to commute by car using the sub-standard A44 towards Oxford or the more dangerous A361 towards Banbury. The bus service to Oxford only runs hourly and has to cope with the severe congestion in the Wolvercote roundabout area. Access to the North Cotswold railway line at...</td>

<td>&gt; SECTION 5 - PROVIDING NEW HOMES &gt; MAIN 27</td>
<td>Kingham is also difficult - the connecting bus service is now sparse and unreliable following the County Council cuts, not as implied in para. 7.58. The additional 800 homes must be allocated nearer to Oxford with easy access to a railway line, thereby linking easily to the main employment areas in the County. The modified Plan already picks up on this logic, by proposing the Eynsham garden village with good links to Hanborough station (and with the potential to be eventually linked to a re-opened railway line to Witney) and with employment areas nearer to the ‘knowledge spine’ clusters. The Chipping Norton “800” should therefore be reallocated to the Eynsham area or sites even nearer to Oxford, with a start date earlier than the 2021 proposed for the garden village. The Chipping Norton Eastern Link Road proposed as part of the Tank Farm SDA will not achieve the reduction in HGVs through the town centre - the vast majority of HGVs are on the A44 towards Evesham, not on the A361. The link road will be a “road from nowhere to nowhere”. The money on the link would be wasted and reduce the likelihood of achieving a proper Chipping Norton by-pass on the A44. The commercial viability of the Stagecoach S3 bus to Oxford and the availability of a cadre of local drivers is dependent upon an overnight bus park in Chipping Norton. As part of the masterplan for the Tank Farm development a site of at least 0.3 Ha should be set aside for this vital bus parking.</td>
<td></td>

<tr>
<td>MM491</td>
<td>Crest Strategic Projects</td>
<td>Crest Strategic Projects</td>
<td>-</td>
<td>1410</td>
<td>&gt; SECTION 5 - PROVIDING NEW HOMES &gt; MAIN 27</td>
<td>The dramatic increase in housing proposed for Tank Farm is excessive and completely out of proportion with the layout of the town especially with the large number of houses that are already being built. The original number of 600 that was proposed was already too large, but to increase this to 1400 is ridiculous as there is no local demand for this number of housing and a large number of homes will be far too excessive for local people and, so called ‘affordable housing’ is a misnomer as many locals cannot afford these. It also drives up the prices of the existing housing stock. There has been little provision or thought for employment. Some companies, within Chipping Norton who want to expand and cannot get office space and especially not affordable space to build. This plan has no provision for for this so will drive these companies out of town causing more people to travel - mainly by car as many bus routes have been cut. Many new people moving to this development will be from out of town so will be working in larger surrounding towns - travelling to other towns like Banbury, Witney, Stratford, Oxford or Cheltenham causing increased car usage and traffic problems. Chipping Norton already has a problem with traffic and pollution - this will only make it worse and could actually take trade away from what is a thriving town centre. The ‘sweetener’ of a link road would not be effective as most traffic is on the A44 and is not heading to or from Burford - meaning that they would still have to go through the centre of town. I believe that Burford is also considering a weight limit.</td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td>3.29 The proposed modifications to paragraph 5.28 are not considered to be consistent with the evidence base, or indeed with the process that the paragraph implies has been undertaken in respect of each site. 3.30 In the case of the strategic allocations (SDA) at Witney and Chipping Norton it is reasonable to state that they have been subject to detailed scrutiny initially, in respect of their scale and the approach taken to assessing them via the SA process against standard criteria. However, it is considered that the approach to identifying reasonable alternatives via the SA Addendum process, to identify suitable sites to accommodate the proposed uplift in housing numbers, has not been approached robustly.</td>
</tr>
</tbody>
</table>
3.31 In similar fashion it is not accepted that the new strategic scale development option (SDA) to the west of Eynsham for 1,000 homes has been subject to proper detailed scrutiny having regard to the overarching SA process, which advocates following a development distribution that focuses on the three Main Service Centres of Witney, Carterton and Chipping Norton, with limited dispersal to the rest of the District. The chosen spatial option (Option 2) does not contemplate the assignment of strategic scale growth (via the assessment of spatial options) to the Rural Service Centres. It is contended that this approach, which includes a significant component of development in this location to meet the OAHN of the District, is inconsistent with the chosen spatial strategy and is not supported by the evidence base. It is therefore unsound.

3.32 The SA Addendum demonstrates why the approach to allocating development to the west of Eynsham is unsound having regard to the evidence base. Paragraph 4.44 explains the position:

The submission Plan included a proposed target of 1,600 homes for the Eynsham – Woodstock sub area to be met through a combination of homes already built, existing commitments and other smaller sites, mostly at Woodstock, Eynsham and Long Hanborough. Strategic options for growth at Eynsham were not considered at the submission stage since the agreed strategic approach for the Plan is to focus significant development growth in the Witney, Carterton and Chipping Norton sub areas. (GL Hearn emphasis).

3.33 The paragraph is very clear in stating that the strategic approach to development is to focus significant growth (of a strategic scale) at the three main towns. There is no suggestion here that the approach has changed in light of the uplift in housing numbers now countenanced, a fact the SA Addendum confirms at paragraphs 4.11 and 4.14, in re-affirming the Three Towns focus (Option 2). The only justification for considering more growth within the Eynsham-Woodstock sub area is in response to the undertaking to respond to some of Oxford’s unmet need for housing. Paragraph 4.44 of the SA Addendum confirms this.

3.34 Paragraph 4.45 goes on to make reference to ‘studies’ identifying scope for two new strategic options for growth at Eynsham. There is no footnote or reference within the SA, or indeed within the published evidence base available at the time of writing, explaining what form these ‘studies’ take, but it is assumed the reference is to the LUC study15, which does not appear to form part of the published Local Plan evidence base (at the time of writing) (Appendix 3). As set out elsewhere in this suite of representations the terms of reference were to consider options for accommodating Oxford’s unmet need for housing; there was no remit to consider whether any of the identified options would help to meet the housing requirements of the Districts within which the candidate sites are located. It is therefore misleading to state that there was consideration given to the suitability of Eynsham as a location for meeting the housing needs of West Oxfordshire. The premise for testing the suitability of Eynsham as a location for strategic development to meet the needs of West Oxfordshire is misplaced. What should have been abundantly clear to the authors of the SA Addendum is that development on this scale, in this location is not consistent with the spatial strategy advocated by the SA of the Local Plan. Consequently the approach is fundamentally unsound having regard to the evidence.

3.35 Conversely, the garden village option to meet a proportion of the unmet housing needs of Oxford would be in accordance with the strategy options that the SA Addendum tests and it is a location that was identified and tested by the LUC report for this purpose. Consequently, the inclusion of the garden village is considered to be consistent with the SA of strategic options.

3.36 The proposed modifications include the identification of non-strategic site allocations within four of the five identified sub-areas. These were not tested via the SA process initially because the submission version of
the Local Plan did not include non-strategic allocations. The prospect of non-strategic development that cumulatively would have comprised development on the scale now anticipated at the Rural Service Centre sub-areas (Eynsham-Woodstock and Burford-Charlbury) was only really considered by the SA under the Spatial Distribution (Option 3) – Dispersal, which was rejected.

3.37 As a consequence the only focussed testing of these options is via the SA Addendum, the findings of which are summarised at paragraphs 4.51 and 4.52. Paragraph 4.51 acknowledges that there would ‘potentially’ be negative effects on landscape and on the historic environment, but that these would be mitigated through policies ‘such as’ EH1-7. The SA also states that two options for the Eynsham-Woodstock sub area are close to Blenheim Palace, but potential negative effects (unspecified) would be mitigated through site-specific policy requirements. These statements bear further close consideration.

3.38 The three (not two) options identified for non-strategic development at Woodstock are each in close proximity to the boundary of the WHS, one site actually falls within almost entirely within the view cone extending to the east of the Park, which the Blenheim Heritage Management Plan identifies as significant to the visual setting of the WHS. To contend, as the SA does, that potential negative effects on the historic environment would be mitigated by policy provisions such as those contained within policies EH1-7 is a vague and extremely laissez-faire when considering the importance of the designated heritage assets that are likely to be affected by the proposed modifications.

3.39 Policy EH7 is the only policy of those listed that addresses the Historic Environment; and separate representations are made in respect of Main 83. However, the mitigation that the SA refers to in justifying the allocation of sites at Woodstock contained with Policy EH7 is generic in nature, requiring development proposals affecting designated heritage assets to assess impacts and provide appropriate mitigation strategies to address identified impacts. In addition ‘considerable weight and importance will be given to conserving the intrinsic universal values for which Blenheim Palace and Park is inscribed as a WHS’. These provisions are not any guarantee of the removal or avoidance of harm, as they are in effect development management tools to be applied ‘after the event’ – the event being determination of whether it is appropriate or not, based on appraisal and assessment of the significance of the heritage asset and the effect that development would have on that asset (considered against reasonable alternatives) – to allocate land for development in the first place. Relying on development management tools as justification for allocating a site is fundamentally misplaced and runs entirely contrary to the evidence-based approach to plan-making that the NPPF advocates.

3.40 The SA also concludes that development within the AONB within the Burford-Charlbury sub areas is justified, which would appear to run counter to the guidance set out at paragraph 116 of the NPPF, which advises that planning permission for major development within AONB designations should be refused, except in exceptional circumstances where it can be demonstrated that development is in the public interest. The SA Addendum does not proffer a public interest justification, or demonstrate to any satisfactory degree that exceptional circumstances to justify allocation of land within the AONB are manifest.

3.41 Paragraph 4.5216 states that the reason the non-strategic allocations have been progressed to allocation is because:

‘..they offer the most sustainable likely delivery of development with the least impacts on the important environmental assets of the District.’

3.42 This is a remarkable statement taking into consideration the fact that seven of the 15 options (almost
50% fall within or adjoining landscape and heritage designations (AONB/WHS) that are afforded the highest status of protection, relatively, under the NPPF. With regard to the three proposed allocations at Woodstock in each case the assessment provided as part of the SA Addendum17 concludes that with regard to criterion 14 ‘Conserve and Enhance Landscape Character and the Historic Environment’ the impact would be minor negative/neutral uncertain – with the minor negative being the perceived effect on landscape.

3.43 In each case the assessment of effects is deemed to be mitigated through development management criteria aimed at protecting the historic environment set out at Policy EH7 (addressed above) and via the same criterion applied to each site allocation policy (EW1 c/d/e) which requires that development should be consistent with:

‘Ensuring that development does not have a harmful impact on the setting of the Blenheim Palace WHS’

3.44 Incredibly, taking into account the significance of the heritage asset, this is the ‘mitigation’ on which the SA relies for reaching the conclusion that the proposed allocation is acceptable. There is no assessment of the impact on heritage assets; therefore there can be no certainty or expectation that there will be no impact. Simply concluding that there will be no adverse impact on heritage assets, because the policy allocating the land requires there to be none is a farcical and entirely misguided approach to assessing the merits of a proposed allocation, which requires consideration against all reasonable alternatives. It is an appropriate tool to use in a development management situation, where any decision is limited to whether to approve or refuse a specific development proposal. However, in a plan-making context the question is whether or not to allocate a site for a specified quantum of development; in these circumstances it is necessary to establish the principle of development against a clear and transparent evidence base. As a tool in this scenario it is inappropriate. There has been no such consideration and therefore there can be no prospect of the Council’s approach to identifying these sites for allocation being found sound. The approach to selecting these sites is unjustified and fundamentally flawed and has no evidence of any weight to substantiate it.

The Stanton Harcourt Estate supports the Council’s position that smaller ‘non-strategic’ allocations can help to ensure a deliverable housing supply in the short-term. Accordingly 15 ‘non-strategic’ sites are proposed for allocation at Paragraph 5.30b, resulting in a potential supply of circa 1,700 dwellings. Of these 1,700 units, a delivery of circa 685 dwellings is anticipated in the immediate 5 year supply period (2016-2021, Main Modification 201 - Appendix 2: Housing Trajectory). The Estate support the allocation for 50 dwellings on land at the Former Airfield, Stanton Harcourt.

Requirement for a Specific Policy on Housing Density

Given the increased housing targets, CPRE also considers that it is more urgent than ever that development density should be reviewed. The housing mix proposed by the SHMA and noted in 5.63 (only 32.7% 1 & 2 bed, which is very similar to past figures- see clause 2.17) is not consistent with the occupancy assumed in deriving the target. If affordability is the real issue we are trying to address in the District, then we need small, high density units. Any land allocations made must deliver the maximum number of units and those units must be as affordable as possible. This can only be achieved via high density development. The mix of housing proposed does not maximise the land available, nor deliver the lowest cost housing that is clearly needed.

CPRE therefore proposes an urgent review of allocations to ensure that they are maximised. Specifically, it should be investigated whether the same number of houses could be built on less land, leaving space for houses for the next Plan Period instead of having to make additional allocations. The most appropriate way to take this forward would be to develop a clear policy for densities. This issue is now becoming a

<td>&gt; SECTION 5 - PROVIDING NEW HOMES &gt; MAIN 27</td>
<td>The draft Plan cannot be considered positively prepared or effective, if it does not demonstrate an adequate supply of housing early in the plan period. Archstone Projects Ltd are currently promoting land west of the Burford Road, Chipping Norton as a site suitable for about 250 homes and to also deliver new recreation facilities linked to the existing hub at Greystones. Chipping Norton Town Council have been consulted on the proposals and confirmed their support to West Oxfordshire District Council. The site has been assessed in the SHELAA (ref.422) as being potentially suitable in part for about 100 dwellings. The initial landscape statement and concept masterplan for the site suggest that the developable area for housing (up to 9ha) could enable a higher number of dwellings. Further work is being undertaken to refine the developable area and landscape mitigation. The site represents a deliverable opportunity to boost housing supply, provide new community infrastructure for Chipping Norton and contribute towards measures to improve air quality in the short term.</td>

<td>Main 25 - 30 – Policy H2 - Delivery of New Homes and Supporting Text 2.21 We have set out our comments in respect of the Council’s proposed housing target in relation to main modification 24 and as such do not repeat these here.. Sources of Supply 2.22 The supporting text to Policy H2 sets out the various sources through which the housing requirement will be met, as summarised in the table below (ATTACHED) 2.23 Clearly the Council are already failing to plan for sufficient new homes to meet the housing requirement over the Plan period. 2.24 We do note that currently no allowance is made for additional allocations which could be brought forward through Neighbourhood Plans of which there are currently five in</td>
</tr>
</tbody>
</table>
preparation in the District as well as the made Chipping Norton Neighbourhood Plan, which does not seek to allocate any sites for development. Whilst additional development could be forthcoming through allocations in Neighbourhood Plans there is no guarantee that this will occur.

2.25 The NPPF makes clear that Local Plans “should meet objectively assessed needs, with sufficient flexibility to adapt to rapid change.” As currently drafted the Local Plan is falling not only to make provision for its own acknowledged objectively assessed need but allows for no flexibility to ensure the housing target is achieved. Concern is therefore raised that the Plan as currently drafted is not positively prepared, justified, effective or consistent with National Policy. Further consideration is likely to be required as to how this requirement can be met, including through additional allocations.

Five Year Housing Land Supply

2.26 The revised Policy as currently drafted states:

"With regard to 5-year housing land supply the Council will apply the residual (Liverpool) approach with any under-supply (backlog) of housing to be delivered over the remaining plan period to 2031. The additional provision being made for Oxford City’s needs will be incorporated into housing delivery assumptions from 2021 onwards."

2.27 The NPPG is clear in its guidance to LPAs (D 3-035-20140306) that they should aim to deal with any undersupply within the first 5 years of the plan period where possible. The NPPG makes clear that in circumstances where the LPA is unable to meet its undersupply in the first 5 years then it will need to work with neighbouring authorities under the ‘Duty to Cooperate.’ This matter was specifically raised by the Inspector in his Initial Findings: Part 2.

2.28 Proposed paragraph 5.34c seeks to justify the Council’s proposed approach by advising that:

"To provide a 5-year supply under the Sedgefield method, in excess of 1,000 homes per year would need to be built consistently over the next 5-years, well in excess of what has been achieved in West Oxfordshire in the past, even during several housing booms. Insufficient capacity has been identified through this Local Plan and the supporting assessment of housing land availability to achieve a 5-year supply under the Sedgefield approach and it could only be achieved by releasing a large number of sites that have been assessed by the Council as being unsuitable for new housing. The Council does not consider this to be an appropriate way forward and that addressing the shortfall in a more measured way over the remaining plan period using the Liverpool approach is considered to be entirely justified."

2.29 As is clear from the extract above the NPPG clearly advocates the Sedgefield approach as the most suitable approach. This is borne out in numerous appeal decisions and case law. Where the Sedgefield method cannot be achieved then the LPA must seek to liaise with neighbouring authorities under the Duty to Cooperate in order to redistribute this requirement. Although the Council have sought to justify its decision to seek to
pursue the Liverpool method, no indication is provided as to whether the approach advocated in the NPPG of seeking the assistance of neighbouring authorities to meet this shortfall in the short term has been pursued.

2.30 Given the discussions which have taken place in respect of the Oxford City apportionment, and the fact that full agreement has yet to be reached on this matter, it would appear unlikely in any event that such assistance would be forthcoming.

2.31 Given our comments above it is clear that the Council will need to propose additional allocations in order to meet the housing requirement. Given the shorter lead in times associated with small to medium size allocations it is likely that allocations of this scale would allow the Council to also address its backlog using the Sedgefield approach. Consideration should also be given to whether elements of the larger strategic sites could form an early phase of development without compromising the comprehensive development of the wider site.

2.32 Whilst the Council seeks to justify the use of the Liverpool method by referring back to past delivery rates, it must be recognised that these were set within a significantly different planning context when there was not the requirement as set out within the NPPF to meet the full objectively assessed need. The historic low levels of delivery are a reason to boost the supply of housing as soon as possible because the need has already arisen and has not yet been met, rather than being a reason to suppress the rate at which housing should come forward.

2.33 In light of the above, in order to ensure its soundness the Plan should make provision to meet the backlog in housing need using the Sedgefield method with the backlog delivered in the first five year period rather than being spread across the remaining Plan period (Liverpool) as currently proposed.

2.34 As currently drafted it is unclear whether the Council are proposing that post-2021 the supply of those allocations identified to meet the needs of Oxford City only would be accounted for and that the additional 2,750 dwellings would not be added to the requirement side of the five year housing land supply equation. Plainly such an approach would be unsound and the Inspector in his preliminary findings advised that the apportionment figure should be counted in the five year housing land supply. As such we would recommend that the policy text is re-worded to clarify this position.

Other Matters

2.35 The previously proposed criteria in point 3 of the policy are proposed to be deleted and instead are addressed in Policy OS2 as discussed above. With regards to the Main Service Centres etc., the Policy wording in the third bullet continues to state development will be allowed where "it is consistent with the criteria in 3) below". For clarity this wording therefore requires amendment.

<td>Carterton is the second largest town in the District (after Witney) and has the District's largest employer (RAF Brize Norton), but the local plan modifications do not include a new strategic housing allocation at Carterton. There is a need for a strategic housing allocation at Carterton on the basis that Carterton is a more...</td>
</tr>
</tbody>
</table>
The presence of RAF Brize Norton to the south of the town and the presence of committed residential development at East Carterton (700 dwellings) means that the town could only grow either to the north or the west. Land to the west has relatively poor links to the A40 and has relatively poor access to public transport. Land to the north is better related to the A40 and has good access to public transport. Land to the north of the Carterton (north of Monahan Way) represents a better location for a new strategic housing allocation.

Main Modification 27 and 136 reflect the increase in dwellings, from 600 – 1,400 dwellings, allocated to the east of Chipping Norton at Tank Farm. CALA supports this level of increase.

I am not qualified to judge the response for legality or compliance but my concern is that there appears to be no effort to limit the new building in villages. The example I can give here being Stonesfield where although 50 homes are mentioned along Woodstock Road the developers proposal for just over half the site shown is 68 Homes and there are other sites in the village which are coming forward such that instead of the 20% increase in population expected by the developments in the document there could be 2-3 times that number. These will be on the fringes of the village and traffic through will be impacted as will the already severe shortage of parking around the shop and particularly near the school at the start and end of day. The water, drainage and other utility links to the village will similarly have to be upgraded with disruption to all.

As Chair of Governors of the school I can also draw attention to the impact of the school of increased numbers, a document is attached which details main issues which are access to the school site and the small size of the hall and kitchen which was designed for a much smaller school (around 100 pupils). The School lies within the conservation area at the heart of the village.

We do not believe that the Garden Village proposal at Eynsham is an appropriate measure for delivering the unmet need for Oxford. It is based on an ambitious timescale for delivery and given that the Government’s announcement for the results of Garden Village proposals has not yet been announced (MAIN 17 references an application for funding), it is unclear how and whether the council will be able to deliver the scheme if the site is not selected of the Locally-led Garden Villages. The anticipated delivery numbers in the bid document are also unrealistic. It would be more appropriate to deal with the objectively assessed need and allocate development to settlements that can deliver homes across the plan period in a more effective manner. MAIN 3, 9, 15 16, 17, 23, 24 and 27 should be reconsidered and amended accordingly.
The Council has made some large strategic scale allocations and strategic sites. These will be responsible for delivering the majority of the requirement. All of these sites are concentrated around the three largest settlements, with the exception of Eynsham and the West Oxfordshire Garden Village. These strategic allocations are necessary but there may be problems associated in the short-term with market over-saturation at these particular locations. This could slow-down the rate of delivery. It will be important to increase the number of outlets on each of the strategic allocations to assist with build-out rates.

Delivery would be better assisted in the short to medium term by increasing the number of medium-sized scale schemes – i.e. the non-strategic allocations of about 20-100 dwellings. The Council could also greatly assist struggling small developers by making specific allocations in the villages for small schemes of 10 dwellings and fewer. This would provide certainty for small developers. As the Plan is drafted at the moment we feel that small developers will be discouraged from making applications in the villages given the prohibitive wording of Policies H2 and OS2. It would be hard for an applicant to know whether his/her application would be considered to be in conformity with the plan. There are too many clauses in these policies that could be interpreted by the Council’s development management team as counting against the scheme.

The Plan does not include a table that clearly sets out the residual requirement for which sites must be allocated in the Plan, including appropriate non-implementation allowances against both the existing commitments and proposed allocations. Indeed, it appears that the Plan presumes that both existing commitments and proposed allocations will be implemented in their entirety, and no contingency for slippage is included. This is considered to be an untenable position, and likely to result in the OAN not being met during the Plan period.

A minimum slippage allowance of 10% should made against existing commitments. Given that existing commitments as of September 2016 stood at 4,751 dwellings, this gives rise to a requirement to allocate sites for an additional 475 dwellings.

A non-implementation allowance should also be made against the proposed allocations. Given the reliance placed on a small number of large strategic sites, from which a substantial uplift on past delivery rates is required, and which, as is clear from the delivery trajectory in Appendix 2, is heavily back-loaded towards the end of the plan period reflecting the long lead times to deliver housing from large new development areas, the risks of slippage are real and the consequences significant. It is therefore arguable that a non-implementation allowance of greater than 10% should be applied in the circumstances of this case.

It is evident from the plan that a number of sites on which reliance is placed are of uncertain deliverability. In addition to the uncertainties surrounding the proposed Garden Village, there is evidence of constraints associated with the strategic development areas at Witney in particular. Moreover, there is evidence of constraints relating to a number of other, non-strategic sites that are allocated in the Plan (for example, Woodford Way Car Park and REEMA Central).

Applying the minimum slippage allowance of 10% to the proposed site allocations (strategic and nonstrategic sites) gives rise to a requirement to allocate land for an additional 817 homes.

The correctness of this approach is endorsed by the recent report (November 2016) of the Inspector concerning the Examination of Consequential Amendments to the Other Remitted North Somerset Core
Strategy Policies. There are parallels with the current case in that, at the mid-point in the Core Strategy period, North Somerset Council is facing a substantial uplift in the housing requirement following quashing of the original housing requirement set out in Policy CS13, and its replacement with a revised requirement that reflects a substantial uplift (by approximately 50%) on the original. In considering the distribution of the revised requirement, the Inspector noted that two large strategic sites comprising new urban villages accounted for a substantial part of the District’s housing requirement, and held as follows: …

... projects of this size inevitably encounter practical obstacles to implementation. Significant progress has been made towards infrastructure provision … but there is a lot more to do. Thirdly, build rates can vary according to the prevailing economic climate. Just a modest slippage in delivery against the indicated trajectory would diminish the contribution of this source towards the total requirement. (para. 18).

There is also uncertainty over planning permission lapse rates. The Council has applied a lapse rate of 9% to small site permissions which reflects the average lapse rate for the three years up to 2011, a figure derived from research for the 2011 Strategic Housing Land Availability Assessment. It has not applied a lapse rate to the larger sites because it says the average lapse rate between 2006 and 2011 was 0.73% of the dwelling stock. But some objectors argue that the lapse rate is higher – based on their calculations, around 2% on large sites and 24% based on historic rates. In reality, neither approach is especially reliable because the data from both calculations is derived from a short period which included both economic growth and recession and may not be indicative of future lapse rates, which could increase or decrease in response to economic prospects. The information supplied by the parties reinforces rather than dispels the uncertainty around this matter. There is a possibility that higher lapse rates than allowed for by the Council could occur in the next few years with a negative effect on housing supply if adequate flexibility is not built into the policies. (para. 19).

The conclusion to be drawn from the foregoing is that, whilst there is no reason to anticipate the failure of the strategy, there is potential for slippage and under-delivery. The Council has been optimistic in its approach to the residual requirement that needs to be provided for through the Site Allocations Plan. … (para. 22)

There are parallels in the current case. As in North Somerset, the current plan relies heavily on a limited number of large strategic sites, with the ‘inevitability’ that they will encounter obstacles to implementation as noted by the Inspector. As in North Somerset, a ‘modest slippage’ in delivery against the indicated trajectory would have a significant impact on the contribution of the strategic sites towards the total requirement, with particularly serious consequences in this instance given the ‘back-loading’ of the delivery trajectory from strategic sites.

The inclusion of a non-implementation allowance is therefore reasonable and indeed necessary. It should arguably be higher than 10% insofar as it applies to the strategic sites.

However, incorporating a 10% allowance for both extant planning permissions and allocated sites, the adjusted supply is as set out below (see attachment page 20).

Even on the Council’s own figures, and assuming that all existing commitments and emerging allocations yield their capacity in full during the plan period, the Proposed Modifications do not make sufficient provision to meet the OAN, which is a ‘minimum’ requirement. The adjusted supply, which makes reasonable allowances for non-implementation, and which would seem conservative having regard to the circumstances of the current case, indicates that provision needs to be made through the Plan for an additional 1,500 dwellings.

We fully support this modification, we consider it important that West Oxford cooperates with its neighbouring Boroughs and seeks to accommodate the agreed shortfall from Oxford City Council. For the reasons set out above we support this modification.

We support MAIN 4 and all other modifications that note West Oxford District Council will help meet the wider housing needs and that Eynsham shall play a key part of this, as set out in MAIN 1, 2, 13, 14, 15, 17, 23, 24, 27. |
| MM753         | David Wilson Homes Southern | David Wilson Homes Southern | c/o Barton Willmore | 1903 | > SECTION 5 - PROVIDING NEW HOMES > MAIN 27 | Strategic Development Areas (SDAs) MM27 (Paragraph 5.29) should be modified to reflect the modified housing numbers at Tank Farm (600) and West Oxfordshire Garden Village - within the plan period (1,440) to ensure that the plan is effective and deliverable. |
| MM752         | Bloombridge             | Bloombridge      | Mr               | Cutler            | 1904       | > SECTION 5 - PROVIDING NEW HOMES > MAIN 27 | Strategic Development Areas (SDAs) MM27 (Paragraph 5.29) should be modified to reflect the modified housing numbers at Tank Farm (600) and West Oxfordshire Garden Village - within the plan period (1,440) to ensure that the plan is effective and deliverable. |
| MM756         | Cantay Estates          | Cantay Estates   | -                | Cantay Estates    | 1935       | > SECTION 5 - PROVIDING NEW HOMES > MAIN 27 | Proposed modification - Expansion of Eynsham: The proposed modifications introduce a significant strategic development to the north of Eynsham to meet Oxford City’s unmet housing need. This change pertains to numerous modifications, we therefore set out our response below which we wish to be considered in response to the following modifications: MAIN3, MAIN7, MAIN9, MAIN13, MAIN14, MAIN15, MAIN23, MAIN24, MAIN27, MAIN58, MAIN60, MAIN149 Detailed comments particular to each modification are set out in detail against the relevant reference in following sections.

The same modification seeks to introduce the new strategic development north of Eynsham. The proposed development is of a strategic scale in a location which previously only saw limited development. The strategic area has been newly introduced at the examination stage, rather than through the extensive consultation process which should inform fundamental decisions in plan making.

The proposed ‘Garden Village’ is a strategic site suggested to be a new standalone settlement. Such a development is a clear departure from the submitted spatial strategy which emerged from the earlier consultation stages and was informed by the evidence base. The proposed new development is a clear departure from the proposed development plan, not a mere modification.

The proposed changes to the plan are so significant that they amount to a fundamentally different strategy to that submitted for examination. Should the Council wish to make such a fundamental change it should be done so through a new plan informed by a suitable evidence base and following a formal consultation process. To do otherwise would undermine the credibility of the plan and public confidence in the planning process. |
A consequence of the limited considerations which have informed the introduction of the development area is considerable uncertainty as to the achievability of the proposed scheme. The site was previously discounted as unsuitable for development within the submitted SHLAA, no updated document has been published to revise this status. Noise impacts, segregation across the A40 and landscape impacts are all identified as being prohibitive to development. No information has been produced to demonstrate how these issues may be overcome, nor whether they are less pronounced at any other development site. Similarly the proposal was dismissed as not being realistic in the submitted SA, little is offered to justify such a fundamental change in stance.

Development strategy for the proposed site is deferred to a later Area Action Plan, we consider however development parameters must be set out and explored in order to ensure the proposed scheme is achievable. The Plan also refers to an expression of interest submitted to Government seeking to obtain Garden Village status for the development, unlocking funding streams to deliver infrastructure to unlock the site.

Although an expression has been submitted, no decision has yet been issued. In excess of 50 similar expressions have been made nationally, therefore Garden Village status is far from guaranteed. Proper exploration must be made as to the sustainability, suitability and deliverability of this site and essential infrastructure in the event it does not secure Garden Village status.

MAIN9: The propose modification identifies the proposed expansion north of Eynsham to be an ‘exemplar’ development with regard to design and environmental performance. The aspirations for the development are laudable, however only very high level initial assessments have been undertaken to establish whether this is deliverable, particularly in the context of the landscape previously considered vulnerable to development.

MAIN23: The proposed alteration to the wording from the ‘majority’ of development being delivered in the district’s towns, to a significant proportion, confirms the proposed expansion to the north of Eynsham to be a deviation from the strategy set out under policy OS2 in the Submission Plan. We consider the fundamental change of the strategy renders this a new plan, it should therefore be developed as such, rather than processed through modifications.

MAIN25: We welcome the proposed increase in housing provision within the plan to reflect the objectively assessed need set out in the Oxfordshire SHMA (660 dwellings per annum). Although the headline figure for housing provision is increased the means of meeting that need is somewhat unclear in the document. The proposed site allocations fall someway short of the accepted housing requirement. Allocated sites and suggested windfalls total 11,545 homes, some 1,655 homes below the housing target for West Oxfordshire (13,200). Although not clearly stated it seems the Plan is reliant on a significant number of sites which have on the deliverability of these sites.

The published housing supply position paper sets out the Council’s assumptions on the deliverability of permitted homes. This is set against a backdrop of previous under-delivery in relation to the objectively assessed need, including in the initial five years of the plan period. The anticipated delivery of homes from larger sites (more than ten units) is particularly optimistic given the recent under-delivery of homes and the longstanding nature of several of the outline planning permissions.
The anticipated delivery figures (Appendix 1) do not appear to assume all planning permissions granted for larger sites will be implemented. The assessment of smaller sites makes a concession (9.1%) in acknowledgement that not all permissions will be implemented; an allowance for non-delivery of larger sites is also required.

While uncertainty exists as to the deliverability of a significant proportion of the required housing supply questions remain as to the soundness of the plan. Robust evidence should be produced to show the permitted sites can be relied upon to deliver homes, additional allocations should also be made to mitigate against any shortfall.

MAIN27: The allocation of non-strategic sites is welcomed and we believe imperative if the housing need of the district is to be satisfied. We are concerned that those sites allocated have not been selected through thorough testing, including consideration of all reasonable alternatives as set out by the regulations. As a consequence the soundness of the allocations and broader plan is in doubt.

We have raised our concerns with regard to the unpublished SHELAA earlier in these representations; those comments also apply to this modification. The fact that the plan preceded the assessment significantly undermines the credibility of the plan as an evidence based document as do shortcomings in the assessment.

We consider Long Hanborough to be a suitable location for development as it benefits from an excellent range of services and facilities, including a railway station. We believe additional development sites should be permitted in the village alongside those proposed in the modifications. The proposed development site at Tuckwells Pit, Church Road (SHELAA ref 225) is a suitable location for new development. It can sensitively accommodate new homes in a location which benefits from access to key services and facilities. A Landscape and Visual Impact Assessment has confirmed development of the site can have a beneficial effect on the landscape while the off-road cycleway on Main Road provides viable access to the railway station.

MAIN29: The proposed modifications seek to rely upon windfall development to fulfill the housing requirement at a rate of 125 homes per year. Although this policy is informed by previous delivery rates the published SHELAA suggests insufficient developable sites exist to fulfill that rate of development throughout the plan period. As the Council’s own SHELAA suggests insufficient sites are available to fulfill the suggested windfall rate either the evidence, or the proposed strategy must be unsound.

Historic windfall delivery rates have been achieved in the district’s larger settlements including those designated as service centres. The proposed downgrading of Long Hanborough reduces the likelihood of homes being delivered in the village further reducing the chances of windfall housing rates being maintained. Although an alternative service centre is proposed to be provided this is for delivery within the plan period and therefore will not give rise to any windfalls.

MAIN59: The proposed emphasis on the desirability of locating development in locations with access to public transport is at odds with the modification suggesting downgrading Long Hanborough’s settlement status. The village is one of only two in the district which benefit from a significant railway station.

MAIN60: The plan identifies significant challenges upon the A40, particularly with regard to access to Oxford. Although several alleviation options are suggested none is carried forward in plan proposals which acknowledges necessary funding is not available.

The proposed strategic development area at Eynsham is suggested on the basis that alleviation of A40 issues
could be provided, however their achievability is unknown. The uncertainty of delivery of necessary highway improvements calls into question the suitability of the proposed strategic development area. The Plan which relies upon this area to meet its portion of Oxford’s unmet housing need cannot be sound until the site is known to be deliverable.

MAIN66: The proposed modification underlines a success in the current plan period in encouraging use of railway connections in the district, particularly from Long Hanborough. The modification acknowledges the capability of the rail corridor to remove vehicles from the A40 as residents travel toward Oxford and London, and the desirability of increasing capacity of Hanborough station and the railway link.

The modification supports improvements to the rail connection and acknowledges the need to provide the proposed development north of Eynsham with connections to Hanborough station. It is perverse therefore that the plan seeks to restrict development in Long Hanborough as developments in the village could provide easy access to the railway station and contribute to providing enhanced services and facilities. We consider the village should retain its rural service centre status and consideration given to additional non-strategic allocations to make the most of this opportunity for sustainable development.

MAIN145: The proposed modification suggests Long Hanborough is not in a position to support significant levels of additional development, however no evidence is provided as to any particular harm which would arise from residential development over and above that in the plan.

The document identifies the opportunity in the village in enhancing sustainable transport options through improvements to the station, this presents scope for new homes to be developed with a tangible benefit for the district. No unique sensitivities are identified, we therefore believe additional housing development should be allocated (beyond that proposed) and windfalls encouraged in Long Hanborough.

MAIN149, 180: We welcome the acknowledgement in the modification of the potential for enhancement of Hanborough Station as a transport interchange, however the proposed downgrading of the settlement is clearly at odds with this and undermines the aspiration for improvements. Such an approach is also at odds with the NPPFs encouragement of environmentally sustainable development.

The modification suggests increased car parking at the station, whilst this could encourage rail commuters from rural areas it is clearly preferable to remove the need for car use all together. Additional cycle parking should be provided and homes provided in locations which already benefit from access to the station by sustainable means.

New homes created in Long Hanborough would benefit from existing foot and cycle access to the station, therefore they could be delivered early in the plan period and support enhanced rail services without need for additional car journeys. To seek to restrict this undermines the aspiration of the plan.

The Council suggest the proposed northern extension of Eynsham could benefit from sustainable access options through creation of new foot/cycle routes from the south. These would be more distant than any point within Long Hanborough, furthermore their delivery cannot at this point be guaranteed. If the Council wishes to make the most of opportunities presented by rail routes from Hanborough permitting of additional development in the village is clearly the correct path.
We are concerned that those sites allocated have not been selected through thorough testing, including consideration of all reasonable alternatives as set out by the regulations. As a consequence the soundness of the allocations and broader plan is in doubt.

It is unclear as to why those allocated non-strategic sites were selected over other deliverable options identified through the SHELAA. Little explanation is offered while the SA addendum limits assessment to the impacts of those sites allocated; no assessment is included of reasonable alternative non-strategic sites. Failure to consider reasonable alternatives, or offer any other assessment to demonstrate how the allocated sites out-perform alternatives in terms of sustainability undermines the transparency of the plan making process and the soundness of the Plan.

Kingham is a sustainable location for new development to contribute to meeting the district housing need. The village shares the same status as several villages which benefit from housing allocations in the modified Plan; it is also one of the few settlements in the district which has a railway station. Land adjacent to the Royal British Legion Hall (SHELAA ref 336) would be an excellent location for new development. The site can sensitively accommodate new homes consolidating while also opening access from the centre of the village to the RBL. Residents would benefit from access to rail services giving households a genuine sustainable transport option reducing pressure on the local road network.

Our client supports the Council’s position that smaller ‘non-strategic’ allocations can help to ensure a deliverable housing supply in the short-term. Accordingly 15 ‘non-strategic’ sites are proposed for allocation at Paragraph 5.30b, resulting in a potential supply of circa 1,700 dwellings. Of these 1,700 units, a delivery of circa 685 dwellings is anticipated in the immediate 5 year supply period (2016-2021, Main Modification 201 - Appendix 2: Housing Trajectory).

In order that the Proposed Modifications enable the Council to meet its ambition of short term site delivery (Paragraph 5.30a), Our Client is of the view that additional ‘non-strategic’ housing allocations should be made at Paragraph 5.30b. This approach will allow for a more flexible approach to housing supply.

In light of the Council’s reported 5 year housing land supply delivery position set out by Main Modification 29 and specifically at Paragraph 5.34b, it is here (and at Main Modification 30) that the Council proposes to utilise the ‘Liverpool’ method in respect of meeting past backlog of housing under supply. The Inspector, in his Preliminary Findings Report – Part 2 (IN016, December 2016), commented:

- On the basis of the plan’s current requirement of 525 dwellings per annum there has already been a shortfall in delivery since 2011;
- National guidance seeks any such shortfall to be made up in the next 5 years;
- If the housing requirement is increased, the shortfall will be greater and may need further action to address;
- The Council needs to have particular regard to National Guidance on this matter, as the ‘Liverpool’ method is not mentioned.

The continued application of the ‘Liverpool’ Method is of concern. The application of this methodology is not considered ‘sound’. The NPPG reports at Para 035 that ‘local planning authorities should aim to deal with any undersupply within the first 5 years of the plan period where possible’. In this respect the Plan is not positively prepared or justified. The concerns previously raised by the Inspector are therefore shared and it is
considered that the Sedgefield approach should be applied in order that a 'sound' Plan is prepared. The Council reports at Paragraph 5.34c that 'insufficient capacity has been identified through this Local Plan and the supporting assessment of housing land availability to deliver a 5-year supply under the Sedgefield approach and it could only be achieved by releasing a large number of sites that have been assessed by the Council as being unsuitable for new housing'.

To ensure flexibility, increase short term delivery and assist the Council in rectifying its existing housing supply shortfall it is evident that additional site allocations should be made. For this reason, we identify the land interest at Fawler Road, Charlbury as a developable site in accordance with Paragraph 47 of the NPPF.
The Physical Constraints assessment notes that:

‘The land has major groundwater vulnerability which would need to be taken into account in designing development, and that no other physical constraints are apparent.’

The Environment Agency website shows that the site lies in the ‘Minor Aquifer High’ Groundwater Vulnerability zone, along with extensive tracts of West Oxfordshire. The Environment Agency defines a Minor Aquifer as ‘permeable layers capable of supporting water supplies at a local rather than a strategic scale.’ This designation should not be considered as a constraint, which would preclude development of the site.

We fully endorse the view that there are no other physical constraints to development of the site.

Infrastructure Constraints

The Infrastructure Constraints assessment of the site notes that, if further development took place in the village, significant expansion of Stanton Harcourt Primary School would be challenging, and that solutions which provide some facilities off-site could be acceptable.

We note that, in response to the recently submitted planning application (Ref 16/01054/OUT) for 50 new homes on the former Stanton Harcourt Airfield site, a request that a financial contribution of £190,213 is paid by the developer towards the ‘necessary expansion of permanent primary at Stanton Harcourt CE Primary School’ (Oxfordshire County Council’s response to the proposed development, 16th May 2016). Further developments, such as Land East of Main Road, Stanton Harcourt, could also contribute financially to the need for new primary school facilities.

Landscape, Ecology and Heritage

The Landscape, Ecology and Heritage assessment notes that: ‘The site is unspoilt floodplain pasture which is of particularly high quality and sensitive to development (WOLA).’

We contest this description of the site, which was made in a document written nearly 20 years ago. The site is not floodplain (the whole site lies in Flood Zone 1, the area at lowest risk of flooding).

The assessment also notes that there are no Tree Preservation Orders on the site and no specific ecological designations affecting the site - but that the trees on the site boundaries are protected by their location in a Conservation Area, and make a significant contribution to public amenity. Any development of the site would seek to retain and protect the trees around the boundary of the site. No more trees would be removed than is necessary to create a safe access to the site.

SHELAA Conclusion

The SHELAA assessment concludes by noting that the site is available and achievable, but is not suitable for housing or employment, and that; ‘Development of any part of this unspoilt meadow would be harmful to the landscape and character of the area, the character of the Conservation Area and the setting of the adjacent listed building. The loss of any of the trees on the site would cause further harm and are likely to be necessary to secure safe access:’

In addition, the assessment concludes that: ‘The site forms part of the rural gap between Stanton Harcourt and Sutton.’
Once more, we contest the findings of the SHELAA.

Any greenfield site is 'unspoilt', and the use of this pejorative language is not factual nor helpful. We suggest that sympathetic development of the site, which is designed to properly take account of the sensitive setting, could make a positive contribution to the Conservation Area, and to the setting of the adjacent listed building.

Any development would ensure the retention and protection of the mature trees around the site, limiting removal of the trees to that necessary to create a safe access.

We suggest that the functional gap between Sutton and Stanton Harcourt actually lies further to the east, along New Road. This site forms part of the developed area of the site, with Flexneys Paddock to the west, Flexneys House to the south, and Foxburrow Close to the north east. Development of this site would not reduce either the physical or the perceived gap between Sutton and Stanton Harcourt.

Summary and Conclusion

In summary, my client supports the Council’s intention to make provision through the proposed Main Modifications of the Local Plan to meet the District’s Objectively Assessed Housing Need, as well as the District’s allocation of Oxford’s unmet housing need. The overall housing target is clearly challenging, with the timing of delivery of new housing and supporting infrastructure a key consideration.

We are concerned that the Submission Draft Local Plan (including Proposed Main Modifications) places too much reliance on the four SDA’s and a small ‘basket’ of non-strategic allocations. It is clear that in a number of instances there are significant landowner and infrastructure delivery issues to address, which could significantly delay the delivery of new dwellings.

We believe that the Local Plan should allocate additional sites to increase flexibility and provide greater certainty over delivery of the District’s housing requirement.

There is more capacity to deliver sustainable development adjacent to the villages in West Oxfordshire, including on Land to the East of Main Road, Stanton Harcourt.

We disagree with elements of the SHELAA findings in relation to Land East of Main Road, Stanton Harcourt, and believe the land to be available, achievable and suitable for development. We respectively ask that:

- Main Modification 16 to the Local Plan is further amended to remove reference to ‘limited development’ in villages – to enable more development to come forward in the villages.

- The first sentence of the sixth paragraph of Policy OS2 is further amended to read: ‘The villages are suitable for development which respects the village character and local distinctiveness and would help maintain the vitality of these communities, where the proposed development is necessary to meet identified housing needs.’

- The Council adopts the Sedgefield approach to meeting the backlog in housing delivery.

<td>&gt; SECTION 5 - PROVIDING NEW HOMES &gt; MAIN 27</td>
<td>Strutt &amp; Parker act on behalf of Mr and Mrs Martin Kinch, owners of the land west of Minster Lovell, which the West Oxfordshire Local Plan 2031 allocates for around 85 homes. My clients welcome the identification of this land as a non-strategic housing allocation and wish to reiterate to the Council that, in line with the advice included within the National Planning Policy Framework relating to the deliverability of sites allocated for residential development, the site is ‘available’ now for residential development, offers a ‘suitable’ location for new housing and is ‘achievable’ with a realistic prospect that housing can be delivered within five years. This is supported by the recent submission of an outline planning application for 85 homes on the site which received a resolution to grant planning permission at the November 2016 meeting of the Council’s Lowlands Area Planning Sub-Committee.</td>

<td>&gt; SECTION 5 - PROVIDING NEW HOMES &gt; MAIN 27</td>
<td>This representation is made in respect of the sustainable settlement of Ascott under Wychwood, which is in the ‘village’ tier of the Plan’s Settlement Hierarchy (Table 4.1, p35) where development will be supported where it respects the village character and local distinctiveness and would help maintain the vitality of the local community. We propose that additional sites are allocated in the Local Plan to secure the delivery of new housing on suitable/available sites as sought by proposed Policy OS2 and the relevant supporting text. Land &amp; Partners Ltd (L&amp;P) is a privately owned development company which has identified Ascott under Wychwood as a sustainable location for development. A summary of the company’s approach to development is outlined in Section 2.0. L&amp;P objects to Main Modifications 15, 16, 27, 30 and 172 of the current consultation, as set out below. This modification relates to paragraphs 5.28 – 5.30c of the Plan. Much of the amended text relates to the additional Non-Strategic Housing Allocations, some of which are located in villages. Whilst we agree with the principle of smaller allocations with shorter ‘lead-in’ times to ensure a deliverable housing supply, we have a number of objections to this main modification. Firstly, we object to the inclusion of Land at Myrtle Farm, Long Hanborough, as to our knowledge this is not deliverable. The owners of this site have indicated that they do not intend to bring it forward for development. Furthermore, we question the deliverability of the entirety of the site at Oliver’s Garage, Long Hanborough due to the existing use value of the site. The site allocation for 25 homes includes a number of existing residential properties in separate ownership titles to the main garage. Secondly, our main objection is the lack of a non-strategic allocation at Ascott under Wychwood, within the Burford – Charlbury Sub-Area. The village has a mainline passenger station on the Cotswold and Malvern Line and the Plan acknowledges at para 7.56 that this line has benefited from the redoubling of 20 miles of track and new platforms at Charlbury and Ascott under Wychwood. Furthermore, the village is in reasonable proximity to Oxford City. Main modification 15 is already indicating that the unmet needs of Oxford City present an opportunity to help sustain the more rural areas to by spreading the benefits of growth. Ascott under Wychwood is consequently a village which is well-placed to benefit from housing growth that cannot be met within Oxford City. Having regard to the above, there could be scope for additional sites to be identified at Ascott under Wychwood and this may avoid having to rely on a new Garden Village adjoining Eynsham to accommodate</td>

</tbody>
</table>
The Sustainability Appraisal (SA): The Submission Local Plan only included a proposed housing requirement of 10,500 homes between 2011 and 2031, amounting to 525 new units per year. The plan sought to address only the housing need arising in the district of West Oxfordshire. Although it was acknowledged additional housing was likely to be required to assist in meeting the housing needs of Oxford City no provision was made in the document.

The examination of the Local Plan is presently suspended as the Inspector confirmed the Submission Plan was unsound as it failed to address the objectively assessed housing need; the Council now seeks to address this. Modifications proposed increase housing provision to 13,200 to provide for West Oxfordshire’s need, a further 2,750 homes are also proposed to serve Oxford City. The revised housing provision is some 5,450 units higher than that proposed in the Submission Plan and remains to be delivered over the same plan period. In order to meet the increased figure ‘Strategic Development Areas’ are now proposed. The introduction of these substantial new sites in an area previously proposed for only limited development is a considerable deviation from the spatial strategy of the submission plan proposed. The inclusion of homes to satisfy Oxford’s need is also a significant deviation in spatial strategy from that submitted which solely looked to serve the rural district of West Oxfordshire.

A development strategy involving a new settlement has been subject to SA; the option was ‘scoped out’ of the previous assessment as it was not considered to represent a reasonable option. As the Submission Plan did not include any provision for Oxford no SA was undertaken as to a spatial strategy which looked to serve two housing areas (West Oxfordshire and Oxford City).

The modified Plan amounts to a fundamentally different document to that submitted for examination both in the level of development and the spatial approach. Despite this the changes are dealt with in the SA as an ‘addendum’, rather than fresh consideration being given to the most appropriate options for the distribution of housing.

The modifications proposed are crude additions to a predetermined strategy, rather than choices informed by a full and transparent assessment of all reasonable alternatives. We believe the SA to be deficient; therefore the Plan which follows from it cannot be sound.

Even if it were appropriate to consider the modifications through an SA addendum we believe the addendum itself to be incorrect. The Inspector confirmed in his Interim Findings (INO16) that any new site allocation must be informed by Sustainability Appraisal including assessment against reasonable alternatives. The published SA addendum solely considers two new strategic development sites adjoining Eynsham, rather than seeking to compare any reasonable alternatives.

Those sites closer to Oxford were dismissed out of hand due to Green Belt constraints, while those to the west were dismissed as being too distant from the city. The purpose of the SA is to enable a transparent and balanced assessment of alternative options against sustainability criteria, allowing a judgement to be made. For example a site closer to Oxford would benefit from physical proximity, but present challenges with regard to green belt impacts; a proper SA allows a balanced judgement to be made in a transparent manner offering sound foundations for the plan making process.

The SA does not consider all reasonable alternative options, merely the impacts of the Council’s pre-selected sites. This approach pre-judges the outcomes of the SA, removes the robustness and transparency of the plan making process and results in an unsound Plan.
Evidence base for proposed modifications: The proposed modifications must be informed by a robust and comprehensive evidence base. The modifications to the plan claim to be informed by an updated SHELAA; however this document was not published until 9th December 2016—some four weeks into the six week consultation period on the Local Plan. The sequence of publication suggests the evidence has been tailored to fit the plan, rather than informing the Council's selection of the most sustainable options. It is clearly unacceptable that this consultation has allowed only a fortnight for inspection of the modifications and evidence base. The SHELAA is fundamental to understanding the soundness of the proposed changes, particularly as the document which accompanied the submitted plan was identified as deficient by the Inspector in his interim findings (INO16).

Failure to undertake proper consultation at this stage leaves any decision upon the plan vulnerable to legal challenge as the plan making process, including consultations have not adhered to proper process.

The limited assessment which it has been possible to undertake of the SHELAA suggests it has been treated as a means to limit development in the district, rather than explore the theoretical capacity of suitable development sites.

Numerous sites, including our client's land in Ducklington (ref 342) are incorrectly classed as unsuitable for development as surmountable constraints are treated as fundamental barriers to development. For example site 342 (Ducklington) is considered unsuitable for development owing to landscape impacts; however no consideration appears to be afforded to potential mitigation. Furthermore no consideration is given to benefits which can arise from development; in the case of this site the use of playing fields, presently rented by the community, could be secured.

The restrictive approach applied through the SHELAA means it does not fulfil the purpose of the evidence document. It fails to provide the 'menu of sites' for assessment to ensure the most appropriate are chosen. This issue was identified by the Inspector in his initial findings (INO16) and does not appear to have been satisfactorily addressed; as a consequence the foundations do not exist upon which the Council can build a sound development plan.

We are concerned however that those sites allocated have not been selected through thorough testing, including consideration of all reasonable alternatives as set out by the regulations. As a consequence the soundness of the allocations and broader plan is in doubt. We have raised our concerns with regard to the unpublished SHELAA earlier in these representations; those comments also apply to this modification. The fact that the plan preceded the SHELAA significantly undermines the credibility of the plan as an evidence based document as do shortcomings in the assessment. We consider Ducklington to be a particularly suitable location for additional development. The village shares the same status as several villages within which housing allocations are proposed whilst also benefitting from close access to the major centre of Witney. We consider the proposed development site between the A415 and Standlake Road (SHELAA ref 342) to be a suitable location for new development, it can sensitively accommodate new homes consolidating development to the east of the village. The homes would have excellent access to village facilities and those in Witney and could contribute to securing the playing field for the village which is presently private and rented.</td>

</table>
It respects the village character and local distinctiveness and would help maintain the vitality of the local community. We propose that additional sites are allocated in the Local Plan to secure the delivery of new housing on suitable/available sites as sought by proposed Policy OS2 and the relevant supporting text.

Land & Partners Ltd (L&P) is a privately owned development company which has identified Long Hanborough as a sustainable location for development. A summary of the company’s approach to development is outlined in Section 2.0.

This modification relates to paragraphs 5.28 – 5.30c of the Plan. Much of the amended text relates to the additional Non-Strategic Housing Allocations, some of which are located in villages. Whilst we agree with the principle of smaller allocations with shorter ‘lead-in’ times to ensure a deliverable housing supply, we have a number of objections to this main modification.

Firstly, we object to the inclusion of Land at Myrtle Farm, Long Hanborough, as to our knowledge this is not deliverable. The owners of this site have indicated that they do not intend to bring it forward for development. Furthermore, we question the deliverability of the entirety of the site at Oliver’s Garage, Long Hanborough due to the existing use value of the site. The site allocation for 25 homes includes a number of existing residential properties in separate ownership titles to the main garage.

Secondly, our main objection is to the insufficient non-strategic allocations at Long Hanborough, within the Eynsham – Woodstock Sub-Area. The village has a mainline passenger station nearby (Hanborough) on the Cotswold and Malvern Line. Paragraph 9.5.16 of the Plan acknowledges that this is one of the District’s largest and most well-used stations. Car parking facilities have recently been expanded to improve capacity and there are aspirations for further station improvements including additional parking, a footbridge and new platform so that any trains extended from Oxford can terminate and turnaround.

Furthermore, the village is in reasonable proximity to Oxford City. Main modification 15 is already indicating that the unmet needs of Oxford City present an opportunity to help sustain the more rural areas by spreading the benefits of growth. Long Hanborough is consequently a village which is well-placed to benefit from housing growth that cannot be met within Oxford City.

Stormport object to the non-allocation of its land at Over Norton for housing development. It also, supports the acknowledgement in paragraph 5.31 that no allowance for housing development has been made for sites coming forward through the Neighbourhood Plan process, given the uncertainty associated with such matters. This further underlines the need for the Plan’s housing target to be expressed as a minimum to allow for potential increases in housing as a result of sites coming forward.

The purpose of this Section of the Representation Statement is to make the case for the allocation of the above site, as shown on the plans attached to this document. The site is currently the subject of an outline planning application (ref: 16/03761/out) for the following:

"Outline Planning application for the erection of up to 18 dwelling and associated public open space, all matters bar access reserved."

The purpose of the following paragraphs is to demonstrate its compatibility with the policies in the emerging

<td></td>
<td>Designations</td>
</tr>
<tr>
<td></td>
<td></td>
<td>The site is located within the AONB, but not subject to any other site specific designations. The site is not in the flood plain (flood zone 1) and is not immediately adjacent to it or a watercourse.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>Analysis</td>
</tr>
<tr>
<td></td>
<td></td>
<td>In terms of the development of the site, it is necessary to demonstrate how it accords with the provisions of the emerging Local Plan. The starting point is Policy OS2, states that: “The villages are suitable for limited development which respects the village character and local distinctiveness and would help to maintain the vitality of these communities.”</td>
</tr>
<tr>
<td></td>
<td></td>
<td>It goes on to note that allocations have been made and that further allocations may come forward in Neighbourhood Plans. The policy then provides a direct link to Policy H2 in that proposals for residential development have to be considered in accordance with that Policy. Over Norton is identified as a village on Table 4.1, which is supported by the 2016 Settlement Study. The earlier iteration of which was found sound by the Inspector in his interim findings. The significance of OS2 is that it clearly expects all villages to play a role in accommodating new development to assist the District in meeting its housing needs, such an approach is also consistent with the Framework in respect of rural development at paragraph 55. If this were not the intention of the Policy, then Over Norton would not be considered as a village and the Policy would not have been worded in such a positive manner.</td>
</tr>
</tbody>
</table>
The policy also contains a series of general principles, against which proposals should be assessed, the relative performance of the site against those principles are set out below:

**Proportionate in scale?**
Yes, the proposed allocation is for 18 units, this is less than 10% of the total number of households in the parish. It will not result in a disproportionate amount of development.

**Logical complement?**
Yes, the proposed development is on the northern edge of the village, bounded on two sides by residential development. The development line for the site is drawn in such a way that development arcs around the site, lining up with housing to the south west of the site. As a result, the site will consistently have a residential backdrop and complement the existing pattern of development.

**Avoids Coalescence?**
Yes, the development of this site will not erode in any material way the gap between Over Norton and surrounding settlements.

**Compatible with adjoining uses?**
Yes, the adjacent uses are residential and a village hall, which are entirely compatible with further residential development, as proposed.

**Protect or enhance local landscape?**
Yes, in formulating the proposals, considerable thoughts has been given to potential impacts on the AONB and the ability of development to provide a better management of views of the village. Currently, housing sits somewhat abruptly with the countryside, with open views into back gardens with minimal screening. Development, with associated landscaping can provide a better transition between the village and the wider countryside. In terms of long distance views, these are minimal and any short-range views always have the backdrop of housing development.

**Loss of landscape feature?**
No, the proposals involve the partial development of an arable field. The development will create new public open space, which will be a feature in its own right.

**Safe vehicle access?**
Yes, the development will make use of an existing field gate and access point into the site. There are also pedestrian routes into the village and the ability to use public transport to access Chipping Norton, which is a short distance away.

**Flood Risk?**
The site is in flood zone 1.
Policy H2

Turning to Policy H2, the Policy’s approach to housing in villages is a positive one which will allow for new development in specific circumstances, which includes:

"On undeveloped land within or adjoining the built-up area where the proposed development is necessary to meet identified housing needs and is consistent with the Criteria in 3 below and other policies in this plan in particular Policy OS2."

The proposed development adjoins the built-up area of Over Norton and the housing proposed is to assist the Plan in delivering its housing target and can make use of the windfall projection for the Chipping Norton sub-area. Table 9.3 of the Plan (MAIN 136) shows that there is a windfall allowance which would be of sufficient size to allow this site to come forward and address Stormport’s reservations about table 9.3 being unsound.

In addition, and as can be seen from the Oliver Garage Allocation in Long Hanborough, the Plan has allocated housing sites in the mid-20s, so the allocation of an 18-unit site would be consistent with the approach adopted elsewhere in the Plan. Finally the point has to be made that development will help the vitality of the village. This is important in that it provides an opportunity for more people to live in the village, increasing the diversity of age and incomes. The risk is that without further development, village vitality will degrade because villagers would have to move out of the village if no new housing was available. As a result, development would be entirely consistent with Policy H2.

As a result of the above analysis, the allocation of land at Choice Hill Road would be entirely consistent with the Local Plan development strategy. Detailed technical objections can be easily addressed. Therefore, it is recommended that the site, as per the attached plan is allocated for development.

This representation is made in respect of the sustainable settlement of Tackley, which is in the 'village' tier of the Plan’s Settlement Hierarchy (Table 4.1, p35) where development will be supported where it respects the village character and local distinctiveness and would help maintain the vitality of the local community. We propose that additional sites are allocated in the Local Plan to secure the delivery of new housing on suitable/available sites as sought by proposed Policy OS2 and the relevant supporting text.

Land & Partners Ltd (L&P) is a privately owned development company which has identified Tackley as a sustainable location for development. A summary of the company’s approach to development is outlined in Section 5.28 – 5.30c of the Plan. Much of the amended text relates to the additional Non-Strategic Housing Allocations, some of which are located in villages. Whilst we agree with the principle of smaller allocations with shorter ‘lead-in’ times to ensure a deliverable housing supply, we have a number of objections to this main modification.

Firstly, we object to the inclusion of Land at Myrtle Farm, Long Hanborough, as to our knowledge this is not deliverable. The owners of this site have indicated that they do not intend to bring it forward for development. Furthermore, we question the deliverability of the entirety of the site at Oliver’s Garage, Long Hanborough due to the existing use value of the site. The site allocation for 25 homes includes a number of existing residential properties in separate ownership titles to the main garage.
Secondly, our main objection is the exclusion of land at Tackley from a non-strategic allocation. The village lies outside the AONB and has a station on the Cherwell Valley Line which connects Oxford and Birmingham. The Plan acknowledges at para 7.57 that the largest stations used by most passengers and served by the greatest number of train services include Tackley. Furthermore, it is in reasonable proximity to Oxford City. Main modification 15 is already indicating that the unmet needs of Oxford City present an opportunity to help sustain the more rural areas to by spreading the benefits of growth. Tackley is consequently a village well-placed to benefit from housing growth unmet within Oxford City, within the Eynsham - Woodstock Sub-Area.

Main Modification 27: Non Strategic Housing Allocations

Spitfire Homes supports the Council's position that smaller 'non-strategic' allocations can help to ensure a deliverable housing supply in the short-term, providing a shorter 'lead-in' time to development in comparison to strategic site delivery. Accordingly 15 'non-strategic' sites are proposed for allocation at Paragraph 5.30b, resulting in a potential supply of circa 1,700 dwellings. Of these 1,700 units, a delivery of circa 685 dwellings is anticipated in the immediate 5 year supply period (2016-2021, Main Modification 201 - Appendix 2: Housing Trajectory).

In order that the Proposed Modifications enable the Council to meet its ambition of short term site delivery (Paragraph 5.30a), Spitfire Homes is of the view that additional 'non-strategic' housing allocations should be made at Paragraph 5.30b. This approach will allow for a more flexible approach to housing supply delivery, required by the NPPF.

This is pertinent, in light of the Council's reported 5 year housing land supply delivery position set out by Main Modification 29 and specifically at Paragraph 5.34b. It is here (and at Main Modification 30) that the Council proposes to utilise the 'Liverpool' method in respect of meeting past backlog of housing under supply. The Inspector, in his Preliminary Findings Report – Part 2 (NG16,December 2016), commented:

- On the basis of the plan's current requirement of 525 dwellings per annum there has already been a shortfall in delivery since 2011;
- National guidance seeks any such shortfall to be made up in the next 5 years;
- If the housing requirement is increased, the shortfall will be greater and may need further action to address;
- The Council needs to have particular regard to National Guidance on this matter, as the 'Liverpool' method is not mentioned.

The continued application of the 'Liverpool' Method is of concern to Spitfire Homes. The application of this methodology is not considered 'sound'. The NPPG reports at Para 035 that 'local planning authorities should aim to deal with any undersupply within the first 5 years of the plan period where possible'. In this respect the Plan is not positively prepared or justified. Spitfire Homes share the concerns previously raised by the Inspector and it is considered that the Sedgefield approach should be applied in order that a 'sound' Plan is prepared. The Council reports at Paragraph 5.34c that 'insufficient capacity has been identified through this Local Plan and the supporting assessment of housing land availability to deliver a 5-year supply under the Sedgefield approach and it could only be achieved by releasing a large number of sites that have been assessed by the Council as being unsuitable for new housing'.

To ensure flexibility, increase short term delivery and assist the Council in rectifying its existing housing supply shortfall it is evident that additional site allocations should be made. For this reason, Spitfire Homes identifies its land interest at Standlake as a deliverable and developable site in accordance with Paragraph 47 of the NPPF.

Evidence Base: Strategic Housing and Economic Land Availability Assessment

Spitfire notes the very recent publication of the Council’s Strategic Housing and Economic Land Availability Assessment (SHELAA). Spitfire Homes’ interest is identified by site reference 158 (Malthouse Farm). An area of 6.44 hectares is reported. The SHELAA concludes that the site is available and achievable though not suitable for residential development. Spitfire Homes responds to specific extracts of the Council’s SHELAA through the following table (see original representations).

This representation is made in respect of Land between Witney Road and High Street, Finstock.

This site is Ref: 267 in the Strategic Housing Land Availability Assessment (SHLAA). The site lies outside the AONB. The owners of the site are willing to make the site available for housing development, as recorded in the SHLAA. We disagree with the assessment of suitability in the SHLAA for the reasons set out in Section 4.7.

Finstock is in the ‘village’ tier of the Plan’s Settlement Hierarchy (Table 4.1, p35) where development will be supported where it respects the village character and local distinctiveness and would help maintain the vitality of the local community. Our promoted site at Finstock would accord with the above criteria and we propose that the site is allocated to secure the delivery of new housing on suitable/available sites as sought by proposed Policy OS2 and the relevant supporting text.

Land & Partners Ltd (L&P) is a privately owned development company which has identified this site as a sustainable location for development. L&P has reputation for engaging with the local community and securing high quality design, tailored to the local context. Negotiations are progressing with the landowners and the intention is to engage with residents and the Parish in early 2017.

Objection to Main Modification 27

This modification relates to paragraphs 5.28 – 5.30c of the Plan. Much of the amended text relates to the additional Non-Strategic Housing Allocations, some of which are located in villages. Whilst we agree with the principle of smaller allocations with shorter ‘lead-in’ times to ensure a deliverable housing supply, we have a number of objections to this main modification.

Firstly, we object to the inclusion of Land at Myrtle Farm, Long Hanborough, as to our knowledge this is not deliverable. The owners of this site have indicated that they do not intend to bring it forward for development. Furthermore, we question the deliverability of the entirety of the site at Oliver’s Garage, Long Hanborough due to the existing use value of the site. The site allocation for 25 homes includes a number of existing residential properties in separate ownership titles to the main garage.

Secondly, our main objection is the exclusion of land at Finstock from a non-strategic allocation. Finstock is a highly sustainable location for development, having a range of services, facilities and other attributes which make it a more suitable village for growth than others in the same category. The village has a station on the Cotswolds and Malvern Line and is only partly within the AONB. This is in addition to being in close proximity to Oxford City.

Main modification 15 suggests that the unmet needs of Oxford City present an opportunity to help sustain the more rural areas to by spreading the benefits of growth. Finstock is a rural village well-placed to benefit from housing growth unmet within Oxford City, being located in the southeast of the district.
Finstock’s growth has been limited by its location partly within the AONB, but there is a specific area adjoining the village outside of the AONB which has greater potential for development. This would limit the need to develop within the AONB at other locations, in accordance with national policy.

We also note that Main Modification 66 states at paragraph 7.57a that “there is significant demand and yet further passenger growth is being suppressed by train capacity and poor access to some rural stations. There is potential for further growth with the introduction of an hourly service in December 2018. New trains will bring increased capacity with additional seating and will also achieve faster journey times...”. We believe this provides further justification for allocating a site at Finstock, where there is a rail station close by (within accepted walking and cycling distances) and also with buses connecting to the village.

**SECTION 5 - PROVIDING NEW HOMES**

We note and agree in principle to the wording proposed to paragraphs 5.28 to 5.30c in relation to strategic and non-strategic site allocations. Whilst we have no objection in principle to the strategic development surrounding Witney, we would however consider that the development surrounding Witney (both to the north and the east) should be attributed to Witney’s growth and not to Hailey. As such, with this being the case, we are of the opinion that Hailey is still able to accommodate a level of growth proportionate to the village and that this site to the south west of Charlbury Road is the most suitable site for growth.

We consider that this site alone suggests that the Council have not given sufficient consideration to site availability or site selection.

The plan should allocate land south of Plum Lane, Shipton under Wychwood for a development of 100 residential dwellings.

Site Context

The site extends to approximately 6.6 ha (16.3 acres) and comprises a greenfield site currently in agricultural use (see Appendix 1 - Site Location Plan). The proposed development site is located within the Village of Shipton-under-Wychwood within the District of West Oxfordshire. The proposed development site is located approximately 4 miles (6.4 km) north of Burford, Oxfordshire, 1.3 miles (1.66 km) north-west of Milton-under-Wychwood and 1.56 miles (2.52 km) south of Ascott-under-Wychwood.

The site borders Trots Lane on the south-western boundary and residential properties to the south of Plum Lane. The site borders allotment gardens to the southern boundary of the site. The site has the potential to be accessed by both vehicles and pedestrians from off Plum’s Lane and Swinbrook Road.

The proposed development site is adjacent to residential development on the northern boundary and allotment gardens along the southern boundary. The surrounding character is predominantly residential, with Tall Trees Care Home located within 470 metres of the proposed development site. There is a shop serving Shipton-under-Wychwood approximately 800 metres from the proposed development site, with a further two shops located in Milton-under-Wychwood (approximately 1.5 km). The village contains two residential care homes (Tall Trees Care Homes) located north west of the site and (The Old Prebendal House) located north of the development site. A primary school (Wychwood Primary School) is located between the...
villages approximately 1 km north-west of the site. A Doctor’s Surgery (Wychwood Surgery) is within a kilometre of the site, whilst the Wychwood Library is around 1.7 kilometres away, in Milton-under-Wychwood.

There is a bus stop within 400m of the site which provides a daily service to Witney, another bus stop is located around 850m from the site which is served by frequent services to Charlbury, Bourton on the Water and Burford. Shipton Railway Station is located around 1.3km north of the site and provides services twice daily in each direction to Oxford, London Paddington and to locations within Oxfordshire.

The site falls within the Cotswold Area of Outstanding Natural Beauty and a Conservation Area. The Environment Agency Flood Map for Planning shows that the site is located within Flood Zone 1. This is the zone of the lowest flood risk and is compatible with all forms of development.

**Potential Uses and Capacity**

We proposed that the net developable area of the site would be able to accommodate up to 100 dwellings, including affordable housing (see Appendix 2 – Sketch Layout). This capacity has been calculated as a result of a masterplanning exercise that takes into account the site’s characteristics and constraints. The Sketch Layout shows that a development of 100 dwellings could be achieved, whilst incorporating features such as generous open space provision including a new village green, along with landscaping features and low density development edges.

**Site Suitability Issues**

The emerging Local Plan identified Shipton-under-Wychwood as a service centre that is capable of accommodating a moderate level of development where this is accessible. With this in mind, the site is well located to access a number of key local services/facilities including the primary school, local shops, Doctor’s surgery and public transport connections. The site’s primary access to the site would be obtained from Plum Lane and would coincide with the existing field access in this location. A secondary access point could be taken off Swinbrook Road to the south of the established row of trees and hedgerows. A primary access route could then run through the site, with secondary and shared surface routes leading off this and providing access to the remaining areas.

The site is within flood zone 1, nor is it affected by any ‘bad neighbour’ uses. There is no known potential for any contamination or any other key constraints on the site. The site can be suitably accessed from the Plum Lane, although it is acknowledged that some rationalisation of the junction between Plum Lane, Swinbrook Road and Leafield Road may be required to improve its overall functionality.

Forthcoming proposals for the site will be carefully considered, with a landscape-led masterplan utilised to ensure the landscape and scenic beauty of the AONB is preserved in accordance with relevant national and local policies. The design of the scheme will also be informed by a clear understanding of the surrounding historic context, which includes listed buildings and the Conservation Area. The site’s potential for biodiversity will be informed by ecological surveys undertaken by suitably qualified professionals.

**Site Availability Issues**

The site is currently owned by three separate parties, all of which are in advanced discussions with Spitfire Properties. The landowners are willing to make the site available for development, whilst Spitfire is willing
and engaged in discussions to take a controlling interest in the site with a view to developing it for residential purposes. Therefore, there is a realistic prospect that a planning application will be submitted within the next five years of the Plan period.

**Site Achievability Issues**

There is a realistic prospect the site will come forward for residential use as the site has willing landowners, who are actively engaged in the formal planning process and will be seeking to gain a planning consent within the next five years of the plan period. It is confirmed that the site is “deliverable” in accordance with paragraph 47 of the NPPF, which means the site is:

* Available now (the site has no current use that would delay development);
* Offers a suitable and sustainable location for development; and
* Is achievable with realistic a prospect that housing, including affordable units, will be delivered within five years and that development will be viable (the landowner does not envisage there being any issues regarding viability).

In line with paragraph 49 of the NPPF, and given that the District cannot demonstrate a five year housing land supply, the site is deliverable and can come forward in the short-term for residential development. Allocating the site for development would assist in meeting the identified housing shortfall within West Oxfordshire District and any residual unmet need from Oxford City.

CALA raise objection over a number of the strategic and non-strategic housing allocations identified within modification no. 27.

Concern is raised in relation to the two allocations at Eynsham i.e. land to the west of Eynsham and the new garden village to the north of the A40.

From an assessment of the background documentation supporting the emerging Local Plan, there is no market research which identifies a clear demand for the level of growth within this general location (other than the unmet need of Oxford). As set out within the representation to Policy H2 – Main Modification 30 question marks are raised over the ability to deliver 3200 dwellings within the plan based on lead in times, and the ability to complete and then sell the required number of units per annum over the plan period. Further, one questions the ability to do so on both sites given their proximity to one another and the ability to sell two very different concepts; one which is simply an large strategic urban extension to a village; and the other which is being required to provide exemplary design. And all of this when there are other large sites coming forward much closer to the edge of Oxford – Eynsham still being approximately 8 miles away.

Additionally, given the location of both sites so close to the A40 and the urban edge of Oxford, there are well known highway capacity issues along the A40 in directions heading in and out of Oxford. It is relevant to therefore ask the question as to whether it is appropriate to allocate up to 3,200 dwellings in this location and whether the suggested works being consulted upon by Oxfordshire County Council will help to alleviate the current and future highway infrastructure issues.

Of particular interest is the Transport Technical Note, dated 11th November, page 15, which states:

“The Preferred Local Plan includes a high concentration of additional dwellings along the A40 corridor on the section between the roundabouts at Burford and Headington. These are mainly located in Eynsham and Witney and are forecast to have an impact on the A40 highway section along this corridor. The key model
observation along the A40 on the Burford - Headington corridor (combined for both directions) for both the morning and evening peak hours is that distance travelled by vehicles along the corridor reduces.

This is due to delays along the A40 leading to vehicles re-routing away from the A40 around Eynsham and Witney, resulting in a reduced number of vehicles travelling along the A40. We have identified model delays at the A40 Cassington signalised junction (A40/ Cassington Road/ Eynsham Road) in both the Do Minimum scenario and Preferred Local Plan scenarios (Figure 14 to Figure 17). The overall impact of this is a reduction in average speed, coupled with an increase in delay. Optimisation of signal timings at these junctions does not seem to resolve the level of delay or rerouting experienced which suggests a network pinch point which is likely to require some form of mitigation in the future."

Indeed the preferred Local Plan approach which includes the suggested proposed modifications to the Local Plan in relation to Witney and Eynsham identifies a substantial potential impact on the A40.

In light of the market concerns and the clear transport evidence which states there would need to be significant highway mitigation to accommodate the levels of growth, not just at land to the west of Eynsham and the new garden village but for additional allocations at Witney for example, the proposed numbers of dwellings at the strategic allocations should be reduced in the trajectory or the actual allocations be dispersed across other rural service centres such as Bampton.

Such an approach for a greater dispersal across the District is supported by the House Builders Federation within their response to West Oxfordshire District Council which states:

"The Council has made some large strategic scale allocations and strategic sites. These will be responsible for delivering the majority of the requirement. All of these sites are concentrated around the three largest settlements, with the exception of Eynsham and the West Oxfordshire Garden Village. These strategic allocations are necessary but there may be problems associated in the short-term with market over-saturation at these particular locations. This could slow-down the rate of delivery. It will be important to increase the number of outlets on each of the strategic allocations to assist with build-out rates.

Delivery would be better assisted in the short to medium term by increasing the number of medium-sized scale schemes – i.e. the non-strategic allocations of about 50-100 dwellings."

With regards to the non-strategic sites identified within the proposed modifications, concerns are raised by as to whether there are enough non-strategic allocations to ensure a rolling 5 year housing land supply early in the plan period. As highlighted above there are a number of strategic allocations which are unlikely to deliver units until later in the plan period given the significant infrastructure provision that is required and associated with such allocations. Indeed, the Plan does not allocate sufficient dwellings to meet the OAN. Instead it relies on the review of the Plan to satisfy this objective. Doing so is contrary to the NPPF which says that Plans should allocate sites for the periods 0-5, 6-10 and “where possible” 11-15 years. Where this is not possible one would anticipate there being a good reason not to. No such justification has been given, particularly where suitable, available and achievable sites actually sites. The example that this representation provides is land to the north of New Road, and between Station Road and Mount Owen Road, Bampton.

Objection is also raised with regards to a number of the non-strategic allocations and whether they are the most suitable for allocation given landscape, heritage or environmental designations and site specific constraints that affect a number of the sites.
Firstly, the former Stanton Harcourt Airfield has been identified as delivering units early in the plan period. However, given the previous use of the site where contamination is expected, the site will have to be remediated prior to the delivery of any dwellings on site. This is likely to result in a delay of delivery of the 50 units until the latter part of the plan period.

Secondly, Land East of Woodstock (300 units) and Land north of Banbury Road, Woodstock (120 units) have all been raised as having the potential to impact upon the setting of Blenheim Palace, a World Heritage Site. Indeed the land north of Banbury Road, Woodstock site, which is earmarked for the delivery of 120 units, is within the heart of an important view into the Park from Woodstock towards the column of victory.

PPG (2a-0032) states "World Heritage Sites are designated heritage assets of the highest significance. Appropriate policies for the protection and sustainable use of World Heritage Sites, including enhancement where appropriate, should be included in relevant plans. These policies should take account of international and national requirements as well as specific local circumstances.

When developing Local Plan policies to protect and enhance World Heritage Sites and their Outstanding Universal Value, local planning authorities, should aim to satisfy the following principles:

- protecting the World Heritage Site and its setting, including any buffer zone, from inappropriate development
- striking a balance between the needs of conservation, biodiversity, access, the interests of the local community, the public benefits of a development and the sustainable economic use of the World Heritage Site in its setting, including any buffer zone
- protecting a World Heritage Site from the effect of changes which are relatively minor but which, on a cumulative basis, could have a significant effect
- enhancing the World Heritage Site and its setting where appropriate and possible through positive management
- protecting the World Heritage Site from climate change but ensuring that mitigation and adaptation is not at the expense of integrity or authenticity

Planning authorities need to take these principles and the resultant policies into account when making decisions."

Therefore it is paramount that the LPA seek to protect the setting of the World Heritage Site and protect it from cumulative changes which could have a significant effect upon Blenheim Palace. The delivery of 120 units within an important view of the World Heritage Site and the delivery of 300 units adjacent to an important view of Blenheim Place would not be enhancing the setting of the heritage asset in this instance and therefore their allocation as a non-strategic allocation is questioned.

Additionally, the non-strategic allocation of land to the east of Burford for 85 units is also questioned. The site is located within the Cotswold AONB and therefore a development of 85 units would constitute major development within the AONB. In line with paragraph 116 of the NPPF which states:
"Planning permission should be refused for major development in these designated areas except in exceptional circumstances and where it can be demonstrated they are in the public interest. Consideration of such applications should include an assessment of:

- the need for the development, including in terms of any national considerations, and the impact of permitting it or refusing it, upon the local economy;

- the cost of, and scope for, developing elsewhere outside the designated area, or meeting the need for it in some other way; and

- any detrimental effect on the environment, the landscape and recreational opportunities, and the extent to which that could be moderated."

It is clear that paragraph 116 of the NPPF seeks to guide major development to areas outside of the AONB. It can be demonstrated that there are alternative sites within the district which could accommodate a development of up to 85 units.

Suitability, Achievability and Availability of land at Station Road and Mount Owen Road, Bampton

With regards to the concerns over the sites mentioned above, a number of further development options are suggested on land to the north of the existing 160 units at Bampton without causing any significant adverse impacts on matters such as landscape, drainage, highways or ecology.

CALA are currently working on two development options for the site, one for up to 75 units and one for up to 245 units. As expressed previously, both development options would not result in any significant adverse impacts.

Vehicular and pedestrian access to the site will be gained off a widened Mount Owen Road and/or through the land to the south which is the subject of a detailed consent (ref 15/03505/RES). Each development option of up to 75 units or 245 units has been developed with the three dimensions of sustainable development in mind.

Development at this site would meet the social dimension by providing a range of market and affordable housing to meet the needs of West Oxfordshire as well as the more localised needs of Bampton and the surrounding area. The site is within close proximity to a range of facilities and services including a primary school, doctor’s surgery, pubs, local shop and a post office. There is also good accessibility to Witney through an hourly bus service.

The developer is committed to delivering a high quality development that integrates well with the surrounding community and will deliver additional benefits for use by existing and future residents. Such benefits include the opportunity to provide land for any future expansion at Bampton Church of England Primary School which is known to be close to capacity. It is highlighted that CALA’s site is the only site in Bampton which would be able to provide land for future expansion at Bampton Church of England Primary School. Within the 2016 SHELAA Appendix 3 document prepared by West Oxfordshire District Council, land at Blackhouse Farm (SHELAA reference 331) states:

"Bampton CE Primary School is expanding to an admission number of 30, however this is expected to be needed for already-permitted housing. Site constraints are likely to rule out further expansion of the school,"
<table>
<thead>
<tr>
<th>Respondent ID</th>
<th>Respondent Organisation</th>
<th>Respondent Name</th>
<th>Respondent Title</th>
<th>Comment ID</th>
<th>Comment Full Path</th>
<th>Comment</th>
</tr>
</thead>
</table>
|              |                        |                 |                  |            |                  | However, this site is adjacent to the school site. If additional school site area could be incorporated, it could unlock the potential of Bampton School to expand, addressing the needs of Bampton and possibly also other nearby villages such as Aston & Cote.

This statement is factually wrong as the only site that lies adjacent to the school is the site under control by CALA, land between Station Road and Mount Owen Road. Land at Blackhouse Farm lies 600m to the south east of Bampton Church of England Primary School.

The economic dimension would be met by providing a range of dwellings in a sustainable location which would contribute to economic growth. New residents would also help towards the economic dimension, with a proportion of their income being spent on local services and facilities. Additional employment would arise from the construction and sales phases of the development.

Finally, the environmental dimension can be met through the development of land that as identified above is not constrained by any landscape or ecological designations unlike other non-strategic allocations in other rural service centres such as Burford and Charlbury. The site lies within Flood Risk Zone 1, the lowest category of flood risk, according to the Environment Agency Flood Risk Maps for Planning. The site is also located outside any designated landscape or Article 1(5) land.

Development at this site would lead to a loss of a greenfield site, however, this is offset by the developer’s commitment to providing a high quality scheme that will deliver substantial social and economic benefits which seeks to integrate with the existing built environment and local community. The proposed site is also well related to the neighbouring New Road site. Residential use on this site is deemed to be the most suitable use for the site given its close proximity to a range of facilities and services such as the primary school, local shop and post office.

Summary

In relation to Proposed Main Modification 27, concern is raised over a number of the strategic sites such as land west of Eynsham and the new garden village to the north of the A40 and on this basis the modification cannot be deemed sound. There is no market research which identifies a clear demand for the level of growth within this general location. Further, one questions the ability for both sites to come forward given their proximity to one another and the ability to sell two very different concepts; one which is simply an large strategic urban extension to a village; and the other which is being required to provide exemplary design. Additionally, there is known highway constraints along the A40 at present and one would question whether the highway network could accommodate the level of growth suggested without significant highway infrastructure improvements.

Additionally, concern is raised over a number of non-strategic allocated sites such as land East of Woodstock and Land north of Hill Rise due to the potential harm to the setting of Blenheim Palace; land at the Former Stanton Harcourt Airfield over the likelihood of contamination and the associated delays through remediation work; and land to the east of Burford which would represent a form of major development within the Cotswolds’ AONB.

In light of the above, numbers associated with the larger strategic sites at Eynsham and the Garden Village should be reduced and a number of the non-strategic allocations should be removed given there associated site specific constraints.

<td>These paragraphs refer to existing commitments, Strategic Development Areas and Non-Strategic Housing Allocations. This demonstrates an extremely high reliance on large sites forming a component of the housing supply including: 4,107 dwellings on sites with planning permission or a resolution to grant; 6,450 dwellings on SDAs (principally sites over 1,000 dwellings) which do not currently benefit from planning permission; and several Non-Strategic sites of 200 or dwellings, again without planning permission at present. This equates to 73% of the overall housing requirement on large sites, the majority of which are located within the 3 MRCs, whilst only 304 dwellings are committed/allocated within 5 of the 34 Villages.</td>

<td>Whilst it is acknowledged that the majority of growth should be directed to the most sustainable locations within the District in line with the settlement hierarchy, it should also be recognised as detailed at paragraph 4.17 of the Draft Plan, that not all growth &quot;can or indeed should go to Witney, Carterton and Chipping Norton&quot; as there is a need for development elsewhere in the District in order to spread the benefits of growth to help sustain the more rural parts of the District. This is supported by the guidance at Paragraphs 54-55 of the NPPF and within the PPG in respect of Rural Housing, which highlights the need to recognise the particular issues facing such areas in terms of housing supply and affordability, and the role housing has in supporting the broader sustainability of villages by helping to retain local services and community facilities such as schools, local shops and cultural venues. The extremely limited housing allocations to a handful of Villages ignores the potential availability of other sites within some of the other larger Villages, which are more sustainable - with reference to the Council’s updated Settlement Sustainability Report (December 2016), no housing allocations have been identified at 3 of the top 5 most sustainable Villages (North Leigh, Brize Norton and Enstone). This appears contrary to the Plan’s Vision and Core Objectives which highlight the challenge facing residents in view of house prices well above the national average and the special emphasis on providing homes for local people in housing need (C06). RSL are promoting a site at land south of Oxford Road, Enstone (see enclosed Location Plan) is just one example. This is a site adjacent to the settlement boundary, outside the Cotswold AONB and is otherwise deliverable, achievable and viable with no technical constraints that would prevent it from coming forward in the next 5 years.</td>

<td>The supporting text to Policy H2 sets out the various sources through which the housing requirement for West Oxfordshire will be met (excluding unmet need from Oxford City), as summarised in the table on page 6 of the attachment. Clearly the Council are already failing to plan for sufficient new homes to meet the housing requirement for West Oxfordshire of 13,200 over the Plan period. We do note that currently no allowance is made for additional allocations which could be brought forward</td>

</tbody>
</table>
through Neighbourhood Plans of which there are currently five in preparation in the District, as well as the made Chipping Norton Neighbourhood Plan, which does not seek to allocate any sites for development. Whilst additional development could be forthcoming through allocations in Neighbourhood Plans there is no guarantee that this will occur.

The NPPF makes clear that Local Plans “should meet objectively assessed needs, with sufficient flexibility to adapt to rapid change.” As currently drafted the Local Plan is failing not only to make provision for its own acknowledged objectively assessed need but allows for no flexibility to ensure the housing target is achieved. Concern is therefore raised that the Plan as currently drafted is not positively prepared, justified, effective or consistent with National Policy. There should be no delays to deliverability on any allocated site, in the context of a current 5 year housing land supply shortfall, and therefore reference to their delivery post-2021 should be deleted. Further consideration is likely to be required as to how this requirement can be met, including through additional allocations.

Five Year Housing Land Supply

The revised Policy as currently drafted states: “With regard to 5-year housing land supply the Council will apply the residual (Liverpool) approach with any under-supply (backlog) of housing to be delivered over the remaining plan period to 2031. The additional provision being made for Oxford City’s needs will be incorporated into housing delivery assumptions from 2021 onwards.”

The NPPG is clear in its guidance to LPA’s (D 3-035-20140306) that they should aim to deal with any undersupply within the first 5 years of the plan period where possible. The NPPG makes clear that in circumstances where the LPA is unable to meet its undersupply in the first 5 years then it will need to work with neighbouring authorities under the ‘Duty to Cooperate.’ This matter was specifically raised by the Inspector in his Initial Findings: Part 2.

Proposed paragraph 5.34c seeks to justify the Council’s proposed approach by advising that:

“To provide a 5-year supply under the Sedgefield method, in excess of 1,000 homes per year would need to be built consistently over the next 5-years, well in excess of what has been achieved in West Oxfordshire in the past, even during several housing booms. Insufficient capacity has been identified through this Local Plan and the supporting assessment of housing land availability to achieve a 5-year supply under the Sedgefield approach and it could only be achieved by releasing a large number of sites that have been assessed by the Council as being unsuitable for new housing. The Council does not consider this to be an appropriate way forward and that addressing the shortfall in a more measured way over the remaining plan period using the Liverpool approach is considered to be entirely justified.”

As is clear from the extract above the NPPG clearly advocates the Sedgefield approach as the most suitable approach. This is borne out in numerous appeal decisions and case law. Where the Sedgefield method cannot be achieved then the LPA must seek to liaise with neighbouring authorities under the Duty to Cooperate in order to redistribute this requirement. Although the Council have sought to justify its decision to seek to pursue the Liverpool method, no indication is provided as to whether the approach advocated in the NPPG of seeking the assistance of neighbouring authorities to meet this shortfall in the short term has been pursued.

Given the discussions which have taken place in respect of the Oxford City apportionment, and the fact that full agreement has yet to be reached on this matter, it would appear unlikely in any event that such assistance would be forthcoming.
Given our comments above it is clear that the Council will need to propose additional allocations in order to meet the housing requirement. Given the shorter lead in times associated with small to medium size allocations it is likely that allocations of this scale would allow the Council to also address its backlog using the Sedgefield approach. Consideration should also be given to whether elements of the larger strategic sites could form an early phase of development without compromising the comprehensive development of the wider site.

Whilst the Council seeks to justify the use of the Liverpool method by referring back to past delivery rates, it must be recognised that these were set within a significantly different planning context when there was not the requirement as set out within the NPPF to meet the full objectively assessed need. The historic low levels of delivery are a reason to boost the supply of housing as soon as possible because the need has already arisen and has not yet been met, rather than being a reason to suppress the rate at which housing should come forward.

In light of the above, in order to ensure its soundness the Plan should make provision to meet the backlog in housing need using the Sedgefield method with the backlog delivered in the first five year period rather than being spread across the remaining Plan period (Liverpool) as currently proposed.

As currently drafted it is unclear whether the Council are proposing that post-2021 the supply of those allocations identified to meet the needs of Oxford City only would be accounted for, and that the additional 2,750 dwellings would not be added to the requirement side of the five year housing land supply equation. Plainly such an approach would be unsound and the Inspector in his preliminary findings advised that the apportionment figure should be counted within the five year housing land supply. As such we would recommend that the policy text is re-worded to clarify this position.

Other Matters

The previously proposed criteria in point 3 of the policy are proposed to be deleted and instead are addressed in Policy OS2 as discussed above. With regards to the Main Service Centres etc., the Policy wording in the third bullet continues to state development will be allowed where “it is consistent with the criteria in 3) below”. For clarity this wording therefore requires amendment.

MAIN 27 – Strategic Development Areas

We support this proposed main modification in terms of the proposed increase in housing numbers at the North Witney SDA from 1,000 to 1,400 homes.

2.19. The landowners object to the non-allocation of their land at Long Hanborough for housing development. Furthermore, they object to the allocation of land at Myrtle Farm on the basis that it is of questionable delivery as the landowner had made it clear that they do not intend to sell the site.

2.20. The landowners, support the acknowledgement in paragraph 5.31 that no allowance for housing development has been made for sites coming forward through the Neighbourhood Plan process, given the uncertainty associated with such matters. This further underlines the need for the Plan’s housing target to be expressed as a minimum to allow for potential increases in housing as a result of sites coming forward.

27. MAIN27: The allocation of non-strategic sites is welcomed and we believe imperative if the housing need of the district is to be satisfied. We are concerned that those sites allocated have not been selected through thorough testing, including consideration of all reasonable alternatives as set out by the regulations. As a consequence the soundness of the allocations and broader plan is in doubt.

28. We have raised our concerns with regard to the unpublished SHELAA earlier in these representations; those comments also apply to this modification. The fact that the plan preceded the assessment significantly undermines the credibility of the plan as an evidence based document as do shortcomings in the assessment.

29. We consider Leafield to be a suitable location for an additional development site being of the same status as several villages within which housing allocations are proposed. The proposed development site off Greenwich Lane (SHELAA ref 409) to be a suitable location for new development. It can sensitively accommodate new homes in a location which benefits from access to key services and facilities which can benefit from safe access with suitable highway improvements.

5.29 Land to the east of Chipping Norton at Tank Farm (6001, 400 homes). How can this figure be increased from what was already going to be a significant impact (c. 600 homes) to more than doubled, when it is acknowledged that this will have very negative impacts on the traffic in town and pollution? See CN traffic survey:

9.1.4 Results of the indicative link capacity assessment indicate that by providing new highway infrastructure to the east of the town, delivery of either 850 homes or 1500 homes on the Tank Farm site would be expected to result in a reduction in flow on the A44 High Street / Horsefair corridor through the town centre (by 4% and up to 10% respectively) when compared to the 2031 Baseline plus 600 Unit Tank Farm development scenario. It should be noted however that predicted traffic flows on the High Street corridor for all development scenarios (+600 units, +850 or +1500) would be substantially higher than existing volumes as surveyed in 2016.

9.1.5 As the scale of proposed development on the Tank Farm site increases, the potential delivery of a new eastern link road connecting the A44 London Road to the A361 Burford Road (either by way of a central spine road in the case of the 850 Unit scenario tested or a distinct eastern distributor road in the case of the 1500 Unit scenario) would allow for redistribution of both development and background traffic that would reduce anticipated flows on the High Street corridor but result in increases elsewhere on the network (principally as a result of the impact of the increased level of development itself).

With reference to the increased number of housing allocated to the Tank Farm SDA, the key issue here is where the increased figure of 1400 comes from. The original figure of 600, which the Town voted on and approved via the referendum earlier in the year was judged to be sustainable, even though there were strong objections based on the perceived and real lack of pre-existing infrastructure at a level that might be considered appropriate for an extra 600 homes and the approximate 1100 vehicles likely to be owned by the

| MM147         |                         | David Whetstone | Mr               | Whetstone         | 325        | MAIN 27            | For a town with circa 3,000 dwellings currently, expansion of 1,400 on the Tank Farm area to the east of town is completely disproportionate. It would of course completely change the town’s character, but in practical terms it would:  
- Develop a valuable farmland area that should not be developed, even though it is not formally included in the “conservation area”:  
- Increase the already excessive levels of (traffic) solution;  
- Make excessive demands on the town’s already stretched infrastructure - parking, health services and schools, water and drainage. |
| MM309         |                         | Phillip Parker  |                  | Parker            | 547        | MAIN 27 |Para 9.5.19: “Opportunities for walking, cycling and riding within the sub area are generally good due to the close proximity of Witney and Oxford to key settlements in the area.” They are good, but can be better – and the improvements required do not appear to have been objectively assessed. The location of new housing or the opportunity to improve walking and cycling between housing and existing facilities has not been objectively assessed. In particular, children in the new housing in North Woodstock are likely to be in the catchment area for Wootton primary school, while older children in Wootton go to school in Woodstock. Cycling links between Wootton and Woodstock need to be improved, but the plan does not recognise this, but needs to do so in order to comply with the Core Objectives CO11 (“maximise opportunity for walking and cycling”), Transport Policy T1 (“Priority will be given to locating new development in areas with convenient access to a good range of services and facilities and where the need to travel by private car can be minimised, due to opportunities for walking, cycling and the use of public transport.”) and Transport Policy TP3 (“All new development will be located and designed to maximise opportunities for walking, cycling and the use of public transport.”). |
| MM315         |                         | Richard Gwinn   |                  | Gwinn             | 570        | MAIN 27            | his modification increases significantly the number of properties to be built in the Chipping Norton SDA. This is backed up by unsound evidence and is not appropriate to the existing community. In particular:  
a) Part of the Vision in section 3.2 is to “play a role in helping to meet wider needs, without significant change to the intrinsic character of the District.” Increasing the population of the town by 50% will inevitably change its character. Especially as the driver for the increase is the need to house those working in Oxford, so turning a working town into a dormitory town. |

The increased figure of 1400 has no correlation to an existing local need. It is simply a means of moving housing away from Oxford. This pre-supposes that people will be happy to commute to Oxford from Chipping Norton. It is already the case that unless the commuter leaves early, the rush hour traffic in and approaching Oxford makes commuting by car difficult. Public transport options are extremely limited. Train services from Kingham are heavily restricted by the lack of car parking.  

I do not consider that a development of 1400 at Tank Farm is in any way sustainable, and the figure is arbitrary and the full implications have not been fully considered. |

</thead>
<tbody>
<tr>
<td>b) Core Objective CO2 is to “Ensure that new developments are suitably located and well designed to protect and enhance the individual form, character and identity of our towns and villages as well as contributing to the quality of life in West Oxfordshire.” This fails for the same reasons as the Vision statement.</td>
</tr>
<tr>
<td>c) Core Objective CO3 is to “Promote safe, vibrant and prosperous town and village centres and resist proposals that would damage their vitality and viability or adversely affect measures to improve those centres.” Whilst a modest increase in population will help the town, this huge increase, aimed at commuters into Oxford, will be detrimental. The plan mentions that the proposed development is within walking and cycling distance of the town centre, although it offers no evidence to support this. I visit the town centre most days and have never seen more than one bicycle in the cycle parking there. The area around the town is too hilly for most of the population to cycle. A straw poll of people living in the Parkers Circus estate (which is closer to the town centre than is the SDA) indicates that none walk when going into town to do their shopping. These were all fit, active people. The town centre is also not safe. In the last few years, people have been killed by passing traffic while on the pavement at Horsefair. The proposed link road appears to be a “road to nowhere” as the majority of traffic (especially commercial traffic) enters or leaves the town on the A44 Moreton-in-Marsh road. This will become even more the case if a weight restriction is put on the ancient bridge in Burford, as has been suggested. In that event, no heavy vehicles will use this relief road. This increase in traffic will also affect air quality, which is already at illegal levels.</td>
</tr>
<tr>
<td>d) Core Objective CO4 is to “Locate new residential development where it will best help to meet local housing needs and reduce the need to travel.” Policy T1 – Sustainable Transport says that “Priority will be given to locating new development in areas with convenient access to a good range of services and facilities and where the need to travel by private car can be minimised, due to opportunities for walking, cycling and the use of public transport, particularly where this would help to reduce traffic congestion on the routes around Oxford and the Air Quality Management Areas at Witney and Chipping Norton.” The increase proposed in the modification is mainly to serve Oxford. There is no train link to Oxford. The bus to Oxford takes over an hour and is infrequent. The bus service from Kingham Station does not wait if a train is delayed, resulting in a possible two-hour wait for the bus that meets the next train. I see no solution to this problem as buses have to keep to timetables. Everyone I know has stopped using this bus, resulting in more car journeys and a station car park that can’t cope. The alternative is to travel to the station by driving through country lanes and the village of Churchill in contravention of Policy T1. The increased local traffic will make air quality worse. There is nothing in the proposed plan to solve these problems.</td>
</tr>
<tr>
<td>e) The proposed plan states in para 7.74 that “In Chipping Norton public car parking spaces in the town centre are insufficient to meet current needs.” There is nothing in the proposed plan to solve this problem.</td>
</tr>
</tbody>
</table>

<p>| MM363 | Oxford City Council | Ms Dell | 686 | Land and New Allocations |
|----------------------------------|
| It does appear that the new strategic site allocations (West of Eynsham &amp; the 'Garden City' Eynsham) together with increasing the capacity on the three existing strategic allocations provides sufficient land in principle to meet their SHMA targets and make a significant contribution to Oxford’s ‘unmet’ housing need. The two new strategic allocations in Eynsham (Garden Village and West of Eynsham) have emerged through the joint working arrangements and given their strategic spatial location appear to be best placed to help contribute to meeting Oxford’s ‘unmet’ housing need. |
| Support: The City Council therefore support in principle: |
| * Main Mod 16 Policy O2 ‘Locating development in the right places’, which identifies Eynsham and the |</p>

<td>Garden Village as the most appropriate allocations to help to meet Oxford’s unmet housing need. * Main Mod 23, and in particular paragraphs 5.20 and 5.21 which also confirm the importance of these two principal sites. * Main Mod 27 which then goes on to identify these sites as ‘strategic development areas’ in para 5.29 and 5.34d and * Main Mod 30 Policy H2 ‘Delivery of new homes’ which incorporates “further 2,750 homes in the period 2021 – 2031 to meet Oxford City’s housing needs.” Objection: Given Oxford’s acute housing shortage the City Council would seek some assurance that the deliverability of the two new strategic allocations will be prioritised over and above increasing the capacity on the three existing strategic site allocations. Otherwise there could be further delay in meeting the city’s urgent housing requirements, particularly bearing in mind this Plan only goes to 2031 and development will not start until 2021. The delivery of this housing is urgently needed to meet Oxford’s unmet housing need and therefore the City Council would expect an Area Action Plan for Eynsham and the Garden Village to be commenced at the earliest opportunity to take forward the delivery of these ‘Strategic Development Areas’.</td>

<tr>
<td>MM376</td>
<td>Stagecoach in Oxfordshire/Stagecoach West</td>
<td>Nick Small, Stagecoach Bus</td>
<td>Dr</td>
<td>Small</td>
<td>759</td>
<td>&gt; SECTION 5 - PROVIDING NEW HOMES &gt; MAIN 27</td>
<td>MAIN 27 Para 5.29 Strategic Development Areas Stagecoach, in line with previous representations to the emergent Plan, notes and supports the focus of development at the largest and most sustainable settlements. Stagecoach notes and welcomes that the development strategy to address the additional quantum required to meet the Districts OAN, continues to focus on the largest settlements. These are best served by public transport and are those places where development is best placed, in the main, to unlock and catalyse further improvements to service with a wider public benefit. This is entirely sound, being consistent with NPPF para 17 and paras 29-35. However Stagecoach recognises and concurs with the evaluation and conclusion drawn from the evidence base, that Chipping Norton, Eynsham and Woodstock offer more appropriate opportunities to meet both the Districts growth requirements, and Oxford City’s unmet OAN, than attempting to find greatly more development capacity in and adjoining Witney, where opportunities are more constrained and where the impacts of development on local highways networks are clearly becoming hard to satisfactorily mitigate. The additional demand concentrated in each of these “second tier” settlements arising from development can be expected to lead to increases in service frequency and operating hours, especially where “pump-priming” funding can be applied from developments to de-risk the high opportunity costs involved in a District where distances to key destinations are relatively high. Stagecoach would suggest that this is in fact likely to catalyse a greater proportional improvement in the bus service offer, and its overall attractiveness, than development at Witney and Carterton. Stagecoach notes and supports the increase of the capacity of the Draft allocation East of Witney to 450 units. This site lies directly on the District’s most frequent inter-urban bus services, S1 and S2, with up to 9</td>
</tr>
</tbody>
</table>
buses per hour towards Oxford at peak times, and a new peak service direct to John Radcliffe Hospital. This S7 service is one we are strongly committed to maintaining and building up, serving the Oxford Eastern Arc directly. Once Science Transit Phase 1 is provided the journey time and reliability of this route ought to be competitive with car use.

Stagecoach notes and supports the biggest absolute and relative increase in growth directed to Tank Farm at Chipping Norton, where the site is now anticipated to accommodate 1400 dwellings - 800 more than the previous proposal. We note and welcome that this will provide for a key eastern link road which will have a very beneficial potential impact on bus routing, allowing service S3 to potentially serve much more of the whole town more directly. This does require suitable bus turning and layover facilities to be provided in the town centre. This growth, alongside that already committed and emergent on smaller sites, is likely to allow us to consider frequency increases on service S3 to Oxford to every 30 minutes. Subject to development taking place in Cherwell District, it may also prove to be possible to upgrade the 488 service to Banbury to broadly every 30 minutes.

Stagecoach notes and supports the logic for a new Strategic Development Area West of Eynsham, for 1000 units, most of this to meet locally-arising housing need. Considerable care needs to be taken to integrate the proposal with that for the new Park and Ride north of the A40, allowing buses both to continue beyond the P+R to penetrate and terminate at the site, and/or alternatively to efficiently serve the site via a new Eynsham Western Link Road. This offers potential for buses to route past the site en-route to Oxford, or alternatively towards Bampton, should it prove to be possible to extend buses serving the P+R beyond towards the upper Thames Valley. The formulation of Outline and more detailed proposals for this proposed allocation will need to take particular acre to address many sensitive matters, among which being the need to ensure all residents from first occupation have convenient access to an attractive bus service.

Stagecoach notes and broadly supports the logic for meeting Oxford’s unmet Objectively Assessed Housing Need (OAN) at a site for a New Settlement North of Eynsham. We concur that the evidence base shows that this is the nearest site to the City within the District that can serve that requirement, both minimising overall distance and time of travel to the City, and taking fullest advantage of proposed sustainable transport infrastructure to be provided by A40 Science Transit phase 1 and 2. As such the proposal is the “best fit” by far with NPPF paragraph 17 and 29-35, and therefore Stagecoach considers that this indeed represents the most appropriate solution having considered reasonable alternatives.

Much of the land identified will “wrap around” the Park and Ride site, and we urge OCC and development promoters in due course to fully integrate the P+R proposals with the emerging master plan for the new settlement. This should also seek to ensure initial phases are built out adjacent to the P+R, taking full advantage of the service provided there without the need to use a car at all. Emerging preferred options for the P+R layout do, we understand, make for such provision including for multiple points of pedestrian and cycle access to the terminal building from potential development land adjacent. We have also urged that a bus-only link, at least, is provided from the bus terminal into the Garden Village site to allow buses in due course to penetrate and terminate within the New Settlement, or to continue seamlessly and efficiently through towards Hanborough and employment opportunities north of Oxford.

However Stagecoach notes and objects to the identification of 400 additional dwellings North of Witney. Stagecoach does not believe that the evidence in any way points to this site being suitable, achievable or deliverable, as required by NPPF.

Stagecoach has already pointed out to the Examination that land north of Witney becomes progressively
<table>

<td>Stagecoach in Oxfordshire/Stagecoach West</td>
<td>Nick Small, Stagecoach Bus</td>
<td>Dr Small</td>
<td>762</td>
<td>&gt; SECTION 5 - PROVIDING NEW HOMES &gt; MAIN 27</td>
<td>harder to integrate into a relevant and attractive pattern of bus service provision, the further west from New Yatt Road one goes. Thus this land will be that much the more likely to be car-dependent, even if that is only to drive out of town to the new Park and Ride site at Eynsham, Hanborough Station, or a new P+R proposed in the Oxford Transport Strategy in the Begbroke/A44 area. This proposals therefore runs entirely contrary to the requirement in NPPF para 17 that patterns of development should be actively managed to make the fullest possible use of the opportunities for sustainable transport. On the contrary, this site would struggle to be served by any kind of bus service that would be relevant to meeting residents daily travel needs to a meaningful degree. Worse, modelling already before the Examination shows that even with the £18m West End Link Road provided, the 1000 dwellings previously proposed could be accommodated with small detriment to already unacceptable traffic conditions at Bridge Street. It follows therefore, that any additional quantum provided here would seriously affect this area, adding greatly to congestion-induced delay and unreliability on all our bus services serving the District. NPPF paragraph 32 makes clear that when cumulative unmitigated impacts are severe, development should not be consented. There is no evidence of any kind presented, that an additional 400 dwellings in this location could be accommodated, without already severe and chronic congestion being the result, even if the WELR is provided, something which is itself in some doubt. This aspect of the Plan is contrary to NPPF paras 17 and 29-35, and is evidently not the most appropriate solution when all reasonable alternatives have been considered contrary to paragraph 182. Accordingly, this aspect of the Plan is unsound. Irrespective of the planning merits of the enlarged site, it is also unclear that the enlarged site North of Witney is even deliverable. We are apprised that the land is unregistered and has no promoter, much less a housebuilder, on board. Given the fact that WODC repeatedly stressed the challenge of meeting the currently-proposed housing trajectory, this is both illogical and unhelpful. The Plan in this respect is ineffective, and is thus also unsound on that basis. Stagecoach therefore strongly urges WODC to re-examine the potential to accommodate development north of the town, to focus on a smaller quantum oriented towards the Woodstock Road, where much improved bus services could be provided; and that any residual quantum be redirected to other sustainable settlements. This could include Carterton, where at least two housebuilders with a strong track record are actively promoting strategic options that are omitted from the Plan.</td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td>Stagecoach recognises and broadly supports the need to identify sustainable locations and carry these through to site-specific allocations, both strategic and non-strategic. The logic expressed at para 5.30a is on we understand and recognise carries weight, being well evidenced by the pattern of housing delivery in the District and County beyond, and indeed more generally. Stagecoach is concerned that many of the main strategic sites, and more than one of the larger non-strategic sites identified remain undelivered, despite their identification as suitable sites for development over several years. This is particularly true of land in Carterton, in the control of the DIO and associated organisations. We recognise that the housing needs of the Defence Estate are in a state of particular flux at this time, as the configuration and operational footprint of the armed forces remains subject to profound changes on an</td>

<td>&gt; SECTION 5 - PROVIDING NEW HOMES &gt; MAIN 27</td>
<td>I want to comment on the increase housing in Woodstock in both the North and East in conjunction with the proposed housing in Chipping Norton and Long Hanborough. It seems that the housing proposed will take the total number of houses beyond 3000 houses. My concerns are: - increased traffic on the A44 coming through Woodstock will cause a major burden on the actual town - roads will see an enormous increase in traffic coupled with increased traffic coming from new homes in Hanborough Woodstock and Chipping Norton, Bladon roundabout is likely to be continually congested, it already has busy traffic through Bladon that impacts on traffic on the A44 with regular traffic accidents on the road between Bladon roundabout down to the Oxford Airport, this is only likely to increase with a potential new homes providing a possible, 4,500 drivers on to this stretch of road.</td>
</tr>
</tbody>
</table>
There is no clear citing of employment need in this area to meet the housing numbers you suggested, so we are looking at commuters, the local transport is expensive, does not meet the needs of locals already, and there is no train link to resource this level of build.

Traffic congestion will ultimately result in choked roads all along the A44, putting yet more pressure on the A34 and Oxford English road.

The Pear tree park and ride is already a bursting point for commuters in Oxford.

There is no parking in Oxford, Woodstock Rd is full already, where are the commuters going to put their cars?

re Woodstock

Increased housing for full schools, a GP surgery no longer fit for purpose, no capacity for increased parking in the town is going to kill the town, returning it to the times of pre M40!

Currently access to the north Hill Rise site can only be down Vermont Drive, this access if the park is moved, will cause increased congestion the A44 and residents and buses turning in Vermont Drive will be backing up into the estates.

The infrastructure for the small town Woodstock cannot service effectively increased housing around the town.

There is a real risk for the new housing to overburden the A44, increase traffic problems down its length, increase the risk for more road traffic accidents, kill off a special historic town and overburden local see ices and infrastructure.

With thanks
Vanessa Sadler

**Comments applying to all allocations**

**Masterplanning**

We have noticed that dwelling numbers have increased in a number of sub-area housing delivery tables (eg Main 91) and we wonder how housing numbers for individual sites have been determined. Considering the quantum of development proposed we are concerned that housing numbers might not be informed by necessary masterplanning and as a result might not allow for sufficient space for green infrastructure in form of gardens, open spaces, street tree planting etc within the developments. It is our experience that developers see dwelling numbers in a Local Plan not as a potential maximum that is subject to a number of criteria but as a given number and as such care needs to be taken that housing numbers are not overestimated.

We have not been able to find information which suggests that development capacity of individual sites has been determined and tested by masterplanning. We consider it important that all housing allocations are accompanied by such supporting information to provide confidence that housing can be delivered in a way that results in a high quality environment with sufficient green infrastructure and which is in keeping with the
### Ecological Baseline Surveys

We could not find ecological surveys for the majority of the allocation sites and are therefore not sure whether surveys have been carried out to inform the allocation of these sites. We welcome that allocations largely avoid direct effects on designated sites but sites might still comprise important nature conservation interest in form of priority habitats and protected species that needs to be taken into account. Para. 158 of the NPPF requires Local Planning Authorities to base local plan policies on adequate, up-to-date and relevant evidence. As such surveys are required to inform judgements on suitability and capacity. The potential lack of ecological surveys would be in conflict with the NPPF and could result in allocations being found unsound.

### Strategic Development Areas (MM27)

3.22 One of our gravest concern relating to the housing delivery strategy for the Local Plan is in relation to the high reliance on large strategic sites as listed in MM27. Whilst we do not object to the principle of the development locations per se, we do raise issues with the delivery that is expected from these sites over the plan period and in some cases, the physical capacity for them to deliver the targets suggested.

3.23 Indeed, the Council imply at paragraph 5.25 of the modified Local Plan that past completions have been low because of the lack of urgency from the development sector to bring strategic sites forward. The reality is strategic sites simply take time to properly plan and deliver, principally because their impacts are exponentially greater, they need thorough consideration, and the complexity of land ownerships and scale inevitably result in longer lead in times that those experienced with smaller, more moderate sites.

3.24 As set out in Table 3 below, SDAs are to provide 42.0%, 58.3% and 58.1% of the total number of homes required in the Witney, Chipping Norton and Eynsham-Woodstock sub-areas. This strategy needs to be considered with considerable caution. Should any of the SDA encounter delay to their delivery, these sub-areas and the district as a whole would not meet the housing requirement over the plan period. This is particularly pertinent in the case of Witney and Carterton where there are two very large commitments already which not listed in the table below (ATTACHED)

3.25 Table 4 (ATTACHED) identifies the five SDAs within the district and the number of homes they are expected to deliver over the plan period based on the Council's trajectory.

3.26 Understandably, the overall housing requirement from each of the five SDAs will only be achieved at the very end of the plan period. Thus, should the delivery of one or more SDA slip by just one or two years the plan will fail to meet its housing requirement over the plan period. This is not implausible given the complexity of delivering these SDAs, which we address in more detail in Section 4.

3.27 In order to explore delivery rates from large scale site such as the SDA’s identified in the Local Plan, it is important to be aware of the following three reports / assessment, which are all based a large amount of empirical data:

- A Report into the Delivery of Urban Extensions (Hourigan Connolly, February 2014) (Appendix 1)
- Urban Extensions, Assessment of Delivery rates (Savills, October 2014) (Appendix 2)
- Start to Finish: How Quickly do large-Scale Housing Sites Deliver? (NLP, November 2016) (Appendix 3)
3.28 The Hourigan Connolly report on the delivery of urban extensions highlights the difficulties and time it can take to bring forward such sites. It is worth highlighting the following key factors as reported in Section 15 of that document, namely the average times for the various stages of the planning process. These are:

- Average timescale from submission to grant of outline planning permission is 34 months;
- Average timescale for signing a legal agreement 24 months; and,
- Reserved matters applications 6-9 months.

3.29 Subsequent to that report, the Savills report looks at urban extensions and their delivery rates. In terms of lead in time the report is clear that a period of 3-4 years from the determination of an outline planning application to the completion of site preparation and the delivery of housing is a realistic average time scale for the delivery of housing. The study notes that sites which have particularly complex land packages and or significant strategic infrastructure to deliver can take significantly longer than estimated. The report lists examples of sites where Section 106 agreements in themselves have taken 64 months to agree, with the average being 14 months.

3.30 The Savills report goes on to consider how fast a major site may build out. On average it found that in the first year of construction a site delivered 65 units, this increased to 110-120 dwellings per annum in subsequent years, before dropping towards the end of the life cycle of the development. These rates are obviously averages and dependant on a range of factors, however the report makes clear that any spikes on sites considered within the report were down to very specific delivery factors e.g. the need to deliver a large lump of affordable housing in one go due to the funding requirements of a partner.

3.31 The NLP report relates to housing delivery and assesses 70 large schemes (500 homes+) which have come forward in the last 20 years, and 83 smaller sites (50-499 homes). The report commented on average delivery from conception to start on site looking at:

- Lead in time prior to submission of an application;
- Planning approval period; and,
- Annual build out rates.

3.32 The average lead-in time for large sites is identified by NLP as 3.9 years (i.e. from the point a site is first identified in a Local Plan).

3.33 The planning approval period is measured from the validation date of the first application for the proposed development. The end date is the decision date of the first detailed application which permits the development of dwellings on site. The planning approval period of all sites, both large and small, is identified by NLP as:

- 2.8 years (0-99 homes)
- 4.1 years (100-499 homes)
- 5.3 years (500-999 homes)
- 5.6 years (1000-1499 homes)
- 6.5 years (1500-1999 homes)
- 6.9 years (2000+ homes)

3.34 NLP also identify the annual build-out rate falls within the overall build period of each site. The annual build out rates are influenced by the size of the site and NLP arrives at the following:
3.35 There are clear comparable and a common themes running through each of the three assessment (i.e. large sites take time to delivery).

3.36 Given NLP's assessment is the most recent, we have considered the trajectory from each of the West Oxfordshire SDAs using the two different variables (build out rates and lead-in times). Under each scenario, the full delivery of the 6,450 homes identified within the SDAs are not delivered during the plan period resulting in a shortfall in the delivery of the housing requirements of the district ranging from 2,210 to 2,311 homes.

3.37 Table 5 (Attached) applies the NLP lead-in time to the Council's build-out rates, and identifies that the Chipping Norton, Garden Village and West Eynsham SDA would not be delivered in full during the plan period, resulting in an overall shortfall of 2,210 homes over the plan period.

3.38 Table 6 (Attached) applies both the NLP build-out rates and lead-in times from first identification of the SDA, and identifies that only the East Witney SDA would be delivered in full during the plan period, resulting in an overall shortfall of 2,311 homes over the plan period.

Conclusions Applying NLP Recommendations on Delivery

3.39 Whilst applying the NLP assumptions is a theoretical approach to identifying the delivery of the five SDAs over the plan period, the assumptions are based on empirical data from a large number of development proposals. As such, it cannot be dismissed out of hand. However, we do recognise that there is a need to consider the specific circumstances in relation to West Oxfordshire and each of the SDA sites identified. Nevertheless, the above exercise clearly demonstrates that the Council's trajectory certainly needs to be considered with significant caution.

3.40 We go on to present our own view and final position on the Council's trajectory / delivery from the SDAs in Section 4 having reviewed each of the sites in more detail including their ability to accommodate the suggested number of dwellings. Following this analysis is our final position that is out in Table 7 below (Attached).

3.41 As per the NLP analysis, we agree that East Witney will be completed. We have some genuine concerns over the delivery of the West Eynsham site for a range of reasons but ultimately conclude that this site could potentially be complete within the plan period. However, we take greater issue with the ability for the following three SDAs to deliver within the plan period for reasons set out below and conclude/calculate a shortfall of 1,784 dwellings from these SDA's over the plan period:

- Chipping Norton SDA – not capable of accommodating the number of homes proposed;
- North Witney SDA – will not commence or deliver at the rate the Council anticipate; and,
- Garden Village SDA – will not commence or deliver at the rate the Council anticipate.
1. DELIVERABILITY ASSESSMENT – WITNEY ROAD DUCKLINGTON

1.1 ASL have an interest in land to the east of Witney Road, Ducklington.

1.2 The site is not currently identified in the Submission Draft Local Plan, but is considered to be available, suitable and achievable for the delivery of 105-130 dwellings, which will help to meet the borough’s future housing needs.

1.3 We have submitted general representations on the policies within the Local Plan (Ref: ST/MAN.0190/R011- sections 2-4), which raise concerns over the deliverability of the proposed housing strategy and allocations, particularly the overreliance on delivery from the five Strategic Development Areas; and suggest that additional sites will need to be identified to meet needs within the emerging plan period.

1.4 In light of these wider concerns, it is our strong view that the Witney Road site should be allocated for housing.

1.5 This document assesses the site’s characteristics and deliverability in more detail and should be read alongside the associated Site Context Plan, which is included at Appendix 1.

Site Location and Description

1.6 This 6.5 Ha site is located to the north of the village of Ducklington, which is on the southern fringe of Witney, approximately 2km south of Witney Town Centre.

1.7 The site comprises open greenfield land, which is flat and rectangular in shape, with a footpath running through the centre of the site, along with overhead power lines. The site is well screened by trees and vegetation on all sides.

1.8 To the west the site is bound by Witney Road, with residential development opposite. There are allotments to the north, with a hotel and the A40 dual carriageway beyond that. To the west the site is bound by Witney Lake and Country Park. To the south is an electricity substation, which is set in open fields, with the main residential area of Ducklington further south.

1.9 Ducklington itself is a semi-rural village, with a central Conservation Area, characterised by traditional thatched cottages and barns, surrounded by more modern residential development.

1.10 In policy terms, the site is designated as a ‘policy area to prevent urban sprawl and protect existing character’ under Policy NE2 of the adopted plan, albeit this plan only covered the period until 2011, and this policy has not been carried forward in the emerging Plan. The site is not subject to any other landscape or environmental designations; nor is it within a flood risk zone.

1.11 In terms of local services, the centre of Ducklington lies 750m south of the site, which includes a public house, two churches, a village hall and a primary school. There is also a farm shop and petrol filling station 250m north of the site at the junction with the A40. There are also bus stops within 250m of the site with regular services to Witney, Standlake, Bampton, Carterton and Abingdon.

1.12 A greater range of shops and facilities can be found in Witney, with the Main Town Centre located 2km north of the site by road, or just 1.5km via a footpath and cycle link under the A40. There are also additional out of centre facilities closer to the site, such as the retail units on Ducklington Lane, 600m north of the site,
which include a Lidl, Tesco Express and McDonald’s, as well as a range of trade counters including B&Q and Screwfix.

Proposed Development

1.13 The attached context plan confirms the site is capable of delivering between 105 and 130 homes across a developable area of 4.4 Ha, with a net density range of 25-30 dwellings per hectare.

1.14 Vehicular access is proposed from Witney Road, between Dale Walk and Moors Close, with the option for additional footpath linkages, including a link with the Country Park in the north east corner of the site which has a direct connection to Witney Town Centre via a footpath and cycle link under the A40.

1.15 The development will be concentrated in two main parcels accessed via a central Village Lane, with shared space squares and courtyards; separated by an informal linear park which provides a buffer around the existing footpath, to preserve its character and openness; whilst the routes of other minor footpaths are also preserved within the layout.

1.16 Substantial areas of open space, totalling 2.1 Ha (which equates to over 30% of the site area), are also proposed to the east of the site to provide a sympathetic, semi-rural buffer to the Country Park and electricity substation.

Deliverability Criteria

1.17 The NPPF and NPPG specify that local planning authorities supply sufficient specific deliverable sites to deliver housing in the first 5 years. To be considered deliverable, sites should, at the point of adoption of the relevant local development document:

* Be available – there is confidence that there are no legal or ownership problems.
* Be suitable – it offers a suitable location for development and would contribute to the development of sustainable and mixed communities.
* Be achievable – there is a reasonable prospect that housing will be developed on the site at a particular point in time.

1.18 This is a judgement about the economic viability of a site and the capability of a developer to provide housing within a defined period, taking into account marketing, cost and deliverability factors.

Available

1.19 ASL have legal control of the whole site, through a development option with the landowner, and are seeking to promote it for development at the earliest opportunity. Furthermore, there are no ransom strips, tenancies or other ownership problems which could prevent or delay this.

Suitable

1.20 As such, the site in the control of a nationally recognised strategic land company, with a proven track record, and must be regarded as wholly available.

1.21 The NPPG requires that the suitability of sites should be guided by the development plan, emerging plan and national policy; as well as the market and industry requirements in the housing market area (Ref: 3-019-20140306).
1.22 In this instance, the adopted plan only provides for development needs to 2011, and therefore policies such as NE2, which restrict development around Witney and Carterton, must be considered out of date.

1.23 The emerging Submission Draft Local Plan has sought to allocate additional sites to meet the increased housing need over the period to 2031, and whilst we have concerns with the proposed development strategy (as raised in our general representations, R011), it is pertinent that the Plan does not carry forward or replace policy NE2. In fact, it actually includes housing allocations on sites previously designated under Policy NE2 (including the North Witney SDA and parts of the East Witney SDA), which confirms that this designation is no longer applicable, and can be given little weight.

1.24 One of our major concerns with the plan relates to alternative options considered through the Sustainability Appraisal process. In the case of Witney (see Main Mod 92), 5 growth options were assessed within the Pre-Submission Draft, Sustainability Appraisal Report, February 2015 (CD2); however expansion of Ducklington was not considered as an option, even though it is directly adjacent to Witney with a settlement gap of just a few hundred metres, and would seem to be a logical location for at least some growth.

1.25 The open countryside to the west of Ducklington, known as ‘land south of A40’, was one of the options; however this was dismissed on the basis that it was severed from Witney by the A40, and would generate amenity issues due to a nearby abattoir and sewage works. Development at the Witney Road site or in other locations to the north of Ducklington would not have the same amenity constraints and are better related to Witney, with road access under the A40 via the A415 Ducklington Lane and direct pedestrian and cycle access via a separate underpass adjacent to the Country Park.

1.26 Notwithstanding the alternative growth options for Witney, there is also an argument that the overall strategy for West Oxfordshire should have considered more dispersed growth across individual villages in the eastern part of the borough to help meet Oxford’s unmet need; as an alternative to focussing on Eynsham (and specifically the Garden Village SDA and West Eynsham SDA (see Main Mod 159)).

1.27 As such it is our view that the Witney Road site, and north Ducklington in general, is a suitable location for development, that was not given proper consideration during the Local Plan process.

1.28 In terms of market and industry requirements, ASL’s interest confirms that this is a suitable location for residential development from a commercial perspective.

Location and Accessibility

1.29 Whilst not specifically listed in the NPPG, access to services is a key consideration of suitability. In this instance the site is in a highly accessible and sustainable location with numerous facilities within walking distance, both within the village of Ducklington and the larger urban area of Witney, all of which can be reached by good quality footways.

1.30 In terms of retail uses, a Lidl supermarket and Tesco Express convenience store are located within 600m of the site, with a Sainsbury’s and Waitrose within 1.5km (via a footpath and cycle link under the A40, or 2km via road), along with a range of other national operators, services and employment uses in Witney Town Centre.

1.31 In respect of community facilities, Ducklington contains a primary school, along with a pub, village hall and churches; whilst the urban area of Witney contains 10 primary schools and 4 secondary schools. In
addition, the Witney Lake and Country Park provides a key recreation facility which is directly adjacent to the site and there are several other sport and leisure facilities within Witney including the Windrush Leisure Centre and The Leys Recreation Ground.

1.32 There are bus stops within 250m of the site with regular services to Witney and other higher order centres including Carterton and Abingdon. In respect of cycling, the A415 road has dedicated cycle lanes, and the development can provide linkages between Witney Road, Witney Lake and Country Park, and the dedicated cycle link to Witney that passes under the A40. The site is also directly adjacent to the A40 junction which connects it with the national road network.

1.33 As such, the site is a sustainably located development opportunity located within easy access of a range of local services, employment opportunities and public transport routes.

Constraints and Impacts

1.34 The NPPG goes on to list several further criteria for assessing suitability which we address in turn below:

* Physical limitations and constraints (access, ground conditions, flood risk, etc.) – There are no physical constraints preventing development of the site as it is flat, is not within a flood zone, and can take direct vehicular access from Witney Road. The existing footpaths and power lines can be incorporated into the development, and initial assessments suggest that the development can utilise existing infrastructure surrounding the site without generating utilities or drainage issues.

* Landscape impacts (including nature and heritage) – Whilst the site was designated as part of a ‘green gap’ to prevent urban sprawl under Policy NE2, it is clear that this policy is out of date and that this land no longer serves this function, given that there is development on 3 sides of the site, with residential properties to the west, a substation to the south, and a hotel and the A40 dual carriageway to the north, which still serves as the key physical boundary and separator of Witney and Dücklington. In view of the development of this site will represent infill development, rounding off the north of the settlement. Furthermore, it will be sympathetically integrated with the open land and Country Park to the east and south, through planting and a large open space buffer. In addition, the site is not subject to any ecological or environmental designations or constraints that would prevent its development; and is some distance from Dücklington Conservation Area and associated Listed Buildings, ensuring that any heritage impacts would be minimal.

* Market attractiveness – As noted above, ASL’s land interest suggests that the site is in an attractive market location, which it is, as it falls on the edge of the attractive semi-rural village of Dücklington with its central Conservation Area of thatched cottages; whilst also being in close proximity to Witney, which is the largest settlement in West Oxfordshire, and a key service centre for retail and employment opportunities, making it an extremely desirable location.

* Contribution to regeneration priority areas - Development in this area is not a regeneration priority, but new development here will generate additional household spending which will help to support additional shops and services in Dücklington and Witney.

* Amenity impacts on occupiers and neighbouring areas - The proposed development will have minimal impacts on surrounding developments as it is well screened, sensitively integrated with the adjacent Country Park, and will deliver generous areas of open space for use by residents and the local community.

1.35 The site is therefore suitable in accordance with the NPPF and the NPPG.

Achievable

1.36 The delivery of between 105 and 130 dwellings would make a significant contribution towards meeting
the housing needs of the Borough. An initial assessment of the site constraints has been undertaken which illustrates that delivery of the entire site is achievable and deliverable, and a professional team of technical experts has been appointed to underpin this assessment and support the delivery of the site moving forward. Where any potential constraints are identified, ASL has considered the necessary mitigation measures and investment required to overcome any deliverability barriers.

1.37 ASL has reviewed the economic viability of the proposal in terms of the land value, attractiveness of the locality, potential market demand; as well as the cost factors associated with the site including preparation costs and site constraints. Where potential constraints have been identified; ASL has considered the necessary mitigation measures and will use investment in order to overcome any deliverability barriers. ASL can, therefore, confirm that the development of the site is economically viable in accordance with the NPPF and NPPG. As a consequence, the company is committed to investing in the site and is confident that residential development can be achieved within 5 years.

Conclusion

1.38 This assessment has confirmed that the Witney Road site is available, suitable and achievable in accordance with the latest national guidance and should therefore be allocated for residential development in the West Oxfordshire Local Plan 2031.

<td>MM413</td>
<td>Barwood Land</td>
<td>Barwood Land</td>
<td>Mrs Entwistle</td>
<td>918</td>
<td>&gt; SECTION 5 PROVIDING NEW HOMES &gt; MAIN 27</td>
<td>WYG are instructed by Barwood Land to prepare and submit representations to the current consultation on the Proposed Modifications to the Submission Draft West Oxfordshire Local Plan 2031. Barwood has land interests in the area which are outside of but adjacent to the proposed North Witney Strategic Development Area (SDA). The purpose of these representations is to support the increased housing requirement set out in the Proposed Modifications to the emerging Local Plan and also to request that the Council gives further consideration to this land as a potential allocation to both help meet the Council's now identified Local Plan housing requirement, and which would, in turn, assist the Council in maintaining a demonstrable five year housing land supply. The land interests of my client, which lie outside of the proposed North Witney SDA are identified on the attached plan. It is understood that the Council has not considered this land as a potential site allocation in any detail, but that additional submissions promoting the deliverability of the site as a sustainable location, would be taken into consideration. It is acknowledged that following the Inspector’s Preliminary Findings (IN 015) which stated at para 5.8 that the Council would need to identify and allocate further deliverable housing sites, the Council have made efforts to identify and indeed allocate, additional land for housing development. However, as set out on Page 6 of the Council’s Housing Land Supply Position Statement dated October 2016, identified site allocations and existing commitments over the Plan period total 11,518 dwellings (existing and proposed commitments). This is some way below the Council’s proposed housing target of 15,950 new dwellings over the Plan period. Coupled with an only marginally demonstrable 5 year land supply (as set out in the October 2016 Housing Position Statement) of 5.49 years, it is evident that the Council will need to find further additional land for development across the Plan period to 2031. It is my Client’s position that their land interests, as identified on the attached Plan, comprise approximately 7 hectares and is considered available, deliverable and suitable for residential development, to meet the Council’s identified housing needs across the Plan period 2011-2031. To this end, my client is progressing early Technical Assessment work to consider and develop a proposed scale of development which could be</td>
<td></td>
</tr>
</tbody>
</table>
suitably accommodated on the land. This will be presented within a Delivery Plan Document to be submitted to the Council in early 2017.

Notwithstanding the imminent preparation of a Delivery Plan Document, the additional land would be a logical, and a well-defined 'Phase 2' to the proposed North Witney SDA. There is opportunity and control to provide access from the land west of Hailey Road that is within the proposed North Witney SDA in the emerging Local Plan and its development would not result in any pressure on the issue of coalescence between Witney and Hailey.

Prior to the submission of the Delivery Plan Document, it is requested that the Council give further consideration to the allocation of additional land at Witney as identified on the attached plan and in this letter, to provide further housing development that will assist in meeting identified requirements for the provision of 15,950 dwellings across the Plan period.

We welcome that the majority of the additional sites allocated in the proposed modifications are located within Flood Zone 1.

Sites of Least Environmental Value

In accordance with the NPPF, the plan's development strategy should seek to avoid areas of high environmental value. Natural England expects sufficient evidence to be provided, through the SA and HRA, to justify the site selection process and to ensure sites of least environmental value are selected, e.g. land allocations should avoid designated sites and landscapes and should consider the direct and indirect effects of development on land within the setting of designated landscapes.

Protected Landscapes

The plan area includes the Cotswolds Area of Outstanding Natural Beauty (AONB). We advise the LPA to take into account the relevant Management Plan for the area; the LPA should seek the views of the AONB Partnership. Development proposals brought forward through the plan should avoid significant impacts on protected landscapes, including those outside the plan's area and early consideration should be given to the major development tests set out in paragraph 116 of the National Planning Policy Framework (NPPF).

Designated Sites

Screening of the Local Plan under Regulation 102 of the Conservation of Habitats and Species Regulations 2010 (as amended) should be updated in light of the proposed modifications so that outcomes of the assessment can inform key decision making on strategic options and development sites. It may be necessary to outline avoidance and/or mitigation measures at the plan level, including a clear direction for project level HRA work to ensure no adverse effect on the integrity of internationally designated sites. It may also be necessary for plans to provide policies for strategic or cross boundary approaches, particularly in areas where designated sites cover more than one Local Planning Authority boundary.

Natural England would welcome discussion on the Habitats Regulations Assessment (HRA) of the plan and can offer further advice as policy options are progressed.

| MM425         | Carterton Construction  | -              | Carterton Construction | -               | 963        | > SECTION 5 - PROVIDING NEW HOMES > MAIN 27 | 2.23 We have set out our comments in respect of the Council's proposed housing target in relation to main modification 24 and as such do not repeat these here...
Sources of Supply

2.24 The supporting text to Policy H2 sets out the various sources through which the housing requirement will be met, as summarised in the table below (ATTACHED)

2.25 Clearly the Council are already failing to plan for sufficient new homes to meet the housing requirement over the Plan period.

2.26 We do note that currently no allowance is made for additional allocations which could be brought forward through Neighbourhood Plans of which there are currently five in preparation in the District as well as the made Chipping Norton Neighbourhood Plan, which does not seek to allocate any sites for development. Whilst additional development could be forthcoming through allocations in Neighbourhood Plans there is no guarantee that this will occur.

2.27 The NPPF makes clear that Local Plans “should meet objectively assessed needs, with sufficient flexibility to adapt to rapid change.” As currently drafted the Local Plan is failing not only to make provision for its own acknowledged objectively assessed need but allows for no flexibility to ensure the housing target is achieved. Concern is therefore raised that the Plan as currently drafted is not positively prepared, justified, effective or consistent with National Policy. Further consideration is likely to be required as to how this requirement can be met, including through additional allocations.

Five Year Housing Land Supply

2.28 The revised Policy as currently drafted states: "With regard to 5-year housing land supply the Council will apply the residual (Liverpool) approach with any under-supply (backlog) of housing to be delivered over the remaining plan period to 2031. The additional provision being made for Oxford City’s needs will be incorporated into housing delivery assumptions from 2021 onwards."

2.29 The NPPG is clear in its guidance to LPA’s (D 3-035-20140306) that they should aim to deal with any undersupply within the first 5 years of the plan period where possible. The NPPG makes clear that in circumstances where the LPA is unable to meet its undersupply in the first 5 years then it will need to work with neighbouring authorities under the ‘Duty to Cooperate.’ This matter was specifically raised by the Inspector in his Initial Findings: Part 2.

2.30 Proposed paragraph 5.34c seeks to justify the Council’s proposed approach by advising that:

"To provide a 5-year supply under the Sedgefield method, in excess of 1,000 homes per year would need to be built consistently over the next 5 years, well in excess of what has been achieved in West Oxfordshire in the past, even during several housing booms. Insufficient capacity has been identified through this Local Plan and the supporting assessment of housing land availability to achieve a 5-year supply under the Sedgefield..."
approach and it could only be achieved by releasing a large number of sites that have been assessed by the Council as being unsuitable for new housing. The Council does not consider this to be an appropriate way forward and that addressing the shortfall in a more measured way over the remaining plan period using the Liverpool approach is considered to be entirely justified.”

2.31 As is clear from the extract above the NPPG clearly advocates the Sedgefield approach as the most suitable approach. This is borne out in numerous appeal decisions and case law. Where the Sedgefield method cannot be achieved then the LPA must seek to liaise with neighbouring authorities under the Duty to Cooperate in order to redistribute this requirement. Although the Council have sought to justify its decision to seek to pursue the Liverpool method, no indication is provided as to whether the approach advocated in the NPPG of seeking the assistance of neighbouring authorities to meet this shortfall in the short term has been pursued.

2.32 Given the discussions which have taken place in respect of the Oxford City apportionment, and the fact that full agreement has yet to be reached on this matter, it would appear unlikely in any event that such assistance would be forthcoming.

2.33 Given our comments above it is clear that the Council will need to propose additional allocations in order to meet the housing requirement. Given the shorter lead in times associated with small to medium size allocations it is likely that allocations of this scale would allow the Council to also address its backlog using the Sedgefield approach. Consideration should also be given to whether elements of the larger strategic sites could form an early phase of development without compromising the comprehensive development of the wider site.

2.34 Whilst the Council seeks to justify the use of the Liverpool method by referring back to past delivery rates, it must be recognised that these were set within a significantly different planning context when there was not the requirement as set out within the NPPF to meet the full objectively assessed need. The historic low levels of delivery are a reason to boost the supply of housing as soon as possible because the need has already arisen and has not yet been met, rather than being a reason to suppress the rate at which housing should come forward.

2.35 In light of the above, in order to ensure its soundness the Plan should make provision to meet the backlog in housing need using the Sedgefield method with the backlog delivered in the first five year period rather than being spread across the remaining Plan period (Liverpool) as currently proposed.

2.36 As currently drafted it is unclear whether the Council are proposing that post-2021 the supply of those allocations identified to meet the needs of Oxford City only would be accounted for, and that the additional 2,750 dwellings would not be added to the requirement side of the five year housing land supply equation. Plainly such an approach would be unsound and the Inspector in his preliminary findings advised that the apportionment figure should be counted within the five year housing land supply. As such we would recommend that the policy text is re-worded to clarify this position.

2.37 The previously proposed criteria in point 3 of the policy are proposed to be deleted and instead are addressed in Policy OS2 as discussed above. With regards to the Main Service Centres etc., the Policy wording in the third bullet continues to state development will be allowed where “it is consistent with the criteria in 3) below”. For clarity this wording therefore requires amendment.

Main 25 - 30 – Policy H2 – Delivery of New Homes and Supporting Text

2.21 We have set out our comments in respect of the Council’s proposed housing target in relation to main modification 24 and as such do not repeat these here.. Sources of Supply

2.22 The supporting text to Policy H2 sets out the various sources through which the housing requirement will be met, as summarised in the table below (ATTACHED)

2.23 Clearly the Council are already failing to plan for sufficient new homes to meet the housing requirement over the Plan period.

2.24 We do note that currently no allowance is made for additional allocations which could be brought forward through Neighbourhood Plans of which there are currently five in preparation in the District as well as the made Chipping Norton Neighbourhood Plan, which does not seek to allocate any sites for development. Whilst additional development could be forthcoming through allocations in Neighbourhood Plans there is no guarantee that this will occur.

2.25 The NPPF makes clear that Local Plans “should meet objectively assessed needs, with sufficient flexibility to adapt to rapid change.” As currently drafted the Local Plan is failing not only to make provision for its own acknowledged objectively assessed need but allows for no flexibility to ensure the housing target is achieved. Concern is therefore raised that the Plan as currently drafted is not positively prepared, justified, effective or consistent with National Policy. Further consideration is likely to be required as to how this requirement can be met, including through additional allocations.

Five Year Housing Land Supply

2.26 The revised Policy as currently drafted states:

"With regard to 5-year housing land supply the Council will apply the residual (Liverpool) approach with any under-supply (backlog) of housing to be delivered over the remaining plan period to 2031. The additional provision being made for Oxford City’s needs will be incorporated into housing delivery assumptions from 2021 onwards."

2.27 The NPPG is clear in its guidance to LPAs (D 3-035-20140306) that they should aim to deal with any undersupply within the first 5 years of the plan period where possible. The NPPG makes clear that in circumstances where the LPA is unable to meet its undersupply in the first 5 years then it will need to work with neighbouring authorities under the ‘Duty to Cooperate.’ This matter was specifically raised by the Inspector in his...

Initial Findings: Part 2.

2.28 Proposed paragraph 5.34c seeks to justify the Council’s proposed approach by advising that:

“To provide a 5-year supply under the Sedgefield method, in excess of 1,000 homes per year would need to be built consistently over the next 5-years, well in excess of what has been achieved in West Oxfordshire in the past, even during several housing booms. Insufficient capacity has been identified through this Local Plan and the supporting assessment of housing land availability to achieve a 5-year supply under the Sedgefield approach and it could only be achieved by releasing a large number of sites that have been assessed by the Council as being unsuitable for new housing. The Council does not consider this to be an appropriate way forward and that addressing the shortfall in a more measured way over the remaining plan period using the Liverpool approach is considered to be entirely justified.”

2.29 As is clear from the extract above the NPPG clearly advocates the Sedgefield approach as the most suitable approach. This is borne out in numerous appeal decisions and case law. Where the Sedgefield method cannot be achieved then the LPA must seek to liaise with neighbouring authorities under the Duty to Cooperate in order to redistribute this requirement. Although the Council have sought to justify its decision to seek to pursue the Liverpool method, no indication is provided as to whether the approach advocated in the NPPG of seeking the assistance of neighbouring authorities to meet this shortfall in the short term has been pursued.

2.30 Given the discussions which have taken place in respect of the Oxford City apportionment, and the fact that full agreement has yet to be reached on this matter, it would appear unlikely in any event that such assistance would be forthcoming.

2.31 Given our comments above it is clear that the Council will need to propose additional allocations in order to meet the housing requirement. Given the shorter lead in times associated with small to medium size allocations it is likely that allocations of this scale would allow the Council to also address its backlog using the Sedgefield approach. Consideration should also be given to whether elements of the larger strategic sites could form an early phase of development without compromising the comprehensive development of the wider site.

2.32 Whilst the Council seeks to justify the use of the Liverpool method by referring back to past delivery rates, it must be recognised that these were set within a significantly different planning context when there was not the requirement as set out within the NPPF to meet the full objectively assessed need. The historic low levels of delivery are a reason to boost the supply of housing as soon as possible because the need has already arisen and has not yet been met, rather than being a reason to suppress the rate at which housing should come forward.

2.33 In light of the above, in order to ensure its soundness the Plan should make provision to meet the backlog in housing need using the Sedgefield method with the backlog delivered in the first five year period rather than being spread across the remaining Plan

<td>&gt; SECTION 5 - PROVIDING NEW HOMES &gt; MAIN 28</td>
<td>6.1 This modification is intended to clarify the contribution of neighbourhood plans in potentially identifying housing sites. The wording of the modification explains that the housing supply figures in the plan assumes that no new housing will be delivered through neighbourhood plans because of uncertainty over how much they will actually deliver. Gladman has strong concerns about this approach as it is likely that in those areas where no development is allocated, neighbourhood plans will be under no compulsion to allocate housing sites. This is inconsistent with the objective of the NPPF to significantly boost housing supply and to promote sustainable development in rural areas. The Local Plan should therefore plan positively and include a minimum figure for the number of dwellings expected to be delivered through the preparation of neighbourhood plans.</td>

Non-Strategic Housing Allocations

Objection is raised to MM28 (Paragraph 5.30b) which should be modified to include Land North of Swinbrook Park (115 homes) and Land at North Carterton, Kilkenny Farm (750 homes) and to omit the following sites:

a. Milestone Road, Carterton (200 homes): not deliverable;

b. Land at Swinbrook Road (70 homes): not deliverable;

c. Land North of Jefferson's Place, Charlbury (40 homes): within AONB - exceptional circumstances not demonstrated;

d. Land North of Banbury Road, Woodstock (250 homes): impact on setting of World Heritage Site;

e. Land North of Woodstock Road, Stonesfield (50 homes): within AONB - exceptional circumstances not demonstrated;

f. Land east of Burford (85 homes): within AONB - exceptional circumstances not demonstrated; and

g. Land south of Milton Road, Shipton-under-Wychwood (44 homes): within AONB - exceptional circumstances not demonstrated.

Our client supports the Council’s position that smaller ‘non-strategic’ allocations can help to ensure a deliverable housing supply in the short-term. Accordingly 15 ‘non-strategic’ sites are proposed for allocation at Paragraph 5.30b, resulting in a potential supply of circa 1,700 dwellings.

Of these, land north of Hill Rise, Woodstock has been identified as a proposed allocation for the provision of 120 dwellings. Our Client supports the allocation of land within Woodstock which is identified as a Rural Service Centre and therefore, is one of the most sustainable settlements within the District.

The content of paragraph 9.5.41q (MM 164) identifies that there are landscape sensitivities which relate to the site and that any scheme would need to incorporate landscape mitigation measures. In this regard it is noted that the proposed allocation identified in MM 165 does not follow any natural boundaries but follows an arbitrary line within a larger field. To minimise the landscape impact of the development the boundaries of the allocation should be extended to the natural boundary line therefore ensuring that maximum screening can be achieved. Furthermore, our Client owns land in the vicinity which could be used to provide additional landscaping and/or open space to maximise the development potential of the allocated site.

These paragraphs refer to existing commitments, Strategic Development Areas and Non-Strategic Housing Allocations. This demonstrates an extremely high reliance on large sites forming a component of the housing supply including: 4,107 dwellings on sites with planning permission or a resolution to grant; 6,450 dwellings on SDAs (principally sites over 1,000 dwellings) which do not currently benefit from planning permission; and several Non-Strategic sites of 200 or dwellings, again without planning permission at present. This equates to 73% of the overall housing requirement on large sites, the majority of which are located within the 3 MRCs, whilst only 304 dwellings are committed/allocated within 5 of the 34 Villages.

Whilst it is acknowledged that the majority of growth should be directed to the most sustainable locations within the District in line with the settlement hierarchy, it should also be recognised as detailed at paragraph...
4.17 of the Draft Plan, that not all growth “can or indeed should go to Winery, Carterton and Chipping Norton” as there is a need for development elsewhere in the District in order to spread the benefits of growth to help sustain the more rural parts of the District. This is supported by the guidance at Paragraphs 54-55 of the NPPF and within the PPG in respect of Rural Housing, which highlights the need to recognise the particular issues facing such areas in terms of housing supply and affordability, and the role housing has in supporting the broader sustainability of villages by helping to retain local services and community facilities such as schools, local shops and cultural venues.

The extremely limited housing allocations to a handful of Villages ignores the potential availability of other sites within some of the other larger Villages, which are more sustainable- with reference to the Council’s updated Settlement Sustainability Report (December 2016), no housing allocations have been identified at 3 of the top 5 most sustainable Villages (North Leigh, Brize Norton and Enstone). This appears contrary to the Plan’s Vision and Core Objectives which highlight the challenge facing residents in view of house prices well above the national average and the special emphasis on providing homes for local people in housing need (CO6).

RSL are promoting a site at land south of Oxford Road, Enstone (see enclosed Location Plan) is just one example. This is a site adjacent to the settlement boundary, outside the Cotswold AONB and is otherwise deliverable, achievable and viable with no technical constraints that would prevent it from coming forward in the next 5 years.

We have set out our comments in respect of the Council’s proposed housing target in relation to main modification 24 and as such do not repeat these here..

Sources of Supply

The supporting text to Policy H2 sets out the various sources through which the housing requirement for West Oxfordshire will be met (excluding unmet need from Oxford City), as summarised in the table on page 6 of the attachment.

Clearly the Council are already failing to plan for sufficient new homes to meet the housing requirement for West Oxfordshire of 13,200 over the Plan period.

We do note that currently no allowance is made for additional allocations which could be brought forward through Neighbourhood Plans of which there are currently five in preparation in the District, as well as the made Chipping Norton Neighbourhood Plan, which does not seek to allocate any sites for development. Whilst additional development could be forthcoming through allocations in Neighbourhood Plans there is no guarantee that this will occur.

The NPPF makes clear that Local Plans “should meet objectively assessed needs, with sufficient flexibility to adapt to rapid change.” As currently drafted the Local Plan is falling not only to make provision for its own acknowledged objectively assessed need but allows for no flexibility to ensure the housing target is achieved. Concern is therefore raised that the Plan as currently drafted is not positively prepared, justified, effective or consistent with National Policy. There should be no delays to deliverability on any allocated site, in the context of a current 5 year housing land supply shortfall, and therefore reference to their delivery post-2021 should be deleted. Further consideration is likely to be required as to how this requirement can be met, including through additional allocations.
Five Year Housing Land Supply

The revised Policy as currently drafted states: "With regard to 5-year housing land supply the Council will apply the residual (Liverpool) approach with any under-supply (backlog) of housing to be delivered over the remaining plan period to 2031. The additional provision being made for Oxford City’s needs will be incorporated into housing delivery assumptions from 2021 onwards."

The NPPG is clear in its guidance to LPA’s (D 3-035-20140306) that they should aim to deal with any undersupply within the first 5 years of the plan period where possible. The NPPG makes clear that in circumstances where the LPA is unable to meet its undersupply in the first 5 years then it will need to work with neighbouring authorities under the ‘Duty to Cooperate.’ This matter was specifically raised by the Inspector in his Initial Findings: Part 2.

Proposed paragraph 5.34c seeks to justify the Council’s proposed approach by advising that:

"To provide a 5-year supply under the Sedgefield method, in excess of 1,000 homes per year would need to be built consistently over the next 5-years, well in excess of what has been achieved in West Oxfordshire in the past, even during several housing booms. Insufficient capacity has been identified through this Local Plan and the supporting assessment of housing land availability to achieve a 5-year supply under the Sedgefield approach and it could only be achieved by releasing a large number of sites that have been assessed by the Council as being unsuitable for new housing. The Council does not consider this to be an appropriate way forward and that addressing the shortfall in a more measured way over the remaining plan period using the Liverpool approach is considered to be entirely justified."

As is clear from the extract above the NPPG clearly advocates the Sedgefield approach as the most suitable approach. This is borne out in numerous appeal decisions and case law. Where the Sedgefield method cannot be achieved then the LPA must seek to liaise with neighbouring authorities under the Duty to Cooperate in order to redistribute this requirement. Although the Council have sought to justify its decision to seek to pursue the Liverpool method, no indication is provided as to whether the approach advocated in the NPPG of seeking the assistance of neighbouring authorities to meet this shortfall in the short term has been pursued.

Given the discussions which have taken place in respect of the Oxford City apportionment, and the fact that full agreement has yet to be reached on this matter, it would appear unlikely in any event that such assistance would be forthcoming.

Given our comments above it is clear that the Council will need to propose additional allocations in order to meet the housing requirement. Given the shorter lead in times associated with small to medium size allocations it is likely that allocations of this scale would allow the Council to also address its backlog using the Sedgefield approach. Consideration should also be given to whether elements of the larger strategic sites could form an early phase of development without compromising the comprehensive development of the wider site.

Whilst the Council seeks to justify the use of the Liverpool method by referring back to past delivery rates, it must be recognised that these were set within a significantly different planning context when there was not the requirement as set out within the NPPF to meet the full objectively assessed need. The historic low levels of delivery are a reason to boost the supply of housing as soon as possible because the need has already arisen and has not yet been met, rather than being a reason to suppress the rate at which housing should

| MM376         | Stagecoach in Oxfordshire/Stagecoach West | Nick Small, Stagecoach Bus | Dr | Small | 764 | > SECTION 5 - PROVIDING NEW HOMES > MAIN 28 | come forward.  
In light of the above, in order to ensure its soundness the Plan should make provision to meet the backlog in housing need using the Sedgefield method with the backlog delivered in the first five year period rather than being spread across the remaining Plan period (Liverpool) as currently proposed.  
As currently drafted it is unclear whether the Council are proposing that post-2021 the supply of those allocations identified to meet the needs of Oxford City only would be accounted for, and that the additional 2,750 dwellings would not be added to the requirement side of the five year housing land supply equation. Plainly such an approach would be unsound and the Inspector in his preliminary findings advised that the apportionment figure should be counted within the five year housing land supply. As such we would recommend that the policy text is re-worded to clarify this position.  
Other Matters  
The previously proposed criteria in point 3 of the policy are proposed to be deleted and instead are addressed in Policy OS2 as discussed above. With regards to the Main Service Centres etc., the Policy wording in the third bullet continues to state development will be allowed where “it is consistent with the criteria in 3) below”. For clarity this wording therefore requires amendment. |
| MM388         | Ainscough Strategic Land | Ainscough Strategic Land | - | Ainscough Strategic Land | 665 | > SECTION 5 - PROVIDING NEW HOMES > MAIN 28 | Strategic Development Areas (MM27)  
3.22 One of our gravest concern relating to the housing delivery strategy for the Local Plan is in relation to the high reliance on large strategic sites as listed in MM27. Whilst we do not object to the principle of the development locations per se, we do raise issues with the delivery that is expected from these sites over the plan period and in some cases, the physical capacity for them to deliver the targets suggested.  
3.23 Indeed, the Council imply at paragraph 5.25 of the modified Local Plan that past completions have been low because of the lack of urgency from the development sector to bring strategic sites forward. The reality is strategic sites simply take time to properly plan and deliver, principally because their impacts are exponentially greater, they need thorough consideration, and the complexity of land ownerships and scale inevitably result in longer lead in times that those experienced with smaller, more moderate sites.  
3.24 As set out in Table 3 below, SDAs are to provide 42.0%, 58.3% and 58.1% of the total number of homes required in the Witney, Chipping Norton and Eynsham-Woodstock sub-areas. This strategy needs to be considered with considerable caution. Should any of the SDA encounter delay to their delivery, these sub-areas and the district as a whole would not meet the housing requirement over the plan period. This is particularly pertinent in the case of Witney and Carterton where there are two very large commitments already which not listed in the table below (ATTACHED) |
3.25 Table 4 (ATTACHED) identifies the five SDAs within the district and the number of homes they are expected to deliver over the plan period based on the Council's trajectory.

3.26 Understandably, the overall housing requirement from each of the five SDAs will only be achieved at the very end of the plan period. Thus, should the delivery of one or more SDA slip by just one or two years the plan will fail to meet its housing requirement over the plan period. This is not implausible given the complexity of delivering these SDAs, which we address in more detail in Section 4.

3.27 In order to explore delivery rates from large scale site such as the SDA's identified in the Local Plan, it is important to be aware of the following three reports / assessment, which are all based a large amount of empirical data:

* A Report into the Delivery of Urban Extensions (Hourigan Connolly, February 2014) (Appendix 1)
* Urban Extensions, Assessment of Delivery rates (Savills, October 2014) (Appendix 2)
* Start to Finish: How Quickly do large-Scale Housing Sites Deliver? (NLP, November 2016) (Appendix 3)

3.28 The Hourigan Connolly report on the delivery of urban extensions highlights the difficulties and time it can take to bring forward such sites. It is worth highlighting the following key factors as reported in Section 15 of that document, namely the average times for the various stages of the planning process. These are:

* Average timescale from submission to grant of outline planning permission is 34 months;
* Average timescale for signing a legal agreement 24 months; and,
* Reserved matters applications 6-9 months.

3.29 Subsequent to that report, the Savills report looks at urban extensions and their delivery rates. In terms of lead in time the report is clear that a period of 3-4 years from the determination of an outline planning application to the completion of site preparation and the delivery of housing is a realistic average time scale for the delivery of housing. The study notes that sites which have particularly complex land packages and or significant strategic infrastructure to deliver can take significantly longer than estimated. The report lists examples of sites where Section 106 agreements in themselves have taken 64 months to agree, with the average being 14 months.

3.30 The Savills report goes on to consider how fast a major site may build out. On average it found that in the first year of construction a site delivered 65 units, this increased to 110-120 dwellings per annum in subsequent years, before dropping towards the end of the life cycle of the development. These rates are obviously averages and dependant on a range of factors, however the report makes clear that any spikes on sites considered within the report were down to very specific delivery factors e.g. the need to deliver a large lump of affordable housing in one go due to the funding requirements of a partner.

3.31 The NLP report relates to housing delivery and assesses 70 large schemes (500 homes +) which have come forward in the last 20 years, and 83 smaller sites (50-499 homes). The report commented on average delivery from conception to start on site looking at:

* Lead in time prior to submission of an application;
* Planning approval period; and,
* Annual build out rates.

3.32 The average lead-in time for large sites is identified by NLP as 3.9 years (i.e. from the point a site is first
### Table 5 (Attached)

<table>
<thead>
<tr>
<th>Respondent ID</th>
<th>Respondent Organisation</th>
<th>Respondent Name</th>
<th>Respondent Title</th>
<th>Respondent Surname</th>
<th>Comment ID</th>
<th>Document Full Path</th>
<th>Comment</th>
</tr>
</thead>
</table>

3.33 The planning approval period is measured from the validation date of the first application for the proposed development. The end date is the decision date of the first detailed application which permits the development of dwellings on site. The planning approval period of all sites, both large and small, is identified by NLP as:

- 2.8 years (0-99 homes)
- 4.1 years (100-499 homes)
- 5.3 years (500-999 homes)
- 5.6 years (1000-1499 homes)
- 6.5 years (1500-1999 homes)
- 6.9 years (2000+ homes)

3.34 NLP also identify the annual build-out rate falls within the overall build period of each site. The annual build-out rates are influenced by the size of the site and NLP arrives at the following:

- 27 dwellings per annual (dpa) (0-99 homes)
- 60 dpa (100-499 homes)
- 68 dpa (500-999 homes)
- 105 dpa (1000-1499 homes)
- 135 dpa (1500-1999 homes)
- 161 dpa (2000+ homes)

3.35 There are clear comparable and a common themes running through each of the three assessment (i.e. large sites take time to delivery).

3.36 Given NLP’s assessment is the most recent, we have considered the trajectory from each of the West Oxfordshire SDAs using the two different variables (build-out rates and lead-in times). Under each scenario, the full delivery of the 6,450 homes identified within the SDAs are not delivered during the plan period resulting in a shortfall in the delivery of the housing requirements of the district ranging from 2,210 to 2,311 homes.

3.37 Table 5 (Attached) applies the NLP lead-in time12 to the Council’s build-out rates, and identifies that the Chipping Norton, Garden Village and West Eynsham SDA would not be delivered in full during the plan period, resulting in an overall shortfall of 2,210 homes over the plan period.

3.38 Table 6 (Attached) applies both the NLP build-out rates and lead-in times from first identification of the SDA, and identifies that only the East Witney SDA would be delivered in full during the plan period, resulting in an overall shortfall of 2,311 homes over the plan period.

Conclusions Applying NLP Recommendations on Delivery

3.39 Whilst applying the NLP assumptions is a theoretical approach to identifying the delivery of the five SDAs over the plan period, the assumptions are based on empirical data from a large number of development proposals. As such, it cannot be dismissed out of hand. However, we do recognise that the there is a need to consider the specific circumstances in relation to West Oxfordshire and each of the SDA sites identified. Nevertheless, the above exercise clearly demonstrates that the Council’s trajectory certainly needs to be

| MM425         | Carterton Construction  | -               | Carterton        | 964        | > SECTION 5 - PROVIDING NEW HOMES > MAIN 28 | 2.23 We have set out our comments in respect of the Council’s proposed housing target in relation to main modification 24 and as such do not repeat these here. Sources of Supply  
2.24 The supporting text to Policy H2 sets out the various sources through which the housing requirement will be met, as summarised in the table below (ATTACHED)  
2.25 Clearly the Council are already failing to plan for sufficient new homes to meet the housing requirement over the Plan period.  
2.26 We do note that currently no allowance is made for additional allocations which could be brought forward through Neighbourhood Plans of which there are currently five in preparation in the District as well as the made Chipping Norton Neighbourhood Plan, which does not seek to allocate any sites for development. Whilst additional development could be forthcoming through allocations in Neighbourhood Plans there is no guarantee that this will occur.  
2.27 The NPPF makes clear that Local Plans “should meet objectively assessed needs, with sufficient flexibility to adapt to rapid change.” As currently drafted the Local Plan is failing not only to make provision for its own acknowledged objectively assessed need but allows for no flexibility to ensure the housing target is achieved. Concern is therefore raised that the Plan as currently drafted is not positively prepared, justified, effective or consistent with National Policy. Further consideration is likely to be required as to how this requirement can be met, including through additional allocations.  
Five Year Housing Land Supply  
2.28 The revised Policy as currently drafted states: “With regard to 5-year housing land supply the Council will apply the residual (Liverpool) approach with any under-supply (backlog) of housing to be delivered over the remaining plan period to 2031. The additional provision being made for Oxford City’s needs will be incorporated into housing delivery assumptions from 2021 onwards.” |

considered with significant caution.

3.40 We go on to present our own view and final position on the Council’s trajectory / delivery from the SDA’s in Section 4 having reviewed each of the sites in more detail including their ability to accommodate the suggested number of dwellings. Following this analysis is our final position that is out in Table 7 below (Attached).

3.41 As per the NLP analysis, we agree that East Witney will be completed. We have some genuine concerns over the delivery of the West Eynsham site for a range of reasons but ultimately conclude that this site could potentially be complete within the plan period. However, we take greater issue with the ability for the following three SDAs to deliver within the plan period for reasons set out below and conclude/calculate a shortfall of 1,784 dwellings from these SDA’s over the plan period:

* Chipping Norton SDA – not capable of accommodating the number of homes proposed;
* North Witney SDA – will not commence or deliver at the rate the Council anticipate; and,
* Garden Village SDA – will not commence or deliver at the rate the Council anticipate.
2.29 The NPPG is clear in its guidance to LPA’s (D 3-035-20140306) that they should aim to deal with any undersupply within the first 5 years of the plan period where possible. The NPPG makes clear that in circumstances where the LPA is unable to meet its undersupply in the first 5 years then it will need to work with neighbouring authorities under the ‘Duty to Cooperate.’ This matter was specifically raised by the Inspector in his Initial Findings: Part 2.

2.30 Proposed paragraph 5.34c seeks to justify the Council’s proposed approach by advising that:

“To provide a 5-year supply under the Sedgefield method, in excess of 1,000 homes per year would need to be built consistently over the next 5-years, well in excess of what has been achieved in West Oxfordshire in the past, even during several housing booms. Insufficient capacity has been identified through this Local Plan and the supporting assessment of housing land availability to achieve a 5-year supply under the Sedgefield approach and it could only be achieved by releasing a large number of sites that have been assessed by the Council as being unsuitable for new housing. The Council does not consider this to be an appropriate way forward and that addressing the shortfall in a more measured way over the remaining plan period using the Liverpool approach is considered to be entirely justified.”

2.31 As is clear from the extract above the NPPG clearly advocates the Sedgefield approach as the most suitable approach. This is borne out in numerous appeal decisions and case law. Where the Sedgefield method cannot be achieved then the LPA must seek to liaise with neighbouring authorities under the Duty to Cooperate in order to redistribute this requirement. Although the Council have sought to justify its decision to seek to pursue the Liverpool method, no indication is provided as to whether the approach advocated in the NPPG of seeking the assistance of neighbouring authorities to meet this shortfall in the short term has been pursued.

2.32 Given the discussions which have taken place in respect of the Oxford City apportionment, and the fact that full agreement has yet to be reached on this matter, it would appear unlikely in any event that such assistance would be forthcoming.

2.33 Given our comments above it is clear that the Council will need to propose additional allocations in order to meet the housing requirement. Given the shorter lead in times associated with small to medium size allocations it is likely that allocations of this scale would allow the Council to also address its backlog using the Sedgefield approach. Consideration should also be given to whether elements of the larger strategic sites could form an early phase of development without compromising the comprehensive development of the wider site.

2.34 Whilst the Council seeks to justify the use of the Liverpool method by referring back to past delivery rates, it must be recognised that these were set within a significantly different planning context when there was not the requirement as set out within the NPPF to meet the full objectively assessed need. The historic low levels of delivery are a reason to boost the supply of housing as soon as possible because the need has

Plainly such an approach would be unsound and the Inspector in his preliminary findings advised that the apportionment figure should be counted within the five year housing land supply. As such we would recommend that the policy text is re-worded to clarify this position.

Other Matters

2.37 The previously proposed criteria in point 3 of the policy are proposed to be deleted and instead are addressed in Policy OS2 as discussed above. With regards to the Main Service Centres etc., the Policy wording in the third bullet continues to state development will be allowed where “it is consistent with the criteria in 3) below”. For clarity this wording therefore requires amendment.

The Inclusion of C2 (Residential Institution Uses) within the Council’s Housing Land Supply ID: 3-037-20150320 of the PPG allows C2 units to contribute towards a Council’s housing supply where the approach to such uses is clearly set out in an adopted Local Plan. In this respect we refer to paragraph 9.85 of the 2014 Oxfordshire SHMA that states:

'The growing older population will however likely lead to some increase in requirements for specialist housing solutions. The analysis above suggests a 98% growth in older population with dementia, and an 82% increase in the older population with mobility problems. From a planning point of view, some of these people will require specialist housing such as sheltered or extra care provision. Increasing numbers of older people with health problems will also require jointworking between housing and health (Council and NHS). The SHMA analysis indicates a potential need for between 280-450 additional housing units to be specialist accommodation across the County to meet the needs of the older person population each year moving to 2031. (Paragraph 9.85) (Our emphasis).

<td>&gt; SECTION 5 - PROVIDING NEW HOMES &gt; MAIN 29</td>
<td>Empire Homes Limited object to Table 4.1 (Main Modification, MM, 14) Policies H1 (MM24), H2 (MM29 and MM30) and CA5 (MM134) on the basis that insufficient sites for housing have been identified to provide for a five year supply of housing in accordance with national policy. Edgars Limited have prepared representations on behalf of a number of clients which demonstrates that a five year land supply cannot be demonstrated when appropriate assumptions are used in accordance with national planning policy and guidance. These representations conclude that only 2.7 year supply can be demonstrated. Edgars consider that additional non-strategic sites are required to be allocated to ensure sufficient housing land supply. Land at Sunset View is under the control of Empire Homes Limited, is available now and capable of delivering around 41 homes in a sustainable location to help boost housing supply, ensure a 5 year supply of housing and provide robustness to ensure that the housing requirement of the modified WOLP 2031 is delivered. These representations provide information on the Land at Sunset View, Carterton, and should be read in conjunction with Edgars Limited’s representations regarding housing supply which are not repeated here.</td>
</tr>

</table>

Main 29: Paragraphs 5.34b-5.34d

3.45 The Council acknowledges that there is a national imperative to boost housing supply significantly through the preparation of proactive and aspirational Local Plans; however it seeks to temper this ambition by questioning the realism of addressing the existing Plan period backlog that has built up since 2011. The Council quantifies the backlog (2011-2016) as 1,836 dwellings and in light of the scale of the shortfall proposes to adopt the ‘Liverpool’ method of addressing it over the whole of the remaining Plan period, rather than the NPPG18 preferred ‘Sedgefield’ approach. Local planning authorities should aim to deal with any undersupply within the first 5 years of the plan period where possible. Where this cannot be met in the first 5 years, local planning authorities will need to work with neighbouring authorities under the ‘Duty to Cooperate’.

3.46 In seeking to justify this approach the Council notes that over 1,000 dwellings per annum would need to be built consistently over the next five year period, and implies that the housebuilding industry could not deliver this scale of growth. Furthermore, it is claimed that there are not enough sites that the Council considers to be suitable that can be released to address this need. This is not considered to be supported by the evidence base that the Council relies upon.

3.47 By way of illustration it is reasonable to reconsider (in the context of the Council’s approach to allocations proposed under the Local Plan modifications) the assessment of sites at Carterton via the original and amended SA. Carterton is chosen on the basis it is a Main Service Centre yet receives no strategic allocations for housing, and is curiously assigned no additional housing growth in response to the uplift in the housing requirement to meet the District’s needs.

3.48 The SA as a whole considers three potential strategic development areas at Carterton: North Carterton...

<td>(Kilkenny Farm) (up to 1,000 dwellings), West Carterton (1,000 dwellings) and North East Carterton (1,200 dwellings), the latter being assessed at the modifications stage via the 2016 SA Addendum. The SA Addendum19 concludes that the findings in respect of the North and West Carterton options remain valid and so are carried forward as part of the evidence base, while the North East option is new and so is assessed within Appendix IV.</td>
</tr>
</tbody>
</table>

3.49 In the cases of the North and West options an identical concluding paragraph formed part of the assessment of each site at Table 4.1820:

As such and on balance it is not considered that the site should be allocated at the current time in order to meet the proposed Local Plan housing target (10,500 dwellings). If however the proposed Local Plan housing requirement is increased, or if further sites need to be identified in order to accommodate an element of unmet housing need from another local authority (e.g. Oxford City) this option may need to be reconsidered along with other potential alternatives.

3.50 The principal objection to each option set out within the SA is the potential impact of development on the landscape (Criterion 14), with each being assigned a minor negative/uncertain significance of effect rating. In each case therefore the grading identifies potential sustainability issues, which are capable of being mitigated. Indeed the summary comparative appraisal table within the February 2015 SA (p.86/105) states that the evidence suggests that the landscape can accommodate the proposed level of development at the North and West Options.

3.51 In the case of the North East Option the site performs very similarly21 to both North and West options and what is notable in each case is that there are no absolute constraints/major negative impacts. The only unqualified minor negative effect that arises in respect of each site occurs under criterion 7 (Improve land use efficiency), which is applied because they are green field sites. Other (limited) minor negative effects are uncertain.

3.52 The assessment table demonstrates very clearly that in each case there are no constraints to development on any of the site options at Carterton, consequently it is unreasonable and misleading of the Council to state that there are insufficient additional sites available for allocation. Indeed a comparison of the Carterton options with the Land East of Woodstock (300 dwellings) and the other draft allocations at the town22 (Appendix 4), shows that there are remarkable similarities in the ratings applied to each site under each criterion, yet very different outcomes.

3.53 What is most stark and seemingly perverse is that under criterion 14 the perceived impact on heritage/historic environment for all of the option sites identified at Carterton and the sites proposed for allocation at Woodstock is classified as the same. This is despite the proximity of the conservation area, multiple listed buildings (across all grades) and the WHS affecting the Woodstock sites, while at Carterton there are no such designations and no development within the setting of any listed buildings. The approach to assessment does not bear scrutiny (refer to Orion Heritage – Review of Heritage Considerations) the West Oxfordshire DC Local Plan Evidence Base: December 2016). In the case of landscape the East of Woodstock site would have a minor negative effect on landscape, compared to minor negative/uncertain for the Carterton sites, which suggests that the effect in Woodstock could conceivably be worse. The evidence base, once again does not support the approach taken in the Plan.

CPRE supports the use of the Liverpool method for determining a 5 year supply outlined in Liverpool v Sedgefield

<td>1620</td>
<td>&gt; SECTION 5 - PROVIDING NEW HOMES &gt; MAIN 29</td>
<td>INTRODUCTION AND SUMMARY i. These representations are submitted in response to the West Oxfordshire Local Plan 2031 – Proposed Modifications Consultation, December 2016 (WOLP 2031 Modifications). They are made by Edgars Limited on behalf of Empire Homes Limited who have land north of the A44 and south of the Banbury Road, Chipping Norton under their control. The land extends to approximately 42 hectares and is identified on the plan attached as Appendix 1 to these representations. ii. Empire Homes Limited object to Table 4.1 (Main Modification, MM, 14) Policies H1 (MM24), H2 (MM29 and MM30), CN1 (MM140) and CN2 (MM143) on the basis that insufficient sites for housing have been identified to provide for a five year supply of housing in accordance with national policy. iii. Edgars Limited have prepared representations on behalf of a number of clients which demonstrates that a five year land supply cannot be demonstrated when appropriate assumptions are used in accordance with national planning policy and guidance. These representations conclude that only 2.7 year supply can be demonstrated. Edgars consider that additional sites are required to be allocated to ensure sufficient housing land supply. iv. Land north of the A44 and south of the Banbury Road, Chipping Norton is available and capable of delivering residential development in a sustainable location to help boost housing supply, ensure a 5 year supply of housing and provide robustness to ensure that the housing requirement of the modified WOLP 2031 is delivered. v. The following representations provide further information on the land north of the A44 and south of the Banbury Road, Chipping Norton. 1.0 DELIVERY AT EAST CHIPPING NORTON SDA (Policy CN1, MM138-MM140) 1.1 The East Chipping Norton allocation has been increased from about 600 dwellings at Tank Farm south of the London Road to 1,400 dwellings including 1,200 dwellings south of London Road and 200 north of London Road. The SDA now includes the provision of an Eastern Link Road. 1.2 Limited evidence has been published to demonstrate and assess the impacts of the increased allocation. The previous assessment of Strategic Site Options (Examination Document Ref OTH1) has not been updated. This provides a comprehensive overview of the site and a summary of the site constraints and impacts.</td>
<td></td>
</tr>
</tbody>
</table>
1.3 There would appear to be no evidence document which provides a summary of the modified East Chipping Norton SDA and its constraints. The SHELAA assesses a number of component sites but there is no expression of the overall size of the site and its developable area to ascertain whether delivery is realistic.

1.4 Previous landscape evidence was prepared for the Council by Kirkham Landscape Planning, the Landscaper and Visual Review of Chipping Norton Strategic Site Option (May 2014, Examination Document Ref LAN2). This concludes an indicative housing capacity for the land south of London Road of 500 dwellings within a similar area as now proposed by the Council.

1.5 This is significantly lower than the 1,200 dwellings now assumed by the Council and draws into question the deliverability of this number of dwellings.

1.6 Furthermore, it is noted that the East Chipping Norton SDA now also includes the provision of a link road through the allotment garden land.

1.7 The updated Infrastructure Delivery Plan 2016 does not provide a cost estimate for the provision of the link road. It is unclear what has been assumed for viability purposes.

1.8 Edgars Limited understand that the allotment land is under the ownership of Chipping Norton Town Council who object to the provision of the link road. This draws into question the deliverability of the eastern link road which is now integral to the modified East Chipping Norton allocation.

1.9 In Edgars opinion, the increased allocation at East Chipping Norton is not justified by the published evidence and there is a significant risk that it will not be realised.

1.10 Empire Homes Limited object to Policies H1 (MM24), H2 (MM29 and MM30), CN1 (MM140) and CN2 (MM143) on the basis that the modified plan has not identified sufficient housing land to provide for a 5 year supply of housing and contend that Land north of the A44 and south of the Banbury Road, Chipping Norton should be allocated to assist with the delivery of the East Chipping Norton SDA.

One of the most important components of the National Planning Policy Framework is the need ‘to boost significantly the supply of housing,’ (para 47). The Council acknowledge that it has a backlog of housing ‘under-supply’ which totals 1,836 homes in the period 2011 - 2016. The Council also acknowledges that the additional allocations under the main modifications are not sufficient to address this backlog over the next five years, and justifies this by stating that: ‘Insufficient capacity has been identified through this Local Plan and the supporting assessment of housing land availability to deliver a 5-year supply under the Sedgefield approach and it could only be achieved by releasing a large number of sites that have been assessed by the Council as being unsuitable for housing.’

The fact that they are judged to be unsuitable does not mean that they are unsuitable as the Council argued that this applied to the land south of Witney Road which was granted planning permission on appeal in July 2016 (Ref: APP/D3125/W/15/3129767). It is therefore considered that the land on the north side of Witney Road, which has similar characteristics is also suitable for allocation. The fact that the Council acknowledges that the shortfall will not be made up over the next five years, indicates that if deliverable sites are available they should be allocated.

2.21 We have set out our comments in respect of the Council’s proposed housing target in relation to main modification 24 and as such do not repeat these here.

Sources of Supply

2.22 The supporting text to Policy H2 sets out the various sources through which the housing requirement will be met, as summarised in the table below (ATTACHED)

2.23 Clearly the Council are already failing to plan for sufficient new homes to meet the housing requirement over the Plan period.

2.24 We do note that currently no allowance is made for additional allocations which could be brought forward through Neighbourhood Plans of which there are currently five in preparation in the District as well as the made Chipping Norton Neighbourhood Plan, which does not seek to allocate any sites for development. Whilst additional development could be forthcoming through allocations in Neighbourhood Plans there is no guarantee that this will occur.

2.25 The NPPF makes clear that Local Plans “should meet objectively assessed needs, with sufficient flexibility to adapt to rapid change.” As currently drafted the Local Plan is failing not only to make provision for its own acknowledged objectively assessed need but allows for no flexibility to ensure the housing target is achieved. Concern is therefore raised that the Plan as currently drafted is not positively prepared, justified, effective or consistent with National Policy. Further consideration is likely to be required as to how this requirement can be met, including through additional allocations.

Five Year Housing Land Supply

2.26 Proposed paragraph 5.34c seeks to justify the Council’s proposed approach by advising that:

"With regard to 5-year housing land supply the Council will apply the residual (Liverpool) approach with any under-supply (backlog) of housing to be delivered over the remaining plan period to 2031. The additional provision being made for Oxford City’s needs will be incorporated into housing delivery assumptions from 2021 onwards."

2.27 The NPPG is clear in its guidance to LPAs (D3-035-20140306) that they should aim to deal with any undersupply within the first 5 years of the plan period where possible. The NPPG makes clear that in circumstances where the LPA is unable to meet its undersupply in the first 5 years then it will need to work with neighbouring authorities under the ‘Duty to Cooperate.’ This matter was specifically raised by the Inspector in his Initial Findings: Part 2.

2.28 Proposed paragraph 5.34c seeks to justify the Council’s proposed approach by advising that:
"To provide a 5-year supply under the Sedgefield method, in excess of 1,000 homes per year would need to be built consistently over the next 5-years, well in excess of what has been achieved in West Oxfordshire in the past, even during several housing booms. Insufficient capacity has been identified through this Local Plan and the supporting assessment of housing land availability to achieve a 5-year supply under the Sedgefield approach and it could only be achieved by releasing a large number of sites that have been assessed by the Council as being unsuitable for new housing. The Council does not consider this to be an appropriate way forward and that addressing the shortfall in a more measured way over the remaining plan period using the Liverpool approach is considered to be entirely justified."

2.29 As is clear from the extract above the NPPG clearly advocates the Sedgefield approach as the most suitable approach. This is borne out in numerous appeal decisions and case law. Where the Sedgefield method cannot be achieved then the LPA must seek to liaise with neighbouring authorities under the Duty to Cooperate in order to redistribute this requirement. Although the Council have sought to justify its decision to seek to pursue the Liverpool method, no indication is provided as to whether the approach advocated in the NPPG of seeking the assistance of neighbouring authorities to meet this shortfall in the short term has been pursued.

2.30 Given the discussions which have taken place in respect of the Oxford City apportionment, and the fact that full agreement has yet to be reached on this matter, it would appear unlikely in any event that such assistance would be forthcoming.

2.31 Given our comments above it is clear that the Council will need to propose additional allocations in order to meet the housing requirement. Given the shorter lead in times associated with small to medium size allocations it is likely that allocations of this scale would allow the Council to also address its backlog using the Sedgefield approach. Consideration should also be given to whether elements of the larger strategic sites could form an early phase of development without compromising the comprehensive development of the wider site.

2.32 Whilst the Council seeks to justify the use of the Liverpool method by referring back to past delivery rates, it must be recognised that these were set within a significantly different planning context when there was not the requirement as set out within the NPPF to meet the full objectively assessed need. The historic low levels of delivery are a reason to boost the supply of housing as soon as possible because the need has already arisen and has not yet been met, rather than being a reason to suppress the rate at which housing should come forward.

2.33 In light of the above, in order to ensure its soundness the Plan should make provision to meet the backlog in housing need using the Sedgefield method with the backlog delivered in the first five year period rather than being spread across the remaining Plan period (Liverpool) as currently proposed.

2.34 As currently drafted it is unclear whether the Council are proposing that post-2021 the supply of those allocations identified to meet the needs of Oxford City only would be

2.21 We have set out our comments in respect of the Council's proposed housing target in relation to main modification 24 and as such do not repeat these here.. Sources of Supply 2.22 The supporting text to Policy H2 sets out the various sources through which the housing requirement will be met, as summarised in the table below (ATTACHED). 2.23 Clearly the Council are already failing to plan for sufficient new homes to meet the housing requirement over the Plan period. 2.24 We do note that currently no allowance is made for additional allocations which could be brought forward through Neighbourhood Plans of which there are currently five in preparation in the District as well as the made Chipping Norton Neighbourhood Plan, which does not seek to allocate any sites for development. Whilst additional development could be forthcoming through allocations in Neighbourhood Plans there is no guarantee that this will occur. 2.25 The NPPF makes clear that Local Plans “should meet objectively assessed needs, with sufficient flexibility to adapt to rapid change.” As currently drafted the Local Plan is failing not only to make provision for its own acknowledged objectively assessed need but allows for no flexibility to ensure the housing target is achieved. Concern is therefore raised that the Plan as currently drafted is not positively prepared, justified, effective or consistent with National Policy. Further consideration is likely to be required as to how this requirement can be met, including through additional allocations. Five Year Housing Land Supply 2.26 The revised Policy as currently drafted states: “With regard to 5-year housing land supply the Council will apply the residual (Liverpool) approach with any under-supply (backlog) of housing to be delivered over the remaining plan period to 2031. The additional provision being made for Oxford City’s needs will be incorporated into housing delivery assumptions from 2021 onwards.” |
2.27 The NPPG is clear in its guidance to LPAs (D 3-035-20140306) that they should aim to deal with any undersupply within the first 5 years of the plan period where possible. The NPPG makes clear that in circumstances where the LPA is unable to meet its undersupply in the first 5 years then it will need to work with neighbouring authorities under the 'Duty to Cooperate.' This matter was specifically raised by the Inspector in his Initial Findings: Part 2.

2.28 Proposed paragraph 5.34c seeks to justify the Council’s proposed approach by advising that:

“To provide a 5-year supply under the Sedgefield method, in excess of 1,000 homes per year would need to be built consistently over the next 5-years, well in excess of what has been achieved in West Oxfordshire in the past, even during several housing booms. Insufficient capacity has been identified through this Local Plan and the supporting assessment of housing land availability to achieve a 5-year supply under the Sedgefield approach and it could only be achieved by releasing a large number of sites that have been assessed by the Council as being unsuitable for new housing. The Council does not consider this to be an appropriate way forward and that addressing the shortfall in a more measured way over the remaining plan period using the Liverpool approach is considered to be entirely justified.”

2.29 As is clear from the extract above the NPPG clearly advocates the Sedgefield approach as the most suitable approach. This is borne out in numerous appeal decisions and case law. Where the Sedgefield method cannot be achieved then the LPA must seek to liaise with neighbouring authorities under the Duty to Cooperate in order to redistribute this requirement. Although the Council have sought to justify its decision to seek to pursue the Liverpool method, no indication is provided as to whether the approach advocated in the NPPG of seeking the assistance of neighbouring authorities to meet this shortfall in the short term has been pursued.

2.30 Given the discussions which have taken place in respect of the Oxford City apportionment, and the fact that full agreement has yet to be reached on this matter, it would appear unlikely in any event that such assistance would be forthcoming.

| MM728        | Abbey Developments and David Wilson Homes Southern | -                | 1668       | > SECTION 5 - PROVIDING NEW HOMES > MAIN 29 | already arisen and has not yet been met, rather than being a reason to suppress the rate at which housing should come forward.  

2.33 In light of the above, in order to ensure its soundness the Plan should make provision to meet the backlog in housing need using the Sedgefield method with the backlog delivered in the first five year period rather than being spread across the remaining Plan period (Liverpool) as currently proposed.  

2.34 As currently drafted it is unclear whether the Council are proposing that post-2021 the supply of those allocations identified to meet the needs of Oxford City only would be accounted for and that the additional 2,750 dwellings would not be added to the requirement side of the five year housing land supply equation. Plainly such an approach would be unsound and the Inspector in his preliminary findings advised that the apportionment figure should be counted in the five year housing land supply. As such we would recommend that the policy text is re-worded to clarify this position.  

Other Matters  

2.35 The previously proposed criteria in point 3 of the policy are proposed to be deleted and instead are addressed in Policy OS2 as discussed above. With regards to the Main Service Centres etc., the Policy wording in the third bullet continues to state development will be allowed where “it is consistent with the criteria in 3) below”. For clarity this wording therefore requires amendment.  

Five Year Housing Land Supply  

Despite the increase in the overall level of housing provision set out in the Proposed Modifications (as discussed above), the Local Plan will still fail to “boost significantly” the supply of housing in the short term and therefore make a meaningful contribution to the Government’s national objective of delivering one million new homes by 2020.  

A significant shortfall in housing provision has already arisen within the first five years of the Local Plan period (2011-2016) which is further increasing unmet need. The Council assert that the residual Liverpool method is most appropriate to address the 1,836-dwelling backlog (excluding Oxford City unmet need) from 2011-2016 rather than Sedgefield which is recognised in Planning Practice Guidance (PPG).  

MAIN29 (paragraph 5.34b) indicates that the Council will apply the Liverpool method in calculating the 5-year housing land supply which seeks to address the under-supply over the plan period rather than the immediate 5-year period. IN016 (The Inspectors Preliminary Findings - Part 2 para 2.15) stated that WODC need to have regard for National Guidance as the Liverpool method is not mentioned. Furthermore, a Houses of Parliament Briefing Paper dated 25 May 20162 states that Local Planning Authorities should aim to deal with any undersupply within the first 5 years of the plan period, thus the Sedgefield approach should be adopted. This is especially important given the severeshortfall of 1,836 homes and the serious affordability concerns in the local area (house prices 10 times lowest incomes).  

The Sedgefield approach would facilitate the back-log of supply to be addressed within the first five years of the plan rather than stretching the unmet need over the plan period. Planning Practice Guidance (PPG)3 states that Local Authorities should aim to deal with any undersupply within the first five years of the plan where possible. The Inspector as detailed in IN016 comments that WODCdo need to have regard for
National Policy on this matter, and that the Liverpool method is not mentioned, concluding that Sedgefield is preferred. With the very poor delivery against the district’s revised housing target (with a 2% year deficit at April 2016), there should be a consideration of whether the 20% buffer now applies.

Specifically, in relation to Witney, we note that the Council relies heavily on the West Witney site which has had a resolution to grant outline planning permission since March 2013 (now over 3½ years ago). Furthermore, a non-strategic allocation at Woodford Way Car Park is acknowledged by the Council as undeliverable in the short term. It is still considered that WODC should adopt the Sedgefield method and address housing need in the short term and seek to allocate sites which can deliver in the short term. The Council attempts to justify its approach in MAIN29 (paragraph 5.34c) with reference to the capability of the development industry, including past performance within the district, and in terms of capacity in terms of housing land availability. However, this disregards the significant opportunity for to bring forward development at South Witney in the short term. The Council’s rejection of allocating additional deliverable sites in unconstrained locations such as Witney means that the authority is artificially constraining the supply and therefore limited choice and competition in the market, contrary to paragraph 47 of the NPPF. The way to address this will be to front load the Local Plan with a range of development sites, as opposed to simply increasing the capacity of previously identified SDAs, which would increase delivery within the first half of the plan period and in particular within the 5-year supply period. Additionally, whilst paragraph 5.34c is dismissive of the development industry’s capability to deliver at over 1,000 dwellings annually, the current strategy of the authority expects this to occur between 2021 and 2031 (based upon 660 SHMA annual need + 275 dwellings annually for Oxford un-net need + a proportion of continuing unmet district need through application of Liverpool method). Consequently, there is no justification for delaying delivery of housing in West Oxfordshire post 2021 and the authority should consider all opportunities for early delivery such as around Witney.

Furthermore, the Council’s Housing Land Supply Position Statement October 2016 simply indicates that Eynsham will ‘kick in’ from 2021 onwards as ‘agreed’ through the joint work at the Growth Board: such a view is not supported by the following statement from the September 2016 OGB report which emphasises the sovereign nature of Local Plans in identifying land to address unmet need: “133) The Programme is not seeking to allocate or release sites, but has at a high level and using a common basis, through the work streams; identify the evidence of each district’s ability to absorb additional growth to meet a share of Oxford’s unmet need. It will be for each of the districts through their normal Local Plan processes to allocate sites sufficient to meet their proposed share of Oxford’s unmet need under the requirements of the Duty to Co-operate. It is also important to note that the yield figures for each area of search represent estimated housing numbers to be delivered by 2031 - total capacities at a number of these sites may change through local assessment as part of the more detailed Local Plan process, taking a wider range of planning factors into account, including the potential to deliver further housing beyond 2031.”

Rather than the response to delivering new homes to meet unmet needs ‘kicking in’ in 2021, this should be seen as ‘kicking the can’ down the road. Unmet need, is, by definition, unmet, especially as the City has delivered less than 20% of its SHMA requirements between 2011 and 2016. This is in marked contrast to the Inspector’s preliminary findings that it was his initial view that unmet Oxford City need would need to be taken into account in calculating the 5-year land supply (Paragraph 7.6 (IN015)).

It is counter intuitive for the Council to hold the view that need for housing in the City since 2011 should be addressed in 5 years’ time or beyond. The Inspector’s Preliminary Findings (IN015) confirmed that if the Council failed to consider the implications of unmet housing needs the plan would be
out of date before it can be adopted. The inescapable conclusion to this is that unmet housing needs should begin to be addressed at the time of adoption of this plan: arguably now. Were that not the case, logically an early review which gives time to consider and then respond to unmet needs would be appropriate, which it is evidently not.

**Affordable Housing Need**

We note that the Council’s Strategic Development Area (SDA) Viability Update (2016) provides appraisals for the SDAs proposed in the Local Plan. The appraisals including for North Witney and East Witney appear to suggest that of the 40% affordable housing to be provided, 20% (i.e. 50% of the total affordable housing provision) is assumed to comprise Starter Homes.

The approach to Starter Homes including the extent to which this helps to meet affordable housing needs is expected to be clarified through the Housing White Paper which the Government is due to publish in January 2017. This could potentially call into question the Council’s viability assessment and place further doubt on the deliverability of these sites.

Furthermore, it is unclear from the Viability Update what assumptions have been made regarding financial contributions towards strategic highways infrastructure which both North Witney and East Witney are reliant upon. In the absence of further detail, this could potentially lead to further reductions in meeting the affordable housing need in the area.

Object MAIN 29 - paras. 5.34b & 5.34c - use of 'Liverpool' method Council's agreed position in relation to Long Hanborough Station Inquiry At a current appeal at Land Adjacent to Hanborough Station, Long Hanborough (application ref. 15/03797/0UT and appeal ref. APP/D31/25/w/16/3148400) the Council have set out their current position in respect of a 5 year housing land supply, agreed within the Statement of Common Ground.

In summary, the position is as follows:

- Requirement 2016-2021 - 6,836
- Supply - 4,514
- Shortfall - 2,322
- Years supply - 3.3yrs

As of 11 November 2016, the Council do not have a 5 year housing land supply. A 3.3 year housing land supply is the current position. Council's Approach to Meeting Housing Need The Council's approach to meeting its housing need requirement relies on a combination of large existing commitments, small existing commitments and draft local plan housing allocations. We have concerns in relation to the first and last of these elements.

In relation to existing large commitments, judgements have been made by the Council in their Housing Land...
Position Statement over the timeframe for deliverability of certain sites; particularly within the current five year period ending March 2021. We have significant reservations about the assumptions that have been made in respect of a number of sites including West Witney, land east of Carterton and east of Chipping Norton SDA, where collectively the Council suggest 850 dwellings will be delivered by 2021.

The Council’s reliance on these sites delivering the number of dwellings suggested is, in our opinion, unsound given the background to the sites concerned and the various deliverability issues. For example, the West Witney commitment has had considerable delays to the outline planning application and the Section 106 Agreement still has not been signed. There are major infrastructure requirements to address and to suggest that 350 dwellings will be delivered in the next 4.5 years is unrealistic.

The reliance on the deliverability of ‘existing commitments’ during the current five year period has the effect of distorting the Council’s land supply position as well as rendering the proposed modifications to the Local Plan unsound. With regard to reliance on draft Local Plan Housing Allocations, Paragraph 5.13 of the Council’s Housing Land Supply Position Statement (Oct 2016) outlines that the Council, in response to the Inspector’s concerns with how a significant increase in the overall housing requirement for the District will be delivered, have included a number of new site allocations.

Para 5.14 continues:

“Whilst these allocations remain in draft form at the present time and are subject to further consultation and discussion through the reconvened Local Plan examination it is reasonable to expect some additional housing supply from these sites in the period 2016 - 2021.”

In seeking to demonstrate a 5 year housing land supply and meet the challenge of providing the requisite homes in the District, the Council have produced a series of allocated sites.

The Council acknowledge they are draft and subject to further consultation and examination. In total, across the District, the non-strategic housing allocations total 1,719 (new para. 5.30b), or around 10% of the total provision for the plan period.

Taking together all proposed draft Local Plan housing allocations, strategic development areas and non-strategic allocations, this figure is 8,169 dwellings (including 2,750 dwellings for Oxford’s unmet housing needs).

The Council acknowledge that “it is reasonable to expect some additional housing supply from these sites in the period 2016 - 2021”, but does not expand on this claim any further. These are newly introduced sites which are only now undergoing public consultation and have not been subject to independent examination.

Given the nature of the modifications and the scope of what is proposed, it is likely there will be significant unresolved objections to the proposed site allocations. The Inspector may wish to recommend changes to the Plan once each site has been considered on its merits. These sites have not yet been properly assessed. The allocations are at a very early stage of the plan-making process, undergoing the first stage of public consultation at the time of writing.

Paragraph 216 of the NPPF is explicit in setting out the degree of weight which should be given to relevant policies in emerging plans. Little weight should be afforded to these emerging policies.
Issuing a series of main modifications to a plan for public consultation which propose a series of draft site allocations for the first time is not an appropriate mechanism on which to rely on for the purposes of adopting planning policies relating to housing deliverability.

The Council acknowledge that the “allocations remain in draft form” and will be “subject to further consultation and discussion through the reconvened Local Plan examination”. 'Site Allocations' documents are commonly separate, detailed, stand-alone Development Plan Documents in their own right. They would undergo consultation and various drafts leading up to independent examination as they are adopted. Indeed, paragraph 5.30c the Plan states that “Subject to resources, the Council will seek to prepare site-specific planning briefs to guide the development of these allocated sites” (our emphasis).

The Council acknowledge that further work - including formal public consultation - will be undertaken in the future to understand the capacity and potential for housing delivery on these sites.

However, the Council have instead assumed each site will come forward and will deliver the level of housing stipulated by the proposed modifications, and have prepared policies on this basis.

Furthermore, paragraphs 5.34b and 5.34c discuss the Council’s approach to calculating supply using the ‘Liverpool’ method. We do not consider this approach appropriate. There is a persistent past undersupply of housing delivery within the District which needs to be addressed now, and not spread out over the Plan period, and for this reason in this instance the ‘Sedgefield’ method is the most appropriate basis to address the shortfall.

The Council have made a series of assumptions in reaching the conclusion that the proposed main modifications to the Local Plan will meet the revised housing target for the District. It is circular reasoning to produce draft modifications for consultation yet to assume the requisite levels of housing delivery will be achieved, and it is for this reason we consider the Plan unsound.

Ultimately, we do not share the view that a 5 year housing land supply has been satisfactorily demonstrated, and it is not an appropriate basis on which to operate for decision-making purposes.

1. It is not justified: a series of main modifications - which is in effect the first stage of public consultation on 8,169 homes on strategic and non-strategic allocated sites – is not an appropriate strategy on which to assume the District’s housing shortfall will be delivered, and to produce amended policy which flows from this assumption.

In summary, we are of the view the Plan is unsound because:

2. It is not effective: by its nature, due to the very early stage of consultation on these site allocations we do not know which sites will be deliverable and can be expected to contribute towards the District’s housing supply. It can reasonably be assumed there will be objections to these allocations, and some of them will not come forward for delivery, or may come forward but at a reduced capacity.

3. It is not consistent with the NPPF. The weight which can be afforded to these emerging policies at this early stage of consultation is not consistent with the Council’s position that they can demonstrate a 5-year housing land supply and determine planning applications on this basis.

Strong objections are raised in respect of Paragraph 5.34B of the Plan and the intention to apply the Liverpool approach to dealing with backlog the of 1,836 homes.

</table>
WOLP 2031 is delivered.

v. The following representations provide further information on the site at Churchill Road and should be read in conjunction with Edgars' general representations regarding housing supply which are not repeated here.

1.0 LAND NORTH WEST OF 34 CHURCHILL ROAD, CHIPPING NORTON

1.1 Our clients object to Policies H1 (Main Modification (MM) 24), H2 (MM29 and MM30) and CN2 (MM143) on the basis that the modified plan has not identified sufficient housing land to provide for a 5 year supply of housing and that land at 34 Churchill Road and adjoining land to the north west should be allocated for around 75 homes to help address this deficiency.

Site and Surrounding Area

1.2 The site is situated in the south western part of Chipping Norton, which is the third largest town in the district offering both residents and visitors a good range of services and facilities. The site lies approximately 700m from the town centre and is a similar distance from Chipping Norton Leisure Centre and Chipping Norton School (secondary). There are bus stops located on Churchill Road (within 150m of No. 34 Churchill Road), which provide access to a high frequency service to Oxford (S3) and a slightly less frequent service to Banbury (488). There is also a service (X8) that links Chipping Norton with Kingham Railway Station. The site is therefore in a highly sustainable location.

1.3 The site comprises approximately 4.5 hectares of land, identified on the plan attached at Appendix 1. The land forms part of the side of a valley and slopes downwards from the south east to the north west of the site. There is a two story dwellinghouse at 34 Churchill Road with vehicular access and egress to the front of the property via dropped kerbs in two locations. Access to the land at the rear (north west) of 34 Churchill Road is via an agricultural gate and grassed track situated between numbers 34 and 32 Churchill Road. The land north west of 34 Churchill Road is not currently actively used for agriculture, except for occasional grazing. Consequently, it could be described as unmanaged grassland, declining in quality. This land is divided into two parts, almost equal in area, by a tree-lined stream which runs from the site's southernmost corner to its northernmost corner. The trees along this line are substantial and mature and are effective as a visual barrier.

1.4 The principal north-eastern and south-eastern site boundaries are shared with residential properties at The Leys and Lords Piece Road respectively. The rear gardens which back onto the site include considerable tree cover in the more historic environment of The Leys. There is less tree cover in the 20th century residential development at Lords Piece Road which forms the more elevated backdrop to the site. There is a small group of industrial buildings, with a high number of trees in the curtilages, immediately adjacent to the site's northwestern boundary along the route of a former railway line in the floor of the valley. The group contains some relatively modern structures, which are unremarkable, but among them sits Bliss Mill. This is an imposing 19th century building (now converted to apartments), Grade II* listed and a notable local landmark. Beyond the industrial buildings lies the Chipping Norton Regulated Pastures, which is common land with open public access for recreation. Open countryside lies to the south west of the site.

1.5 The site falls within the Cotswolds Area of Outstanding Natural Beauty, the Chipping Norton Conservation Area and the setting of the listed building (Bliss Mill).
1.6 The ‘Cotswolds AONB Landscape Strategy and Guidelines’ (adopted in June 2016) states in relation to the Vale of Moreton Farmed Slopes Character Area (in which the site is situated) that the expansion of existing settlements onto the Farmed Slopes is regarded as a local force for change, with a range of potential landscape implications including the ‘encroachment of built development onto the Farmed slopes intruding into the landscape, particularly on the more prominent upper slopes’.

1.7 It is to be noted in this instance that the site does not occupy the uppermost slopes. The existing substantial tree cover, both on the perimeter and a belt running through the site, makes the land less visually prominent than the common land to the north west and the open countryside to the south west.

1.8 The Chipping Norton Conservation Area Character Appraisal identifies the bowl-shaped valley landscape setting of Bliss Mill as the most significant area of open space in the Conservation Area. While it is envisaged that within the Conservation Area the existing buildings, land uses, historic settlement patterns and open spaces should remain largely undisturbed, the guidance does enable development where views into and out of Chipping Norton, as well as views within Chipping Norton, are not harmed and where existing features of historic, visual or natural importance, such as trees, hedgerows, ponds, stone walls, paths and tracks are incorporated.

1.9 The site is not within an area that is at risk from flooding.

Representations on behalf of the owners of land north west of 34 Churchill Road, Chipping Norton West Oxfordshire Local Plan 2031 Proposed Modifications Consultation, December 2016.

1.10 The site has not previously been submitted to the Council or considered in the Strategic Housing and Economic Land Availability Assessment (SHELAA).

Key Planning Site Considerations

1.11 Additional technical work, including a Landscape and Visual Impact Assessment is currently being undertaken and likely to be available in advance of further WOLP 2031 examination hearings. Without prejudice to this further work, the following planning considerations are identified as relevant to the potential allocation of the site.

The principle of housing development at Chipping Norton

1.12 Chipping Norton is identified as a Main Service Centre in the Local Plan 2031. Draft WOLP Policy H2 permits new housing on undeveloped land adjoining the built-up area to meet identified housing needs. As such housing development on the site would be acceptable in principle.

1.13 Draft Policies H2 and CN2 seek to secure the delivery of 2,400 new homes focused on Chipping Norton. Delivery is proposed partly through a strategic mixed used development area of around 1,400 dwellings on the eastern side of Chipping Norton. The provision of an eastern link road is an integral part of the proposed Strategic Development Area (SDA).

1.14 In Edgars opinion, there is a significant risk of delays in delivery on SDAs which is likely to result in continuing housing supply deficits. There is a need to address deficiencies in the 5 year housing supply. Given the long lead times of SDAs, addressing the current supply deficiencies is best achieved through allocating...
1.15 In Edgar's opinion, the development of land at 34 Churchill Road and adjoining land to the north west can comply with Policy H2 in being adjacent to the built up area of a Main Service Centre in the settlement hierarchy, settlement character, AONB landscape and Conservation Area.

1.16 Draft Policy OS2Locating Development in the Right Places states that a significant proportion of new homes, jobs and supporting services will be

Representations on behalf of the owners of land north west of 34 Churchill Road, Chipping Norton West Oxfordshire Local Plan 2031 Proposed Modifications Consultation, December 2016 focused within and on the edge of the main service centres of Witney, Carterton and Chipping Norton. Development is required to:

- form a logical complement to the existing scale and pattern of development and/or the character of the area;
- be compatible with adjoining uses and not have a harmful impact on the amenity of existing occupants;
- as far as is reasonably possible protect or enhance the local landscape and the setting of the settlement/s;
- be provided with safe vehicular access and safe and convenient pedestrian access to supporting services and facilities; and
- conserve and enhance the natural, historic and built environment.

1.17 The site is surrounded on three sides by existing residential and industrial development. It is considered that allocating the site for housing would form a logical extension of the existing built-up area, without encroaching on the more visually prominent parts of the valley that would otherwise cause harm to the setting of Bliss Mill.

1.18 Use of the land for housing is entirely compatible with the adjoining residential development at The Leys and Lords Piece Road. The retention of existing trees and hedgerows, especially on the perimeter of the site, will help to ensure that there is no harmful impact on the amenity of the existing occupiers of properties in these two roads. It will also help to preserve and enhance the character and appearance of the conservation area.

1.19 A new all-purpose access road is capable of being provided off Churchill Road following demolition of the existing dwelling at No. 34. A 6.0m wide access road with 9.0m radii (like the Lords Piece Road/Churchill Road junction) with 2.0m wide footways each side would be constructed. Junction visibility splays of 2.4m x 43m are readily available in accordance with the 30mph speed limit on Churchill Road. An offset distance of 20m (centreline to centreline) would be provided between the new access and the cul-de-sac on the opposite side of Churchill Road, named Edward Stone Rise. This specification would facilitate a development of up to 150 dwellings. However, having regard to the importance and sensitivity of the landscape, the character and appearance of the Conservation Area and the setting of the listed building, it is considered that around 75 dwellings would represent a more appropriate scale of development for this site.

Representations on behalf of the owners of land north west of 34 Churchill Road, Chipping Norton.
1.20 If the total number of dwellings on the site generated a need for a separate emergency access, this could be achieved by utilising existing rights of access to the gate in the northern corner of the site, from The Leys/Station Road. It would also provide an additional means of access for pedestrians and cyclists. In this manner, the development would be provided with safe vehicular access and safe and convenient pedestrian access to supporting services and facilities.

1.21 The character and appearance of the AONB and the Conservation Area can be preserved and enhanced through a high quality evidence based development within a strong and extensive landscape framework. While the extent of the land is 4.5ha, around 75 dwellings are proposed leaving significant scope for open space and landscaping.

1.22 In Edgars opinion, a development of this scale does not comprise ‘major’ development for the purposes of NPPF paragraph 116 and that a development within a strong landscape framework will not have a significant adverse impact on the landscape and scenic beauty of the wider AONB. The public benefits of the scheme would outweigh any harm to the Conservation Area and the setting of Bliss Mill.

1.23 Although further work is being undertaken, Edgars consider that development can be achieved on the site which makes an important contribution to meeting housing land supply in a sustainable location, without significant impact on the settlement character, AONB or the Conservation Area.

1.24 Further detailed technical information is likely to be available during the next stages of the WOLP 2031 Examination.
housing;

-- the ongoing reliance on a 5% rather than a 20% buffer to facilitate delivery;

-- the lack of evidence to support the Council's estimates of supply on allocated, permitted and other potential housing sites.

In this circumstance, Hallam consider that it is important for the Local Plan to make additional allocations to realistically help ensure that the housing required to meet needs is delivered.

The allocations in the Plan do not achieve this objective (irrespective of their individual merits and suitability which, in Hallam’s view, also means that further allocations should be made).

In the following paragraphs, a summary of Hallam’s concerns regarding the deliverability of the Plan’s housing objectives is set out. Hallam would look to substantiate those views at the forthcoming resumption of the Examination.

Sedgefield v Liverpool approach.

In Main modification 29 and 30 the Councils sets out a new approach - which is to adopt the Liverpool method for assessing five year supply.

While no detailed consideration was given to this issue in the first session of the Examination, paragraph 2.15 of the IN016 (the Inspector's Preliminary Findings Part II) warns the Council that it should have particular regard to National Guidance on this matter, as the “Liverpool Method” is not mentioned”.

The Council have consistently used the Sedgefield approach to address the housing shortfall whereby the backlog of housing is met in the first five years of the plan period. The October Housing Land Supply Position Statement however sets out that the Council now believe that the Liverpool method is the most appropriate way of addressing the shortfall – over the plan period as a whole. MAIN 29 inserts text into the draft Local Plan that seeks to explain that the Liverpool method would place strain on the delivery of housing, meaning that in excess of 1,000 homes would need to be built in the first 5 years. MAIN 29 states that the Sedgefield approach ‘could only be achieved through by releasing a large number of sites that have been assessed by the Council as unsuitable for new housing’. This comment is not considered to be a valid reason for employing the Liverpool method as it is predicated on the Council having not allocated enough sites for housing rather than there being sites in the pipeline. There are clearly additional and sustainable opportunities that could come forward and help meet identified housing needs.

It is the Sedgefield method that is more with the NPPF, and paragraph 47 in particular which states that the shortfall should be moved forward from later in the plan period. The Planning Practice Guidance is clear. Paragraph Reference ID: 3-035-20140306 considers “How should local planning authorities deal with past under-supply?” The short answer given in the Planning Practice guidance is that: “Local planning authorities should aim to deal with any undersupply within the first 5 years of the plan period where possible. Where this cannot be met in the first 5 years, local planning authorities will need to work with neighbouring authorities under the ‘Duty to Co-operate”

The Guidance does not suggest an alternative to the Sedgefield approach. If the scale of the shortfall can’t be met within the first five years of the Plan then the solution is not to abandon the Sedgefield approach – or
the attempt to meet needs that are urgent but to meet such needs as is possible and also to look to work with neighbouring authorities through the “Duty to cooperate”. This is not proposed by the Local Planning Authority.

It can make no sense to plan to meet housing needs that are assessed as having arisen between 2011 and 2016, and that haven’t been addressed in that period, at some undetermined point in the future - say 2026 - 2031. Deferring meeting needs is not consistent with the NPPF.

The Sedgefield approach is entirely consistent with the urgency stressed in the NPPF in relation to meeting housing needs because it seeks to ensure housing is provided as quickly as possible. It is unsurprisingly that appeal decisions have consistently employed the Sedgefield approach.

The fact that the Council has consistently applied the Sedgefield method, and this approach has been endorsed by Inspectors at recent appeals in the district (Burford Road, Witney), further illustrates the Council’s change of position as ill-judged. The October 2016 Housing Land Supply Position Statement sets out that the ‘validity of this approach will be debated through the Local Plan process’ however as it currently stands, the Council have provided no substantive justification for this approach. The Sedgefield remains the most appropriate method for addressing the shortfall, and given the significant shortfall and under delivery, the Council should accept this position rather than causing unnecessary delay to the delivery of much needed homes by not allocating enough sites to deliver the shortfall in the first 5 years. Adopting the Sedgefield approach, the Council accepts that it does not have enough land identified to meet housing requirements. This is not an acceptable approach given the scale of housing need and the large shortfall in meeting urgent housing needs.

5% v 20% buffer

The issue of the appropriateness of a 5% buffer was considered by the Local Plan Inspector in his preliminary findings in December 2015 (IN016). The conclusions were that delivery had been well below the local plan in recent years but that “it would not be reasonable to conclude, at present, that there had been persistent under-delivery”. This was because recent under delivery was partly excused by over delivery in the preceding 5 years against the South East Plan (and notwithstanding the limited provision that was sought in the SEP).

The Local Plan Inspector’s conclusions were both preliminary, and related to that point in time. Specifically, the Inspector pointed to circumstances where a 5% buffer should not be applied:

- “If delivery continues to be below that which is required, future decision makers may take a different view”;
- “the Council would be in a more robust position going forward if the plan creates a 5 year supply with more than a 5% buffer”.

Subsequently, Inspectors reaching decisions in respect of housing land supply in West Oxfordshire have opted to employ a 5% buffer.

Equally decisions have built on the WOLP Inspector’s conclusions by cross referring to the “tipping point implied in the Inspectors report” (when the adoption of a 20% buffer becomes appropriate).

With the publication of the Housing Land Supply Position Statement in October 2016 matters have now
progressed further. The data profile has moved on six months and been confirmed. The completion of just 246 dwellings in 2015/16 represents another year of very substantial under delivery - since the Inspectors initial conclusions. Moreover in the Main Modifications a new housing trajectory is proposed. Still no more than 515 dwellings are anticipated by the Council in the present year (2016-17) (NEF/App 12). The Council on its own figures therefore anticipates at least another year of under delivery.

In the light of this most recent evidence, and the sheer scale of the shortfall in delivery in the Local Plan period it would seem appropriate to reconsider the need to adopt a 20% buffer for the assessment of housing land supply and the plan period. By so doing, a robust approach can be adopted which will increase the options and choice for housing land to address the substantial under-delivery, and to reduce the risk of further shortfalls in delivery in the future. As it stands the Plan makes no provision for resilience.

Housing Supply

In its Housing Land Supply Position Statement (October 2016) the Council has comprehensively updated its estimate of the sites and other sources of supply that it considers will contribute towards meeting the need for housing in the five year period from 1 April 2016.

This responds to the expectation in Planning Practice Guidance that "Local Planning Authorities will need to provide robust, up to date evidence to support the deliverability of sites, ensuring that their judgements on deliverability are clearly and transparently set out").

In presenting updated information, the Council has taken the opportunity to reorganise its categorisation of its sources of supply. In so doing it is worth noting at the outset that the updating of the Council’s position has resulted in a limited increase in the Council’s estimate of available supply only. Hitherto the Council suggested that some 4,067 dwellings could be completed in a five-year period from 1 April 2015. The Council’s estimate has risen to 4,514 only, in setting out updated evidence to a 1st April 2016 base date.

At the same time - as outlined above - the Council has accepted a significant increase in its estimate of OAN and there has been a very substantial rise in the already considerable backlog or housing shortfall in the plan period.

Existing Commitments

In Appendix 1 of the Housing Land Supply Position Statement, the Council includes a schedule of 43 sites, all bar two of which are expected to deliver at least 10 dwellings in the period 1 April 2016 to 31 March 2021. Collectively, the Council expects some 2,740 dwellings to be delivered on these sites in that five-year period. A number of these sites I have reviewed in my evidence to date. Others are advanced by the Council for the first time.

For a variety of reasons that the Council continues to considerably overstate the likely completions in this category.

First, now relies on a number of sites that have been granted planning permission at a point beyond the base date for the assessment (1st April 2016). Specifically, such sites include a number permitted on appeal, and a few permitted by the authority, well beyond the base date of the five-year supply assessment, for instance:
One of the major concerns of adding sites “post hoc”, is that this results in a comparison between the claimed supply and the requirement that is a comparison of apples and pears. What the Council proposes is a comparison of the supply in October 2016 with the requirement on 1 April 2016. The Council’s comparison fails to take account of what will inevitably be a further increase in the backlog/shortfall between April and October 2016 as completions continue to lag substantially behind the requirement. This applied also to the small site commitments 94 of which were granted after 1 April 2016.

Second, a number of sites relate specifically to C2 uses - in the form of care homes and extra care. These include Sites 2 and 3 - Coral Springs, Witney (155 units), Site 22 - Penshurst School, Chipping Norton (93 units) and Site 32 - Freeland House (40 units)

Third, there are specific concerns regarding a number of sites. For instance while the Council has downplayed considerably its expectations of North Curbridge (West Witney) and while the Council’s Housing Land Supply Position Statement (October 2016), indicates that a full application for infrastructure has just been submitted and some pre reserved matters application activity has taken place, the position fundamentally remains the same - no permission has yet been issued with a section 106 agreement still to be signed. The slippage documented at the previous session of the Examination continues and extends. There is no certainty at the end of the day that it will be signed and completed, or when. As delay is built on delay, we are already six months into the five-year period from 1 April 2016. Even if the outline consent were to be issued now (and there is no evidence to suggest that it will be), infrastructure details have only just been submitted and there will be significant lead in time before commencement could begin on site. We consider that the Council’s estimate of 350 completions is highly optimistic.

Very similar circumstances prevail in relation to the land to the land east of Carterton 300 dwellings. A resolution to grant permission was obtained but this is now two years ago now. The Housing Land Position Statement October 2016 provides no significant update in relation to progress on the site. No further details appear to have been lodged. No evidence is provided of activity in moving the site forward. Reference to the site being in single ownership is made with the implied suggestion that this provides more certainty as to delivery. In reality, the site is controlled by a single developer - Bloor Homes - and the expectations of some 300 completions delivered on the site by 31 March 2021 - even if the section 106 were signed now are highly ambitious.

Draft Local Plan Allocations

The Council’s latest evidence of supply continues to rely substantially on emerging Local Plan sites to deliver a substantial proportion of the required completions in the five years from 1 April 2016. In total some 1,035 dwellings are anticipated on 11 different sites comprising 23% of the Councils estimate total five year supply of 4,514 dwellings.

This is similar in scale to the 1,000 dwellings anticipated in the Council’s previous Housing Land Supply:

-- Burford Road (Witney) (150 dwellings) - granted on appeal on 24 August 2016;

-- Land south of A4095 (Long Hanborough) (169 dwellings) - granted on appeal July 2016;

-- Eynsham Nursery (77 dwellings) - approved on appeal August 2016;

-- Land south of High Street (Milton under Wychwood) (62 dwellings) - approved on appeal July 2016.

| Position (CD6.2). However, the composition of that supply has changed. Rather than some 1000 dwellings as previously assumed on four strategic sites - east of Chipping Norton, north of Witney, REEMA Central and east of Witney - the Council has now recognised that no more than 281 dwellings might be anticipated on these four sites (of which 200 are anticipated on the land to the east of Chipping Norton SDA and 81 on REEMA north and central).

The vulnerability of the delivery assumptions in respect of land east of Chipping Norton was addressed in the first part of the examination. The Council's latest Housing Land Supply Statement (October 2016) recognises that this is a "large strategic site with potentially large lead in time" (page 75). The hope canvassed by the Authority is that some parcels e.g. the Pillars and the former Parker Knowle site might be capable of early release and had been subject to pre-application approaches.

However, no application was indicated in the October 2016 Position Statement and in any event the capacity of any such applications remains far from clear. It would seem most unlikely to amount to the 200 dwellings that the Council anticipates on the site in the five-year period (now 4.25 years away).

In the suggested Main Modifications to the Local Plan, officers are suggesting to the Council that the SDA east of Chipping Norton is substantially recast. It is to increase in size from 600 dwellings to 1400 dwellings and to embrace land now to the north and the south of the London Road. This will have significant new implications for the delivery of housing within the SDA. In particular, the implementation of the SDA now (it did not before) requires a new "eastern link road connecting the Banbury Road to the A4026/A361 via the London Road". The ability to deliver that essential infrastructure depends on land ownership issues ("the proposed eastern link road is likely to need to be routed across land in the ownership of the Town Council much of which is in use as allotments as well as areas of community woodland") with delivery and/or the planning of the delivery of that infrastructure likely to impact significantly on the ability to commence any development on the site;

In all such circumstances, and in the absence of any clear evidence to the contrary, the prospect of resolving the substantial range of issues prior to the commencement of any development on site in order to allow 200 dwellings to be on site in 4.25 years’ time seems remote.

With the exception of Site 48 (REEMA) all the remaining sites where the Council now anticipates housing completions by 2021 are sites that have been newly identified in the suggested Main Modifications.

In addition to evidence of suitability, it is necessary for the Council to demonstrate that the site is deliverable and that the new homes anticipated to be completed within five years is achievable. No evidence is presented within the Housing Land Supply Position Statement October 2016 that this is the case. Generally, and simply, it is suggested that the location is highly desirable and that there is evidence of developer interest. The submission of an application would be a demonstration of potential achievability and availability in a five year period yet in many cases that does not exist.

We are already 6 months into the five-year period. In the absence of a planning application now, availability can’t readily be established. Further, in the absence of an application now, it is difficult to imagine that there is any certainty that significant completions might be achieved in the remainder of the five-year period.

Summary and Conclusions in respect of Housing Land Supply

Drawing together the conclusions in respect of housing land supply and delivery in the Local Plan it is

<td>The Council’s overall windfall allowance for the remaining plan period is 1,380 dwellings. Only 30 windfalls are assumed for the first five year period for 2016-2021 to avoid double-counting of existing windfall permissions. Thereafter, the Council assumes 125 windfalls a year. The Council assumes, based on past-trends, the windfalls will come forward in the various sub-areas. Our main reservation is whether the ‘general principles’ articulated in Policy OS2 (MAIN 16) and Policy H2 will be conducive to enabling these windfalls to come forward in these sub-areas. In combination, these two policies impose a great many restrictions on residential development such that it may be very difficult for small and medium sized residential developments to come forward. Combined with the very low number of non-strategic allocations (paragraph 5.30a) we have some reservations about the likelihood of windfalls coming forward at the number expected. This could make it difficult for the Council to sustain delivery.</td>

<td>Five-year housing land supply We note that the number of completions has been low – 1,464. This means that there is an undersupply accrued since the base date of the Plan in 2011 of 1,836 homes. The Council has stated that it intends to deal with the backlog through the Liverpool approach. The HBF’s preference is that the shortfall should be addressed as quickly as possible, i.e. in the next five years by applying the Sedgefield approach so that the Council is not faced with an insuperable residual requirement in the last few years. We recognise that this could represent a challenge for the Council but equally we are concerned that one quarter of the life of the plan period has already elapsed so that the Council has 15 years left to deliver the overall requirement. On the plus side, West Oxfordshire is a popular housing market. We consider that delivery could be greatly assisted by increasing the number of non-strategic allocations in the villages, which currently number only 15 (paragraph 5.30a).</td>

</table>
housing need and affordability.

The Inspector has endorsed the need to follow the Sedgefield approach, advising the Council of the need to have particular regard to National Guidance on the matter, as the 'Liverpool Method' is not mentioned (IN 016, para. 2.15). Moreover, he made it clear that the 5% buffer should be applied to the shortfall in delivery during the plan period to date. He also considered it would be prudent for the Plan to create a five year supply with a buffer in excess of 5% to allow for any unexpected delays on some sites, and which would therefore result in a more robust position for the Council going forward (para. 2.14).

It is therefore essential that the backlog is front-loaded and cleared within the first five years. The only alternative provided for in Government guidance is to work with neighbouring authorities to resolve it under the Duty to Cooperate. There is no evidence that the Council has attempted to do this.

Even if the Council is correct that the consequence of applying the Sedgefield Approach would be the release of sites considered to be unsuitable for new housing, boosting significantly housing delivery is an imperative to which very great weight is properly given in the planning process, and is likely to override the objections to the allocation of less preferred sites that can make an early contribution to increasing the delivery trajectory. In considering which sites to allocate, the elimination of the back-log in the first five years should therefore feature prominently in the allocation strategy. Since the Council has chosen not to follow this approach, it ensues that its allocation strategy is flawed and should be revisited. In particular, it is likely to require allocation of smaller sites in areas which are currently a lower focus for growth. Since, having regard to the table of Adjusted Supply set out above, the Council is likely to be required to make significant additional provision for housing land, it will afford the opportunity to distribute more growth to smaller settlements and sites in the northern part of the plan area, that have the potential to deliver housing at an early stage in the five year period following adoption of the Plan.

There is no justification for not including the needs arising from Oxford City Council in the five year supply. They are part of the overall requirement for the plan period, and their exclusion from the five year supply currently exacerbates the back-loading of the delivery trajectory and the consequential enhanced risks of undershooting the requirement.

There are again parallels between the current circumstances and those considered at the recent Plan Examination in North Somerset. In North Somerset the Council similarly argued that the 50% uplift in the housing requirement mid-way through the Plan period meant that the back-log should be spread over the plan period, not least having regard to the necessary elevation of delivery rates to unprecedented levels. The Examination Inspector held as follows:

Regarding the Sedgefield approach, the plan period is already at its halfway point and the Weston Villages are shortly expected to make a significant contribution to housing supply. It is important that the under-supply that has arisen as a result of the increase in the housing requirement through modified Policy CS13 is remedied as soon as practicable. The Sedgefield methodology, which corrects the backlog within the first 5 years, is therefore the appropriate approach.

Given the level of commitments that already exist, there would seem to be no reason why, subject to an appropriate allocation strategy, not least in terms of the residual requirement, the delivery trajectory cannot be escalated to respond to the backlog within the first five years, and without compromising the distribution strategy 'to steer a significant proportion of future development to the Witney, Carterton and Chipping Norton Sub-Areas'.
5 Year Supply

Main Modification 29 (paragraphs 5.34b) indicates that West Oxfordshire will apply the Liverpool method in calculating the 5-year housing land supply which seeks to address the under-supply over the plan period rather than the immediate 5-year period. IN016 (The Inspectors Preliminary Findings - Part 2 para 2.15) stated that WODC need to have regard for National Guidance as the Liverpool method is not mentioned. Furthermore, the Houses of Parliament Briefing Paper Number 03741 dated 25 May 2016 Planning for Housing states that Local Planning Authorities should aim to deal with any undersupply within the first 5 years of the plan period, thus the Sedgefield approach should be adopted. This is especially important given the severe shortfall of 1,836 homes and the serious affordability concerns in the district (house prices 10 times lowest incomes).

The Sedgefield approach would facilitate the backlog of supply to be addressed within the first five years of the plan rather than stretching the unmet need over the plan period. Planning Practice Guidance (PPG)5 states that Local Authorities should aim to deal with any undersupply within the first five years of the plan where possible. The Inspector as detailed in IN016 comments that WODC do need to have regard for National Policy on this matter, and that the Liverpool method is not mentioned, concluding that Sedgefield is preferred. As outlined above, due to poor delivery against the district’s revised housing target, there should be a reconsideration of whether the 20% buffer now applies. We have not seen any evidence that WODC has truly embraced the need to address housing delivery - even as recently as July 2016 WODC were seeking to rely on PBA’s housing update as a means of justifying a lower OAN. Over the last 13 months, since the adjournment of the EIP, Barton Willmore (and our clients) have never been asked: “how can Carterton help address housing needs in West Oxfordshire?” And this, despite the fact that David Wilson Homes (as part of the wider Barratt Group) delivered 17,319 new homes in the last 12 months (Annual Report & Accounts 2016). It also seems that the opportunity presented by the Carterton Town Master Plan has not been carried forward positively by WODC.

Existing commitments have been ‘complemented’ by a number of allocations locally, but ‘continual supply’ is questionable throughout the plan period, particularly between 2016-2021. It is still considered that WODC should adopt the Sedgefield method and address housing need in the short term and seek to allocate sites which can deliver in the short term.

The Council attempts to justify its approach in Paragraph 5.34c with reference to the capability of the development industry, including past performance within the district, and in terms of capacity in terms of housing land availability. However, this disregards the significant opportunity for additional development at Carterton and also reflects the fact that the Council no longer has an up to date Local Plan and has had difficulty in delivering major development sites in a timely manner. The Council’s rejection of allocating additional deliverable sites in unconstrained locations such as Carterton means that the authority is artificially constraining the supply and therefore limited choice and competition in the market, contrary to paragraph 47 of the NPPF. The way to address this will be to front load the draft plan with a range of development sites which can deliver in the first half of the plan period and in particular within the 5-year supply period. Additionally, whilst paragraph 5.34c is dismissive
of the development industry’s capability to deliver at over 1,000 dwellings annually, the current strategy of the authority expects this to occur between 2021 and 2031 (based upon 660 SHMA annual need + 275 dwellings annually for Oxford unmet need + a proportion of continuing unmet district need through application of Liverpool method). Consequently, there is no justification for delaying delivery of housing in West Oxfordshire post 2021 and the authority should consider all opportunities for early delivery, such as North Carterton, where the Town Master Plan started the assessment exercise some years ago.

Furthermore, and as stated above, the Council’s Housing Land Supply Position Statement October 2016 simply indicates that Eynsham will ‘kick in’ from 2021 onwards as ‘agreed’ through the joint work at the Growth Board: such a view is not supported by the statement above from the September 2016 OGB report which emphasises the sovereign nature of Local Plans in identifying land to address unmet need. Rather than the response to delivering new homes to meet unmet needs ‘kicking in’ in 2021, this should be seen as ‘kicking the can’ down the road. Unmet need, is, by definition, unmet. This is in marked contrast to the Inspector’s preliminary findings that it was his initial view that unmet Oxford City need would need to be taken into account in calculating the 5-year land supply (Paragraph 7.6 (IN015))

It is counter intuitive for the Council to hold the view that the present day need for housing should be addressed in 5 years’ time or beyond. The Inspector’s Preliminary Findings (IN015) confirmed that if the Council failed to consider the implications of unmet housing needs the plan would be out of date before it can be adopted. The inescapable conclusion to this is that unmet housing needs should begin to be addressed at the time of adoption of this plan: arguably now. Were that not the case, logically an early review which gives time to consider and then respond to unmet needs would be appropriate, which it is evidently not. The draft plan is not positively prepared nor consistent with national policy and will not be effective as a consequence in meeting development needs.

| MM752 | Bloombridge | Bloombridge | Mr Cutler | 1909 | 5 Year Supply | Main Modification 29 (paragraphs 5.34b) indicates that West Oxfordshire will apply the Liverpool method in calculating the 5-year housing land supply which seeks to address the under-supply over the plan period rather than the immediate 5-year period. IN016 (The Inspectors Preliminary Findings - Part 2 para 2.15) stated that WODC need to have regard for National Guidance as the Liverpool method is not mentioned. Furthermore, the Houses of Parliament Briefing Paper Number 03741 dated 25 May 2016 Planning for Housing states that Local Planning Authorities should aim to deal with any undersupply within the first 5 years of the plan period, thus the Sedgefield approach should be adopted. This is especially important given the severe shortfall of 1,836 homes and the serious affordability concerns in the district (house prices 10 times lowest incomes). The Sedgefield approach would facilitate the backlog of supply to be addressed within the first five years of the plan rather than stretching the unmet need over the plan period. Planning Practice Guidance (PPG5) states that Local Authorities should aim to deal with any undersupply within the first five years of the plan where possible. The Inspector as detailed in IN016 comments that WODC do need to have regard for National Policy on this matter, and that the Liverpool method is not mentioned, concluding that Sedgefield is preferred. As outlined above, due to poor delivery against the district’s revised housing target, there should be a reconsideration of whether the 20% buffer now applies. We have not seen any evidence that WODC has truly embraced the need to address housing delivery - even as recently as July 2016 WODC were seeking to rely on PBA’s housing update as a means of justifying a lower OAN. Over the last 13 months, since the adjournment of the EIP, Barton Willmore (and our clients) have never been asked: “how can Carterton help address housing needs in West |
Oxfordshire?" And this, despite the fact that David Wilson Homes (as part of the wider Barratt Group) delivered 17,319 new homes in the last 12 months (Annual Report & Accounts 2016). It also seems that the opportunity presented by the Carterton Town Master Plan has not been carried forward positively by WODC.

Existing commitments have been ‘complemented’ by a number of allocations locally, but ‘continual supply’ is questionable throughout the plan period, particularly between 2016-2021. It is still considered that WODC should adopt the Sedgefield method and address housing need in the short term and seek to allocate sites which can deliver in the short term.

The Council attempts to justify its approach in Paragraph 5.34c with reference to the capability of the development industry, including past performance within the district, and in terms of capacity in terms of housing land availability. However, this disregards the significant opportunity for additional development at Carterton and also reflects the fact that the Council no longer has an up to date Local Plan and has had difficulty in delivering major development sites in a timely manner. The Council’s rejection of allocating additional deliverable sites in unconstrained locations such as Carterton means that the authority is artificially constraining the supply and therefore limited choice and competition in the market, contrary to paragraph 47 of the NPPF. The way to address this will be to front load the draft plan with a range of development sites which can deliver in the first half of the plan period and in particular within the 5-year supply period. Additionally, whilst paragraph 5.34c is dismissive of the development industry’s capability to deliver at over 1,000 dwellings annually, the current strategy of the authority expects this to occur between 2021 and 2031 (based upon 660 SHMA annual need + 275 dwellings annually for Oxford un-met need + a proportion of continuing unmet district need through application of Liverpool method). Consequently, there is no justification for delaying delivery of housing is West Oxfordshire post 2021 and the authority should consider all opportunities for early delivery, such as North Carterton, where the Town Master Plan started the assessment exercise some years ago.

Furthermore, and as stated above, the Council’s Housing Land Supply Position Statement October 2016 simply indicates that Eynsham will ‘kick in’ from 2021 onwards as ‘agreed’ through the joint work at the Growth Board: such a view is not supported by the statement above from the September 2016 GGB report which emphasises the sovereign nature of Local Plans in identifying land to address unmet need. Rather than the response to delivering new homes to meet unmet needs ‘kicking in’ in 2021, this should be seen as ‘kicking the can’ down the road. Unmet need, is, by definition, unmet. This is in marked contrast to the Inspector’s preliminary findings that it was his initial view that unmet Oxford City need would need to be taken into account in calculating the 5-year land supply (Paragraph 7.6 (IN015))

It is counter intuitive for the Council to hold the view that the present day need for housing should be addressed in 5 years’ time or beyond. The Inspector’s Preliminary Findings (IN015) confirmed that if the Council failed to consider the implications of unmet housing needs the plan would be out of date before it can be adopted. The inescapable conclusion to this is that unmet housing needs should begin to be addressed at the time of adoption of this plan: arguably now. Were that not the case, logically an early review which gives time to consider and then respond to unmet needs would be appropriate, which it is evidently not. The draft plan is not positively prepared nor consistent with national policy and will not be effective as a consequence in meeting development needs.

MM756  Cantay Estates  Cantay Estates  -  Cantay  1951  > SECTION 5 - PROVIDING  MAIN29: The proposed modifications seek to rely upon windfall development to fulfill the housing requirement at a rate of 125 homes per year. Although this policy is informed by previous delivery rates the

<td>NEW HOMES &gt; MAIN 29</td>
<td>Estates published SHELAA suggests insufficient developable sites exist to fulfill that rate of development throughout the plan period. As the Council’s own SHELAA suggests insufficient sites are available to fulfill the suggested windfall rate either the evidence, or the proposed strategy must be unsound. Historic windfall delivery rates have been achieved in the district’s larger settlements including those designated as service centres. The proposed downgrading of Long Hanborough reduces the likelihood of homes being delivered in the village further reducing the chances of windfall housing rates being maintained. Although an alternative service centre is proposed to be provided this is for delivery within the plan period and therefore will not give rise to any windfalls.</td>

<td>-</td>
<td>2095</td>
<td>&gt; SECTION 5 - PROVIDING NEW HOMES &gt; MAIN 29</td>
<td>Stormport has the following observations to make in respect of maintaining a 5-year housing land supply. In terms of maintaining a supply, this is done on the basis of a District target, against which supply is assessed. In calculating that target, there is a need to ensure that the proposals not only meet the needs of the District, but also those of neighbouring Districts under the Duty to Co-operate (in this case Oxford City). Paragraph 5.34d makes it clear that the housing target for Eynsham is to be addressed differently, given that the bulk of this is allocated for meeting Oxford’s unmet needs. This ring fencing of housing requirements could lead to a situation where there is a delay in delivery of the new Garden Village and neighbouring Strategic Allocation, which means that the Council is unable to demonstrate a 5-year supply. This still means that the Council is failing to deliver housing as per its target and could lead to additional pressure for the further release of development sites.</td>

<td>2101</td>
<td>&gt; SECTION 5 - PROVIDING NEW HOMES &gt; MAIN 29</td>
<td>Savills has been instructed by Spitfire Homes to submit written representations to the West Oxfordshire Local Plan 2031 Proposed Main Modifications document. These representations are made in respect of land at Jubilee Lane, Milton under Wychwood. The site off Jubilee Lane, Milton under Wychwood comprises greenfield land to the south of existing built development. The site is well located to the village edge and represents a logical extension to the village providing an opportunity to improve the character of the edge of the settlement. Planning history for the site is limited. Spitfire Homes supports the Council’s position that windfall development will contribute to the supply of housing within the District. Furthermore, the identification of a windfall target for each sub-area is generally supported. Smaller windfall sites would have a shorter ‘lead-in’ time to development in comparison to strategic site delivery and the Council’s recognition that 125 dwellings per annum will come forward through Windfall Sites is supported.</td>
</tr>
</tbody>
</table>

With regards to the text in relation to Main Service Centres, Rural Service Centres and Villages within Policy H2 we would comment that the policy has the potential to be interpreted stringently given its wording. Furthermore, it refers to a criteria which is not within the policy. We would suggest that this is amended as follows below to reflect the potential for suitable, achievable and deliverable sites to come forward within the Plan period to assist in meeting the challenging delivery target of 15,950 homes to 2031.

"On undeveloped land within or adjoining the built-up area where the proposed development is necessary to meet identified housing needs, is suitable, achievable and deliverable, and is consistent policies in this plan in particular Policy OS2.”

<td>2152</td>
<td>&gt; SECTION 5 - PROVIDING NEW HOMES &gt; MAIN 29</td>
<td>Strong objections are raised in respect of Paragraph 5.34B of the Plan and the intention to apply the Liverpool approach to dealing with backlog the of 1,836 homes. Applying the Liverpool methodology would not comply with the PPG which makes clear that dealing with backlog in the next five years is the preferred approach. Furthermore, delaying dealing with the backlog would be to reward failure, and would not be consistent with the Framework which requires boosting significantly the supply of housing now and not at some point in the future. The Council have chosen a strategy to deliver significant housing numbers through a range of Sustainable Urban Extensions. It is inevitable that these will not deliver quickly, through a combination of protracted planning process and the need to deliver infrastructure before housing. However, it is the Council that have determined the strategy and they could have elected to focus on an alternative strategy which delivered a greater number of smaller housing sites across key sustainable settlements in the District which would be an approach better able to deal with the significant backlog in a more timely manner and avoid the need to commit to the Liverpool methodology. It can be seen therefore that the Council have chosen a development strategy; the consequence is an inability to deal with backlog properly; and therefore has used the strategy decisions to argue against dealing with the backlog quickly at odds with the PPG and Framework. This is a significant issue since there are already considerable quantities of people on housing waiting lists and pent up demand in terms of seeking a home in the District, issues which will be perpetuated by the Councils chosen housing distribution strategy and consequential and inevitable commitment to the Liverpool methodology as a means to validate the approach. Further strong objections are lodged in respect of Paragraph 5.34D and the Councils desire to disaggregate housing land calculations for the purposes of five year housing land supply. There is no legitimate reason why this approach should be taken, it can draw no justification from the PPG or Framework, and is evidence of the Council seeking to avoid a commitment to delivery housing as quickly as possible.</td>

<td></td>
<td></td>
<td>We have set out our comments in respect of the Council’s proposed housing target in relation to main modification 24 and as such do not repeat these here. Sources of Supply The supporting text to Policy H2 sets out the various sources through which the housing requirement for West Oxfordshire will be met (excluding unmet need from Oxford City), as summarised in the table on page 6 of the attachment.</td>
</tr>
</tbody>
</table>
Clearly the Council are already failing to plan for sufficient new homes to meet the housing requirement for West Oxfordshire of 13,200 over the Plan period.

We do note that currently no allowance is made for additional allocations which could be brought forward through Neighbourhood Plans of which there are currently five in preparation in the District, as well as the made Chipping Norton Neighbourhood Plan, which does not seek to allocate any sites for development. Whilst additional development could be forthcoming through allocations in Neighbourhood Plans there is no guarantee that this will occur.

The NPPF makes clear that Local Plans “should meet objectively assessed needs, with sufficient flexibility to adapt to rapid change.” As currently drafted the Local Plan is failing not only to make provision for its own acknowledged objectively assessed need but allows for no flexibility to ensure the housing target is achieved. Concern is therefore raised that the Plan as currently drafted is not positively prepared, justified, effective or consistent with National Policy. There should be no delays to deliverability on any allocated site, in the context of a current 5 year housing land supply shortfall, and therefore reference to their delivery post-2021 should be deleted. Further consideration is likely to be required as to how this requirement can be met, including through additional allocations.

Five Year Housing Land Supply

The revised Policy as currently drafted states: “With regard to 5-year housing land supply the Council will apply the residual (Liverpool) approach with any under-supply (backlog) of housing to be delivered over the remaining plan period to 2031. The additional provision being made for Oxford City’s needs will be incorporated into housing delivery assumptions from 2021 onwards.”

The NPPG is clear in its guidance to LPA’s (D 3-035-20140306) that they should aim to deal with any undersupply within the first 5 years of the plan period where possible. The NPPG makes clear that in circumstances where the LPA is unable to meet its undersupply in the first 5 years then it will need to work with neighbouring authorities under the ‘Duty to Cooperate.’ This matter was specifically raised by the Inspector in his Initial Findings: Part 2.

Proposed paragraph 5.34c seeks to justify the Council’s proposed approach by advising that:

“To provide a 5-year supply under the Sedgefield method, in excess of 1,000 homes per year would need to be built consistently over the next 5-years, well in excess of what has been achieved in West Oxfordshire in the past, even during several housing booms. Insufficient capacity has been identified through this Local Plan and the supporting assessment of housing land availability to achieve a 5-year supply under the Sedgefield approach and it could only be achieved by releasing a large number of sites that have been assessed by the Council as being unsuitable for new housing. The Council does not consider this to be an appropriate way forward and that addressing the shortfall in a more measured way over the remaining plan period using the Liverpool approach is considered to be entirely justified.”

As is clear from the extract above the NPPG clearly advocates the Sedgefield approach as the most suitable approach. This is borne out in numerous appeal decisions and case law. Where the Sedgefield method cannot be achieved then the LPA must seek to liaise with neighbouring authorities under the Duty to Cooperate in order to redistribute this requirement. Although the Council have sought to justify its decision to seek to pursue the Liverpool method, no indication is provided as to whether the approach advocated in the NPPG of seeking the assistance of neighbouring authorities to meet this shortfall in the short term has been pursued.
Given the discussions which have taken place in respect of the Oxford City apportionment, and the fact that full agreement has yet to be reached on this matter, it would appear unlikely in any event that such assistance would be forthcoming.

Given our comments above it is clear that the Council will need to propose additional allocations in order to meet the housing requirement. Given the shorter lead in times associated with small to medium size allocations it is likely that allocations of this scale would allow the Council to also address its backlog using the Sedgefield approach. Consideration should also be given to whether elements of the larger strategic sites could form an early phase of development without compromising the comprehensive development of the wider site.

Whilst the Council seeks to justify the use of the Liverpool method by referring back to past delivery rates, it must be recognised that these were set within a significantly different planning context when there was not the requirement as set out within the NPPF to meet the full objectively assessed need. The historic low levels of delivery are a reason to boost the supply of housing as soon as possible because the need has already arisen and has not yet been met, rather than being a reason to suppress the rate at which housing should come forward.

In light of the above, in order to ensure its soundness the Plan should make provision to meet the backlog in housing need using the Sedgefield method with the backlog delivered in the first five year period rather than being spread across the remaining Plan period (Liverpool) as currently proposed.

As currently drafted it is unclear whether the Council are proposing that post-2021 the supply of those allocations identified to meet the needs of Oxford City only would be accounted for, and that the additional 2,750 dwellings would not be added to the requirement side of the five year housing land supply equation. Plainly such an approach would be unsound and the Inspector in his preliminary findings advised that the apportionment figure should be counted within the five year housing land supply. As such we would recommend that the policy text is re-worded to clarify this position.

Other Matters

The previously proposed criteria in point 3 of the policy are proposed to be deleted and instead are addressed in Policy OS2 as discussed above. With regards to the Main Service Centres etc., the Policy wording in the third bullet continues to state development will be allowed where “it is consistent with the criteria in 3) below”. For clarity this wording therefore requires amendment.
the plan period where possible. Where this cannot be met in the first 5 years, local planning authorities will need to work with neighbouring authorities under the 'Duty to Cooperate'.

There is no compelling evidence to support or justify a departure from the clear aim of the PPG which is for the backlog to be resolved within the first 5 years of the plan period. Other local planning authorities within Oxfordshire (Cherwell District Council and Vale of White Horse District Council) have objectively assessed housing needs in excess of 1,000 dwellings per year, therefore why should this be considered not achievable in West Oxfordshire. There is no evidence presented to demonstrate why the development industry could not achieve these build rates. It is pertinent to note the reasons why there is a backlog in the supply of housing within the district.

This is predominantly due to the Council's inability to accept, and appropriately plan for, the full objectively assessed housing need for the district. The housing need is current and is exacerbated due to the severity of the backlog in delivery. This is not the time to suppress housing delivery by utilising the Liverpool method, on the contrary this is the time to boost housing supply to resolve the backlog as soon as possible, as advised by the PPG. The NPPF clearly indicates at paragraph 47 the need for local planning authorities to 'boost significantly the supply of housing'.

Five-Year Housing Land Supply – Oxford's unmet housing need

The Housing Land Supply Position Statement, states at paragraph 4.4 that: ‘it has been agreed through joint work carried out on behalf of the Oxfordshire Growth Board that this additional requirement [Oxford's unmet housing need] will only 'kick-in' from 2021 onwards in order to allow Local Plan process to determine the most appropriate site options as well as recognising the lead-in times for most large strategic sites’

There is no clear or justified reasoning as to why the agreed unmet need is not being planned for within the first 5 years of the plan period. Oxford's unmet housing need is acute and should be addressed at the earliest opportunity in the first 5-years of the plan period. It should not be left for a further backlog to accumulate. In the recent Local Plan examinations of Cherwell District Council and more recently the Vale of White Horse District Council, Oxford’s unmet need is to be addressed early within the first 5-years of the plan period. In the case of the more recent Vale of White Horse Local Plan examination, the Inspector requested main modifications to ensure Oxford’s unmet housing need is calculated within the overall housing requirement after a 2-year period from adoption of the Local Plan.

My client considers Oxford’s unmet housing need should be accommodated within the first 5-years of the plan period, or at the very latest 2-years from adoption of the WOLP, in conformity with other local authorities within the same housing market area.

The WOLP is not positively prepared and consistent with national planning policy insofar as it does not address Oxford’s unmet housing need within the first 5-years of the plan period. When taking into account Oxford’s unmet housing need within the 5-year housing land supply calculations, it is considered the Council are unable to demonstrate a 5-year housing land supply even based on the Council’s preferred Liverpool method. When utilising the Sedgefield method the Council are significantly short of a 5-year housing land supply of deliverable sites. The Council’s inability to demonstrate a 5-year housing land supply is contrary to paragraph 47 of the NPPF.

### Land at School Lane, Minster Lovell

**1.0 LAND AT SCHOOL LANE, MINSTER LOVELL**

1. Lagan Homes object to Table 4.1 (Main Modification, MM, 14) Policies H1 (MM24), H2 (MM29 and MM30) and WIT4 (MM115) on the basis that the modified plan has not identified sufficient housing land to provide for a 5 year supply of housing and that Land at School Lane should be allocated for around 25 homes to help address this deficiency.

#### Site and Surrounding Area

1.2 The site lies adjacent to the village of Minster Lovell and the B4047 Burford Road some 3 miles (5km) west of Witney and 4 miles (6km) north of Carterton. There is an off-road cycle path to Witney (within reasonable cycling distance) and an hourly bus service to Witney. The village also has a number of amenities including a small shopping parade, Post Office, Primary School, Public House and Butcher. There are also several businesses along the Brize Norton Road.

1.3 The site is a single 2.5ha open grassland field immediately north of the Burford Road and west of School Lane. It is part of the north facing slope of the Windrush Valley. A site plan is attached at Appendix 1.

1.4 The site lies some 1m below the Burford Road and is screened by a strong hedgerow along the road frontage such that the open nature of the site is not readily perceptible from this frontage.

1.5 On the southern side of Burford Road is some modern development which is also mostly set back from the road frontage. The White Hart Public House (Listed Grade II) along with the War Memorial and Methodist Church frame the Brize Norton Road junction opposite the site. There is a farm access in the south western corner and a strong hedgerow bounds to the west along with a Thames Water pumping station.

1.6 School Lane leads to Little Minster. College Farm within Little Minster lies at the southern end of the site and there is a scattering of modern and historic buildings along School Land and School Hill.

1.7 School Lane and College Farm fall within a Conservation Area. A Conservation Area Appraisal has been prepared by the Council. The site is not identified in the appraisal as where there is a notable sensitive view into or out of the

<td></td>
<td></td>
<td></td>
<td>1.19 In Edgars opinion, there is a significant risk of delays in delivery on SDAs which will likely result in continuing housing supply deficits. There is a need to address deficiencies in the 5 year housing supply. Given the long lead in times of SDAs, addressing the current supply deficiencies is best achieved through allocating</td>
</tr>
</tbody>
</table>
1.20 Land at School Lane lies adjacent to Minster Lovell, close to amenities and public transport links. The village bus stops, public house and shops are located on the opposite site of the Burford Road to the site in very close proximity. The village school lies within 500m to the south. The site is also within cycling distance of the West Witney employment areas (2km) and Witney Town Centre (5km). In locational terms, it is sustainable. Indeed, the site lies closer to village amenities than the proposed allocation west of the village.

1.21 It is noted that Table 4.1 of the plan includes Minster Lovell as a village within the settlement hierarchy but this has been modified to (MM 14) to include reference to Minster Lovell 'south of the Burford Road'. Lagan Homes object to this modification.

1.22 In Edgars opinion, the development of Land at School Lane and north of the Burford Road can comply with Policy H2 in being adjacent to a village in the settlement hierarchy.

1.23 There is no reason why land at School Lane, north of the Burford Road, is in any way less sustainable in locational terms than other land adjoining the village. Indeed, land at School Lane is in closer proximity to many of the villages amenities, including the school, shops and public house than other land on the edge of the village.

Village character, AONB landscape and Conservation Area

1.24 Draft Policy OS2 Locating development in the right places states that villages are suitable for limited development which respects the village character and local distinctiveness and would help to maintain the vitality of these communities. Development should form a logical complement to the settlement pattern, protect landscape character and settlement identity.

1.25 The site does not appear to have been part of the historic Chartist settlement for which Minster Lovell is known. The site does lie within the Cotswolds AONB and adjacent to a Conservation Area.

1.26 The site is not identified in the Council’s Conservation Area appraisal as where there is a notable sensitive view into or out of the Conservation Area.

1.27 Views of the site are already filtered by vegetation and topography. The WOLA identifies that this area of the Windrush Valley can accommodate development within a strong landscape structure. Indeed, in views from across the valley, existing landscape features act as a screen to existing dwellings on the Burford Road.

1.28 The setting of the Conservation Area and AONB can be preserved and enhanced through a low density but high quality development within a strong and extensive landscape structure. Although the extent of the land is 2.5ha, only around 25 dwellings are proposed leaving significant scope for open space and landscaping.

1.29 In Edgars opinion, a development of this scale does not comprise ‘major’ development for the purposes of NPPF paragraph 116 and that a development within a strong landscape structure will not have a significant impact on the landscape and scenic beauty of the wider AONB.
1.30 A low density development within a strong landscape structure will also respects the settlement pattern and separate identities of Little Minster and Minster Lovell.

1.31 Although further work is being undertaken, Edgars consider that development can be achieved on the site which makes an important contribution to meeting housing land supply in a sustainable location, without significant impact on the settlement character, AONB or adjoining Conservation Area.

1.32 Further detailed technical information and development design work is likely to be available during the next stages of the WOLP 2031 Examination.

Developers want to build family housing, but that isn’t what West Oxfordshire needs. There is plenty of larger housing (which is generally under-occupied) in the existing stock. Overall, we consider that a total windfall allowance of 1,380 in clause 5.34a, is modest and could be increased. We suggest a review of recent permissions, which will be indicative of windfall potential. For example the Springfield Oval (Witney) application for 75 homes is recommended for approval and so will add 75 units to the supply and we believe that this is not counted. There have been a number of significant applications even since the Local Plan was redrafted- 40 here and 14 there and it all adds up. Most are recommended for approval. There are outstanding appeal results too, which may further increase the supply.

We do not consider that it is necessary to exclude any further windfall over the next five years to avoid double counting. The small developments upon which the windfall target relies are normally completed quickly after permission is granted and applications continue to come in. A two-year lag should be sufficient, leaving 13 years left in the Plan Period during which windfall opportunities can come forward, receive appropriate permission, and be completed: discounting permissions only in the final two years, accepting that delivery would be unlikely in that timeframe.

Stagecoach recognises that delivering the trajectory of housing completions implied by the Plan will present all stakeholders with challenges. Indeed, resource requirements within the development management function are likely to need considerable strengthening, to deal with the larger volume of work, on sites that by their very nature are greatly more complex to bring forward, and consequently much harder to implement propitiously.

It is also clearly the case that bringing forward the Strategic Development Areas, and in particular the largest-scale scheme at the Garden Village to meet Oxford’s unmet needs will unavoidably require a meaningful lead time to secure relevant consents, discharge conditions, work up detailed designs and then mobilise construction on-site, starting with large scale infrastructure. A four-year horizon from the point the Plan is likely to be adopted would represent a credible period to allow such a project to progress to the point of delivery.

Therefore, Stagecoach supports the Councils position that it would be more appropriate to set back delivery to meet Oxford’s OAN to later in the Plan period, starting in 2021, and applying the “Liverpool” methodology, rather than the “Sedgefield” methodology that seeks to make up any backlog within the first five years of the Plan.

There is also a significant backlog to addressing the endogenous OAN of about 660 dwellings per annum.
which the lack of issued major consents threatens to aggravate in the short term. This risks a situation where Paragraph 47-49 of NPPF remains applicable for the foreseeable future, in the absence of measures to apply a stepped trajectory that allows delivery of existing commitments and allocations to be brought forward progressively, and allow a suitably reasonable transition period to allow rates of delivery to ramp up between 2016 and 2021.

Such an approach to the trajectory also allows for a significant number of factors known to affect the delivery of the North of Witney SDA to be fully appraised and robust solutions formulated and tested. Stagecoach notes that the West End Link Road, which is a requirement for the allocation to come forward, will require third party funding, the scale of which itself depends in some measure upon any mitigations required to satisfy hydrological and environmental concerns. The draft Plan indicates that measures to attenuate surface water run-off also apparently require further definition. It is clear from the language elsewhere in the Plan that most of this site west of New Yatt Road, cannot be relied on to contribute to the trajectory until after 2021.

It is also likely that delivery of the Chipping Norton SDA will largely take place after 2021.

In the short term, without a suitably ambitious but realistic definition of the trajectory under the “Liverpool” methodology, the Authority risks becoming bogged down by “planning through Appeal”. In the clear absence of many alternative sites that can credibly take advantage of the opportunities for public transport in particular, this risks leading to an ad-hoc reactive approach to the location of housing delivery, where ever-more-remote sites are selected and brought forward, where public transport is either weak, or indeed entirely absent.

This is already a demonstrable trend within the District. Stagecoach sets out below, a list of the sites subject to recent planning applications within the District that benefit from little or nothing in the way of a credible public transport offer, and therefore cannot be realistically considered to be anything other than entirely car-dependent in practice. Many of these sites now benefit from resolution to grant, and some are now included as draft allocations within the Plan.

Attempting to meet a Sedgefield-based housing land supply trajectory therefore sets the District up to remain very prone to applications submitted outside the Plan-led system. Where a significant number of opportunities well served by sustainable modes to be available, this may not pose too serious a difficulty in terms of the consequential outcomes in the form of high levels of traffic growth. The table above shows that this is not the case in West Oxfordshire.

It is absolutely essential given the current transport challenges and levels of traffic congestion in the District, that the 5-year supply target is achievable to ensure development is directed to, and delivered in those locations where a good range of credible sustainable transport options already are, or can be provided. The alternative risks further seriously exacerbating an excessive level of car dependence, that disproportionately would contribute to traffic growth rates, aggravating already severe congestion across the District.

| MM388 | Ainscough Strategic Land | Ainscough Strategic Land | Ainscough Strategic Land | 866 | > SECTION 5 - PROVIDING NEW HOMES > MAIN 29 | Strategic Development Areas (MM27)

3.22 One of our gravest concern relating to the housing delivery strategy for the Local Plan is in relation to the high reliance on large strategic sites as listed in MM27. Whilst we do not object to the principle of the development locations per se, we do raise issues with the delivery that is expected from these sites over the plan period and in some cases, the physical capacity for them to deliver the targets suggested.

3.23 Indeed, the Council imply at paragraph 5.25 of the modified Local Plan that past completions have been low because of the lack of urgency from the development sector to bring strategic sites forward. The reality is strategic sites simply take time to properly plan and deliver, principally because their impacts are exponentially greater, they need thorough consideration, and the complexity of land ownerships and scale inevitably result in longer lead in times that those experienced with smaller, more moderate sites.

3.24 As set out in Table 3 below, SDAs are to provide 42.0%, 58.3% and 58.1% of the total number of homes required in the Witney, Chipping Norton and Eynsham-Woodstock sub-areas. This strategy needs to be considered with considerable caution. Should any of the SDA encounter delay to their delivery, these sub-areas and the district as a whole would not meet the housing requirement over the plan period. This is particularly pertinent in the case of Witney and Carterton where there are two very large commitments already which not listed in the table below (ATTACHED).

3.25 Table 4 (ATTACHED) identifies the five SDAs within the district and the number of homes they are expected to deliver over the plan period based on the Council’s trajectory.

3.26 Understandably, the overall housing requirement from each of the five SDAs will only be achieved at the very end of the plan period. Thus, should the delivery of one or more SDA slip by just one or two years the plan will fail to meet its housing requirement over the plan period. This is not implausible given the complexity of delivering these SDAs, which we address in more detail in Section 4.

3.27 In order to explore delivery rates from large scale site such as the SDA’s identified in the Local Plan, it is important to be aware of the following three reports / assessment, which are all based a large amount of empirical data:
<table>
<thead>
<tr>
<th>Comment</th>
</tr>
</thead>
<tbody>
<tr>
<td>* A Report into the Delivery of Urban Extensions (Hourigan Connolly, February 2014) (Appendix 1)</td>
</tr>
<tr>
<td>* Urban Extensions, Assessment of Delivery rates (Savills, October 2014) (Appendix 2)</td>
</tr>
<tr>
<td>* Start to Finish: How Quickly do large-Scale Housing Sites Deliver? (NLP, November 2016) (Appendix 3)</td>
</tr>
</tbody>
</table>

3.28 The Hourigan Connolly report on the delivery of urban extensions highlights the difficulties and time it can take to bring forward such sites. It is worth highlighting the following key factors as reported in Section 15 of that document, namely the average times for the various stages of the planning process. These are:

* Average timescale from submission to grant of outline planning permission is 34 months;
* Average timescale for signing a legal agreement 24 months; and,
* Reserved matters applications 6-9 months.

3.29 Subsequent to that report, the Savills report looks at urban extensions and their delivery rates. In terms of lead in time the report is clear that a period of 3-4 years from the determination of an outline planning application to the completion of site preparation and the delivery of housing is a realistic average time scale for the delivery of housing. The study notes that sites which have particularly complex land packages and or significant strategic infrastructure to deliver can take significantly longer than estimated. The report lists examples of sites where Section 106 agreements in themselves have taken 64 months to agree, with the average being 14 months.

3.30 The Savills report goes on to consider how fast a major site may build out. On average it found that in the first year of construction a site delivered 65 units, this increased to 110-120 dwellings per annum in subsequent years, before dropping towards the end of the life cycle of the development. These rates are obviously averages and dependant on a range of factors, however the report makes clear that any spikes on sites considered within the report were down to very specific delivery factors e.g. the need to deliver a large lump of affordable housing in one go due to the funding requirements of a partner.

3.31 The NLP report relates to housing delivery and assesses 70 large schemes (500 homes +) which have come forward in the last 20 years, and 83 smaller sites (50-499 homes). The report commented on average delivery from conception to start on site looking at:

* Lead in time prior to submission of an application;
* Planning approval period; and,
* Annual build out rates.

3.32 The average lead-in time for large sites is identified by NLP as 3.9 years (i.e. from the point a site is first identified in a Local Plan).

3.33 The planning approval period is measured from the validation date of the first application for the proposed development. The end date is the decision date of the first detailed application which permits the development of dwellings on site. The planning approval period of all sites, both large and small, is identified by NLP as:

* 2.8 years (0-99 homes)
* 4.1 years (100-499 homes)
* 5.3 years (500-999 homes)
* 5.6 years (1000-1499 homes)
* 6.5 years (1500-1999 homes)
3.34 NLP also identify the annual build-out rate falls within the overall build period of each site. The annual build out rates are influenced by the size of the site and NLP arrives at the following:

- 27 dwellings per annual (dpa) (0-99 homes)
- 60 dpa (100-499 homes)
- 68 dpa (500-999 homes)
- 105 dpa (1000-1499 homes)
- 135 dpa (1500-1999 homes)
- 161 dpa (2000+ homes)

3.35 There are clear comparable and a common themes running through each of the three assessment (i.e. large sites take time to delivery).

3.36 Given NLP’s assessment is the most recent, we have considered the trajectory from each of the West Oxfordshire SDAs using the two different variables (build out rates and lead-in times). Under each scenario, the full delivery of the 6,450 homes identified within the SDAs are not delivered during the plan period resulting in a shortfall in the delivery of the housing requirements of the district ranging from 2,210 to 2,311 homes.

3.37 Table 5 (Attached) applies the NLP lead-in time to the Council’s build-out rates, and identifies that the Chipping Norton, Garden Village and West Eynsham SDA would not be delivered in full during the plan period, resulting in an overall shortfall of 2,210 homes over the plan period.

3.38 Table 6 (Attached) applies both the NLP build-out rates and lead-in times from first identification of the SDA, and identifies that only the East Witney SDA would be delivered in full during the plan period, resulting in an overall shortfall of 2,311 homes over the plan period.

Conclusions Applying NLP Recommendations on Delivery

3.39 Whilst applying the NLP assumptions is a theoretical approach to identifying the delivery of the five SDAs over the plan period, the assumptions are based on empirical data from a large number of development proposals. As such, it cannot be dismissed out of hand. However, we do recognise that there is a need to consider the specific circumstances in relation to West Oxfordshire and each of the SDA sites identified. Nevertheless, the above exercise clearly demonstrates that the Council’s trajectory certainly needs to be considered with significant caution.

3.40 We go on to present our own view and final position on the Council’s trajectory / delivery from the SDA’s in Section 4 having reviewed each of the sites in more detail including their ability to accommodate the suggested number of dwellings. Following this analysis is our final position that is out in Table 7 below (Attached).

3.41 As per the NLP analysis, we agree that East Witney will be completed. We have some genuine concerns over the delivery of the West Eynsham site for a range of reasons but ultimately conclude that this site could potentially be complete within the plan period. However, we take greater issue with the ability for the following three SDAs to deliver within the plan period for reasons set out below and conclude/calculate a shortfall of 1,784 dwellings from these SDA’s over the plan period:
2.23 We have set out our comments in respect of the Council’s proposed housing target in relation to main modification 24 and as such do not repeat these here.
Sources of Supply

2.24 The supporting text to Policy H2 sets out the various sources through which the housing requirement will be met, as summarised in the table below (ATTACHED)

2.25 Clearly the Council are already failing to plan for sufficient new homes to meet the housing requirement over the Plan period.

2.26 We do note that currently no allowance is made for additional allocations which could be brought forward through Neighbourhood Plans of which there are currently five in preparation in the District as well as the made Chipping Norton Neighbourhood Plan, which does not seek to allocate any sites for development. Whilst additional development could be forthcoming through allocations in Neighbourhood Plans there is no guarantee that this will occur.

2.27 The NPPF makes clear that Local Plans “should meet objectively assessed needs, with sufficient flexibility to adapt to rapid change.” As currently drafted the Local Plan is failing not only to make provision for its own acknowledged objectively assessed need but allows for no flexibility to ensure the housing target is achieved. Concern is therefore raised that the Plan as currently drafted is not positively prepared, justified, effective or consistent with National Policy. Further consideration is likely to be required as to how this requirement can be met, including through additional allocations.

Five Year Housing Land Supply

2.28 The revised Policy as currently drafted states:
“With regard to 5-year housing land supply the Council will apply the residual (Liverpool) approach with any under-supply (backlog) of housing to be delivered over the remaining plan period to 2031. The additional provision being made for Oxford City’s needs will be incorporated into housing delivery assumptions from 2021 onwards.”

2.29 The NPPG is clear in its guidance to LPA’s (D 3-035-20140306) that they should aim to deal with any undersupply within the first 5 years of the plan period where possible. The NPPG makes clear that in circumstances where the LPA is unable to meet its undersupply in the first 5 years then it will need to work with neighbouring authorities under the ‘Duty to Cooperate.’ This matter was specifically raised by the Inspector in his Initial Findings: Part 2.

2.30 Proposed paragraph 5.34c seeks to justify the Council’s proposed approach by advising that:
“To provide a 5-year supply under the Sedgefield method, in excess of 1,000 homes per
<table>

<th>Comment</th>
</tr>
</thead>
</table>

Year would need to be built consistently over the next 5-years, well in excess of what has been achieved in West Oxfordshire in the past, even during several housing booms. Insufficient capacity has been identified through this Local Plan and the supporting assessment of housing land availability to achieve a 5-year supply under the Sedgefield approach and it could only be achieved by releasing a large number of sites that have been assessed by the Council as being unsuitable for new housing. The Council does not consider this to be an appropriate way forward and that addressing the shortfall in a more measured way over the remaining plan period using the Liverpool approach is considered to be entirely justified.

2.31 As is clear from the extract above the NPPG clearly advocates the Sedgefield approach as the most suitable approach. This is borne out in numerous appeal decisions and case law. Where the Sedgefield method cannot be achieved then the LPA must seek to liaise with neighbouring authorities under the Duty to Cooperate in order to redistribute this requirement. Although the Council have sought to justify its decision to seek to pursue the Liverpool method, no indication is provided as to whether the approach advocated in the NPPG of seeking the assistance of neighbouring authorities to meet this shortfall in the short term has been pursued.

2.32 Given the discussions which have taken place in respect of the Oxford City apportionment, and the fact that full agreement has yet to be reached on this matter, it would appear unlikely in any event that such assistance would be forthcoming.

2.33 Given our comments above it is clear that the Council will need to propose additional allocations in order to meet the housing requirement. Given the shorter lead in times associated with small to medium size allocations it is likely that allocations of this scale would allow the Council to also address its backlog using the Sedgefield approach. Consideration should also be given to whether elements of the larger strategic sites could form an early phase of development without compromising the comprehensive development of the wider site.

2.34 Whilst the Council seeks to justify the use of the Liverpool method by referring back to past delivery rates, it must be recognised that these were set within a significantly different planning context when there was not the requirement as set out within the NPPF to meet the full objectively assessed need. The historic low levels of delivery are a reason to boost the supply of housing as soon as possible because the need has already arisen and has not yet been met, rather than being a reason to suppress the rate at which housing should come forward.

2.35 In light of the above, in order to ensure its soundness the Plan should make provision to meet the backlog in housing need using the Sedgefield method with the backlog delivered in the first five year period rather than being spread across the remaining Plan period (Liverpool) as currently proposed.

2.36 As currently drafted it is unclear whether the Council are proposing that post-2021 the supply of those allocations identified to meet the needs of Oxford City only would be accounted for, and that the additional 2,750 dwellings would not be added to the requirement side of the five year housing land supply equation. Plainly such an
approach would be unsound and the Inspector in his preliminary findings advised that
the apportionment figure should be counted within the five year housing land supply. As
such we would recommend that the policy text is re-worded to clarify this position.

Other Matters

2.37 The previously proposed criteria in point 3 of the policy are proposed to be deleted and instead are
addressed in Policy OS2 as discussed above. With regards to the Main Service Centres etc., the Policy wording in the third bullet continues to state
development will be allowed where “it is consistent with the criteria in 3) below”. For clarity this wording therefore requires amendment.

<td>10</td>
<td>&gt; SECTION 5 - PROVIDING NEW HOMES &gt; MAIN 30</td>
<td>The important point is that much of the new housing should consist of small affordable starter homes built to a basic standard. Purchases should have the option of paying for fully fitted kitchens, bathrooms, in-built wardrobes, garages, lawns etc etc if they wish. To keep down the cost, expensive landscaping (both hard and soft) should be avoided - it only adds to the cost of the houses. Similarly, it is self-defeating to require a developer to pay for extensive off-site highway works because again the cost is only added to the cost of each house. The Highway Authority, Thames Water and the Environment Agency are very good at passing on the cost of off-site works to the developer without thought to the eventual cost of each house. Starter homes are required now. I trust that WODC will, as speedily as possible, get on with opening-up land for development. Only last week I learned that one of Witney’s GP Surgeries is unable to recruit new doctors because of the cost of housing. If a newly qualified doctor cannot afford a house in Witney what hope is there for others?</td>

<td>&gt; SECTION 5 - PROVIDING NEW HOMES &gt; MAIN 30</td>
<td>Empire Homes Limited object to Table 4.1 (Main Modification, MM, 14) Policies H1 (MM24), H2 (MM29 and MM30) and CA3 (MM134) on the basis that insufficient sites for housing have been identified to provide for a five year supply of housing in accordance with national policy. Edgars Limited have prepared representations on behalf of a number of clients which demonstrates that a five year land supply cannot be demonstrated when appropriate assumptions are used in accordance with national planning policy and guidance. These representations conclude that only 2.7 year supply can be demonstrated. Edgars consider that additional non-strategic sites are required to be allocated to ensure sufficient housing land supply. Land at Sunset View, Carterton, is under the control of Empire Homes Limited, is available now and capable of delivering around 41 homes in a sustainable location to help boost housing supply, ensure a 5 year supply of housing and provide robustness to ensure that the housing requirement of the modified WOLP 2031 is delivered. These representations provide information on the Land at Sunset View and should be read in conjunction with Edgars Limited’s representations regarding housing supply which are not repeated here.</td>

2016 (Ref: APP/D3125/W/15/3129767). It is therefore considered that the land on the north side of Witney Road, which has similar characteristics is also suitable for allocation. The fact that the Council acknowledges that the shortfall will not be made up over the next five years, indicates that if deliverable sites are available they should be allocated.

Additional housing sites are required to be allocated to ensure sufficient housing land supply

1. **THE FIVE YEAR HOUSING REQUIREMENT**
   1.1. The Council now use the 2014 Strategic Housing Market Assessment (SHMA) based housing requirement of 660 dwellings per annum (dpa) for West Oxfordshire. This is now in line with Edgars previous representations to the WOLP 2031.

1.2. The Council has now agreed to accept 2,750 dwellings of Oxford City Council’s unmet housing need for the period 2011-2031. Now that this apportionment has been agreed, this housing should be added to the five year housing requirement.

1.3. Under paragraph 47 of the National Planning Policy Framework (NPPF), Oxford’s unmet housing needs are part of the full objectively assessed housing needs of West Oxfordshire. Paragraph 47 is explicit that Local Plans meet the full housing needs of the housing market area (first bullet point of paragraph 47) which includes Oxford, and that sufficient sites need to be identified to provide 5 years of housing against housing requirements (second bullet).

1.4. Inclusion of Oxford’s unmet needs into the five year housing requirement is, therefore, required in accordance with the NPPF.

1.5. Indeed, in his preliminary findings (IN015) the Inspector appeared to accept this view in commenting at paragraph 7.6 that: If any such apportionment is made then that would become part of the housing need for the district. Any such apportionment is not immediately a definitive housing requirement, since it must be taken through a local plan process to test its deliverability and environmental impact. Nevertheless, it will be a figure of considerable significance and weight, since it will have emerged from an evidence-based process to inform spatial options for growth outside Oxford City. My initial view is that it would need to be taken into account in calculating the 5 year land supply.

1.6. Edgars agree with this view in as much that the Oxford apportionment is part of the housing need for the District and as such it should now be taken into account in calculating the 5 year land supply.

1.7. It is also of note that in a recent appeal relating to Land at Hanborough Station the Council signed a Statement of Common Ground (Appendix 1, paragraphs 2.4 – 2.12) agreeing that the Oxford’s housing needs be added to West Oxfordshire’s housing needs for the purposes of the 5 year requirement.

1.8. The Council at paragraph 5.34d (MM 29) of the modified plan, however, state that it will treat Oxford’s housing needs separately and only as part of the 5 year requirement in the years 2021 - 2031.

1.9. The Council’s approach is contrary to paragraph 47 of the NPPF, the requirement to boost housing supply and the requirement to provide a five year supply of sites which addresses housing needs across the housing market area.

1.10. Now the apportionment has been agreed, Oxford’s needs should start to be dealt with now. There is, in
Edgars opinion, an imperative to do so having regard to the scale of unmet needs of Oxford and the related poor affordability and availability of housing in the City.

1.11. These are precisely the issues which the wording of paragraph 47 to 'boost significantly the supply of housing' seek to address. To delay dealing with Oxford’s unmet needs until 2021 will only compound such issues.

1.12. Furthermore, as is further explained later, the Council’s approach to Oxford’s unmet need is to put all of these ‘eggs in one basket’. That is the Council seek to deliver all of it’s apportionment of Oxford’s unmet need in a single location, Eynsham, across what will be two major and linked sites.

1.13. Both sites involve multiple landowners and have significant infrastructure requirements. Delivery of such sites will be complex with delivery rates uncertain.

1.14. In Edgars experience such major urban extensions with multiple landowners and major infrastructure have relatively long gestation periods before delivery on the ground.

1.15. Edgars furthermore question the delivery of over 3,000 dwellings at Eynsham between 2021 and 2031 – up to 325 homes per year in a single location. This rate of delivery in a single location is not considered realistic in Edgars opinion.

1.16. Edgars consider that Oxford’s needs can in part be met by other sites in the area whilst major sites such as the Tilgarsley Garden Village come on line.

1.17. Inclusion of Oxford’s need in the five year supply serves to ensure that Oxford’s unmet need is addressed in a timely manner. It will also mean that Oxford’s need will more likely be addressed in the plan period and that a larger unmet need is not accumulated for future plan periods.

1.18. The 2,750 dwellings of Oxford’s unmet needs which West Oxfordshire have agreed to accept represents an additional 137.5 dpa. Together with the identified needs of West Oxfordshire itself (660dpa) this represents a total housing requirement of 797.5 dpa.

1.19. The base five year requirement for 2016 – 2021 is therefore 3,987.5, rounded 3,988 dwellings.

2. DEALING WITH PAST SHORTFALLS (LIVERPOOL/SEDGEFIELD)

2.1. Edgars consider that the shortfall in supply should be made up in the first 5 years (Sedgefield) method. This method most closely reflects advice of the PPG (Paragraph: 035 Reference ID: 3-035-20140306) which states: Local planning authorities should aim to deal with any undersupply within the first 5 years of the plan period where possible. Where this cannot be met in the first 5 years, local planning authorities will need to work with neighbouring authorities under the ‘Duty to Cooperate’.

2.2. There is no reference in national planning guidance to the approach which the Council seek to use which is to spread the past backlog over the remaining plan period, the so called 'Liverpool' approach.

2.3. In Edgars opinion, there is good reason not to spread backlogs over the remaining plan period as this will simply store up a potential housing delivery issue rather than deal with it – the Liverpool approach will continue to risk the delivery of housing needs (both West Oxfordshire’s and Oxford’s).

2.4. It is noted that the NPPG does offer an alternative to the Sedgefield approach, that alternative being to work with neighbouring authorities under the Duty to Cooperate. That is not what is proposed by West Oxfordshire.

2.5. There is no reference to the Liverpool approach in national planning guidance. The Local Plan Inspector highlighted this to the Council in his Preliminary Findings notes (IN016, paragraph 2.15):

"The Council needs to have particular regard to National Guidance on this matter, as the "Liverpool method"
(spreading the shortfall over the whole plan period) is not mentioned."

2.6. The Council has not provided any robust justification to divert from national guidance on this matter.

2.7. The issue is commented upon in the modified plan at paragraphs 5.34b to 5.34d (MM29). This appears to be the Council’s only justification for its approach and its arguments may be summarised as:
   - A degree of realism is needed about what can be achieved by the development industry;
   - The Sedgefield method would need in excess of 1,000 homes per year to be built over the next 5 years which is in excess of what has been achieved in the past;
   - Insufficient capacity has been identified through the housing land availability assessment and to achieve it would mean releasing a large number of unsuitable sites;

2.8. In Edgar’s opinion the Council’s approach and justification is flawed and inadequate.

2.9. Firstly, delivery of housing in excess of 1,000 dwellings per year has never been achieved as the Council has never released sufficient sites to achieve such rates of delivery. Past plans have been guided by Oxfordshire Structure Plans which explicitly advocated policies of restraint and not current policies seeking to ‘boost significantly the supply of housing’.

2.10. Housing allocations and planning permissions have largely been constrained to a limited number of large strategic allocations at limited locations (Witney and Carterton predominantly) along with small windfall sites.

2.11. Edgars consider that a more varied approach to supply can achieve higher delivery rates and that small to medium scale, non-strategic allocations in a variety of locations will achieve this.

2.12. It should be noted that this has not occurred in the district under previous plan periods and only recently has a number of additional non-allocated sites received planning permission an on appeal.

2.13. Secondly, but significantly, although the Council question the delivery of 1,000 dwellings per year for the purposes of five year housing land supply, the Council accept this is possible in later years of the plan in the housing trajectory at Appendix 2 of the modified plan. This indicates that the Council consider that up to 1,250 dwellings per annum is deliverable.

2.14. The question then seems to be not whether 1,000 dwellings per annum is achievable but whether the Council are prepared to release sufficient sites to achieve it.

2.15. Edgars represent a number of clients promoting small to medium scale sites in a number of locations which are sustainable and deliverable and could help the Council achieve higher rates of deliver in the first 5 years of the plan to accord with the Sedgefield approach.

3. BUFFER – 5% OR 20% BUFFER

3.1. NPPF paragraph 47 states that the housing requirement should include an additional buffer of 5% (moved forward from later in the plan period) to ensure choice and competition in the market for land. It goes on to state that: "Where there has been a record of persistent under delivery of housing, local planning authorities should increase the buffer to 20% (moved forward from later in the plan period) to provide a realistic prospect of achieving the planned supply [Edgars emphasis] and to ensure choice and competition in the market for land”

3.2. It is noted that the Local Plan Inspector in his preliminary findings (IN016, paragraph 2.14) took the view that persistent under delivery should be assessed over a 10 year period and at that time (December 2015) it
would be unreasonable to conclude persistent under delivery. The Inspector also commented that: “If delivery continues to be below that which is required, future decision makers may take a different view. The Council would be in a more robust position going forward if the plan creates a 5 year supply with a buffer greater than 5%, thus allowing for any unexpected delays on some sites.”

3.3. Delivery for 2015/2016 has now been published by the Council and as shown in Appendix 2 of the Draft Local Plan was 246 dwellings. Delivery for 2016 – 2017 is indicated to be 515 dwellings.

3.4. This means that for the first 5 years of the plan period the Council has significantly under delivered against its target and this is also expected in 2016-2017.

3.5. Over the first 5 years of the plan period, 2011-2016, the Council has achieved an average of 293 new homes per annum against an annualised requirement for West Oxfordshire of 660 homes.

3.6. It has resulted in a significant backlog of housing delivery against West Oxfordshire’s requirement (660dpa) of 1,836 homes. There is now also a backlog of 687 homes relating to Oxford’s unmet needs. Together this represents a backlog of 2,524 homes.

3.7. As noted above, NPPF paragraph 47 advocates a 20% buffer to provide a realistic prospect of achieving the planned supply. The Inspector highlighted to the Council that a buffer of more than 5% would help to mitigate any expected delays on some sites.

3.8. Delays on strategic sites and allocated sites are not uncommon. In Edgars view they are much more likely for large strategic sites with significant infrastructure delivery requirements and multiple landowners. Large sites typically have significant infrastructure requirements, complex S106 agreements and substantial pre-commencement works.

3.9. Looking back at the WODC 2010 Annual Monitoring Report (Appendix 2, Table 2) which presents the forecast completions on sites at that point it is clear that: o 200 dwellings on the remaining part of the Carterton North East Development Area were expected to be complete by 2015 - the site now has planning permission and has started. Completions are now expected in the period 2016 – 2021.

o 200 dwellings at West Witney (Proposal 8) were expected to be delivered by 2015. the site does not yet have a planning decision and completions are not expected until 2018.

3.10. This identifies that there has been slippage on sites in the District in the past for various reasons.

3.11. As set out in Section 6 in Edgars representations, Edgars consider that the increased delivery at key strategic sites is uncertain and unjustified and this provides additional justification for adopting a 20% buffer.

3.12. As indicated previously by the Local Plan Inspector, the Council should apply a greater buffer than 5 % to ensure robustness in the supply. Taking into account of the underdelivery housing against the District’s requirement 2011- 2016, expected underdelivery in 2016-17 and the likely under delivery at SDAs, Edgars consider that a 20% buffer must now be applied.

4. DELIVERABLE SUPPLY

4.1. Edgars has reviewed the deliverable supply within the October 2016 5 year supply statement which considers the supply within the period 2016-2021. This indicates a total deliverable supply of 4,514 dwellings in the period 2016-2021.

4.2. In Edgars opinion delivery on the following sites should be removed from the supply:

- East Chipping Norton (200 dwellings)
- Carterton Petrol Station (35 dwellings)
4.3. It is noted that delivery on major SDAs with significant infrastructure (East Witney and North Witney for example) has now been excluded from the supply 2016-2021.

4.4. Delivery of 200 dwellings on land east of Chipping Norton (Tank Farm) is however included in the supply. The Council comment that this is a large strategic site with a lengthy lead in time but that several parcels of land lend themselves to early release without prejudice to the remainder of the scheme.

These parcels of land include The Pillars and the former Parker Knoll site.

4.5. There is no current application at the Parker Knoll site to indicate deliverability.

4.6. There is a current planning application at The Pillars (Ref 16/03416/OUT) for 100 dwellings. The application proposal does not make provision for the proposed East Chipping Norton link road and is subject to an objection from OCC Highways as a consequence. The proposed alignment of the Eastern Link Road passes through the site.

4.7. The East Chipping Norton link Road is a major piece of infrastructure and it is clearly expected that land at the Pillars is part of the delivery of the SDA and link road.

4.8. Edgars fail to see, therefore, how the Council can agree to its early release until negotiations regarding the remainder of the SDA have been completed to ensure the delivery of the Eastern Link Road.

4.9. It is noted that the Council previously included 200 dwellings within the 5 year supply at North Witney in advance of the West End Link Road but have now removed these dwellings from the 5 year supply commenting ‘complex site with major infrastructure costs’.

4.10. Consistent with the Council’s approach on other SDAs with major infrastructure, including North Witney and East Witney, delivery of 200 dwellings at the East Chipping Norton SDA should be removed from the 5 year supply.

Carterton Petrol Station

4.11. The Council include 35 dwellings in the five year supply at Carterton Petrol Station. The site previously had a consent for residential development 10/1287/P/OP, granted 28th March 2013. As is standard, Condition 1 required Reserved Matters within 3 years. This permission has now lapsed. The site cannot be considered deliverable.

4.12. In summary, Edgars has identified that the deliverable supply in the period 2016-2021 should be discounted by 235 dwellings resulting in a revised deliverable supply of 4,279 dwellings.

5. REVISED FIVE YEAR SUPPLY POSITION

5.1. Having regard to the above, Edgars consider that the following assumptions should be applied to the Five Year Housing Land Supply Position:

- The Five Year Housing Requirement should include both West Oxfordshire’s needs (660 dpa) and Oxford’s unmet needs (137.5dpa) giving a total annual requirement of 798 dpa.
- Past shortfalls in delivery should be addressed in the five year period ‘Sedgefield’ approach, in accordance with national guidance. There is no robust justification to divert from this.
- Buffer – having regard to the extent of shortfall now identified due to past under delivery and the likelihood of further slippage and under delivery on key strategic sites, a 20% buffer should now be applied.
- Supply – the supply is over estimated and should be discounted by 235 dwellings.

5.2. As shown in Table 1 (Attached) below Edgars conclude that only a 2.7 year housing supply can be
<table>

<td>6.2. Large SDAs with significant infrastructure and often multiple landowners typically have significant lead in times from allocation or a resolution to grant permission to delivery on site.</td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td>6.3. Recent experience in West Oxfordshire has shown this lead in time can be considerable. This is exemplified by West Witney the Council’s most recent SDA. Planning application 12/0084/P/OP for 1,000 dwellings, an employment area, new junction on A40, local centre and primary school received a resolution to grant consent in March 2013. The S106 has still not been signed at December 2016 and no decision issued. The site is now expected to deliver homes from 2018/19.</td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td>6.4. This experience would indicate that there can be a period of 5 years between a resolution to grant consent and delivery on site. This does include time for the initial planning application to be prepared and decided which for a major site is likely to be 6 months to 1 year. It also does not allow time for any Compulsory Purchase Order Inquiry (CPO) which may be required on some sites.</td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
<td></td>

<td>6.8. It is also understood that the Council (modified plan para 9.5.40g) will seek to prepare and adopt an Area Action Plan for this site. This will also add to the lead in time for delivery at the Garden Village.</td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td>6.9. If the WOLP 2031 is adopted toward the end of 2017/18 and an Area Action Plan progressed swiftly and adopted toward the end of 2018/19, this would leave very limited time for the preparation of an outline planning application, negotiation of a S106 agreement, reserved matters and pre-commencement works to achieve first delivery by 2021. In Edgars opinion, delivery from at least 2022/23 is more realistic. Past Delivery Rates on SDAs</td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td>6.10. Edgars obtained past delivery rates from the Council for the last two major urban extensions in the district – North East Carterton (Shilton Park) and North East Witney (Madley Park).</td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td>6.11. It is understood that at least 4 housebuilders were active on each site. There is a peak of delivery at North East Carterton in 2004/05 which is out of scale with</td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td>6.12. The average delivery rate per annum was similar for each site at around 125 dwellings. The data shows that each site delivered in excess of 200 dwellings in some years although this was not sustained over a long period.</td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td>6.13. Edgars consider that sustained delivery between 2021-2031 of over 200 dwellings per annum in a single strategic development location such as at Eynsham to be ambitious and up to 250 dwellings per annum overly ambitious.</td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td>6.14. In the modified WOLP 2031, full delivery of the Eynsham Garden Village at 220 dpa is anticipated alongside delivery of 105 dpa at the West Eynsham SDA. In total this comprises between 275 and 325</td>
</tr>
</tbody>
</table>
6.15. Based on the above if an optimistic delivery rate of 250 dwellings per annum is adopted at Eynsham, across the Garden Village and West Eynsham SDA, then this would result in an under delivery of at least 550 dwellings across the plan period and around 700 dwellings if delivery at Eynsham is delayed to 2022/23.

6.16. The strategy to deliver all of Oxford’s unmet needs at Eynsham at two SDAs in close proximity is a high risk strategy and will mean that such needs are unlikely to be met in the plan period.

6.17. This risk can be off-set by including Oxford’s needs within the 5 year supply requirement and applying a 20% buffer (brought forward in the plan period).

6.18. Edgars consider that additional non-strategic sites should be allocated to frontload housing delivery, achieve a five year housing land supply in accordance with national policy and offset the likely under delivery at the Eynsham SDAs.

7. DELIVERY AT WEST EYNSHAM SDA (Policy EW1b, MM156 – 158)

7.1. Limited evidence has been published to demonstrate and assess the impacts of this proposed allocation. The previous assessment of Strategic Site Options (Examination Document Ref OTH1) has not been updated. This provided a comprehensive overview of site and a summary of strategic site constraints and impacts.

7.2. There would appear to be no evidence document which provides a summary of the West Eynsham SDA and its constraints. The SHELAA assesses a number of component sites but there is no expression of the overall size of the site, constraints, and its developable area to ascertain whether delivery is realistic.

7.3. The proposed SDA incorporates the provision of a new western link road to the village. This link road will be a major piece of infrastructure which will need to cross the Chill Brook and areas of flood plain. It is also proposed to join the B4449 by cutting across a Scheduled Ancient Monument.

7.4. It is unclear what consideration has been given to these constraints or any technical design or mitigation measures required, or any Flood Risk Assessment to address the Sequential or Exception tests. The updated Infrastructure Delivery Plan 2016 does not provide a cost estimate for the provision of the link road. It is unclear what has been assumed for viability purposes.

7.5. In Edgars opinion, the allocation at West Eynsham is not justified by the published evidence and there is a significant risk that it will not be realised as proposed.

8. DELIVERY AT EAST CHIPPING NORTON SDA (Policy CN1, MM138- MM140)

8.1. The East Chipping Norton allocation has been increased from about 600 dwellings at Tank Farm south of the London Road to 1,400 dwellings including 1,200 dwellings south of London Road and 200 north of London Road. The SDA now includes provision of an Eastern Link Road.

8.2. Limited evidence has been published to demonstrate and assess the impacts of the increased allocation. The previous assessment of Strategic Site Options (Examination Document Ref OTH1) has not been updated. This provided a comprehensive overview of site and a summary of site constraints and impacts.

8.3. There would appear to be no evidence document which provides a summary of the modified East Chipping Norton SDA and its constraints. The SHELAA assesses a number of component sites but there is no expression of the overall size of the site and its developable area to ascertain whether delivery is realistic.

8.4. Previous landscape evidence was prepared for the Council by Kirkham Landscape Planning, the Landscape and Visual Review of Chipping Norton Strategic Site Option [May 2014, Examination Document Ref...
LAN2). This concludes an indicative housing capacity for the land south of London Road of 500 dwellings within a similar area now proposed by the Council.

8.5. This is significantly lower than the 1,200 dwellings now assumed by the Council and draws into question the deliverability of this number of dwellings.

8.6. Furthermore, it is noted that the East Chipping Norton SDA now also includes provision of a link road through allotment garden land.

8.7. The updated Infrastructure Delivery Plan 2016 does not provide a cost estimate for the provision of the link road. It is unclear what has been assumed for viability purposes.

8.8. Edgars understands that the allotment land is under the ownership of Chipping Norton Town Council who object to the scale of development proposed. This draws into question the deliverability of the eastern link road which is now integral to the modified East Chipping Norton allocation.

8.9. In Edgars opinion, the increased allocation at East Chipping Norton is not justified by the published evidence and there is a significant risk that it will not be realised.

9. DELIVERY AT NORTH WITNEY SDA (Policy WIT2, MM97 – MM103)

9.1. The North Witney allocation has been increased from about 1,000 dwellings to 1,400 dwellings. 100 of these dwellings are now to be south of the Hailey Road adjacent to the Witney Primary School. Modified paragraph 9.2.45 indicates that the remaining additional 300 dwellings are to be accommodated through a modest increase in the extent of the developable area to the north and an increase in density.

9.2. Limited evidence has been published to demonstrate and assess the impacts of the increased allocation. The previous assessment of Strategic Site Options (Examination Document Ref OTH1) has not been updated. This provided a comprehensive overview of site and a summary of site constraints and impacts.

9.3. Previous landscape evidence was prepared for the Council by Kirkham Landscape Planning, the Landscape and Visual Review of Submissions for Carterton and Witney Strategic Development Options (October 2012, Exam Doc LAN3). This concludes an indicative housing capacity for the land at north Witney of 750 - 850 dwellings within a similar area north of Hailey Road now by the Council. It is unclear how 1,300 dwellings can now be achieved within this area whilst being consistent with the Council's evidence.

9.4. In Edgars opinion, the increased allocation at North Witney is not justified by the published evidence and there is a significant risk that it will not be realised.

10. DELIVERY AT REEMA CARTERTON SDA (Policy CA1, MM 122 - 125)

10.1. Outline planning permission for this site was granted in 2005 (04/2358/P/OP) also setting out a series of design principles for future reserved matters schemes.

10.2. A reserved matters scheme for 225 dwellings REEMA North (all 3 bedroomed) was granted on 27th July 2011. A subsequent reserved matters application (11/0490/P/RM) for 200 dwellings (3 and 4 bed dwellings) was approved on 22nd May 2013. The net developable area noted in the application is 6.53 hectares and the density as 30.6 dwellings. The dwellings are required for service families.

10.3. These reserved matters applications had been discussed extensively with officers to ensure compliance with the approved design principles and standards. These applications have now lapsed and the Council indicate this is due to funding difficulties.

10.4. Main modification CA1 increases the proposed allocation for REEMA North and Central by 100 dwellings, the preceding modifications making clear this is expected to be delivered at REEMA North.

10.5. The two previous reserved matters schemes to provide service personnel accommodation were already
at a reasonable density of over 30 dwellings per hectare. To achieve 300 dwellings would require a density of 46 dwellings per hectare.

10.6. Edgars is not aware of any evidence that demonstrates that this is deliverable whilst complying with the establish design principles for the site and development which forms a positive addition to Carterton.

10.7. Edgars consider that only 200 dwellings should be assumed for REEMA North in accordance with previous detailed planning permissions.

11. CONCLUSION

11.1. These representations are submitted in response to the West Oxfordshire Local Plan 2031 – Proposed Modifications Consultation, December 2016 (WOLP 2031 Modifications). They are made by Edgars on behalf of Rectory Homes Limited and a number of clients with development interests in West Oxfordshire.

11.2. Edgars object to the modified WOLP 2031 Policies H1 (MM24) and H2 (MM29 and 30) on the basis that insufficient sites for housing have been identified to provide for a five year supply of housing in accordance with national policy:

- The Five Year Housing Requirement – should include Oxford’s unmet needs
- Dealing with past shortfalls – should be based on the Sedgefield method
- Buffer – a 20% buffer should now be applied
- Supply – the supply is over estimated and should be discounted

11.3. Edgars conclude that when using robust assumptions in accordance with national policy and guidance that only a 2.7 year supply can be demonstrated.

11.4. Edgars object to the approach to the delivery all of Oxford’s unmet needs at Eynsham, in a single location, in the period 2021 – 2031 (Policy H1, MM24 and MM152 – 158). In Edgars opinion, concentrating all of the delivery of Oxford’s unmet needs in a single location is a high risk strategy due to the complexity and delays typically associated with such large scale development and the likely build out rate is untested and unrealistic. In Edgars opinion Oxford’s housing needs now form part of the five year supply requirement and non-strategic sites should be released now to address this requirement in a timely fashion.

11.5. Edgars also has concerns regarding delivery on other SDAs in the proposed modifications and that the this is not justified by the evidence presented. This includes:

- West Eynsham SDA (Policy EW1b, MM156 – 158)
- East Chipping Norton SDA (Policy CN1, MM138-MM140)
- North Witney SDA (Policy WIT2, MM97 – MM103)
- REEMA Carterton SDA (Policy CA1, MM 122 - 125)

11.6. Edgars consider that this provides additional justification for applying a 20% buffer to the 5 year supply requirement and that additional non-strategic sites are required to be allocated to ensure sufficient housing land supply.

| MM728 | Abbey Developments and David Wilson Homes Southern | - | 1669 | > SECTION 5 - PROVIDING NEW HOMES > MAIN 30 | Policy H2 - Delivery of New Homes
Insufficient evidence has been provided to justify the use of the Liverpool method as opposed to Sedgefield and the draft Plan should be amended accordingly in terms of Policy H2. |
Main 25 - Policy H2 – Delivery of New Homes and Supporting Text

2.21 We have set out our comments in respect of the Council’s proposed housing target in relation to main modification 24 and as such do not repeat these here.

Sources of Supply

2.22 The supporting text to Policy H2 sets out the various sources through which the housing requirement will be met, as summarised in the table below (ATTACHED)

2.23 Clearly the Council are already failing to plan for sufficient new homes to meet the housing requirement over the Plan period.

2.24 We do note that currently no allowance is made for additional allocations which could be brought forward through Neighbourhood Plans of which there are currently five in preparation in the District as well as the made Chipping Norton Neighbourhood Plan, which does not seek to allocate any sites for development. Whilst additional development could be forthcoming through allocations in Neighbourhood Plans there is no guarantee that this will occur.

2.25 The NPPF makes clear that Local Plans “should meet objectively assessed needs, with sufficient flexibility to adapt to rapid change.” As currently drafted the Local Plan is failing not only to make provision for its own acknowledged objectively assessed need but allows for no flexibility to ensure the housing target is achieved. Concern is therefore raised that the Plan as currently drafted is not positively prepared, justified, effective or consistent with National Policy. Further consideration is likely to be required as to how this requirement can be met, including through additional allocations.

Five Year Housing Land Supply

2.26 The revised Policy as currently drafted states:

"With regard to 5-year housing land supply the Council will apply the residual (Liverpool) approach with any under-supply (backlog) of housing to be delivered over the remaining plan period to 2031. The additional provision being made for Oxford City’s needs will be incorporated into housing delivery assumptions from 2021 onwards."

2.27 The NPPG is clear in its guidance to LPAs (D 3-035-20140306) that they should aim to deal with any undersupply within the first 5 years of the plan period where possible. The NPPG makes clear that in circumstances where the LPA is unable to meet its undersupply in the first 5 years then it will need to work with neighbouring authorities under the ‘Duty to Cooperate.’ This matter was specifically raised by the Inspector in his
2.28 Proposed paragraph 5.34c seeks to justify the Council’s proposed approach by advising that:

“To provide a 5-year supply under the Sedgefield method, in excess of 1,000 homes per year would need to be built consistently over the next 5-years, well in excess of what has been achieved in West Oxfordshire in the past, even during several housing booms. Insufficient capacity has been identified through this Local Plan and the supporting assessment of housing land availability to achieve a 5-year supply under the Sedgefield approach and it could only be achieved by releasing a large number of sites that have been assessed by the Council as being unsuitable for new housing. The Council does not consider this to be an appropriate way forward and that addressing the shortfall in a more measured way over the remaining plan period using the Liverpool approach is considered to be entirely justified.”

2.29 As is clear from the extract above the NPPG clearly advocates the Sedgefield approach as the most suitable approach. This is borne out in numerous appeal decisions and case law. Where the Sedgefield method cannot be achieved then the LPA must seek to liaise with neighbouring authorities under the Duty to Cooperate in order to redistribute this requirement. Although the Council have sought to justify its decision to seek to pursue the Liverpool method, no indication is provided as to whether the approach advocated in the NPPG of seeking the assistance of neighbouring authorities to meet this shortfall in the short term has been pursued.

2.30 Given the discussions which have taken place in respect of the Oxford City apportionment, and the fact that full agreement has yet to be reached on this matter, it would appear unlikely in any event that such assistance would be forthcoming.

2.31 Given our comments above it is clear that the Council will need to propose additional allocations in order to meet the housing requirement. Given the shorter lead in times associated with small to medium size allocations it is likely that allocations of this scale would allow the Council to also address its backlog using the Sedgefield approach. Consideration should also be given to whether elements of the larger strategic sites could form an early phase of development without compromising the comprehensive development of the wider site.

2.32 Whilst the Council seeks to justify the use of the Liverpool method by referring back to past delivery rates, it must be recognised that these were set within a significantly different planning context when there was not the requirement as set out within the NPPF to meet the full objectively assessed need. The historic low levels of delivery are a reason to boost the supply of housing as soon as possible because the need has already arisen and has not yet been met, rather than being a reason to suppress the rate at which housing should come forward.

2.33 In light of the above, in order to ensure its soundness the Plan should make provision to meet the backlog in housing need using the Sedgefield method with the backlog delivered in the first five year period rather than being spread across the remaining Plan

| MM734         | vanderbilt Homes        | Vanderbilt Homes | -                | 1703       | > SECTION 5 - PROVIDING NEW HOMES > MAIN 30 | period (Liverpool) as currently proposed.  

2.34 As currently drafted it is unclear whether the Council are proposing that post-2021 the supply of those allocations identified to meet the needs of Oxford City only would be accounted for and that the additional 2,750 dwellings would not be added to the requirement side of the five year housing land supply equation. Plainly such an approach would be unsound and the Inspector in his preliminary findings advised that the apportionment figure should be counted in the five year housing land supply. As such we would recommend that the policy text is re-worded to clarify this position.  

Other Matters  

2.35 The previously proposed criteria in point 3 of the policy are proposed to be deleted and instead are addressed in Policy OS2 as discussed above. With regards to the Main Service Centres etc., the Policy wording in the third bullet continues to state development will be allowed where “it is consistent with the criteria in 3) below”. For clarity this wording therefore requires amendment.  

Object MAIN 30 - amended Policy H2 how housing will be delivered  

Council’s agreed position in relation to Long Hanborough Station Inquiry  

At a current appeal at Land Adjacent to Hanborough Station, Long Hanborough (application ref. 15/03797/0UT and appeal ref. APP/D31/25/w/16/3148400) the Council have set out their current position in respect of a 5 year housing land supply, agreed within the Statement of Common Ground.  

In summary, the position is as follows:  

* Requirement 2016-2021 - 6,836  
* Supply - 4,514  
* Shortfall - 2,322  
* Years supply - 3.3yrs  

As of 11 November 2016, the Council do not have a 5 year housing land supply. A 3.3 year housing land supply is the current position.  

Council’s Approach to Meeting Housing Need  

The Council’s approach to meeting its housing need requirement relies on a combination of large existing commitments, small existing commitments and draft local plan housing allocations. We have concerns in relation to the first and last of these elements. In relation to existing large commitments, judgements have been made by the Council in their Housing Land Position Statement over the timeframe for deliverability of certain sites; particularly within the current five year period ending March 2021. We have significant reservations about the assumptions that have been made in respect of a number of sites including West Witney, land east of Carterton and east of Chipping Norton SDA, where

<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td>collectively the Council suggest 850 dwellings will be delivered by 2021.</td>
</tr>
</tbody>
</table>

The Council's reliance on these sites delivering the number of dwellings suggested is, in our opinion, unsound given the background to the sites concerned and the various deliverability issues. For example, the West Witney commitment has had considerable delays to the outline planning application and the Section 106 Agreement still has not been signed. There are major infrastructure requirements to address and to suggest that 350 dwellings will be delivered in the next 4.5 years is unrealistic.

The reliance on the deliverability of 'existing commitments' during the current five year period has the effect of distorting the Council's land supply position as well as rendering the proposed modifications to the Local Plan unsound.

With regard to reliance on draft Local Plan Housing Allocations, Paragraph 5.13 of the Council's Housing Land Supply Position Statement (Oct 2016) outlines that the Council, in response to the Inspector's concerns with how a significant increase in the overall housing requirement for the District will be delivered, have included a number of new site allocations.

Para 5.14 continues:

"Whilst these allocations remain in draft form at the present time and are subject to further consultation and discussion through the reconvened Local Plan examination it is reasonable to expect some additional housing supply from these sites in the period 2016 - 2021."

In seeking to demonstrate a 5 year housing land supply and meet the challenge of providing the requisite homes in the District, the Council have produced a series of allocated sites. The Council acknowledge they are draft and subject to further consultation and examination. In total, across the District, the non-strategic housing allocations total 1,719 (new para. 5.30b), or around 10% of the total provision for the plan period.

Taking together all proposed draft Local Plan housing allocations, strategic development areas and non-strategic allocations, this figure is 8,169 dwellings (including 2,750 dwellings for Oxford's unmet housing needs).

The Council acknowledge that "it is reasonable to expect some additional housing supply from these sites in the period 2016 - 2021", but does not expand on this claim any further. These are newly introduced sites which are only now undergoing public consultation and have not been subject to independent examination.

Given the nature of the modifications and the scope of what is proposed, it is likely there will be significant unresolved objections to the proposed site allocations. The Inspector may wish to recommend changes to the Plan once each site has been considered on its merits.

These sites have not yet been properly assessed. The allocations are at a very early stage of the plan-making process, undergoing the first stage of public consultation at the time of writing.
**Comment**

Paragraph 216 of the NPPF is explicit in setting out the degree of weight which should be given to relevant policies in emerging plans. Little weight should be afforded to these emerging policies.

Issuing a series of main modifications to a plan for public consultation which propose a series of draft site allocations for the first time is not an appropriate mechanism on which to rely for the purposes of adopting planning policies relating to housing deliverability.

The Council acknowledge that the "allocations remain in draft form" and will be "subject to further consultation and discussion through the reconvened Local Plan examination". 'Site Allocations' documents are commonly separate, detailed, stand-alone Development Plan Documents in their own right. They would undergo consultation and various drafts leading up to independent examination as they are adopted. Indeed, paragraph 5.30c the Plan states that "Subject to resources, the Council will seek to prepare site-specific planning briefs to guide the development of these allocated sites" (our emphasis).

The Council acknowledge that further work - including formal public consultation - will be undertaken in the future to understand the capacity and potential for housing delivery on these sites.

However, the Council have instead assumed each site will come forward and will deliver the level of housing stipulated by the proposed modifications, and have prepared policies on this basis.

Furthermore, paragraphs 5.34b and 5.34c discuss the Council's approach to calculating supply using the 'Liverpool' method. We do not consider this approach appropriate. There is a persistent past undersupply of housing delivery within the District which needs to be addressed now, and not spread out over the Plan period, and for this reason in this instance the 'Sedgefield' method is the most appropriate basis to address the shortfall.

The Council have made a series of assumptions in reaching the conclusion that the proposed main modifications to the Local Plan will meet the revised housing target for the District. It is circular reasoning to produce draft modifications for consultation yet to assume the requisite levels of housing delivery will be achieved, and it is for this reason we consider the Plan unsound.

Ultimately, we do not share the view that a 5 year housing land supply has been satisfactorily demonstrated, and it is not an appropriate basis on which to operate for decision-making purposes.

* It is not justified: a series of main modifications - which is in effect the first stage of public consultation on 8,169 homes on strategic and non-strategic allocated sites - is not an appropriate strategy on which to assume the District’s housing shortfall will be delivered, and to produce amended policy which flows from this assumption.

In summary, we are of the view the Plan is unsound because:

<td>MM735</td>
<td>Braemar Property Developments</td>
<td></td>
<td>-</td>
<td>1725</td>
<td>&gt; SECTION 5 - PROVIDING NEW HOMES &gt; MAIN 30</td>
<td>Strong objections are raised in respect of Paragraph 5.34B of the Plan and the intention to apply the Liverpool approach to dealing with backlog the of 1,836 homes. Applying the Liverpool methodology would not comply with the PPG which makes clear that dealing with backlog in the next five years is the preferred approach. Furthermore, delaying dealing with the backlog would be to reward failure, and would not be consistent with the Framework which requires boosting significantly the supply of housing now and not at some point in the future. The Council have chosen a strategy to deliver significant housing numbers through a range of Sustainable Urban Extensions. It is inevitable that these will not deliver quickly, through a combination of protracted planning process and the need to deliver infrastructure before housing. However, it is the Council that have determined the strategy and they could have elected to focus on an alternative strategy which delivered a greater number of smaller housing sites across key sustainable settlements in the District which would be an approach better able to deal with the significant backlog in a more timely manner and avoid the need to commit to the Liverpool methodology. It can be seen therefore that the Council have chosen a development strategy; the consequence is an inability to deal with backlog properly; and therefore has used the strategy decisions to argue against dealing with the backlog quickly at odds with the PPG and Framework. This is a significant issue since there are already considerable quantities of people on housing waiting lists and pent up demand in terms of seeking a home in the District, issues which will be perpetuated by the Councils chosen housing distribution strategy and consequential and inevitable commitment to the Liverpool methodology as a means to validate the approach. Further strong objections are lodged in respect of Paragraph 5.34D and the Councils desire to disaggregate housing land calculations for the purposes of five year housing land supply.There is no legitimate reason why this approach should be taken, it can draw no justification from the PPG or Framework, and is evidence of the Council seeking to avoid a commitment to delivery housing as quickly as possible.</td>

<td>1762</td>
<td>&gt; SECTION 5 - PROVIDING NEW HOMES &gt; MAIN 30</td>
<td>Introduction We write on behalf of our client the Church Commissioners for England (the Commissioners) which manages a well-diversified investment portfolio to support the Church’s work across the country and is a long-term landowner in the West Oxfordshire area. We understand that the Council are currently consulting on the proposed modification to the Submission Draft West Oxfordshire Local Plan Local Plan 2031 Consultation.</td>
</tr>
</tbody>
</table>
The Submission Draft West Oxfordshire Local Plan Local Plan 2031 seeks to address the initial concerns raised by the inspector in December 2015 following the first Local Plan hearing which dealt with strategic matters. These concerns generally related to the overall housing requirement and deliverability of these sites. We recognise that in response West Oxfordshire has increased the total housing requirement to 15,950 homes, allocated new sites and increased the size of strategic sites.

We submitted representations in relation to the following five sites located within West Oxfordshire on behalf of the Commissioners to the West Oxfordshire Call for Sites in February 2016:

- Land North of Bampton
- Deanery Farm
- Church Close
- Land at Lower Farm Cottages
- Ansells Farmyard

All five sites are immediately available and are suitable for allocation. We understand these have not been included within the Submission Draft West Oxfordshire Local Plan Local Plan 2031 and instead there is a focus on larger allocations.

Housing

In terms of MAIN 30 Policy H2, the Commissioners recognises that there is provision to develop undeveloped land within or adjoining the built up area to meet the housing needs, however the policy refers to criteria in point 3 which has now been deleted. The previous text included under point 3 should be reinstated to make this policy sound.
available now and can deliver around 75 homes in a sustainable location to help boost housing supply, ensure a 5 year supply of housing and provide robustness to ensure that the housing requirement of the modified WOLP 2031 is delivered.

v. The following representations provide further information on the site at Churchill Road and should be read in conjunction with Edgars' general representations regarding housing supply which are not repeated here.

1.0 LAND NORTH WEST OF 34 CHURCHILL ROAD, CHIPPING NORTON

1.1 Our clients object to Policies H1 (Main Modification (MM) 24), H2 (MM29 and MM30) and CN2 (MM143) on the basis that the modified plan has not identified sufficient housing land to provide for a 5 year supply of housing and that land at 34 Churchill Road and adjoining land to the north west should be allocated for around 75 homes to help address this deficiency.

Site and Surrounding Area

1.2 The site is situated in the south western part of Chipping Norton, which is the third largest town in the district offering both residents and visitors a good range of services and facilities. The site lies approximately 700m from the town centre and is a similar distance from Chipping Norton Leisure Centre and Chipping Norton School (secondary). There are bus stops located on Churchill Road (within 150m of No. 34 Churchill Road), which provide access to a high frequency service to Oxford (53) and a slightly less frequent service to Banbury (488). There is also a service (X8) that links Chipping Norton with Kingham Railway Station. The site is therefore in a highly sustainable location.

1.3 The site comprises approximately 4.5 hectares of land, identified on the plan attached at Appendix 1. The land forms part of the side of a valley and slopes downwards from the south east to the north west of the site. There is a two story dwellinghouse at 34 Churchill Road with vehicular access and egress to the front of the property via dropped kerbs in two locations. Access to the land at the rear (north west) of 34 Churchill Road is via an agricultural gate and grassed track situated between numbers 34 and 32 Churchill Road. The land north west of 34 Churchill Road is not currently actively used for agriculture, except for occasional grazing. Consequently, it could be described as unmanaged grassland, declining in quality. This land is divided into two parts, almost equal in area, by a tree-lined stream which runs from the site’s southernmost corner to its northernmost corner. The trees along this line are substantial and mature and are effective as a visual barrier.

1.4 The principal north-eastern and south-eastern site boundaries are shared with residential properties at The Leys and Lords Piece Road respectively. The rear gardens which back onto the site include considerable tree cover in the more Representations on behalf of the owners of land north west of 34 Churchill Road, Chipping Norton West Oxfordshire Local Plan 2031 Proposed Modifications Consultation, December 2016 historic environment of The Leys. There is less tree cover in the 20th century residential development at Lords Piece Road which forms the more elevated backdrop to the site. There is a small group of industrial buildings, with a high number of trees in the curtilages, immediately adjacent to the site’s northwestern boundary along the route of a former railway line in the floor of the valley. The group contains some relatively modern structures, which are unremarkable, but among them sits Bliss Mill. This is an imposing 19th century building (now converted to apartments), Grade II* listed and a notable local landmark. Beyond the industrial buildings lies the Chipping Norton Regulated Pastures, which is common land with open public access for recreation. Open countryside lies to the south west of the site.
1.5 The site falls within the Cotswolds Area of Outstanding Natural Beauty, the Chipping Norton Conservation Area and the setting of the listed building (Bliss Mill).

1.6 The 'Cotswolds AONB Landscape Strategy and Guidelines' (adopted in June 2016) states in relation to 'Vale of Moreton Farmed Slopes' Character Area (in which the site is situated) that the expansion of existing settlements onto the Farmed Slopes is regarded as a local force for change, with a range of potential landscape implications including the 'encroachment of built development onto the Farmed slopes intruding into the landscape, particularly on the more prominent upper slopes'.

1.7 It is to be noted in this instance that the site does not occupy the uppermost slopes. The existing substantial tree cover, both on the perimeter and a belt running through the site, makes the land less visually prominent than the common land to the north west and the open countryside to the south west.

1.8 The Chipping Norton Conservation Area Character Appraisal identifies the bowl-shaped valley landscape setting of Bliss Mill as the most significant area of open space in the Conservation Area. While it is envisaged that within the Conservation Area the existing buildings, land uses, historic settlement patterns and open spaces should remain largely undisturbed, the guidance does enable development where views into and out of Chipping Norton, as well as views within Chipping Norton, are not harmed and where existing features of historic, visual or natural importance, such as trees, hedgerows, ponds, stone walls, paths and tracks are incorporated.

1.9 The site is not within an area that is at risk from flooding.

Representations on behalf of the owners of land north west of 34 Churchill Road, Chipping Norton West Oxfordshire Local Plan 2031 Proposed Modifications Consultation, December 2016.

1.10 The site has not previously been submitted to the Council or considered in the Strategic Housing and Economic Land Availability Assessment (SHELAA).

Key Planning Site Considerations

1.11 Additional technical work, including a Landscape and Visual Impact Assessment is currently being undertaken and likely to be available in advance of further WOLP 2031 examination hearings. Without prejudice to this further work, the following planning considerations are identified as relevant to the potential allocation of the site.

The principle of housing development at Chipping Norton

1.12 Chipping Norton is identified as a Main Service Centre in the Local Plan 2031. Draft WOLP Policy H2 permits new housing on undeveloped land adjoining the built-up area to meet identified housing needs. As such housing development on the site would be acceptable in principle.

1.13 Draft Policies H2 and CN2 seek to secure the delivery of 2,400 new homes focused on Chipping Norton. Delivery is proposed partly through a strategic mixed used development area of around 1,400 dwellings on the eastern side of Chipping Norton. The provision of an eastern link road is an integral part of the proposed Strategic Development Area (SDA).

1.14 In Edgars opinion, there is a significant risk of delays in delivery on SDAs which is likely to result in
continuing housing supply deficits. There is a need to address deficiencies in the 5 year housing supply. Given the long lead in times of SDAs, addressing the current supply deficiencies is best achieved through allocating additional non-strategic developments such as Land at 34 Churchill Road and adjoining land to the north west.

1.15 In Edgars opinion, the development of Land at 34 Churchill Road and adjoining land to the north west can comply with Policy H2 in being adjacent to the built up area of a Main Service Centre in the settlement hierarchy. Settlement character, AONB landscape and Conservation Area

1.16 Draft Policy OS2Locating Development in the Right Places states that a significant proportion of new homes, jobs and supporting services will be

Representations on behalf of the owners of land north west of 34 Churchill Road, Chipping Norton West Oxfordshire Local Plan 2031 Proposed Modifications Consultation, December 2016 focused within and on the edge of the main service centres of Witney, Carterton and Chipping Norton. Development is required to:

- form a logical complement to the existing scale and pattern of development and/or the character of the area;
- Be compatible with adjoining uses and not have a harmful impact on the amenity of existing occupants;
- as far as is reasonably possible protect or enhance the local landscape and the setting of the settlement/s;
- be provided with safe vehicular access and safe and convenient pedestrian access to supporting services and facilities; and
- Conserve and enhance the natural, historic and built environment.

1.17 The site is surrounded on three sides by existing residential and industrial development. It is considered that allocating the site for housing would form a logical extension of the existing built-up area, without encroaching on the more visually prominent parts of the valley that would otherwise cause harm to the setting of Bliss Mill.

1.18 Use of the land for housing is entirely compatible with the adjoining residential development at The Leys and Lords Piece Road. The retention of existing trees and hedgerows, especially on the perimeter of the site, will help to ensure that there is no harmful impact on the amenity of the existing occupiers of properties in these two roads. It will also help to preserve and enhance the character and appearance of the conservation area.

1.19 A new all-purpose access road is capable of being provided off Churchill Road following demolition of the existing dwelling at No. 34. A 6.0m wide access road with 9.0m radii (like the Lords Piece Road/Churchill Road junction) with 2.0m wide footways each side would be constructed. Junction visibility splays of 2.4m x 43m are readily available in accordance with the 30mph speed limit on Churchill Road. An offset distance of 20m (centrel ine to centrel ine) would be provided between the new access and the cul-de-sac on the opposite side of Churchill Road, named Edward Stone Rise. This specification would facilitate a development of up to 150 dwellings. However, having regard to the importance and sensitivity of the landscape, the character and appearance of the Conservation Area and the setting of the listed building, it is considered that around 75 dwellings would represent a more appropriate scale of development for this site.
1.20 If the total number of dwellings on the site generated a need for a separate emergency access, this could be achieved by utilising existing rights of access to the gate in the northern corner of the site, from The Leys/Station Road. It would also provide an additional means of access for pedestrians and cyclists. In this manner, the development would be provided with safe vehicular access and safe and convenient pedestrian access to supporting services and facilities.

1.21 The character and appearance of the AONB and the Conservation Area can be preserved and enhanced through a high quality evidence based development within a strong and extensive landscape framework. While the extent of the land is 4.5ha, around 75 dwellings are proposed leaving significant scope for open space and landscaping.

1.22 In Edgars opinion, a development of this scale does not comprise ‘major’ development for the purposes of NPPF paragraph 116 and that a development within a strong landscape framework will not have a significant adverse impact on the landscape and scenic beauty of the wider AONB. The public benefits of the scheme would outweigh any harm to the Conservation Area and the setting of Bliss Mill.

1.23 Although further work is being undertaken, Edgars consider that development can be achieved on the site which makes an important contribution to meeting housing land supply in a sustainable location, without significant impact on the settlement character, AONB or the Conservation Area.

1.24 Further detailed technical information is likely to be available during the next stages of the WOLP 2031 Examination.

As above, we fully support proposed Main Modification 30, which sets out the District Council’s decision to meet the objectively assessed need for housing, as set out in the Oxfordshire Strategic Housing Market Assessment (March 2014). We further support the Council's decision to assist in meeting a part of the Oxford City unmet housing need.

In total, the West Oxfordshire Local Plan 2031 seeks to accommodate some 15,950 new dwellings in the period 2011-2031.

The significant increase in development needs to be accommodated has resulted in the Council needing to increase the scale of development on previously proposed allocated land, as well as identifying new sites. As set out in more detail below, we believe there is scope to increase the scale of development at East Witney, with development here being adjacent to the largest and most sustainable settlement in West Oxfordshire District.

We comment further on the revised sustainability appraisal below.

We do have concerns over the Council’s proposed intention to apply the Liverpool approach to meeting its backlog. This approach runs the risk of the District Council not meeting its overall housing requirement, with the backlog potentially not being met until 2031, or after. We would strongly recommend use of the Sedgefield approach, which would enable other sites to come forward earlier in the Plan period, increasing the likelihood of the objectively assessed need for the District being met in full, within the Plan period.

We note that in the final paragraph of the section of draft Policy H2 on Main Service Centres, the Plan states:

<td>MM745</td>
<td>Gladman Developments Limited</td>
<td>Richard House (Gladman)</td>
<td>Mr House</td>
<td>1793</td>
<td>&gt; SECTION 5 - PROVIDING NEW HOMES &gt; MAIN 30</td>
<td>7.1 Policy H2 – Delivery of New Homes is proposed to be modified to the effect that the calculation of the Council’s 5 year supply of housing land will be undertaken applying the Liverpool methodology which provides for the backlog of housing to be delivered over the whole of the remaining plan period rather than in the first 5 years which applies under the Sedgefield methodology. This is surprising given the Council’s acceptance at a host of recent appeals, including Land off New Yatt Road, North Leigh and Land off Burford Road, Witney, that the Sedgefield methodology should be used to calculate housing land supply.</td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td>7.2 Gladman maintains that the housing land supply should be calculated using the Sedgefield methodology. Gladman note the examining Inspector’s Preliminary Findings – Part 2 (IN016 dated December 2015), where it was set out whilst discussing the 5-year supply calculation in paragraph 2.14 onwards that: ‘National Guidance seeks any such shortfall to be made up in the next 5 years. On the Council’s own assessment of land supply this is achievable and so the Council accepts that an alternative approach could not currently be justified. If the housing requirement is increased, the shortfall will be greater and may need further action to address. The Council needs to have particular regard to National Guidance on this matter, as the “Liverpool method” (spreading the shortfall over the whole plan period) is not mentioned.</td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td>7.3 The Sedgefield approach is the approach most commonly advocated by the Planning Inspectorate, as it is more closely aligned with the NPPF’s objective of significantly boosting the supply of housing (paragraph 47), by requiring any historic shortfall to be addressed within the first five years. This approach is also explicitly endorsed within the PPG (paragraph 3-035-20140306) which states:</td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td>&quot;Local planning authorities should aim to deal with any undersupply within the first 5 years of the plan period where possible. Where this cannot be met in the first five years, local planning authorities will need to work with neighbouring authorities under the ‘Duty to Cooperate’. “</td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td>7.4 The Liverpool (or residual) approach, where shortfall is made up over the full length of the plan period, has been supported in some instances, but only where there is evidence that past delivery has been restricted by housing moratoria or other constraints, and this is also referred to in paragraph 3-035-20140306 of the PPG. West Oxfordshire has never been restrained in this way and insufficient justification has been advanced to support this approach. Gladman would highlight that this approach does not appear to be consistent with the NPPF. Whilst neither approach is mentioned in the NPPF, it is clear that the emphasis is on meeting the housing need in full on an annual basis and as a minimum. It seems at odds with that approach to spread past housing delivery failure over a longer period into the future when it should already have been delivered. The undersupply is substantial and should be made up as soon as possible.</td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td>7.5 Gladman would be strongly opposed to the inclusion of Oxford City Unmet Housing Need combined with the Liverpool Approach, as this would represent a double constraint to meeting housing needs. It should be borne in mind that any further delay in meeting the unmet housing need is failing those households who have needed both market and affordable homes since the start of the Plan period. It is important to remember that this is not just a theoretical mathematical exercise, there are households who need homes now so it is unreasonable to expect them to wait until later in the plan period before their housing needs are</td>

Delivery of New Homes (MM 29 and 30)

A key element in the testing of the soundness of the WOLP is whether the Plan as proposed to be modified, is whether the plan will ensure the delivery of the identified housing requirement set out in the Plan. This relates to the 15,950 dwellings proposed by 2031 and the obligation set out in the Planning Practice Guidance to ensure that there is a deliverable five year supply of housing land - facilitated by the Plan. The issue of five year supply is of considerable importance not least because of the possible reliance on the Council to resist further sustainable development options, if the outcome of the Local Plan examination was that the Council had established a position that it could demonstrate a five year supply of housing land. Hallam Land Management has been involved in a recent planning inquiry in relation to proposals for 91 dwellings plus care home and assisted living uses at Burford (APP/D3125/W/15/3139687). The outcome of the inquiry is awaited at the time of writing but involved inquiry sessions in November 2016 following the publication of the Councils Updated Housing Land Supply Position in October 2016. It is this update that the Council relies upon to support the conclusion in Main Modification 30 that the Plan and existing provisions will meet both requirement to meet housing needs over the plan period to 2031 but also the five year period to 2021. Having considered the Council’s evidence base in some detail, Hallam conclude that the Plan is not ensuring the delivery of housing needs in the District contrary to the assertions of the Council in the Main Modifications and in the evidence base. There are a number of reasons for which this include: -- the Councils suggested adoption of the "Liverpool method" for considering the substantial shortfall of housing;
In this circumstance, Hallam consider that it is important for the Local Plan to make additional allocations to realistically help ensure that the housing required to meet needs is delivered.

The allocations in the Plan do not achieve this objective (irrespective of their individual merits and suitability which, in Hallam’s view, also means that further allocations should be made).

In the following paragraphs, a summary of Hallam’s concerns regarding the deliverability of the Plan’s housing objectives is set out. Hallam would look to substantiate those views at the forthcoming resumption of the Examination.

Sedgefield v Liverpool approach.

In Main modification 29 and 30 the Council sets out a new approach - which is to adopt the Liverpool method for assessing five year supply.

While no detailed consideration was given to this issue in the first session of the Examination, paragraph 2.15 of the IN016 (the Inspector’s Preliminary Findings Part II) warns the Council that it should have particular regard to National Guidance on this matter, as the “Liverpool Method” is not mentioned”.

The Council have consistently used the Sedgefield approach to address the housing shortfall whereby the backlog of housing is met in the first five years of the plan period. The October Housing Land Supply Position Statement however sets out that the Council now believe that the Liverpool method is the most appropriate way of addressing the shortfall – over the plan period as a whole. MAIN 29 inserts text into the draft Local Plan that seeks to explain that the Liverpool method would place strain on the delivery of housing, meaning that in excess of 1,000 homes would need to be built in the first 5 years. MAIN 29 states that the Sedgefield approach ‘could only be achieved through by releasing a large number of sites that have been assessed by the Council as unsuitable for new housing’. This comment is not considered to be a valid reason for employing the Liverpool method as it is predicated on the Council having not allocated enough sites for housing rather than there being sites in the pipeline. There are clearly additional and sustainable opportunities that could come forward and help meet identified housing needs.

It is the Sedgefield method that is more with the NPPF, and paragraph 47 in particular which states that the shortfall should be moved forward from later in the plan period. The Planning Practice Guidance is clear. Paragraph Reference ID: 3-035-20140306 considers “How should local planning authorities deal with past under-supply?” The short answer given in the Planning Practice guidance is that: “Local planning authorities should aim to deal with any undersupply within the first 5 years of the plan period where possible. Where this cannot be met in the first 5 years, local planning authorities will need to work with neighbouring authorities under the ‘Duty to Co-operate’.”

The Guidance does not suggest an alternative to the Sedgefield approach. If the scale of the shortfall can’t be met within the first five years of the Plan then the solution is not to abandon the Sedgefield approach – or the attempt to meet needs that are urgent but to meet such needs as is possible and also to look to work with neighbouring authorities through the “Duty to cooperate”. This is not proposed by the Local Planning...
Authority.

It can make no sense to plan to meet housing needs that are assessed as having arisen between 2011 and 2016, and that haven’t been addressed in that period, at some undetermined point in the future - say 2026 - 2031. Deferring meeting needs is not consistent with the NPPF.

The Sedgefield approach is entirely consistent with the urgency stressed in the NPPF in relation to meeting housing needs because it seeks to ensure housing is provided as quickly as possible. It is unsurprisingly that appeal decisions have consistently employed the Sedgefield approach.

The fact that the Council has consistently applied the Sedgefield method, and this approach has been endorsed by Inspectors at recent appeals in the district (Burford Road, Witney), further illustrates the Council’s change of position as ill-judged. The October 2016 Housing Land Supply Position Statement sets out that the ‘validity of this approach will be debated through the Local Plan process’ however as it currently stands, the Council have provided no substantive justification for this approach. The Sedgefield remains the most appropriate method for addressing the shortfall, and given the significant shortfall and under delivery, the Council should accept this position rather than causing unnecessary delay to the delivery of much needed homes by not allocating enough sites to deliver the shortfall in the first 5 years. Adopting the Sedgefield approach, the Council accepts that it does not have enough land identified to meet housing requirements. This is not an acceptable approach given the scale of housing need and the large shortfall in meeting urgent housing needs.

5% v 20% buffer

The issue of the appropriateness of a 5% buffer was considered by the Local Plan Inspector in his preliminary findings in December 2015 (IN016). The conclusions were that delivery had been well below the local plan in recent years but that “it would not be reasonable to conclude, at present, that there had been persistent under-delivery”. This was because recent under delivery was partly excused by over delivery in the preceding 5 years against the South East Plan (and notwithstanding the limited provision that was sought in the SEP).

The Local Plan Inspector’s conclusions were both preliminary, and related to that point in time. Specifically, the Inspector pointed to circumstances where a 5% buffer should not be applied:

- “If delivery continues to be below that which is required, future decision makers may take a different view”;
- and moreover
- “the Council would be in a more robust position going forward if the plan creates a 5 year supply with more than a 5% buffer”.

Subsequently, Inspectors reaching decisions in respect of housing land supply in West Oxfordshire have opted to employ a 5% buffer.

Equally decisions have built on the WOLP Inspector’s conclusions by cross referring to the “tipping point implied in the Inspectors report” (when the adoption of a 20% buffer becomes appropriate).

With the publication of the Housing Land Supply Position Statement in October 2016 matters have now progressed further. The data profile has moved on six months and been confirmed. The completion of just 246 dwellings in 2015/16 represents another year of very substantial under delivery -since the Inspectors
initial conclusions. Moreover in the Main Modifications a new housing trajectory is proposed. Still no more than 515 dwellings are anticipated by the Council in the present year (2016-17) (NEF/App 12). The Council on its own figures therefore anticipates at least another year of under delivery.

In the light of this most recent evidence, and the sheer scale of the shortfall in delivery in the Local Plan period it would seem appropriate to reconsider the need to adopt a 20% buffer for the assessment of housing land supply and the plan period. By so doing, a robust approach can be adopted which will increase the options and choice for housing land to address the substantial under-delivery, and to reduce the risk of further shortfalls in delivery in the future. As it stands the Plan makes no provision for resilience.

Housing Supply

In its Housing Land Supply Position Statement (October 2016) the Council has comprehensively updated its estimate of the sites and other sources of supply that it considers will contribute towards meeting the need for housing in the five year period from 1 April 2016.

This responds to the expectation in Planning Practice Guidance that “Local Planning Authorities will need to provide robust, up to date evidence to support the deliverability of sites, ensuring that their judgements on deliverability are clearly and transparently set out”).

In presenting updated information, the Council has taken the opportunity to reorganise its categorisation of its sources of supply. In so doing it is worth noting at the outset that the updating of the Council’s position has resulted in a limited increase in the Councils estimate of available supply only. Hitherto the Council suggested that some 4,067 dwellings could be completed in a five-year period from 1 April 2015. The Council’s estimate has risen to 4,514 only, in setting out updated evidence to a 1st April 2016 base date.

At the same time - as outlined above - the Council has accepted a significant increase in its estimate of OAN and there has been a very substantial rise in the already considerable backlog or housing shortfall in the plan period.

Existing Commitments

In Appendix 1 of the Housing Land Supply Position Statement, the Council includes a schedule of 43 sites, all bar two of which are expected to deliver at least 10 dwellings in the period 1 April 2016 to 31 March 2021.

Collectively, the Council expects some 2,740 dwellings to be delivered on these sites in that five-year period.

A number of these sites I have reviewed in my evidence to date. Others are advanced by the Council for the first time.

For a variety of reasons that the Council continues to considerably overstate the likely completions in this category.

First, now relies on a number of sites that have been granted planning permission at a point beyond the base date for the assessment (1st April 2016). Specifically, such sites include a number permitted on appeal, and a few permitted by the authority, well beyond the base date of the five-year supply assessment, for instance:

- Burford Road (Witney) [150 dwellings] -granted on appeal on 24 August 2016;
One of the major concerns of adding sites "post hoc", is that this results in a comparison between the claimed supply and the requirement that is a comparison of apples and pears. What the Council proposes is a comparison of the supply in October 2016 with the requirement on 1 April 2016. The Council's comparison fails to take account of what will inevitably be a further increase in the backlog/shortfall between April and October 2016 as completions continue to lag substantially behind the requirement. This applied also to the small site commitments 94 of which were granted after 1 April 2016.

Second, a number of sites relate specifically to C2 uses - in the form of care homes and extra care. These include Sites 2 and 3 - Coral Springs, Witney (155 units), Site 22 - Penshurst School, Chipping Norton (93 units) and Site 32 - Freeland House (40 units)

Third, there are specific concerns regarding a number of sites. For instance while the Council has downplayed considerably its expectations of North Curbridge (West Witney) and while the Council's Housing Land Supply Position Statement (October 2016), indicates that a full application for infrastructure has just been submitted and some pre reserved matters application activity has taken place, the position fundamentally remains the same - no permission has yet been issued with a section 106 agreement still to be signed. The slippage documented at the previous session of the Examination continues and extends. There is no certainty at the end of the day that it will be signed and completed, or when. As delay is built on delay, we are already six months into the five-year period from 1 April 2016. Even if the outline consent were to be issued now (and there is no evidence to suggest that it will be), infrastructure details have only just been submitted and there will be significant lead in time before commencement could begin on site. We consider that the Council’s estimate of 350 completions is highly optimistic.

Very similar circumstances prevail in relation to the land to the land east of Carterton 300 dwellings. A resolution to grant permission was obtained but this is now two years ago now. The Housing Land Position Statement October 2016 provides no significant update in relation to progress on the site. No further details appear to have been lodged. No evidence is provided of activity in moving the site forward. Reference to the site being in single ownership is made with the implied suggestion that this provides more certainty as to delivery. In reality, the site is controlled by a single developer - Bloor Homes - and the expectations of some 300 completions delivered on the site by 31 March 2021 - even if the section 106 were signed now are highly ambitious.

Draft Local Plan Allocations

The Council's latest evidence of supply continues to rely substantially on emerging Local Plan sites to deliver a substantial proportion of the required completions in the five years from 1 April 2016. In total some 1,035 dwellings are anticipated on 11 different sites comprising 23% of the Councils estimate total five year supply of 4,514 dwellings.

This is similar in scale to the 1,000 dwellings anticipated in the Council's previous Housing Land Supply Position (CD6.2). However, the composition of that supply has changed. Rather than some 1000 dwellings as previously assumed on four strategic sites - east of Chipping Norton, north of Witney, REEMA Central and
east of Witney - the Council has now recognised that no more than 281 dwellings might be anticipated on these four sites (of which 200 are anticipated on the land to the east of Chipping Norton SDA and 81 on REEMA north and central).

The vulnerability of the delivery assumptions in respect of land east of Chipping Norton was addressed in the first part of the examination. The Council's latest Housing Land Supply Statement (October 2016) recognises that this is a "large strategic site with potentially large lead in time" (page 75). The hope canvassed by the Authority is that some parcels e.g. the Pillars and the former Parker Knowle site might be capable of early release and had been subject to pre-application approaches.

However, no application was indicated in the October 2016 Position Statement and in any event the capacity of any such applications remains far from clear. It would seem most unlikely to amount to the 200 dwellings that the Council anticipates on the site in the five-year period (now 4.25 years away).

In the suggested Main Modifications to the Local Plan, officers are suggesting to the Council that the SDA east of Chipping Norton is substantially recast. It is to increase in size from 600 dwellings to 1400 dwellings and to embrace land now to the north and the south of the London Road. This will have significant new implications for the delivery of housing within the SDA. In particular, the implementation of the SDA now (it did not before) requires a new "eastern link road connecting the Banbury Road to the A4026/A361 via the London Road". The ability to deliver that essential infrastructure depends on land ownership issues ("the proposed eastern link road is likely to need to be routed across land in the ownership of the Town Council much of which is in use as allotments as well as areas of community woodland") with delivery and/or the planning of the delivery of that infrastructure likely to impact significantly on the ability to commence any development on the site;

In all such circumstances, and in the absence of any clear evidence to the contrary, the prospect of resolving the substantial range of issues prior to the commencement of any development on site in order to allow 200 dwellings to be on site in 4.25 years’ time seems remote.

With the exception of Site 48 (REEMA) all the remaining sites where the Council now anticipates housing completions by 2021 are sites that have been newly identified in the suggested Main Modifications.

In addition to evidence of suitability, it is necessary for the Council to demonstrate that the site is deliverable and that the new homes anticipated to be completed within five years is achievable. No evidence is presented within the Housing Land Supply Position Statement October 2016 that this is the case. Generally, and simply, it is suggested that the location is highly desirable and that there is evidence of developer interest. The submission of an application would be a demonstration of potential achievability and availability in a five year period yet in many cases that does not exist.

We are already 6 months into the five-year period. In the absence of a planning application now, availability can’t readily be established. Further, in the absence of an application now, it is difficult to imagine that there is any certainty that significant completions might be achieved in the remainder of the five-year period.

Summary and Conclusions in respect of Housing Land Supply

Drawing together the conclusions in respect of housing land supply and delivery in the Local Plan it is apparent that the Plans provision is unlikely to ensure the delivery of housing to meet housing needs. Moreover the assumptions made in seeking to demonstrate such a position fail to provide flexibility or seek

<td>Elements of the policy are unsound because they are unjustified. On schemes of 50 or more dwellings, the Council wants at least 25% of all homes to be built to Part M4 (2) - accessible and adaptable homes. The policy states that it may require more than this. We have noted the report titled Supporting West Oxfordshire’s Aging Population (November 2012) has referred to the SHMA 2008 report that assessed that 14.3% of the households in the District included a member with a disability. While we consider that there is a reasonable case for a maximum of 25% we do not agree that the evidence supports a level of provision that is higher than this. 25% would appear to be the maximum level that could be justified. The report titled Supporting West Oxfordshire’s Aging Population (November 2012) records that the SHMA 2008 report assessed that 4.9% of households contained a member who was a wheelchair user. The requirement for 5% Part M4 (3) - wheelchair accessible homes on schemes of 50 units and more – seems justified in terms of need. However, the wording of the policy is a little confusing. The Council states that it will seek, as a minimum, the provision of at least 5% wheelchair homes. But it then says in the subsequent paragraph that the provision of wheelchair homes is “encouraged although it is not required by this policy”. It is therefore not entirely clear what the Council wants and how an applicant to respond to the wording in this policy. In terms of the viability of adopting these standards, unfortunately it is very unclear from the Local Plan and CIL Update Viability Study (February 2015) whether the Council has factored these costs into its assessment. We note pages 51 and 52 of the viability report. The Council initially used BCIS costs that were based on a five year sample. Paragraph 5.82 observes that this will have reflected the then current standard for energy efficiency which was Part L 2010. Part L of the Building Regulations has moved on since then and is Part L 2013 (which came into effect from 6 April 2014), so results based on this as a build cost would not necessarily provide a reliable picture of the cost of meeting the current Building Regulations. Secondly, we note in paragraph 5.87 that the Council has sensitivity modelled the cost of building to Code 5 to reflect the cost of building “over baseline Part L 2010”. Unfortunately, even Code Level 5 will not provide a reliable indicator of the costs associated with constructing to the new optional technical standard Part M4 (3) - wheelchair accessible homes. It may be adequate to cover the cost of building to Part M4 (2), but not for Part M4 (3). The cost of building wheelchair accessible homes is very expensive. The DCLG’s report that was published to inform the Housing Standards Review titled Housing Standards Review: Cost Impacts (DCLG, September 2014) places the cost of building wheelchair homes above the current Building Regulations and excluding additional space costs (associated with the Nationally Described Space Standard) as varying</td>

Main Service Centres, Rural Service Centres and Villages

We support the inclusion of the words “or adjoining” the built up area. This should help to allow those settlements falling within this classification to allocate suitable sites through the neighbourhood planning process. However, there is no guarantee that neighbourhood plans will be produced, or in time, and the number of non-strategic allocations is very low. It is still unclear whether the distributed housing requirement in Policy H1 can be delivered if delivery on the strategic schemes falters. As a contingency, the Council should consider making more allocations at the villages using some of its windfall allowance. |

between £7,764 for a one bedroom flat up to £23,052 for a four bedroom detached home. The average is €16,779. These are considerable costs. The Council needs to factor these costs into its assessment as it could reduce how much money can realistically be collected through CIL or it could reduce the level of affordable housing provision.

We have considered the appendices to the Council’s Local Plan and CIL Update Viability Study but it is not clear from this report where this sensitivity analysis is located within the residential appraisal tables.

| MM746         | Hallam Land Management  | Hallam Land Management | - | Hallam Land Management | 1843 | > SECTION 5 - PROVIDING NEW HOMES > MAIN 30 | The guidance in the PPG concerning how local planning authorities should deal with past under-supply is unequivocal, and is that: Local planning authorities should aim to deal with any undersupply within the first 5 years of the plan period where possible. Where this cannot be met in the first 5 years, local planning authorities will need to work with neighbouring authorities under the ‘Duty to Cooperate’. (PPG, Paragraph:035 Reference ID: 3-035-20140306). The PPG does not therefore recognise anything other than the Sedgefield Approach to dealing with any housing backlog. Moreover, to do so would be inconsistent with provisions of the NPPF to ‘boost significantly’ the supply of housing pursuant to the core planning principle to proactively drive and support sustainable economic development to deliver, inter alia, the homes that the country needs. A backlog of supply implies a backlog of housing need, which in turn has implications for affordability and even homelessness. It is therefore imperative that any backlog is cleared as quickly as possible. That is particularly so in circumstances such as the current one where the housing delivery trajectory is already ‘back-loaded’ and the risks of slippage considerable. Spreading the backlog across the plan period will further backload the delivery trajectory, and increase the risk of carrying it forward into the next plan period with the implications for housing need and affordability. The Inspector has endorsed the need to follow the Sedgefield approach, advising the Council of the need to have particular regard to National Guidance on the matter, as the ‘Liverpool Method’ is not mentioned (IN 016, para. 2.15). Moreover, he made it clear that the 5% buffer should be applied to the shortfall in delivery during the plan period to date. He also considered it would be prudent for the Plan to create a five year supply with a buffer in excess of 5% to allow for any unexpected delays on some sites, and which would therefore result in a more robust position for the Council going forward (para. 2.14). It is therefore essential that the backlog is front-loaded and cleared within the first five years. The only alternative provided for in Government guidance is to work with neighbouring authorities to resolve it under the Duty to Cooperate. There is no evidence that the Council has attempted to do this. Even if the Council is correct that the consequence of applying the Sedgefield Approach would be the release of sites considered to be unsuitable for new housing, boosting significantly housing delivery is an imperative to which very great weight is properly given in the planning process, and is likely to override the objections to the allocation of less preferred sites that can make an early contribution to increasing the delivery trajectory. In considering which sites to allocate, the elimination of the back-log in the first five years should therefore feature prominently in the allocation strategy. Since the Council has chosen not to follow this approach, it ensues that its allocation strategy is flawed and should be revisited. In particular, it is likely to require allocation of smaller sites in areas which are currently a lower focus for growth. Since, having regard to the table of Adjusted Supply set out above, the Council is likely to be required to make significant additional provision for housing land, it will afford the opportunity to distribute more growth to smaller settlements and sites in the northern part of the plan area, that have the potential to deliver housing at an early stage in the

| MM754        | Persimmon Homes Wessex  | Claire Hambleton| Ms               | 1893       | > SECTION 5 - PROVIDING NEW HOMES > MAIN 30 | This modification states that the Council will apply the 'Liverpool' (residual) approach in calculating the five year housing land supply, whereby the past backlog of housing 'under-supply' which totals 1,836 homes in the period 2011-2016 is delivered over the whole of the remaining plan period (2016-2031) rather than the immediate 5 year period (2016-2021) which would be required under the alternative 'Sedgefield' methodology. Using the Liverpool approach is unsound. When determining whether there is a five year housing land supply in accordance with paragraph 47 of the NPPF, it is necessary to consider the extent to which there is any shortfall in delivery to date. The housing requirement covers the period 2011 to 2031 and any under-supply to the most recent update point when measured against the requirement must be included as part of the future requirement against which to measure the supply. The Sedgefield approach seeks to ensure that any shortfall in supply is made up within the 5 year period and therefore accords with the Government policy set out within the NPPF, to boost significantly the supply of housing. It also accords with the PPG at paragraph ID 3-034. If delivery has not been achieved at the rate expected then there must be a shortfall on the first date at which the five year supply is considered and that must be taken into account. The approach of utilising the residual, or Liverpool, approach to dealing with the shortfall to date would, in effect, be compounding past under delivery rather than boosting significantly the supply of housing in line with the NPPF. Therefore, the most appropriate method to accommodate past shortfall in West Oxfordshire Council is the Sedgefield approach. This modification should make clear that when a five year housing supply is not in place, the NPPF makes it clear that planning applications should be decided in light of the presumption in favour of sustainable development and that local plan policies relating to the supply of housing should be considered to be out of five year period following adoption of the Plan. There is no justification for not including the needs arising from Oxford City Council in the five year supply. They are part of the overall requirement for the plan period, and their exclusion from the five year supply currently exacerbates the back-loading of the delivery trajectory and the consequential enhanced risks of undershooting the requirement. There are again parallels between the current circumstances and those considered at the recent Plan Examination in North Somerset. In North Somerset the Council similarly argued that the 50% uplift in the housing requirement mid-way through the Plan period meant that the back-log should be spread over the plan period, not least having regard to the necessary elevation of delivery rates to unprecedented levels. The Examination Inspector held as follows: Regarding the Sedgefield approach, the plan period is already at its halfway point and the Weston Villages are shortly expected to make a significant contribution to housing supply. It is important that the under-supply that has arisen as a result of the increase in the housing requirement through modified Policy CS13 is remedied as soon as practicable. The Sedgefield methodology, which corrects the backlog within the first 5 years, is therefore the appropriate approach. Given the level of commitments that already exist, there would seem to be no reason why, subject to an appropriate allocation strategy, not least in terms of the residual requirement, the delivery trajectory cannot be escalated to respond to the backlog within the first five years, and without compromising the distribution strategy 'to steer a significant proportion of future development to the Witney, Carterton and Chipping Norton Sub-Areas'.

<td>the backlog of housing, so that the backlog will be delivered over the whole Plan period, not, as the Sedgefield method proposes, over the next 5 years. It is suggested that the Plan should endeavour to clear the backlog of housing need as soon as possible, and that small sites such as Land East of Main Road, Stanton Harcourt, would provide the opportunity to deliver much needed housing now, contributing to clearing the housing backlog well before the end of the Plan period. Our client supports the Council's position that smaller 'non-strategic' allocations can help to ensure a deliverable housing supply in the short-term. Accordingly 15 'non-strategic' sites are proposed for allocation at Paragraph 5.30b, resulting in a potential supply of circa 1,700 dwellings. Of these 1,700 units, a delivery of circa 685 dwellings is anticipated in the immediate 5 year supply period (2016-2021, Main Modification 201 - Appendix 2: Housing Trajectory). In order that the Proposed Modifications enable the Council to meet its ambition of short term site delivery (Paragraph 5.30a), Our Client is of the view that additional 'non-strategic' housing allocations should be made at Paragraph 5.30b. This approach will allow for a more flexible approach to housing supply. In light of the Council's reported 5 year housing land supply delivery position set out by Main Modification 29 and specifically at Paragraph 5.34b, it is here (and at Main Modification 30) that the Council proposes to utilise the 'Liverpool' method in respect of meeting past backlog of housing under supply. The Inspector, in his Preliminary Findings Report – Part 2 (IN016, December 2016), commented: · On the basis of the plan's current requirement of 525 dwellings per annum there has already been a shortfall in delivery since 2011; · National guidance seeks any such shortfall to be made up in the next 5 years; · If the housing requirement is increased, the shortfall will be greater and may need further action to address; · The Council needs to have particular regard to National Guidance on this matter, as the 'Liverpool' method is not mentioned. The continued application of the 'Liverpool' Method is of concern. The application of this methodology is not considered 'sound'. The NPPG reports at Para 035 that 'local planning authorities should aim to deal with any undersupply within the first 5 years of the plan period where possible'. In this respect the Plan is not positively prepared or justified. The concerns previously raised by the Inspector are therefore shared and it is considered that the Sedgefield approach should be applied in order that a 'sound' Plan is prepared. The Council reports at Paragraph 5.34c that ‘insufficient capacity has been identified through this Local Plan and the supporting assessment of housing land availability to deliver a 5-year supply under the Sedgefield approach and it could only be achieved by releasing a large number of sites that have been assessed by the Council as being unsuitable for new housing’. To ensure flexibility, increase short term delivery and assist the Council in rectifying its existing housing...</td>

L&P objects to Main Modifications 15, 16, 27, 30 and 172 of the current consultation, as set out below.

We object to specifying the residual (Liverpool) approach to the 5 year housing land supply in Policy H2, as this is contrary to the NPPF. The NPPF aims to boost significantly the supply of housing, in part by ensuring choice and competition in the market for land. To achieve this the NPPF specifies that

“Where there has been a record of persistent under delivery of housing, local planning authorities should increase the buffer to 20% (moved forward from later in the plan period) to provide a realistic prospect of achieving the planned supply...”

With regard to the above point, we further note that paragraph 5.34d makes it clear that the housing target for Eynsham is to be ringfenced on the basis that the bulk of this is allocated for meeting Oxford’s unmet needs. We question whether this is consistent with the NPPF and its objective of boost significantly the supply of housing. |
We object to specifying the residual (Liverpool) approach to the 5 year housing land supply in Policy H2, as this is contrary to the NPPF. The NPPF aims to boost significantly the supply of housing, in part by ensuring choice and competition in the market for land. To achieve this the NPPF specifies that “Where there has been a record of persistent under delivery of housing, local planning authorities should increase the buffer to 20% (moved forward from later in the plan period) to provide a realistic prospect of achieving the planned supply...”

With regard to the above point, we further note that paragraph 5.34d makes it clear that the housing target for Eynsham is to be ringfenced on the basis that the bulk of this is allocated for meeting Oxford's unmet needs. We question whether this is consistent with the NPPF and its objective of boost significantly the supply of housing.

Spitfire Homes supports the Council’s position that smaller ‘non-strategic’ allocations can help to ensure a deliverable housing supply in the short-term, providing a shorter ‘lead-in’ time to development in comparison to strategic site delivery. Accordingly 15 ‘non-strategic’ sites are proposed for allocation at Paragraph 5.30b, resulting in a potential supply of circa 1,700 dwellings. Of these 1,700 units, a delivery of circa 685 dwellings...
is anticipated in the immediate 5 year supply period (2016-2021, Main Modification 201 - Appendix 2: Housing Trajectory).

In order that the Proposed Modifications enable the Council to meet its ambition of short term site delivery (Paragraph 5.30a), Spitfire Homes is of the view that additional 'non-strategic' housing allocations should be made at Paragraph 5.30b. This approach will allow for a more flexible approach to housing supply delivery, required by the NPPF.

This is pertinent, in light of the Council’s reported 5 year housing land supply delivery position set out by Main Modification 29 and specifically at Paragraph 5.34b. It is here (and at Main Modification 30) that the Council proposes to utilise the 'Liverpool' method in respect of meeting past backlog of housing under supply.

The Inspector, in his Preliminary Findings Report – Part 2 (IND16, December 2016), commented:

* On the basis of the plan’s current requirement of 525 dwellings per annum there has already been a shortfall in delivery since 2011;
* National guidance seeks any such shortfall to be made up in the next 5 years;
* If the housing requirement is increased, the shortfall will be greater and may need further action to address;
* The Council needs to have particular regard to National Guidance on this matter, as the 'Liverpool' method is not mentioned.

The continued application of the 'Liverpool' Method is of concern to Spitfire Homes. The application of this methodology is not considered 'sound'. The NPPG reports at Para 035 that 'local planning authorities should aim to deal with any undersupply within the first 5 years of the plan period where possible'. In this respect the Plan is not positively prepared or justified. Spitfire Homes share the concerns previously raised by the Inspector and it is considered that the Sedgefield approach should be applied in order that a 'sound' Plan is prepared. The Council reports at Paragraph 5.34c that 'insufficient capacity has been identified through this Local Plan and the supporting assessment of housing land availability to deliver a 5-year supply under the Sedgefield approach and it could only be achieved by releasing a large number of sites that have been assessed by the Council as being unsuitable for new housing'.

To ensure flexibility, increase short term delivery and assist the Council in rectifying its existing housing supply shortfall it is evident that additional site allocations should be made. For this reason, Spitfire Homes identifies its land interest at Standlake as a deliverable and developable site in accordance with Paragraph 47 of the NPPF.

Evidence Base: Strategic Housing and Economic Land Availability Assessment

Spitfire notes the very recent publication of the Council’s Strategic Housing and Economic Land Availability Assessment (SHELAA). Spitfire Homes’ interest is identified by site reference 158 (Malthouse Farm). An area of 6.44 hectares is reported. The SHELAA concludes that the site is available and achievable though not suitable for residential development. Spitfire Homes responds to specific extracts of the Council’s SHELAA through the following table (see original representations):

This representation is made in respect of Land between Witney Road and High Street, Finstock.

This site is Ref: 267 in the Strategic Housing Land Availability Assessment (SHLAA). The site lies outside the AONB. The owners of the site are willing to make the site available for housing development, as recorded in the SHLAA. We disagree with the assessment of suitability in the SHLAA for the reasons set out in Section 4.7.
Finstock is in the ‘village’ tier of the Plan’s Settlement Hierarchy (Table 4.1, p35) where development will be supported where it respects the village character and local distinctiveness and would help maintain the vitality of the local community. Our promoted site at Finstock would accord with the above criteria and we propose that the site is allocated to secure the delivery of new housing on suitable/available sites as sought by proposed Policy OS2 and the relevant supporting text.

Land & Partners Ltd (L&P) is a privately owned development company which has identified this site as a sustainable location for development. L&P has reputation for engaging with the local community and securing high quality design, tailored to the local context. Negotiations are progressing with the landowners and the intention is to engage with residents and the Parish in early 2017.

Objection to Main Modification 30

We object to specifying the residual (Liverpool) approach to the 5-year housing land supply in Policy H2, as this is contrary to the NPPF. The NPPF aims to boost significantly the supply of housing, in part by ensuring choice and competition in the market for land. To achieve this the NPPF specifies that

“Where there has been a record of persistent under delivery of housing, local planning authorities should increase the buffer to 20% (moved forward from later in the plan period) to provide a realistic prospect of achieving the planned supply...”

With regard to the above point, we further note that paragraph 5.34d makes it clear that the housing target for Eynsham is to be ringfenced on the basis that the bulk of this is allocated for meeting Oxford’s unmet needs. We question whether this is consistent with the NPPF and its objective of boost significantly the supply of housing.

Strong objections are raised in respect of Paragraph 5.34B of the Plan and the intention to apply the Liverpool approach to dealing with backlog the of 1,836 homes. Applying the Liverpool methodology would not comply with the PPG which makes clear that dealing with backlog in the next five years is the preferred approach. Furthermore, delaying dealing with the backlog would be to reward failure, and would not be consistent with the Framework which requires boosting significantly the supply of housing now and not at some point in the future.

The Council have chosen a strategy to deliver significant housing numbers through a range of Sustainable Urban Extensions. It is inevitable that these will not deliver quickly, through a combination of protracted planning process and the need to deliver infrastructure before housing. However, it is the Council that have determined the strategy and they could have elected to focus on an alternative strategy which delivered a greater number of smaller housing sites across key sustainable settlements in the District which would be an approach better able to deal with the significant backlog in a more timely manner and avoid the need to commit to the Liverpool methodology.

It can be seen therefore that the Council have chosen a development strategy; the consequence is an inability to deal with backlog properly; and therefore has used the strategy decisions to argue against dealing with the backlog quickly at odds with the PPG and Framework.

This is a significant issue since there are already considerable quantities of people on housing waiting lists and pent up demand in terms of seeking a home in the District, issues which will be perpetuated by the Councils chosen housing distribution strategy and consequential and inevitable commitment to the Liverpool
Further strong objections are lodged in respect of Paragraph 5.34D and the Council's desire to disaggregate housing land calculations for the purposes of five year housing land supply. There is no legitimate reason why this approach should be taken, it can draw no justification from the PPG or Framework, and is evidence of the Council seeking to avoid a commitment to delivery housing as quickly as possible.

<td>MM777</td>
<td>Hook, Nockles &amp; CALA Management</td>
<td>-</td>
<td>-</td>
<td>2117</td>
<td>&gt; SECTION 5 - PROVIDING NEW HOMES &gt; MAIN 30</td>
<td>Policy H2 relates to the delivery of new homes within the emerging plan period 2011-2031. Paragraph 5.34d states: “Furthermore the Council's assessment of 5-year housing land supply will treat the additional provision being made at Eynsham for Oxford City's housing needs (2,750 homes in the period 2021 - 2031) separately and the requirement will only form part of any five-year supply calculation that includes housing delivery assumptions from 2021 onwards.” It is accepted that the Eynsham garden village (as principally a stand-alone settlement) is intended to deliver units to meet Oxford City's needs. The intention to increase the OAN to meet those needs is commended. However, one queries the justification for the 1,000 dwellings on the western edge of the village (please refer to the representation in respect of Policy H1) to satisfy the same objective. The urban extension for 1,000 new dwellings has no direct relationship with Oxford. The basis on which this then satisfies the needs of Oxford City is questioned. Objection is also made over the delivery of 2,750 units within a ten year period. The proposed allocated sites at Eynsham would have to deliver 275 units per year, presuming delivery of that number started and were successfully completed in 2021. This position is strongly contested. Once land deals and equalization agreements are resolved, planning permissions gained and major infrastructure works are undertaken there is no scope for delivering the expected level of growth. CALA are aware of a recent report by Nathaniel Lichfield Planning that suggests that delivery of housing on strategic sites such as this will not normally exceed 150 dwellings per annum. In addition lead in times associated with large strategic sites can be found in the Hourigan Connolly, A study in respect of the delivery of urban extensions, page 58 (enclosed). The examples identify the average time period from submission of an application to a grant of outline planning permission is 34 months with legal agreements taking on average an additional 23.6 months to be resolved and Reserved Matters applications are usually dealt with in 6-9 months with the first units being delivered within 12 months of this approval. On average it takes 6.5 years once an outline application has been submitted for dwellings to be delivered on larger strategic sites. Therefore, new dwellings won't be delivered until the latter part of the Plan period. This is supported by one of the urban extension sites at Witney which from submission of the outline application has taken approximately five years to this point, and the section 106 is still yet to be signed. One would therefore suggest that a more reasonable timescale would be for the delivery of actual units to commence in 2024. To then build and sell 275 homes each year as currently proposed would mean completing effectively 138 dwellings on each site pa. Taking into consideration the potential lead in times there would actually only be a 7 year period to complete 2,750 dwellings for the urban extension at Eynsham and the new garden village. This would result in house builders having to deliver 393 dwellings across the two site. Applying a completion rate of 50 dwellings per annum per housebuilder that would mean having 3 housebuilders on land west of Eynsham, and then 5 housebuilders on the new Garden Village site for the last 7 years of the plan period.</td>
<td></td>
</tr>
</tbody>
</table>
Once again that is simply not a realistic assumption in both circumstances given the location of the urban extension (i.e. on the edge of a village) and the expectation for 5 housebuilders to operate on a single site. In fact it is totally at variance with the recent NLP report.

Indeed, one also questions the ability for 1,000 homes forming part of the urban extension to the existing village and the garden village allocation to both attract the level of market demand to sell that many units per annum even if both sites were ready to deliver 275 units pa from 2021. What justification can be provided to support that intention, mindful also of other strategic sites being promoted in closer proximity to Oxford?

The trajectory expected on some of the larger strategic sites is also questioned allowing for lead in times to obtain planning permissions, resolve equalisation agreements and sell land, discharge conditions and then put the relevant infrastructure in place. Once again there is considered to be an over expectation as to how many units can be completed each year based on levels of developer and market interest.

Therefore CALA suggest that additional land or sites need to be allocated to offset the failure to meet the necessary housing trajectory going forward. One site in particular that will help to plug the gap in housing delivery over the short term is land to the north of New Road, and between Station Road and Mount Owen Road, Bampton. It is identified in other representations, for example, to Policy H1 that the site is free of constraints (including any landscape and environmental designations) and is capable of delivering housing in the short term.

CALA support the inclusion of the wording within the second criterion to the Main Service Centre, Rural Service Centres paragraph within the amended policy H2. The policy quoted below now makes provision for smaller greenfield sites, such as land at Station Road and Mount Owen Road, Bampton, to come forward for development if the housing requirement is not being met. The suitability of the site and its delivery is set out in the representation made on behalf of CALA to Policy H1.

"Main Service Centres, Rural Service Centres and Villages

1. New dwellings will be permitted at the main service centres, rural service centres and villages in the following circumstances:

- On sites that have been allocated for housing development within a Local Plan or relevant neighbourhood plan;

- On previously developed land within or adjoining the built up area provided it is not of high environmental value (e.g. ecology) and the loss of any existing use would not conflict with other plan policies. This will include the provision of starter homes exception sites;

- On undeveloped land within or adjoining the built up area where the proposed development is necessary to meet identified housing needs and is consistent with the criteria in 3) below and other policies in this plan in particular Policy OS2."

The policy now supports development that adjoins the built up area provided that it is not of high environmental value and that the loss of any existing use would not conflict with other Local Plan policies.

CALA recommend that the reference within the Main Service Centres paragraph – quoted above should remove the reference within the third bullet point to “criteria 3)” as it has now been deleted within the main
In conclusion, Main Modification 30, relates to the 5 year supply in the context of Oxford City's needs. CALA Homes raises concern over the delivery of 2,750 units in the period 2021-2031 to meet Oxford City's needs. Indeed, it has been demonstrated that the average lead in time across the country for large urban extensions on average is 6.5 years with evidence of a large extension at Witney taking 5 years from submission to the final revisions of the s.106. Therefore it is not realistic to anticipate delivery at land west of Eynsham and the new garden village until 2024 at the earliest. In addition to the above, to then deliver 2,750 homes in a 7 year period across both the west of Eynsham site and the new Garden Village, this would result in land west of Eynsham having to deliver 143 dwellings per annum and the new Garden Village having to deliver 250 dwellings per annum. Applying a completion rate of 30 dwellings per annum per housebuilder that would mean having 3 housebuilders on the land west of Eynsham site, and then 5 housebuilders on the new Garden Village site. Such expectation of delivery is unsustainable and on this basis modification number 30 is deemed unsound.

CALA welcomes that greater flexibility is provided within Policy H2 to allow for development that adjoins the built up areas of Main Service Centres, Rural Service Centres and Villages providing it is not of high environmental value to come forward for development.

Overall, CALA are of the view that the Proposed Modifications to the emerging Local Plan cannot be declared sound in their current format.
West Oxfordshire will be met (excluding unmet need from Oxford City), as summarised in the table on page 6 of the attachment.

Clearly the Council are already failing to plan for sufficient new homes to meet the housing requirement for West Oxfordshire of 13,200 over the Plan period.

We do note that currently no allowance is made for additional allocations which could be brought forward through Neighbourhood Plans of which there are currently five in preparation in the District, as well as the made Chipping Norton Neighbourhood Plan, which does not seek to allocate any sites for development. Whilst additional development could be forthcoming through allocations in Neighbourhood Plans there is no guarantee that this will occur.

The NPPF makes clear that Local Plans “should meet objectively assessed needs, with sufficient flexibility to adapt to rapid change.” As currently drafted the Local Plan is failing not only to make provision for its own acknowledged objectively assessed need but allows for no flexibility to ensure the housing target is achieved. Concern is therefore raised that the Plan as currently drafted is not positively prepared, justified, effective or consistent with National Policy. There should be no delays to deliverability on any allocated site, in the context of a current 5 year housing land supply shortfall, and therefore reference to their delivery post-2021 should be deleted. Further consideration is likely to be required as to how this requirement can be met, including through additional allocations.

Five Year Housing Land Supply

The revised Policy as currently drafted states: “With regard to 5-year housing land supply the Council will apply the residual (Liverpool) approach with any under-supply (backlog) of housing to be delivered over the remaining plan period to 2031. The additional provision being made for Oxford City’s needs will be incorporated into housing delivery assumptions from 2021 onwards.”

The NPPG is clear in its guidance to LPA’s (D 3-035-20140306) that they should aim to deal with any undersupply within the first 5 years of the plan period where possible. The NPPG makes clear that in circumstances where the LPA is unable to meet its undersupply in the first 5 years then it will need to work with neighbouring authorities under the ‘Duty to Cooperate.’ This matter was specifically raised by the Inspector in his Initial Findings: Part 2.

Proposed paragraph 5.34c seeks to justify the Council’s proposed approach by advising that:

“...To provide a 5-year supply under the Sedgefield method, in excess of 1,000 homes per year would need to be built consistently over the next 5 years, well in excess of what has been achieved in West Oxfordshire in the past, even during several housing booms. Insufficient capacity has been identified through this Local Plan and the supporting assessment of housing land availability to achieve a 5-year supply under the Sedgefield approach and it could only be achieved by releasing a large number of sites that have been assessed by the Council as being unsuitable for new housing. The Council does not consider this to be an appropriate way forward and that addressing the shortfall in a more measured way over the remaining plan period using the Liverpool approach is considered to be entirely justified.”

As is clear from the extract above the NPPG clearly advocates the Sedgefield approach as the most suitable approach. This is borne out in numerous appeal decisions and case law. Where the Sedgefield method cannot be achieved then the LPA must seek to liaise with neighbouring authorities under the Duty to Cooperate in
order to redistribute this requirement. Although the Council have sought to justify its decision to seek to pursue the Liverpool method, no indication is provided as to whether the approach advocated in the NPPG of seeking the assistance of neighbouring authorities to meet this shortfall in the short term has been pursued.

Given the discussions which have taken place in respect of the Oxford City apportionment, and the fact that full agreement has yet to be reached on this matter, it would appear unlikely in any event that such assistance would be forthcoming.

Given our comments above it is clear that the Council will need to propose additional allocations in order to meet the housing requirement. Given the shorter lead in times associated with small to medium size allocations it is likely that allocations of this scale would allow the Council to also address its backlog using the Sedgefield approach. Consideration should also be given to whether elements of the larger strategic sites could form an early phase of development without compromising the comprehensive development of the wider site.

Whilst the Council seeks to justify the use of the Liverpool method by referring back to past delivery rates, it must be recognised that these were set within a significantly different planning context when there was not the requirement as set out within the NPPF to meet the full objectively assessed need. The historic low levels of delivery are a reason to boost the supply of housing as soon as possible because the need has already arisen and has not yet been met, rather than being a reason to suppress the rate at which housing should come forward.

In light of the above, in order to ensure its soundness the Plan should make provision to meet the backlog in housing need using the Sedgefield method with the backlog delivered in the first five year period rather than being spread across the remaining Plan period [Liverpool] as currently proposed.

As currently drafted it is unclear whether the Council are proposing that post-2021 the supply of those allocations identified to meet the needs of Oxford City only would be accounted for, and that the additional 2,750 dwellings would not be added to the requirement side of the five year housing land supply equation. Plainly such an approach would be unsound and the Inspector in his preliminary findings advised that the apportionment figure should be counted within the five year housing land supply. As such we would recommend that the policy text is re-worded to clarify this position.

Other Matters

The previously proposed criteria in point 3 of the policy are proposed to be deleted and instead are addressed in Policy OS2 as discussed above. With regards to the Main Service Centres etc., the Policy wording in the third bullet continues to state development will be allowed where “it is consistent with the criteria in 3) below”. For clarity this wording therefore requires amendment.

Overall Housing Number in the Plan

We support Main Modifications (MM) 22, 24 and 30 which propose that the Local Plan should provide for at least 15,950 homes in the period 2011-31, including 13,200 to meet the district’s needs and 2,750 homes as West Oxfordshire’s contribution to providing for Oxford’s unmet housing need.

Soundness Reason: Positively Prepared

WODC propose to use the figure of 660 homes pa as their OAN which is the mid-point figure in the SHMA.

| MM788 | Mr Murray and Mr Blackwell | Mr Murray and Mr Blackwell | Mr | Murray and Blackwell | 2308 | > SECTION 5 - PROVIDING NEW HOMES > MAIN 30 | This would be sufficient to support forecast economic growth and would help to meet affordable housing needs.  
(For information we do not accept Peter Brett’s rebuttal to our criticisms of the methodology used in the Oxfordshire Strategic Housing Market Assessment Partial Update. It remains our view that at least 598 homes p.a. are needed to meet the labour force requirement. It is not clear how WODC justify adopting the SHMA figure of 660pa as their OAN – presumably they have decided to uplift the number of homes Peter Brett identified as necessary to support economic growth to ensure new housing makes a significant contribution to the district’s identified affordable housing needs).  
The inclusion of 2,750 homes for Oxford’s unmet need is in line with the Growth Board’s apportionment of unmet need and reflects the terms of the Growth Board Memorandum of Cooperation1 signed by five of the Oxfordshire councils including WODC and the County Council. The figure has been tested at a high level through the post SHMA process and shown to be deliverable.  
Delivery period for Oxford’s Unmet Need sites and the 5 year housing supply calculation  
We support MMs 22, 29 and 30 which set out WODC’s proposal to use the Liverpool method to calculate their 5yr housing land supply figure and that sites for unmet need are unlikely to deliver housing until 2021 and therefore will not form part of the housing land supply calculation until 2021 onwards.  
Soundness Reason: Effective  
Use of the Liverpool method which spreads housing backlog across the whole plan period is a realistic approach, given the ambitious district OAN figure of 660pa and the scale of housing backlog in West Oxfordshire.  
The Growth Board apportionment is based on a common assumed start date of 2021 for the commencement of development. This assumption doesn’t preclude earlier delivery, but does recognise the complexity of the issues which need to be considered and factors in reasonable lead times to enable options to come forward and to be fully considered through the Local Plan and development management process. |
| MM791 | Greenwich Lane Owners | Greenwich Lane Owners | - | Greenwich Lane Owners | 2319 | > SECTION 5 - PROVIDING NEW HOMES > MAIN 30 | 30. MAIN30: The proposed modification appears to contain an error, the amenity criteria (point 3) have been deleted to avoid duplication with policy OS2, however the policy still makes reference to the deleted criteria.  
31. The modification seeks to rely upon the Liverpool method for addressing historic under-delivery of housing, deferring provision across the plan period. We disagree with this approach; the district and broader housing market area has a critical housing shortage. Each undelivered home represents an un-housed individual or family; it is clearly unacceptable for this to persist throughout the plan period and should be addressed as a priority. The Sedgefield method is the only way to ensure housing needs are reflective of the situation and to ensure policies are in place to address housing shortages as a matter of urgency |
INTRODUCTION AND SUMMARY

i. These representations are submitted in response to the West Oxfordshire Local Plan 2031 – Proposed Modifications Consultation, December 2016 (WOLP 2031 Modifications). They are made by Edgars Limited on behalf of Lagan Homes who have land under their control off School Hill, Minster Lovell. The land extends to 2.5ha and is identified on the plan attached as Appendix 1 to these representations.

ii. Lagan Homes object to Table 4.1 (Main Modification, MM, 14) Policies H1 (MM24), H2 (MM29 and MM30) and WIT4 (MM115) on the basis that insufficient sites for housing have been identified to provide for a five year supply of housing in accordance with national policy.

iii. Edgars Limited have prepared representations on behalf of a number of clients which demonstrates that a five year land supply cannot be demonstrated when appropriate assumptions are used in accordance with national planning policy and guidance. These representations conclude that only a 2.7 year supply can be demonstrated. Edgars consider that additional non-strategic sites are required to be allocated to ensure sufficient housing land supply.

iv. Land at School Lane is under the control of Lagan Homes, is available now and capable of delivering around 25 homes in a sustainable location to help boost housing supply, ensure a 5 year supply of housing between 2016-2021 and provide robustness to ensure that the housing requirement of the modified WOLP 2031 is delivered.

v. Lagan Homes object to Table 4.1 and the reference to Minster Lovell 'south of the Burford Road' (MM14). There is no reason why Land at School Lane and north of the Burford Road is in anyway less sustainable in locational terms than other land on the edge of the village.

vi. The following representations provide further information on the Land at School Lane and should be read in conjunction with Edgars Limited’s representations regarding housing supply which are not repeated in detail in these representations.

1.0 LAND AT SCHOOL LANE, MINSTER LOVELL

1.1 Lagan Homes object to Table 4.1 (Main Modification, MM, 14) Policies H1 (MM24), H2 (MM29 and MM30) and WIT4 (MM115) on the basis that the modified plan has not identified sufficient housing land to provide for a 5 year supply of housing and that Land at School Lane should be allocated for around 25 homes to help address this deficiency.

Site and Surrounding Area

1.2 The site lies adjacent to the village of Minster Lovell and the B4047 Burford Road some 3 miles (5km) west of Witney and 4 miles (6km) north of Carterton. There is an off-road cycle path to Witney (within reasonable cycling distance) and an hourly bus service to Witney. The village also has a number of amenities including a small shopping parade, Post Office, Primary School, Public House and Butcher. There are also several businesses along the Brize Norton Road.

1.3 The site is a single 2.5ha open grassland field immediately north of the Burford Road and west of School Lane. It is part of the north facing slope of the Windrush Valley. A site plan is attached at Appendix 1.
1.4 The site lies some 1m below the Burford Road and is screened by a strong hedgerow along the road frontage such that the open nature of the site is not readily perceptible from this frontage.

1.5 On the southern side of Burford Road is some modern development which is also mostly set back from the road frontage. The White Hart Public House (Listed Grade II) along with the War Memorial and Methodist Church frame the Brize Norton Road junction opposite the site.1.6 There is a farm access in the south western corner and a strong hedgerow bounds to the west along with a Thames Water pumping station.

1.7 School lane bounds to the east. The lane lies some 1.5m below the site and views are filtered through by boundary vegetation.

1.8 School Lane leads to Little Minster. College Farm within Little Minster lies at the southern end of the site and there is a scattering of modern and historic buildings along School Land and School Hill.

1.9 School Lane and College Farm fall within a Conservation Area. A Conservation Area Appraisal has been prepared by the Council. The site is not identified in the appraisal as where there is a notable sensitive view into or out of the Conservation Area. Buildings adjacent the site are identified as Locally Listed including College Farm and the Old School.

1.10 The site forms part of the northern slopes of the Windrush Valley and falls within the Cotswold AONB. The West Oxfordshire Landscape Assessment (WOLA) identifies the site as part of the Upper Windrush Character Area and part of Semi-Enclosed Valley Side Farmland which is noted to be sensitive to views within an across the valley but where there may be limited opportunities to accommodate small scale development within a strong landscape structure. The settlement pattern identifies scattered villages along the valley with Charteville (New Minster) a notable exception being sited on higher land.

1.11 The site is well screened from the Burford Road, but there are some more immediate views through boundary hedgerows from School Lane. The site is appreciable but not prominent in middle distance views back from the opposite side of the valley just south of Ashhall Leigh. From here existing dwellings at Little Minster and north of the Burford Road are well screened by existing trees.

1.12 There is no planning history of direct relevance to the site. The site lies within Flood Zone 1 Low Risk.

1.13 Access is available to School Lane and to the Burford Road. Further technical work is underway to establish the most appropriate access point.

1.14 Lagan Homes have only recently acquired an interest in the site and as such the site has not previously been submitted to the Council or considered in the Strategic Housing and Economic Land Availability Assessment (SHELA). Key Planning Site Considerations

1.15 Lagan Homes are in the process of undertaking technical and development design work to inform a planning application and this is likely to be available in advance of further WOLP 2031 examination hearings. Without prejudice to this further work, the following planning considerations are identified as of particular
relevance to the potential allocation of the site.

The principle of housing development in Minster Lovell, north of the Burford Road

1.16 Minster Lovell is identified as a village in the Local Plan 2031. Draft WOLP Policy H2 permits new housing adjacent to villages to meet housing needs. As such housing development on the site would be acceptable in principle.

1.17 Draft Policies H2 and WIT4 seek delivery of 4,400 homes in the Witney Sub Area including Minster Lovell. Delivery is proposed through three Strategic Development Areas (SDAs - West, East and North Witney) each with strategic highway improvements. Land West of Minster Lovell is proposed for allocation confirming the suitability of the settlement for additional housing development.

1.18 There is residual windfall requirement of 304 homes within the Witney Sub– Area.

1.19 In Edgars opinion, there is a significant risk of delays in delivery on SDAs which will likely result in continuing housing supply deficits. There is a need to address deficiencies in the 5 year housing supply. Given the long lead in times of SDAs, addressing the current supply deficiencies is best achieved through allocating additional non-strategic developments such as Land at School Lane, Minster Lovell.

1.20 Land at School Lane lies adjacent to Minster Lovell, close to amenities and public transport links. The village bus stops, public house and shops are located on the opposite site of the Burford Road to the site in very close proximity. The village school lies within 500m to the south. The site is also within cycling distance of the West Witney employment areas (2km) and Witney Town Centre (5km). In locational terms, it is sustainable. Indeed, the site lies closer to village amenities than the proposed allocation west of the village.

1.21 It is noted that Table 4.1 of the plan includes Minster Lovell as a village within the settlement hierarchy but this has been modified to (MM 14) to include reference to Minster Lovell ‘south of the Burford Road’. Lagan Homes object to this modification.

1.22 In Edgars opinion, the development of Land at School Lane and north of the Burford Road can comply with Policy H2 in being adjacent to a village in the settlement hierarchy.

1.23 There is no reason why land at School Lane, north of the Burford Road, is in any way less sustainable in locational terms than other land adjoining the village. Indeed, land at School Lane is in closer proximity to many of the villages amenities, including the school, shops and public house than other land on the edge of the village.

Village character, AONB landscape and Conservation Area

1.24 Draft Policy OS2 Locating development in the right places states that villages are suitable for limited development which respects the village character and local distinctiveness and would help to maintain the vitality of these communities. Development should form a logical complement to the settlement pattern, protect landscape character and settlement identity.

1.25 The site does not appear to have been part of the historic Chartist settlement for which Minster Lovell is

<td>Overall, I have no doubt that housing developers will be very happy with the extra allocation of houses and the fact that the overwhelming majority of land is greenfield. There are big profits to be made for house builders and land owners, many of which are the very wealthy Oxford colleges. However, although houses and infrastructure are needed the scale of development in only 15 years will transform West Oxfordshire and I fear not for the better. I doubt very much that the infrastructure, services and environmental improvements needed to keep pace with such large scale developments will be provided, let alone to a sufficient level to actually see an improvement to the lives of everyone in the area.</td>

<td>MAIN 30, Para 5.38a Not sound So starter homes will be sold at no more than 80% of open market value, making them 8 times instead of 10 times the lowest incomes (see Para 2.19). Doesn't make much difference. And Figure 5.1 shows that Eynsham lies in a High Value Zone, which will remain so as prices rise to accommodate the extra people commuting to Oxford.</td>

Council would expect an Area Action Plan for Eynsham and the Garden Village to be commenced at the earliest opportunity to take forward the delivery of these 'Strategic Development Areas'.

We support the use of the Liverpool method for determining a five-year supply outlined in clause 5.34b & H2. WODC will struggle to maintain a five-year supply as it is. The Sedgefield method is too punitive and after all, WODC traditionally over-delivered; only under-delivered because the target has been altered since the original Draft Local Plan as a result of external forces.

With regard to policy H3 & clause 5.50, we do not support the low affordable housing provision and lack of care for the elderly provision in low and medium value areas. Viability issues are understood, but we would like to see detailed figures before we are convinced. At the very least, in a District with an ageing population, housing for the elderly should be provided through all allocated sites.

Oxford Overspill and Eynsham
Regarding policies H1, H2 and clauses 5.14 & 5.19, we do not agree with the SHMA figures regarding the housing need of Oxford City. In particular the UPC is not properly understood and yet is used to justify most of the unmet need. The calculation is far too broad brush and simplistic to rely upon when setting targets that will have a major impact on the area for a significant period.

West Oxfordshire is expected to take 2,750 homes for Oxford, bringing the total to 15,950 or 800 per annum. Considering that the target suggested in 2011 was 300 per annum, this is an increase that presents a considerable challenge.

Oxford City has too many jobs for the number of people. Conversely, West Oxfordshire has too many houses for the number of jobs. The obvious and sustainable solution is to encourage more jobs in West Oxfordshire to balance the situation as opposed to building thousands more houses here, whilst encouraging jobs growth mainly in the City. It is unbalanced, illogical and unfair.

Also, it is not clear to us how hard the City is working to solve its own housing problem. The density of development is not that great at present. Is the City just sitting back and passing its problems on to the other districts? The population density in Oxford is about 23% of the density in parts of London.

As above, it certainly doesn’t make sense to plan for and allow 18% of workers created via the planned population growth here (equivalent to a significant 2,376 of the 13,200 houses in the Draft Local Plan), to commute to work in Oxford, in addition to building a new village to support Oxford’s unmet need (some 2,750 homes). This would seem to represent double counting, with over 5,000 more workers out-commuting in total over the Plan Period.

It’s debatable then whether WODC should have to contribute 2,750 homes to Oxford’s unmet need. So whilst Eynsham is the closest to Oxford and so perhaps the most obvious location, in our view the number of houses planned is too many. We are aware of City Farm in the area of the proposed Garden Village and would suggest at the very least that this area remains untouched in perpetuity and that protection is put in place.

The A40 has undergone improvements, which have helped, but queuing remains at peak times and starts a long way back from the Wolvercote roundabout. In our view, it’s not clear whether the extra traffic from the planned development at Eynsham as noted in clauses2.5a & 2.9, on top of the 18% of workers elsewhere in the District in existing and new households, can be accommodated and we are not aware of any detailed

</thead>
</table>

- **Comment**: Analysis in this regard. Should the said analysis exist, we would be happy to review it, but as it stands the ongoing A40 consultation gives limited information on the backup analysis. Buses may not help relieve traffic much as it depends where people work— not everyone will need to get to the City Centre, but elsewhere in the science parks for example. Certainly, the effectiveness needs to be proven. In any event, clauses 7.26 & 7.27b indicate that there is a funding shortfall for the A40. The reliance on developers noted in 7.28 would seem hopeful and we would question whether the funds expected from planned allocations will actually meet the shortfall.

- **Comment**: The OCC consultation on the planned improvements between Eynsham and Oxford clarify that car queuing times will not be reduced by the scheme, as traffic increases cancel out improvements. The A40 will therefore remain a misery for commuters even if improvements are made, underlining the fundamental lack of sense of encouraging outcommuting from West Oxfordshire to Oxford. The effectiveness of the park and ride will depend on how many people work on the bus route, which is not clear. We are also not sure whether WODC’s latest housing plans have been fed into the design for the A40.

- **Comment**: It is of note that clause 2.40 indicates that road deaths and injuries are worse than the national average in West Oxfordshire, indicating that we have a higher than average number of accident black spots and dangerous junctions.

- **Comment**: It is also of note that under policy E1 and clause 6.28, WODC seeks to allocate around 100Ha of employment land. This will accommodate around 7,500 jobs (based on 30 jobs per acre).

- **Comment**: Typically 50% of new jobs are on employment land and the rest are at existing premises. Therefore, about 15,000 jobs are catered for. As the total number of jobs expected is 7,900 under the SHMA, this seems excessive and inconsistent. In particular, it doesn’t make much sense to provide employment land at the Garden Village in Eynsham if that site is merely to meet Oxford’s unmet need for housing for its workers.

- **Comment**: One of the arguments we have heard repeatedly for the expansion of Oxford City is to allow the University to retain its position as a key player in research and innovation in Europe, as part of the so called ‘The Golden Triangle’ comprising Oxford, Cambridge and Imperial Universities. This sounds important, but we consider it a little elitist. These universities carry out important work for sure, but there are certainly excellent facilities for R&D all over the Country. As people who work in a technical industry, we have found that often other more pragmatic educational institutions provide more practical and so more useful services in terms of specialist research and testing. One of us is an Oxford science graduate, so we are not against the University (far from it), but we feel it should not expect its interests to affect the everyday lives of the residents of the whole County.

- **Comment**: Oxford University claims that it struggles to find and retain both technical staff and key support workers. We believe that the University could easily pay higher wages as part of the solution to its own problems. Furthermore, it makes no sense that the University is selling off land to private developers where almost certainly only a small proportion of the residents will end up working for the University.

- **Comment**: The University could instead develop the land and provide housing at low cost rent exclusively for its own (key) workers, if it chose to solve its own problems. The argument we have heard that selling the land to private developers is maximising revenue in line with Charities Commission Rules, only stacks up if the University considers short term revenue. If instead it focuses on long term sustainability, which includes financial stability, then investing in staff would be top of its agenda. In that scenario, a financial case can be
made for using land to provide its own housing. Certainly, without good people, the University will not flourish. Other major employers could also consider housing schemes. It is of note for example, that Christ Church College is known to have made a surplus of £20M from the land deal at Carterton East in West Oxfordshire and is now promoting other sites nearby. Should the University built 700 homes on a similar sized site for itself instead, it could expect to make a £7M profit on paper initially, in terms of the gap between build costs and housing value. However, the rest would be made over time in rent and increasing asset value ahead of inflation and in any event, the housing would help the University carry out important work. That sort of amount could be made on one project or one significant scientific breakthrough. Also, the type of housing the University needs could probably be built at higher density, so the site could take more than 700 units (say 900) with the same land take, if flats and small homes were the focus (albeit that some family housing will be needed).

This would make the site most effective in terms of solving a specific problem in the County. Every site should be made to work hard at what is actually needed to ensure land is not wasted.

The planned road link between Oxford and Cambridge will naturally pull growth eastwards rendering West Oxfordshire further away from the zone of influence.

Finally, on a personal note, we were disappointed by how Oxford City’s barrister attacked WODC during the first round of the Examination. He showed no sign of respecting the District and demonstrated that any co-operation just involves the District doing what the City wants. It was an eye opener regarding the lack of genuine two-way collaboration and therefore makes the allocation of 2,750 homes to this District help out the City a bitter pill to swallow.

The reference in the final bullet to H2 (1) to 'criteria in 3 below' should be removed as the criteria and section 3 have been removed. The final bullet should instead clarify that the need to meet identified housing needs shall not be a justification where the policies which are identified in footnote 9 of the NPPF require that it is not. This is required for the plan to comply with the NPPF.

The Cotswolds Conservation Board wishes to reiterate its recommendations (copied below) made at the Publication Stage in respect to this policy. The Board does not believe that the proposed modifications address our previous comments in respect to Paragraphs 115 and 116 or Paragraph 14 of the NPPF. As a result the Board continues to be concerned that the plan does not take full account of the need to conserve the landscape and scenic beauty of the AONB as per its Section 85 duty under the CRoW Act 2000.

"The Policy at present does not refer specifically to Paragraphs 115 and 116 of the NPPF (and see separate comments in respect of Paragraph 14 Footnote 9).

The only reference to AONBs within Policy H2 is within section 3 that states "where acceptable in principle." There has to be a step back from this stage to be compliant with the tests of Paragraphs 115 and 116 of the NPPF in specific relation to AONBs as this may rule out sites as being "acceptable in principle" in the first place.

Add an additional category to Policy H2 (1) and (2):
1. New dwellings will be permitted at the main service centres, rural service centres and villages in the following circumstances:

* Where sites are within or within the setting of the Cotswolds AONB, only when compliant with the requirements of Paragraphs 115 and where relevant 116 of the NPPF and in consideration of the purposes of Section 85 of the CRoW Act in relation to the conservation and enhancement of the nationally protected landscape.

and repeated again in respect of section (2):

2. New dwellings will be permitted in the small villages, hamlets and open countryside in the following circumstances:

* Where sites are within or within the setting of the Cotswolds AONB, only when compliant with the requirements of Paragraphs 115 and where relevant 116 of the NPPF and in consideration of the purposes of Section 85 of the CRoW Act in relation to the conservation and enhancement of the nationally protected landscape.”.

3.22 One of our gravest concern relating to the housing delivery strategy for the Local Plan is in relation to the high reliance on large strategic sites as listed in MM27. Whilst we do not object to the principle of the development locations per se, we do raise issues with the delivery that is expected from these sites over the plan period and in some cases, the physical capacity for them to deliver the targets suggested.

3.23 Indeed, the Council imply at paragraph 5.25 of the modified Local Plan that past completions have been low because of the lack of urgency from the development sector to bring strategic sites forward. The reality is strategic sites simply take time to properly plan and deliver, principally because their impacts are exponentially greater, they need thorough consideration, and the complexity of land ownerships and scale inevitably result in longer lead in times that those experienced with smaller, more moderate sites.

3.24 As set out in Table 3 below, SDAs are to provide 42.0%, 58.3% and 58.1% of the total number of homes required in the Witney, Chipping Norton and Eynsham-Woodstock sub-areas. This strategy needs to be considered with considerable caution. Should any of the SDA encounter delay to their delivery, these sub-areas and the district as a whole would not meet the housing requirement over the plan period. This is particularly pertinent in the case of Witney and Carterton where there are two very large commitments already which not listed in the table below (ATTACHED)

3.25 Table 4 (ATTACHED) identifies the five SDAs within the district and the number of homes they are expected to deliver over the plan period based on the Council's trajectory.

3.26 Understandably, the overall housing requirement from each of the five SDAs will only be achieved at the very end of the plan period. Thus, should the delivery of one or more SDA slip by just one or two years the plan will fail to meet its housing requirement over the plan period. This is not implausible given the complexity of delivering these SDAs, which we address in more detail in Section 4.

3.27 In order to explore delivery rates from large scale site such as the SDA's identified in the Local Plan, it is important to be aware of the following three reports / assessment, which are all based a large amount of empirical data:
<table>
<thead>
<tr>
<th>Comment</th>
</tr>
</thead>
<tbody>
<tr>
<td>* A Report into the Delivery of Urban Extensions (Hourigan Connolly, February 2014) (Appendix 1)</td>
</tr>
<tr>
<td>* Urban Extensions, Assessment of Delivery rates (Savills, October 2014) (Appendix 2)</td>
</tr>
<tr>
<td>* Start to Finish: How Quickly do Large-Scale Housing Sites Deliver? (NLP, November 2016) (Appendix 3)</td>
</tr>
</tbody>
</table>

3.28 The Hourigan Connolly report on the delivery of urban extensions highlights the difficulties and time it can take to bring forward such sites. It is worth highlighting the following key factors as reported in Section 15 of that document, namely the average times for the various stages of the planning process. These are:

- Average timescale from submission to grant of outline planning permission is 34 months;
- Average timescale for signing a legal agreement 24 months; and,
- Reserved matters applications 6-9 months.

3.29 Subsequent to that report, the Savills report looks at urban extensions and their delivery rates. In terms of lead-in time the report is clear that a period of 3-4 years from the determination of an outline planning application to the completion of site preparation and the delivery of housing is a realistic average time scale for the delivery of housing. The study notes that sites which have particularly complex land packages and or significant strategic infrastructure to deliver can take significantly longer than estimated. The report lists examples of sites where Section 106 agreements in themselves have taken 64 months to agree, with the average being 14 months.

3.30 The Savills report goes on to consider how fast a major site may build out. On average it found that in the first year of construction a site delivered 65 units, this increased to 110-120 dwellings per annum in subsequent years, before dropping towards the end of the life cycle of the development. These rates are obviously averages and dependant on a range of factors, however the report makes clear that any spikes on sites considered within the report were down to very specific delivery factors e.g. the need to deliver a large lump of affordable housing in one go due to the funding requirements of a partner.

3.31 The NLP report relates to housing delivery and assesses 70 large schemes (500 homes +) which have come forward in the last 20 years, and 83 smaller sites (50-499 homes). The report commented on average delivery from conception to start on site looking at:

- Lead in time prior to submission of an application;
- Planning approval period; and,
- Annual build out rates.

3.32 The average lead-in time for large sites is identified by NLP as 3.9 years (i.e. from the point a site is first identified in a Local Plan).

3.33 The planning approval period is measured from the validation date of the first application for the proposed development. The end date is the decision date of the first detailed application which permits the development of dwellings on site. The planning approval period of all sites, both large and small, is identified by NLP as:

- 2.8 years (0-99 homes)
- 4.1 years (100-499 homes)
- 5.3 years (500-999 homes)
- 5.6 years (1000-1499 homes)
3.34 NLP also identify the annual build-out rate falls within the overall build period of each site. The annual build out rates are influenced by the size of the site and NLP arrives at the following:

* 27 dwellings per annual (dpa) (0-99 homes)
* 60 dpa (100-499 homes)
* 68 dpa (500-999 homes)
* 105 dpa (1000-1499 homes)
* 135 dpa (1500-1999 homes)
* 161 dpa (2000+ homes)

3.35 There are clear comparable and a common theme running through each of the three assessment (i.e. large sites take time to delivery).

3.36 Given NLP’s assessment is the most recent, we have considered the trajectory from each of the West Oxfordshire SDAs using the two different variables (build out rates and lead-in times). Under each scenario, the full delivery of the 6,450 homes identified within the SDAs are not delivered during the plan period resulting in a shortfall in the delivery of the housing requirements of the district ranging from 2,210 to 2,311 homes.

3.37 Table 5 (Attached) applies the NLP lead-in time to the Council’s build-out rates, and identifies that the Chipping Norton, Garden Village and West Eynsham SDA would not be delivered in full during the plan period, resulting in an overall shortfall of 2,210 homes over the plan period.

3.38 Table 6 (Attached) applies both the NLP build-out rates and lead-in times from first identification of the SDA, and identifies that only the East Witney SDA would be delivered in full during the plan period, resulting in an overall shortfall of 2,311 homes over the plan period.

Conclusions Applying NLP Recommendations on Delivery

3.39 Whilst applying the NLP assumptions is a theoretical approach to identifying the delivery of the five SDAs over the plan period, the assumptions are based on empirical data from a large number of development proposals. As such, it cannot be dismissed out of hand. However, we do recognise that the there is a need to consider the specific circumstances in relation to West Oxfordshire and each of the SDA sites identified. Nevertheless, the above exercise clearly demonstrates that the Council’s trajectory certainly needs to be considered with significant caution.

3.40 We go on to present our own view and final position on the Council’s trajectory / delivery from the SDA’s in Section 4 having reviewed each of the sites in more detail including their ability to accommodate the suggested number of dwellings. Following this analysis is our final position that is out in Table 7 below (Attached).

3.41 As per the NLP analysis, we agree that East Witney will be completed. We have some genuine concerns over the delivery of the West Eynsham site for a range of reasons but ultimately conclude that this site could potentially be complete within the plan period. However, we take greater issue with the ability for the following three SDAs to deliver within the plan period for reasons set out below and conclude/calculate a

shortfall of 1,784 dwellings from these SDA’s over the plan period:

* Chipping Norton SDA – not capable of accommodating the number of homes proposed;
* North Witney SDA – will not commence or deliver at the rate the Council anticipate; and,
* Garden Village SDA – will not commence or deliver at the rate the Council anticipate.
NPPG makes clear that in circumstances where the LPA is unable to meet its undersupply in the first 5 years then it will need to work with neighbouring authorities under the ‘Duty to Cooperate.’ This matter was specifically raised by the Inspector in his Initial Findings: Part 2.

2.30 Proposed paragraph 5.34c seeks to justify the Council’s proposed approach by advising that:

“To provide a 5-year supply under the Sedgefield method, in excess of 1,000 homes per year would need to be built consistently over the next 5-years, well in excess of what has been achieved in West Oxfordshire in the past, even during several housing booms. Insufficient capacity has been identified through this Local Plan and the supporting assessment of housing land availability to achieve a 5-year supply under the Sedgefield approach and it could only be achieved by releasing a large number of sites that have been assessed by the Council as being unsuitable for new housing. The Council does not consider this to be an appropriate way forward and that addressing the shortfall in a more measured way over the remaining plan period using the Liverpool approach is considered to be entirely justified.”

2.31 As is clear from the extract above the NPPG clearly advocates the Sedgefield approach as the most suitable approach. This is borne out in numerous appeal decisions and case law. Where the Sedgefield method cannot be achieved then the LPA must seek to liaise with neighbouring authorities under the Duty to Cooperate in order to redistribute this requirement. Although the Council have sought to justify its decision to seek to pursue the Liverpool method, no indication is provided as to whether the approach advocated in the NPPG of seeking the assistance of neighbouring authorities to meet this shortfall in the short term has been pursued.

2.32 Given the discussions which have taken place in respect of the Oxford City apportionment, and the fact that full agreement has yet to be reached on this matter, it would appear unlikely in any event that such assistance would be forthcoming.

2.33 Given our comments above it is clear that the Council will need to propose additional allocations in order to meet the housing requirement. Given the shorter lead in times associated with small to medium size allocations it is likely that allocations of this scale would allow the Council to also address its backlog using the Sedgefield approach. Consideration should also be given to whether elements of the larger strategic sites could form an early phase of development without compromising the comprehensive development of the wider site.

2.34 Whilst the Council seeks to justify the use of the Liverpool method by referring back to past delivery rates, it must be recognised that these were set within a significantly different planning context when there was not the requirement as set out within the NPPF to meet the full objectively assessed need. The historic low levels of delivery are a reason to boost the supply of housing as soon as possible because the need has already arisen and has not yet been met, rather than being a reason to suppress the rate at which housing should come forward.
2.35 In light of the above, in order to ensure its soundness the Plan should make provision to meet the backlog in housing need using the Sedgefield method with the backlog delivered in the first five year period rather than being spread across the remaining Plan period (Liverpool) as currently proposed.

2.36 As currently drafted it is unclear whether the Council are proposing that post-2021 the supply of those allocations identified to meet the needs of Oxford City only would be accounted for, and that the additional 2,750 dwellings would not be added to the requirement side of the five year housing land supply equation. Plainly such an approach would be unsound and the Inspector in his preliminary findings advised that the apportionment figure should be counted within the five year housing land supply. As such we would recommend that the policy text is re-worded to clarify this position.

Other Matters

2.37 The previously proposed criteria in point 3 of the policy are proposed to be deleted and instead are addressed in Policy OS2 as discussed above. With regards to the Main Service Centres etc., the Policy wording in the third bullet continues to state development will be allowed where “it is consistent with the criteria in 3) below”. For clarity this wording therefore requires amendment.

So starter homes will be sold at no more than 80% of open market value, making them 8 times instead of 10 times the lowest incomes (see paragraph 2.19). Doesn’t make much difference. And Figure 5.1 shows that Eynsham lies in a High Value Zone, which will remain so as prices rise to accommodate the extra people commuting to Oxford.

As a reflection of the overreliance on large site allocations to meet its housing requirement detailed above, the implications are that having reviewed its housing trajectory, the conclusion is that it is unrealistic to boost significantly the supply of housing in the short term and as such, looks to resolve the issue by spreading the existing backlog of housing supply over the whole of the remaining Plan by using the ‘Liverpool’ method. This is on the basis that the Council claim at paragraph 5.34c that insufficient sites have been identified to provide sufficient supply to deliver a 5-year supply under the ‘Sedgefield’ method.

Reference is made to paragraph 2.15 of the Inspector’s Preliminary Findings Part 2, where it is highlighted that National Guidance seeks any such shortfall to be made up in the next 5 years. Furthermore, the Inspector made reference to the Council’s own evidence which suggests this is achievable and that as such, an alternative approach (i.e. the Liverpool method) could not be currently justified. Whilst the housing requirement has increased, 2,750 is proposed to be ‘delayed’ until 2021. We would question whether it is therefore unrealistic for the residual increase and it impact on the 5-year supply to be so significant as to warrant use of the Liverpool method, particularly in light of the Council’s recent approach to planning applications on unidentified sites and those recently granted at appeal which would indicate that there is further capacity to suggest that an uplift in delivery over the next 5 years is a realistic proposition, particularly if these are smaller sites in some of the more sustainable Villages such as Enstone where demand is high.
The Council’s Proposed Use of the Liverpool Methodology

We strongly object to WODC’s proposed use of the Liverpool methodology towards assessing housing land supply matters. This method seeks to spread the delivery of a backlog of required housing, that has previously accumulated, over the whole plan period. The basic problem with the approach is that the needed housing that has already accumulated because of a past failure of delivery is not in fact theoretically met in full until the very end of the plan period with a consequential failure to boost the delivery of housing and an inherent failure to address the first five years of need with a sufficient supply (as there will already be an unmet backlog that continues throughout that period).

The far more common approach is the ‘Sedgefield’ method. This requires authorities to meet an already acquired shortfall in the first five years and is consistent with the overall thrust of the NPPF.

It is clear that the objectives of the NPPF, and the terms of the NPPG both support and endorse the Sedgefield methodology as the appropriate methodology to use. ID 3-035-20140306 of the NPPG itself principally requires LPAs to aim to deal with any under-supply within the first five years of the plan period where possible, stating:

‘Local planning authorities should aim to deal with any undersupply within the first 5 years of the plan period where possible. Where this cannot be met in the first 5 years, local planning authorities will need to work with neighbouring authorities under the ‘Duty to Cooperate’. (Our emphasis).

The NPPG is consistent with the thrust of the NPPF. The NPPF is aimed at boosting the delivery of housing and meeting identified needs. There is no sensible justification for seeking to put off delivery of an already acquired shortfall to later parts of the plan period.

National policy and guidance therefore strongly justifies the use of the Sedgefield model here. Significantly, this is the methodology that has been applied by the Secretary of State (SoS) himself in numerous appeal cases, including a number of different decisions which followed from the introduction of the NPPF, namely:

* Land west of Shottery, Stratford-on-Avon (October 2012) [IR Para 497] (SOS case);
* Daux Avenue, Billingshurst (April 2013) [IR paras 4-47];
* Station Road, Honeybourne (August 2012) [IR para 36]; and
* Hook Norton, Cherwell (September 2013) [IR Para 198] (SoS case).

The Sedgefield approach has also been applied specifically to WODC’s area by recent Inspectors including in relation to an appeal scheme comprising the erection of 270 dwellings at Burford Road, Witney (PINS Ref. 3005737). This appeal was allowed by the Secretary of State in August 2016, in accordance with his Inspector’s recommendation. Paragraph 256 of the Inspector’s Report supports the application of the Sedgefield methodology in West Oxfordshire:

‘The Council readily admit that it has traditionally always used the Liverpool method of amortising shortfall or surplus across the remaining term of the plan period [165]. This in itself is not a good enough reason to continue its use, particularly as the PPG advises that
Council’s should aim to deal with any undersupply within the first five years of the plan period where possible. The Council suggested that in times of surplus the Liverpool method brings housing forward faster298 [165]. That is not a persuasive argument in their current position of uncertainty and does not justify a departure from the PPG guidance in the case of West Oxfordshire’s approach to this appeal299. The EiP Inspector highlighted that the Council should have particular regard to National Guidance on this matter as the Liverpool method is not mentioned300. In heeding his advice there was no credible justification presented at the Inquiry to go against the PPG in this instance.

Therefore, for these reasons the use of the Sedgefield method promoted by the appellant company is favoured in this appeal” (paragraph 256) (Our emphasis).

WODC’s proposed use of the Liverpool methodology is also contrary to the EiP Inspector’s preliminary conclusions where he stated:

On the basis of the plan’s current requirement of 525 dpa there has already been a shortfall in delivery since 2011 of 885 dwellings. National Guidance seeks any such shortfall to be made up in the next 5 years. On the Council’s own assessment of land supply this is achievable and so the Council accepts that an alternative approach could not currently be justified. If the housing requirement is increased, the shortfall will be greater and may need further action to address. The Council needs to have particular regard to National Guidance on this matter, as the ”Liverpool method” (spreading the shortfall over the whole plan period) is not mentioned. (paragraph 2.15) (Our emphasis)

Ultimately, the use of the Sedgefield approach is not a punishment for LPAs but merely the effective and positive way of boosting the supply of housing, particularly in LPA areas that have had time expired Local Plan for a number of years (as is the case for WODC). Ultimately the delay in having an up-to-date Local Plan is the Council’s responsibility and forms the true reason why under delivery has occurred over the first 5 years of the plan period. As per our comments in response to main modification no. 24, WODC have made a plan making decision not to identify a larger suite of smaller / medium sized sites to support these strategic allocations. This results in a failure to demonstrate a 5-year housing land supply when assessed using the Sedgefield methodology.

WODC’s suggested use of the Liverpool methodology is contrary to the clear advice of the EiP Inspector’s preliminary findings, the NPPG and recent Section 78 appeal decisions. The Council’s approach is therefore not justified, inconsistent with national policy and is not effective.

We support this proposed minor modification and the use of a clearer base map of the District for Figure 5.1 (Affordable Housing Zones). In order to negate any disputes regarding which Zone a site falls into however, we suggest that the Affordable Housing Zones are included in an updated Proposals Map for the District (preferably an interactive one for ease of reference).

<td>2081</td>
<td>&gt; SECTION 5 - PROVIDING NEW HOMES &gt; MAIN 32</td>
<td>We represent Rentplus, a company providing an innovative affordable housing model aimed at delivering discounted rented homes to buy for people aspiring to own their own home but trapped by ineligibility for other affordable housing. Enclosed with this consultation response is an Affordable Housing Statement by Tetlow King Planning setting out the model's compliance with the NPPF definition of affordable housing and how this should be incorporated into local plans to boost supply and meet local needs. We ask that this be read alongside our representation so that the Council’s strategic planning team take into account this innovative, Government supported, model. This innovative tenure allows families to move to more appropriate homes, freeing up social rented or affordable rented properties for households in greater need. It also allows those families trapped in private rented sector accommodation, or still living with parents to gain independence and security of tenure. The delivery of Rentplus homes as part of a mixed tenure (or mixed use) scheme also has the potential to speed up overall delivery as the product does not require grant funding, and can be occupied speedily. Partner Registered Providers are also given the option of purchasing any Rentplus property that is not bought by an individual household within the 20 year period, giving the Registered Provider an opportunity to continue offering that property as any affordable housing tenure. West Oxfordshire District is invited to enter into a Memorandum of Understanding (MoU) with Rentplus, setting out joint aims to deliver high quality housing to local people in need. This provides a best endeavours commitment by Rentplus to replenish stock sold in the District on a one for one basis, allowing for a proportion of the affordable housing stock to be retained in the local area. There are clear challenges to delivering sufficient affordable housing across West Oxfordshire as recognised by the vision to meet local housing needs. In particular it is noted that there are barriers to home ownership relating to high house values within the area; the Government has recognised the benefits of this new tenure to overcome such barriers. Rentplus could deliver a significant number of affordable homes in West Oxfordshire, helping to meet the 274 affordable dwellings required per annum within the District (as set out at paragraph 5.39 of the Plan). We are encouraging planning authorities to incorporate the tenure within Local Plans to help those in need leave inappropriate housing for high quality new homes, thus freeing up those private rented sector or affordable homes for other households in need. Paragraph 5.38a Affordable Housing</td>

</table>
7) Policy H3 – Affordable Housing

Whilst an affordable housing contribution for schemes of 6-10 dwellings in the AONB is appropriate, the requirement set out in Policy H3 in this regard appears vague and imprecise, contrary to Planning Practice Guidance. It simply requires “a financial contribution.” The Policy would benefit from detailed clarification through the provision of further information/reference in this regard.

It is not clear why all 6-10 unit schemes in the AONB should comprise market housing, as implied by Policy H3, which requires off-site affordable housing contributions. As worded, Policy H3 would require a 10 unit 100% affordable housing scheme in the AONB to make an (undefined) off-market affordable housing contribution. This is contrary to Paragraph 173 of the Framework in respect of viability and deliverability and there is no evidence to the contrary.

Taking the above into account, this part of Policy H3 makes little sense given the Local Plan’s recognition of the need for affordable housing throughout the District.

The Council’s broad-brush approach to “value areas” is flawed. It fails to take into account significant value-differences within the three “zones.” Values within the zones fluctuate significantly, dependent upon location. As set out, Policy H3 would result in a site in a supposedly higher value area being subject to a higher tariff when, in reality, the end value of the development would be lower than that in the supposedly lower value area. There is a paucity of evidence to demonstrate that the approach set out in Policy H3 properly reflects the difference in values and build costs across the whole of each value area, as well as between value areas.

In addition to the above, West Oxfordshire District Council has previously been presented with detailed evidence of land costs, build costs and development values by local landowners and developers. This information clearly demonstrated that the arbitrary high-medium-low value zone approach in Policy H3 fails to fully reflect reality. It has not been taken into account.

Consequently, to some considerable degree, the proportionate 35%, 40% and 50% figures comprise guesswork and are unsuitable for adoption as a statutory land use planning policy basis for decision making.

Policy H3, as worded, will simply slow down the planning process – contrary to national policy – as developers will need to expend further costs in slow and costly negotiations to demonstrate viability. It is Blenheim Estates’ experience that West Oxfordshire District Council does not have adequate resources to act efficiently in respect of such matters and it is respectfully suggested that Policy H3 will make an existing problem even worse.

The approach set out in Policy H3 will add further layers of unnecessary detail, much of which are ultimately based on the flawed concept of the District splitting simply and neatly into three value Zones – which it does not.

A requirement for 50% affordable housing in any part of West Oxfordshire District is unjustified. The London Boroughs have accepted that 35% affordable housing is appropriate. In London, a figure of 35% is, in 2016, widely recognised as a percentage that can help to speed up the delivery of, and fundamentally, ensure the provision of, affordable housing. Development and sales values in London are greatly in excess of those in West Oxfordshire. The Council is simply out of touch in seeking to impose a 50% affordable housing requirement at a time when residential development and the provision of affordable housing needs to be
Again, the approach set out in Policy H3 will simply result in slowing down the process, as developers need to go through the long, costly and unnecessary process of having to demonstrate viability and go through lengthy negotiations, during which time housing will not be delivered. In this way, Policy H3 fails to contribute to the achievement of sustainable development. Rather, it serves to prevent development that is sustainable from going ahead without delay.

Policy H3’s reference to “considering revised mix” prior to “accepting” lower provision appears imprecise and fails to provide a decision maker with a clear indication of how to react to a development proposal, as required by Paragraph 154 of the Framework. Notwithstanding this, its inclusion demonstrates that the Council recognises that the approach set out in Policy H3 will inevitably result in viability issues. However, rather than provide for efficient and effective consideration of viability, Policy H3 could obfuscate and delay matters even further.

By its very nature, a large residential development, for say 50 or more dwellings, could comprise endless different housing mixes. No indication is provided on the basis of which a “revised mix” will be considered. This part of the Policy simply enables the Council to refuse to progress negotiations until an (undefined) different approach to a development is provided. This makes little sense as a developer will seek to provide a housing mix that meets market demand and providing a different mix will, by definition, be less demanded in the market. This will only have one impact on viability. The requirement for consideration of a different mix inserts a further unnecessary delay into the planning process, contrary to planning policy and guidance.

Policy H3 has no control over external funding and how a development is funded is not a land use planning matter. The reference to external funding should be removed.

The Government is encouraging the provision of starter homes. Paragraph 5.53 states that the starter homes will form part of “a broader mix of affordable housing types.” However, there is no policy reference at all to starter homes. As set out, Policy H3 is largely flawed as it serves to delay the planning process. It is considered that Policy H3 would be better if it was a positive land use planning process, which encouraged an innovative approach to the provision of appropriate affordable housing across the District. This should include establishing a positive policy basis for the provision of starter homes. It should also recognise that life moves on and that affordable housing is provided in all manner of forms in 2016. For example, Registered Social Landlords provide more market housing than ever and public and private developers provide for affordable housing than ever.

Given that thousands of affordable homes will be built across West Oxfordshire over the next fifteen years, the Council has an opportunity to look forward and seek to provide a positive land use planning policy that reflects the affordable housing market in 2016 and ahead. In this way, it can provide a policy to encourage and support the provision of a broad mix of high quality, well-designed affordable housing.

Rather than encourage and support, as worded, Policy H3 appears to set out a negative, “doomed to fail” approach of attempting to extract an unrealistic proportion of affordable housing from future development. This will simply result in delays and appeals and not the efficient delivery of high quality affordable homes for the people of West Oxfordshire.

I have noted the requirements for affordable housing under main modification 33 of policy H3 of the draft Local Plan which vary from 35% to 50% of market housing, depending on the ‘zone’ the site is situated within. I want to clarify in relation to Oxford’s unmet housing need, what percentage of affordable housing is encouraged.

<td>&gt; SECTION 5 - PROVIDING NEW HOMES &gt; MAIN 33</td>
<td>In relation to Affordable Housing the University &amp; Colleges request a different policy approach to that element of the housing provision in the Local Plan that is aimed at meeting the housing needs of Oxford. Given that the specific purpose of this component of the Local Plan is to meet the housing needs of Oxford, the relevant allocations should reflect the dynamics of that particular housing market. In this regard, the University &amp; Colleges request that within the definition of affordable housing, specific allowance is made for the key workers employed by the University and Colleges. As with other employers in the City, the University &amp; Colleges frequently experience the deterrent to recruiting new staff and retaining existing staff that the unaffordability of housing represents. This can be a deterrent to the university &amp; Colleges attracting the brightest and the best young researchers coming to work in Oxford. This is a direct threat to the University maintaining its status as the Number 1 University in the World; to remain the best it must attract and retain the best academic minds. Meeting the needs of the University’s key workers is not currently addressed in the affordable housing policies that apply in Oxford. However, the University &amp; Colleges are in discussions with the City Council to introduce such an amendment to the City’s policies. The University is asking the City Council to recognise in the definitions used in the Local Plan that its academic staff, early career research staff and technical and support staff should be identified as key workers. The University has many academic, technical and support staff on lower incomes who cannot afford to buy a house at current market prices, whether that is in Oxford or in the adjacent districts. It is intended that through this mechanism (sites or part of sites) that are being brought forward specifically to meet the requirements of key workers should be exempt in the Local Plan from the affordable social housing</td>

<td>&gt; SECTION 5 - PROVIDING NEW HOMES &gt; MAIN 33</td>
<td></td>
<td>I note that the Affordable Housing policy as currently drafted states“ ...Reduced levels of affordable housing provision will be applied in relation to 'supported living' accommodation including extra-care and sheltered housing” (page 64). Whilst the Council have clearly recognised the two types of housing at opposite ends of the ladder, the policy does not go far enough. The reduced levels of affordable housing provision should be applied to all types of retirement housing. The Government is encouraging older peoples housing, as set out in the National Planning Policy Guidance (NPPG). Moreover, at paragraph 21 the NPPF explicitly states that housing for older people is “critical”. The situation will only get exacerbated unless things change. Retirement and the majority of affordable housing are at opposite ends of the housing ladder but both are equally important. The fundamental reason why older people’s housing is not coming forward at the rate it truly needs to is because of its incompatibility with affordable housing, especially on much smaller sites of say 1 acre. Consideration should be had to other methods of affordable housing delivery, not just that it must be delivered on-site. That is not to say affordable housing should be ignored. On the contrary, its delivery is crucial, but so too is housing for older people. Indeed, whilst not specifically recognised in any policy, providing specialist retirement housing will result in family housing that is currently occupied by older people, being ‘freed up’ and becoming vacant for younger families. These issues should be recognised in any future affordable housing wording. Whilst I appreciate that there is a real need to provide affordable housing in West Oxfordshire, in reality our schemes generate a small level of affordable housing and quite often a Registered Provider is not attracted to make an offer for the number available. This has been especially true ever since the Budget 2015 announcement of reductions in social rents in the four years from 2016-2017. As well as a reduction in the level of affordable housing, commuted sums should also be seriously considered. For example, a scheme of say 12 no. retirement properties would require 40% affordable housing in a Medium Value Zone, i.e. five affordable units. It would benefit all parties if in the aforementioned example, a commuted sum would be accepted by the Local Planning Authority. A Registered Provider could use the money to provide more affordable housing on much larger sites. In turn, this would bring forward much needed retirement properties to an area which has a shortage at both ends of the housing ladder - affordable and retirement. I believe there should be some flexibility in the way affordable housing provision is sought from specific types of housing, namely retirement housing. Whilst I appreciate there is a recognised need for affordable housing, there is also a recognised need in the Authority for homes for the elderly. Much greater attention to paragraph 21 of the NPPG should be made by the Council.</td>

<td>2082</td>
<td>&gt; SECTION 5 - PROVIDING NEW HOMES &gt; MAIN 33</td>
<td></td>
<td>We represent Rentplus, a company providing an innovative affordable housing model aimed at delivering discounted rented homes to buy for people aspiring to own their own home but trapped by ineligibility for other affordable housing. Enclosed with this consultation response is an Affordable Housing Statement by Tetlow King Planning setting out the model's compliance with the NPPF definition of affordable housing and how this should be incorporated into local plans to boost supply and meet local needs. We ask that this be read alongside our representation so that the Council’s strategic planning team take into account this innovative, Government supported, model. This innovative tenure allows families to move to more appropriate homes, freeing up social rented or affordable rented properties for households in greater need. It also allows those families trapped in private</td>
</tr>
</tbody>
</table>
rented sector accommodation, or still living with parents to gain independence and security of tenure. The delivery of Rentplus homes as part of a mixed tenure (or mixed use) scheme also has the potential to speed up overall delivery as the product does not require grant funding, and can be occupied speedily.

Partner Registered Providers are also given the option of purchasing any Rentplus property that is not bought by an individual household within the 20 year period, giving the Registered Provider an opportunity to continue offering that property as any affordable housing tenure. West Oxfordshire District is invited to enter into a Memorandum of Understanding (MoU) with Rentplus, setting out joint aims to deliver high quality housing to local people in need. This provides a best endeavours commitment by Rentplus to replenish stock sold in the District on a one for one basis, allowing for a proportion of the affordable housing stock to be retained in the local area.

There are clear challenges to delivering sufficient affordable housing across West Oxfordshire as recognised by the vision to meet local housing needs. In particular it is noted that there are barriers to home ownership relating to high house values within the area; the Government has recognised the benefits of this new tenure to overcome such barriers. Rentplus could deliver a significant number of affordable homes in West Oxfordshire, helping to meet the 274 affordable dwellings required per annum within the District (as set out at paragraph 5.39 of the Plan). We are encouraging planning authorities to incorporate the tenure within Local Plans to help those in need leave inappropriate housing for high quality new homes, thus freeing up those private rented sector or affordable homes for other households in need.

Paragraph 5.38a Affordable Housing

The approach set out in Paragraphs 5.38 onwards to include Starter Homes is largely appropriate, and supported. To further encourage delivery of a wide range of affordable homes to meet local needs and aspirations, we ask that the policy be amended to reference the Rent to Buy tenure. The proposed tenure split should also reference Rent to Buy, noting that this will bridge the needs of households who can currently afford to rent at an affordable level, but whose aspirations will be met by Rentplus homes. Such an approach would further encourage flexible responses to local need and changes in national policy.

<td>2.39 No modifications are proposed to the proposed affordable housing requirements for general (C3) housing. A modification is however proposed to apply reduced levels of affordable housing provision in relation to ‘supported living’ accommodation including extra-care and sheltered housing. 2.40 In principle we support the reduction in affordable housing requirements in relation to extra-care and sheltered housing. For clarity the Policy wording should specify that the proposed reduced levels would only apply in respect of C2 uses. Whilst thresholds at which the requirement for affordable housing is triggered are stated in the Policy in...</td>
<td></td>
</tr>
</tbody>
</table>
2.41 Whilst we support the principle of the proposed modification, we are unable at this stage to comment on the proposed proportions of affordable housing sort on such schemes. Currently there is insufficient information in the Council's evidence base to justify this amendment or to clarify how the decision on the proposed proportions has been reached. The only viability assessment prepared to support the Proposed Modifications relates to the Strategic Development Areas only and as such no assessment of the overall implications of this modification on the deliverability of the Plan has been provided.

2.42 Notably the Sustainability Appraisal Addendum Report summarises the proposed changes to Policy H3 as:

"Policy amended to include reference to starter homes and the delivery of market housing on rural exception sites to facilitate the delivery of affordable housing."

2.43 The Report therefore concludes that the changes are "minor changes for clarification and not significant with regard to the SA." From the above it appears that the SA has not considered the implications of the proposed modification in respect of supported living accommodation. Clearly the proposed modification is likely to result in a reduced overall delivery rate in respect of affordable housing and the implications of this should be assessed through the Sustainability Appraisal and supported by a proportionate evidence base. Further work is therefore required to demonstrate that the proposed modification is sound.

</tbody>
</table>
| MM724        | Gallagher Estates Limited     | Gallagher Estates Limited | 1719       | > SECTION 5 - PROVIDING NEW HOMES > MAIN 39 | 2.40 The Proposed Modifications to the Policy propose that in addition to Strategic Development Areas, all residential development for 100 dwellings or more is required to provide "an energy assessment or strategy which assesses viability for decentralised energy systems, including consideration of the use of local wood fuel biomass and other renewable energy initiatives."
2.41 The Government has adopted a clear stance of moving away from locally set standards in respect of renewable energy for housing scheme, with such matters instead addressed through the Building Regulations. Furthermore decentralised energy systems are unlikely to be appropriate for the majority of new residential developments, even those over the proposed 100 dwelling threshold.
2.42 Should such a requirement be enforced this is likely to prevent the early delivery of phases of larger strategic sites which will have negative implications for the Council’s housing land supply and indeed would be an additional infrastructure provision requirement which would delay lead-in times for the delivery of the much needed new homes in the District. As such we consider the proposed modification to be unsound in that it is not justified, effective or consistent with national policy. There is no evidence to justify a different approach in West Oxfordshire, and such an approach has been struck out by other Inspectors at Examination. |
<p>| MM745        | Gladman Developments Limited | Richard House (Gladman) | 1794       | &gt; SECTION 5 - PROVIDING NEW HOMES &gt; | 8.1 Policy H4 is proposed to be amended to clarify that wheelchair adaptable housing will be required and that wheelchair accessible housing will be encouraged (but restricted to dwellings for which the Council is responsible for allocating or nominating a person to live in that dwelling). However, the policy as drafted does not reflect that clarification, requiring larger housing developments of 50 or more dwellings to provide a specifically amended to account for C2 uses. The Council’s position in this respect is therefore not justified and inconsistent with national guidance. |</p>

<td>The additional clarification proposed to Policy H4 (Type and Mix of New Homes) is supported. However, although the principle of ensuring an appropriate mix of dwellings including the provision of accessible and adaptable housing is supported, we still have concerns that the policy requirements as currently drafted are excessively stringent. The policy requires the provision of a minimum of 25% of developments as accessible and adaptable housing (formerly Lifetime Homes). It is not clear however what the evidential basis is for this 25% requirement and so the Council should provide a clear justification for this level of accessible and adaptable housing in advance of the Examination in Public. In addition 5% of new homes as a minimum are required as wheelchair adaptable dwellings. Although the requirement for both elements is caveat ed that this will be a matter for negotiation it is considered that this should be expanded. The policy wording should be made more flexible by allowing for a reduced requirement where justified on viability grounds.</td>

<tr>
<td>MM251</td>
<td>Andrew Garbutt</td>
<td>Mr Garbutt</td>
<td>728</td>
<td>&gt; SECTION 5 - PROVIDING NEW HOMES &gt; MAIN 39</td>
<td>We also believe that development density should be reviewed. The housing mix proposed by the SHMA and noted in 5.63 (with only 32.7% 1 &amp; 2 bed, which is very similar to past figures- see clause 2.17) is not consistent with the occupancy assumed in deriving the target. Since affordability is the real issue we are trying to address in the District (as market demand is coming from outside the District mainly), then we need small, high density units. People need to start somewhere to get on the housing ladder. Any assigned land allocations must deliver the maximum number of units and those units must be as affordable as possible. This can only be achieved through higher density development. The mix of housing proposed does not maximise the land available, nor deliver the lowest cost housing that is clearly needed. We welcome increased allocations to existing strategic sites, rather than too many new allocations, but we propose an early review of all allocations to ensure that they are maximised. Specifically, it should be investigated whether the same number of houses could be built on less land, leaving space for the next Plan Period instead of having to make additional allocations. Ideally, any permissions of 10 or more houses that have not been built out should be the subject of a discussion with the applicant to see if numbers can be increased.</td>

<td>2156</td>
<td>&gt; SECTION 5 - PROVIDING NEW HOMES &gt; MAIN 40</td>
<td>The Council's intention to produce a Design Code for custom/self-build housing is supported in principle; however either the wording of Policy H5 or the supporting text should be amended to make it clear that such a Design Code is yet to have been produced, as the proposed main modification is somewhat misleading at present. Whilst we agree that custom and self-build may be appropriate for some schemes, as set out within our representations on the Pre-Submission Local Plan however, we do not consider that large strategic sites are an appropriate location and are unlikely to be taken up. Although the policy wording does allow for plots to revert to the developer after 12 months should there be insufficient demand for such plots it is considered that this will delay the delivery of the scheme, create uncertainties in the build programme for developers and potentially add additional costs as a result of abortive work. Furthermore the PPG makes clear that the Local Planning Authority must assess the local demand for self-build housing. The PPG advises: &quot;Plan makers should, therefore, consider surveying local residents, possibly as part of any wider surveys, to assess local housing need for this type of housing, and compile a local list or register of people who want to build their own homes.&quot; (ID 2a-020-20140306) Whilst the SHMA does consider the demand for self and custom build housing in Oxfordshire, it advises that: &quot;In policy terms there is some potential to encourage through policy developers of larger schemes to designate parts of these schemes as serviced plots which can be developed as self-build. There is some, albeit limited evidence of this. It is difficult to demonstrate concrete evidence of demand.&quot; There is also no reference to custom or self-build housing in the Partial Update of the Oxfordshire SHMA (July 2016), prepared by Peter Brett Associates. Based on all the proposed Strategic Development Areas and Non-Strategic Housing Allocations of over 100 units, the 5% requirement in Policy H5 equates to the provision of at least 381 custom/self-build plots over the plan period. This is considered to be highly excessive, particularly when compared to the 183 people who are currently registered on the District's Register of Interest, as set out in minor additional modification MIN32 (some of whom may also be registered with other Local Planning Authorities). Given the lack of evidence available to underpin and justify this requirement it is therefore considered to be unsound. The policy wording should be amended to remove reference to the 5% requirement. Based on the current policy wording, it is also considered that the provision of 5% self-build plots on strategic sites has the potential to have significant viability implications, particularly as a result of the higher infrastructure costs which these sites are already subject to. It is therefore considered that the 5% requirement for self-build plots should be removed from the strategic sites. The Council’s housing targets are, in part, reliant on the deliverability of large strategic housing sites. In the case of the North Witney SDA, a 5% requirement on this site as currently proposed would equate to 70 plots (based on 1,400 homes) set aside for custom/self-build units. This is a substantial number of units, which has the potential to significantly impact development viability and completion times. As set out within the PPG, these units would not be required to contribute towards CIL or potentially other Section 106 requirements if planning permission was sought individually for each self-build house.</td>
